Long Island Game Protectors.

WHITEHALL, N. Y., April 30.—*Editor Forest and Stream:* In reading over your issue of April 27, an article entitled "Where is the Long Island Game Protector?" attracted my attention. If its author really desires to see the law enforced why doesn't he communicate with Chief Protector Pond and let him know the facts? Besides, if he had any sand he would collect evidence against these violators or call the nearest game protector's attention to these violations and personally help him to uphold the law.

WM. KOCH, JR.

Woodcock Cover Burned.

BAYVILLE, N. J., May 2.—The fowl have left the bay. There has been very few killed this spring.

A fire has just gone through here which has burned at least fifty square miles of our best woodcock and grouse cover, and has killed large numbers of both birds, also a good many rabbits, etc., and has burned the woodcock nests. HERB.

FOREST AND STREAM is an excellent paper; it has supported many good causes, especially in relation to the protection of game, and it has always been credited with an intelligent sympathy with sports and sportsmen of the best sort. * * * It needs and deserves the help of the rest of us in behalf of its campaign for a law to prevent the sale of dead game.—New York Times, April 15.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

Great Sea Lamprey.

MR. W. L. HOSKINS sends me another letter upon the subject of the lamprey or lamprey eel, which I give in full.

Since my first letter to you asking about the lamprey eel as a table food, I have received your remarks regarding it in the FOREST AND STREAM of Dec. 15, 1900, and April 20, 1901. In my reply permit me to say that I am a living witness for the lamprey as regards its table qualities. Sixty years ago, while living in Connecticut, my father and his neighbors were in the habit of making a trip every year, to the Agawam River, in Massachusetts, for the purpose of taking this fish. The lamprey is properly a salt water fish and ascends the fresh water streams in advance of the shad to spawn and then returns to the sea. At the time I write of the mode of capture was by hand. During the day time these fish lie in the deep water, but after dark they run up in the rapids and there attach themselves to the stones or rocks, swaying back and forth like eel grass. During this period it was the custom for one man to carry a torch, and two men with lines, each with a bag on his shoulders and a woolen mitten on his right hand. They would commence at the foot of the rapids and pick the lampreys off, one at a time, until each had a load, then go on shore and dump them into their wagons. This was followed up until they were satisfied with their catch. My father has told me of their catching as high as 3,000 in a night. What is very peculiar is that if any one attempted to catch them by going to the head of the riffs, the entire school would become alarmed and drop back into deep water and there would be no more fishing that night. This fish is so popular in the cities along the Connecticut River that I have known them to command a price of one dollar each for the early run. For twenty years I have been in receipt of a box of these fish from Hartford, Conn., and I know of no article for the table that excels them.

To-day these fish are an article of commerce in New England markets. Instead of the old method of capture they are now caught in weirs. While their looks are repulsive, I think that if you were served with a dish of them, nicely broiled, properly seasoned with salt and pepper, and a good liberal supply of melted butter poured over them, you would pronounce them good. I prefer them to the famous Connecticut River shad. Regarding their destructive qualities I think they are not to be compared to the fresh water eel. I am living on lampreys and have been for a week."

The remarks I have quoted are of interest, but they relate to the great sea lamprey I feel sure, while the notes I wrote in FOREST AND STREAM had reference to a dwarfed form called the lake lamprey and particularly the lamprey found in Cayuga Lake, except that I quoted Mr. Dean Sage, who found a sea lamprey or river lamprey fast to a fresh run salmon, for there are a number of species of lampreys, about fifteen in this country, though some of them are very scarce; and there are several in Europe. specifically mentioned. The great sea (*Petromyzon marinus*) lamprey is common to the Atlantic coasts of Europe and North America and is highly esteemed as food, and grows to over three feet in length, while the lake lamprey averages but little over one foot in length. Pennant records "that it is an ancient custom for the city of Gloucester annually to present the sovereign with a lamprey pie covered with a raised crust; and at Rodneys, in Gloucester, a rent called 'pride gavel' is paid by certain tenants to the lord of the manor for the liberty of fishing for lampreys in the River Severn."

Pennell says "The food of the lamprey consists generally of animal matter; and in the sea it will attack fish greatly superior to itself in size, fastening pertinaciously upon them, and practically eating its way to the very bone." * * *

"The lamprey spawns in May, and its food consists of insects, worms, small live fish, and the flesh of dead ones."

This, however, all relates to the great sea lamprey about which there is no question as to its food qualities. What I wrote in the issue of FOREST AND STREAM, which Mr. Hoskins mentions, is not before me at this moment. but I assumed he asked about the lake lamprey as I now recall the matter, for this was the fish which Prof. Surface had written exhaustively about in one of the reports of the Forest, Fish and Game Cases about that time. Prof. Surface says: "We wish to state here for the sake of exposing some bits of folk lore (based, as is most folk lore, upon ignorance), that they (the lake lamprey) contain no venom whatever, and can inflict no injury whatever upon man, neither by bite nor sting; neither is the flesh poison to man in eating it, except after the alimentary canal has long been atrophied at spawning times and the bile and catabolic products being unable to escape become spread throughout the entire system of the lamprey and cause all the flesh to assume a green color. * * * It is thought by many persons that they will attack people while in the water, and that a new hole comes in the side of the neck each year, as rattles are supposed to come on a rattler's tail, or as the wrinkles come on a cow's horn, but these suppositions are, of course, false. The holes in the sides of neck are openings into the gill pouches through which the water flows to carry its dissolved air to the gills to purify the blood, and their number is always seven. Lampreys have no means whatever of inflicting any injury upon man, neither directly nor indirectly, except through their economic effect in destroying the fishes he would use as food. This destruction, however, is great."

This is rather non-committal, but should not discourage one who has a desire to try the lake lamprey as a table relish. Now as to the lamprey being a fish, as it is generally termed. I think it is Jordan who says it is the lowest form of animal with a backbone, and that back bone is gristle, and not bone. But Surface is more explicit: "Lampreys are not fishes, but fish-like verebrates with no paired fins, and neither spines nor bony rays in the fins which they do possess; no scales, no jointed appendages, and, in fact, no external appendages of any kind but the vertical fins of the back and tail, with only one nostril, and that found on the middle line of the head; adults with a large circular suctorial mouth armed with a great number of sharp chitinous teeth, but with no true jaws; mouth surrounded by a fleshy membrane which insures perfect suction and is fringed around the entire margin with a close-set row of numerous fimbriæ; tongues rasp-like, containing many sharp chitinous teeth."

At the time the bill to appropriate money to destroy the lampreys in Cayuga Lake was in the Senate a Senator, a personal friend, asked me about it and what it was intended to do. I took from my pocket a dried section of a lamprey's head, making a fine display of its open mouth, described above, and said it was to appropriate money to destroy things like that. He frowned and said, "I would be in favor of voting more money for the purpose than is asked for in the bill."

Trout Parasites.

In the report of the Forest, Fish and Game Commissioner for 1898 there is a paper by Dr. Gary N. Calkins on a parasite which made its appearance in the trout of a private trout farm on Long Island and killed all the fish, young and old, in the ponds. I now learn with regret that what is undoubtedly the same parasite, from what I can hear, made its appearance in the trout of two private fishery clubs on Long Island and destroyed over thirty thousand trout. This is greatly to be deplored. Dr. Calkins unfortunately did not arrive definitely at the cause of the parasite, nor did he discover a certain and sure remedy. Thus far this parasite has appeared only in fish confined in ponds at clubs or fish farms and no wild trout are reported as affected. I have believed, and I think Dr. Calkins considered the belief tenable that inbreeding had something to do with this disease, as in this way the fish might have been weakened and less able to resist it, and something I have heard in connection with the later cases tends to confirm the belief as at least one of the causes.

Another cause has been suggested. I was lately dining on a railroad dining car with Mr. Dean Sage, of Albany, and he told me that once when fishing in Labrador he and his friends caught a number of sea trout and put them in a pond made in the rocks by the side of the river. and in a few days they developed a disease similar to if not the same, as that which has visited Long Island, and he has seen the Long Island trout that were affected. He attributes the disease to overcrowding in the pool.

A. N. CHENEY.

Trouting in California.

SAN FRANCISCO, CAL., April 13.—With our intimate knowledge of the subject we have never been able to account for the fact that the best fishing on the opening day of the season, April 1st., within easy reach of San Francisco is to be had in the tidewater of Paper Mill Creek, which empties into Tomales Bay in Marin county. City anglers (now numbered by hundreds) were out in full force all over the State, but the Paper Mill Creek seemed to have the preference. Here the angler is always sure of a few good-sized fish on the opening day and fair catches are made well on in the season by those most familiar with its many pools and riffles. Heretofore when the season opened on a week day only a few of the more fortunate anglers could visit this popular stream, but during the past few years fishermen have sprung up like mushrooms and out of the many quite a number availed themselves of the pleasure of wetting their lines. Those who fished in the tide-water were much more successful than those who whipped the headwaters. The White House Pool, near the mouth of this lovely stream, has always been recognized as a loitering place for the incoming steelheads on their way to the headwaters for spawning and also on their return to old ocean. The run of large fish during the winter months has been much greater than for several years past and has afforded the anglers much sport during the close season. A law, however, has just been passed prohibiting the taking of steelheads in tidewater during the months of February and March, which will be much appreciated by sportsmen who believe in allowing the fish ample opportunity to reach the headwaters and tributaries. The spring run of small fish has been quite late this season, hence the grand sport afforded anglers who were fortunate enough to visit this tidewater pool on April 1.

ANDY LEGASKE AND HIS STEELHEAD.

On April 2 there appeared in the sporting columns of the daily newspapers glowing accounts of the large catches made at White House Pool, which enthused so many that the following Sunday the majority of those visiting the Paper Mill Creek wended their way to this pool and it was estimated that there were at least fifty, but sad to relate the fish taken did not average one fish to a rod. This poor luck the fishermen attributed to the weather, high winds, etc. Quite a number of them could not understand why the fish did not materialize, as it was positively known that the pool was alive with fish only a few days before. We think it may be easily accounted for—fifty anglers fishing in one pool and not a large pool either, the majority of whom were using bait, through the disturbance made by their incessant casting and the heavy sinkers, used to combat the outgoing tide, so disturbed the equanimity of the wary trout that they persistently refused to take any kind of lure presented to them, which included such well-known baits as angleworms (barnyard hackle), shrimps and salmon roe (the Butler fly). The anglers who fished further up the stream were quite successful, as was evidenced by a few well-filled creels which were exhibited on the return trip.

Andy Legaspe, probably the best tidewater fisherman in San Francisco and a most expert gaffer, was high hook of the day. During the afternoon a large fish was seen floating down with the tide, evidently much used up, Legaspe reached for his gaff and waited patiently for the opportunity which soon came; he made the strike and gaffed the steelhead amidships. The roll of the fish after being gaffed loosened Andy's hold, but he luckily regained himself and landed an 8-pound steelhead trout. My friend Mr. E. W. Currier has favored me with a sketch of the incident.

Thirty-nine deer were counted in a single herd feeding near Sayville, L. I., the other day.

In Quest of Big Ones.

MR. EDWARD VOM HOFE, of this city, left on May 7 for an extended trip in Florida fishing for tarpon. Leaving there about June 1 he goes direct to Avalon, Santa Catalina Island, Cal., where he will spend a month or more hunting up the tuna.

E. VOM HOFE, JR.

The Rod and the Pole.

OCULAR corroboration of oft repeated statements of the natives of that region was afforded me on a bright May day.

"Ther's trouts in thet 'ere brook, ef ye know whar to fin' 'em," was what I had been told by the farmer lads in the vicinity.

The brook, a typical New England stream, skirted what is known as "The Old Plain," occupying the boundary between the townships of Middlebury and Oxford, Conn. Tradition had it that the Pomperaug and Wangaum Indians utilized this as their burying ground in pre-Pilgrim days; the spade of the ditch and well digger bore out the legend in the curious primitive flint arrowheads, hatchets and other articles usually buried with the dead brave for use in the hunting grounds beyond the big divide, that they often brought to light.

Emerging from the dark fastnesses of the "Derry Woods," the stream leaped into the sun-lit meadows with rippling songs of gladness. There were places in the rocky pasture where one could step across it without effort, and here the waters were deep and dark, cutting broad sluices underneath the banks, ideal lurking places for the wary trout. But though I had often inspected these places with critical eye, naught but shiners, with an occasional sucker, rewarded my search.

On the day in question, however, I was walking through a meadow, where the brook fretted and complained over the pebbles of a broad shallow. A loud splashing arrested my attention and, lokking toward the stream, I discovered the cause of the commotion in the presence of as fine a fourteen-ounce trout as ever tickled the visual nerves of an enthusiatic fisherman. The big fellow was making a sort of semi-portage over the shallows; every few seconds he would reach a point where the depth of water was insufficient to maintain his verticality and he would flounder and flop, sending showers of spray high into the air for the sun to weave rainbows with. Though enough of a sportsman to refrain from taking a mean advantage of the fish, I must confess to a strong temptation to have a bit of fun with him.

During the late season of protracted aquaousness, when Jupiter Pluvius seemed to have mislaid his rain-stopper, I had oft-recurring visions of that embarrassed trout in the sunny Yankee meadow brook; finally they became irresistible and I yielded. One morning when the milkmen were monopolizing city traffic a rubber clad mortal might have been seen to take an elevated train at Eighty-first street and Columbus avenue, hampered with a fishing kit. That was I. At 155th street I took a train on the Northern Railway for Brewster, where by the skin of my teeth and a forty-rod run I managed to get hold of the hand-rail of the last car of a train on the New England Division of the Consolidated Road. The ride of seventy-five miles, getting a "rig" at Oatman's livery at Southford and a four-mile ride in the rain over roads heaved by frost with frequent sloughs and hummocks, was all quite strenuous but uninteresting.

Once more I stand by the brookside in the "Old Plain" meadow and I realize the effect of varying conditions. The picture engraved upon the tablets of inner consciousness and the one which I now behold are as dissimilar as night and day. In place of a grassy, flowery mead, bordered by the limpid waters of a merrily singing streamlet, glistening in the soft warm light of a May-day sun, is a brown, soggy, cheerless field, through which roars a chocolate colored torrent that escapes its bounds at the base of the field, spreading out into a broad, muddy pond, a background of leaden cloud and the ever present drenching rain.

It is depressing to the last degree, but I speedily come to my senses and, remembering that I am not out in quest of nature's beauties (speckled ones instead), unlimber rod and line, adjust an imitation fly, whose colors rival nature's most extravagant efforts, and make a cast. For a half hour I devote myself with most conscientious assiduity but unavalingly to the sport (?). I substitute a beetle for the fly and am in the act of discarding both in favor of an embryo frog, when I chance to glance up stream. I am confronted by a spectacle that, while most interesting, is confoundedly exasperating. A scion of indigenous habitat, aged about twelve years; he stands in rubber boots whose tops threaten to bisect him: a coat evidently a relic of a remote ancestor and a slouch hat. This is the boy. An alder pole, short, knotty and crooked, with two yards of common twine tied at the smaller end. This the outfit. A forked willow stick with upward of a dozen of the finest trout I have ever seen. This is his "luck" and my aggravation. Even while indulging my astonishment I was further tantalized by seeing another fine trout of a pound weight come thrashing out of the muddy torrent at the end of that homely tackle.

"Hello!" I ventured.

"Hello yeou!" was the response.

"You've had fine luck."

"Nuthin extry: jest cum eout," and with this he landed another magnificent fish.

"What yeou got?" he queried as he removed the trout.

For the sake of appearances I was momentarily glad that a well-filled lunch box gave my fish bag a corpulent aspect; but it served no purpose, however, for, without waiting for an answer, the boy walked up and demanded a view of results. I could conjure up no valid reason for refusing his demand and was compelled to admit the truth.

"Whachye bait with, them things?" as he caught sight of a fly and bug hanging to my bag buttin. "Huh! 'Taint no wonder't yeou don't ketch nuthin; theyn't no flies ner bugs 'raoun' this time o' year," and with a look of mingled pity and disgust he turned to his fishing. I ventured to inquire what sort of bait he employed and received the laconic reply, "Wums."

Following a few more ineffectual casts, during which time my companion landed several handsome fish, I cast my self-confidence to the winds (and rain), swallowed my pride and humbly asked the youngster if he would sell me a few "wums." He spurned the cash but generously offered to share his supply of bait, a portion of which I accepted.

Looking up after some minutes' futile fishing, I found my boy regarding me with an expression in which disgust and sympathy seemed struggling for a mastery.

"What is it?" I asked.

Shaking his head in a deprecating manner the boy walked close up to me and looked at me quizzically for a few seconds, then this: "Does things float up-stream? Gosh ter mity! I never seen sech er fule."

I asked him to explain, both nettled and amused by his strictures on my intelligence.

"Yeou was fishin' up stream, wa'nt ye?"

I admitied that such was the case.

"Wal, yeou was hitchin' yer hair flies an' leather bugs

THE BAREFOOT BOY.
Courtesy of Wm. Mills & Son.

an' then ther wum all on 'em right up stream agin the water, wa'nt yeou?"

Again I was forced to admit the correctness of his deductions, and ventured to demand what of it.

"What on't! Wal, if yeou aint the alfiredest t'ick-skull I ever seen then I'll give up. Trouts knows a whole lot, trouts does, a dum sight more'n sum folks (giving me a significant look), an' when a trout sees a fly er a wum a-comin' up stream he gits leary an' wouldn't tech 'em in a month er Sundays. Theys got some sense, trouts hez."

During the recital of this homely proposition upon gravity, a great light dawned upon me. Of course it was

MORE OF THE SORT.
Courtesy of Wm. Mills & Son.

contrary to the natural order of things for a fly, worm or other seductive fish tid-bit to swim against the current of a stream, and I had wholly ignored this fact while wondering why the trout did not respond to my overtures.

"Jest flip yer hook out back o' thet bog an' foller it along down," advised my instructor.

Humbly I followed instructions, and ere the hook had floated ten feet down the current there was a swish, a tug at the line and the next instant I landed a splendid, fifteen-ouce trout. That was the beginning of a fine run of luck, no less than eleven following my initial catch in quick succession. SAMUEL MANSFIED STONE.

Nets Are Nuisances.

SAUK CENTRE, Minn., April 23.—While out looking for coon sign on a fresh snow one day early this spring I wandered off about six miles from home and came to the outlet of Long Lake into Lily Lake, a very slow current six feet deep. There I saw a string of lilypads that reached straight across the run. They proved to be the floats of a gill net. I gave it a "jank" (it was a Norwegian net), and the answer came back that it was loaded. How to get it out was the next thing. The cord was tied to a willow on the other side, a distance of 40 feet. I had a gun with me. The first shot cut the cord and tore that willow right out by the roots. Then I pulled the net out. And such a mess. They were twisted in all shapes; I didn't stop to untwist them either. I would take one by the middle, then with my knife I would start at his head and slit the twine to his tail, then roll him back into the water. There were nine pickerel and twelve pike, all alive but three, and some nice ones, too. After getting them out I doubled the net up in 4-foot loops, then cut each loop and pitched the whole thing out into the middle. I then went back into the woods, sat down and waited two hours. No one came. I took two fish (thought I was entitled to them) and went home. The next day I went back; the net had been pulled out on shore, but no one in sight. V.

New England Waters.

BOSTON, May 4.—The Rangeleys are clear. Moosehead was clear Thursday, morning, May 2, nine days earlier than last year. In the forenoon Capt. F. C. Barker telegraphed that the ice was breaking up and would be out of Mooselucmaguntic before night. This clearing was ten days earlier than last year. Richardson Lake was clear a day or two before, and Rangeley Lake has since cleared. This opens the season at the Rangeleys and Moosehead, and many fishermen have already gone to these resorts. Great catches are expected, though much will depend upon the weather, especially since the time is so early.

A number of Boston lovers of the angle have gone to Lake Cobbosseecontee, in Maine. T. Ralph Parrs and wife, A. W. Wheeler and wife, of Arlington, and John Robinson and wife, of Hallowell, are at that lake on a fishing trip. Some catches are reported, including several salmon, to Lewiston, Auburn and Augusta fishermen But there comes a good deal of complaint about "too many smelt," and that the trout and salmon decline to bite, because too well fed with smelt. Indeed, every fish caught seems to be gorged with these little smelt. Now the same is true of the early fishing at the Rangeleys, at Sebago and at all the lakes that are stocked with smelt, for salmon food. Still Cobbosseecontee sportsmen are objecting to the smelt, and suggest that the law protecting smelt at spawning time be repealed, in order that the supply be diminished, and hence the anglers be able to take trout at every turn.

Good reports are coming from Clearwater Pond, Farmington, Me. There is a Boston party there consisting of Dr. Heber Bishop, W. S. Hinman, C. F. Perry, Fred E. Whiting, J. M. Grovner, Jr., and G. F. Andrews. Mr. Hinman had the good fortune to take the first fish of any size for the season at those waters—a trout of 5½ pounds. Mr. Whiting has caught a salmon weighing 5 pounds. Both fish are good ones for that lake, and especially so when it is remembered that salmon have been in there but a few years.

Stream fishing has not yet been very satisfactory in Maine. Reports all mention streams full to overflowing, the result of the continued rains. A few days of dry weather will certainly be followed with good results. High water is always favorable to good catches of trout in New England streams, but the angler must wait till the water begins to fall. A Bennington, Vt., report says that the legal open season on trout began there May 1, and though the streams are still very high the fishermen are looking for good catches as soon as the water begins to fall. Reports exactly the same come from the New Hampshire streams. Richard O. Harding and C. F. Danforth are looking toward Dan Hole Pond, N. H., for salmon fishing. They will be off as soon as business permits. It will be remembered that Mr. Danforth took a salmon there last year that weighed over 14 pounds. He and Harding are satisfied that there are more of the same sort there. Doubtless Fish and Game Commissioner Nat Wentworth will fish there with them. Fishing is still slow at Lake Auburn, Me., for which cold weather and continued rains are supposed to be to blame.

BOSTON, May 6.—The New England fishing season has certainly started with unusual interest, if we are to believe the newspaper reports. These reports are numerous and long-drawn-out, and bristle with adjectives concerning what is going to be done in the way of catches, or what was done last year. A large number of sportsmen have gone to the hundred and one resorts north and east of the Hub, but not many catches are yet reported. The fact is that the season is yet very early, the water is high, and most of the Maine and New Hampshire lakes and ponds are alive with smelt. These smelt have just returned from spawning, up the brooks and inlets, and a great many of them are dead and dying. The trout and salmon only have to float under them, as they rise to the surface, to gorge themselves to overflowing. A fisherman writes of a small salmon he finally succeeded in getting at Sebago Wednesday. He shook more than twenty little smelt out of the salmon's mouth and throat. The angler says that it is a wonder the fish bite at all, but he was tempted to "fight a Rangeley spinner." Catches have been slim at Sebago for several days.

A Wolfsboro, New Hampshire, special says that there has been great fiishing at that point of late. A salmon weighing eight pounds was taken right off the Hobb-is-Inn wharf on Tuesday. The fish was photographed and sent to Boston, where it is shown in the window of a railway office. At the same point twenty-seven pounds of trout and salmon were taken by a fisherman in one and a half hours. The largest fish weighed ten and one-half pounds. A Boston sportsman is also having great luck at the same place. Lake Winnipisaukee has been fairly alive with fishermen at Alton Bay and Lake Shore Park, and hundreds of pounds of trout and salmon are reported taken. Of course the lakers predominate, but landlocked salmon are showing up well. At Laconia Capt. T. R. Tarrant, Richard McGee and L. P. Bennett, of Boston, have made a string of twenty-five pounds of trout and salmon in only a few hours' fishing. A Weirs dispatch says that the trout and salmon season there is surpassing all previous records. Good reports are coming from Newfound Lake. Fish Commissioner Nat. Wentworth and Frank L. Hughes, who have been attending to the restocking and hatching works at Bristol, have also landed several good trout and salmon with the rod and reel. They have over 1,700,000 fry in the tanks, to be distributed in Newfound and adjacent waters as soon as sufficiently grown. C. W. Colburn, J. C. Stott and Frank L. Eames are some of the Massachusetts sportsmen who have been having fair luck at Newfound. At the head of the lake H. H. Clark, C. C. Cushman, H. E. Buckminster, and Samuel Wax, Boston; Mr. and Mrs. T. J. McDonald, Lowell; F. H. Bayard, Maplewood; A. L. Dame, Methuen; J. D. Morehouse, Lawrence, have been fiishing for several days. They write of fierce winds and cold weather, but of fish biting well when it is possible to be out.

At the Big Bangor, Me., salmon pool the fishermen have been having better sport of late. A report of Saturday says that over twenty fish have been taken for the week, weighing from seventeen to twenty-seven pounds. The ice is out of Sebec Lake, Me., and Scoodic, though a little late, compared with the clearing of other Maine waters. Great fishing is expected there. Reports from Grand Lake mention cold weather and high winds, con-

ditions unfavorable to good fishing. At Cobbosseecontee there is good bass fishing, although it is early for that sport. The biggest catch of bass has been made by George Palmer, of Manchester; ten, weighing from two to five pounds. Prof. Thieman, of Togus, took a salmon weighing fourteen pounds there last week. Fish Commissioner L. T. Carleton and H. L. Pishon, of Augusta, have been fishing at Maranacook the past week, and are reported to have brought home good strings of trout.

It is all too early for many reports of catches at the Rangeleys and Moosehead, although a great many fishermen have gone to their usual haunts on those waters. From the Rangeleys reports continue to mention "too many smelts" by far. When the smelts have been done running for a few days the trout fishing is sure to be excellent. SPECIAL.

On Old Back Creek Again.

I NEVER think about writing up a camping trip until, sometimes, while sitting smoking in my "den," surrounded by fishing rods, flies, camping scenes, etc., my imagination carries me back to the dear old banks of my favorite fishing grounds, old Back Creek, where, to use the late Fred Mather's words, "Bass are jumping crazy for the fly."

Back Creek is a favorite fishing resort for Winchester people, and in bass fishing season along Beaver Dam may be seen followers of Izaak Walton, patiently waiting to hear the musical click of the reel. There are a good many people who can't see much pleasure in casting a fly, but that is because the love of the sport was never born in them. When a man can lie flat upon the ground in the broiling hot sun in July, waiting for a bass to take his minnow, he is a true lover of sport, and gets more out of life than a great many people do.

After hooking a big fish one experiences a sensation that is so exciting and intoxicating that sometimes after landing his prize he is attacked with a voilent headache; but he is perfectly willing to stand all that.

But to go on with my story. I was accompanied on this trip, as I have been on all former ones, by my old friend Stiemman Snapp, who would rather wade all day in the creek enticing the bass than make love to a pretty girl.

We left old Winchester at 12 o'clock at night and arrived at the creek about daylight. How familiar everything looked. Even the crudely constructed table we had put up the summer before was still there, and served us again on which to eat our meals.

The scenery around this section is beautiful. The water is as clear as crystal and as smooth as glass. To follow the windings of this stream is a strangely fascinating pastime. Sometimes it slips away beneath the low hanging branches of glossy green ivy and is as dark as ink among the dense shadows, and moans and sobs among the gnarled roots and shelving rocks that try to hold it captive. When you tire of murmuring streams you can climb the high cliffs near by and look afar to lands that seem fairer than this; where the soft fleece-like clouds bend down to kiss the slopes of the distant Blue Ridge; where the wind comes straight over the hills to tell you strange stories of what it saw and heard before it came to sob and moan among the dense pines around you. At night those who love solitude and the weird can listen with pleasure to the sad notes of the whipporwill and the plaintive cry of the catamount. All of these things go to make camp life pleasant and something out of the ordinary.

The nearby farmer strolls in at night and amuses you with some of his experiences about these parts. He tells you of a rattlesnake swallowing a deer and of a man seeing two immense carp basking in the sun and jumping in and catching one under each arm, and many other miraculous things which we all take in and apparently believe. Bidding our good-natured friends good night we roll into our bed of straw and blankets and soon are dreaming of placid waters, the splash of the gamy bass and of skill pots.

There is something tugging at my arm; ah! I say to myself in my dreamings, I have a strike; it feels like a big one; it keeps on tugging; I raise myself upon my elbows; I am reeling him in. Ah! it is only my friend "Snappy" trying to wake me up. The morning sun is streaming in between the folds of the canvas and tells us it is time to be up, and then breakfast is the next thing on the programme.

Any one who has been camping knows how good everything tastes on these trips; even fat bacon, which we would not think of eating in town, is relished as much as a quail on toast. After satisfying our appetites we strike out down the stream, with a pair of old shoes on and very little else, casting here and there and everywhere, and now and then having the satisfaction of seeing the line go out and hearing the sweet music of the reel. In his frantic and game effort to free himself of the hook he throws himself clear out of the water only to plunge again into the water out of sight; now he is zigzagging; now he takes a straight shoot, but the hook is still fast, and my friend commences to slow him up; there is not as much line out as there was five minutes ago, and finally a quivering object is chucked into the fish basket. We continue on our way, now and then adding to our number. By noon we have caught enough to satisfy us and retrace our steps toward camp.

We made arrangements to have the Winchester News-Item sent to us before leaving town, and reading it in the afternoon was one of the greatest pleasures of the trip. Before leaving town it was rumored that Mr. Charles Broadway Rouss, the blind millionaire merchant prince of New York, and Winchester's benefactor, was going to give $30,000 toward an opera house to be erected in the city, and on the day before leaving for home we received the news that it was really a fact, and to-day there stands in Winchester one of the finest buildings in the State, costing nearly $100,00, which but for the great generosity of Mr. Rouss might never have been erected. This man has done a great deal for Winchester and there is not a man, woman or child in the city who does not love him.

Bidding farewell, but hoping to return again, we leave the rippling, musical waters of Old Back behind us and are soon going up hill and down hill toward home.

AL CLINE.

Notice.

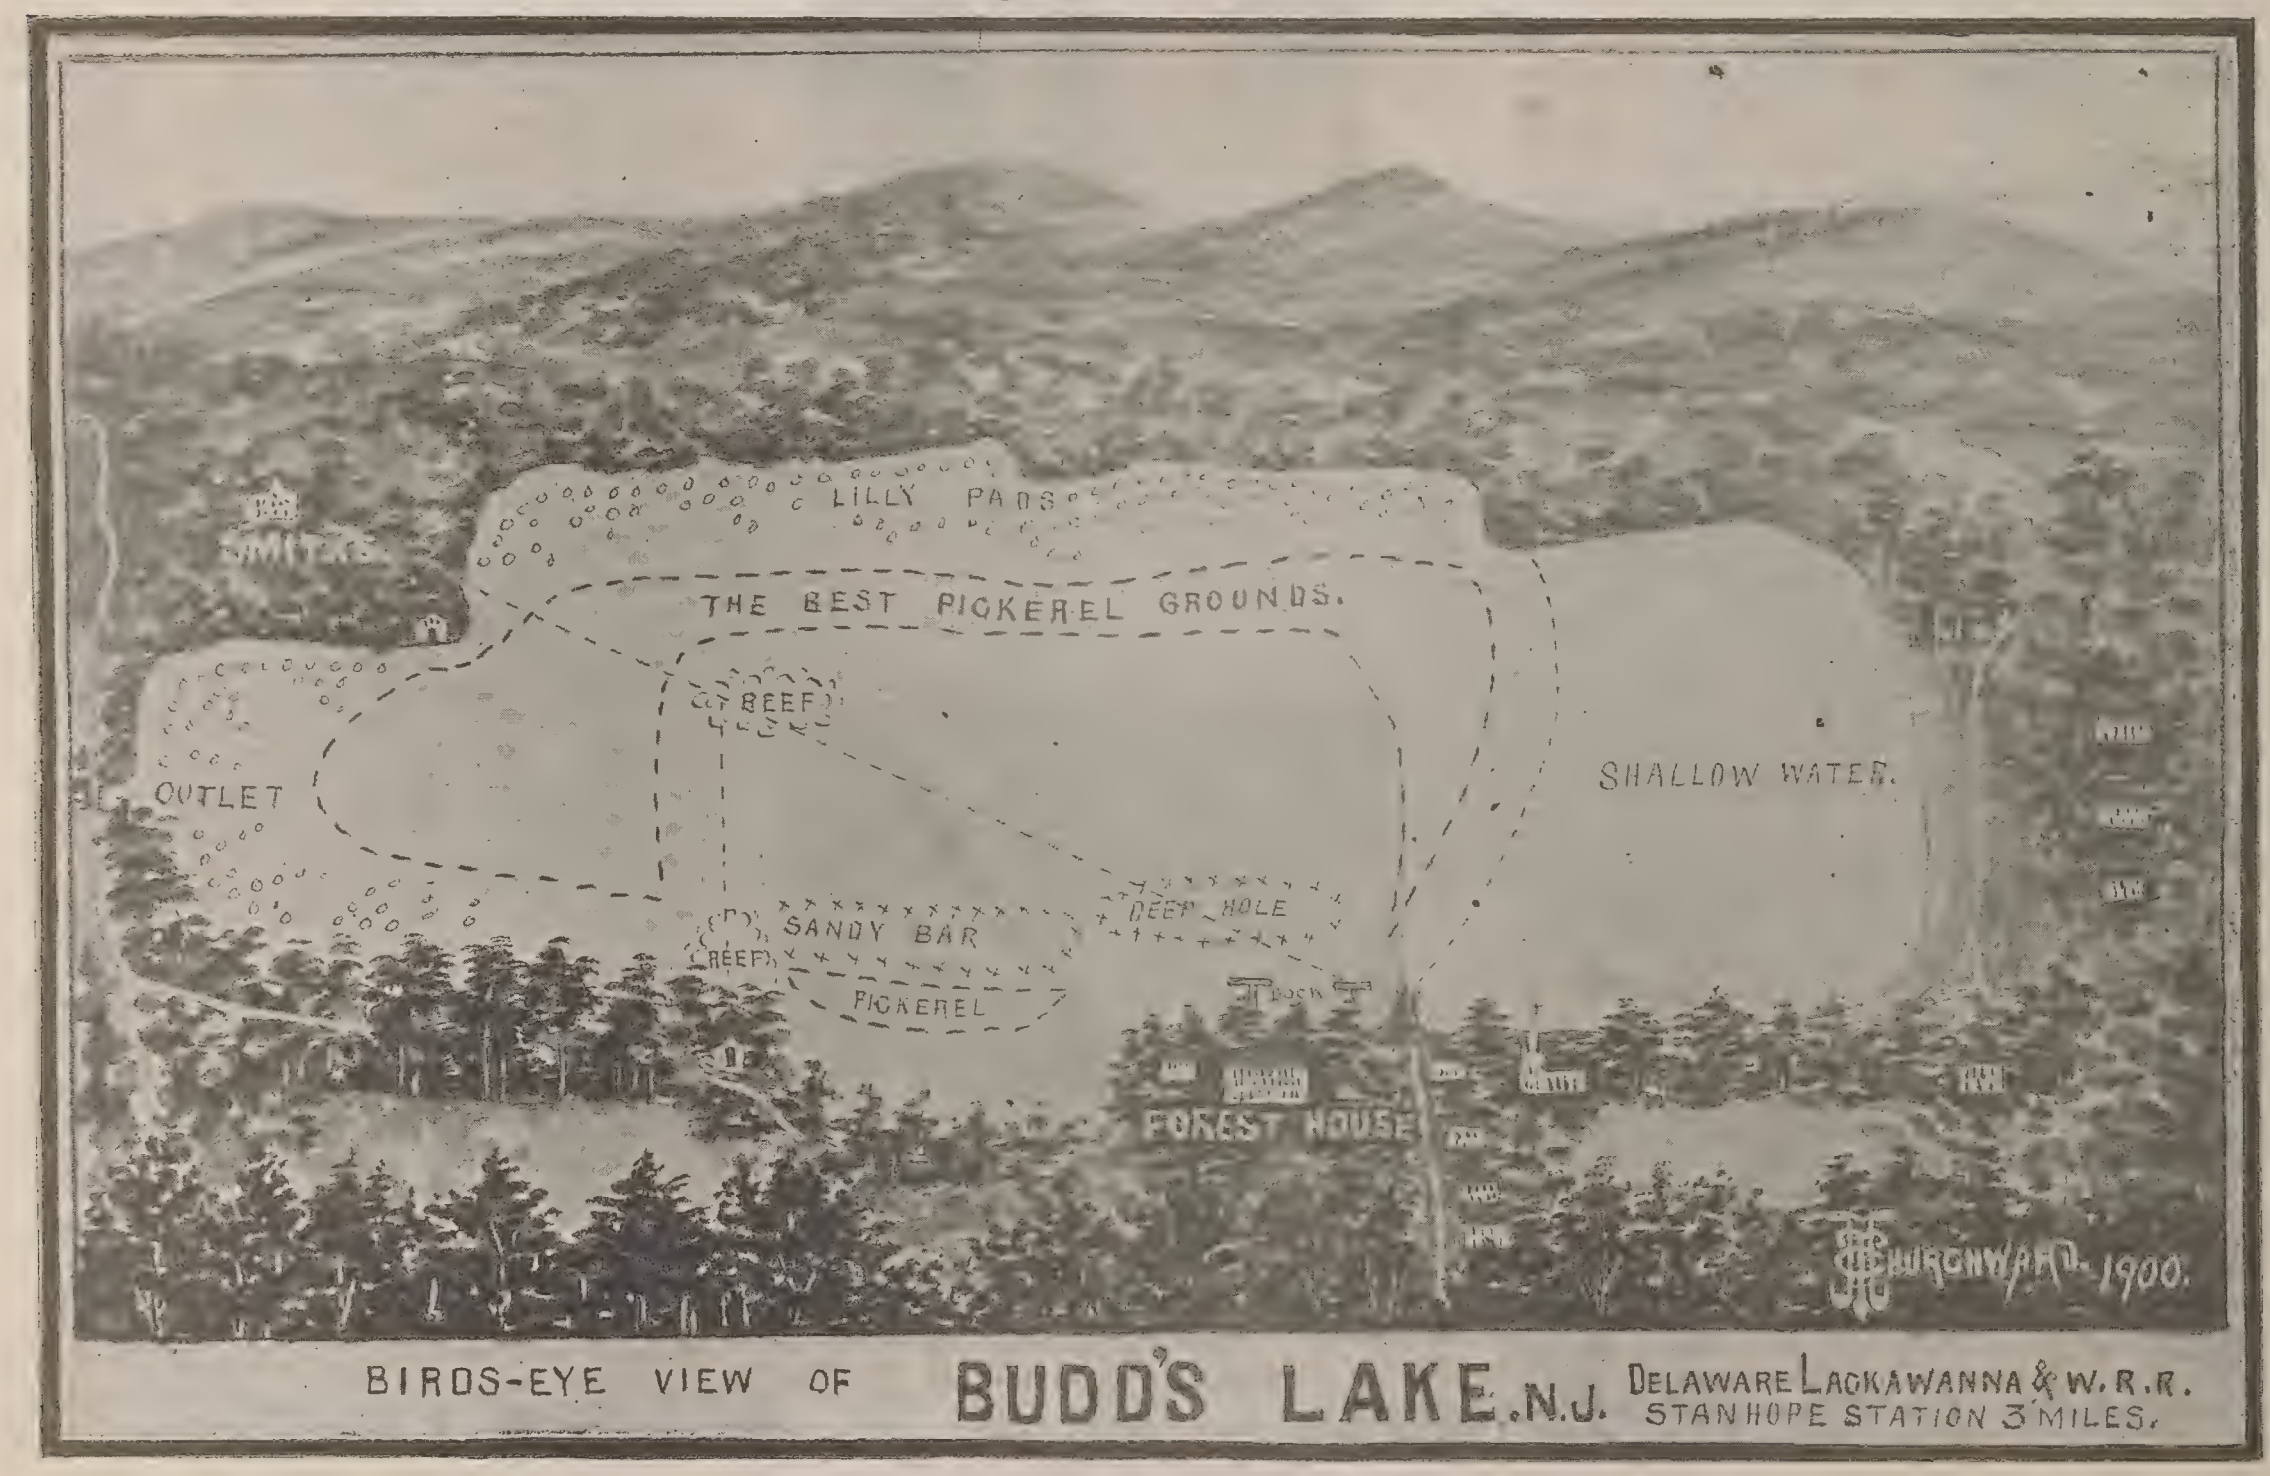
Budd's Lake, New Jersey.

BUDD'S LAKE is situated in the Schooley Mountains, Sussex county, N. J. The most direct way to reach it is by the Delaware, Lackawanna & Western Railroad to Stanhope Station, thence stage to the lake, three miles. three miles.

Budd's Lake is not one of the most picturesque pieces of water that we know of. It is oblong, being about one mile across by nearly a mile and a half long, surrounded mostly by flat lands, rising a little distance back to rolling hills. But it is a good fishing ground, containing small-mouth black bass, large-mouth black bass, pickerel, etc. We give a birdseye view of the lake, from which the fisherman can easily locate what fishing he wants.

Small-Mouth Black Bass Grounds.—Small-mouth bass are taken more or less all over the lake, but the best spots are the deep water, 75 feet out from the Forest House dock, and extending from the point above down to the upper end of the bay. From the end of the deep water down to the point at the lower end of the bay is a sand bar in about 10 feet of water; some nice small-mouths are often taken from this bar. Then around the reef off the lower point some are often taken. A very good spot, indeed, is over and around the reef in the center of the lake. This reef can be located by following straight out from the reef just mentioned, until you are in a direct line between the Forest House dock and Smith's House, shown in map. The reef is about 6 feet under water. The best bait in Budd's Lake for the large fellows, and there are many of them that will run to 5 and 6 pounds, is crickets and grasshoppers during the warm evenings of July and August. Crickets used in the deep water off the Forest House dock will generally bring three or four of the big ones to the net.



Large-mouth black bass—and there are some old bouncers—are more plentiful than the small-mouth variety. Their principal grounds are among the lilypads, skirting the western shore, and around the lower end. They are mostly taken by casting in holes among the pads with minnows and frogs. Frogs are a particularly good bait for them in Budd's Lake.

Pickerel are all over the lake, but average smaller than most of the lakes in this section, but they are numerous. In other lakes, which we shall mention hereafter, one generally gets a fair percentage of 3, 4 and 5 pound fish, but here a 5-pound pickerel is quite a novelty. The best grounds for pickerel are: Starting from the Forest House dock take a bee-line for the point on the western shore shown in map, then down to Smith's boat house, keeping just clear of the lilypads. After passing Smith's boat house it is all good ground all over the bottom of the lake, either for still fishing or trolling. The best trolling rigs for Budd's Lake are Skinner's No. 2 silver and brass casting spoons, with a piece of white belly from another fish for bait. We have taken as high as 120 in a day with these rigs. J. CHURCHWARD.

Like Picking Up Money.

In every city, town and village in the United States where there is shooting or fishing or yachting we want agents to canvass for subscriptions for FOREST AND STREAM. Every sportsman is deeply interested in its subjects, and every sportsman is glad to discuss his doings afield and to hear of the adventures of other sportsmen.

Money is to be made by canvassers for FOREST AND STREAM, and those who wish to take advantage of the opportunity we offer should send for premium list and circular.—Forest and Stream Publishing Company, 346 Broadway, New York.

Some Fishing Points.

WE have had favorable reports of the following fishing points as affording fishing worth going for. The name of hotel or person giving accommodations to sportsmen is added. Correspondence should be had in advance as to present conditions of water, etc.:

Trout.

Orchard Lake House—Emmonsville, Sullivan county, N. Y.
P. A. Purdy—Smithville Flats, N. Y.
Maple Grove House—Long Eddy, Sullivan county, N. Y.
Morley's—Lake Pleasant, Hamilton county, N. Y.
W. R. Bishop—Hammond, St. Lawrence county, N. Y.
H. M. Sacey—White Lake, N. Y.
Nat Locke—Indian Lake, N. Y.
Mrs. E. Mead—Indian Lake, N. Y.
American Hotel—Hackettstown, N. J.
W. S. Emery—Eustis, Me.
G. H. Gleason—Portage Lake, Me.

C. E. Dood—Spruce Brook, George Pond, Newfoundland.
Norman Jenkins—Burnt Land Brook, N. B., Can.

The Tuna Club.

AVALON, Santa Catalina, Cal., May 1.—*Editor Forest and Stream:* In consequence of the unqualified success of the rod and reel tournaments of the Tuna Club in former years, in the interest of a higher standard of sport and the protection of the game fishes of southern California, the club will give an open tournament at Santa Catalina Island, Cal., from May 1 to Oct. 1, 1901, inclusive. The object is to encourage the use of the rod and light tackle in taking the large game fishes of these waters, and in every way to elevate the sport to the highest standard.

The prizes are open to all men not professionals, special prizes being arranged for ladies.

The only restrictions are the rules of the Tuna Club that rods and reels must be used and that rods must not be less than 6 feet 9 inches in length, the tip of which must weigh not more than 16 ounces. By the word tip is meant all that portion of the rod from reel seat to end of rod; the line must not exceed twenty-four thread or strand, and be capable of sustaining a dead weight of not more than 48 pounds. The drag known as the Rabbeth drag is barred. Each angler must bring his fish to gaff unaided, and the fish must be reeled in, a broken rod either before or after gaffing the fish disqualifying the angler. The tournament is open to amateurs only; professional fishermen, those engaged in allied industries, and members of their families being debarred, except as stated in special class I.

Present Holders of Cups and Records.

Lragest tuna: Col. C. P. Morehouse, 251 pounds, first; C. F. Holder, 183 pounds, second; H. St. A. Earlscliff, 180 pounds, third; F. V. Rider, 175 pounds, fourth.

Black sea bass: F. S. Schenck, 384 pounds, first; T. S. Manning, 370 pounds, second; T. S. Manning, 330 pounds, third; F. V. Rider, 327 pounds, fourth.

White sea bass: E. M. Boggs, 58 pounds, first; F. F. Garish, 56 pounds, second; Mrs. F. V. Rider, 50 pounds, third.

Yellowtail: F. V. Rider, 41 pounds, first; F. F. Garish, 37 pounds, second; Mrs. H. W. Hoyt, 31½ pounds, third.

Prizes.

Class A—Leaping Tuna.

1. For exceeding the club record, Tuna Club gold medal and Banning cup.
2. For the largest tuna of the season, presidency of the club and extra silver-mounted rod.
3. For second largest tuna, silver-mounted rod, offered by James McDonald, Deposit, New York.
4. For the smallest tuna, booby prize.
5. To the angler taking first tuna of the season, silver-mounted rod.
6. Special prize to angler taking first tuna between Jan. 1 and April 31, silver-mounted rod.
7. Special prize for largest tuna taken by a lady, silver-mounted tuna rod.

Class B—Black Sea Bass.

1. For exceeding the club record, 384 pounds, Tufts-Lyon silver cup, Rider-Macomber gold medal and extra silver-mounted rod.
2. For the largest black sea bass other than the above, silver-mounted rod.
3. For smallest black sea bass of the season, booby prize.
4. Special prize for largest black sea bass taken by a lady, silver-mounted rod.

Class C—Open to Ladies—White Sea Bass.

1. For the largest of the season, silver-mounted rod.
2. For the second largest, gaff.

Class D—Open to Ladies—Yellowtail.

1. For largest fish of the season, John F. Francis gold medal and silver-mounted rod.
2. For second largest fish, gaff.

Class E—Open to Ladies—Albacore.

1. For largest fish of the season, silver-mounted rod.

Class F—Rock Bass.

1. For the largest fish of the season, Vom Hofe line dryer.

Class G—Sheepshead.

1. For largest fish of season, angler's pipe.

Class H—Whitefish.

1. For the largest fish of the season, gaff.

Class I—Professional Boatmen.

1. For the best equipped launch, three horse-power or over, for fishing purposes; rods, reels, lines and gaffs to be considered: silver-mounted rod.
2. For the best equipped fishing boat, under three horse-power, or without engines; rods, reels, lines and gaffs and general comfort to be considered: silver-mounted rod.
3. For the boatman of the angler taking the first tuna of the tournament season, silver-mounted rod.

All catches made with a view of competing for prizes must be reported at once to some member of the weighing committee, and weighed in his presence and posted. No allowance will be made for shrinkage. Club scales must be used.

Weighing Committee—F. S. Schenck, R. A. Eddy, E. L. Doran, T. S. Manning, Frank V. Rider.

During the tournament of the Tuna Club there will be exhibited by the Santa Catalina Aquarium and Zoological Station as complete a collection of the living game fishes of this region as possible, so that contesting anglers may see and observe the fish before taking them. The rock bass seen here are particularly commended to lovers of 8 and 10 ounce split bamboo rods. There will be shown also, if possible, all the different live baits used by the members of the Tuna Club, including sardine, smelt, mackerel, crayfish, octopus, clams, sea worms, abalone, flyingfish, squid, etc.

Seasons.

Seasons fluctuate according to local conditions, wind, weather and food supply.

Leaping tuna *(Thunnus thynnus)*, 22 to 250 pounds. May 15 to Aug. 15. Have been hooked in February.

Black sea bass *(Stereolepis gigas)*, 20 to 400 pounds. March to December. Sometimes all the year.

Albacore *(Germo alalunga)*, 10 to 70 pounds. Nearly all the year.

Yellowtail *(Seriola dorsalis)*, 15 to 60 pounds. March to January. Often all the year.

Bonito *(Sarda chiliensis)*, 5 to 16 pounds. March to January.

White sea bass *(Cynoscion nobile)*, average 50 pounds. May 1 to July 15.

Barracuda *(Sphyræna argentea)*, up to 15 pounds. Spring and summer.

Blue perch *(Medialuna) (Scorpis californiensis)*. All the year.

Sheepshead *(Trochocopus pulcher)*. All the year.

Rock bass, several kinds, 2 to 12 pounds. All the year.

Halibut and flounder, all the year.

Mackerel and swordfish, spring and summer.

Whitefish all the year.

He Took the Card.

Editor Forest and Stream:

I was once presented with a card which made me an honored but unworthy member of a club of anglers which can probably boast of a larger membership than any club in this country; but I lost my membership, and this is how I lost it:

In the latter part of August some years ago a small party of us took the little steamer Varuna at Clayton on our way up the Bay of Quinte to Trenton. With our boats and oarsman we naturally attracted some notice, and received an immense amount of gratuitous information as to the best fishing grounds in the whole region. At last one person, who claimed to be an expert angler, strongly insisted that we should give up our trip to the Bay of Quinte and visit a lake some eight or ten miles from Trenton, and assured us that if we did so we would have the trip of our lives, and to convince us he told us the following story, in which he was corroborated by his two companions:

He stated that the week before they had all visited this lake and that in just eighteen minutes from the time they began to fish they had caught three bass, weighing together 18 pounds.

"How long a time," I asked, "were you obliged to take in hooking and landing each fish?"

"Exactly six minutes by the watch."

"And you landed them?"

"In just eighteen minutes."

"And they weighed?"

"Exactly 6 pounds each by the scales."

"Large or small mouthed bass?"

"Small, of course, and they are seldom taken in this lake weighing less than 6 pounds, although larger ones are very often caught."

I turned to my friend and said, "Your story about this wonderful lake has made this the saddest day of my life. I am one of the members of the largest club of anglers in this country, but I joined on the express condition that if at any time I met a person whose qualifications for membership were superior to mine I would immediately transfer to him my token of membership. From this moment my connection with this club ceases, and I now hand to you this card, which entitles you to full membership in my place."

It read as follows: "This card entitles the holder to full membership in the Ananias Club."

At first he was angry and his face flushed, but his companions jeered at him, and in a moment or two he disappeared and kept out of sight during the rest of the trip.

J. S. VAN CLEEF.

POUGHKEEPSIE, N. Y., May 1.

CHICAGO AND THE WEST.

Two men this week caught twenty-five fine bass one day on Cedar Lake, Indiana. Harry Gobel, of this city; George Murrell, of the Chicago Fly-Casting Club, and others of our Chicago anglers, have made trips to this early bass water or others adjacent to Chicago, and they report fairly decent success. Mr. Murrell was on the Fox River this week, but did not have very good luck there.

The trout season is a little late in Wisconsin, but some parties are going out this week, and a few very decent takes are reported from the lower portions of the State.

I was talking with Mr. Mayer, of this city, who told me that last fall when he was out at the Sixty-fourth street pier he saw several bass caught by perch fishers along the pier. Investigation proved that there is a body of shallow water in the big lake there between the old World's Fair pier where the moving sidewalk was and the short pier south of there, in which space the bottom of the lake is covered with grass and weeds, making a very good lying ground for bass. He saw a good many bass jumping in this place, and thinks he could go out there and catch a nice string. It is near the mouth of the park lagoons, and it is known that there are a great many bass in these lagoons where they have been protected. These fish were seen last fall, and I have a notion to keep an eye on that bit of water myself for this summer's fishing.

Governor Yates has reappointed Nat H. Cohen, of Urbana, to succeed himself as a member of the Illoinois State Fish Commission. Mr. Cohen has given enthusiasm and careful study to the work and proved a highly desirable official. His appointment is a good one.

Deputy Game Warden James Latherman, of Wyoming, has found a waterfall 300 feet high in the Yellowstone Park. It is located in Box Cañon, two and a half miles northwest of Hell's Half Acre. A heavy growth of timber conceals the falls, which have been there all these years without being suspected. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Mink and Trout.

IN their latest report the New Hampshire Fish Commissioners discuss a phase of droughts in relation to trout which has not been given the attention it deserves. They say:

So far as relates to the propagation of food fish, and particularly those that furnish the best sport for the rod and reel—namely, the brook trout and landlocked salmon—we have had as great a degree of success as we could have asked for under the circumstances. Both of the two summers last passed have been seasons of unparalleled drought, and trout streams all over the State, which had never before been known to fail, went entirely dry. The north part of the State, where the streams have their rise among the hills and mountains, and their headwaters fairly well protected by a growth of timber, suffered far less than the central and southern portions. Probably many thousands of trout perished for want of living water, and in some of the brooks which did not run dry the fish were all driven into a very few pools, and became an easy prey to the boy or man who saw fit to drop them a line. Trappers say that mink never were so fat and slick as they have been this fall, which is easily accounted for by the condition of the streams, which were so nearly dried as to render every fish left alive in them by the drought an easy prey to this most voracious little animal. The mink is the only fish eater (four-footed) that will take more fish than he needs. He will fish industriously all day, eating what fish his stomach will hold, and dragging away and hiding the balance. And he never was known to go near the dead ones he has deposited around under various logs and stones, but repeats to-day his work of yesterday. So that given such a season as the two last passed, and the number of fish destroyed by mink throughout the State is incalculable. There would, in our opinion, be much greater sense shown in establishing a fair bounty on that most thorough little poacher than in keeping it on bears and wolves. Notwithstanding the reverses we have met with by reason of the drought, we have had no disposition to abandon those streams which have in times past furnished so much good trout fishing. Last spring we restocked them with more fry than we had ever before put into them, and we propose to keep at them, hoping that the summers to come may not be so disastrous to our work as the two last passed.

An Adirondack Trout String.

JOHNSTOWN, N. Y., May 2.—I inclose clipping from Johnstown Republican of this date:

"Charles W. Rowles returned home from Canada Lake and vicinity last evening with a string of fish which has been looked upon with much admiration by the local anglers. He pulled seven trout from the Canada Lake Inlet which tipped the scales at 15 pounds, representing the largest sized trout that has been brought to this city in a long time."

I saw the catch and can verify the statement as to size and weight. They were all speckled brook trout, seven in number, and taken in an afternoon's fishing, and comprised the whole catch and are the largest average that ever came in to our city for one afternoon's fishing. The season is backward and this is the first catch reported.

C. M. P.

Lobster Claws.

HORSE CAVE, Ky.—*Editor Forest and Stream:* Some time since I chanced to find in a junk shop the claw of a lobster which measured 12¼ inches in a straight line from point to heel, and about 5 inches broad in the widest part. It is in perfect condition and has the small claw attached with a string. I have not been able to get its history, and would be glad to know if any of your readers has ever seen a lobster claw to equal this one in size. E. C. H.

[This is by no means a record claw. A 19-pound lobster from Eastport, Maine, had claws measuring 18 inches in length and 8 inches across; and the lobster of 30 to 40 pounds must have had claws much larger. For years, owing to overfishing, the size of lobsters has decreased.]

The Boy with the Pole.

WE all know of the barefooted boy with the pole, and many of us have been so fortunate as to meet him. Mr. Stone writes of him appreciatively. For more than one amateur fisherman the boy has come to the rescue from utter defeat with some suggestion, or, in dire extremity, with fish. We found the other day in the tackle catalogue of Messrs. Wm. Mills & Son, of this city, two little pictures of the barefoot boy, which were so unstudied and true to nature that we asked permission to print them, and they come in very fitly with Mr. Stone's story.

In the early days of Illinois a gentleman prospecting through the country found himself at nightfall near a little two-story log cabin. Having been granted the privilege of staying all night, he was shown to the attic, where he found a couple of hounds, who, as his host explained, always slept there. As he was disrobing he gave a mighty sneeze, whereupon the two hounds gazed intently at each other a moment and then with one accord bolted out of the single window the room contained. The hostess, hearing the racket, appeared above and inquired the cause. "Why," said the guest, "I sneezed, and the hounds looked at each other a moment and then flew out the window."

"Oh! that's it, is it? I'll tell you the reason they did that. I always whale 'em for sneezing around the house, so when you sneezed each thought the other one was the culprit and jumped out of the window to escape punishment."—St. Louis Post-Dispatch.

The Kennel.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

California Coursing.

COURSING is evidently rapidly increasing in popularity on the Pacific coast. The coming season promises to be an exceptionally interesting one in California in the number of events and entries at the various courses. More dogs and better ones are being constantly brought forward and those most familiar with the sport say that California now has as good dogs as are to be found anywhere.

Perhaps the plentiful supply of hares has much to do with the growth and popularity of the sport. The western jack rabbit is an unfailing product and a good reliable sprinter. History does not tell how long he has held his own against the hordes of coyotes that have chased him over every acre from the Rockies to the Pacific. Certain it is that the coyote is a natural born rabbit chaser, and he has about the readiest means of rapid transit of any creature with four feet to manipulate. The hungrier and thinner he is the less resistance air and space can offer to govern him. The lighter his plumage becomes, in his contention with his fleas,—when he gets so thin that the sun shines through him and leaves no shadow—the more the alacrity he exhibits in his efforts to annihilate space and encompass jack rabbits. He has obliterated so many of them that there are, at this time, but a few billion of them left.

In Nevada a few years ago the stock raisers tampered with natural conditions by introducing a theoretical innovation. They offered a reward for the extermination of coyotes, and it worked. So many coyotes were wiped out that, it is alleged, the rabbits thrived so well they not only ate up all the grass, but had begun to obstruct the railroad. A reward was then offered for rabbit scalps, a penalty threatened for any person who injured a coyote, and, at the time my informant came away, rabbit scalps and ammunition were the only things to be seen in Nevada except the landscape.

It seems to me the jack-rabbit does not do himself the credit with a brace of hounds after him that he does on his native heath with a pack of ki-yi-ing coyotes in his wake. The dogs do not make noise enough for him to think there is anything doing. Even when he does unlimber and wake up to the reality of things he seems to think he can dodge the hounds, and he always appears to be surprised that they pick him up while he is doing some of his curves. A hound's nose is about three inches longer than a coyote's, and the jack has not yet learned to make the allowance. After a while he will perceive that two or three inches on the forward end of a hound may have considerable to do with his personal affairs. However this may be, I have seen many a rabbit on the sage-brush plains give a pack of coyotes a longer and harder run than any I have seen made for the dogs.

At the Open Stake Coursing at Union Coursing Park, San Mateo county, on April 27 and 28, there were 112 entries and the entire 56 brace of dogs were in form and participated in the event. The total of the purse was $875. First money, $110, was won by Frank Jones' dog, Wedgewood, with F. A. McComb's Little Sister winning second money, $70. The remainder of the purse was awarded in smaller amounts.

The first day was bright, with rather a strong wind. A drizzling rain fell during most of the second day, while a stiff wind made it cold and disagreeable for the men and dogs in the field. The entire programme was carried out in a very satisfactory manner. Considering the number of events and the disagreeable weather of the second day the management deserves much credit for the good work of its fielders, particularly for that of the judge, John Grace, and the slipper, James Grace. The meeting was under the direction of the California Coursing Committee, which has announced the following events for May: 4th and 5th, Sapling and Open Stake; 11th and 12th, Puppy and Open Stake; 18th and 19th, Open Stake; 25th and 26th, California Coursing Committee Stake.

RANSACKER.

SAN FRANCISCO, April 29.

Points and Flushes.

Mr. M. T. Mason, of Chatham, N. Y., writes us as follows: "There will be a bench show the week following the Pan-American event at Chatham, N. Y. It will be under A. K. C. rules, and will be the first annual show held by the Columbia County Agricultural Society. As Chatham is only twenty-five miles from Albany, on B. & A. R. R., New York and Eastern exhibitors from the Pan-American will doubtless stop off at this show, especially as a small entry, good premiums and liberal classification will be a feature of this event."

Burley—Hello, Hurley! Where did you get the dog? It isn't full-blooded, is it?

Hurley—Well, no; not exactly. I call him Heintz—fifty-seven varieties, you know.—Town Topics.

The Manitoba Field Trials Club, through its secretary-treasurer, Mr. Eric Hamber, has issued a circular letter giving much valuable information to those who contemplate attending or participating in its trials. The matter concerning the customs arrangements is specially noteworthy. Derby entries close on July 1. All-Age entries close Aug. 1. Champion Stake nominations are to be made on or before Aug. 1. Mr. S. C. Bradley has again consented to act as one of the judges.

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

Canoeing.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

'Mid Reef and Rapid.—IX.

BY F. R. WEBB.

The Lewis dam is built at the head of a conglomeration of small islands, located in a sharp turn of the river to the left, so that the dam seems to be simply a continuation of the left bank in a straight line, until the other bank curves around and meets it; and, to the canoeist descending the stream, all that appears to remain of the diminishing river disappears through a tall, massive head gate of hewn timbers into the race—the mill itself not being visible from the dam, as it is located half a mile below. On landing on the dam, however, the canoeist discovers several little channels leading down among the islands, no one of which appears larger than a good sized creek. The most direct and practical one is the old boat channel, the one nearest the left end of the dam, and down this narrow, shallow little stream—after easily sliding our canoes over the dam—we now made our way, alternately wading and floating on the swift, race-like shoot for a quarter of a mile until the open river was again reached, and with it plenty of water.

A fine stretch of river is presented below this place; the river, flowing broad, swift and deep between low banks overhung on either side by giant sycamores which cast their grateful shade far out over the water, behind which lie broad stretches of rich, well tilled fields—a lovely pastoral reach—until it ends at the Lewis mill half a mile below in a steep, gravelly rapid, down which we shot with exhilarating speed, successfully avoiding the numerous big rocks strewn around in careless confusion at the foot of the rapid.

A mile or so below, a ledge juts out from the right bank and extends in a long, slanting, down-stream line clear across the river. One or two small, grass-grown islands are strung along it, and a gravel bar breaks the otherwise three or four foot fall into a short, steep rapid. In fair water the shoot down this short bar is a fine one, and a passage is easily found almost anywhere along its length, but at the present stage the bar is impassable, and the old boat channel at the extreme left must be taken. It winds around over the end of the ledge next to the bank, and turns sharply to the right out into the river again, while right in the turn, just over the verge of the shoot, in the swiftest water at the most awkward place imaginable, is a peculiarly ugly, jagged mass of honeycombed limestone. It is particularly hard to dodge without running the canoe ashore on the rocks which line the sides of the narrow shoot, yet it must be dodged, as a sharp blow and rub against its vile, petrified, sponge-like edges is more than the stoutest canvas—or cedar either, for the matter of that—can stand.

We knew this nasty little shoot well, and therefore approached it with great circumspection, the more necessary because, as we were well aware, places of this character are at their worst in the lowest water.

George was in the lead, and, after backing and filling around a few minutes for position, he let go and shot over the verge and down the shoot. He succeeded in dodging the ledge in mid-stream, but was swept heavily ashore on the rocks at the side of the shoot below, where, after vigorous shoving, pushing, poling and swearing, he succeeded in freeing himself, and passed out into the deep, still pool below, where he floated idly, his paddle across his lap, intent on seeing the fun as the rest of us negotiated the shoot, while I lay up in the shade under the bank above for the same purpose and to profit by the other fellows' mishaps.

Lacy went next, and his experience was quite similar to George's. The Colonel then essayed the shoot, and smashed up against the reef squarely amidships with a crash that made the stout timbers of his big, heavy canoe fairly crack and groan. Considering his quite respectable avoirdupois, the blow was a terrible one, and I was really surprised to see him shove off from the rocks and go bumping and dragging down the remainder of the channel into the still water below, apparently unharmed; and my respect for the toughness and strength of a well made canvas canoe—already well founded—was most materially strengthened by the incident.

It was my turn next; so, cautiously drawing my canoe out from under the bank, stern first, into position, back paddling carefully as I drifted down into the powerful suction of the shoot, I approached.

In order to avoid beaching on the rocks below, as George and Lacy had done, it was necessary to lay close to the reefs in 'mid channel, so I steered as closely as I dared—a fatal mistake, for I saw in an instant that I was to share the Colonel's fate.

Hastily shoving my paddle out to port, however, with a vigorous jab I caught the reef firmly with my paddle blade and eased my canoe gently down against it, holding the boat off all I could.

In spite of all my efforts, however, the harsh, coral-like finger tips rasped horribly along my side as I gently dropped down away from the dangerous proximity. I made the remainder of the shoot at the expense of a few thumps from the rocks at the bottom and speedily rejoined the others, who had turned their bows down stream again and were lazily paddling along.

"Did you strike hard, Colonel?" Lacy was saying as I came up alongside.

"Oh, no," replied the Colonel carelessly, as he struck a match on the hatch framing which lay inverted in front of him and lit his pipe again. "I just bumped and scraped a little as I came down; that's all."

"The Colonel never strikes hard or sticks fast," said George. "When he gets out into the water he does it because he likes to wade."

"How did you get that little hole in the side of your canoe, then?" Lacy continued. "Why, I can crawl aboard through it!"

"Great fish hooks, Colonel!" exclaimed George, "the whole side of your canoe is busted in!"

"Oh, get out! what are you giving us!" exclaimed the Colonel. "Why, I haven't shipped a drop of water!"

"Well, I advise you not to lean too far over to port, or you'll speedily ship a boatful of it," I put in.

"Put your hand down, man, and see for yourself," added George. "The break's just above the water line."

"Jeem—sis cousin! why, I can shake hands with myself, right through her side!" exclaimed the Colonel in consternation, as he took this simple advice, and reaching down along the side of his canoe, discovered a ghastly rent in the canvas along the freeboard just above the water line, a foot and a half long.

"The frame timbers are smashed, too! the whole side of the boat's smashed in!" he continued, in utter dismay, as he investigated the break from the inside.

"Yes, you touched a little bit heavily, I'm afraid," said Lacy drily, as he lit his little brierwood.

"That had better be attended to at once," I said "Yonder is the old Governor Walker place," as the fine old mansion opened up to view, around a wooded point. Embowered in stately trees, its well kept grounds sloping gently down to the river in front from the little eminence on which it stood, it presented a stately appearance as we dropped down toward it. "We'll land there for lunch and then repair damages."

"I expect that would be best," replied the Colonel; "the rent is above water and I expect I could easily run to our camp at Three Springs, which is only three or four miles below, but I might hang up on a rock or fish dam on the way, and the boat careen and fill with water before I could get off."

"Yes, and there's plenty of rough water before we get there, with reefs ad infinitum, not to mention a fish dam or two, and you will be quite likely to ship some water before we get there," said George.

"Oh, I don't think I would take any water in the rapids," replied the Colonel. "My boat is a dry boat, and rides the waves like a duck."

"You will have an opportunity to try the experiment right here," George continued, as we approached the head of a long half mile shoot, down along whose surface the surges ran pretty high, while at the foot of the rapid, even at that distance, the big "white horses" could be seen gamboling and throwing their shaggy white manes high in the air, the bright foam-crests glittering and sparkling in the sun as we closed our hatches and drew up our aprons before dipping—one at a time—down over the crest, and beginning the long, exhilarating shoot.

"Well, did you take any water?" I exclaimed, as I joined the others at the bank below the foot of the rapid and just above the Walker place, where they had arrived before me. As I spoke, I threw up my apron, throwing overboard as I did so a bucketful or so of water reposing in a pellucid little pool in the hollow of my apron in my lap; while my wet, shining decks, from which the water was still running and dripping over the gunwales, like rain from the roof of a house, bore additional testimony as to the size and weight of the aforementioned "white horses," now gamboling and tossing a hundred yards astern of us up the river.

"Yes, I believe a little did dash in as I came down that last pitch," he replied, as he stepped ashore, "but none to amount to anything. I expect, though, it had better be fixed after lunch," he continued, drawing his wounded canoe well up on the bank after him.

"I think myself it will be the safest plan," I replied, as I opened up my hatches and lifted out the mess-chest, upon which I placed my folded camp stool, and then on the top of both folded the three cushions of my mattress, having previously drawn my boat well up ashore, where the entire fleet now lay stranded.

"Look at that scratch on the side of your own canoe, Commodore," said Lacy. "It is exactly like the cut in the Colonel's boat."

An investigation revealed a long line of paint scratched and rubbed off the side of the Frankie on the freeboard, above the water line, in exactly the same place as the Colonel's break, the line being quite similar in outline to the rent in his boat. As, however, the canvas was uninjured, no harm was done, but it conclusively illustrated what a narrow escape I had from sharing the Colonel's fate.

My plunder was carried up the bank to a nice turfy spot under the trees, where—Lacy having by this time returned from Walker's with a bucket of water—we gathered around the convenient little mess chest, and did ample justice to an ample lunch of cold sliced ham, sardines, pickles, bread and butter and cheese, with a hard boiled egg apiece by way of relish, after which our mattresses were brought into play, and our after-dinner smoke accomplished in luxury, flat on our backs, our heads and shoulders supported by our upturned camp-stools, over which one cushion of the mattresses was thrown, and our feet and lower limbs extending over the matresses and down the sloping bank.

Another convenient feature of the oiled mattress bags is that in addition to the protection afforded the mattresses in the canoe from the water and weather, they can be thrown carelessly down anywhere—even where the ground or grass is damp—without fear of soiling or dampening the mattress inside—a great convenience, for our after-lunch smoke and siesta is quite an institution of our cruises.

After our lunch and smoke—in the interim the Colonel's boat having thoroughly dried out, while he hauled it further up on the bank and turned it up on one side so as to get the wound uppermost and in good position for operating upon—I went to my own canoe, and from one of those inestimable pockets which hang up under the washboard along each side of the cockpit I drew out a small roll of stout duck and a little muslin bag of resin, while from another I procured a bottle of alcohol and a small brass alcohol lamp, or stove (if so small an article could be called a stove), Lacy in the meanwhile procuring the malleable iron ladle packed in the expeditionary camp stove in his canoe, and carried for this purpose (as well as for the supplementary purpose of refreshing the fire in the stove with a small dash of coal oil now and then, when the wood is wet, or when the fire dies down at some critical juncture, as it occasionally does, the popular servant-girl method of pouring directly from the can upon the fire not being much in vogue in our party), and while I placed the lamp on a flat stone in a sheltered place from the breeze under the bilge of the Colonel's canoe and

filled it with alcohol, the Colonel cut three pieces of canvas from the roll of duck of a size sufficient to cover the hole—one single piece being too large to quickly and conveniently handle. In the meantime George, having contributed his share to the process by preparing a couple of little chisels or scalpels cut from a ½in. limb from the nearest sycamore and flattened at one end to a knife-like blade, with which to plaster on the patch, made ready with the kodak to catch us in the act.

All being ready, I lighted the alcohol lamp, and, holding the ladle, in which I had placed two or three tablespoonfuls of resin, over the blaze, I soon had the resin reduced to a seething liquid, whose fragrant, aromatic odor diffused itself in the air around. I then took about half a teaspoonful of lard from the lard can in the mess chest and dropped it in the melted resin, stirring it in with one of the flattened sticks. When it was thoroughly melted in, I poured a few drops of the mixture into a cup of river water which Lacy held for me, kneading the cooled drops between my fingers to test its consistency. A little more lard was added, and the water test again applied, until the compound had lost its brittleness and was about the consistency of fairly pliable shoemaker's wax, when it was pronounced ready to use.

A piece of the canvas was immersed in the boiling compound until thoroughly coated and saturated, when it was lifted out between the two flattened sticks and quickly placed over one end of the break and plastered smoothly down. The other end of the break was next fixed in the same manner, after which a patch was placed over the remaining open space in the middle, a little hot compound poured over the completed patch and quickly plastered over the entire surface (rapid work is necessary, as the mixture cools and hardens rapidly), and the job was done, and the Mary Lou—her beauty considerably disfigured by the big resin-colored patch on her cheek—was again waterproof. An examination of her frame inside revealed less damage than the Colonel had at first supposed. One of her stout inch-pine cross sections, or moulds, was shattered, however, but we could not conveniently repair this, and as it did not materially impair her efficiency, we did nothing to it.

The river makes a great ox-bow bend to the right and background to the left again of several miles in extent; clear around the front of the Walker place, and coming back below to a point considerably in the rear of the place, before again bending sharply to the right and resuming its course down the valley.

We found the first reach, of a mile or so around the bend to the right, full of reefs. The river was wide, swift and very shallow, and great patience and care were required in order to safely negotiate this reach, particularly in the upper part, and hang-ups were by no means infrequent. At the bottom of the reach, in the great crescent to the left, is a mile or so of eddy, as the still reaches are incorrectly termed, in local parlance, and at the present stage of water we found this reach as currentless as a mill pool, and a tedious half an hour's paddling was required in order to work our way through it. The river impinges against the base of the outlying spurs of the Blue Ridge along here, and the right bank rose to a considerable height, densely clothed with trees and broken by the longitudinal straight line of the Norfolk & Western Railroad, as it lay in an ugly, red clay gash, high up above the water.

A couple of gentlemen fishing from a big white skiff about half way down this reach proved to be Dr. Tomkins and Mr. Avis, of Charleston, W. Va., who were spending a few summer weeks at the Walker place. They showed us a fine catch, among which was a huge 5lb. bass. It was the biggest one I had ever seen, and I took it up and handled it with great interest and respect, speculating meanwhile with the Colonel as to how he would feel at the business end of our light fly tackle.

We told the fishermen that we would camp at Three Springs, some three miles or so below, and invited them to visit us in the evening, which, as it was not over a mile across the country from their stopping place, they readily agreed to do, and the Colonel and I paddled on after George and Lacy, who were by now some little distance ahead.

We finally worked through this mile or more of eddy, which ends in a broad flat bar, which stretches across the breadth of the river in a gravelly beach, mostly above water, until the lower end of the eddy looks more like the bottom of a long, narrow lake or pond than the continuation of a river. At the left a deep, narrow channel, not more than a few boats' lengths in width, carries all the water in the river over the bar in a strong, deep stream, which then pitches away down hill in a glorious rapid, a quarter of a mile long, with the usual long, semicircular fringe of stones, boulders, etc., piled up across the lower end. We plunged swiftly in a shouting procession down this surging shoot and pitched head first and one at a time over the rocky fringe at the bottom, escaping with a few thumps apiece, and were buried in the suds below, which rolled in sheets from our decks, leaving them glistening and shining, mirror-like, in the sun.

From here on down to where the river flows deep, still and lake-like in the broad expanse of the Shaver mill pool, some three or four miles below, is one continuous rapid. We have had fine sport in running this stretch of river on former cruises, but on the present phenomenally low water we had all we could do to get through it at all, for it is literally ribbed and seamed with reefs, huge sections of which project in great masses, high out of the water, scattered here and there over the surface of the river in picturesque confusion, and as might be expected, great caution was required in order to navigate this water at all, and many and frequent were the bumps, thumps and hang-ups scored by each and every one, although all succeeded in getting through without having to get out.

The scenery down along this reach is very beautiful. We had turned our backs upon the ugly red scar upon the mountainside in which lay the railroad tracks, and in front of us, as the river wound to the left, the banks on the right rose in a high bluff, upon which, and commanding a fine river prospect, stood a large, fine looking brick farmhouse, the massive white columns supporting the porch in true Southern style standing out conspicuously against the red brick background. To the left the banks were low, and we looked out over pleasant, well-tilled fields, with the handsome brick Weaver residence in the foreground, while immediately behind it rose the majestic peak in which the Southern end of the Massanutton range springs from the valley, whose portals we were just entering, the grand, imposing slope of the peak being strikingly beautiful, while every tree and bush on the mountainside stood out in distinctness in the clear, pure atmosphere, while the picturesque masses of rock scattered freely around in the river bed, around and among which the swift, clear waters rippled caressingly, breaking into pearly foam, made up a foreground charming in its beauty.

I had a clumsy, troublesome time of it getting over the big fish dam opposite Weaver's, and half a mile above our camp at Three Springs. I had lagged some distance behind the others, and they had slipped over the dam, apparently without trouble or delay, some little time before I even reached the couple of hundred yards or so of slack water above it. I was familiar with the location of the shoot, and merely noting that each canoe, as it approached, turned to the left and disappeared over the dam with a parting glimpse of the shoulders and helmet of the occupant, and the uplifted, sharply pointed stern of the canoe, I paid no special attention to the exact spot, but drove my canoe swiftly through the slack water above down upon the dam, intent only on getting over and catching up as quickly as possible. Approaching the dam I gave a glance down the usual place, then, closing my hatches and pulling up my apron—for the shoot was about a boat's length long, with a drop of 3 or 4ft., and quite rough—I drove my canoe briskly over.

In my careless haste I went over a yard too far to the left, and my bow brought up with a crash on a sunken rock just below the crest of the dam and held fast. The swift rush of water caught the stern of my canoe in its relentless grasp and swung it resistlessly round and hurled the canoe down over the dam sidewise. As soon as the bow hung I threw off my apron and hatch in anticipation of the inevitable capsize, and prepared to jump. The stern crashed down on the rocks and hung up likewise, leaving the canoe broadside on, across the full flow of water over the dam, and over she went.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

MAY.

11. Manhasset Bay, first series race for Jacob cup, Port Washington, Long Island Sound.
18. Huguenot, special, New Rochelle, Long Island Sound.
25. New Rochelle, special, New Rochelle, Long Island Sound.
30. South Boston, club race, City Point, Boston Harbor.
30. East Gloucester, club race, Gloucester, Massachusetts Bay.
30. Atlantic, Sea Gate, New York Bay.
30. Harlem, annual regatta, City Island, Long Island Sound.
30. Indian Harbor, special, Greenwich, Long Island Sound.
30. Bridgeport, special, Bridgeport, Long Island Sound.
30. Canarsie, opening and parade, Carnarsie, Jamaica Bay.
30. Brooklyn, opening, Gravesend Bay.
30. Staten Island, Stapleton, S. I.
30. American, opening, Milton Point, Long Island Sound.
30. Burgess, Marblehead, Massachusetts Bay.
30. Manhasset Bay, second series race for Jacob cup, Port Washington, Long Island Sound.
30. Seawanhaka Corinthian, races for raceabouts, Seawanhaka knockabouts and club catboats, Oyster Bay, L. I. Sound.

JUNE.

1. Knickerbocker, annual, College Point, Long Island Sound.
1. Atlantic, Sea Gate, New York Bay.
5. East Gloucester, evening race, Gloucester, Mass.
8. Canarsie, pennant championship, Canarsie, Jamaica Bay.
8. Manhasset, annual, Port Washington, Long Island Sound.
8. Brooklyn, open, Gravesend Bay.
8. South Boston, club handicap, City Point, Boston Harbor.
12. East Gloucester, evening race, Gloucester, Mass.
15. South Boston, club cruise, City Point, Boston Harbor.
15. Beverly, club, Monument Beach.
15. New York C. C., annual, Gravesend Bay.
15. Larchmont, spring regatta, Larchmont, Long Island Sound.
15. Seawanhaka Corinthian, first race, Center Island cup, Oyster Bay, Long Island Sound.
15. Burgess, Marblehead, Massachusetts Bay.
15-17. Boston, cruise, City Point, Boston Harbor.
16. South Boston, cruise, City Point, Boston Harbor.
17. Beverly, open sweepstake, Monument Beach.
17. Duxbury, club race, Duxbury, Mass.
17. Hull-Massachusetts, classes over 18ft., Hull, Boston Harbor.
17. Dorchester, classes 18ft. and under, Dorchester, Boston Harbor.
17. Corinthian, first club championship, Marblehead, Mass.
17. East Gloucester, club race, Gloucester, Mass.
17. Brooklyn, annual regatta, Gravesend Bay.
17. Pavonia, annual, Bayonne, Newark Bay.
17. Burgess, Marblehead, Massachusetts Bay.
18 Atlantic, annual, Sea Gate, New York Bay.
19. East Gloucester, evening race, Gloucester, Mass.
20. New York, annual, New York Bay.
20. Duxbury, ladies' day, Duxbury, Mass.
22. Beverly, Corinthian, Monument Beach.
22. Marine and Field, open, Gravesend Bay.
22. Manhasset Bay, third series race for Jacob cup, Port Washington, Long Island Sound.
22. New Rochelle, annual, New Rochelle, Long Island Sound.
22. Atlantic, special, Sea Gate, New York Bay.
22. Seawanhaka Corinthian, second race for Center Island cup, Oyster Bay, Long Island Sound.
25. American, Newburyport, Massachusetts Bay.
25. New York, Glen Cove cups, Long Island Sound.
26. East Gloucester, evening race, Gloucester, Mass.
27-28. Seawanhaka Corinthian, special, Oyster Bay, L. I. Sound.
29. Boston, City Point, Boston Harbor.
29. Atlantic, annual, Sea Gate, New York Bay.
29. Burgess, Marblehead, Massachusetts Bay.
29. Seawanhaka Corinthian, annual race for Leland challenge cup for raceabouts, Oyster Bay, Long Island Sound.

JULY.

2, 4, 6. Newport, Y. R. A., cup defender class, Newport.
2. Indian Harbor, Greenwich, Long Island Sound.
3. Columbia, City Point, Boston Harbor.
3. East Gloucester, evening race, Gloucester, Mass.
3-8. Brooklyn C. C., cruise, Gravesend Bay.
4. Beverly, open sweepstake, Monument Beach.
4. Duxbury, club race, Duxbury, Mass.
4. Boston City, City Point, Boston Harbor.
4. Corinthian, second club championship, Marblehead, Mass. Bay.
4. East Gloucester, open, Gloucester, Mass.
4. Gravesend Bay Y. R. A., first open regatta, Gravesend Bay.
4. Larchmont, annual regatta and schooner races for Colt cup, Larchmont, Long Island Sound.
4. Hartford, annual, Saybrook, Long Island Sound.
4. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
4. Pavonia, McInnis cup, Bayonne, Newark Bay.
4. Canarsie, parade, Canarsie, Jamaica Bay.
4. Penataquit Corinthian, annual, Bay Shore, L. I.
4. Columbia, Chicago, Lake Michigan.
4. Burgess, Marblehead, Massachusetts Bay.
5-11. Atlantic, cruise, Sea Gate, New York Bay.
6. Shinnecock Bay, club, Shinnecock Bay.
6. Mosquito Fleet, City Point, Boston Harbor.
6. Riverside, annual, Riverside, Long Island Sound.
6. Seawanhaka Corinthian, third race for Center Island cup, Oyster Bay, Long Island Sound.
6. Burgess, Marblehead, Massachusetts Bay.
6. South Boston, ladies' day, City Point, Boston Harbor.
8. Norwalk, annual, South Norwalk, Long Island Sound.
9, 10, 11. New York, Newport series, Newport.
10. East Gloucester, evening race, Gloucester, Mass.
13. Moriches, club.
13. Corinthian, third club championship, Marblehead, Mass. Bay.
13. Beverly, club, Monument Beach.
13. Larchmont, open, first day of race week, Larchmont, Long Island Sound.
13. Seawanhaka Corinthian, race for Roosevelt memorial cup, Oyster Bay, Long Island Sound.
13. Manhasset, special, Port Washington, Long Island Sound.
13-20. Larchmont, race week, Larchmont, Long Island Sound.
17. Beverly, Buzzards Bay.
17. East Gloucester, evening race, Gloucester, Mass.
18, 20, 23. Newport Y. R. A., special races, Newport.
20. Westhampton C. C., club.
20. Winthrop, Winthrop, Mass.
20. Duxbury, ladies' day, Duxbury, Mass.
20. Beverly, Corinthian, Monument Beach.
20. South Boston, club handicap, City Point, Boston Harbor.
20. Stamford, annual, Stamford, Long Island Sound.
20. Seawanhaka Corinthian, fourth race for Center Island cup, Oyster Bay, Long Island Sound.
20. Trial race to select Canada cup defender, Chicago, Lake Michigan.
20. Burgess, Marblehead, Massachusetts Bay.
22. New York, cruise, rendezvous, Glen Cove.
22. Harvard, cruise, rendezvous, Morris Cove, L. I. Sound.
22. Canarsie, open, Canarsie, Jamaica Bay.
23. New York, cruise to the eastward.
24. Seawanhaka, cup race, Lake St. Louis.
24. East Gloucester, evening race, Gloucester, Mass.
25, 26, 27. Hull-Massachusetts, invitation races, Hull, Mass.
27. Beverly, open sweepstake, Monument Beach.
27. Corinthian, fourth club championship, Marblehead, Mass. Bay.
27. Shinnecock Bay, special, Shinnecock Bay.
27. Sea Cliff, annual, Sea Cliff, Long Island Sound.
27. Northport, annual, Northport, Long Island Sound.
27. Seawanhaka Corinthian, fifth race for Center Island cup, Oyster Bay, Long Island Sound.
27. Manhasset, fourth series race for Jacob cup, Port Washington, Long Island Sound.
29. New York, Astor cup races, Newport.
29-30. Burgess, open, Marblehead, Massachusetts Bay.
30-31. New York, trial races to select America Cup defender, Newport.
31. Corinthian, Marblehead, Massachusetts Bay.
31. East Gloucester, evening race, Gloucester, Mass.

AUGUST.

1-3. Corinthian, Marblehead, Massachusetts Bay.
1. New York, trial race to select cup defender, Newport.
3. Duxbury, club, Duxbury, Mass.
3. Beverly, Corinthian, Monument Beach.
3. Moriches, association regatta.
3. Atlantic, Sea Gate, New York Bay.
3. Hempstead Harbor, annual, Hempstead Harbor, L. I. Sound.
3. Seawanhaka Corinthian, Robert Center memorial cup races, Oyster Bay, Long Island Sound.
3 Manhasset Bay, special, Port Washington, Long Island Sound.
5, 6. Manchester, West Manchester, Massachusetts Bay.
7. Misery Island, Salem Bay, Mass.
7, 8. East Gloucester, Gloucester, Mass.
7. East Gloucester, evening race, Gloucester, Mass.
9, 10. Annisquam, Ipswich Bay, Mass.
10. Beverly, Van Rensselaer cup, open, Monument Beach.
10. Westhampton C. C., association regatta.
10. Brooklyn, Gravesend Bay.
10. Horsehoe Harbor, annual, Larchmont, Long Island Sound.
10. Bridgeport, special, Bridgeport, Long Island Sound.
10. Seawanhaka Corinthian, sixth race for Center Island cup, Oyster Bay, Long Island Sound.
10-15. Chicago, races for the Canada cup, Chicago, Lake Michigan.
12, 13. American, Newburyport, Massachusetts Bay.
17. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
17. Moriches, open.
17. Wollaston, Quincy Bay, Boston Harbor.
17. Corinthian, fifth club championship, Marblehead, Mass. Bay.
17. South Boston, club handicap, City Point, Boston Harbor.
17. New York, New York Bay.
17. Indian Harbor, annual, Greenwich, Long Island Sound.
17. Seawanhaka Corinthian, seventh race for Center Island cup, Oyster Bay, Long Island Sound.
17. Canarsie, Corinthian regatta, Jamaica Bay.
17. Columbia, Chicago, Lake Michigan.
20, 22, 24, 27, 29. American cup races, Sandy Hook.
24. Shinnecock Bay, association regatta, Shinnecock Bay.
24. Corinthian, sixth club championship, Marblehead, Mass. Bay.
24. South Boston, ladies' day, City Point, Boston Harbor.
26. Cape Cod, Provincetown, Mass.
27. Wellfleet, Wellfleet, Mass.
29. Plymouth, Plymouth, Mass.
30. Kingstown, Kingstown, Mass.
31. Duxbury, Duxbury, Mass.
31. Beverly, Corinthian, Monument Beach.
31 Westhampton C. C., open.
31. East Gloucester, club, Gloucester, Mass.
31. Marine and Field, Gravesend Bay.
31. Hartford, annual, Saybrook, Long Island Sound.
31. Huntington, special, Huntington, Long Island Sound.
31. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
31. Larchmont, special, Larchmont, Long Island Sound.

SEPTEMBER.

2. Beverly, open, Monument Beach.
2. Duxbury, ladies' day, Duxbury, Mass.
2, 3. Corinthian, cruise, Marblehead, Massachusetts Bay.
2. Lynn, Nahant, Massachusetts Bay.
2. Gravesend Y. R. A., all classes, Gravesend Bay.
2. Norwalk, special, South Norwalk, Long Island Sound.
2. Sachem's Head, annual, Saybrook, Long Island Sound.
2. Larchmont, fall regatta, Larchmont, Long Island Sound.
2. Atlantic, special, Sea Gate, New York Bay.
2. Pavonia, special, Bayonne, Newark Bay.
2. Canarsie, ladies' day, Canarsie, Jamaica Bay.
2. Seawanhaka Corinthian, Oyster Bay, Long Island Sound.
2. Burgess, Marblehead, Massachusetts Bay.
2 Chicago, Chicago, Lake Michigan.
3. Shinnecock Bay, open, Shinnecock Bay.
5, 6. Seawanhaka Corinthian, open special, Oyster Bay, L. I. Sound.
7. Beverly, open, Mattapoisett.
7. Seawanhaka Corinthian, fall regatta, Oyster Bay, L. I. Sound.
7. Atlantic, Sea Gate, New York Bay.
7. Lynn, Y. R. A., rendezvous.
14. Brooklyn, fall regatta, Gravesend Bay, New York Bay.
14. Larchmont, Larchmont, Long Island Sound.
14. Indian Harbor, fall regatta, Greenwich, Conn.
14. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
14. Atlantic, fall regatta, Sea Gate, New York Bay.
21. New York C. C., fall regatta, Gravesend Bay.
21. Manhasset Bay, fall regatta, Port Washington, L. I. Sound.
21. Canarsie, commodore's cup races, Canarsie, Jamaica Bay.
28. Manhasset Bay, fifth series race for Jacob cup, Port Washington, Long Island Sound.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

THE Boston Herald's foreign correspondent in speaking of Shamrock II. in the trial on last Saturday, says:

Shamrock II. had her first trial off Southampton to-day, and certainly did well. There was fine weather for the te t, the water being smooth and the wind varying from four to ten knots. The results suggest that Watson has done well by his tank experiments, for the challenger goes through the water cleaner and sweeter than any yacht of her size ever seen on this side of the water. However, at t mes she gives one the impression of going down by the head when hard pressed, but whether this is really so or is simply an impression produced by the manner in which the line of white paint is drawn on her bronze is yet debatable.

Her canvas looked good, but it was a heavy suit, that will not be used in the Cup races. It is cut fuller than the sa ls of Shamrock I.

She is unmistakably tender, for a ten-knot breeze was sufficient to put her lee rail under.

She sailed alongside Shamrock I. for a short distance—too short to give any reliable comparison. The old boat is clearly incapable of holding her own, however, as she was drawing a big quarter wash, while the challenger was going clean, and overhauled and passed her with the greatest ease. Under these conditions she could give the first Shamrock a minute a mile.

The new boat took the bottom off Ryde, but was pulled off by a launch uninjured.

Our Boston Letter.

BOSTON, May 6.—A question which has been bothering the yachtsmen around Boston for some time seems now to be practically settled. A recent dispatch from England states on reliable authority that Sir Thomas Lipton has said he would bring Shamrock II. around to Boston after the close of the Cup races and that she would take part in the races for the cups and prizes offered by Thomas W. Lawson. The success of these races depended largely on the decision of Sir Thomas, but up to the present time he has been very conservative in regard to his possible future action in the matter. With the entry of Shamrock II. it is expected that many of the large racers of the New York Y. C. will enter the races and that all three of the 90-footers will take part.

Within the past few days a rumor has been floated that Thomas W. Lawson may turn his back on 90-footers and Cup races to accompany his wife on a trip to Europe in his beautiful steam yacht the Dreamer. At Mr. Lawson's office the rumor has not been confirmed, but enough has been gleaned to show that the rumor was not without foundation, and that it would not be surprising in the least if Mr. Lawson should make the proposed trip. Mrs. Lawson has been quite ill, and her physician has advised that she go abroad. If she should go it is more than likely that Mr. Lawson will accompany her. Nothing has been definitely decided yet, and it may be that Mr. Lawson will still see the efforts of Independence as an aspirant for Cup defender honors.

It has been stated that the launching of Independence has been definitely decided, and that she will take the water on May 18. Work has been progressing well on her during the past week, and there is no doubt that she can be got ready by that time. The work of riveting the aluminum deck plating has proceeded very rapidly. The aluminum rivets are driven cold and they are headed up about one-half the time it takes to perform the same operation on heated bronze or steel rivets. Her steel mast is being constructed inside the boiler shop. About 30ft. of it has now been assembled. There are eight longitudinal angle irons, the same number that Herreshoff is using. The diaphragm plates are cut in to fit over the angle irons, and there is a flange at the circumference of the plates on which the outer plating of the mast is butted. Work on the steel gaff has been started, eight or ten plates having now been bored and rolled. At Lawley's the hollow wooden boom is being finished up and the hollow gaff was glued last week.

The first race of the season for Hull-Massachusetts Y. C. boats was sailed Saturday. As might have been expected the race was between the 18-footers conforming to the restrictions of the Eighteen-Foot Knockabout Association. Four of these boats were launched last week, and it was between these that the race was sailed. The match was the result of the usual pride each owner had in his coming boat. They sailed for $10 a corner, the winner taking $30 and the second boat $10.

This first race had more than the usual interest, because among the competitors three entirely different types of boats were represented. The four which competed were Ayaya, owned by W. P. Keyes; Aspinquid, Oriana and Bacchante. Ayaya, which won the race, was designed by her owner and built by a house carpenter named Knight at Hull. Aspinquid was designed and built by Shiverick, of Kingston; Oriana was designed by Fred Lawley and built by the Lawley Company; Bacchante was designed and built by Hanley, of Quincy Point.

Ayaya is one of the semi-keel boats, drawing about 2ft. 6in. of water and carrying a centerboard. Asqinpuid is one of the same type. Oriana is a keel boat drawing the limit of the class, and looks as if she had more speed in her than was shown Saturday. Bacchante is an out-and-out centerboard, without a pound of outside ballast. She is a typical Hanley boat, resembling much the famous H. O. 25-footers of last season.

The four lined up for the start in a piping northwester, which made double reefs the order of the day. The breeze held true as far as direction was concerned, but was as fickle as to strength as most northwesters are. At times it would blow steadily with little or no sea, and the little fellows would skim along as though possessed of life; again, a puff would come down across the bay which would bring them all up shaking.

Ayaya got the best of the start, with Asqinquid second, Oriana third and Bacchante last. The first leg, to the spar buoy off Sheep Island, was a broad reach. Ayaya kept the lead she established at the start and turned the buoy first. Both Ayaya and Bacchante overstood the mark and went for it with sheets broad off. On the reach across Oriana came up and took second place from Aspinquid.

On the next leg to Strawberry Hill, which was also a reach, the order remained the same. Ayaya turning first, followed by Oriana, Aspinquid and Bacchante. On the turn to windward Oriana, the keel boat, took a sudden spurt, and it looked as though she would be first to reach the line on the first round. Ayaya, however, was piling along steadily, and her owner was keeping her looking closer to the wind and making her go there. When they made the last tack for the line it was seen that Ayaya was in far the weather position and also ahead. She turned the stake boat with a good margin and romped away for the Sheep Island mark a winner, barring accidents.

No accidents occurred, and she steadily increased her lead to the finish, although there was less than a minute between her and the second boat. On the last round both Aspinquid and Bacchante shook out their reefs, but even then Ayaya proved too much for them. The finish between Aspinquid and Oriana was the most exciting incident of the race. From the first mark Oriana had led Aspinquid around the course. After the Strawberry Hill was passed for the last time and they were headed for the line, Aspinquid commenced to crawl up. Oriana was constantly luffed, so much so that she lost headway. The skipper of Aspinquid saw this and he forced his boat. They were constantly splitting tacks, and just before the line was reached Aspinquid crossed Oriana's bow and headed her over the line by eighteen seconds. The following is the summary:

Name and Owner.	Act. Time.
Ayaya, W. P. Keyes	1:30:43
Aspinquid, C. A. Comey	1:31:12
Oriana, Alfred Douglas	1:31:30
Bacchante, Humphrey and Lauriat	1:35:56

The Regatta Committee of the Savin Hill Y. C. has sent in the list of events for the season, among which is a Y. R. A. race, thus adding to the already long list of Association races. The fixtures of the club are as follows:

June 22, Saturday—Y. R. A. open.
July 6, Saturday—Club race.
July 20, Saturday—Club race.
Aug. 3, Saturday—Club race.
Aug. 17, Saturday—Club race.

At Lawley's the interior work and engine are being put in the Sloane auxiliary 85-footer. The Burgess Y. R. A. 21-footer is all planked. The interior work is being put in the Herter 35-footer, the Lowell 25-footer and the Binney 70-footer. The Boreland 86ft. steamer will be launched very soon. The Y. R. A. 21-footer for H. H. Wiggin is in frame. The 15-footer designed by Fred Lawley is planked. She is a small Hostess and looks as though she would develop speed proportionate to that of the Quincy boat.

JOHN B. KILLEEN.

QUI VIVE—DESIGNED BY JOHN B. HERRESHOFF IN 1862.

YACHTING NEWS NOTES.

Wyckoff Brothers & Taylor, of Clinton, Conn., have completed three of the Larchmont one-design boats, and the other two are being planked. These boats were designed by Messrs. Gardner & Cox, and they are handsome craft that should show a good turn of speed. Mr. R. W. Bainbridge, of Brooklyn, has had a house-boat built by Wyckoff Brothers & Taylor. She is 70ft. over all, 63ft. on the waterline, 21ft. beam and 2ft. draft. The boat will be rigged as a yawl, with a leg-of-mutton mainsail and jib. This firm has built a 16ft. power tender for Mr. Bainbridge.

* * *

Mr. R. C. Robbins has sold the raceabout Pirate to Mr. George Bird.

* * *

Mr. A. H. Hagemeyer has sold the knockabout Lorelei to Mr. J. M. Ellsworth.

* * *

The 51-footer Huguenot has been run out of the shop at Huntington's yard at New Rochelle. She will be taken to South Brooklyn shortly, where she will be put in the dry dock and have her fin put in place. As soon as this is done, she will be rigged and put in condition for the racing season.

Small Yacht Construction and Rigging.

Introduction—Types of Boats.

PART I.—BUILDING.

1. Tools.
2. Materials.
3. Laying off, making moulds, and setting up in frame.
4. The rabbet, ribbands, and fairing.
5. Timbering and planking.
6. Floors, shelf, and deck beams.
7. The rudder and trunk, and center case
8. Laying the deck, coamings, etc.
9. Caulking, stopping and painting.
10. Lead keels and centerplates.
11. Spars.
12. Deck fittings and iron work.
13. Cabin fittings.

PART II.—RIGGING.

1. Rope, blocks and fitting rigging.
2. Bending and setting sails.
3. Various rigs.
4. Roller head sails and reef gears.

Design of 22ft. C. B. sailing boat.
Design of 24ft. L. R. fast cruiser.

Introduction.

So many amateurs nowadays understand the use of carpenters' tools, and have some knowledge of yacht designing, thanks to the late Dixon Kemp's admirable books, that I feel sure a few hints on practical boat and small yacht building will interest yachtsmen generally, and I hope be of some assistance to those who wish to try their hands at building their own boats. Boat building is one of the most fascinating hobbies a man can take up, although it is scarcely likely that any amateur wou'd care about spending several years acquiring the requisite skill to enable him to turn out the very highest class of rater work. If, however, he has some natural talent, patience and common sense, there is no reason why, with a little practice, he should not be able to build a vessel which will be a credit to him, and probably better than many of the so-called "cheap" boats which are turned out by some small firms. He must not, however, be discouraged if at the beginning he only spoils wood, and has to do the work over and over again till he can make a good job, and he should therefore before starting make up his mind that he will do it right even if he has to make half a dozen fruitless attempts.

The chief maxims to be borne in mind in boat building are: (1) Be sure that all your measurements are correct. (2) Always work to a level L.W.L., and be sure the moulds are both square and plumb to this line. (3) Shore and stay your keel and moulds so that they cannot possibly move while the boat is being built. (4) Keep your tools sharp, and keep your wood dry.

There are two general types of small craft now in use, which may be classified as round-bottomed and hollow-bottomed boats. The first comprises the modern centerplate and bulb-fin boats (many of which are nearly or quite flat); and the second class consists of the deeper bodied sea-going cruisers, and the linear raters built to the new Y. R. A. rules for 1901.

The first type will be the easiest for the beginner to tackle, owing to the simpler form of the keel and sections, and also because the weights of the various parts are much less in proportion to the size of the boat.

Under this head will come the 22ft. C. B. sailing boat (design No. 1), which will be the best to start with, as she has far less work in her than boats of the other type, and will make a good, useful sailing boat, either for the coast or river, and can also be used as a yacht's sailing cutter.

The 24 L. R. fast cruiser (design No. 2) complies with the new Y. R. A. rules. She will be more difficult to build, and should not be attempted at first.

All the round or flat bottomed centerplate boats should be built bottom up, as it is much easier to get at the work, and you can see at once if you are making a good job of your seams, besides being able to fair the moulds better when setting up the frame.

The second type, or hollow-bottomed, boats are a bit more troublesome, as the keel, stem and stern frame have a good deal of work in them. The planking, too, especially about the garboards and just at the tuck of the counter, is rather trying to one's patience at first.

These boats are usually build in the old-fashioned way, right side up, the bottom being easier to get at when this way up than that of a round-bottomed boat. They would also be very awkward to turn over when they get larger, both as to shape and weight. The 24 L. R. fast cruiser, for instance, would require ten or a dozen men to turn her over safely.

The designs shown are taken not so much as being ideal boats in any way, but chiefly as representing popular types of sailing boats and small yachts now in general use and suitable for an amateur to build.

They will also be sufficiently typical to illustrate the methods used for most carvel built boats up to ten tons.

The first three chapters will apply to all sorts of carvel building, but in the subsequent chapters I shall endeavor to explain the construction of a boat of each type side by side.

Part I—Building.

CHAPTER I.—TOOLS.

To turn out good work it is absolutely essential to have a set of good tools, which must always be kept in proper order, though I know by my own experience that one does not care about the drudgery of sharpening them the moment they get the least bit blunt. If, however, they are allowed to get blunt and gapped it is quite impossible to make a good job.

A common fault with amateurs' tools is that they are sharpened only on an oil stone long after they should have been ground, and the consequence is that the cutting angle gets steeper, and though the actual edge is sharp, yet it is so steep that it will not make a clean cut. The following diagrams show a section of the edge of a chisel, A as it should be, and B as it should not be, but often is:

A B

I do not propose to teach the use of the tools, as there are many excellent books on the subject; but I will give a list of the various tools requisite for the work before us, and also some extra tools which, though not absolutely necessary, are exceedingly useful if the expense is not too great; these are marked with a *.

The total cost of all the tools which are really necessary will come to about £5, not including the cost of a bench.

List of Tools.

1 half rip saw.
*1 fine panel saw.
1 turning saw, with 2 extra blades of different sizes.
*1 small compass saw, with half a dozen spare blades.
1 medium-sized tenon saw, with fine teeth.
1 jack plane.
1 smoothing plane (wood).
*1 small plane (iron), with various adjustments.
1 rabbet plane.
1 ⅜in. round plane, for working hollow for gold line.
*1 3in. circle, spar makers' hollow plane.
*1 1½in. firmer chisel.
1 1in. firmer chisel.
*1 ¾in. firmer chisel.
1 ½in. firmer chisel. (This may be a dovetail chisel.)
1 ¼in. firmer chisel.
*1 ¾in. inside bevel gouge medium sweep.
1 small shipwright's adze.
1 draw knife.
1 spokeshave, with adjustable mouth.
1 ratchet stock and set of bits.
*1 set of pat twist bits, 3-16in. to 1in.
1 Archemedian stock and set of boat builders' piercers.
1 set of 4 gimlets.
1 set of 4 bradawls.
2 screwdrivers, large and small.
2 hammers—a 2lb. engyineer's ball paned hammer and a light boat builders' riveting hammer.
*1 "holder on" or small maul head.
1 rooving punch.
1 carpenter's punch.
*1 pair stout pliers.
1 pair cutters.
1 pair pincers.
1 large vise.
*1 hack saw.
1 cold chisel.
1 10in. bastard file (flat safe edge).
*1 10in. bastard file (half round).
*1 6in. saw file.
*1 8in. round or rat tail file.
*1 10in. smooth file (half round).
*1 breast drill and set of Morse twist drills.
*1 small anvil.
*1 hand vise.
1 12in. square.
1 2ft. two-fold rule, with slide.
1 bevel.
1 spirit level.
1 marking gauge.
*1 pair dividers with set screw.
2 plumb lines.
1 chalk line.
1 good sized oil stone and a slip for the gouge, etc.
1 grindstone and stand, etc., for foot power.
*1 30ft. steel tape (if possible marked in inches on one side and decimals of a foot on the other).
2 12in. stout iron cramps.
4 9in. light iron cramps.
2 or 3 paint and varnish brushes and a putty knife.
2 small caulking irons.
1 caulking mallet.
1 steam chest and boiler.

In addition to these tools, a really good firm bench should be made, long enough to take the longest planks which will be used, say 25ft. long and 2ft. wide, with the top not less than 1½in. fir, and quite flat. A wooden bench vise should be fitted at the left-hand end, and the large iron vise fitted at the other end, so that very long stuff may be held in both. A flush rising and falling planing stop should be fixed in the top at the left-hand end, and some tool racks and drawers will be very handy; also a nail box or two.

Note.—The steam chest can be made of four 9in. by 1½in. fir planks rabbeted at joints and well screwed together, with one end permanently blocked up and the other end fitted with a loose plug or door. The boiler may be any sort of kitchen copper or even a large kettle capable of holding two or three gallons. The lid must be made steam tight, and a pipe fitted from the boiler to the steam chest. A good plan is to fit one or two small bars across the steam chest inside about half way up, so as to keep the wood to be steamed off the bottom and let the steam get all around it. All the joints can be made sufficiently steam tight with red lead and canvas. A couple of good stout saw horses or trestles must also be made.

[TO BE CONTINUED.]

Qui Vive.

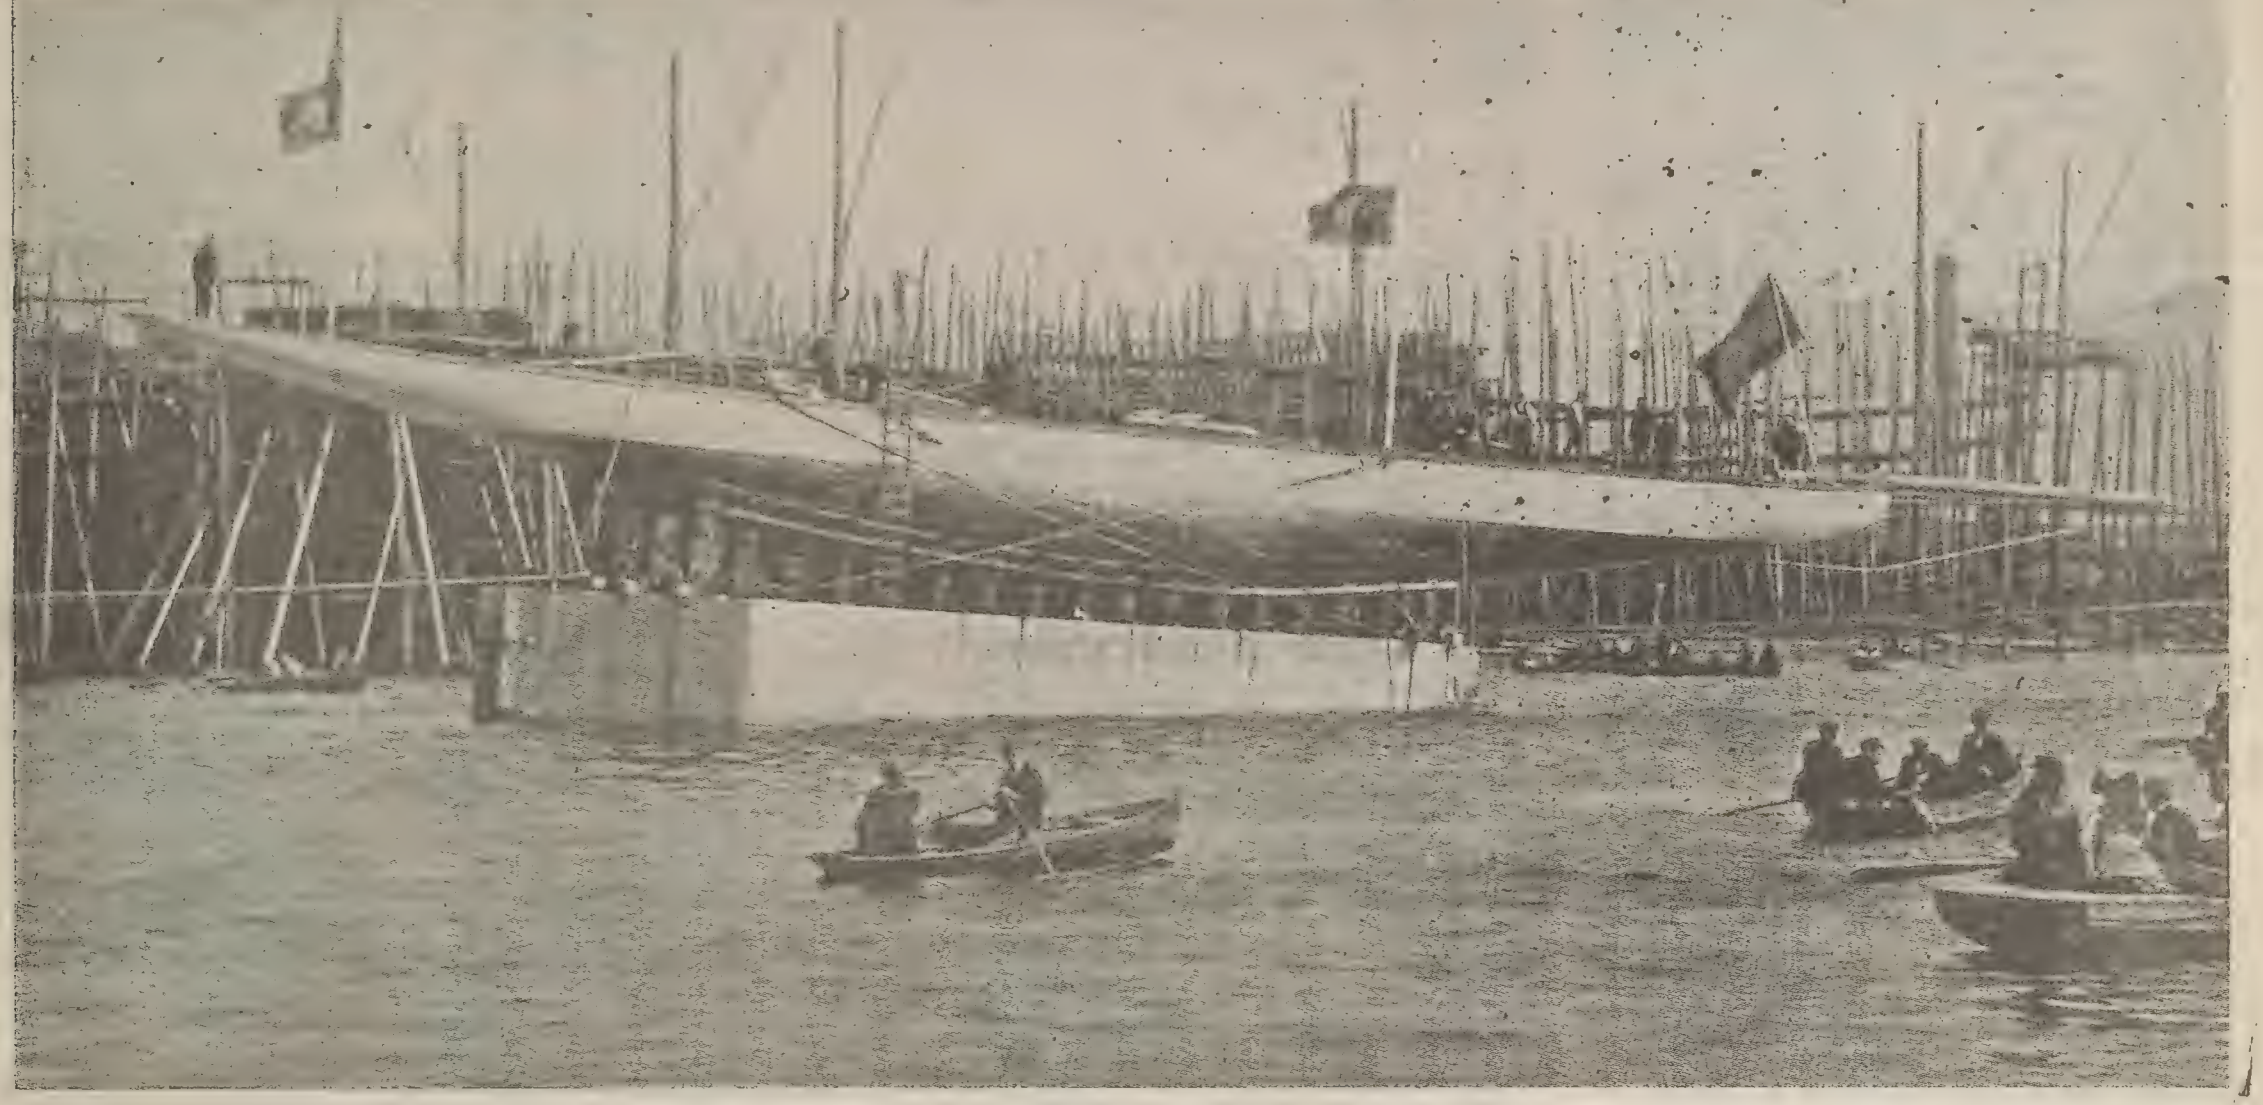
In the summer of 1862, when on a cruise in my little sloop yacht Jerry Bryant, a jolly crew consisting of four Derby, Conn., boys and the writer found themselves flying high and dry on a sand bar in the lagoon at Holmes Hole—since then renamed Vinyard Haven. We had run on the bar for the purpose of scrubbing our boat. While so occupied a trim yacht somewhat smaller than ours sailed up the harbor and anchored a few hundred feet distant. Her sails were no sooner furled than a yawl containing two men put off from her and ran up under our stern, and one of the men hailed us with the query, "Is that the fast sloop from New York?"

We told them it was, then invited them aboard. The man who had hailed introduced himself as Dexter Stone and presented his companion as John B. Herreshoff, from Bristol, R. I. After talking boat for awhile with Herreshoff, who was wearing dark blue spectacles, I was informed that he was totally blind. He told me that his yacht was named Kelpie, that he had designed and built her, and having heard that my boat was very fast had come all the way from New Bedford to ask if I would sail a race with him just to test the speed of his Kelpie. I said we would be happy to do so, but thought we could easily win, because our boat was much larger than his and had been built by David Kirby. He then very coolly informed me he would "let me know as to that after he had looked at the shape of my boat." Naturally, we boys wondered how a blind man proposed to see anything. But he soon settled matters by taking off his boots, climbing down to the sand bar and feeling along and around and under Jerry Bryant from stem to rudder.

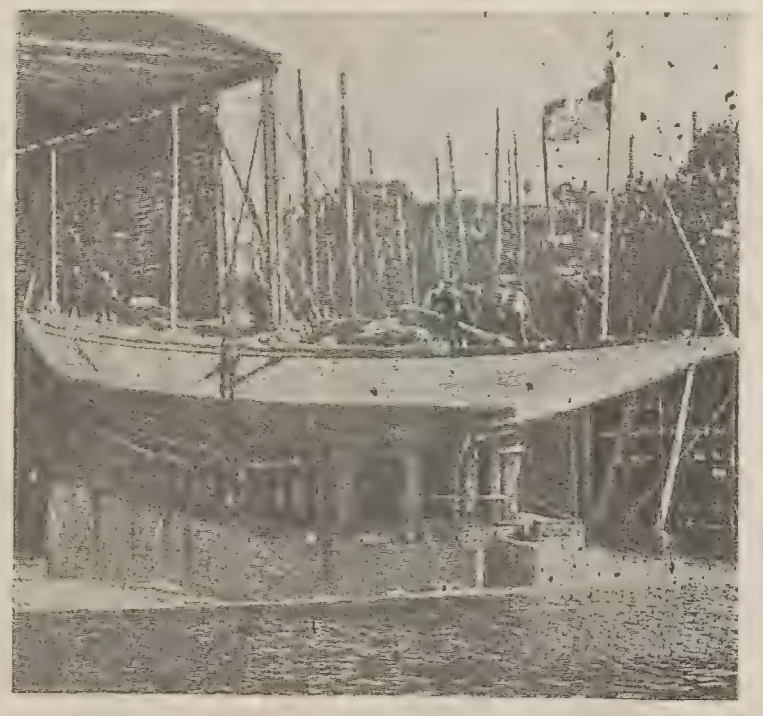
After again coming aboard he quietly remarked that Kelpie could beat us to windward, though possibly our greater length might enable us to run a trifle faster sailing free. Well, the next day the race was sailed and Kelpie won handsomely, much to our astonishment, for up to that time we had found nothing of our size that could sail with us.

Just before bidding us good-by, Herreshoff remarked to me, "I'm intending to commence a yacht building business." "All right," I replied; "make me a model for a 40ft. sloop yacht and if it suits I will let you build from it." The model did suit. Johnnie, as we had learned to call him, built the yacht, and during the twelve years that I owned and sailed Qui Vive we never met a boat of any size or kind that could sail as close to the wind while very few were able to hold her with the wind from any direction.

Most of Qui Vive's racing was done in New York and Connecticut waters, and to her remarkable speed was due the first fame of the Herreshoffs.



SHAMROCK II.
From the Yachtsman.



SHAMROCK II.
From the Illustrated Sporting and Dramatic News.

John Herreshoff, I believe, can to-day take a block of wood and with a jackknife whittle out a model that would equal in speed the best boat yet produced by any of the merely "scientific designers," so called, with their eyes wide open. The photograph of Qui Vive, shown herewith, illustrates what a Herreshoff yacht of nearly forty years ago looked like. Her dimensions were: Length over all, 42ft.; length waterline, 37ft. 6in.; beam, 15ft. 2in.; draft with centerboard up, 3ft.; length of mast, 50ft.; length of boom, 50ft.; foot of jib, 26ft. Her cabin contained four full-sized berths with cushioned transoms in front of them. She had a stateroom with double size berth, two berths in forecastle, a large butler's pantry, and every convenience for comfortable cruising.

THOMAS CLAPHAM.

ROSLYN, N. Y., Feb. 21.

Orizaba.

MR. HENRY C. PIERCE, of St. Louis, has ordered from Messrs. Gardner & Cox the largest steam yacht yet turned out by an American yacht designer. Orizaba, as she is to be named, will be built at Mr. Lewis Nixon's Crescent Shipyard, Elizabethport, N. J., and she is intended for deep-sea cruising; her speed will be fourteen knots, and she will have bunker capacity sufficient for her to steam 6,000 miles without recoaling. The designers will have entire charge of the vessel from the designing of boilers and engines down to the furnishings and decorations. Her dimensions are as follows: 258ft. over all, 195ft. on the waterline, 30ft. beam, 14ft. draft, 20ft. depth of hold, and she will be about 1,000 tons displacement. The freeboard forward is 18ft. Her large single funnel, together with her simple rig and high freebroard, gives her a most dignified and powerful appearance. Orizaba is fitted with twin screws, and her engines consist of two four-cylinder triple expansion engines of 2,400 horse-power. The two Scotch boilers have a working pressure of 200lbs. Much time has been spent by the architects in laying out the cabin plans for the owner and the crew. To obtain the amount of accommodation made necessary by the requirements, the type of the later English steam yachts, such as Mr. Higgins' Varuna, has been adopted with the bulwarks carried up to the hurricane deck. In following this method the usual deck houses and gangways on the main deck are done away with, and the great gain in space gives room for large and airy quarters on the main deck in addition to those below. The forecastle is in the forward part of the vessel, occupying part of the main and part of the lower decks; the deck crew are housed on the main deck, while the firemen and the oilers are directly below on the lower deck. Aft of the crew's quarters come the officers' staterooms. These include six staterooms, messroom and two bathrooms, which are fitted with hot and cold shower baths; a separate galley

is also furnished for the officers. On the main deck forward of the engine space is the dining room, 26 by 25ft., paneled in teak, elaborately carved. The dining room connects with the pantry and owner's galley, and is reached from the deck and below through a small anteroom, which is also finished in teak. In the after end of the machinery space on this deck is the laundry and drying room. These rooms are fitted with the most approved laundry machinery. Adjoining this is a bath and dressing room intended for the use of those who want to take a swim alongside, and in returning to the vessel the wet bathing suits may be removed there and a fresh-water shower may be enjoyed. Bath rooms, laundry, galleys and pantries will have tiled walls and floors. Aft of the engine space on the main deck is the library, which will be finished in Circassian walnut; the chairs, bookcases and tables will be made of the same material. Aft of the library is a small room from which stairs lead to the lower deck, and further aft is a music room 26ft. long, finished in white mahogany and satin wood. Forward of the machinery space on the lower deck are located the owner's quarters; they include the owner's stateroom, 13 by 12ft., with a bath room adjoining on the port side and a sitting room 10 by 12ft. on the starboard side; these rooms are finished in mahogany. Forward to starboard is a large room 14 by 10ft., for the owner's sons, and adjoining this is a room for the tutor and secretary. On the port side are rooms for the doctor, valet and a bath room. The floors and walls of the bath rooms are tiled, with the exception of the owner's, which is of marble; all are fitted with hot and cold, fresh and salt water, as well as shower and needle baths. There is 8ft. of headroom throughout. Aft of the engine space there are four large staterooms finished in white mahogany and two bath rooms and a large apartment 28 by 14ft., to be used as a sitting room; still further aft are other staterooms for the children, maids and nurses, as well as bath rooms, linen closets and sewing room. On the hurricane deck, which extends the entire length of the vessel, and from side to side, is a deck house fitted up as a smoking room and a study for the owner's sons. Above this deck house is the bridge, which runs the full width of the ship, fitted with steam steering gear, search light, engine room telegraph, and telephone to all parts of the vessel. The electric equipment of the yacht will include electric curling irons in staterooms, electric irons in the laundry and electric fans for ventilation. The closets will be fitted with automatic lights, which will light when the doors are opened. The electric plant includes two dynamos and a storage battery, furnishing a current for 700 lamps. The yacht will be constructed of steel and will be schooner rigged. At the davits she will carry two power launches, a sailing boat, cutter and dinghy. Orizaba will be completed for the season of 1902.

Launch of Constitution.

BRISTOL, R. I., May 6.—The successful launching of Constitution took place to-night at 8:30 at high water, and as the boat started on her short journey down the waves Mrs. W. B. Duncan, Jr., broke a bottle of wine over the bows and named her. The launch was witnessed by a large number of people, among whom either then or during the day were J. Rogers Maxwell, August Belmont, Mr. and Mrs. C. Oliver Iselin, Mr. and Mrs. Royal Phelps Carroll, Johnston de Forest, Newbury D. Lawton, S. Nicholson Kane, Jas. A. Stillman, J. V. S. Oddie, Mr. and Mrs. F. G. Bourne, Mr. Henry Walters, and many others.

It was, of course, entirely dark at the time when the launching took place and the electric lights did little more than to make the darkness visible. No satisfactory view could be had of the operation. At the same time photographers were busy, during the vessel's course down the ways, taking flashlight pictures, some of which are likely to give satisfactory views of the launch.

A detailed description of the boat as seen must be postponed until later.

From the time Constitution began to move until it reached deep water the time was a little over fourteen minutes. After the launch she was towed back to the wharf and moored there, and preparations were made for stepping the mast on Tuesday and at once going on with the rigging. Her mast and spars are said to be larger than those of Columbia, with which Constitution has usually been compared, and the sail area will be greater.

Southern Gulf Yachting Association.

NEW ORLEANS, La., April 30.—*Editor Forest and Stream:* The Southern Gulf Yachting Association was organized at New Orleans, April 28. It embraces all the yacht clubs on the Louisiana, Mississippi and Alabama coasts, and the objects are to encourage uniform rules and to establish a racing circuit along that stretch of the waters of the Gulf of Mexico. The club's embraced in the organization so far are the Southern Y. C., New Orleans, La.; the Bay-Waveland Y. C., Bay St. Louis, Miss.; the Pass Christian (Miss.) Y. C., the Biloxi (Miss.) Y. C., and the Mobile (Ala.) Y. C.

The officers elected were: A. Baldwin, Southern Y. C., President, and S. D. Sampsell, Southern Y. C., Secretary, and a Vice-President from each of the other clubs on the circuit, as follows: J. C. Bush, Jr., Mobile Y. C.; Walter Gautier, Pascagoula-Scranton Y. C.; T. P. Dulion, Biloxi Y. C.; J. H. Menge, Jr., Pass Christian Y. C., and E. J. Bowers, Bay-Waveland Y. C. Racing dates were fixed as follows for this year: Biloxi, July 4, 5 and 6; Mobile, July 13 and 14; Pass Christian, July 20; Bay-Waveland, July 27; New Orleans, Aug. 6 and 7.

S. D. SAMPSELL, Sec'y Southern Y. C.

Yacht Club Notes.

Recent amendments to the racing rules will, it is said by certain members of the New York Y. C., throw the 51-footers out of their present class. These yachts had many interesting races last year, but it seems that many of them will this year have to pass up into the Wasp or 60ft. class. One of the amendments has changed the point of measurement for the length of the topmast from the heel of the spar to the upper throat halyard block. This, in the case of the 51-footers, causes them to overrun the class. This will possibly include the new Maxwell craft being finished by the Herreshoffs. When these amendments were made there was no suggestion of an intention to legislate the 51-footers into another class. There still remains a remedy, for the Regatta Committee of the New York Y. C., with the approval of the Commodore, may hold special races for any set of boats, making them a special class.

COM. HOYT announces the appointment of Wm. G. Newman as Fleet Captain, the Rev. Chas. L. Newbold as Fleet Chaplain, and W. I. Cocke, M. D., as Fleet Surgeon. The Board of Trustees announce the following appointments:

Regatta Committee—Edw. M. MacLellan, chairman; Charles D. Mower and Robert Jacob.

House Committee—Wm. W. Phillips, chairman; W. Forbes Morgan, Jr., and Clendenin Eckert.

Delegates to the Yacht Racing Association of Long Island Sound—E. M. MacLellan and Robert Jacob.

Library and Art Committee—Guy Standing, chairman; Julian Rix and Clendenin Eckert.

The club house will be opened for the season on Saturday, May 11.

New Publications.

"The Love of Sport."

"The Joys of Sport," by W. Y. Stevenson, illustrated by G. R. Brill, is the title of a work which within its 226 pages contains a series of kindly satires on the diversions of civilized mankind. Thirty-one kinds of sport are succinctly treated as to foibles and fallacy, namely: Salt-water fishing, fencing, sailing, pigeon shooting, boxing, track athletics, polo, bear hunting, automobiling, fresh-water fishing, fox hunting, basket ball, cricket, tennis, bicycling, baseball, deer hunting, pool and billards, rowing, skating, golf, swimming, football, duck shooting, handball, crabbing, hunting mudhens, coasting, horse racing, croquet and bowling. There is a proficiency of the mental phase of the subject which compasses the special mental and physical. As an illustration of the humor of the talented author, the following excerpt, concerning pigeon shooting, is presented for the edification of the gentle reader: "The peculiarity of pigeon shooting is the peculiarity of the men who do the shooting. Each man has his own especial little tricks, by means of which he thinks his marksmanship is improved. I knew a man once, a really fine shot, who would never stand on the raised platform leading to the traps, but, rain or shine, snow or wind, he would invariably take his position on the grass beside the mark, and if through any unforseen cause he could not stand on this spot his shooting was of the poorest description. Another well-known wing shot cannot bring his birds down unless he wiggles his right thumb just before he fires. As to the wearing of certain coats and hats or the using of a certain make of shells, the majority of pigeon shooters are absolutely helpless, unless these various appurtenances are at hand. Singularly enough, this does not prevail to so great an extent as one might suppose in regard to guns. I know one man in particular who doesn't care a rap as to what make of gun he uses, provided he can have his shells loaded with his favorite brand of powder.

"If you ever care to find out how cheap and small you can be made to feel just go to some popular gun club and stand at the traps before forty or fifty enthusiasts, and after posing for a moment or two in the most approved style, fire both barrels, and then hear the dreary cry of the referee, 'Lost bird.'

"Some men never seem fully to get over the nervousness caused by having their actions watched by so many people, and even old hands at the game fall down at times.

"A dead bird is one which is gathered within the 50-yard circle or boundary. A lost bird is one which breaks all family ties and strays from the home circle, never to return. An easy bird may be either a young lady whose acquaintance you make quickly or a pigeon whose obsequies are easily attended to. A bird is considered as half shot when it staggers drunkenly around in the air, showing that the load has gone to its head. While if you speak of 'drivers,' 'quarterers,' 'towerers,' and 'incomers,' you refer to the direction of their flight, and not to golf clubs, 25-cent pieces, the William Penn statue or Andrew Carnegie.

"It is amusing to watch the way the different marksmen walk out to the traps. Each man has his own method, and nothing can make him alter it in the smallest degree, for he firmly believes that if anything should be changed his chances to win are gone. Some of them hand in their bird tickets before they shoot, and some after. Others will hand in bunches of ten or twenty, while others invariably forget them, and have to go back for one each time. Some men walk out in a hurry, while others stroll down the platform trying hard to appear unconcerned, and the expression of most of their faces would cause you to believe they were on the way to be guillotined. For pigeon shooting is a very serious thing and must be treated with becoming gravity and respect, and the lengthy discussions after the match as to the direction of a certain bird's flight, or the drift of No. 6 shot, as compared with No. 7½, would make you think that the laws governing the universe were being discussed instead of merely the day's sport."

Concerning sailing, the humorist turns philosophic, and concludes with the remark that "The proper way to go about learning to sail is to be taught to swim, to never lose your temper, to get used to staying in wet clothes for hours, to be quick with your feet and hands, to have a rhinoceros-like hide all over your body, and to carry an accident policy."

All the other subjects are treated in a similar breezy, original manner.

"Tell me a story, papa."
"No; go to bed."
"No, sir! Tell me a story."
"If I do will you go to bed?"
"Yes."
"Well, once upon a time there was a great big bear that caught a hunter in the woods and started to hug him to death."
"In what woods?"
"Oh, I don't know—some woods."
"Did the bear hug him to death?"
"No; just then two big tiger policemen came along and run the bear in for violating the game laws. Now go to bed."—Indianapolis Sun.

Rifle Range and Gallery.

Fixtures.

May 30.—Pohlmann's Pavilion, Jersey City Heights.—Tournament of Our Own Shooting Society.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Our Own Shooting Society.

HOBOKEN, N. J.—The Our Own Shooting Society elected officers Wednesday, May 1, at its semi-annual meeting, held at headquarters, 110 Grand street, Hoboken. Many of the society's officers were re-elected. The men who will conduct the affairs of the organization during the ensuing six months are: Captain, Louis Christ; First Lieutenant, Herman Warnken; Second Lieutenant, Frederick Lohman; Third Lieutenant, Robert B. J. Olbeter; Financial Secretary, Adam Schmitt; Recording Secretary, J. H. Kruse; Treasurer, Lesser L. Levy; First Shooting Master, Herman Bahn; Second Shooting Master, John Spinck; Marshal, Herman Ehrlich; Adjutants, Julius Holm and Chas Drees; Board of Trustees, August Jacobsen, Chairman; Owen Smith, W. F. Dilger, John Chartrand and Dr. F. C. Wolff; Finance Committee, Fred Bunger, Chairman; Charles Bischoff and C. G. Paul.

Robert Goldthwaite, Charles Bischoff and Albert Stahmann were elected to membership. This brings the total up to 168.

At the conclusion of the meeting the members returned to the society's shooting ranges and bowling alleys. Excellent scores were made on the targets, as these records will show: Capt. Louis Christ 232, H. D. Hencken 224, Wm. F. Dilger 235, Fred Bunger 233, Gus Ising 216, J. H. Kruse 239, Jere Kennedy 219, Charles Drees 228, John Spinck 228, Lieut. Fred Lohmann 224, Max Pfundheller 228, A. Jacobsen 219, J. Clair 217, Lieut. Herman Warnken 222, L. L. Levy 214, A. Meyns 235, Henry Hohn 214, Lieut. Robert B. J. Olbeter 222, Dr. F. C. Wolff 224, Capt. Aug. Rentzing 221, Herman Ehrlich 217, Wm. C. Schmidt 226, R. Goldthwaite 243, H. A. Mohrmann 217, John Schreier 224, Herman Bachmann 206, Wm. Haag 214, Wm. Donald 214, T. Meehan 222, H. Peyerimhoff 214, Herman Bahn 236, Julius Holm 212, Fred Bunger 239, C. G. Paul 219, H. C. Streckfuss 212, Charles Bischoff 241, Geo. Neuner 224, Owen Smith 232, Walter Travis 232.

Rifle at Shell Mound

SAN FRANCISCO, April 29.—Marksmen spent yesterday at Shell Mound in a driving rain. A large attendance was present. F. E. Mason and Dr. Rodgers in the Golden Gate handicap shoot did some good work. Most of the clubs held bullseye shoots. Scores of the day:

Golden Gate Rifle and Pistol Club, rifle score, handicap, 10 shots: Dr. L. O. Rodgers 230, 225; M. F. Blasse 209, 191; D. W. McLaughlin 223; F. E. Mason 232, 221, 211; C. M. Henderson 213, 210. Gold medal: C. M. Henderson 217, 224; M. F. Blasse 170, 192; J. Kullman 180, 194. Silver medal: W. F. Blasse 166, 166, 189, 179.

Golden Gate Rifle and Pistol Club monthly medal shoot, pistol range, handicap: J. E. Gorman 96, 94. Silver medal: W. F. Blasse 79, 81, 78, 76; G. Tammeyer 71, 63; M. F. Blasse 77; J. Kullman 69.

Red Men Schuetzen Company, monthly medal shoot: First champion class, W. Dressler, 373; first class, Capt. Henry Grieb, 401; second class, Schuetzen Meister George Wagner, 396; third class, Herman Schult, 330; fourth class, E. Tamke, 338; best first shot, Capt. Henry Grieb, 23; best last shot, W. Dressler, 21.

Norddeutscher Schuetzen Club, monthly medal shoot: First and second champion classes and first class, not won; second class, Henry Huppert, 367; third class, William Doell, 383; fourth class, John Woebcke, 301; best first shot, D. Salfield, 24; best last shot, A. Hohmann, 24.

German Schuetzen Club, monthly bullseye shoot: H. Hellberg 247, F. E. Mason 352, C. M. Henderson 681, L. N. Ritzau 793, John Utschig 841, John Gefken 922, E. H. Goetze 943, William Doell 970, and A. Jungblut 1105.

ROEEL.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, April 28. Conditions, 200yds., offhand, at the German ring target. Payne was declared champion for the day with the good score of 224. Weather, clear; thermometer, 80; wind, head on, from 10 to 2 o'clock:

							Honor.

PETERS CARTRIDGE COMPANY'S TOURNAMENTS.

May 21-23.—Henderson, Ky.—Amateur tournament given by the Peters Cartridge Company; two days targets; one day live birds. John H. Mackie, Mgr.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The Birch Brook Gun Club, of Lynn, Mass., announces its fourth annual prize series, commencing June 1 and ending Aug. 31. Concerning the subject the club presents the following information: "List of prizes: First, Winchester repeating shotgun; second, sole leather gun case; third, pair of rubber hip boots; fourth, shell carrying case; fifth, 6¼lbs. nitro powder; sixth, Thurman shooting blouse; seventh, 25lbs. chilled shot; eighth, Powers cleaning rod; ninth, loading block; tenth, 100 Smokeless shells; eleventh, Tomlinson cleaner; twelfth, Heikes holder. Conditions: Thirty targets, thrown from magautrap, to constitute the prize event. Prize event begins each Saturday at 3 P. M. Open to all; no entrance fee. Targets, 1½ cents each. Distance handicap—subject to readjustment at any time. Eight scores must be shot to qualify for prizes. Contestants shooting the full series may select their eight best scores. Ties, should there be any, will be decided by shooting the regular prize event between the hours of 2 and 4 P. M., Labor Day, Sept. 2, when there will be an all-day shoot, and high guns will win. The club does not officially encourage sweepstake shooting, but those desiring to indulge will be furnished all facilities. Practice shooting before and after prize event. No postponement on account of weather. No provision made for late comers in prize event. Wakefield & Lowell cars leave Central square for Elm street, Lyndhurst, at 12:07 P. M., and every thirty minutes. Ammunition for sale on the grounds. Wm. Wetherbee, J. Walter Hay, Chas. F. Lambert, committee."

Mr. Chas. T. Stickle, secretary of the Springfield (Ill.) Sportsmen's Association, writes us as follows: "Owing to the fact that the American team that will visit Europe finds it necessary to leave Springfield on Thursday morning, May 23, at 9 A. M., in order to eat in the steamer sailing from New York on Saturday, and as each member of the team expressed a desire to participate in the Dupont Smokeless powder championship trophy event, it has been decided to shift the above-named event forward to Tuesday, May 21, and schedule the Board of Trade Diamond badge event for Thursday, May 33. This arrangement will bring the Dupont Smokeless trophy for Tuesday, May 21; the State team shoot at live birds for Wednesday, May 22; the diamond badge shoot for Thursday, May 23, and the State target team shoot, Friday, May 24. The only change in programme is shifting the Dupont and diamond badge events into each other's place as given in the programme, and Illinois shooters should take particular notice so that the team representatives in the State events can make the necessary arrangements to be present on the days now selected for the team races."

The Peters Cartridge Company will give an amateur tournament on June 13 and 14 at Pensacola, Fla., under the auspices of the Pensacola Gun Club.

The second annual tournament of the Oklahoma Territorial Gun and Sportsmen's Club, to be held at Guthrie, Oklahoma, May 16 and 17, has eight target events on the programme each day. Entrance $1, $1.30, $1.50 and $2; added money in each event. Shooting commences at 9 o'clock. Magautrap rules govern. No. 6 on the first day is a team shoot of five men, 15 birds per man, for the team championship of Oklahoma. Open only to clubs belonging to the Association. The members of a club must live in or near the city they represent. Each club may enter one or more teams. One money. No. 6 on the second day is for the championship of Oklahoma. Open only to members of the Association. One dollar of the entrance goes to help pay for the championship cup.

The first annual amateur championship target tournament of the Blue Grass region of Kentucky, to be held at Paris, Ky., May 15, under the auspices of the Blue Grass Gun Club, has seven 15-target events, $1.50 entrance, for the forenoon competition, and three similar events in the afternoon, besides, at 2 o'clock P. M., sharp, the championship event at 50 targets, $2.50 entrance. The winner to receive as his absolute property a handsome sterling silver loving cup, emblematic of the amateur championship at targets of the Blue Grass region of Kentucky, for the year 1901, and 40 per cent. of the purse. To second 30 per cent., to third 20 per cent., and to fourth 10 per cent. of the purse.

The Lincoln, Ill., Daily News-Herald of April 29 contains the following concerning one of America's greatest shots of years now past, but yet not so long ago. It states: "Capt. A. H. Bogardus, the old champion wing shot of the world, has just returned from Hot Springs, Ark., where he has been running a shooting school and gallery, with good success. He has used 73,500 .22 cartridges in the last two and a half months, and in the last year he has used 181,000. At the Ferris Wheel Park and at Hot Springs he has taught at least 1,000 ladies and gentlemen how to shoot. He will open his gallery at the Lincoln House May 4 for a couple of weeks before he goes to Chicago."

It has been published that the Carteret Gun Club rescinded its recent ruling concerning its members shooting with professionals. It would be more correct to state that the ruling was modified so that it applied to members shooting on grounds where gate money is charged. A daily paper of New York calls attention to the fact that at the Gun Club of London an admission fee of about $1 is charged to any one who desires to enter to see the competition. As all the Carteret members are eligible to shoot in the Gun Club events, and do so when abroad, the question now naturally arises: Where are they at under the ruling?

The Central Gun Club, of Duluth, Minn., at its annual meeting, held recently, elected a list of officers as follows: President, Paul Sharvy; Vice-President, F. E. Berry; Secretary and Treasurer, J. W. Nelson; Field Captain, D. H. Day; Lieutenant, Thomas Storey; Official Referee, A. B. Thomas. The clug now has about forty active members and about one hundred and twenty-five all together. Eight new members were admitted at the meeting. There will be a two days' tournament the coming summer, the dates to be decided upon later. The grounds are open for practice and shoots on Saturdays and Wednesdays.

The Waukegan, Ill., Gun Club announces the programme of its spring tournament, May 30 and 31, each day being at twelve target events, 10, 15 and 20 targets, entrance based on 10 cents per target. The total entrance for each day is $17. Shooting commences at 10 o'clock. Interstate rules govern, excepting that "no bang, no bird," though all fair targets must be shot at. Rose system governs the moneys. Targets 2 cents. Magautrap. Mr. S. H. Kennedy is president of the club; Mr. James Van Deusen is the secretary.

Those who are desirous of keeping a record of their scores in a concise and convenient form will find the vest-pocket score book of Forest and Stream equal to all requirements. It contains Interstate rules, besides being ruled and spaced for all the trapshooters' data in respect to a full record of doings with the shotgun at the traps. Price 50 cents. The Anglo-American team and the shooters who will accompany it will find this little book well worthy of their attention.

Mr. Will K. Park, in his interesting news notes, writes as follows concerning the trapshooting interests of Philadelphia: "Flying target shooting in Philadelphia is certainly booming at the present time. There are over fifteen active shooting clubs in this city, all having their own grounds, and up-to-date arrangements. A new club was opened last week, the Athletic Club of Philadelphia starting a magautrap in operation at their summer home, near Essington, Pa."

In Von Lengerke & Detmold's, at 318 Broadway, is a hawkish sight this week. Mr. J. Applegate, of Freneau, N. J., took a day off with his Francotte gun and killed about a bushel of hawks, mostly of the smaller kinds, which are so destructive to the game birds. He sent the bunch to the above address, where they are on exhibition as a lesson of what a game protector can practically do over and above the orthodox "Whereas" and "Be it resolved."

Mr. G. V. Dering, secretary W. L. of G. C., Columbus, Wis., writes us as follows: "Kindly announce through the columns of Forest and Stream the dates for the Wisconsin Trapshooters' League tournament as June 5 and 6, to be held on the grounds of the Columbus Gun Club. Professionals and manufacturers' agents are welcome to shoot for birds only. This will be the banner shoot of Wisconsin. Programmes out May 10."

Mr. John Wright announces that the conditions of his launch shoot at Interstate Park, May 22, will be at 10 live birds, $10 entrance, birds extra; handicaps 25 to 33yds.; class shooting; boat to first; 60 per cent. of surplus to second; 40 per cent. to third; seventeen entries to fill. Competition in this event to begin on the arrival of the 1:54 train from New York. Sweepstake shooting commences at 10 o'clock.

At a meeting of Enterprise Gun Club, of McKeesport, Pa., held May 4, the following officers were elected for the year: President, Fred Stephan; Vice-President, Leroy W. Cannon; Secretary, Geo. W. Mains; Treasurer, J. F. Calhoun; Captain, Chas. H. Baird; Executive Board, Fred Stephan, Geo. W. Mains, Chas. H. Baird, Robert Knight, H. V. Bradshaw.

Mr. H. E. Getchell, of Woonsocket, R. I., will accompany the American team of trapshooters to England, as an independent visitor, yet as a patriotic rooter. It is possible that several more will cross the herring pond to witness the great match. A dress suit case with each individual will serve to carry a dress suit over and the winnings on the return trip.

After a very satisfactory visit to New York, where he spent several days energetically furthering the interests of the Anglo-American trapshooting match, in which he was most pleasingly successful, Mr. Paul North returned to Cleveland, O., on Thursday of last week. He has arranged to sail for England on the 18th inst.

Messrs. W. Fred Quimby and Harold Money arranged to leave for St. Louis, Mo., on Monday of this week, for their new field of business activity in the interest of the Western Cartridge Company.

Mr. S. M. Van Allen, of Jamaica, L. I., and Mr. Sim Glover, of New York, both of whom are highly expert with the shotgun, have arranged to shoot a match at live birds in the near future.

The opening target shoot of the Garfield (Chicago) Gun Club's season was well attended. There were nineteen contestants in the trophy event at 25 targets. Mr. J. S. Boa led in Class A with 24, Dr. Meek, J. Wolf and Midgley tied on 21 in Class B, H. N. Delano was alone with 19 in Class C.

The match between Messrs. T. W. Morfey, of Interstate Park, and James F. Somers, of Easton, Pa., at 50 live birds, $100 a side, each man standing at 29yds., Morfey allowing Somers 5 kills, is probably off, as Mr. Morfey can learn nothing as to the date and place of it.

Mr. C. E. Willard, after a long trip through the United States in the interest of his company, spent a few days in New York, whence he departed for Chicago about the middle of this week. He was in most excellent health, and reported a successful trip.

Concerning the scores and percentages of the Garfield Gun Club members, published in our columns last week, the secretary of the club, Dr. J. W. Meek, sends in the following corrections: J. Gardner, 40—23—.575. C. J. Wolff, 30—20—.666.

In the contest for the medal emblematic of the championship of western Pennsylvania, at New Castle, May 2, between Messrs. Atkinson and Fleming, the latter won by a score of 90 to 86. Mr. Atkinson had held the medal for a year past.

BERNARD WATERS.

Amateur Trapshooters' Tournament.

LAMAR, Mo.—The fourth semi-annual target tournament of the amateur trapshooters of southwest Missouri and southeastern Kansas began here bright and early Monday morning, April 29. The Lamar Club claim to have the best grounds in the State, and having two lines of railroad, the matter of transportation is solved satisfactorily.

Shooters began to arrive on Sunday, and by 9 A. M. there was a fairly average number present at the opening.

The programme consisted of twelve events and a team shoot. The side issue had $15 as high average, divided $5, $4, $3, $2, $1.

Those present during the day were as follows: W. A. Vivian, Columbia, Mo.; J. M. McMillan, Carthage, Mo.; Thomas Norton, Kansas City, Mo.; H. E. Sherman, Kansas City, Mo.; H. C. Johns, Carthage, Mo.; A. Dixon, Joplin, Mo.; Geo. Hickman, Carthage, Mo.; L. Art, Kenomo, Mo.; Joe Leggett, Carthage, Mo.; J. D. Gilkey, Rich Hill, Mo.; R. B. Peebles, Carthage, Mo.; W. C. Gresham, Panama, Mo.; C. B. Platt, Carthage, Mo.; E. M. Gravett, Gravitt, Ark.; J. H. Cox, Detroit; Joe Clinkenbeard, Lamar, Mo.; H. T. McDaniels, Gavitt, Ark.; Count Smyth, Lamar, Mo.; R. E. Sister, Carthage, Mo.; A. McCrea, Lamar, Mo.; G. D. Leggett, Carthage, Mo.; W. I. Sprague, Sedalia, Mo.; L. E. Day, Nevada, Mo.

Then there was Joe Spicer, of St. Louis, and Tramp Irwin, of Chicago, together with Tom Norton and Harry Sherman shooting the programme through just for targets.

The weather was fine; quite warm, considering the backward spring. During the afternoon the wind blew strong directly in the shooters' faces, causing the targets to go rather high. As the trap faced a public road, many stops were necessary to permit teams to pass.

The first average was won by W. A. Vivian, of Columbia, Mo., who made the excellent score of 142 out of 150. He was shooting a strange gun and two or more different shells, and the boys are wondering where he "blew in from" or what he would have done under more favorable circumstances. The veteran, Tramp Irwin, was an easy second, as by losing 15 he was exactly 90 per cent. This is good, for he does not claim to be a target shot. Second and third averages were won by A. Dixon, of Joplin, and A. McCrea, of Lamar, with 17, the next highest being that of H. C. Johns, of Carthage, Mo., closely followed by W. C. Gresham, of Panama, Mo., with 21, who was also tied by J. Leggett, of Carthage, Mo.

The five-man team championship brought out only two teams, Lamar and Carthage, shooting at 75 targets, or 15 each man. The Lamar boys were successful, winning by 2 birds, score 61 to 59.

First Day, April 29.

No. 13 was a team shoot between Carthage and Lamar.

Second Day, April 30.

The sun came forth this morning, and the longer it shone the hotter it got, until the shooters were compelled to don negligee shirts and to seek shade. It has not been many days since there was snow falling, and to-day it is about 90 in the shade; but it maketh the heart of the farmer glad, and the shooters are glad to welcome it.

There was a falling off in names when the entries were gotten this morning, as some had gone home during the night. The additions were from the city by the Ozark, Springfield. The delegation was composed of A. Elos, B. L. Routt, Dug and J. F. Dunckel. They shot in all events, and made very good average scores.

Yesterday we were surprised by Vivian, and to-day by McDaniels, the gentleman from Arkansas. Losing 31 targets the first day, it seemed strange to see him drop but 3 out of his first 80, and then wind up with a total of 15 goose eggs. It shows what confidence in one's loads has to do with it. He started out and ran up to 80 with the same load, and then changed, and using several different loads, fell off, not making a stranght after the change.

There was the Tramp trying to break them all, but by "fudging" did not get to making any straight until late in the day.

Mr. Folger, of Carthage, was shooting splendidly, smashing out his last 40 straight, and tieing with Tramp and McDaniels for first honors. McCrea, besides managing the shoot and working all the time, made the good score of 17 lost ones, and was hard pressed by Johns and Leggett with 18 and 19 respectively. The full scores hereto annexed will show what the others did:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

New Utrecht Gun Club.

Interstate Park, L. I., April 27.—There was a large attendance at the New Utrecht Gun Club's shoot to-day, which, in addition to other events, determined the winner of the monthly cup.

Event 4 was the monthly cup final contest, in which Messrs. E. W. Reynolds, H. M. Brigham, G. Stevenson and F. B. Stevenson killed straight. Mr. G. Stevenson won in event 1. Mr. H. M. Brigham won in event 2, killing 22 straight. The monthly cup event was won by Mr. G. Stevenson, who killed 20 straight, shooting out three others in the ties.

The birds were an extra good lot as a whole.

Trap at Eltingville.

Eltingville, Staten Island, May 3.—The Jeannette Gun Club and the Columbia Fishing Club held a shoot to-day on the beautiful grounds of the latter organization. The contest was at live birds. Mr. L. H. Schortemeier won first with 10 straight. H. Noble was second, C. Steffens third, Thomford fourth, N. Brunie fifth and J. H. Kroger sixth. An eleven-man team race at 4 live birds was won by Schortemeier's team, whose score was 30 to Steffens' team's 29:

H Noble, 25	1120221212— 9	121
N Brunie, 29	0002211210— 6

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J., April 27.—Joyful notes! Thank heaven for the fine weather that we had on the day of the shoot; that we had a big crowd; that all the boys were in good humor; that I have a twelve-man team for the Frankford shoot; that it is going to win by the same token; and finally that I made a good score for the first time with a pump gun.

Feeling somewhat indisposed on the day of the shoot, Mr. J. R. Taylor very kindly took the job of opening up and running things in my place, and I did not get down until late in the afternoon. The banging of the rainmaking squad set my blood to gurgatating, and it was impossible to keep out of it, all of my work being done with Mr. Taylor's pump.

The boys were shooting in very good form, that of the recently acquired members being especially creditable. After Frankford, the N. J. S. S. A. shoot at Newark will claim our attention. Members of the White Hill Club were visitors, and enjoyed themselves at the traps:

Hudson Gun Club.

Jersey City, N. J., May 6.—The appended scores indicate a successful shoot. Schorty was high with a fraction under 93 per cent. There were 1,705 targets thrown. The weather was delightfully pleasant, though there was much wind, which made difficult shooting. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	Shot at.	Broke.

A. A. S., Ass't Sec'y.

Missouri State Shoot.

St. Louis, May 4.—The time is now at hand to say a few words in reference to the Missouri State shoot, which takes place in St. Louis during the last week in May.

Our programme will be in the mail long before this is printed, and the sportsmen of the country will have an opportunity of looking it over.

Most of the trapshooters can go to only one tournament a year, and they like to go where the best attractions are offered. We draw our shooters not only from Missouri but Kansas, Illinois, Arkansas, Tennessee, Oklahoma and Texas; each sends large delegations The reason of this large attendance is the liberal character of the programmes in former years. The management does not take a cent from the purses, beyond the price of the targets or live birds; in fact, it has added to them. Added money is a great drawing card, and to each target event the St. Louis Shooting Association has added $10 to the 15-target races and $15 to the 20-target races, except the prize events.

In the team race we guarantee $100. We add $25 to the State championship, and a like amount to the Interstate contest. The prize events carry valuable prizes, such as a Parker gun, an Ithaca gun, a Stevens rifle, a case of Mumm's champagne, and many other articles of value and usefulness.

The number of targets has been reduced to 140 per day, so that it will be a saving of both shells and money, and sportsmen will have time for becoming better acquainted with each other, also time to see something of St. Louis.

The tournament will be managed by Dave Elliott, who has entire charge of Dupont Park.

Two magautraps and Fulford's live-bird underground traps are competent to trap 8,000 targets a day and 1,000 birds. If we do that it will be satisfactory.

The Republic cup and the Lemp trophy make two events of national importance, each one being worth a good deal to win.

If you are going to a shoot this year, come to St. Louis, for the following reasons:

First—You will be in good company, and will know a lot of the other shooters.

Second—The programme is attractive.

Third—The Rose system of division of moneys guarantees you a just percentage of the purse.

Fourth—You man win the Republic cup.

Fifth—If you don't win the Republic cup you still have a chance to win the Lemp medal.

And finally—You will become a better shot by shooting here a week with some of the best marksmen in the country, and you will be able to compare yourself with them.

If you have not received your programme write to Herbert Taylor, Sec'y.

Fitchburg Rifle and Gun Club.

Fitchburg, Mass., April 29.—The scores of the Fitchburg Rifle and Gun Club, made to-day, are as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	10	10	10	10	10	10	10	10	10	10	10	10

All unknown angles from magautrap.

New Castle Noter.

New Castle, Pa., May 4.—Herewith inclosed find scores of a shoot held May 2. In the contest for the bronze medal, which carries with it the championship of western Pennsylvania, L. B. Fleming, challenger, won from Atkinson, holder, by the score of 90 to 86. Mr. Atkinson held the medal for more than a year against all, and gives it up to the winner with the best feelings imaginable. It is very probable that some of the experts of the Herron Hill Gun Club, of Pittsburg, will challenge Fleming.

A high wind prevailed during the day, making the flight of the rocks very erratic, but giving us all a much-wanted excuse for our poor shooting.

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Brandreth	11	4	Chadeayne	15	7
Brandreth	11	8	Bedell	12	8

C. G. B.

Wollaston Trap Club.

Wollaston, Mass., May 4.—The regular weekly shoot of the Wollaston Trap Club was held this afternoon.

A brisk northwest wind blew across the traps, but it did not prevent some very good work. Barry was easily high man with 84 per cent.

Events 1 and 3 were straightaway; events 2, 4, 9 and 10 were unknown angles; event 6 regular angles; event 5 reversed, and events 7 and 8 pairs. All events 10 targets. The scores:

Events:	1	2	3	4	5	6	7	8	9	10
Barry	9	8	9	7	8	9	9	9	9	7
Whitmarsh	9	7	..	9	..	..	9	7	7	4

The Proposed Anglo-American Clay Pigeon Match.

We are informed that the arrangements in connection with the proposed match between teams of American and British inanimate bird shooters are taking a definite form. It has been decided to nominate a team of twenty shooters, selected from the best-known shots in this branch of sport. Each member of the team will deposit his own proportion of the £500 of stake money required. The actual shooters in the match will be selected from this team of twenty, the remainder acting as reserve men to take the place of any who may be displaced on account of illness or other causes. The whole of the team of twenty will be considered as members of the British team should the home representatives prove the winners. So far twelve shooters out of the twenty selected have accepted nomination under the conditions above outlined, and there is every likelihood that the list will be completed within the next few days. It is intended that the match shall take place at the grounds of the Middlesex Gun Club, Hendon, but the time has not yet been definitely settled. It is, however, to be hoped that a more convenient date than that at present mooted will be fixed, since the first week of August would find London empty and most shooting men more keenly interested in the early approach of the twelfth than in a competitive match of this description.—London Field of April 20.

Admonished by the Court.

The venerable Judge Allen, of the United States Circuit Court, at Springfield, Ill., was hearing a case a few years ago, in which James C. Courtney was one of the attorneys. The counsel on the opposite side had asked a question of a witness, and Courtney had objected. The point was argued by both sides, and the objection was overruled. The opposite lawyer asked the same question of the next witness, and Courtney again objected, and began to argue it over again. Judge Allen interrupted him with this observation: "Mr. Courtney, you remind me of a dog that keeps barking up the tree after the 'coon is gone." Mr. Courtney subsided.—Argonaut.

The Hon. F. D. Allen possesses a unique souvenir of his college days at Yale of which he is justly proud and which he treasures very carefully. It is only a plain bit of cardboard with a hole in the center, but it has a history, for it is a memorial of the expert marksmanship of Prof. Loomis, the famous mathematician.

One day in the class room Prof. Loomis, in illustrating the principle of the air gun, shot at the card as a target across the room. The old gentleman was a bit proud of his skill, and the boys knew it. Were he ever to miss his aim, they would be extremely delighted, and on this occasion they thought they had caught him at last, for the second time he shot at the card it was apparent that no other hole had been made in it. The class had, of course, assumed that the card had not been hit, and laughed very mirthfully at the professor. But the latter quickly picked up the little target and called attention to the fact that the original perforation was now enlarged, the second missile having struck the edge of the hole first made.

There was never any doubt after that about Prof. Loomis being a crack shot, and Frank Allen esteemed himself lucky in securing the card. That was over twenty years ago, and he has the card yet.—Boston Evening Record.

Peters Cartridge Company's Tournament at Binghamton.

THE Peters Cartridge Company's tournament at Binghamton, N. Y., April 24 and 25, was a very successful affair. The shoot was given for the purpose of reviving interest in trapshooting, which had been somewhat lagging.

Over fifty different shooters competed in the tournament, and outside of the State shoot there has not been a more successful one held in years. The trade was represented by Messrs. Thomas H. Keller, manager of the Eastern agency of Peters Cartridge Company, and John Parker, also representing the Peters Cartridge Company, from Detroit, Mich., and Messrs. A. G. Courtney and Leroy Woodward, of the Remington Arms Company; W. L. Colville, of Dupont Powder Company; E. C. Fort, of the Robin Hood Powder Company; J. R. Hull, of Parker Brothers, and A. H. Fox, of W. R. A. Company.

The purses all paid remarkably well, and anybody shooting 80 per cent. or better would receive more than his entrance back.

The race for high average between W. H. Stroh, of Pittston, Pa., and Windsor Morris, of Baldwinsville, N. Y., was a very interesting one, Stroh bagging 25 in last event, and Morris 22; but Morris won by 3 targets the handsome trophy presented by the Peters Cartridge Company for high average. Thomas H. Keller, in a very neatly worded and appropriate speech, presented the trophy to Mr. Morris immediately after the last shot was fired in the last event.

The shoot was very ably managed by Mr. John Parker, of Detroit, Mich., and complimentary remarks were heard on all sides regarding the successful issue of the tournament and the liberality of the Peters Cartridge Company in giving the shoot.

Mrs. M. F. Lindsley, shooting under the name of Wanda, graced the tournament by her presence, and shot in three different events the last day.

Mr. Windsor Morris, winner of the trophy, is, comparatively speaking, a new shooter, and under the circumstances as regards weather, background, etc., made remarkably high average.

Considering the weather, the attendance was more than could be expected, as it rained continually both days; but ample and plenty protection by tents and club house was afforded the shooters, and the working force was a very complete and efficient one. Mr. W. H. Brown, of Binghamton, was untiring in his efforts to help the management in making the shoot a decided success, and shot remarkably well, considering the amount of work he had to do.

Messrs. Tracy and Pumpelly, of Owego, advertised their shoot, which was to take place the following day.

First Day, Wednesday, April 24.

Events:	1	2	3	4	5	6	7	8	9	10

Townsend vs. McElreevy.

OMAHA, Neb., April 27.—W. D. Townsend, of Omaha, shot J. E. McElreevy, of Nebraska City, a race of 100 targets at the gun club grounds to-day for the State championship and the Dickeybird trophy—an elaborate sterling silver cup. A strong wind was blowing right in the faces of the shooters, so the scores were very poor and not near up to the capacity of either shooter. McElreevy won the cup for the second time by a good lead. During the day there were a number of other shoots both at live birds and targets, scores of all of which are given below.

The Dickeybird trophy will be shot for in open competition at the Nebraska State shoot at Lincoln early next month. Following are the conditions governing contests for this trophy:

For Nebraska amateur championship; 100 targets at unknown angles, under A. S. A. rules, except at open competition, which shall be 25 targets per man. Challenger to deposit the sum of $5 at the time of making challenge, with the W. S. Dickey Clay Mfg. Co., Kansas City, Mo., who will notify holder, which amount goes to present holder of the trophy; loser of match to pay for targets. Holder of trophy to name place and time of shoot, which shall be within thirty days from date of challenge. In open competition, 25 targets per man, $2 entrance, amount less price of targets to go to holder of trophy. The winner of the trophy binding himself to the Dickey Clay Mfg. Co. to comply with all conditions of the competition.

The nominal sum of $5 charged contestants is put so low as to make the event a popular one, and it is hoped that there will be a large number of entries at the coming State shoot.

Event 1, 15 birds, $7 entrance; 40, 30 and 20 per cent.; handicap. No. 2, 10 live birds, $3; 50, 30 and 20 per cent.:

H. S. McDONALD.

Garden City—National Gun Club.

MILWAUKEE, April 29.—*Editor Forest and Stream:* Some time the first part of this year arrangements were made between the Garden City Gun Club, of Chicago, and the National Gun Club, of Milwaukee, for a live-bird contest, fifteen men on each side, at 15 birds each, making a total of 225 birds on a side to be shot at.

The first match took place the first part of March at Milwaukee, at which time the National Gun Club carried off the plum with 190 birds killed, to the Garden City Gun Club's 172.

At that time it was arranged that a return match should be shot at Chicago under the same conditions, the same number of birds and the same number of men, and if the Garden City Gun Club were successful at that time a third match should be shot on some neutral ground.

The match at Chicago took place on the 27th inst., at Watson's Park. The Milwaukee team was very much crippled, owing to the fact that four of its best men—Dr. Williamson, Geo. L. Deiter, Richard Merrill and L. J. Petit—were unable to attend, and we went there with somewhat of a feeling that the game was against us. Nevertheless, all the boys, except your humble servant, were full of vinegar.

There was considerable wrangling after we reached the grounds over a matter that we supposed was settled long ago, and that was the distance. At Milwaukee we shot at 28yds. rise, and we supposed, as we had been informed, that the shoot at Chicago was under the same conditions; but we finally compromised on 29yds., and at about 1 o'clock got down to business.

There was quite a strong wind blowing from the left quarter across the field, which made the right-quarter birds very difficult. E. E. Rogers, captain of the Milwaukee team for the day, won the toss and was the first man to face the traps. The shooting was in pairs, one Milwaukee man against a Chicago man; 8 birds at the first set of traps, then passing over and finishing his score at the second set, while the second shooters took the first set again, and so on through to the finish. Rogers was very unfortunate in his shooting, losing 4 birds, his opponent, Mr. Cumley, losing 1 bird, thus giving the Garden City a lead of 3 birds on the start.

The next pair, Mr. Crane, of the Milwaukee, and Mr. Adams, of the Garden City, cut even with 13 birds each. Mr. Meixner, of Milwaukee, in the next pair, killed 14 to Mr. Miller's 12, giving our opponent but 1 bird the lead. In the next Mr. Potter killed 13 to Mr. Pumphrey's 14, giving our opponents 2 in the lead. In the fifth Mr. Cantillon killed 12 and Mr. O'Brien 10, tieing our opponents, and thus it went, with the score very close, to the finish.

Mr. Case did well with his shooting, bringing down 13 birds to Mr. White's 15, who was fortunate enough to be the only man to kill out straight.

Mr. Meixner and Mr. Blake were the only men on the Milwaukee team who killed 14 each, while our opponents had five 14s.

Your humble servant was the last Milwaukee man to face the traps, and I must confess now that he had several slight attacks of what is called up in the woods "buck fever." Just before being called he was informed that $10 was bet on him, which was not very encouraging, as he has always been opposed to being the means of losing anybody's money, and on top of that, another member of the club cautioned him to keep his nerve; that there was a chance for him to pull the team out, as they were but 2 behind at that time; all of which tended to shatter his nervous system. While he has been able all through the Spanish-American war and the Filipino troubles and the troubles with China to retain his nerve (he being too old to enlist) and shoot fairly well, he was completely unstrung at this time, and lost 3 birds, thus losing the game. He has talked with the members of his own club, and has been forgiven on condition that he never do so again.

There was not a minute from the time the first man faced the traps until the last bird was shot at that the Garden City Club did not know we were there, and I think they realized that it was a pretty close call for them.

At the time of shooting the return match, which will probably be on May 18, at Racine, we hope to regain our lost laurels.

Our treatment by the Garden City Gun Club and the Chicago people in general was of the best, and not one thing during the day came up to mar the harmony and good feeling that existed between the two clubs.

LINDLEY COLLINS,
Sec'y Nat. Gun Club.

Ithaca Gun Club.

ITHACA, N. Y., April 27.—The opening matinee shoot of the Ithaca Gun Club was held under very auspicious circumstances at Ithaca, N. Y., to-day.

The shoot was very well patronized by local shooters and also by trade representatives, who had come from Binghamton and Owego. The trade was represented by Messrs. Keller and Parker, of the Peters Cartridge Company; Colville, of Dupont Powder Co.; Messrs. Louis and Claude Smith, of the Ithaca Gun Company. The Ithaca gun was very much in evidence, nearly every local shooter using an Ithaca gun.

The shoot was managed by Mr. John Parker, of Detroit. Everything passed off pleasantly, and the shoot will have a tendency to boom trapshooting in this locality. The opening of the baseball season kept many of the students away, as there was a game between Cornell and Columbia.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Pigeon Shooting.

CALIFORNIA.—*Editor Forest and Stream:* I read with satisfaction your exhaustive treatise, "Pigeon Shooting at the Traps," in FOREST AND STREAM of April 20. You have collected and put into concise, logical form a great deal of sound information that is the very best kind of reading for any one, and particularly for the well meaning but notoriously incompetent contingent that is always and everywhere preaching the prevention of many evils, but that rather encourages than prevents, because it is mainly made up of impostors—impostors because they pretend to knowledge they do not possess, or undertake duties they do not perform.

Our land is full of societies for the prevention of all sorts of things, and notably for the prevention of cruelty to childen and animals. The land groans with the evils that they volunteer to correct, but how seldom do we hear of any great good accomplished or of systematic effort made? When such impostors go afield to teach humanity to sportsmen they usually present a pitiable picture of incompetency and ignorance.

Is not every city full of inhumanity to men, women, children and animals to which these societies and philanthropic individuals may well devote themselves if they are sincere? If by concerted effort they establish a reformatory that really reforms, endow a charitable institution really charitable, or if they look to the welfare of homeless cats and wandering dogs, or if they would only abolish the barbarous and senseless check reins that torture thousands of horses throughout the years, they should be worthy of recognition and praise.

While reading the treatise I hoped it would touch more explicitly upon the subject of propagation—a theme that is doubtless treated of in books, but that is not often considered in general discussion. It would perhaps simmer to the old, old problem, the survival of the fittest; but the old problem has not been settled. It is a good one for preventionists and reformers to study profoundly. Is it nobler to propagate children for whom we do not provide, or pigeons for which we do? The science of propagation, in my opinion, from frog farming to the expansion of empires and the mission of flags and constitutions has been neglected.

I witnessed a pigeon shoot on the grounds at Ingleside, San Francisco, a few days ago. I was never fond of trapshooting, and do not like to see creatures killed. I have for various reasons, nevertheless, killed a great many wild birds and animals. The incident, death, is the shadow over sport with the rifle, gun and rod, but it is the shadow over all the life of the world, and who shall say that our dread of death is not more a perverted notion than a natural instinct? Pain is another matter. Neither gentleman nor sportsman ever finds pleasure in the torture of any creature.

Several club members, gentlemen, participated in the shoot at Ingleside, where 75 pigeons were shot in a couple of hours, the largest number I have seen killed at the trap. I did not enjoy looking on because the birds were being killed; but I did enjoy the methodical, skillful and clean process of the shoot.

The grounds are beautiful, overlooking the Ingleside race course, pavilions and stables, and to the southwest the broad green fields sloping to the ocean. The afternoon was bright and breezy. The five traps were complete with the latest improvements, opening from a roomy, covered trench, in which the trappers and supply of birds were invisible from the stand. The traps were sprung by the ingenious contrivance by the use of which no one knows which of the five will be sprung for the shooter. The birds apparently flushed from the grass, and were in the main quick and hardy.

The three shooters were men who could afford to pay about $60 for their couple of hours' shooting, and they were as decent, methodical, quiet and graceful in their art as the dancing or fencing master is in his. Nearly all the birds were killed instantly and retrieved by a pointer dog that did his work as cleanly as the gunners did theirs. If a bird was not killed by the shot it was so quickly retrieved by the dog and laid at the feet of his master that its neck was wrung before it could have possibly recovered from the shock of the shot. I do not conceive how the same number of birds could have been killed in a more humane manner. They were afterward drawn and crated for the market.

The deportment of the shooters, the beauty of the surroundings, the complete equipment of the grounds, the elegant, well kept guns used, and the wonderful work of the dog made up a combination that was truly complimentary to the best kind of sportsmanship. Pigeons doomed to die could scarcely do it in a more fitting manner. They doubtless owed their existence to sportsmen and they paid the debt unwittingly and without suffering. Seven or eight birds that flew straight away and escaped beyond boundaries nearly all circled about until shot by the keeper of the grounds. These I thought should have been allowed to live. The shooting was more satisfactory from a humane point of view than could be the shooting of the same number of wild birds, because the latter would be shot under differing conditions and many cripples would surely escape to suffer.

I left the grounds feeling that I should like to be a member of the right kind of a gun club and participate in such shooting as that which I have described. I believe I would rather be such a shooter than be president of some of the prevention societies that neither seem to know what to prevent nor how to go about it if they do. Humanity is rarely served by good intentions ignorantly or affectedly professed. So much for a snap shot.

RANSACKER.

Tracy—Pumpelly Tournament.

OWEGO, N. Y., April 26.—The tournament given by Messrs. Tracy and Pumpelly, at Owego, N. Y., under the auspices of the Owego Gun Club, the day following the tournament at Binghamton, was a very successful affair. The grounds are beautifully situated on the top of a high hill commanding a beautiful view of the village and the Susquehanna River.

The shoot consisted of twelve 15-bird races, and was a strictly amateur affair. John Parker, of Detroit, managed same in his usual effective manner, and taken all together it was a very pleasant affair.

Messrs. Tracy and Pumpelly were complimented on their cordial and courteous treatment of the visiting shooters. The shoot was finished early in the afternoon, and visiting shooters left for home, some going to Ithaca to take part in a tournament there Saturday, the 27th.

The trade was represented by Messrs. Thomas H. Keller and John Parker, of the Peters Cartridge Company, of Cincinnati; A. G. Courtney and Leroy Woodward, of the Remington Arms Company.; J. R. Hull, of Parker Brothers; W. L. Colville, of Dupont Powder Company, and A. H. Fox, of the Winchester R. A. Company. The scores:

Dr. Carson wins trophy distance rise handicap. In event No. 5, at 15 targets, Mrs. Carson was victor with 15 straight.

BLUE JEANS.

Nonpareil Gun Club.

CHICAGO, May 4.—The first regular shoot of the Nonpareil Gun Club took place to-day at John Watson's. It was a beautiful day, with a good wind blowing from No. 1 trap over to No. 5. Although the club numbers but twenty-three members, an idea of the feeling and enthusiasm that the style of trapshooting adopted by this club has engendered may be conceived when it is seen that twenty shooters faced the traps. All at scratch, 30yds., no handicap and a fight to a finish.

Before the club shooting there was a meeting held to ratify the rules adopted by the special committee appointed for that purpose. At this meeting the Interstate Association rules were adopted, with exception of weight of gun, which was left unlimited. It was also decided that in addition to regular club prizes there should be a $2 sweep included in the club event of 15 live birds. The secretary was instructed to enter the club in the State Association, and the following team named: Lem Willard, Chas. Comley, J. L. Alabaster, O. Von Lengerke. This is a pretty warm team, and it should be pretty near the top.

Four men tied in the regular event, with straight scores of 15—J. R. Graham, C. R. Stevens, E. S. Graham, Chas. Comley.

In the shoot-off Comley won first, Stevens second and J. R. Graham third.

After the regular event, several miss-and-out sweepstakes were indulged in. All expressed themselves as more than pleased with this the first shoot, and the feeling is that this club bids fair to become the leading club of the West. It is hoped others will follow suit, as there is no question at all but that the only way to satisfy all shooters and prevent continual growling is to form clubs for novices and clubs for the more expert.

Immediately preceding the club shoot there was a friendly race at 25 birds per man between Mr. W. W. Bonson and Mr. O. Von Lengerke, the latter winning by a score of 24 to 18. The scores of this match are as follows:

Bonson	1002221022010021102222212—18
O Von Lengerke	2222222022222222222222222—24

Garfield Gun Club.

Chicago, May 4.—The appended scores were made to-day on the occasion of the opening of the season's target trophy series. The day was an ideal one for target shooting, and twenty members came out to enjoy it. The warm sunshine and gentle breeze were delightful. In the trophy event J. S. Boa carried off the honors, breaking 24, Class A. Class B trophy was tied for by John Wolff, E. A. Midgley and Dr. Meek on scores of 21, while Class C was won by H. N. Delano on a score of 19. Everything passed off without friction, and all were happy:

H N Delano	0111110111101011111001111—19
J M Donald	0001011010011100011011100—12

W A Jones	1110111010100111011110111—18

A team race was shot as follows:

Boa 14, Pollard 11, Eaton 14, Barnard 9, Delano 10, Hoff 12, Thomas 10, McDonald 9, Adams 11, R. H. Trail 4½; total 103½.

Midgley 12, Richards 13, Dr. Meek 9, J. Wolff 11, Hellman 13, P. McGowan 10, Dorman 5, Jones 8, A. McGowan 11, R. H. Trail 4½; total 96½.

DR. J. W. MEEK, Sec'y.

May 4.—The Chicago Gun Club's weekly shoot this afternoon was a great day for the Carsons; they all made good scores. Dr. Carson won the high gun trophy in the weekly shoot, also broke 15 straight in the monthly handicap, distance 20yds. rise, also 10 straight, same rise, in shoot-off with R. B. Carson, his father (R. B. Mack). The second prize went to Dr. Morton in the weekly shoot. The weekly prizes are of the same value, only difference being the honor. Visitors are welcome, and we assure them a warm reception at the traps. Shells for sale on the grounds.

Trophy event, 25 targets:

Boston Gun Club.

BOSTON, May 1.—The initial shoot of the Boston Gun Club's summer series for 1901 was held on their grounds at Wellington to-day and fifteen shooters gathered to make it as auspicious an opening as could be wished for. Among the welcome visitors was Mr. Mitchell, of Dover, who was in town for the day, and not knowing of any more enjoyable way of passing a few hours than on the trapshooting grounds, journeyed to the grounds for a try in three or four of the events. Though shooting a strange gun and load, the majority of the targets had to give in that a well placed charge of shot was more than they calculate to stand. The afternoon was replete with good scores, among which were Griffith's five straights and a 24 out of 25 in the prize match, and Leroy's straight of 5 pairs. The latter, being from the 19yd. mark, was as pretty an exhibition of skill as has been seen on the grounds lately. The club's lady representative was again present after a protracted absence, and showed no signs of having forgotten where the gun should be placed to secure a merit mark. Considerable amusement was afforded all by two of the regulars taking up the 16-gauge gun, with 2⅛drs. powder and ⅞oz. shot; but after 14 out of the 20 had been grassed in as neat a style as could be asked for by the most fastidious, the 16-gauge came in for a good deal of well deserved praise. The scores in the prize match were: Griffith, 19yds., 24; Leroy, 21yds., 21; Frank, 16yds., 21; Baker, 18yds., 17; P. B., 16yds., 17; Spencer, 18yds., 17; Horace, 18yds., 17; Woodruff, 17yds., 16; Lane, 16yds., 15; Arthur, 16yds., 14.

Other scores below. Events 3, 6, 9, 5 pairs; events, 5, 8, 15 unknown; all other events 10 unknown; distance handicap:

The American Team.

THE American team will sail from New York Saturday, May 25, on the steamship Canadian, of the Leyland Line, which is expected to arrive in Liverpool either June 3 or June 4. The Canadian is a four-masted steamer of 10,000 tons burden, and is one of the new transatlantic steamships which combine freight and traffic passage; she carries only saloon passengers, and has accommodation for between sixty and seventy, all the quarters being on the saloon and main decks, and all amidships. According to measurements, there is nearly 200ft. between the bow and the staterooms nearest the bow, and the same distance between the stern and the staterooms nearest the stern.

The team, landing in Liverpool on June 3 or 4, will have time to get rid of their sea legs before taking part in the first of the series of five shoots, which will be decided on Tuesday, June 11, most probably on the grounds of the Middlesex Gun Club, Hendon, just outside of London. The conditions call for the best out of five 100-target races, each race to be shot on consecutive days. In addition to shooting the matches in London, it is expected that matches will also be shot at Glasgow, Belfast and Dublin, and possibly one in Paris.

The team is booked to return on the Steamship Cestrian, of the same line, which sails from Liverpool June 29, and should reach Boston nine or ten days later, in plenty of time for preliminary practice prior to the opening of the Pan-American shoot, the third week in July.

Paul North leaves Saturday, May 18, on the Cunard Line, which will give him nearly two weeks in which to prepare for the coming of the team.

As at present decided upon, the team is made up as follows: T. A. Marshall, captain; R. O. Heikes, W. R. Crosby, C. W. Budd, J. S. Fanning, J. A. R. Elliott, Fred Gilbert, Frank Parmelee, C. M. Powers.

This leaves a vacancy or two to be filled up, but the vacancies will not probably be filled until the Indians meet at the Iowa State shoot at Newton, Ia.

Among those who will go along with the team are E. H. Tripp and wife, Indianapolis, Ind.; Emil Werk and F. D. Pride, of Cincinnati, O.; B. Leroy Woodard, Campello, Mass.; Louis Erhardt, Atchison, Kan.; and probably others.

All arrangements for transportation, etc., have been left in the hands of Mr. Edward Banks, to whom application should be made for passage on the steamer. Stateroom accommodation at this time of year is extremely limited, and if anybody wishes to go with the team he should lose no opportunity in notifying Mr. Banks at his office, 318 Broadway, New York, although this is no guarantee that there will be accommodation on the boat in question.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Zanesville Gun Club.

ZANESVILLE, O., May 2.—A perusal of the pages of the programme of the Zanesville (O.) Gun Club's spring tournament will disclose a new and novel method for the division of the money—surely an equitable one.

The handicap is by distance. The first event in which each participates the management will place each where in its judgment each properly belongs. Should it be found that any one be improperly placed, he will advance or recede 1yd. at a time, until his proper place be thus ascertained, and there he will remain for the balance of the day.

By this programme the strictly pure amateur should be satisfied, as he breaks into the money if he only breaks 1 target, while if he breaks 2 or more he gets paid according to the number he breaks.

This should be sufficient inducement for him to shoot the entire programme.

The expert amateur should be more than satisfied, as he not only participates in the money under the Moore system, but has a purse created for his special benefit divided under the Rose system; besides, the club adds money to each event, and charges as an entrance 20 cents per target, thus making a large purse, and as their worst competitors, the professionals, are permitted to shoot for targets only here should be surely a programme to his liking.

From mail before us we feel this tourney is going to be largely attended.

L. A. MOORE, Sec'y Z. G. C.

[Mr. Moore, on investigation, will learn that the system which he honors with his name is not new. It is known to fame and practice as the equitable system. He further, on analysis, will note that 20 cents per target is a pretty stiff proposition. If an amateur pays, in a 15-target event, $3 entrance and breaks 10 targets, drawing back a stated sum for each target, a sadness will steal over his spirit as he notes the difference between income and expenditure, and also he might find that the professional might not shoot as a raw professor.]

Mississippi Valley Notes.

THE Progressive Gun Club, of East St. Louis, Ill., held its first medal shoot for the season on April 28. There were twenty-two shooters in attendance, which is certainly good for the initial meet after the winter's rest. W. Baggerman won the medal, Riehl being ineligible to compete, as a non-member of the club. An informal programme was also shot, and much interest manifested, indicating a lively shooting season to follow. The scores are appended:

LINDLEY COLLINS, Sec'y.

PUBLISHERS' DEPARTMENT.

Pennsylvania Railroad Summer Excursion Tickets to Buffalo, Niagara Falls and Other Summer Resorts.

ON April 30, 1901, the Pennsylvania Railroad Company will place on sale summer excursion tickets to Buffalo on account of the Pan-American Exposition, and to Niagara Falls.

On May 1, 1901, the regular summer excursion tickets to all the principal summer resorts east of Pittsburg and Buffalo will be placed on sale at ticket offices of the Pennsylvania Railroad Company.

These tickets will bear the usual summer excursion limit of Oct. 13, 1901, except that the Niagara Falls tickets will be good to return until Nov. 30, 1901.

The Pennsylvania Railroad Summer Excursion Route Book for 1901 will be issued, as heretofore, on June 1.—*Adv.*

Summer Homes.

IN the Lake Country of Northern Illinois, Wisconsin, Minnesota and the Upper Peninsula of Michigan, on the line of the Chicago, Milwaukee & St. Paul Railway, are hundreds of most charming summer resorts. Among the list are: Fox Lake, Delavan Lake, Lake Geneva, the Lauderdale Lakes Waukesha, Oconomowoc, Palmyra, the Dells at Kilbourn, Elkhart Lake and Madison, Minocqua, Star Lake, Frontenac, White Bear, Minnetonka, Marquette, Spirit Lake, Okoboji, Big Stone Lake, etc., etc.

For illustrated booklets "Summer Homes for 1901," and "In the Lake Country," send address with 6 cents in postage to F. A. Miller, General Passenger Agent, Chicago, Milwaukee & St. Paul Railway, Chicago, Ill.—*Adv.*

Spratts Patent (America) Limited, Newark, N. J., have published an instructive booklet, whose title is "Spratts Dog Culture; with a Chapter on Cats," which contains useful information as a catalogue of the sterling goods manufactured by that company, besides describing symptoms of many diseases and the best manner of caring for and conditioning dogs for work afield or for the show bench or for everyday life. It will be sent by Spratts Patent to those who apply to them for it.—*Adv.*

The desirability of good lights, which shall be reliable, safe and give little trouble, will be acknowledged by all country dwellers, whether in cottage or in camp. These are some of the advantages claimed by the "Nulite" lamps, which are advertised in another column.—*Adv.*

All campers will agree that there is nothing more important than good coffee to one's comfort while in the field. The Instantaneous Coffee, advertised by the National Food Co., of Camden, N. J., is said to be prepared at once, and to be the real thing. It is certain to appear strongly to all coffee drinkers. A very small investment will tell just what it is.—*Adv.*

The National Projectile Works, of Grand Rapids, Mich., advertise lubricated wire patched bullets, which, they tell us, prevent fouling and leading of the rifle, and clean and lubricate the barrel with every shot. All big-game hunters and marksmen will be interested in this new device, and they can easily see what it is by sending for a catalogue and for sample bullets.—*Adv.*

Protection from the weather has a very great deal to do with the comfort of every man who goes into camp. Messrs. Geo. B. Carpenter & Co., ship chandlers, of Chicago, not only furnish tents and oil clothing but camp furniture as well. Besides this, they are sail makers, and the growth of Chicago as a yachting center makes this an important part of their business.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, MAY 18, 1901.

VOL. LVI.—No. 20. No. 346 BROADWAY, NEW YOR

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

Koro it is called, and the fathers say that when the sea for days rose steadily and steadily, and drowned the men and washed their plantations into waste and gave their homes to fishes, the last spot of earth that anywhere arose above the waste of waters was the rocky summit of that mountain, and on it sat a little bird. But the water higher rose and higher, and covered even that last resting place, and the little bird flew sadly round and round, and wept over Koro, for that it was lost. Yet it came again to light as the waters slowly sank, but the bird has never learned to change its mourning note, and ever wails in the woods of Koro.—*William Churchill: A Princess of Fiji.*

The Forest and Stream's Platform Plank.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1901.—No. VII.

CALIFORNIA.

Penal Code, Sec. 626k, enacted 1901.—Every person who buys, sells, offers or exposes for sale, barter or trade, any quail, partridge, pheasant, grouse, sage hen, ibis, or plover, or any deer meat, whether taken or killed in the State of California, or shipped into the State from any other State, Territory, or foreign country, is guilty of a misdemeanor.

"THE ART AND PLEASURE OF HARE-HUNTING."

OF all the professions none have greater uncertainties than has that of authorship. It is uncertain from first to last. No author can fathom the depths of his own mental powers, nor can any one forecast the verdict of the public on any literary work. Manuscripts have been condemned as unworthy of merit, which when published have been awarded a place in the classics, while others of which much was expected hardly made a beginning in public favor.

But of the incessant output of literature, much general good is accomplished, for much of the current publications of the day makes the progress which is lost in the sum total of progress of the passing year as the literature of the year is lost in the lapse of ages. It would indeed be an ill inference which would visit disapproval on all literature that did not bear the visible marks of immortality. Much of it is necessarily identified with the struggles of the moment, with the needs of mental diversion, and with the evolution of civilization. And the making of books is not without pathos, for in future many an hour of work with its bright hope is lost; many a rosy dream of fame and honor is rudely dispelled; many a heartache is the only return for hard wrought prose and poem, and often with failure, saddest of all, the wolf comes nearer to the door. Thus, like all else in civilization, authorship has its bright and dark side.

The vicissitudes of authorship during the centuries are well exemplified in the miscellaneous collections which make up the stock of the dealer in old books; and here we find that the sporting authors of the past are not infrequently represented. Among the old books in a New York shop is one entitled "The Art and Pleasure of Hare-Hunting, in Six Letters, to a Person of Quality. By John Smallman Gardiner, Gent. Printed for R. Griffiths at the Dunciad in St. Paul's Churchyard, MDCCL." The title page frankly informs the reader that the price of the work is one shilling. Its price to-day is $70. It is a modest octavo numbering fifty-four pages, bound in quiet elegance in levant morocco with a delicate tracing of gilt on the inner edge of the covers by way of ornament. The paper and ink are of a quality which would be no discredit if made at the present day. The diction is in the quaint old idiom of 150 years ago. In his preface the author earnestly cautioned his reader that he had learned that some other author had treated on the same subject some time prior to his own writing thereon, but that he had never seen the writings of his predecessor, and that therefore anything that he wrote was not appropriated from him, however much it might be the same in idea. Thus this old work had still an earlier one, and inferentially the older one had still an older one to contend against. Matters which were debated then as contemporary in interest are still debated to-day as being of modern thought and interest. Of these are the wide or narrow range of setters and pointers, the relative capabilities of each, mental impressions and their influence on the progeny, etc. John Smallman Gardiner, Gent., was particularly conscientious in his treatment of the art of hare-hunting. In quaint old English with its piquant idioms he minutely describes the habits and wiles of the hare, the manner of hunting it, the dogs most approved for that work and many delightful speculations on their senses and instincts. Treating of their powers of vision he says: "Some maintain Hares to be of the tribe of Nocturnal Animals that cannot see *well in the Day,* their eyes being much like Cats or Owls, and of a Contexture susceptible of far nicer touches of the rays of light than Creatures more Habituated to Daylight."

From one shilling to $70 is no mean appreciation, though the time required is necessarily discouraging to those who wait. And these old books of a far age of the past show that the element of favorable circumstance, the element of luck, was not without its force in preserving some authors from oblivion, for many of the old books owe their preservation to their association with a past age contemporaneous with great historical events; to the ancient styles of type with which they were printed, or to the rich and beautiful bindings, the binder's art having been brought to an extraordinary degree of perfection. That some of the ancient books should owe their preservation to their covers differs in a way from some modern books, in whose covers is concealed their chief value. But in the vicissitudes of authorship there is little that can justly be called new. In every age the author encountered the author who had written before on his favorite subject; he encountered the public which ignored his writings, his disappointments were the same disappointments of his predecessors, and he could not fail to note that many works were preserved by the guarding of good covers. Thus there need be nothing discouraging in the fact that there is nothing new under the sun, for while the facts of the world's knowledge may be old, they are ever new to those who have them yet to learn. In the matter of sporting literature, both ancient and modern, the good showing is ground for just pride, as it portrays the esteem in which the healthful and pleasing sports of field and stream were held, and the talent of the writers who gave these sports their attention.

THE LOADED GUN IN THE HOUSE.

A LOADED gun in the house is an instrument of harm. It is ever waiting for some one to set it off and do the injury. Sometimes it goes off by itself. The house of a Long Island clergyman was destroyed by fire not long ago, and the fire was caused by the falling of a loaded gun from its rack on the wall and the consequent explosion. In a murder trial in the South the accused was acquitted when his counsel demonstrated this combination of circumstances; the person killed had been at the time of his death lying on a lounge. A muzzle-loading rifle had hung on the wall so disposed that it was aimed directly at the lounge, and this rifle had been kept loaded. A mirror had reflected the sunlight and concentrated it as a burning glass upon the priming cap of the rifle and had caused the discharge which had killed the victim. The thing was proved possible by an actual experimental test, in which the discharge of the arm was brought about in the manner described.

If loaded firearms in the house are dangerous when let alone, they are a hundred times more dangerous because of the meddling propensities of human nature. The combination of gun and charge is always ready for the chance handler who did not know it was loaded. In a village in western New York the other day a five-year-old child and her uncle were in a room together, when the uncle took up a gun which he did not know was loaded, and in handling discharged it, shooting the child's legs off and killing her. The incident belongs to a type which is so common that its relation here would be without purpose, did it not give an opportunity to direct attention to the responsibility of those unthinking persons who provide the means for the didn't-know-it-was-loaded shooters to do their fell work. The immediate active agent in blotting out the life of a beloved child stands not alone in the responsibility for the distressing casualty. Another must share with him the awful burden. That other one is the person who kept the loaded gun, who maintained the engine of destruction ever ready to work its disaster. If the owner of the gun had adopted the simple precaution of taking out the charge before standing the arm in the corner, his home would not have been darkened with this great sorrow. The teaching of the incident is this: If you have a loaded gun standing in the corner or hanging on the rack, take out the charge. Remove from your own home at least the possibility of a disaster for which you would have to share with the didn't-know-it-was-loaded shooter the responsibility.

In the old days when loading a gun was a complicated operation of measured powder and shot charges, wadding and ramrod, there may have been some excuse for keeping a charge in a gun; but under present conditions, when to load is the work of a second, and to remove the charge is equally simple and expeditious, there can be absolutely no excuse for the loaded gun in the home.

SNAP SHOTS.

The Smithsonian Institution has just published as one of the series of reports devoted to the National Museum a memorial of George Brown Goode, together with a selection of his papers on the museums and the history of science in America. There are given here in permanent form the tributes paid to Dr. Goode by his associates, at the memorial meeting held in Washington in 1897. These comprise a memoir by Prof. A. P. Langley, Secretary of the Smithsonian Institution, and estimates of Dr. Goode as a historian and citizen, by Pres. W. L. Wilson, of Washington and Lee University; as a naturalist, by Prof. Henry F. Osborn, of Columbia University, and of his activities in relation to American science, by Dr. W. H. Dall, of the United States Geological Survey. The papers of Dr. Goode relate to museums and museum history and administration, and the beginnings of natural history and sciences in America; and these are followed by a full bibliography of Dr. Goode's published writings, by Randolph I. Geare. The volume of over 500 pages is made the more valuable by a series of no fewer than 109 portraits of scientists, naturalists, explorers and others who have contributed to the advancement of science in America. The noble volume is a fitting recognition of Dr. Goode's life and character and public services. Another memorial of the man is the National Museum itself, for as it is to-day in large measure he made it.

The Massachusetts Legislature rejected last week a bill to permit shooting and fishing on Sunday. The advocates of making shooting lawful upon that day base their argument upon the fact that many shooters who are confined to their work through the week have no time to go shooting on any day but Sunday, and the opportunity to shoot on that day should not in fairness be denied them. As was inevitable, the debate in the House was a combination of Sabbath observance and game protection arguments, and the two together were strong enough to defeat the proposed amendment by a vote of 61 to 17.

The Appalachian National Park may be regarded as a thing accomplished. Dr. Ambler tells us as much as this in the report printed to-day on the present standing of the scheme. The favorable action taken by the legislatures of the States immediately concerned, and the attitude of Congress, as shown in the last session, are such as to give fullest confidence that the Government will acquire the territory and maintain it as a perpetual forest reserve and pleasuring ground for the people. Some hint of the attractiveness of this Appalachian country and its possibilities from a sportsman's standpoint is contained in Dr. Waldo's description of it.

Mr. C. H. Ames asks for the origin of the name Poke-o-Moonshine as applied to a mountain or stream. There is much of romance and history in place-names. We have in hand and shall print next week an interesting paper on the subject of Adirondack names.

That story of a cabin on the shore of a Massachusetts lake is full of suggestion. There are just such sites without number for summer camps, and the shelter may be put up by any one who has the gumption to drive a nail and push a saw. The cost is practically nothing. The enjoyment and solid comfort possible are beyond compute. We shall be much mistaken if the account of the Massachusetts camp shall not prompt other fishermen to make like provision for cheap, handy and sensible near home outings.

The Sportsman Tourist.

Two Scares.

"TALKING about scares, I don't mind one once in a while—a long while; but two in twenty-four hours are more than a decent man is called upon to bear with enough patience to put in tea."

The Judge had his pipe going well before he resumed, our having tempted him to a refill.

The tins were washed, plenty of wood handy, darkness had come, and we were squatted pretty close to the fire in front of the lean-to, for it was cold.

This is to be read slowly, as the Judge spoke that way.

"You boys know that it is a long time since I hunted with another gun. I gave up taking chances with another man when my friend was carried out of the woods shot by his careless friend. You know I don't allow even my guide to carry a rifle when I'm out for big game.

"Well, it was about this time of the year. I had a feeling that I had lost something, and when I seriously analyzed it, I found it was a moose. I dropped a card to Louis Noel, the Indian, telling where and when to meet me, and in a couple of days started for Guysborough county.

"It was pretty late in the day before I found Louis—too late to strike into the tepee—so we made for a house known to him kept by a widow; and a long way it was. We reached it, however, just before dark, climbed up the hill and banged at the door. The woman came at once, and I haven't seen a more worried one since. Before I could say a word she let out a torrent of them as long as the Moral Code. What I could make of it was that a tramp had applied for something to eat that morning, she had given him a good meal, and he liking it, and finding no man around, proposed to annext the whole outfit. Of course, she was very much frightened, and coaxed and threatened him; but there he styed, and while she was speaking a door in the hall opened and his Joblots slouched up to the front.

"He was a pretty hard looking specimen, and the meals he had eaten that day gave him an impudent air that killed sympathy at once.

"The widow had said there was only one available room in the house, and he had pre-empted it.

"'Look here,' says I to him, mildly, 'you asked this woman for something to eat this morning, and she gave it to you. Is that correct?'

"'Yas,' he growled.

"'And you stayed and ate some more?'

"'Wall, it's none o' your d—— business, is it?'

"'And you propose now to take the only room with which she can earn a little money?'

"'That's wot.'

"'Well, my friend,' says I, 'you are really making a mistake. I want that room, and if you don't want to sleep in the woods jog along, quick.'

"'I guess not,' he said.

"I stood my gun against the side of the house and began to put off my pack. He stepped outside, and stood a couple of yards off and slowly took in my 72 inches, turned around, and with a lot of fancy cusses started for the village we had passed through. We watched him out of sight, and went in.

"The widow was a grateful little soul, and hustled around to maks us comfortable, and succeeded first rate. She told me more about the tramp; how the cuss wouldn't even get a little wood for the fire to make his own meals, and so on, until 9 or 10, when we went to bed in the spare room.

"It wasn't much of a room to fight about. We got to it by a sort of ladder that landed right in it, an, by Jove! it was cold. There was a small window that let in more air than light, and I saw by the candle only one little cot, and mighty little on it. We undid our packs and got out the blankets. I took off my boots and hat, and rolled up on the cot, while Louis did the same in the corner on the floor, and it wasn't long before we slept.

"I don't know how long I slept—an hour or two, maybe—but the next thing I knew I was standing in the middle of the room, my hair standing too, and the awfullest scream ringing in my ears that ever man heard. My blanket was wound around me like a fly paper, but I got it off in a hurry, seeing mental pictures of cutthroats, outrages and all the rest of it. I grabbed the rifle, told Louis to follow, and slid down the ladder without touching a rung, I think.

"We stood a few seconds to listen—not a sound. I called out, 'Anything wrong?'—no answer. I tried a door or two—locked. I unlocked the front door and stepped out. It was almost light as day. The moon was up big, but it showed nothing wrong to me.

"I said, 'Come along' to Louis, and we climbed a fence and went entirely around the house. Everything was quiet and orderly, and the windows were all shut. I stood and shivered in my stocking feet, completely mystified.

"Louis grunted out in an inquiring tone, 'Dream?'

"'Dream be ——,' I was about to answer, when I jumped about 3 feet with this terrible scream ringing out again. No dream this time, anyway. I looked up from whence it came, and to my intense disgust, there, on the ridge of the house, sat an owl that looked as big as a prize turkey.

"Well, maybe I wasn't mad! I didn't see a bit of humor in it then. I jammed a cartridge in the gun, and in a couple of seconds blew that owl into such bits that no ornithologist could identify it. We then sneaked back to the room and tried to get some more sleep, but I didn't succeed very well. Louis asked before I got settled down, 'Mister scared?' I told him to go to blazes, and pulled the blanket over my head.

"All the same, boys, it was a scare.

"We were out at daylight, the widow making us a good breakfast. She had heard the rifle, but not the owl. Was used to it, I s'pose.

"We were off early; had a long tramp before us, and it seemed to be getting warmer. Louis shook his head at the sky, and I didn't like the looks of it myself. He took the lead on the trail—and a tough one it was, I tell you. About 11 we had a bite and eased our backs of the duffle. The weather looked gloomy, and was getting too warm for snow or comfort. We didn't rest long, as I saw Louis was anxious to be moving.

"To cut it short, we made the tepee about 5 that evening, and a great relief it was, too. The tepee was of poles and bark, you know, one he had put up some time before, and a pretty good one it looked.

"Louis cut firewood, while I went for spruce to make new beds. It was dark by the time everything was made snug and the tea going, and the wind came up easterly, too, and I knew that meant a wet day unless it changed.

"We finished tea and sat around to smoke, Louis being more silent than usual, I thought, although I didn't try to make him talk, being tired and thoughtful myself. Anyway, I don't feel much like talking in the woods except on an occasion like this.

"We smoked a couple of pipes, and while Louis built a fire in the middle of the teepee I strolled down to get a tin of water, nearly breaking my neck in the darkness getting it. Things looked so cozy inside that I decided to turn in. I fussed around a little, and he, too, rolled up in his blanket.

"Well, I slept; and this time I was not awakened by a scream, but by a cold 'spat' on the temple. I was really only half awake, wondering what it was, when it came again, hitting me in the same spot. Then I knew. It was raining hard, and a drop, running down a pole, let go right over my head. I moved my head slightly, just in time to catch it on the nose. As I moved a little again, I opened my eyes and saw, on the other side of the fire, the Indian slowly rising. I wondered if he had found a cold drop, too, and wondered some more when I saw him on his feet and the firelight flash on a knife in his hand.

"Without a sound he stepped over the fire toward me. Another drop fell, broke on a spruce twig and spattered in my eyes, making me close them for an instant. I thought, Had I offended him, or had I shown more money than was wise when paying the widow? I had been out with him before, and always found him trustworthy, if not exactly cheerful.

"I opened my eyes quickly, and found him leaning over me, and away at the end of his uplifted arm was that wicked, glittering knife.

"Boys, I was paralyzed for a second; then, just as I was about to roll aside to avoid the blow, he gave one long sweep of the knife——, sliced the bark off the dripping pole, quietly stepped back, and rolled up again in his blanket."

H. M. ROSENBERG.

HALIFAX, N. S.

A Dog that Thought He Could Fight

"SPEAKIN' o' fightin' dorgs," Old Hogarth drawled, in his quiet voice, breaking the painful silence that had followed Jack's latest effort—one of those wild flights of fancy which he was wont to term "a true personal experience," and which always had a subduing effect upon our own vain ambitions to shine in a like capacity—"Speakin' o' fightin' dorgs, I've seed a hull lot o' sech critters, off 'n' on, in my life, of all sorts an' sizes, but I never seed one what could come up to Jim Simpson's brindle bull. Fight? Why, that wa'n't no name fer it. He just na'terly wallered in a good scrap, an' he didn't give a cuss fer odds. He'd fight any number o' dorgs an' come out on top every dern time. 'Twas as bad as havin' a painter 'round loose when he was out on the warpath, an' ef Jim hadn't live so fur away I wouldn't 'a' had a dorg left by the end o' the year, 'ceptin' Sooner, who was too cute fer him.

"Waal, naterly, we didn't none of us zactly hanker arter that dorg's company, an' from dislikin' the dorg 'twarn't onusual dif'cult t' git t' sorter not havin' much time fer his owner. When we hinted purty plain like to Jim that we wa'n't all-fired in love with his brindle bull an' that his days of usefulness as a dorg, 's far as we was consarned, was over, ef he'd ever had any sech days 'tall, Jim he bristled up like a porcupine an' sez, sorter sassy-like, as how he guessed he'd keep any dorg he dum wanted to, an' would lick any man what had any more objections t' make. Seein' as he had the brindle bull 'long with him at the time, we didn't try t' find out how much in arnest he was.

"Y' see, 'sociatin' with that thar fightin' bull dorg had got Jim t' thinkin' he was 'baout as good a fighter as the dorg was, an' as the two on 'em was allers together we wa'n't bustin' our gizzards t' dispute the title, as the lawyers say. 'Twas a case o' 'like master like dorg' turned hind sight foremost, an' bimeby Jim got t' be as onpopular as the brindle bull. I allers notice that when a man begins t' think he's bigger'n smarter'n anybody else, right thar's where he gits ketched in his own b'ar trap, an' he has t' begin an' learn all over again. An' it's the same with dorgs as men.

"Waal, one day me' n' Bill here was out sorter seein' what they was t' see, when all t' onct we run on to a she b'ar an' her cub. They wa'n't nothin' t' do but shoot the b'ar or git chawed up, so we let her have it an' knocked her over, an' Bill he ketched the cub, a cute, fuzzy leettle cuss, an' brung him home fer t' tame him fer a pet. But that thar cub wa'n't what y' might call sociable, an' Bill couldn't do nothin' with the leettle devul. He growed fast 'nuff, an' the bigger he got the crosser he got, an' by the time he was six months old he'd made hisself so derned onpopular the old woman swore she'd shoot him ef I didn't.

"Things was gittin' sorter oncomf'table 'baout the house, an' the old woman was ripsnortin' 'round wusser'n the cub b'ar, when who sh'd come sa'nterin' 'long one day but Jim Simpson an' his brindle bull. He had the dorg tied to a chain, an' both on 'em was a-hankerin' arter a fight, 'twas easy t' see that. Jim spied the b'ar right away.

"'Hello!' sez he. 'Whar'd y' git that thar scart, onery lookin' critter?'

"'Caught him when I was fishin' fer trout,' sez I, not admirin' his style o' talk. 'Better not monkey with him, 'cause he's purty cross,' sez I.

"'Y' don't say,' sez he, with a mean grin. 'Do y' keep him fer protection? Ain't y' glad he's tied up, Tige?' sez he, lookin' down at the brindle bull an' laffin'.'

"'Waal,' sez I, beginnin' t' git my dander up, 'next t' your infarnel bull dorg thar he's 'baout the ugliest-tempered critter I ever met up with,' sez I.

"'Oh, Tige ain't cross,' sez he, laffin' more. 'Tige's gentle as a lamb, ain't y' Tige? I guess,' sez he, sorter contemptuous like, 'I guess that sickly lookin' cub could chaw Tige into mincemeat.'

"'Shouldn't wonder,' sez I, more t' rile him than anythin' else.'

"'We might git up a fight,' sez he, purtendin' t' be in arnest.

"Now I knowed I'd have t' shoot the b'ar sooner or later, an' I thought I'd give the critter a chanct fer his life. He might make it interestin' fer the brindle bull, an' anyways I was mad clean through by that time, an' wanted t' make Jim madder'n me. He was a mean cuss ef they ever was one.

"'How much'll y' bet?' sez I.

"'I ain't got nuthin' 'long but my rifle,' sez he, some s'prised.

"'Oh, that'll do,' sez I; 'I'll hold it fer security.'

"'What'll y' bet?' sez he.

"'Baout ten dollars,' sez I.

"'I'll take it,' sez he, thinkin' he had me beat, an' jumpin' at the chanct. 'Let's see yer money.'

"I put up the money an' then he sez:

"'Onchain yonder terrible critter,' sez he. But that cub knowed somethin' was up consarnin' hisself, so he planted his back ag'in the tree, an' sot thar lookin' wicked an' darin' us t' come on, an' I fer one wa'n't special eager t' take the dare.

"'He'll have t' fight jest as he is,' sez I. 'Turn the dorg loose.'

"'Just as you say,' sez he. 'Go fer him Tige! Eat him up!' sez he, slippin' the chain from the dorg.

"Tige didn't need no coaxin', but sailed in t' do up the cub b'ar. The b'ar didn't seem much consarned, but sot thar waitin', an' I begun t' feel glad I wa'n't Tige. The brindle bull walked up to the cub, sparrin' fer an openin', as the lawyers say, when afore he knowed what had happened he got a swipe on the side o' the head that knocked him endwise. He got up madder'n he ever was afore, I reckon, an' made a rush, aimin' t' git the cub by the throat. An' right thar's whar he wa'n't so allfired smart as he thought he was, 'cause the cub b'ar jest opened his lovin' arms an' took him 'round the neck an' begun a-huggin' the wind out'n him. An' while he was a-huggin' he was a-clawin' an' a-diggin' with his hind feet up an' down the brindle bull's sides an' belly, an' 'twarn't long afore that dorg was a sight. The dorg had had a nuff an' so had Jim, but the cub b'ar hadn't, an' he kept right on a-clawin' an' a-huggin'.

"'Take off yer b'ar!' Jim began yellin', dancin' up an' down. 'Take him off!' sez he, 'or he'll kill my dorg!'

"'I hope he does,' sez I, laffin'. 'Take him off yerself.'

"Waal, the long an' the short of it was that when the cub b'ar got through with the brindle bull they wa'n't much fight left in the dorg or much of anythin' else; an' when Jim begun t' git sassy 'baout it Bill turned in an' give him the derndest lickin' he ever had in his life. So, owin' t' the cub b'ar, 't warn't such a bad day's work arter all.

"We buried the brindle bull fer Jim, an' Jim went home considerable edefied consarnin' cub b'ars. What become o' the cub b'ar? Oh, we turned him loose the next day, an' I guess he's still ripsnortin' 'round the woods somewhars lookin' fer a fight, onless he got too smart fer his breeches. When a critter or a man does that air he generally ends like Jim Simpson's brindle bull."

FAYETTE DURLIN, JR.

In the Southern Appalachians.

THAT portion of the Southern Appalachian Mountain region which covers the western part of North Carolina and the eastern part of Tennessee, and which projects somewhat into South Carolina and Georgia, is destined to play a very important part in our social life as a future recration ground for the people of the Eastern and Southern United States.

The natural beauties of this section of the country cannot be overrated, and to the very slow progress which has been made in the so-called development of the region by building railroads through it, we owe the as yet almost perfect preservation of its sylvan charms. Fortunate it is that the railroad construction was delayed until we had awakened to the fact that primitive nature presents to us recreative phases which the art of man can never supply.

If Congress crowns with success the endeavors of lovers of nature to have a large area within this region set aside as a park reservation, and this action be taken in time to stop the devastation of forest growth which is even now proceeding with frightful rapidity, we and our descendants will have reserved for recreation purposes what has been so aptly termed the mountain fairyland of the United States. Here alone in our country do we find that combination of almost tropical luxuriance of plan and forest growth, with the delicious atmospheric conditions of our Northern mountains.

I shall use my limited amount of space in presenting the opportunities for sport in this region. It may as well be confessed at the outset that so far as shooting is concerned the region is a disappointment to any one who imagines that because so few sportsmen have visited it, and the covers are so palpably excellent and retired, there must be plenty of game. The country is apparently so sparsely settled that one may ride for fifteen miles over some of the main country roads and not see a single wayside cabin. Back in the cove-like valleys, however, we do find the isolated cabins of the mountaineers, sufficient in the aggregate to amount to a respectable number. A whole county may have 500 or 1,000 male inhabitants, and almost every one has hunting proclivities. The professional hunter does not now exist, according to my observation; the product of the corn patch and the mast-fed razorback hog being considered everywhere a more reliable sustenance than game.

Although actual game is scarce, owing to there being so many hunters and practically no closed seasons, yet the possibilities for game are enormous. No other region in our country offers such attractions for game preserves. In the first place, the country is so broken that in whatever place one finds himself there is every

variety of land contour within such a short distance as a mile or two.

The whole country is a succession of narrow ridges and narrow valleys. Along all the ravine-like valleys run never-failing streams of water of crystal purity. These streams wind in and out, and change their direction so frequently that their sloping banks have every aspect of exposure, north, south, east and west, within a narrow boundary. The side slopes of the mountains rise up from the creek beds to heights of 500, 1,000, 1,500, 2,000 or even 3,000 feet. They thus offer at some point the kind of ground suitable for almost any kind of game.

As regards cover, there exists, too, every variety, from the rock bar, and the laurel and rhododendron thickets of the creek banks, to the uncarpeted thin woods of the almost barren ridges; from the very dense forest growth of the dark north slopes to the open woods of the south exposures. Owing to the formation of most of the valleys which "lead nowhar," there is always the retirement which is necessary for the propagation of even the shyest game. Running water is so plentiful that in almost no place will game have to leave its favorite cover to obtain a drink.

Some game is to be found at the present time, but hunting must be done even more systematically here than in the wild regions where a closed season is enforced. A man can shoulder his gun and walk through these woods and crawl through the thickets during a whole month and not see a thing to shoot, except, perhaps, noisy woodpeckers or chattering squirrels.

In the first place, you must decide upon what you wish to hunt, and make your plans accordingly. In almost any case it is necessary to go ten or fifteen miles back from the railroad. The hotel keeper at any station can easily put the sportsman in touch with some local resident who knows the mountains thoroughly, and who will take him to the cabin of some mountaineer who is always ready to take a hand in arranging a hunting trip. The stranger must always carry with him tea, coffee and sugar, enough to supply half a dozen people three times a day for the time that he expects to be out.

As you approach a mountaineer's cabin you can tell what kind of a hunter is to be found there by the kind of dogs that he keeps. If you are met by the pell mell rush of a miscellaneous gang of mixed breed dogs—curs, hounds and shepherd dogs—you may be sure that the shiftless owner is content with coon hunting. A bark or two from dignified hounds, which slowly rise and approach to inspect you, indicates the well-trained deer hunter. The savage rush of thin, gaunt, powerful jawed dogs, with low, menacing growls, shows that you have struck the cabin of a bear hunter.

Deer are scarce in these mountains. I do not think I heard of over half a dozen being seen within an area ten miles square in one of the most retired parts of these mountains during the whole of the past summer. Deer hunting is always carried on by driving. This necessitates the services of men who know the deer runs and who have good hounds well broken to the sport. The general whereabouts of certain deer becomes known by the reports of mountaineers, who are always tramping the woods in search of cattle or hogs, or going from place to place on business or pleasure, and who in these excursions always keep a close lookout for signs of game. The people always drive their stock high up into the mountains during the summer and fall, and they have regular times and places for salting their cattle. Deer very often frequent these salting places, which are usually little openings in the woods. A fallen log has hollowed out on its upper side some basin-like holes, where the salt is placed. These "lick logs," as they are called, are known by name to all dwellers in the region. Thus "Jones' lick log" is referred to just as we might say "Jones' corner" in the city.

A deer drive usually begins near some lick log where either the deer or their fresh signs have been seen. One man and the dogs do the driving, while the sportsman takes up his position at an assigned stand on the deer run. The stand is usually in some little gap that the deer is bound to run through, in order to get out of his feeding ground without crossing a creek. When the deer has been started, the sportsman in the stand is reasonably sure of a flying shot at him, and several deer are likely to present themselves in rapid succession.

One must plan to devote a week's time to a deer drive, and his expenses will be in the neighborhood of $5 a day for food, lodging and hiring hunters and dogs. Very frequently one can join, free of all cost, a local hunting party, but this cannot be counted on.

The mountain deer like to be at a high altitude. The best hunting is up, say, at and above 4,000 feet above sea level; and I have never seen deer in these mountains below an altitude of 3,000 feet. It may be that below this the valleys are too much frequented; but it is more likely that the animals are afraid of getting tangled up in the thick undergrowth of the lower altitudes.

I think it no misstatement to say that bears are more plentiful than deer among these mountains. I judge this from the statements of mountaineers, from the frequent excellent bear covers, and from the number of trails which I have myself examined. The dark north coves, with their dense, interlaced growth of laurel and rhododendron, along the water courses, offer typical hiding places for bears. The north coves are seldom disturbed by the mountain cowboy in search of his cattle, because the latter are kept as much as possible from them, for it is in these coves that cattle get that fatal poisoning called milk sick. Thus it is that shy game retires to these coves. Here one must actually crawl to force his way through the brush, and hatchet cutting is frequently necessary unless he happens upon an indistinct pathway made by the bears themselves in their frequent passage.

Bears may be occasionally surprised in the woods, but systematic bear hunting is almost always accomplished by tracking with dogs. A fresh bear track is seen in the soft earth, and presenting much the appearance of a bare footprint. The interest of some neighboring mountaineer who has bear dogs is enlisted, and the trail is followed up until the animal is overtaken in the pathway or traced to his lair. The bear does his best to escape from his pursuers, and the dogs are chiefly useful in bringing him to a standstill so that the hunter can get an opportunity for a shot. The dogs fight savagely, but, unaided by the hunter, they cannot bring down their game. On the other hand, the bear can scuttle through the thickets at a rapid rate, while the hunter can progress but slowly. Thus the latter's success depends largely on what success the dogs have in holding the bear. A good bear dog is the most valued animal that walks the mountain trails, and could readily be swapped for a good cow or fine horse.

Certain mountaineers breed these dogs and encourage their ferocity from their puppyhood up. Such dogs are generally held by a leash when taken about the country. Bears are found at much lower altitudes than the deer, although their favorite haunts are the laurel undergrowth along the smaller water courses at an altitude of 3,000 or 4,000 feet above the sea.

The panther and the large gray wolf are only possibilities in these woods. A very well informed mountaineer, and an excellent hunter, who lives in a very wild part of the mountains, told me that he had not heard of a wolf being seen for some ten years back; and panthers practically disappeared about fifteen years ago. On the other hand, it was only last summer that a reliable cattle herder told me that he had heard the shrill scream of a panther as the animal approached his cabin (at an altitude of 5,000 feet) at night; he then heard a sniffing among the bushes where he had cleaned a turkey the day before. Shortly after this, he heard the shrill cry of the animal as it went down the ridge. I myself saw claw marks on both the sides of a mule which was grazing on this ridge a day or two before this. A bear may have attempted to seize the mule, but it is more likely that one of the few remaining panthers was passing along this ridge, from one high mountain top to another. The panther always travels the ridges when he can; thus he can see down each side and mark his prey or evade his foe.

Wildcats, chiefly of the bobtailed variety, are so common as to be a nuisance; they are the chief enemy of small game of all kinds, because they eat the young.

Wild turkey shooting is, however, the most fascinating hunting which the mountains can offer. It requires the assistance of but one mountain expert and no dogs. If the sportsman obtains board in the family of a hunter whom he has engaged to help him, a dollar a day for the man's pay will be all the expense incurred; but 50 cents a day for each person must be added to this if board is obtained elsewhere.

Turkey hunting is done by calls. To imitate the turkey call with anything like naturalness, with the usual turkey feather quill requires considerable practice. To make the call with the mouth alone denotes a skill seldom acquired even by the most expert mountaineers. The best device that I have seen is a peculiarly fashioned piece of dry wood, which, rubbed or rather scraped along the gun barrel, produces a very natural turkey call. Sufficient skill in the use of this wooden call may be acquired by an evening's practice. It is an interesting lesson for the sportsman to sit at night on one side of the great fire, with the turkey hunter on the other side, each calling to the other. When the sportsman can imitate the other's call to suit the acute ear of the latter, the lesson is learned. It is amusing to watch a noble hound stretched out on the hearth on the occasion of such a lesson. At the first call he is all alert with cocked ear and open eye; but after it has been repeated a few times he subsides into indifferent contempt and finally into a troubled slumber.

Wild turkeys are such shy birds that one might as well hunt for them in his own back yard as to try to shoot them without calling. I have ridden through these mountains for years, over trail and unpathed hillside, and never yet caught a glimpse of a turkey while on the go. The turkey always hears the hunter first. Many a time I have seen the bushes closing in where a turkey has just disturbed them in its flight, and have seen small feathers that have had barely time to reach the ground in front of me; but no turkey. Occasionally when sitting quietly in the woods, one will see a drove of turkeys stalk silently by, or sometimes at dusk a whole drove may be seen flying across a narrow valley a distance of several hundred yards. I have never seen the wild turkey below 2,500 feet altitude, and the best shooting ground that I know of is up at a height of about 5,000 feet above sea level. There is unlimited cover for turkeys in these mountains, and in some high places the birds are plentiful. The wildcats, however, catch so many of the young turkeys that they do not multiply very rapidly. There is no need of dwelling on the difficulties of wild turkey shooting. Unless the bird drops in his tracks the sportsman rarely gets it, even if badly wounded. It is necessary to shoot off the turkey's head, to break its neck or break its shell—that is, break its back. A turkey that is able to flop after it is shot is seldom to be found in the underbrush.

The small game is only fairly plentiful; but with the extermination of the wildcats there would be no dearth of wood grouse, quail and squirrels. I have seldom heard the quail outside of the valleys; and on the other hand grouse seem to be the most plentiful on the rocky ridges near the mountain "tops," at an altitude of say 4,000 feet. In riding along the mountain ridges grouse are continually flying up just in front of the horse's feet. They then offer beautiful opportunities for wing shots; but they seldom fly more than a hundred yards unless shot at.

I have reserved mention of trout fishing to the last, because this is not only a possibility but an actuality. Many of the streams contain trout, and some of them are famous in the annals of local fishermen. The fish are, however, smaller than those reported from Northern waters; perhaps because the streams are smaller. I have never happened to see a trout over 12½ inches long, but am told that they are caught up to 16 inches in length; and perhaps even an inch or two may be added to this to indicate an extreme limit. Trout are, however, by no means as plentiful as they once were; although catches of 150 to 200 are still made in a day by expert fisherman in the best streams, most of the fish being not over 6 or 8 inches in length.

Few sportsmen have as yet visited these mountains for fishing purposes, and the average mountaineer does very little fishing after his boyhood years. Most of it is done by the Cherokee Indians and a few white men who carry the fish to the hotels and taverns of railroad towns and to the saw mills to sell to the proprietors. The local price for trout is now 15 cents a pound. In addition to these, what might be called professional fishermen, a great many of the men living in the little towns go back into the mountains for a few days' fishing each year. There is practically no closed season for trout. Their greatest foe at the present time is the saw mill man. Probably one-half of the trout creeks have on their waters small saw mills now in active operation. The saw dust from these mills gets into the water and deals death to the trout below.

If the laws regarding saw mill defilement of the streams, and a closed season were enforced, these waters would in a few years be literally alive with trout. Many streams in which they have become extinct could be restocked, but there is no one to enforce the law.

Very little true fly-fishing is done in these waters. When flies are used the hook is also live baited with worms, grasshoppers or "stick" bait. The Indians, who are the most successful fishermen, use only baited hooks. It seems somewhat remarkable that some streams support many trout while others within a few miles of them have none at all; and yet there is apparently no difference in the water in the streams.

I do not know how low down the trout are to be found, but I have never caught any below about 2,500 feet altitude. They seem to be most plentiful between this and 3,500 feet. The waters flow very swiftly between these altitudes, and consequently the streams are relatively shallow and with comparatively few deep pools. The beds are, however, rocky, and in many places ledges crop out, and falls or rapids are formed.

One can fish from the open banks and rocks, but the main reason that wading is desirable is that the banks are generally so laurel-covered that many of the best fishing stretches cannot be reached from them. The water is, however, very cold, coming, as much of it does, from altitudes of 4,000 and 5,000 feet, and wet feet are dangerous to persons not inured to this cold. Hip rubber boots will, however, take a fisherman dry-footed wherever he may wish to go to cast a fly. Within the trout belt the streams are usually not over 2 feet deep. Throughout the whole year they preserve a wonderful uniformity of depth, the only exception being that during and after a rain they rise very rapidly; but they fall again within a few hours after it has ceased raining.

With few exceptions, there are practically no accommodations for sportsmen in this whole section, and the hunter or fisherman must trust to being able to find some mountaineer who will take him to board, or he must provide himself with tent and camp supplies. The wagon roads are few and far between, and it is best in most cases—and often absolutely necessary—to carry tent and supplies on pack horses. In many sections it is impossible to buy any provisions in the mountains; ofttimes the mountaineers themselves are compelled to carry their own corn meal on their backs a distance of ten or fifteen miles from the town or mill.

Concerning the climate of this region, it must be remarked that the sun is very hot, but in the shade and at night the air is usually cool. In the broad, cleared valleys, and on the southern slopes of the low mountains, the day heat is sometimes as intense as in the Southern lowlands. On the north slopes and in the narrow shaded valleys, one never suffers from the heat. The rain fall is excessive. Showers are usually frequent, while the vegetation in the lower country is burning up with drought. Continuous or but slightly interrupted rains frequently interfere with the sportsman's plans, and camping under a canvas tent is not always a pleasure.

One closing remark may be made concerning the desirability of this region for outing purposes. The color question does not arise here, because few negroes live among these mountains.

FRANK WALDO, PH.D.

The Appalachian National Park.

ASHEVILLE, N. C., April 30.—*Editor Forest and Stream:* In our letters heretofore published in FOREST AND STREAM we have pretty well gone over the reasons why we are asking for the establishment of the Appalachian National Park, and it would be unnecessary to repeat this at this time. I inclose you printed matter which covers this point fully.

Since my last letter our Association has turned its attention to securing the necessary legislation in the different States interested, or in which it is purposed that this park might be established. North Carolina on Jan. 18 passed a bill ceding to the National Government the right to acquire title to such portion of the mountain lands as might be desired for national park purposes, such lands to be exempt from taxes. The Legislature of this State also on the same date passed a resolution asking the Congressmen and Representatives from this State to use their influence toward the establishment of an Appalachian National Park in the South.

Following the action of North Carolina, South Carolina, Alabama and Tennessee have passed similar laws while Virginia is yet to be heard from. Governor McMillan of Tennessee gave it out at first that he would veto the bill which was passed by the Senate and Legislature of his State, but suffice it to say that he signed this bill last week, and it has now become a law, being practically the same as the North Carolina law.

It was necessary to secure this legislation in the different States interested before anything definite could be done by the National Government; in fact, the only opposition we have thus far met with in Washington is now set at rest by our having secured the consent of these States for the establishment of such a preserve.

You will remember that one year ago we secured an appropriation of $5,000 by Congress for a preliminary investigation of the territory under consideration. This investigation was left in the hands of the Secretary of Agriculture, who last summer had the mountain section from Virginia to South Carolina thoroughly investigated,

and had maps prepared showing all standing timber, size of streams, burnt lands, agriculture lands, etc. The Secretary of Agriculture had the co-operation of the Geological Survey in this work, and there was actually spent about $25,000 during the summer in investigating the forest condition of the Southern Appalachian Mountains.

Following this report, the Secretary of Agriculture and the President transmitted this report, together with and the President transmitted this report, togetmer with a special message by himself, indorsing the Secretary of Agriculture's report and recommending it to Congress.

Following this special message and the report of the Secretary of Agriculture (copies of which I herewith inclose), Senator Pritchard, of North Carolina, introduced a bill into the Senate asking for an appropriation of $5,000,000 to be expended in the purchase of a forest reserve in the Southern Appalachian Mountains, approximating 2,000,000 acres. This bill was referred to the Committee on Agriculture and Forestry, and was reported back by this committee favorably.

Owing to matters of great importance in Congress during the last few days of the past session, the friends of this Appalachian National Park movement agreed that it would be unwise to push the matter in Congress at that time for fear of offending those who are heartily in favor of the measure. I mean that by becoming too aggressive during the last days of the session, when there were so many matters of great importance before Congress, we might have done our cause more harm than good. However, the measure only failed by being crowded out by more important matters. A canvass of the House has shown that almost without exception the members are in favor of the movement, and will support it when the opportune time arrives.

By securing the legislation we have above mentioned in the different States we have practically removed the only opposition which we have met with in Washington. I am pleased to report that the only opposition we have to deal with at present is that produced by a few selfish lumbermen. In order not to do an injustice to the many lumber corporations, however, I would state that such opposition as the lumbermen have produced has been at the hands of a few private individuals. The large lumber corporations and the more progressive and up-to-date lumbermen are with us heartily in trying to establish a forest reservation in the Southern Appalachian Mountains.

A few lumber operators are circulating a report in the mountains that this park project is simply a gigantic steal on the part of the Government and private individuals located in Asheville, and that if the scheme succeeds it will work a hardship on the mountain people. I would simply state in answer to this that the gentlemen interested in this matter here in Asheville and who started the movement two and a half years ago are not forest land owners, and have no axes to grind other than protecting a large area of the beautiful forest mountain land.

As regards the Government working a hardship upon the mountain people, it is almost too absurd to discuss. Mr. Vanderbilt has already located a forest reserve of 160,000 acres, and has done so by buying out the people owning the land, and I am sure we have never heard a report in this country of any hardship being wrought by him. If Mr. Vanderbilt can secure 160,000 acres without hardship to any one, it certainly is possible for this Government to do the same kind of business on ten times the scale. Our Government, moreover, is certainly more able to pay the full value for land received than any private individual may be.

The mountain people are now being shown wherein if this forest reserve is established it will result in conservative lumber operations being carried out in the same under Government supervision, and will mean permanent positions for hundreds of men in the lumber camps, as patrols and forest rangers, road builders and so on. If our movement is successful, one of the most important things of all will be to protect the preserve from fire, and this in itself would offer employment to many men. It is not the purpose at all to stop lumbering operations. When a tree is mature it should be cut, but it should only be cut in such a manner as not to destroy the young and growing trees, and moreover, the brush should be removed or destroyed, and not left on the ground to enhance the danger of forest fires. Tan bark would continue to be gathered, but only under Government supervision. It is not the agriculture lands which the Government would desire or acquire, but only the more inaccessible mountain regions which are still covered with forests.

We have taken Mr. Vanderbilt's experiment as an object lesson to the natives, and they themselves are now coming to realize the possibilities for them in this undertaking. The opposition which they at one time developed has almost entirely died out, and in fact our whole park project is now in the best possible shape, with practically no opposition, so far as we are aware, and with the very best and brightest prospects of receiving favorable consideration at the hands of Congress, and that quite possibly at the next session.

We are going to succeed!

C. P. AMBLER, Sec'y A. N. P. A.

ATTALLA, Ala.—*Editor Forest and Stream:* The inclosed clipping, taken from the Chattanooga Times, Chattanooga, Tenn., will show the readers of FOREST AND STREAM that we of the South are alive to the possibilities of the Appalachian Park, and are working to secure its establishment.

That immediate action on the part of the Government is necessary is evident to us who see every day the price of select timber advancing and the value of mountain lands for fruits and small farming enhancing. I believe under proper conditions Tennessee, Virginia and North Carolina and possibly other States of the South would make appropriations to further this project.

I was very much interested in the recent letter in FOREST AND STREAM from Mr. Henry Stewart describing the North Carolina section of this park. Although I have not been myself at Highlands, I have a botanical friend who lives there (Mr. T. G. Harbison), and he has told me much of the wild attractiveness of the surrounding country. I have tramped over the Asheville section, and after seeing it I could well understand why Mr. Vanderbilt selected this place of all the world in which to build his Château d'Espagne.

EDGAR MAGNESS.

Judge William R. Day, of the United States Circuit Court of Appeals of the Sixth Judicial Circuit, and formerly Secretary of State, has written to Judge C. D. Clark the letter given below in regard to the Appalachian Park matter.

It is not generally known that Judge Day was the first to originate the Appalachian Park idea. Returning worn out by his labors on the Paris Peace Commission, he spent the summer of 1899 in the mountains of North Carolina, where his health was completely restored, and where he was so charmed with the country, climate and scenery that he set on foot the project for the creation of the Appalachian Park:

CINCINNATI, April 11, 1901.—Dear Judge: I observe with satisfaction that considerable progress is being made in advancing the plan of establishing a park or forest reserve in the mountain district of western North Carolina, southern Virginia and eastern Tennessee. Having passed the spring and summer of 1899 in that region, I became much interested in the project, and have watched its progress. When I was in the Asheville region a number of gentlemen interested in that country were talking of the matter, resulting, as I understand, in enlisting the services of Senator Pritchard and other members of Congress in bringing it to the attention of that body. My information is that Secretary Wilson, of the Department of Agriculture, has recommended an appropriation of public moneys with a view to establishing a forest reservation rather than a public park. However this may be, the main thing to be desired is to preserve this region in its natural beauty for the benefit of not only the people of your section, but those who are now attracted there and the many more who will be if it comes under the jurisdiction of the national Government for the purposes stated. If something of this kind is not done these mountains will, in the course of a few years, be denuded of the forests which are now so attractive. Such removal of the timber, I am told, will result in drying up the clear and beautiful streams which now everywhere abound and constitute one of its most attractive features.

My sojourn in that country led me to believe that there is no more attractive or beautiful spot in our broad domain than exists in that part of the Appalachian range. To permit the destruction of its forests with the consequences that would follow seems little short of vandalism. The streams abound with fish; the forests with game; the climate always salubrious; the air clear and bracing, all tending to make the region alike attractive to sportsman, tourist and health seeker.

One who has once been within its charmed circle, especially when the azalia and rhododendron are in the beauty of full bloom, will believe as I do that when its attractions are known there will be no more popular resort in the United States. The forests should be protected; the natural beauty of the region preserved for the benefit not only of your people, but the thousands of others to whom the region will afford a place for rest and recreation.

The far West has its Yellowstone Park, no more attractive, I am sure, than this mountain country, which is much more accessible to the majority of our people. The Government may well afford to make the necessary appropriation, not to beautify the region, for nature has done that, but to provide it with good roads and maintain it under such regulations as shall preserve it practically as it is. Permit me to congratulate you upon the progress which I understand is being made in the right direction.

Very truly yours,

WILLIAM R. DAY.

Fun.

Editor Forest and Stream:

A few congenial spirits were seated in the smoking room of the club and had been talking of various ways of spending a vacation, and one of the party, who because he never went camping could see no good in it whatever, said, "I suppose you amateur campers meet with many thrilling adventures while camped on front lawns or back yards."

Another spoke up and said, "I don't know what you'd call it, but here's something I went through last October that I would not like to repeat, and I call it downright hardship.

"My camping partner, Herb, and myself started late in October of 1900 from Lindsay, Ontario, for Long Lake, which lies some distance northeast of that town.

"Each with a canoe and camping stuff enough to make Nessmuk throw up his hands could he have seen it, we boarded the side-wheeler Esturion, bound for Bobcaygeon, at the head of Sturgeon Lake, then we hired a farmer to cart our boats and duffle fourteen miles to Long Lake.

"In due time we got our camp in shape and turned in early, for the next morning we were to try the black ducks, for it was on their account we had taken all this trouble of packing and traveling.

"In the morning we were in our stands, each with about a dozen decoys out. The weather, which had been threatening for several days, now turned real mean and gave us a cold, drizzling rain.

"At about 10 A. M. I gathered up my decoys and started for camp with not a duck to pay me for my damp, cold vigil, and, boys, you don't know what it is to be cold until you have sat in a canoe for three or four hours on a late fall morning, with the ducks all hugging the middle of the lake and not a shot coming your way to relieve the monotony.

"When I reached camp it was raining hard, and after turning my boat bottom up I got inside the tent and started a fire in the stove with the dry wood we had under cover.

"Well, it rained harder and harder, and when my partner came home with only two birds, we both agreed that bacon was fine eating. A duck apiece is what any dyspeptic can eat on a trip of that kind, but we made those two last three meals, for though we went out in the rain and mud the next two mornings, not another did we get.

"This lake, with no houses on it and no towns near it, could not boast of a single flock—at least not during our stay there.

"We smoked and ate and told stories. 'And the rain fell and the wind blew,' but no ducks flew, and to come down to the real hardship of the trip, when our tobacco pouches were empty and we looked for the tin box which held our main supply, we found it lying near the path leading to the lake with the cover off and the precious contents 'gone to mix forever with the elements.' Then our spirits fell, and that night we drew lots to see who would walk the six or eight miles to the nearest farmhouse for a wagon to haul us out.

"I won and stayed in camp, and it was a dreary wait from 6 A. M., when my partner left, till nearly 11, when I heard the welcome rumble of the wagon wheels.

"On the ride out we smoked chewing tobacco and felt relieved. When we reached Sturgeon Lake our hardships were at an end, for we were near supplies and could have fresh milk every morning if we wanted it."

"Is that all?" said the non-camper. "And you call that fun? Let's have one more drink and we'll go home.

H. A. R.

BROOKLYN, N. Y., April 30.

Poke-o-Moonshine.

BOSTON, May 4.—*Editor Forest and Stream:* I have long had much curiosity to know the origin and meaning of the name "Poke-o-Moonshine" as applied to a mountain or stream. Can any of your readers furnish them?

In your issue of this date Mr. J. B. Burnham in the tenth chapter of his enjoyable "Gens des Bois" twice refers to "Poke-o-Moonshine" Mountain in the Adirondacks. I know a "Poke-o-Moonshine" Brook in Piscataquis county, Maine, and if I am not greatly mistaken there are two brooks of that name in the State. I have heard some local attempts to give meaning to the name, but, like most local etymologies, they were palpably absurd.

In this connection let me also ask the meaning of "Poke Logan" or "Poke-e-Logan," which I have several times heard in Maine.

Every person familiar with the Maine woods knows what a "logan" is, but what is a "poke logan"? And, still further, is "logan" surely an Indian word like "wongan," "monhegan," "wichegan," "munsungan" (munsungun?), "Debskonegan," etc.?

I have seen a statement that it is derived from or akin to "lagoon," but have the impression that it has nothing to do with that and is Indian.

C. H. AMES.

Natural History.

Seaboard Air Line.—V.

Report to May 15.

Editor Forest and Stream:

The New York Sun of Feb. 20, last announced the arrival of the vanguard of migrating fowl in Long Island waters. These sturdy pioneers must have felt themselves a trifle previous while the cold, blustering weather of the ensuing two weeks kept them hustling; but strong in faith they persisted, being joined from time to time by later arrivals. Somewhere to the north of us they are now well on in their housekeeping for 1901 and will soon spend long sunny days among the bogs and fens in company of their young.

March 12 bluebirds appeared, stopping for a few hours only. March 14 dawned balmy and bright, with southerly airs that fanned the face with a light touch as of feathers. With this soft south wind came the first grackles to our tree tops. For days these fierce-eyed pests grated out their evil thoughts with all the vigor of their granulated voices, as they perched among the leafless twigs, or waddled awkwardly over the grass below. I must confess to a feeling of gratified spite when later on the boisterous winds and rain banged these iridescent black fiends rudely about. They looked so lopsided and bedraggled in their efforts to make headway against the furious gusts, with big tails all awry. These grackles are certainly "hoboes," showing so much of the tramp in manners and appearance that the self-respecting travelers of the "air line" will not associate with them, hence you find them stealing their passage long before the feathered "élite" are on the way.

March 15 I saw my first song sparrow. I had heard them before for some days, but this little chap sat in plain view among the topmost twigs of a scraggy mulberry just at twilight. Though his features were indistinguishable, his silhouette showed plainly marked against the after glow in the west. Surely there was nothing in his surroundings to warrant his being cheerful, yet there he sat, his little head raised, looking up toward the heavens the while his tinkling notes floated in the growing dusk. His small song was free of suggestion of soft airs and blue skies. These little brown-coated harbingers of nature's resurrection are surely prophets voicing their foreknowledge in simple pastorals that all who have ears to hear may understand. I thought of this little brown bird very often during the hideous weather from the 15th to the 25th of April, and was curious to know how he managed to keep his spirits up, and whether he tried to sing.

March 9 the first migrant robin to reach us tried an "obligato." He made a miserable first-attempt, but a day or two put his voice in shape.

March 20—Chank! ch-a-nk! said a topsy-turvy nuthatch. He was not with us as usual the past winter so I welcome his return and take as much pleasure in his queer antics as though he were always accustomed to leave us in autumn. Did it ever strike you as strange that we never hear of apoplexy among the nuthatch family? The positions they often assume are surely conducive to a rush of blood to the head.

My books for April do not show any passenger traffic worth mentioning; the lovely weather (?) so comforting to liverish people and pessimistic thoughts, did not warrant the exposure necessary for field work. Our residents deserve a good word right here. During all the beastly strife 'twixt easterly winds and water, our redhead woodpeckers and starlings were full of fun and

frolic; while robins and sparrows sat about disconsolate with shrugged shoulders, the redheads were chattering in lively fashion, and the starlings took advantage of every gleam of watery sunshine to say—forget it! forget it! sunlight! sunlight! forget it! These jolly fellows must be made of waterproof stuff to rejoice amid such weather conditions as then prevailed.

May 4 saw a great rush of travelers; vireos arrived over night, the white-eyed being well represented as to numbers. Hundreds of various warblers came along during the morning, numbers of the yellow-crowned among them, their bright and jaunty suits of feather cloth being specially pleasing to the eye as they moved gracefully among the twigs.

May 5 the clear voice of the purple finch caused envy on the part of sundry swallows, who responded with a gurgle of twittering notes as they sailed about overhead. Numerous hawks appeared in the afternoon, mostly sharp-shinned and sparrow hawks, all flying strongly against the northwesterly breeze.

May 7 swamp robins (*mustelinus*) chewinks, hermit and brown thrush and the yellow-breasted chat were on hand. The foliage was behind time in coming out this season, consequently the birds were much more easily seen. This lack of concealment may account for the seeming increase in numbers, for I have not seen so many familiar forms among the trees for years. Well-known varieties were largely represented and favorite localities were alive with many unidentified migrants. There was evidence of hurry in this crowd of travelers; an impatience hardly concealed appeared to drive them on in waves as it were. To-day the thickets would be crowded, to-morrow comparatively empty, the greater number having gone over night, in order to avail themselves of the prevailing southerly winds.

There were but few arrivals on May 8. I heard a contest of musical ability on this date between a wren, who sang from a clump of rhododendrons, and a brown thrush perched high on a leafless magnolia near by. Of course the result was never in doubt for an instant, though it was a delight to listen to such experts, both in fine voice and each determined to outsing the other.

Orioles and tanagers came to us on the 12th of May. The former must have met with some unusual detention, as they were much behind time. In '98 they arrived on the 6th; in '99, the 8th; last year, on the 7th. However, they are here at last and in their arrival I find the measure of spring loveliness is filled. At this writing all the air is filled with the soft rustle of new-born leaves that serve to screen many a bright form from careless eyes, but though one may not see them the cheery calls and subdued twitter of the glad little voices tells us the birds have come.

Maine Panthers Again.

BOSTON, May 4.—*Editor Forest and Stream:* Having started the discussion as to the occurrence of the panther in Maine, I presume I am entitled to "close the debate"—i. e., "if no one else wishes to speak."

My inquiry called forth two claimants for the panther, and their letters were duly presented in your columns. The writers were evidently sincere in the belief that they had seen Maine panthers. I gave also the recollection of my old and trusted guide, T. W. Billings, of two animals seen by him many years ago playing on the ice of a lake in the northern part of the State, and which he always believed were panthers. I nevertheless remain incredulous and think it easier to believe these witnesses mistaken than to believe the animals they saw were genuine panthers.

The testimony of Mr. Manly Hardy—the great fur buyer—that he has in all his experience never seen nor heard of a panther skin derived from Maine, seems to me of very great weight, and almost conclusive. If there were any truth in the abundant stories of Maine panthers would it not be certain that some one would at some time be able to produce a skin of the animal?

Is the Maine panther so far superior to his kind in all other localities as to be able to forever escape capture? Are we not justified in applying as a rule in the case "no pelts, no panthers"?

The question is not one, perhaps, which just now "most urgently confronts the laboring man," but it has a certain amount of interest not only as one of natural history, but also in the history of popular myths and delusions.

C. H. AMES.

Derattling a Rattler.

UMATILLA, Ore., May 5.—*Editor Forest and Stream:* Reading Mr. Charles Cristadoro's story of "Cutting the Rattles Off a Live Snake," brings to my memory an experience I had with a rattlesnake, which I will relate if the FOREST AND STREAM will think it worthy of publication. Several years ago I was walking across a portion of my ranch on the north bank of the Columbia River in Washington in the sage brush. I saw a rattlesnake. There was neither a stick nor rock near with which to dispatch it, and as the snake was slowly disappearing down a squirrel hole I thought that by seizing it by the rattles I could throw it out on solid ground and perhaps get time to find something to kill it with. Accordingly I grabbed its rattles between thumb and first finger and with a vigorous pull and backward motion of the hand and arm I expected to throw the snake out some 10 feet on the ground. Instead of that the rattles easily parted from the snake, and as I threw my arm back I released the rattles, thinking, of course, the snake would come with them. The consequence was the snake went on his way down the squirrel hole and the rattles went I know not where, nor could I find them. I never saw the snake nor rattles again.

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

In the Upper Blackfoot for Ducks.

"Oh, confound that alarm clock!"

"I told you so when you said you would be all ready at 5 o'clock."

"Well, yes; but a fellow feels worse than he thought he would when he has been working as hard as he thought he possibly could, and then tries to do double work to get every little extra about the office cleaned up so as to be spared a few days. Worked last night until 12 and then have to turn out at 3; it's a guess whether I live through it or not."

This seemed rather a discouraging conversation to pass between man and wife on the morning I was to start on our annual trip up the Blackfoot after ducks.

The first of September is the open season for ducks. Sixty-five miles away are the breeding grounds, but sixty-five miles is nothing for Montana horses to travel. At 5 o'clock the rig, with three of the boys in, came around as agreed upon, and with two of us in a single rig, leading a saddle horse with which to do errands around camp, such as looking up hunting grounds, we were ready to start.

In the double rig was the tent and camping outfit and the grub. After taking an inventory to see what we had and to see that nothing was missing that would add to our comfort, we are off. We pass through Bonner, seven miles away, just as the sun is coming up. Here we enter the Blackfoot Cañon, which is dark and so cold we have to button our coats and draw our wraps closer to be comfortable. The scenery here repays one for the trip, and although I have seen it many times I never tire of looking at those piles of rocks. Away above, the sun is lighting the mountain tops thousands of feet above us, while the river, whose water looks dark and cold and blue and white, is still wearing away at the rocks, and one cannot help wondering at the time it must have taken to cut so deep a channel. The road, though good, is dangerous enough to keep the driver always on the lookout. Several miles of the road has been blasted from the solid rock. High above the river is another place where it crosses a piece of slide rock, and has been walled up on the upper side; but the ever moving slide, although slow, is always throwing down rock in the road. Here the road is so narrow that save for the turnouts one could not pass a team. I have some very pretty bits of this road on paper, taken at different times during the eight summers we have driven up there, either camping, hunting or fishing, all of which are good. About ten miles and the mountains to the north seem to break away like clouds in April, while to the southeast they are still high and dark. One more bend in the river and we come into sunshine again, and one feels like wishing to be a bird, so that he could fluff his wings and take it all in.

Eighteen miles from Missoula we cross the Blackfoot River, pass by a high rocky point to the south of the road, where the bighorns used to winter as late as ten years ago. But, alas! they and the white man cannot occupy the same ground, and they have gone. One mile and we are at Camas Prairie. We leave the river and start up Camas Prairie, so named by the Indians on account of the large beds of camas which they dig, this being their potato crop; but the camas, like the bighorn, is mostly gone, and no longer does its pretty blue flower wave in the June breezes. The prairie, so called, is a large meadow, about eight miles long by four miles in width, and is set up on a tilt to the west, all fenced up now and dotted with neat farmhouses, hay ricks and corrals. This is a good stock country, as there is good grazing on the hills, and they grow fine hay and oats, which they are just beginning to harvest on the first of September. This prairie is at so high an elevation that fruit and vegetables will not grow; cabbage may get ripe enough to eat, but there is good money in stock and oats, so they can buy what other things they need. So people in this quiet mountain retreat seem to be well off and contented away from the busy world.

But we are dreaming too much, so whipping up our horses we are soon on the divide between Camas and Sunset Prairies. The road is steep here and much washed by the mountain rains and melting snow. Where the road comes to the foot of the mountain and out on the prairie is a nice cold spring, with horse feed close by. We are now thirty-five miles from Missoula, and stop for dinner. The sun is so hot now we have to hunt shade, and could never imagine it was below freezing when we started this morning. We only take a half-hour to eat, when we hitch up and start across Sunset Prairie, which we soon cross and descend to the river once more. The road now seems almost level, and the driving is fine. Going up the river we see a flock of green-wing teal on the river, and one of the boys gets three of them before they get out of range. The river is very swift here, and although in a bad place my water spaniel brings them all out. We cross the river again just above where the Clearwater empties into the Blackfoot, go up the Clearwater a few miles (another prairie as smooth as a driving park) and come to where the mountains narrow down to the river, and crossing through this we are at the mouth of the Cottonwood River. Beyond this, as far as the eye can reach, about twenty miles away, are small buttes and meadows, and here even oats grow a good crop, and stock is to be seen in large bands. There are small natural ponds everywhere, and there are ducks on all of them. They rise as we pass, and circle around or sit still and watch us. One bunch looked so tempting I tried the old pump Winchester, and six stopped behind to furnish us meat for supper. Nine teal ducks are enough for any five hungry men.

Six miles up the Cottonwood we leave the creek for the buttes, pitching our camp on the bank of a lake which must be over a mile long by a quarter of a mile in width. About half of this lake reaches among the pines at the foot of the mountains to the north. It is a beautiful camping place by a cold spring, with plenty of grass and wood, and shelter of pine and quaking aspen. We hear the ducks on the lake, and occasionally hear their wings as they pass over, for there seem to be ducks everywhere, and we can hear the boom of guns, several miles away, as we are pitching out tents and getting supper. One flock of ducks in going over seemed to stop in the air to see what we were doing. Lemley said he didn't think that kind of foolishness would pass, and began to load his gun just in time, for they came back to get the second look. Two quick shots brought down two mallards. "That is toll," he remarked, which pleased Joe Beebe. It was his first trip out since he came to the mountains. Although he can run a locomotive as good as the best of them, he cannot cook nor even help, so he was detailed to take the horses back to the pasture, while we finished the camp. Joe said he was a horseman through and through, and proceeded to throw himself into the saddle like a cowboy, taking the three horses in hand to lead. As he passed by where Frank McHaffie was cleaning ducks he jolted in the saddle, saying, "Don't I ride like an old-timer?" But there was trouble for Joe. One of the horses swung off of the trail and a yellow jackets' lodging house as large as a peck measure was knocked from its mooring on a bush. Every horse went into the air except the one Joe was riding, which was only kept from lying down by Joe's frantic efforts to keep it moving.

"Lots of flies there," says McHaffie.

"Flies? They are bees!" replied Joe.

The horse was bucking furiously now, and Joe was seen to go up in the air until he said he was above the tops of the trees, looking into the lake, and the horse was 50 feet away when he struck the ground. (Of course this is overdrawn, but we made Joe believe it.) A few willing hands soon caught the horses.

The next day we all took things easy, as there is not much shooting until the evening flight. McHaffie and Beebe went fishing, while Lemley, Woody and I wandered among the hundreds of buttes. Between each of these is a small lake or pond, some of quite good size, and there are ducks on all of them. But as there are no shrubs nor brush, and you are in full view, of course you can only get long shots. When they rise they may circle and give you a second chance, but to say the least there was much shooting and few ducks, and at 3 o'clock we returned to camp. McHaffie had a hard luck story to tell. He had fished with Beebe until he was sure no one could catch any fish, when he came back to camp only to find a deer right in camp. It ran, Mac grabbed a gun and ran to get a shot at it, and running into the first clump of brush there stood the deer. Mac pulled the trigger, but the gun was empty, and on trying to load he found he had a .32 Winchester gun in his hand, having grabbed Lemley's gun, and had .30-30 cartridges in his pockets. The deer got away. But while looking for the deer he saw a covey of ruffed grouse, and had twelve to show us. "Well, what's the matter with grouse fried in bacon grease, Mac? Don't covet the earth," said Woody. Everything was ready for our meal, but no Beebe showed up. We got our guns ready for the evening shooting, but no Joe yet. We were about ready to believe he had got lost, when his familiar whoop gove the signal; and he came into camp, and in his hand was as fine a string of trout as any one could wish to see, twenty-three in all, some of them coming pretty near the pound mark in weight. Mac had just been assuring us before Beebe came in that the fish would not bite. Mac sells fishing tackle, and told us no tenderfoot could catch fish when he himself gave it up. "How did you get them, Joe?" we asked. "Oh, I just went after some grasshoppers, and then after that I never flagged by a pool but caught a passenger at every station."

Mountain trout are very good, but we were after ducks, and now to the duck pass. The ducks go out over the fields and sloughs to feed during the day, and as the sun begins to sink low they come back to the large lake. At the upper end of the lake are several patches of bulrushes, with from one to five acres in each. This is the breeding ground, and to see the number of ducks that go in there of an evening would give the impression that the rushes could not hold them. They came in pairs and in flocks,—there were hundreds of them. I believe a thousand ducks passed over our heads in about fifteen minutes. The ducks are high in the air, and we are out of practice, and Joe says they fly on passenger train time. We are stationed far enough apart so that there is no danger of shooting each other; four of us with pump guns and Joe with a double-barrel 10-gauge. I have seen wild shooting, but this particular evening took the palm over anything I have ever seen. Two of the five had never shot ducks, while one had not used a gun for three years. There were ducks hit that were never shot at, but the greater majority were ducks shot at that were never hit. Some one at the lower end of the lake with a black powder gun seemed to be firing at regular intervals. That seemed to drive the ducks, for they began to go back to the reeds for the night. For fifteen minutes there was no time when there was not a flock of ducks within gunshot, and close shooting at that, but very quick, so the destruction to the duck crop was light. Had there been good shots wanting to make a killing we could have killed a large number. As it was, we shot away 1,250 shells during the three days we were there. We had all the ducks we could eat, gave some away to the people in the neighborhood, and had eighty to distribute among our friends when we returned.

There were others who went out from Missoula and brought back more ducks, but none enjoyed himself as we did, and there are very few places where the conditions are as favorable for a good time—good roads, plenty of fish and game, kind people who live there, no restrictions as to when and where to hunt and fish, good camping grounds, pure water and mountain air, and some very fine scenery.

All combined make the upper Blackfoot Valley one of the finest places a true sportsman can find to enjoy himself, with but few drawbacks to mar his pleasure.

BERT STEVENS.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Alligator Lake.

THE names of Union Camp and Alligator Lake recall pleasant memories to many local sportsmen. There is hardly a spot in the great pine wilderness of Maine that is better known to local people than the little green island nestling down on the mirror surface of hill-hung Alligator Lake. Every one of the past eighteen years has seen one or more parties of Springfield men sitting in front of John Haynes' camp, with either rods or rifles in their hands or at their feet. The shores and waters of the lake are a true sportsman's paradise, and over the crackling winter fire of Massachusetts birch, trips are planned to Alligator Lake for the coming spring, summer or fall. During the past week the hearts of all true Union campites have been made homesick by the sight of the fine black bear skin which Fred Swan has just received from Bangor. This skin last fall was the only suit of a big bear, weighing close to 600 pounds, which Mr. Swan killed near the shore of the lake, within an hour after arrival in camp. The Maine Sportsman prints the following:

The giant bear of Maine was secured last fall, late in the hunting season, and the members of one non-resident party covered themselves with glory enough to last them for several seasons, while the astonishing crop of "fireside yarns" that will eventually grow from that wonderful bear hunt will distance any others on record. Charles Whipple, Fred Swan, William Bellows and Frank Richmond, of Springfield; Frank Howard, of Pittsfield, and Warner Holt, of Boston, made up a party toward the very last of the deer season for a trip to John Haynes' camp at Alligator Lake. With their other trophies they came out of the woods two weeks later, bringing two big bears, the smaller one of which would have satisfied any ordinary sportsman. But they weren't ordinary sportsmen, for they had with them the dressed carcass of the biggest bear on record, at least in these modern days of actual records of size and weight of game. This bear was discovered as he was making his den, and when he ventured forth to investigate the intruder, a rifle ball settled his destiny. Bruin was so heavy that it took all eight men of the party "tote" him to the boats, the bear being strung on four poles, a man supporting an end of each. Between 500 and 600 pounds is the recorded weight, and the entire skin, which was of exceptional quality, will be prepared as a rug by Crosby, of Bangor, leaving the head with its ferocious, wide open mouth on the skin. It will be long before another such bear is killed in the Maine woods, as these old fellows are found only by accident, their extreme cunning enabling them to successfully elude all pursuers.

It is a long trip from this city to Alligator Lake. The most time-saving way is to leave Boston at 7 at night, reaching Bangor at 5:30 the next morning. Then comes, to the novice, the hard part of the trip. Teams are taken at the Bangor Station and a ten-mile drive to Eddington for breakfast is begun. From Eddington there is a drive of twenty-five miles over first-class, but hilly, roads to Great Pond, and from there there is a nice walk of five more miles to Alligator Lake. The baggage is taken in from Great Pond on ox sledges. When the shore of Alligator Lake is reached John F. Haynes, the veteran guide and owner of Camp Union, is waiting with his big flat-bottomed boats and two or three cedar canoes of home manufacture. The trip to the camp is but a short one and the landing is reached before sunset as a rule. The little lake is a beautiful sheet of water about four miles long and from half a mile to two miles wide, and the island is about three acres in extent. John Haynes obtains the right to have his camp on it from a large lumber company which owns all the surrounding forest and in return he acts as their fire warden. He is a typical Maine guide, and also a warm friend of the Springfield men who have been there. He has many admirable qualities, is thoroughly honest, enterprising, knows his business as a guide thoroughly, is an extremely hard worker and does not use tobacco or liquor in any form. This abstinence is a comparatively unusual feature among Maine guides. He has visited Springfield and was entertained at Alligator Inn, the cottage owned by Messrs. Whipple, Bellows, Swan, Richmond and others, at Calla Shasta, which is named for the Maine lake.

Alligator Lake has been on the map for some time, but it was John Towne and Dwight L. Fuller who officially put it there for Springfield people. They were the first local people to go there, Mr. Towne having heard of it during his business trips through Maine. Charles E. Whipple was also one of the pioneers, and has been there every year for some time, and killed a number of deer. Mr. Whipple tells an interesting story about the number of trout in the lake. He paddled into Fuller's Cove, named for Dwight Fuller, one fall and saw the dorsal fins of hundreds of trout protruding from the shallow water of the spawning beds. When he sent his canoe in among them the water fairly boiled as the trout swam for the deep water. Of course it is the spring fishing that is the best, and some good strings have been caught there. It is one of the last lakes in Maine in which the ice breaks up in, as the lake is fed by springs, and so is one of the last to freeze over in the fall. The record trout is one weighing 7¾ pounds but this fish was not killed by a Springfield man. Mr. Haynes has stocked the lake with rainbow trout and salmon, and some salmon weighing close to 10 pounds have been taken. There is also some good fishing in the outlet, called Alligator Stream, and one local man on his last trip there caught a string of thirty-two, weighing about 11 pounds, one afternoon in a few hours. And not the least pleasant part of the fun is to return from a day's sport to the comfortable camp at night. There have been three camps built there in the history of the place. The first one was of rough logs, a small place, and not the most comfortable shelter in the world. The second camp was built on a somewhat better plan, but was not large enough, so the present camp was built a few years ago. This is a two-story structure of rough-hewn timber outside, with a broad piazza and sheathed inside matched boards. On the first floor is a big lounging room and a kitchen, and on the second are four comfortable sleeping rooms.

The shooting is the chief attraction of Alligator, and it is as good as can be found anywhere. The deer are very plentiful, and the local parties always bring one or two home with them. Never has there been a party there in the shooting season that has not had a shot at least, and the men who go there are apt to have something to show for the powder burned. Mr. Flagg, a former clothier in this city, had a novel experience with a deer at the camp a number of years ago. One had been captured alive, and was tied to a tree with a rope. Mr. Flagg carelessly untied the rope from the tree, thinking he was a match for the deer in strength. He was soon undeceived on this point, and after being yanked over everything and through everything on the island, found himself in the lake, still holding the rope behind the swimming deer. Of late there have been signs of moose seen near the lake, and one was killed at Nicatous Lake a few miles aawy. That there are bear there is proved by Mr. Swan's fine rug, and there have been several others seen there during the past year. Mr. Haynes had a trying experience with one a few years ago, when Dr. J. K. Wiley and his son, of this city, were in camp. Haynes ran across a bear cub and killed it by a shot from his rifle. Then the she-bear made her appearance and attacked Haynes, naturally. He could not extract the empty shell from his rifle, and was obliged to take to a tree for safety, the bear grabbing hold of his boots in his ascent. Haynes' dog probably saved him from injury, if not from death, by harassing the bear, and the bear finally became so incensed by the dog's attacks that she left the foot of the tree where Mr. Haynes was abiding and chased her animal foe. Haynes then took advantage of the welcome opportunity to make a bee-line for the lake and his boat.

Among the local hunters who have visited Camp Union are Charles E. Whipple, E. A. Carter, Horace F. Clement, William H. Sargeant, Charles C. Morgan, Frank B. Richmond, Arthur Berry, William H. Richards, Warner Holt, W. S. Bellows, Herbert B. Handy, J. L. Strong, George B. Clark, E. C. Dumbleton, Fred R. Swan, Frank D. Foot, James W. Kirkham, Joseph H. Wesson, L. H. Mayott, Dr. J. K. Wiley, O. W. Niles, Dr. S. F. Pomeroy, Tom Hill, H. W. McGregory, E. L. McGregory, F. W. Westervelt. The late Horace L. Niles brought home a live deer several years ago, which was placed in Forest Park.—Springfield Republican.

Spring Shooting and the Game Supply.

SEATTLE, Wash., May 7.—*Editor Forest and Stream:* I have followed the discussion in your publication regarding the spring shooting of ducks, and it is amusing to note how those who favor it use every possible excuse to bolster up their arguments. The fact remains, however, and one cannot controvert it, that if we expect any species to at least perpetuate its race, it must be allowed to breed, and spring shooting or anything else calculated to disturb or destroy a species immediately prior to or during its breeding period operates against this and must in time diminish the race. The excuse so often advanced, "If we do not shoot during the spring we get little if any shooting," is a purely selfish one, and cannot be defended, and this excuse is the basis pure and simple of every argument ever advanced in favor of shooting during that season of the year.

The condition that confronts us, we who love good, honest sport, is no theory; we simply are against the cold, hard facts. Game everywhere is decreasing rapidly, and we must simply meet the condition. The game laws generally regarding water fowl are pretty generous, and give the sportsman a good chance to get a fair amount of sport, but the trouble is a few wish it all. A man cannot be blamed for shooting during any open season, only simply have that open season when it does not conflict with the mating and nesting period, and even go a little further—give the young a chance to become sufficiently mature to provide for and protect themselves.

I have been surprised that spring shooting has continued so long in a State like New York, and never could quite understand it, unless it has been a question with which perhaps politics has intermingled. Out here we are in advance of that State. Our season on ducks closes, as for a number of years, with February.

Now, I recall that when I was a boy and living in New York State, quite a few ducks bred in central New York. In the spring of 1875 I found a nest of the black duck (*Anas obscura*) with eleven eggs at the foot of Owasco Lake, on what was called "The Island." The bird hatched the eggs and I saw her a number of times with the brood of young. During that same period and for a number of years a pair of the beautiful wood ducks (*Aix sponsa*) always nested each year in a dead stub about 2½ feet in diameter that overhung the Owasco outlet, and about a mile below the island. These birds were finally shot or driven away. Wood ducks always bred each year along Blind Sodus Creek, flowing into Blind Sodus Bay, Lake Ontario, near North Fair Haven, and also along Sterling Creek, near the same town, up to about 1885, to my certain knowledge. I often saw the birds with their broods, and knew the species well, and there are many just such places in that part of central and northern central New York that even to-day would be used by the above-named species as breeding grounds if they were given the chance; but the spring shooter seems to be so afraid some one else may get them if he does not that he at least tries to head off the whole affair.

I noted what your correspondent from Long Island says. Well, if he cannot get any fall shooting there, let him move and go to some locality where he can, the same as many another good fellow has who loved sport; but the idea that that locality must have a special game law allowing them to shoot during the spring is preposterous. If the prohibition of spring shooting cuts them off and works good for the sportsmen as a whole, why they should stand it or move out. The law should be based on the facts, the greatest good for the greatest number, and no interference with nature's laws regarding the perpetuation of the species.

The stand you have taken is right. No spring shooting and no market, the time having gone by when a man can expect to make a living by the gun, and by the exercise of a little self-restraint on the part of all of us we will be able to have some little sport in the days to come; otherwise it takes no prophet to predict for the future.

I wish the Jefferson county outfit the greatest success in their fight for the abolishment of spring shooting. Good luck to them! S. F. RATHBUN.

Like Picking Up Money.

In every city, town and village in the United States where there is shooting or fishing or yachting we want agents to canvass for subscriptions for FOREST AND STREAM. Every sportsman is deeply interested in its subjects, and every sportsman is glad to discuss his doings afield and to hear of the adventures of other sportsmen.

Money is to be made by canvassers for FOREST AND STREAM, and those who wish to take advantage of the opportunity we offer should send for premium list and circular.—Forest and Stream Publishing Company, 346 Broadway, New York.

CHICAGO AND THE WEST.

At the Wishininne Club.

AT the Wishininne Club to-day, Mr. Graham H. Harris, president of the board of education of this city, was prevailed upon to tell, with becoming modesty, a story of how he killed the mountain lion whose skin adorns his boudoir.

"I do not claim," said Mr. Harris, "to be so much a hunter as I am a fisherman, and I make no boast regarding my personal prowess. All I say is that a man often does things under the impulse of a wish to protect his fellow man, which, under calm deliberation, he would not attempt for himself. In regard to this mountain lion, I did not kill it because I had lost any lion, but simply to save the life of my friend Bill Haskell. I heard a loud shout, and looking up saw Bill come flying down the mountain side, only touching the ground in the high places, while behind him, only semi-occasionally landing upon even the elevated portions of the landscape, there was an enormous mountain lion, upon whose exposed fangs the rays of the rising sun glittered ominously. You will observe that under the circumstances I did not become excited. The lion was gaining on Bill, but I saw that it would not catch him until they got within gunshot. At the distance of a hundred yards, I raised my rifle and drew a close bead upon the heart of the lion as it was sailing midair with its deadly paws extended and about to sink into the quivering flesh of my dear friend Bill Haskell, whose terrified shrieks meantime rent the air. At the report of the rifle the lion fell dead almost at Mr. Haskell's feet. The latter came to me with tears in his eyes and thanked me as his benefactor. I make nothing of this feat and admit that I could not have done it had it not been for the imminent peril of my friend."

It was nearly thirty minutes after this before Bill Haskel himself came in. "Fellows," said he, as he sat down and fastened his napkin with a half-Nelson about his neck, "you ought to see the lion skin that Harris and I bought while we were out West. I will bet any man at this table that it measures over nine feet."

The party looked in silence at Mr. Haskell. There were no tears in his eyes.

"I wish you would wait, Bill," said Mr. Harris, "until after I go away. You are always spoiling a good story."

Wrinkles About Rifles.

I was speaking the other day about sighting of rifles, and believe I had occasion to mention the fact that the low-leafed Winchester Express rear sight, when placed on a .30-40 rifle, brings one's eye so close down to the metal breech that it catches a glimmer which makes it difficult to draw a fine sight. Billy Hofer and I were going to rust the top of the receiver band on our .30-40, but I conceived a better idea. I took the rifle over to Mr. Stannard, the gun repairer of Montgomery Ward & Co., and told him I wanted him to file the top of that breech band off square and then put something on the cut surface so that it would not shine. I thought I was the discoverer of this notion, but Mr. Stannard told me he had done the same thing for others. He took my rifle and screwed it into a big thing that looked like a cook stove, and after turning certain bands and cranks set the thing going. The result was that he planed a little streak off the top of the projecting breech, so that I found I could see into the hindsight with perfect plainness. Then he turned some more cranks and milled the top of the cut just as one does a shotgun rib. Then he took some kind of black stuff and painted the milling and lo! I had a rifle which comes up very nicely, in which the eye hugs the barrel close, but which has no glimmer whatever. It is astonishing how much more confidence this little trick gave me in the gun. I do not know whether the factory likes to put on this Winchester Express sight with the .30-40. The trifling cut made in the breech band did not weaken it in the least, and it is practically a necessity if one uses the Express sight on that arm.

I learned some more things about the .30-40 while talking with Mr. Stannard. He has put on for several gentlemen in Chicago a milled rib, like a shotgun rib, on top of the .30-40 barrel. This makes the gun look better and handle better, and it saves that awkward appearance of the foresight sticking up into the air. Dr. H. A. Frothingham, Mr. Phil Woodford and others have tried this rib, and they say that it adds a hundred per cent. to the quickness of catching sight. They would not have the gun without a rib now for anything.

Now it may not be wise for everybody to hasten to put a rib on his .30-40 unless he has it done by some one who understand the job. Nor should one leave the gun in this way without an entire new sighting. For some mysterious reason, it is said that the rib causes the rifle to shoot just a little lower than it does without it. The .30-40 rib seems to be the coming thing here, but it is just as well to have the gun carefully sighted after the rib is put on.

HARTFORD BUILDING, Chicago, Ill.

Protection in Montana.

LODGE POLE, Mont., May 7.—*Editor Forest and Stream:* I am glad to see that we are going to have the game protected out here. A short time ago one of the game wardens arrested two men at Havre for using giant powder in Beaver Creek and killing a lot of trout. I understand that they were sentenced to pay a fine of $100 each and to ninety days in jail.

If the game wardens can only catch a bunch of those Cree half-breeds hunting deer with hounds, and send them over the road for a while, it will soon put a stop to such business.

I see by the papers that the authorities are going to take all the Crees back to Canada and put them over the line, and if they come back after that to imprison them. This will be a good thing, for the Crees kill a great deal of game, as well as many cattle, and the blame for killing both is put on Indians in our State. W. L. A.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Shooting on Spring Island.

NEW YORK,—*Editor Forest and Stream:* Having had several hunting trips South the past winter after quail, my experience on Spring Island was so unique and in such strong comparison with the shooting in other parts of the South, that I am tempted to write of it.

I have never hunted in western North Carolina or in Virginia, and, in fact, my quail shooting heretofore in the South has been near the coast, in either North Carolina, some fifteen or twenty miles from New Bern, or in South Carolina around Georgetown, so that I cannot say that all quail shooting in the South is on similar territory to that with which I am familiar, but the country in the vicinities I have mentioned is flat, and one is about half the time traveling over low, wet ground, and is very often compelled to walk a log to cross the branches and flooded places, and the quail almost invariably fly into practically inaccessible thickets.

The branches in eastern North and South Carolina are very heavily grown up with bushes, brambles, briers and stuff that a dog can scarcely penetrate, so that the quail fly into these inaccessible places. And then, although quail are considered plentiful, and on favorable days you can often raise anywhere from ten to perhaps twenty and even at times twenty-five coveys, there will be periods of hours at a time during the day or even almost an entire day, when it seems impossible to find birds. For instance, recently at Georgetown, S. C., I hunted with three magnificent dogs over a country where quail were undoubtedly abundant, and where my companions had often found, at other times, large numbers of coveys. For hours during this day we were unsuccessful, and when we began to find birds along toward night, I was too exhausted from my many miles of tramping to do any satisfactory shooting.

I mention all this in order to draw comparison with Spring Island. As the guest of Colonel Martin, I shot on Spring Island, and have never seen as fine a place for hunting. It is where a woman could shoot with perfect comfort, so dry and clean, no fences and few if any briers.

Without exaggeration you can hunt this island over with slippers on and not get your feet wet. There are no marshy spots and the streams are all narrow and spanned with ease. Then the island has been in such a state of cultivation and so thoroughly cleared up, that impenetrable places along streams such as you find on the mainland, do not exist on Spring Island. Of course, there are bushes and thick places, but none that are not easily penetrated and in which good shooting cannot be done, and when we flushed a covey, instead of flying into a tangled growth where it was hopeless to follow, they would invariably light on high ground, affording the very prettiest kind of shooting. It was a constant marvel to me, the ease with which we found the birds after flushing a covey, and the open, fine shooting they afforded.

As to quantities, I have never seen the like, and I do not believe there is another place in our country that can approach it; just one covey after another in rapid succession. There are certainly vast numbers of quail on this island, and although Colonel Martin said 6,000 birds had been killed this season up to March 1, we were continually shooting into coveys that I could not discover had ever been shot at before. And rabbits were constantly found—more than I have ever seen before in my life. It must be largely owing to the fact that there are no foxes or skunks on the island.

By the way, there is a well-known shooter in South Carolina, whose name, if I should give it to you, many would know and whose scores on quail are wholly beyond my comprehension. He claimed, and was not disputed by those who know him, to have killed fifty-four quail with fifty-six shells. He shoots with a Winchester pump gun, and it is a common occurrence for him to shoot three, four and five quail on a rise, and to kill twenty and twenty-five quail without a miss is nothing for him to comment on. I understand he does not pick his shots, but takes everything as it comes.

Whether or not an outdoor life would ever get my nerves in shape where I could kill as many as eight out of ten I do not know. I would like to have a year of leisure and such life, in order to see what it would do for me. As it is, I shoot at everything in sight, and manage to get my share of the bag, although I never have had the courage to keep account of the shells that I use.

COURTLANDT BABCOCK.

K. W. Y. A. A.

NEW YORK, May 8.—The first meeting of the Ticonderoga Gun Club, motto, K. W. Y. A. A. (Know What You Aim At), organized to prevent the danger incident to hunting in the Adirondacks and to promote kindly and fraternal relations between country and city sportsmen, was held in this city to-day. The following ticket was elected: Ingle Carpenter, President; Edward M. Bliven, First Vice-President; Frank Hooper, Second Vice-President; Peter Flint, Secretary, 150 Nassau street, New York city; George Ketchum, Assistant Secretary; Paris Scott Russell, Treasurer.

Board of Directors to act for the first year: Ingle Carpenter, Peter Flint, George Ketchum, Edward M. Bliven, Paris Scott Russell, Carlos C. Alden, Edmund O. Luthy, Alexander H. Weed, George Farrington, Frank Hooper, W. Bradford Smith, Cass Pease and Sidney M. Rawson.

The club has secured an option on a tract of land situated near the bridge on Eagle Lake, Ticonderoga, containing upward of twenty-five acres, with about one-half mile of water front. The club house to be erected soon will stand upon the old trails to Goose Neck and Bear ponds, and near to the stage and telephone lines from Ticonderoga to Schroon.

The President announced the following committees: By-Laws—Messrs. Alden, Flint and F. H. Russell. Membership—Messrs. Alden, F. H. Russell, Flint, A. R. Weed and Frank Hooper. Site and Club House—Messrs. Luthy, Pease and F. H. Russell. PETER FLINT, Sec'y.

Clara—"I see Cynthia has decorated her room with guns, pistols, swords, and the like." Cora—"Yes; she always has been a great girl for having arms around her."—Yonkers Statesman.

Quail on Toast.

Editor Forest and Stream:

The article in your issue of this week (copied from the Milwaukee Sentinel), which refers to quail on toast and says that Wisconsin pigeons are commonly served on toast as quail, is amusing and quite suggestive.

Did you ever know an old sportsman who has had the quail of his own shooting slowly broiled over a bed of coals and basted with butter until it was a morsel fit for a king, to munch a piece of pungent brown toast as he ate his bird, and thus neutralize or destroy its delicacy of flavor?

Those of us who shot quail thirty or forty years ago and often broiled our own birds over a bed of hickory coals, never permitted the delicious flavor of our game to be affected by anything, and least of all by brown and perhaps bitter toast.

But some years ago some chef in a hotel or cook in some restaurant invented this dish as a commercial necessity for the reason that quail had become an article of commerce. Many were slaughtered in large quantities at the West and were permitted to freeze and thaw and freeze until when they were put upon the market for sale they were very often stale and practically tasteless, and here came in the fine work of the chef. If he could make quail on toast a fashionable dish he could serve his State birds, and even "Wisconsin pigeons," simply observing the rule that the more stale the bird the more brown must be the toast. X.

Long Island Bay Bird Season.

THE list of bay bird shooting points given in our last issue was inadvertently printed without reference to season, and Long Island points were included as if shooting there was now permissible. The season for bay birds on Long Island will not open until July 1.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

The Sabbath Day on the Beaverkill.

Editor Forest and Stream:

I have in mind your suggestion that I should give some reminiscences in regard to the Beaverkill, but the days or weeks which I spent on that stream were mostly from 1857 to early in the seventies, and he must have a good memory who can recollect the incidents of the trips he made forty years ago—and yet it is difficult to see how any one could ever forget how he was impressed with the religious sentiments of all those living there, how universally they regarded the Sabbath as a day of absolute rest and as a holy day.

I never knew or heard of a native fishing on the Sabbath; and if any one visiting this stream dared to defy this unwritten law he was waited upon by a committee and ordered to leave and never return.

This was the sentiment on other streams as well. About 1864 a companion of mine, against my earnest protest, fished the Rondout on the Sabbath, and on the next morning he was ordered home and told that if he ever returned he would be mobbed. The anglers who visited the Beaverkill were gentlemen; they recognized the courtesies extended to them under which they were permitted to fish on private property. They appreciated the deep religious sentiment of the inhabitants, and I never knew of an angler who did not, out of respect to this sentiment, regard the Sabbath as a day of rest and quiet whatever his own views may have been, and thus it was that the Sabbaths were in fact the most delightful days spent by those who used to make their home at Murdock's cottage.

Two miles below Murdock's there was a little hamlet consisting principally of a church, an old graveyard, a grocery, blacksmith shop and cobbler's shop. At this point a small stream joined the Beaverkill from the east, with the charming name of Shin Creek, and those who fished this stream with its ragged edges and narrow gorges and came in with sore ankles, have always recognized this name, which was adopted by the Post Office Department as exceedingly appropriate.

The church at this place was built in the forties or early fifties by the joint contribution of several denominations, and when some minister did not happen to be on the stream to take charge of the service, it was usually conducted by a Methodist minister, who preached some six or eight miles elsewhere in the morning, and then afterward walked to Shin Creek to conduct the service there in the afternoon. His yearly stipend for this double service was $200; and yet there are those who claim that these men are in the business only for the money that there is in it.

The anglers in those days esteemed it a privilege as well as a pleasure to contribute from year to year something for the purpose of keeping this church in proper paint and repair, and also to quietly add to the collection taken on every Sabbath day for the benefit of the minister.

But this is really preliminary to what I started out to write.

On the Sabbath day every one attended the services in this little church, rain or shine, often riding ten miles or more from up the stream, for this was the only church between the head of the Beaverkill and a place ten miles below it. It was always full.

There was a person then living in the neighborhood by the name of Hotchkiss, long since gone to his rest, and by common consent he led the music. He always came in his shirt sleeves when the day was warm, and when the hymns were given out he usually stood at the front seat, threw his foot over the back, and after listening to his music fork started the tune, which on almost every Sabbath was either "China" or "Mear" and sometimes both.

I have heard the best church music in this country, but I have never heard anything which seemed to bring every person who joined in these services nearer to the Heavenly Throne of God than these simple services in this little church in which every one joined, many of them with tears in their eyes.

It is hardly necessary to say that the rest of the service was equally fervent and uplifting. The minister who for $200 a year would travel eight or ten miles every Sabbath, winter and summer, conduct two services and visit the sick and bury the dead, in two congregations, was necessarily filled with the spirit of his Master. His sermons may not have been very deep, but he always tried to impress upon his hearers the necessity of a holier and a higher life, and to urge them to follow as their pattern life that of the Master he came to present to them.

And these services and teachings bore rich fruit. The Sabbath was always observed as a day of holiness and rest, and what is more, these services made their visible impress upon the daily lives of all who lived upon this stream. J. S. VAN CLEEF.

The Cabin by the Lake.

ON the outskirts of a small town in Massachusetts, about fifty miles west of Boston, in the basin of the high plateau land, is a lake about one and a half miles in length and about a mile in width, in the middle. The lake is fed entirely by springs, and the water is clear as crystal. The average depth of the lake is 60 feet, but the township being more desirous of a few dollars than a beautiful spot provided wholly by nature sold the water right to a manufacturing company about a dozen miles away. They put in a dam at the foot of the lake and dredged out the bottom so they could draw it as low as they wished. Owing to the dry season the last two years the lake has been kept very low. The lake was surrounded by magnificent groves, mostly chestnut, oak and pine, but these have been cut off to a great extent, and the beauty of the lake is greatly marred.

I am interested in the welfare of this lake, because a friend and myself have a camp there. It is a little cabin 12 feet wide by 20 feet long, made of rough pine boards and sheathed inside and out with ordinary sheathing paper to make it airtight as well as waterproof. On the roof we put first a layer of this sheathing paper, then over that a layer of tar paper. This has proved to be waterproof, and it has stood some severe tests. Every year we go over the roof with a coat of tar to preserve the paper, and in this way it will last for six or seven years. The expense of a camp like this is very small, and the amount of enjoyment derived is beyond expression. We bought second-hand lumber, several pieces 6 by 6 inches, which we used as stringers, laid on a foundation of stones from the shore of the lake. We used 2 by 4s for the flooring timbers and all the rest of the frame work, and then boarded up with the rough boards. One roll of sheathing paper was enough for the whole of the sides and roof and roof of the piazza. Tar paper is only 3 feet wide, so we lapped it over enough to use five strips, each 21 feet long. We covered the paper with sheathing strips—strips about half an inch thick and an inch wide—putting them on within a foot of each other to prevent any possibility of the wind getting under it and stripping it off. The whole camp, all told, not including our time, which we did not value very highly, cost us $9.75—$5 for the lumber and the rest for the sheathing paper, nails and carting of our fixings to the lake.

We take great pride in the location of this camp. It is situated on a rising plot of ground, about 200 feet from the lake, and just north of the middle. It is one of the few spots where a view of the whole lake is obtained. In front of the cabin, about 50 feet toward the lake, is a huge maple, whose spreading branches afford a cool shade the entire day. Many a day have we lain under its branches reading, smoking or rigging some new kind of fishing tackle, not realizing that it was a hot day until some of our friends drove down from town, six miles away, and told us it was one of the hottest days of the season, and that they had come down to spend the day where it was cool.

We have a piazza on the front side of the building fitted with all kinds of rustic contrivances for comfort—chairs with cushions made of gunnysacks stuffed with pine needles and long backs in which one can recline in comfort; settees made of the same material and fitted with head rests at one end. Here we sit on balmy summer evenings, when we do not feel in a mood for fishing, and sing college songs and all the popular airs of the day, much to our own enjoyment, though some of the harmony might not please the ears of a trained musician. Under the cabin we dug a hole about 4 feet square and about the same depth, and stoned up the sides and the bottom, using a sort of clay found in some portions of the lake, which, when dry, is as hard as rock. This is our cellar, and things keep cool and fresh in there in the hottest kind of weather. Water kept in this cellar over night is plenty cool enough for drinking. We have two stone jars, which we keep filled with water all the time, so that we have plenty of cold drinking water.

When the lake is up to its high water mark, the fishing is very good for perch, pickerel and bullheads, but when it is low we have to resort to all kinds of strategy to get what fish we want. We have always managed to get all the fish we wanted for food, however, and to give our friends an occasional fish fry; and what more does one want? I love to tinker around, rigging all sorts of new contrivances to tempt the unwilling fish, and so far have always succeeded.

Last summer the lake had been down very low for two years, and the fishing was exceedingly poor. I was sitting under the big maple one day racking my brain for a scheme to get a mess of bullheads, for when bullheads are tken from a clear lake like this they form a very delicate morsel of food, and are in great demand by the summer boarders. I happened to think of a scheme I had read of somewhere but had never had occasion to try, and I set about testing it immediately. I took a clear glass bottle, filled it half-full of angle worms and corked it up. I then took a boat and went to a place that I had marked as being a good fishing ground for bullheads, and tying a weight to the bottle sank it and anchored it there about 3 feet from the bottom. The second evening, just at dusk, I rowed to the place where the bottle was, and anchoring right over it began to fish, using angle worms for bait. It was barely ten minutes before the sport began, and it was very lively while it lasted.

Between the hours of 7 and 9 I caught ninety-two bullheads that averaged a half-pound each when they were dressed. We have a crate in which we keep the fish alive, and as we want them we dress them and use them. It is a notable thing about this lake we never make two catches in the same place during the same season. So the next time we wanted bullheads I anchored my bottle in a different place, and everywhere I anchored the bottle I had similar success.

Up to last summer perch had been a very certain quantity, but owing to the dryness of the season they were not inclined to take any dead bait, such as worms; so we took the boats and scoured the shore for minnows. We finally found a school, but they were very shy, but

FLYING PELICANS AT TAMPICO.

by feeding them we gradually got them in near enough shore to anchor our boats. We anchored the boats about 10 feet apart and dropped over a big net. At first we had difficulty in getting any over the net, but we noticed that when we pulled up the net they would swarm over the place where the net had been, so we dropped over the big net, letting it down pretty deep; then we dropped over a smaller one, and as soon as a minnow was over it we pulled up. As before, the minnows swarmed over the place where the net had been, and then we pulled up the big net, and had all we could use for a month. Just at sunset I took a light fly-rod and put on an easy playing reel, and picking out some of the smaller minnows went out and anchored my boat in a little nook where the water was very deep. Using a small hook, I baited with a lively minnow and cast about the length of the rod away from the boat, having on a sinker just heavy enough to draw the line under the water. Letting it sink down about 3 feet, I watched the minnow work back and forth. I could see him plainly because the water is so clear. After a while the perch began to come around, but they were pretty shy. Finally one

LEAPING TARPON.

made a grab and started off, and I struck, but no perch! I only lost my bait. The next time I tried a different policy. I gave him plenty of slack line and waited fully thirty seconds before I struck. This time I had him, and with the light fly-rod it was good sport. I caught just an even dozen in the next two hours, and it took from five to ten minutes to land each one. I was not aware a perch was such a gamy fish, and hereafter I shall not fish any other way for them.

When the lake is high the pickerel rise freely to trolling or skipping, but when it is low they will not rise at all. I broke the record for low water in the lake last summer, but I did not get a rise to all the trolling and skipping I did, but resorted to a novel method that I never heard of before. I got the idea from the worms in the bottle. I made five boxes out of fine wire netting, one side only being of wood. Putting about thirty or forty minnows in each, I towed them to the best pickerel ground in the lake and anchored them in a radius of about 25 feet and about 5 feet under the surface of the lake. After they had been there a day or two, I took a rod and some good lively minnows and anchored directly in the center of the boxes. I kept casting contiually on all sides of the boat, putting on a fresh minnow now and then. In about half an hour I was rewarded with a ferocious grab, and how the reel did hum! In just twenty-two minutes I landed a pickerel in the boat that tipped the scales at 4 pounds and 1 ounce. I made many early morning visits to that place and always succeeded in landing one or two good-sized pickerel. The first one was the largest, but the smallest one all but tipped the scales at 2 pounds. I caught a sum total of eleven pickerel about those boxes. We opened them on the back and stuffed them, then sewed them up again and baked them. Talk about your fine meals! why, nothing ever touched one of those baked pickerel eaten under the shade of that spreading maple. I locked those boxes up in our cabin, and no one to this day knows how I caught those fish; but I like to see other people enjoy a mite of sport as well as myself.

Tarpon at Tampico.

KANSAS CITY, Mo., April 24.—*Editor Forest and Stream:* I am disappointed by the failure of my first paper on tarpon fishing to evoke a discussion and supplementary papers or letters. Surely there are many of your readers who are tarpon fishermen, and who can tell the rest of us about "where to go." Their neglecting to do so is probably due to reluctance to take the trouble of writing, for no one need fear the giving away of some of his private haunts, as might be the case were brook trout or bass fishing the topic under consideration. The supply of tarpon and other game fishes that are found therewith is absolutely inexhaustible, because rod and line cannot make any impression on the countless thousands of such fishes. Again, one's pleasure on a tarpon fishing trip is increased materially by the presence of a number of jolly good fellows sharing the same sport during the day and meeting in the evening to repair tackle, compare experiences, tell stories, etc.

This feature of the sport is one of the principal charms of the town of Tarpon at Aransas Pass, where, under the shelter of the Tarpon Inn, that is kept by the genial Frank Hetfield and his obliging wife, sportsmen from all over the United States, and even occasionally from foreign countries, meet upon an absolutely equal footing on all else than piscatorial skill. The total lack of style that governs at the Tarpon Inn appeals to the heart of every true fisherman. The best of the fishing season is generally the months of May and June, but any time during the four succeeding months is likely to afford good sport.

Since sending you my last communication, I have had another outing at Tampico, this time with my friend, Mr. Marshall Miller, of Mexico City. The weather was not as favorable as on my two previous visits, nevertheless we did fairly well, taking 112 game fish in eleven days, my friend's share being 11 tarpon, 26 jackfish, 1 pike, 1 pargo mulato and 1 chopa in ten days; and mine, 15 tarpon, 44 jackfish, 2 pargos and 1 gar in twelve days.

The total weight of the catch was in the neighborhood of 2,800 pounds, and there was not a single day that either of us failed to catch something.

The longest tarpon was one of mine, measuring 6 feet 4 inches, but Mr. Miller caught a 6-footer that weighed more.

Our best day gave us six tarpon and twenty-three jackfish, all but three being caught in the forenoon, and the weight of the morning's catch reaching fully 1,000 pounds.

I am sending you a few photographs of some of our fish, so that you can reproduce them in your paper, if you so desire.

The large print shows a three hours' catch by Mr. Miller and myself, consisting of three tarpon and six jackfish. In it Mr. Miller is standing on the right and yours truly on the left.

Among the prints you will notice three leaping tarpon and one of flying pelicans. These were taken with an apparatus that I evolved, and which was manufactured by my friend, Dr. Howe, of Mexico City—the gentleman who has caught the largest tarpon up to date. We call the apparatus a "gun-camera," for it consists of an ordinary camera mounted beneath a little wooden gun, so that the axes of both gun and camera are parallel and have a trigger that operates the shutter.

Had either of us known anything about photography, or had the weather been more favorable, we would have had many more views of leaping tarpon. Dr. Howe, who went to Tampico after I left there, has taken a number of snap shots, and has promised to send me prints of same. If they be good ones, and if you care to publish any more, I would be pleased to send them to you.

Mr. Farley, the taxidermist, of Tarpon, Tex. spent part of February and all of March at Tampico to study the fishing grounds and mount some tarpon. He is so pleased with his experience there that he is going back about Nov. 15 to remain until next April.

Some of the gentlemen who were at Tampico last season are going to form in Mexico City a tarpon club, consequently any sportsman who goes to Tampico next winter will be liable to find good company there.

Now in respect to my second paper on tarpon fishing—viz., "Tackle and Outfit"—I would state that, as I am very busy this year on professional work, I may be prevented for some little time from writing it. Moreover, before doing so, I would prefer to wait a little in order to hear from other sportsmen something more concerning "Where to go."

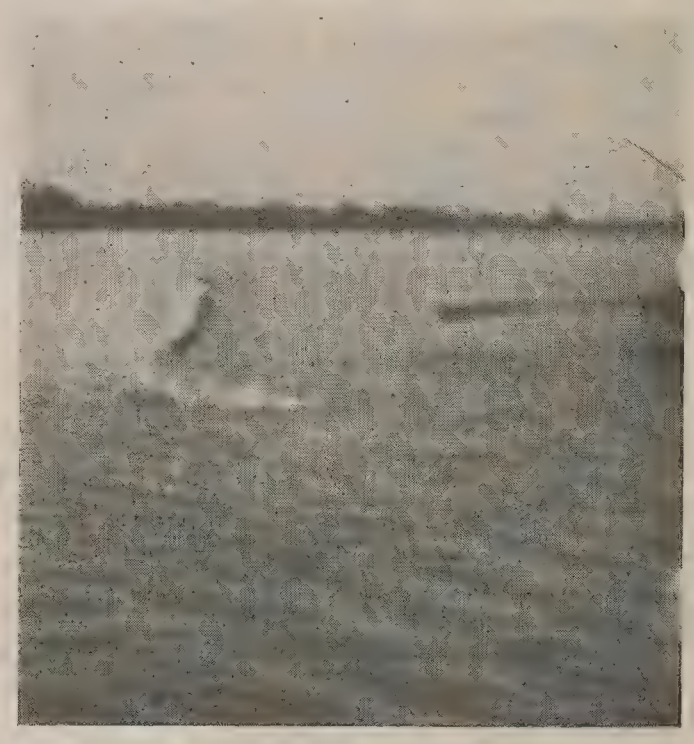
New England Fishing.

BOSTON, May 13.—The fishing season has begun in good shape at the Rangeley waters. The ice "sprung a march" on the sportsmen, as well as hotel and camp keepers, by going out at least a week earlier than expected. But the telegraph gave the word and the early fishermen are on the grounds. At the Upper Dam there are already more than a dozen of the lovers of the rod and reel. E. E. Suffern, of New York, is there, and his fishing friend, John Watkins, is coming in a day or two. B. G. Ackerman, who has fished with them for so many years, and has a wonderful record of trout, is kept at home by serious illness. Mr. Suffern took a small salmon on



LEAPING TARPON.

Tuesday and a trout of 7 pounds. He is almost always high line. Freeland Howe, another early and veteran fisherman at those waters, has taken several good trout and salmon. He caught one or two on the fly at Mill Brook Wednesday. Mr. W. P. Clark, who has fished at the Upper Dam for so many seasons, caught four trout on the fly at Mill Brook the other day, the united weight of which was 10 pounds. This is remarkably early for fly-fishing. Mr. Clark says that the Parmachenee-belle did the business, and Mr. Howe says that he used a Gray fly, something like the silver-doctor. Other fishermen have taken trout on the fly at that point, among them Mr. W. D. Brackett, who has fished with Mr. Clark for so many years. The fishermen have had a hard time getting to the Middle Dam. Capt. Ed. Coburn's steamer "spread the ways," when sliding her into the water after the ice

THE END.

went out, and it has taken a long time to get her into the water, hence that point has had to be reached by rowboats, or else by one of the private steamers on the lake above. But some good catches of trout have been made by those who have been willing to take a nine-miles' row in an open boat from the Upper Dam. Fishermen at the Upper Dam, Middle Dam and Rapid River below will want to know about the sluicing of the logs this spring, since fishing in some of the pools is impossible when the logs are running. In other pools the sportsmen are claiming that the fishing is better when the water is on and the logs running. The drivers work every minute of daylight, unless during meals and when waiting for booms or rigging. Supt. John A. Larey tells me that there were 22,000,000 feet of logs to go through the sluices in the first place, and that he has got about 3,000,000 feet through at the Upper Dam. It will take sixteen to eighteen days longer to get the logs all through. Then the pools will be unobstructed.

Fishing at Indian Rock, the home of the old Oquossoc Angling Association, is very much obstructed by the big drive of logs, all of which have to pass out of the narrow Kennebago and be boomed at that point. At Haines' Landing the fishing is already good, and sportsmen are assembling in considerable numbers. Salmon are being taken. At Mountain View the fishing season was opened by Mrs. Sawyer, of Boston, who caught a trout of 4 pounds weight off the wharf early this week. At Billy Soule's

Pleasant Island camps the fishing has begun in good earnest. Some new cottages have been built on the main land, reached by a foot bridge. All the regular visitors are booked and many new ones. At Haines' Landing a number of new cottages have been built, and one of the Standard Oil people, from New York, with his friends, is to occupy three or four of them. At Rangeley the salmon fishing began early. Mr. A. H. Proctor, of Salem, with his friends Breed and Northly, have built a cottage on the southeast shore of the lake. Mr. Proctor and Mr. Northly were down a week ago, as soon as the ice was out, to look after their camp arrangements, not thinking of fishing. But finding a rod and line rigged up, Mr. Northly got into a boat for a few minutes before the train started to take them home on Monday. The result was a trout of 3 pounds, the first of the season. Since that time Miss C. T. Crosby has taken several. Other fishermen are arriving, and the register at the Rangeley Lake House will soon be full, if applications are an indication. Let fishermen think of it who went to Rangeley twenty-five years ago, by rail to Farmington, then by stage twenty miles to Phillips. Here stopping over night, they took that terrible stage ride of twenty-six miles over Beech Hill, landing at Greenvale, more dead than alive, at the close of the second day. To-day the journey is made in parlor cars from Boston to Farmington, and then by

A CATCH AT TAMPICO.

the little "two-foot" Narrow Gage to Rangeley. At Rangeley there were hotel accommodations for half a dozen, on a pinch. To-day the Rangeley Lake House, on a beautiful point overlooking the lake, will hold 250 guests. Daily trips to all the other fishing points on the lakes are easily made by steamers. Such is the march of progress, and the fishing interest has done it. In the State of Maine, are the hotel and camp people aware of how much they are indebted to the FOREST AND STREAM, that has been modestly telling about this fishing all these years? Where would the fishing interest be without the newspapers?

There is good fishing at Bemis, foot of Mooselucmaguntic Lake, Me. The fishing is almost always first there, and some very fine strings are being taken. State of Maine fishermen were generally the first on hand, and are getting the cream of the spring catch. Fishing is easy, for it is done right off the steamer wharves, within a few rods of the railway station. Among the earliest catches made last week, Hon. John P. Swasey, of Canton, led off with a trout of 3½ pounds; H. O. Davis, Rumford Falls, trout of 4 pounds; Frank A. Hesiltine, of Phillips, trout of 2½ pounds; Leonard W. Hills, Portland, ten trout largest 3½ pounds; F. H. Richmond, Rumford Falls, several trout, one of 2½ pounds; Joseph Dupill, Mexico, seven trout, largest 3½ pounds. Walter Hinds and a friend from Portland have been at the Birches, where fishing is just commencing to be good. John A. Greenleaf, of Lewiston, and his friend, H. F. Farnum, were coming down the lake on Wednesday with a view to catching the train for home. They had not had much luck at either Upper Dam or Mill Brook, having taken only a trout or two. As things sometimes go on the early trips on these lakes, the fire went out under the steamer's boiler, and they were stopped. To reach the train was not possible, and Mr. Greenleaf, who is a stone contractor and a very busy man, as well as a great lover of the rod and line, was a good deal disgusted. But there was no help for it, and they would be obliged to stay at Bemis over night. Just as the little steamer made a slow landing, they saw sportsmen fishing off the wharf. A man pulled out a trout of 3 pounds. It did not take long to again joint their rods and go at it. Mr. Greenleaf made a catch of ten trout, the largest 4 pounds, and Mr. Farnum did almost as well. The little steamer and the dead fires under her boiler were forgiven.

Calais, Me., reports say that fishing in that section has begun in good earnest. At Grand Lake and Grand Lake Stream some very good catches are being made. The wind has blown very hard a good deal of the time, but better fishing has seldom been known, when the sportsmen have been able to get out at all. Good catches are reported as follows: E. P. Boynton, Boston, 17 fish; M. Hartley, Boston, 39; Thomas Lincoln, Jr., Quincy, 14; W. H. Allen, Newtonville, 26; G. H. Brown, Boston, 33; Dr. F. M. Johnson, Boston, 14; Herbert H. White, Cambridge, 14; Charles Lewis, Cambridge, 8; John C. Tailor, Boston, 10. Reports from Sebago speak of poor fishing. Big salmon seem to be plenty in the lake, but the smelts are running, and the salmon are feeding on them, declining any other bait. Lake Auburn reports also say that the fishing is poor, whether by reason of the cold weather and higher water it is not well understood. Salmon seem to be plenty, and the anglers are very likely to have several successful days yet. One salmon of 5 pounds was reported taken there last week, and a few trout. Good fishing is reported at the Bangor salmon pool; the best ever recorded for any one week. The total weight of the catch for the week was over 1,000 pounds, the fish weighing from 14 to 30 pounds. Mrs. William A. Munroe caught two salmon last week, both weighing about 20 pounds each. Both fought savagely, but were finally landed by Mrs. Munroe, who has fished several seasons at the pool. Mrs. Geo. Willey has not had much experience at the pool, but she has succeeded in landing a 25-pound salmon, after a hard fight of over an hour. This is one of the largest fish of the season. From Snow Pond, in Kennebec county, Me., comes the report of a trout being taken weighing a little over 8 pounds, a perfect brook trout. It was 25 inches in length and 13 inches broad. This is the largest fish ever known in that section. Fishing is better at Cobbosseecontee. Dwight L. Higgins captured last week a salmon of 6¾ pounds, the largest salmon of the season at that lake. Fish and Game Commissioner Carleton has been fishing there. He caught eleven trout in four hours, and during the same time other parties took fifteen or twenty. Adjt.-Gen. John T. Richards, another State official, who has been fishing at Cobbosseecontee, has broken the record thus far, capturing three trout, the united weight of which was 11½ pounds.

Plymouth, N. H., reports are of good fishing at Winnisquam Lake, where some good salomn are being taken. On Winnipisaukee, along Saunders' Shore, in the town of Guilford, some good salmon are being taken. One of 8 pounds was reported there last week, to the credit of a Boston fisherman. Henry H. Whitman, Allen H. Moses and H. T. Coyverse, all of Boston, have been fishing and camping in the vicinity of Dorchester, N. H., and have brought home with them about 20 pounds of trout. Fishing continues good at the Weirs, and sportsmen do not go away empty-handed. It is estimated that the weight of the salmon and trout already runs well up into thousands of pounds. The New Hampshire Fish Commissioners are well pleased with the success that salmon are making in the larger lakes and ponds of the State. Reports say that over 500 pounds of trout and salmon have been taken in the vicinity of Alton Bay during the week. Newfound Lake is showing up as well as usual this year, and good, big lakers and some salmon are being caught. H. E. Gero and A. B. Kelley, of Plymouth, and A. L. Richardson, of Boston, landed five salmon last week, the united weight of which was 10 pounds, as well as three trout of 4¼, 4½ and 5 pounds. They fished in the vicinity of Bristol. At Grove Hill Farm there have been registered the past week George F. Richardson, Newton, Mass.; Dr. F. G. Kuhl, Woonsocket, R. I.; J. P. Morse, Boston, and Samuel Way. Each has caught some good fish.

SPECIAL.

ANGLING NOTES.

The Yellow-Hackle for Salmon.

THERE is a large blue envelope, cloth-lined, and bearing on the outside "Forest and Stream Angling Notes," that is always on my desk. It is not always the same envelope, for even cloth-lined envelopes will wear out, and when this occurs the worn one is replaced by another new, but similar one. Into this envelope I put all sorts of things—letters, clippings, memoranda, made in all sorts of places; flies with histories, queries and notes on bits of paper or backs of envelopes to serve as reminders. When there comes an evening that I can sit down at my desk at home, I do some fishing into the interior of the big envelope, and then do the writing that I try to do as often as once a week under the heading "Angling Notes." The contents of the envelope have been growing of late because I have rarely been able to sit down at my own desk at home longer than to contribute to the contents from my pocket memorandum or traveling bag, and have lacked the time to make a draft upon them, so this evening I have first of all been weeding the contents, for angling memoranda will sometimes get stale if not used in its proper season. One item is nearly a year old, judging from the date of the letter containing it, but it is still in season, and I take it first.

Mr. Archibald Mitchell sent me a letter written to him by Mr. J. J. Dodds, and now I quote from it in part: "I was gratified to see in a recent issue of FOREST AND STREAM an account of your success in salmon fishing this season. Such sport is beyond my reach at present, still I am fisherman enough to feel the blood tingle in my veins in reading Mr. Cheney's account, and can cheerfully congratulate you. In my last letter I believe I mentioned a salmon fly known to me by the name of yellow-hackle, the invention and pet fly of an old salmon fishing acquaintance in the 'North countree.' During the interval I received a letter from him, inclosing one of the original patterns I refer to, and I now inclose it to you. It may interest you, although it is very evident that your own patterns are deadly enough for all purposes. It is not a gaudy fly, but I have seen it do some excellent execution at times when well-known standard patterns drew a blank. My old chum says of the fly: 'I have improved on the old pattern and now add a golden pheasant crest down the center, and also a jungle-cock feather at the cheeks, and find it an advantage.' He did not send me one of his latest dressing, as he had to tie them all on double wires."

To me the peculiarity of this extract is that it is the first time that I have ever heard a fly designed purely for salmon fishing called a hackle, be it yellow or any other color. We have all sorts of hackles for trout fishing and a hackled fly has been considered strictly a trout fly. Having no wings, it is supposed to counterfeit a caterpillar. The novelty of the term hackle applied to a salmon fly caused me to look at several lists of salmon flies—Farlaw's, Forest's and Cummings' among others—and I can find no mention of hackle in connection with dressings for salmon flies, nor does the name appear with either prefix or suffix. Unfortunately, the fly did not come to me with the letter, and so I do not know if its dressing bears out its name, but as a hackle does not have cheeks I assume that it does not, and to call any salmon fly a hackle would seem to me to be an innovation that would not be relished by the salmon fisherman who, perhaps, would not be displeased to admit it to his fly-box as the "yellow charcoal burner" or the "yellow cheesemonger," for a salmon fly is such a pretentious creation that it is not to be described merely as a hackle though it be red, white and blue, with polka dots of lavender and green.

Infant Fish.

Lately I had something to say about killing baby trout, and entered a protest against the practice and tried to show why the little trout are protected by statute. A few years ago I entered a protest against the killing of baby whitefish the size of sardines and selling them in tins the size of sardine tins. It is true that they were advertised as cooked with tomato sauce, and however savory the tomato sauce may have made them, it was no excuse for slaughtering baby fish.

Now I wish to enter another protest, and this time it is against the killing of baby mackerel. Here is the advertisement as I find it in a local paper:

"INFANT MACKEREL, 5 CENTS EACH.

"We were sorry to disappoint many customers last week, but the demand for these fish was way beyond our greatest expectations. We are now prepared to fill all orders. Special price by the barrel."

"Infant mackerel for five cents each"! Just think of the assurance of the advertiser. And by the barrel, too. As I knew the advertiser, I called upon him and expressed my opinion of his advertisement orally and in person, with an adjective thrown in occasionally to be impressive and to fill the gaps when other language or parts of language failed me; and concluded with Frank Daniels' oft-repeated question to the court jester in the "Ameer": "Aren't you ashamed of yourself?"

Monster Fish.

From Avalon, Santa Catalina Island, my brother sends me a photograph of himself standing by his yellowtail, which was, when taken, the record fish with hook and line, weight 44 pounds. This fish has since been exceeded in weight by one of 44½ pounds, if I am correctly informed by members of the family who have recently returned from California, but who are "not given to storing their minds with the precise weights of fishes as if that was the end of all things." This I was also informed as recently as this evening. I never have seen my sisters climbing trees to study birds, although their gowns some-

times indicate that that is the sort of field work they have engaged in, so I only made the retort courteous by saying it was perhaps as dignified to store one's mind with the precise weight of fishes as to crawl through the brush and brambles on hands and knees, risking feminine apparel to see an oven bird do a heel and toe walk.

Having balanced accounts, I proceed with the fish department.

With the photograph mentioned are other photographs of monster fish—the record tuna and its captor, the record black sea bass and its captor and a list of record fish of the Santa Catalina Island Tuna Club. These were printed in FOREST AND STREAM of last week.

The statement there given as to weight of fish, tackle used and the specific name of the fishes will answer several queries that I have received from anglers abroad, particularly in Great Britain. An angler who is not a member of the Tuna Club, competing for the club records or cups, is not of course restricted as to the kind of tackle he must use in fishing at Santa Catalina Island.

Lake George.

The fishing for lake trout in Lake George opened on May 1, and as a returning angler told me, any kind of an angler who puts a baited hook in the water this year bill take fish, and the scores I have heard of confirm this. So far I have not heard of any landlocked salmon being taken from the lake this year, but presume I shall hear of them later.

A. N. CHENEY.

The River Nepigon.

From the Ontario Department of Fisheries Report.

THE River Nepigon, which connects Lakes Nepigon and Superior some sixty miles east of Port Arthur, and which is said to be the headwaters of the St. Lawrence, is our most noted fishing river, and is admitted by those who have whipped its waters to be the finest trout "stream" in America, if not in the world. "Stream," however, conveys a very erroneous and vague idea of the magnitude of the river, unless one were in the habit of so speaking of the great Niagara, for the Nepigon possesses in but a slightly lesser degree the "whirling and tumbling water, and the eddies and currents leaping and charging from side to side in eternal confusion" of that river. Here is the virgin home of the speckled trout, specimens having been taken weighing 5, 7 and even 10 pounds; and here is the angler's paradise. When they are rising well, the fun is fast and furious, for the trout of this region are unequaled for vigor and activity.

No more delightful outing could be imagined, desired or experienced than is afforded by a fortnight spent on the glorious Nepigon. The scenery alone would well repay a visit, not to speak of the angling. In its sinuous windings it recalls the famous Saguenay, and it is a matter of constant wonder what splendor the next turn will reveal. In some places the shores are banked with foliage to the water's edge, while in others bold bluffs rear themselves majestically to dizzy heights, and many islands add charm to the view. Immediately one begins the ascent, he feels that he has been transported to another world. Dull care is left behind, the anxieties of life cease to oppress, the very atmosphere seems to be intoxicating, and he gladly yields to the fascination of his surroundings. After leaving Lake Helen and passing the little Indian village at the mouth of the river, the prospect is unbroken by settlement or habitation, and is one delightful expanse of nature's most exquisite handiwork. Six miles more, and the first camping place—Camp Alexander—is reached, and the initial portage has to be made. Here tents are pitched and preparations begun for spending the night. Some of the guides repair to the forest, and in a few moments return heavily laden with large bundles of fragrant spruce boughs, which they adeptly convert into restful couches. Others have meantime been preparing the evening meal; the call to "wee-sin" is a welcome sound, and soon the camp is lulled to rest by the never ceasing song of the river.

No reliable fishing is to be obtained below Camp Alexander, though the impatient angler has occasionally been rewarded with a rise where a fly has been cast in the eddies along the way. The river falls in its course of twenty miles between Lake Nepigon and Camp Alexander some 300 feet, so that for this distance falls and rapids follow in quick succession, and good fishing is to be had almost anywhere between these points. The guides are either Indians or half-breeds, and, as a rule, are most attentive and trustworthy. To be properly equipped, two guides are required for each canoe, unless one is himself an adept canoe man and has a fondness for hard work, for it requires a strong arm, a skillful hand, an unerring eye and an active brain to safely pilot a craft through these turbulent waters into the coveted haunts. Indeed, as the struggle against the rushing waters becomes fiercer, the muscles and veins of the swarthy guides stand out like cables. The guides are anxious that the tourist should have good fishing, and the rivalry is keen as to which boat shall bring in the largest trout; and when a fish is struck their exclamations of delight are second only to the uproar created by the swift running waters. In places where the current is too strong for paddling, and not angry enough to necissitate a portage, the guides pole the canoe along; and, as inch by inch headway is made, it seems a battle of the weak against the strong, wonder prevails as to which will ultimately triumph, and speculation arises as to what consequence would follow the snapping of the trusted spruce or the capsizing of the canoe. Occasionally such a contingency arises as the snapping of a pole, but the skillful bowman has never yet proved unequal to the emergency.

Near the head of the river is Virgin Falls—a miniature Niagara. At the foot of the falls may at any time be seen, disporting in the foam, hundreds of whitefish and speckled trout; and the former takes the fly as to the "manner born." A few miles below the falls is Lake Nepigon itself, a most beautiful sheet of water, measuring some seventy miles long by fifty wide, with a coast line of about 600 miles. The lake is thickly studded with islands—it is estimated some one thousand in all. The descent of the river is not the least enjoyable part of the trip, and is, of course, accomplished in a much shorter time, as most of the rapids are run in the downward journey. Frequently the canoes of several parties may be seen descending a rapid in quick succession—a most thrilling sight.

The undersigned would most strongly urge the desirability of reserving a strip of land on each side of the river, in addition to the one chain already reserved, that the scenery may be properly protected and preserved for all time in its pristine beauty.

Nepigon Trout.

An experiment which I should like to see tried, and the result of which I would watch with great interest, would be the fertilizing of the eggs of the brook trout in some of the preserves with the milt from the male of the Nepigon. Milt can be retained for days in hermetically sealed jars, and has been sent one thousand miles or more by mail, and on its arrival used to impregnate eggs that afterward yielded over 90 per cent. of fry. If any of our trout culturists would care to make the experiment, the Department will endeavor to have a supply of milt obtained by its officers at the Nepigon. The milt must not be diluted with water, and the eggs should be impregnated within six days from the time it is taken. The result, it is believed, would be a hardy and vigorous offspring.

S. T. BASTADO.

Where the Trout Went.

"FOLLER the course of the brook till you come to the swamp, then turn to the left round the woods an' you'll find the pond on t'other side," said the old farmer, at whose house I was staying through August of a recent year.

After walking about a mile we came to what the boy called "the swamp," but there was no water visible.

"It's mostly overflowed in the spring," said he, "but I s'pose it dries up in summer."

"'Tis very hot, my boy. Why should we go around in the sun when it is shady and cool in the woods, and much nearer, too?"

"Perhaps we couldn't find the way," replied Tom, mindful of his father's instructions.

I decided to go through the woods, so we pressed on through the belt of bushes—alder, gray birch and willow—which appear to bound the inner edge of "the swamp," entering beyond them a more open area of trees. These were of several kinds, like the usual New England forests—white and yellow birch, white maple, beech, but chiefly hemlock—of which there were quite a number of large size.

Sauntering along, we caught glimpses of birds that warbled and chirped among the foliage, and of a few crows that flew cawing over the leafy tree tops, while several squirrels defiantly chattered at us, as they sat peaked up on a low branch or scrambled over the rough bark.

A sharp cry of affright from Tom startled me. When I looked, he lay struggling on the ground. Running to him, I saw that one of his legs had disappeared, and taking my stand on a big hemlock root, I seized him under the arms and drew him up. My thought was that he had stepped heedlessly into the hole of a fox or a skunk and that some animal in there—a fox, a raccoon, or, perhaps, a woodchuck—had set its teeth into his foot, shoe or trousers, and was holding back, or that, in his fall, Tom's leg had been broken or thrown out of joint.

"Is your leg hurt?" I asked, as I lifted him to his feet.

"No; but it's awful wet and cold."

Then I saw that one trousers leg was dripping wet.

"I didn't see any hole at all before," said Tom, staring down into a small visible spot of water. "I guess it's what folks call a 'honey pot,' but they are gener'ly muddy and this isn't."

"There's a little spring down there, I suppose," was my explanation. "You should look before you step."

Just then we heard a swishing in the branches of a beech beside a big hemlock on a knoll a few rods away, and caught a glimpse of a patch of gray fur, which indicated a gray squirrel or a coon. I started quickly in that direction, but had taken only a few steps when one of my feet alighted in a slightly depressed place. It didn't stop at the surface, neither did the other foot, but both instantly went through into what seemed for a moment empty space, but which I perceived a moment later to be a brimming pool of cold water. Then I saw that the surface of the ground near me was sinking and water rising above it.

My fishing rod was still in its stout canvas bag, and as I dropped the rod found a resting place on some stiff roots at either end, and leaning over this I was held from sinking deeper, except as the ground sank with me.

When Tom observed my mishap he laughed, doubtless having in mind my slur on his personal prudence. However, he came skipping along on the high spots and thrust the stout butt of his alder fishing pole under my other arm, for having been in a similar predicament himself, he knew what I needed. He wasn't tall and strong enough to lift me much, yet thus supported I presently drew myself up and sprang to a secure standing place.

The locality we now knew had at least two pools, and the last one was not small, either. The animals in the trees were quite forgotten. The weather was so warm that the wetness of my garments did not make me feel so very uncomfortable, even in the dense shade, but the idea—which had come so near realization—of being immersed in a pool underground had given my nerves quite a stir.

Borrowing Tom's pole, I punched with it in another low place some 15 or 20 feet away. It went easily through about 6 inches of moist earth, mostly matted leaves near the top, and below dark soil that had been leaves, and now bound together by tiny roots of plants, then instantly of its own weight the pole slipped down its whole length, nearly 13 feet.

My resulting feeling was not a pleasant one, and the old farmer's instructions to go round the swamp recurred to me.

I tried several other places all about, some of them 50 yards from my slump, with similar results. The nearer were the trees the deeper was the soil, I found, but I could work the pole through into water anywhere else that I tried.

Suppose I should come to a large area of low level in my course, I could avoid going quite through by only going far around. The feeling this reflection induced was not one of serenity.

Another shout from Tom and I was, of course, startled, but I saw that he was on his feet and bending over, excitedly, pulling up a line, while calling out to me, "I've got something! I've got something!"

"Pull it out!" I shouted back.

"It's so lively and strong that I can't get it in sight," replied Tom, gripping hard the slippery line.

He had dropped his hook into the hole I had made, and it had been taken almost instantly. In a few moments after I reached him he landed a handsome spotted trout over a foot long. Doubtless my heavy and hurried footsteps shook the ground and alarmed the trout, for Tom didn't get another nibble until many minutes after I went away, but he ultimately caught two more there almost as large as the first.

After having seen a genuine trout pulled out of a hole in the ground, I looked about and soon found a natural opening about the size of the broad brim of my Panama hat where I could see the water, which appeared to have a slight movement. I could not find a good support near it, and therefore put three sections of my rod together, baiting the hook with the whole of a small angleworm. Before the hook had time to sink 2 feet in the water I felt the characteristic bite of a large trout. After a lively contest, lasting several minutes, I pulled out a speckled beauty, which weighed 3 pounds.

Probably a great number might have been caught, but half a dozen—only two of which weighed less than a pound each—seemed an ample quantity for one day.

The existence of this underground lake is accounted for in this way: A large area here had once been an open pond additional to the one at present visible. Probably there were within it several slightly alkaline springs, which tended to the formation of a mossy scum, and whose flow also aided in keeping the water courses underground open in dry times, through which the waters of the open ground found passage to the brook, up whose course we had mainly followed. The mossy scum caught the falling dust and the leaves blown over the pond by the autumn winds, and the leaves became wet and matted upon the moss, when that in its turn overgrew these. The process went on year after year, and seeds blown from the shores or dropped by flying birds, germinated in this soft soil, grew up as plants and bushes, caught more leaves and dust, until at last trees grew all over the surface where had formerly been only water. Year by year these bushes and trees grew larger and heavier, and small areas which their roots had penetrated were pressed lower into the water, and the scum and dirt stuck about their roots and more leaves gathered above them. There were boulders, small and large, in the pond too, upon and about which islands formed, and, finally, the water was all hidden and over it grew a forest of trees, large and small, according to the depth of soil their roots found.

Tom and I failed to reach the pond for which we had started, but we carried home 10 pounds of prime trout, caught in holes in the ground under the hemlocks, and we had solved the mystery of where the trout went in hot weather, when they could not be found in the pond.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

60

A press dispatch from Caribou, Me., April 30, 1901, reports: "Six years ago Aaron H. Leonard went into the woods from his home in Washburn on a hunting expedition and never returned. Last week gunners came across the skeleton of a man in the woods but a short distance outside of Washburn village, which is undoubtedly that of Leonard. A rifle and other hunting utensils serve to identify the remains, but there is no indication of foul play, and it is believed that Leonard lost his way and died of starvation."

61

And here is the story of a fisherman whose fishing was the means of restoring a long lost daughter. In the summer of 1898 Robert Damren, of Oakland, Me., found his daughter, Alice Maude, who had been taken from his home by a woman of Norridgewock during his absence and the illness of his wife in 1876. All efforts to find the girl failed. Her discovery was due to the chance remark of a companion of Damren on a fishing trip, and the daughter was found in Portland, where she was known as Alice Maude Wormwell, the last name being that of the second husband of the woman who took the girl away.

62

A Greek fisherman fishing in the little Bay of Livadostowo (a village in the innermost northeast corner of the Gulf of Corinth, close to where the ancient Creusis is supposed to have stood) has brought to light the fragments of a bronze figure a little over half life size. From an inscription on the basis it appears that the statue represented Poseidon. The bearded head is the portion best preserved, and it is reported to be closely analogous to the bearded bronze head found in the Acropolis; if this be correct it belongs to the sixth century B. C. Unfortunately, the rest of the statue—i. e., the nude standing body of the god—is so fragmentary and so much corroded that it is doubtful if even the most careful cleaning and piecing can make much of it.

Sidney D. Smith, a civil engineer and surveyor of Bellmore, L. I., nearly lost his life Sunday while on his way home from a duck-shooting expedition. His boat was filled by the waves that were raised by the high wind and he was forced to jump overboard. He held on to his craft and after a desperate struggle managed to push it, with the aid of the wind and tide, several miles to Whale Neck Point, near Merrick.

On the way he had to throw overboard his decoy ducks, a dozen or more sheldrake that he had shot, and everything else in the boat. While still in the water and holding on to the boat he managed to divest himself of his heavier clothing. After landing he had to walk two miles against a cold wind in order to reach his home. —New York World, April 16.

The Kennel.

Leading dealers in sportsmen's supplies have advertised in our columns continuously for a quarter-century.

My Dogs.—III.

AFTER parting with Prince I lived a dogless life for several long years, except for an occasional uncongenial companionship with my eldest brother's mongrel descendants of Juno.

At length, one fall, an old friend of my other brother came with his hound to stay with us for a few days of fox hunting. We had an unbroken week of that brief, delightful season known as Indian summer, when heaven descended upon the earth, making its mountains the Delectable, its fields and woods fit though transient realms of bliss.

In that memorable week I got my first taste of fox hunting in our New England fashion and at once conceived a great fondness for the sport. I have taken up the cudgel more than once in these columns in its defense against the charges that it is unsportsmanlike and unmanly and have no intention of doing so now. It is the privilege of those who wish to risk breaking their necks in riding after the hounds for the pleasure of seeing an overmatched and helpless animal torn to pieces, as it is ours to hunt the fox in a way which seems to us quite as fair, if not so dangerous and cruel, though as for the latter element, it cannot be denied that it enters largely into all field sports, which, like war, are a survival of our original savagery.

Our friend Clark was a pleasant companion as well as a skillful hunter, and his little dog, Drive, was exceedingly wise in the cunning ways of foxes. To my mind he was an ideal hound for our fox hunting, in size not much above a beagle, but with the low-set long ears, the pendent flews, the high, peaked head, the corrugated brow and other characteristics of the old Southern hound, with a voice as bell like, if not as deep toned, the sweetest music I had ever heard, it seemed to me when it first fell upon my ears.

We hunted the hills and the lowlands, started a fox every day, yet to our humiliation we got not one, though on his own ground in Addison and thereabout. Clark was a very successful hunter, not unfrequently killing twenty foxes in a season. But here he was off his beat and my brother and I knew as little as he did of the runways, nor had the experience which should have taught him to guess them, so none of us happened to be in the right place at the right time except in one instance.

That was in the Slang woods, where Drive had been running a fox for an hour, in a great circle toward which I gradually edged my way with my heart in my throat and my gun at a ready and so came at last to a little open space among the hemlocks where a pile of forgotten rails lay aslant upon a log that looked no older than they, with the weathering and moss and lichens of many years upon them.

The music of the hound drifted nearer and my heart rose higher and choked more with every increasing wave of melody which was borne to my ears, at last, an occasional crash of underbrush, then a nearer patter of light footfalls on the dry leaves, and then the gray pile of rails burst into a tawny glow of bloom at the top as the fox sprang lightly upon it. My eye caught every feature of the brief apparition; the jet black ears and legs, the cunning, plotting visage, the magnificent white-tipped brush—all these I saw in the instant of aiming, and believe I saw my sight fairly against his side just behind the shoulder. Then, through a veil of powder smoke, I saw him vanish behind the rails, whither I ran, sure of finding him there. But, alas! he had disappeared as utterly as if the earth had swallowed him or as if he had faded into viewless air more entirely than the smoke of my gun. My poor heart no longer choked me, but sickened me with the void of sinking quite out of me.

Drive came in to the report of the gun, eager for the small yet satisfying reward of his well-performed feat, but there was no dead fox there for him to mouth and sniff, and after a questioning look that found its answer in my chapfallen visage, he began circling for the lost trail. I was still searching for one consoling drop of blood or tuft of fur, when Clark and my brother came to me, both nobly forbearing blame or derision, the first even offering an excuse for my failure in the small size of my shot. It was very kind of him, for no doubt he suspected a case of ague, which I believe occurs as often in fox hunting as in deer hunting.

Forty years ago the axe swept away the ancient forest, and the plow and harrow have smoothed its rough floor to a level meadow, but as often as I think of it I see as distinctly as then the patch of frost-browned ferns amid the old hemlocks, the lichened pile of rails, the brief vision of the fox on its top, and I feel again the sickening humiliation of that abortive shot.

The ill success of that October week was as nothing to the joy and excitement of it, which determined me to own a hound and be a fox hunter.

One morning I set off over the hills in quest of a young hound that I heard was for sale by a family of fox hunters whose dogs were of good repute. After a nine-mile tramp, I came to the house of the hunters, where a few of the neighbors were assembling with their oxen for a drawing bee. Its object was the removal of a small tenement, characterized by the patriach of the family as a "damned Free Soil house," in as mild reprobation of the last tenant's politics as the veteran of ninety years could bestow. His tough old body, erect and agile, seemed unscathed by time and he was the liveliest of the company, cracking his rough jokes in a continuous volley while the decanter of old Medford rum was passed in the ancient hospitable custom against which not even prohibition could here avail.

"Marv," he shouted to a burly neighbor, "ye look ju' like a cussed ol' elephant, only ye forgot to fetch yer trunk."

Making my business known, I was shown the hound, a bitch under a year old, of bright and graceful form handsomely marked with blue mottling, black saddle, tan legs and eye patches, but lacking in length of ears, and heavy flews which indicate a musical voice, though the young men of the family assured me that she possessed this quality to a degree that would warrant giving her the name of Kate Hayes, they having given that of Jenny Lind to her sister. She took my inexperienced eye at once, a bargain was speedily struck and I, the happy owner of my first hound, was a mile on my way homeward when the vociferous clamor of the drawing bee arose behind me, Uncle Till's shrill treble overtopping the "Whoa hush!" "Whoa haw!" of all other voices.

As we journeyed together by crossroads, fields and woodlands and established friendly relations, I held an informal christening and named my new acquisition Diana, and so introduced her to my family, by whom she was received with temperate admiration.

The first snowfall gave her a trail on a fresh fox track, I following it with her and laying her on to it as often as she returned to me after brief sprints of racing speed, apparently guided as much by sight as by scent in which latter sense she seemed deficient. After a good deal of such work, the fox was started. She raced him half a mile and came back to me, and would not follow the track when I laid her on again. She had a harsh, rasping voice and in all respects disappointed me then, as she did ever after, except when she proved herself a good deer hound.

In the following spring she had a litter of nine pups, sired by Joe Birkett's old Lond, a very superior hound, keen scented, true as a die, slow in pursuit and of most musical voice. Some of the dog pups which were saved of the litter turned out well.

The next fall Diana ran amuck in a flock of sheep, fortunately our own, several of which she killed and maimed more. In spite of her many faults and this crowning sin, I loved her, for she was fond of me and I could not bear the thought of sentence of death being executed upon her and got it commuted to banishment, whereupon she was transferred to the Adirondack country, where she lived some years, becoming a noted deer hound when hounding deer was considered legitimate sport.

ROWLAND E. ROBINSON.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XVII.—The Natural Method.

THE term "natural method" is a misnomer. It is distinctly misleading in its significance.

The vanity and pleasure of the dog are catered to by the trainer from start to finish in the application of this system. The dog's self-interest is thus in a manner the basis of the trainer's lessons and success.

To the dog the lessons are moments of mere delightful play. They are combined with flattery and petting by the trainer, which inflate the dog's body and spirit with pride and delight. His performance being thus dependent on his own pleasure, his advancement in retrieving, as a serious work, or, indeed, whether he advances well or not at all, is exceedingly uncertain. His own whimsical inclination is always the dominant factor. He engages in the lesson with ardor if he feels in a frolicsome mood, or disdainfully ignores it if he feels otherwise. It should be called the amusement system, for such it really is.

It is an important adjunct to the so-called force system, since the same flattery and petting have the same goods effect on the dog when educated by that system, with the additional advantage that he must retrieve whether he is inclined to do so or not. Force properly applied establishes implicit and lasting obedience as a ground work. The amusement system supplements it and further appeals to the dog's self-interest by indulging him in amusement which is pleasurable. Later, when in actual field work, he comprehends the practical application of retrieving, and delights in the material success which it brings.

However, as it is generally considered as being a distinct method, it will be so treated in this work.

The natural method, so called, is not the best method. The "natural" retriever is rarely a finished retriever. Although termed a method it is inherently devoid of method. Under it, instead of governing the dog by method, the whim of the dog governs the trainer. It is crude and uncertain in its principles, since it is founded on the simple acts of the dog when voluntarily carrying the things in play for his own amusement.

The trainer, adopting the idea of amusement from the dog's standard, joins in the dog's frolic and with a liberal bestowal of flattery to inveigle the dog into making a semblance of retrieving, terms such tentative efforts a method.

Briefly, the important faults of the system are that it is entirely inoperative if the dog has no inclination to play; that dogs vary greatly in their capacity for play when compared one with another, and that the same dog at different times varies widely in his moods concerning it; that, though a dog may be inclined to play according to his own liking, he may not be inclined to play according to the liking of his trainer; that, being taught in play, many imperfections will necessarily be incorporated into his manner of retrieving; that he will never engage in it as a serious act entirely subject to the will of his trainer; that aged dogs, not being playful, cannot be taught by it, and that when at any time in his mature years the dog finds the work irksome or laborious to an unpleasant degree, he will quit it for good and all.

The natural retriever is rarely a finished retriever. From the manner of his education he is predisposed to a hard mouth, to rolling the bird in his mouth or dropping and picking it up in a dilatory manner as he fetches it to his handler, and to dropping it on the ground several yards away instead of bringing it neatly to hand as he should.

If punished for any fault concerning it, he is very likely to quit retrieving for good and all. Punishment inflicted under such circumstances is by him understood to be for having the bird in possession at all, instead of for the faulty manner of retrieving it. In most instances, at some period of the natural retriever's life, he ceases to maintain his interest in retrieving and thereupon refuses to further engage in it.

Nearly all puppies have an uncontrollable desire to play. They will romp with each other or with such children as will join them. The lone puppy, left to his own resources, derives great pleasure in fiercely carrying about and tossing an old shoe, or other available object, simulating attack and defense as if it were alive. He is not averse to engaging in play with his master, though the latter in his mature frolics oftentimes is too ponderous and calm as to deportment, and too conservative in his standards of play, to say nothing of his dangerous nature when irritated.

Play is the trait of the dog's character, which the trainer must utilize in schooling him to be a retriever. In its application there is no fixed nor arbitrary rule. The trainer's tactfulness and the puppy's playfulness are the factors.

No serious punishment is permissible. Anything which stops the puppy from playing stops the education at the same time. Disapproval may be shown when the puppy endeavors to rend or mouth the object to be retrieved, to the end that he may be checked more or less in his destructive tendency, but in that respect disapproval by word and manner is about as far as the trainer may safely venture.

By gradual and protracted stages the fun of the puppy is more or less imperfectly developed into the act of retrieving. An infinite degree of patience, persistency and good temper is essential in training the dog to retrieve after this method.

A palatable morsel, given to the dog when he has retrieved the object thrown out by the trainer, is a gratifying profit to him, and therefore an appeal to his self-interest. However, when the edge is gone from his appetite, and therewith his self-interest is dormant for the time being, he is likely to be indifferent to the wishes of his trainer.

Before beginning the lessons, it is better to have the puppy's interest by engaging in play with him at numerous times during the preceding weeks, so that all his association of ideas are anticipatory of amusement. Also, it is best to prohibit entirely all efforts to amuse him on the part of others. Thus the puppy from habit looks to his trainer and depends entirely upon him for his moments of pleasure; in fact, if no one else amuses him, he is ignorant of the fact that amusement exists apart from association with his trainer, and success will be accordingly as the latter can bring himself down or up to the dog's standard of amusement.

A ball, pad or old glove makes a fairly good object on which to practice the dog in retrieving. It is better to wash them frequently when used, as, from beslavering and rolling on the ground, they quickly become soiled and offensive. An object with iron nails in it so that the dog cannot bite it is best, but, unfortunately, such object the dog refuses to hold in his mouth. Iron, when against the dog's teeth, is specially repugnant to him.

In the first lessons the trainer permits the dog to exercise his own pleasure. He is building up an interest in the sport which later is to become a business. When the dog is habituated to play, he teasingly waves the object to and fro before the dog's eyes in a challenge for him to seize it. This the dog is keen to accept. While he is endeavoring to seize it, it is thrown alluringly out a few yards away, and he eagerly scrambles after it, grasps it in his mouth and struts about spiritedly in the pride of possession. If the trainer endeavors to get it, the puppy by pantomime banters him to get possession if he can do so, and by wily devices evades him as much as possible when he comes too near.

At length by craft and intimidation the trainer again gets possession of the object and throws it out as before. And thus the play proceeds, lesson by lesson, till from habit and deference to mild authority the puppy obeys the order to "fetch," which is always uttered when the object is thrown out, so that this command is associated with the act of fetching.

The erratic faultiness which the puppy will display from the beginning should be corrected as positively and as soon as possible, consistently with holding his interest and effort. For instance, when he retrieves the object and the trainer is endeavoring to take it from him, he will hold it tightly in his mouth; if the trainer pulls on it forcefully he holds it the tighter, all of which has a tendency to make him hard-mouthed. If the trainer holds him by the collar with the right hand and grasps the object with his left, he can with the collar hold the dog in place so that he cannot exert any force on the object. Then he with his foot pinches the toes of the puppy while holding him kindly but firmly in place, at the same time uttering the command, "Give." In a few lessons he will associate this command with a pain in his toes, and the act of opening his mouth and releasing the object he will associate with the avoidance of the pain; thereupon he will open his mouth to release the object when he hears the command. Thus, "Fetch" denotes that he is to retrieve the object, and "Give" denotes that he is to release it when he has brought it to hand.

The results of this "method" are much as they happen to be. The lessons are continued through weeks and months, from the time the puppy is three or four months old till he matures. With age he becomes less frivolous. Month by month he is less playful because it is the natural evolutionary development from youth to maturity.

Many repetitions of the retrieving act become habitual, and what he at first did by way of amusement he may at last do by way of habitual deference to the trainer who dominates him; to a habit of life; to a desire to win approbation; to a material self-interest in the way of food rewards, or to all combined.

After the puppy has reached a stage of advancement in which he will fetch the object with some degree of regularity and certainty, the trainer should direct his efforts toward schooling the puppy to carry the object without mouthing it. If he acquires a hard mouth, shown by closing tightly on the object or chewing it, there is no certainty that the fault ever can be cured. In actual retrieving a hard-mouthed retriever is worse than none at all. He mutilates and destroys more birds than his services are worth.

To enforce steadiness it is better to make the lessons pertaining to it quite distinct from the other retrieving lessons. The trainer ties a rope three or four feet long to the puppy's collar so that he can control him easily, and, placing the object in his mouth, he forces him to hold it without biting it.

If the puppy is particularly predisposed to bite it, the

object may be prepared with nails in it as mentioned under the head of the force system. The object thus protected is placed in the puppy's mouth, and he is forced to keep it therein whether he is pleased to do so or not, but all is done with kindness and firm deliberation.

The lessons should be conducted without frightening him. If he ejects the object from his mouth, it should quickly be returned and by quiet coercion he should be forced to retain it.

He is next required to carry it steadily in his mouth while the trainer leads him about. These lessons are persisted in day after day till the puppy will carry the object without mouthing it.

When teaching him to carry steadily, the order "Steady" may be uttered every time he attempts to roll or chew the object, coincidentally with a jerk on the collar to force him to desist, and in time he will learn that the order signifies that he is to avoid working his jaws upon the object he is retrieving.

There will be some unpleasant features to the puppy in these lessons, but if he is treated kindly as to manner, though firmly as to practice, he will not remember them long, and, being in separate lessons, he will not associate them with the main theme of retrieving.

As before intimated, the length of time required to teach retrieving by the natural method is from puppyhood to maturity. A few families of dogs, intelligent, deferential and vain by nature, take kindly to retrieving. However, when taught by the natural method, they rarely make a finished performance, and display all their peculiar selfish idiosyncrasies in their work.

After the puppy displays some steadiness and finish in retrieving the pad, or whatever other object is used, the wing or tail feathers of a comman barnyard chicken may be tied to it, so that he will be accustomed to grasping them with his mouth. Although no dog hesitates to grasp them when they are on a bird which he himself has captured, many dogs manifest a persistent repugnance to them when they are attached to an object to be retrieved. So great is their dislike for them that the trainer may find it necessary to place the feathery object in the puppy's mouth and force him to carry it about, lesson after lesson, till by familiarity his repugnance is worn out. He is further schooled in fetching the feathered object till he will do so reliably.

California Coursing.

SAN FRANCISCO, Cal., May 6.—*Editor Forest and Stream:* Visiting Union Coursing Park last Saturday, through the courtesy of Mr. R. L. Taylor, an old friend of FOREST AND STREAM, I made the acquaintance of Mr. John H. Halton, the managing director of the park. Mr. Halton went around with us—that is to say, we went around with Mr. Halton, who showed us the equipment of the grounds and gave us much information about the management of the sport, the principal dogs, and about coursing in general as it is conducted out West.

The open stake match, with 128 dogs entered, was in progress. We went to the slips, where we talked with Mr. John Grace, the noted judge of coursing, and with James Grace, the unrivaled slipper. Both of them are very pleasant gentlemen, and we watched with much interest from a near point of view the excellent work of both men through many courses. I wanted to know something about the hares and gathered some information.

The hares are notably well managed here. The supply comes mainly from Fresno and Tulare counties, where they are captured by being driven into inclosures and thence into crates or boxes, in which they are brought to the grounds. They are not touched by a hand until after they are killed by the dog. They are pastured at the park in the main field, which is about fifty acres in extent, until they are needed. They are then driven through a series of yards and separating pens, and finally into a chute from which they are run into small closed boxes separately.

These boxes, with a single hare in each, are numbered and are awarded by lot, one to each brace of dogs. This process gives no chance for favoritism to be shown or imagined. Some hares are naturally in better condition for a strong run than others, but their allotment being made by chance, luck is an element that cannot be eliminated. Thus if an indifferent hare is loosed to a brace of dogs not closely matched in endurance, the weaker and quicker dog may win as against the stronger one, while a hardy hare and a long run will favor the dog with the most strength and endurance.

The hares are most unequal in condition in the spring months, and then the condition of the field is bad for them. When the grass is thrifty and thick the hares cannot run as fast nor maneuver as well as later in the season when the grass becomes thinner and dry. All of these things, together with the chances of the hare swerving so as to favor a particular dog, are considered by the patrons of the sport, and are of course themes for a great deal of discussion and speculation.

Before each course the dogs are taken to scales prepared for the purpose and carefully weighed. Their weight is marked opposite their names on the bulletin announcing the event, which gives their friends and fanciers hints as to their condition. They are then led across the field, in front of the spectators' pavilion, to the slipper's stand.

The hare is let out of his box and driven through a passage in the pen to the open field where the mounted judge and his aids are stationed on either side, and as soon as the hare appears they spur forward with him to direct his course as nearly as possible to the center of the field. The slipper, with the hounds in leash, allows the hare a start of from 60 to 100 yards. The hounds, on sighting the hare, strain and lunge in their excitement until the slipper, following them as they bound forward, for a dozen paces, slips the leash and they are off. It might appear a simple matter to unleash the dogs, but attentively observed it can be seen that it is a thing requiring much experience and ability. It is quite as difficult to find an expert slipper as to find a competent judge. Both positions are peculiarly arduous, requiring clear heads, good judgment, great activity and endurance. The Union Park management is notably fortunate in having men with the talent and experience of the Grace brothers.

The arrangement of the kennels and yards is excellent. Several hundred dogs can be accommodated in the main house. The stalls are roomy, well ventilated and secure from the intrusion of possible meddlers. They are regularly fumigated, thoroughly clean, and every precaution is taken to prevent accident or disease.

As an instance of—whatever you like—I confess to having bet on the races. After having made the tour of the grounds and buildings a friend and myself reached the pool boxes. The wise were betting 10 to 1 on Mollie R. against Lovina. To be sociable with the crowd I bet a dollar for my friend and another for myself, just as the dogs were slipped. Mollie was greatly surprised, the rabbit annihilated, and the talent was dismayed. I drew down $21.60, while I tried to look as though it was an ordinary matter-of-course with me, and pose as though I had every reason for my confidence in Lovina. After that I bet several times with less perspicacity. If I had stayed longer I might have paid all the money back to some intelligent people around there.

The result of the events for May 4 and 5 were as follows: E. Geary's dog, Palo Alto, won the 128 dog open stake, with D. J. Healey's dog Sisquoc the runner-up. The first sapling stake by Wild Eclipse, and the second sapling stake by Tame Tralee, both dogs owned by P. Hogan.

Among the favorite imported dogs here is Fiery Face, a sister of Fearless Footsteps, who twice won the Waterloo stake at Liverpool. RANSACKER.

Canoeing.

'Mid Reef and Rapid.—X.

BY F. R. WEBB.

SHE did not go very far, however, for a big rock—wagon loads of which usually fringe these fish dams all the way across, rendering the shoots more or less troublesome and hazardous—caught the bilge of my boat, just as the water overflowed my decks and reachd the top of the cockpit coaming—a quarter of an inch more and I would have been swamped—giving me time to throw my weight against the upper side of the canoe and straighten her up. The bottom slid up over the rock and the stern let go, and she careened until the up-stream side was awash, drifting around down stream meanwhile. By a dexterous shift of position I threw my weight on the down-stream side in time to again straighten her up and avert a capsize. The bow let go, and she went drifting and bumping sidewise down the swift, rocky piece of water below, her keel catching on every rock, and tilting her over, and keeping me throwing myself back and forth from one side to the other to preserve her equilibrium, until still water was reached and I found myself safe and in position to enjoy the joke, which the other fellows had all along been enjoying hugely as they lay to a short distance below to observe my progress, all the while freely tendering me advice and counsel, more or less sensible and appropriate, according to the taste and capacity of the advisor and counsellor.

I joined the Colonel, whose canoe had slid gently up on a large flat reef while he was engaged in advising me, and who was making vigorous efforts to shove her off without resorting to the expedient of lightening her of his 200lbs. odd avoirdupois. There is so much of the Colonel that he dislikes exceedingly to get up when he is comfortably seated in his canoe, and he will prod and push and shove with his paddle in the effort to push his boat off the rocks, and do more work and take more trouble twice over than it would be to pick himself up and step overboard and lift his boat off in the first place, which he generally has to do anyhow in the end.

His efforts in this instance resulted in failure, as usual, and together we paddled to the landing place at the Three Springs camping ground, whither the other two had preceded us, his long legs spread out like a pair of compasses, and his wet, dripping feet spread out on each side of the canoe, and hanging over the gunwales, in which attitude he presented an appearance that could not properly be termed graceful, and in a short time the canoes were carried up on the bank, unloaded of their freight and in position for the night, with their beds made up and tents erected, after which George and the Colonel proceeded to go a-fishing, wading around in the river and picking their way from reef to reef, the ledges being so numerous that, although the water is quite deep here, they were enabled to work their way over pretty much the entire river front without getting in above their waists, casting their flies in likely spots as they worked. Lacy and I, meantime, settled ourselves comfortably alongside our respective canoes to attend to our correspondence.

Lacy, by the way, seemed to have a deal of correspondence on his hands on this cruise, for at every camp he was observed to get out his writing materials and settle down to write a letter. He appeared to be a very dutiful son, for when questioned by George from time to time as to the destination of all this correspondence, his reply was always that he was writing to his mother.

"Commodore, our annual canoe cruises are like our annual Greenbrier trips in one respect," said the Colonel a couple of hours later, as we were doing ample justice to an elegant fish supper—the result of their evening's work.

"In what way?" asked George. "Lacy, you may hand me a biscuit, if you will."

"Well," replied the Colonel, as he helped himself to his third half-pound bass, "we've been over the trip so often and are getting acquainted with the river so that we know where the best camping places are, and generally make pretty much the same camps, like we do on the Greenbrier road. Thanks, Commodore, you may give me another cup of coffee, and some more potatoes, too, while you're resting. I tell you there's nothing like fish right out of the water and in to the frying-pan," he continued. "We never get fish at home in such perfection as we do on the Shenandoah or the Greenbrier."

"That's so," replied Lacy. "I'll take some more provender, too, Commodore, while you're about it," passing up his plate for the third installment; "another cup of coffee, too, please. Thanks; that'll do."

"I tell you an early camp's a great thing," said the Colonel, as he leaned back on his stool and filled his pipe, while Lacy and George gathered up the supper utensils and carried them down to the water's edge, where they were scoured bright and clean with sand and water before being returned to the camp, to undergo the still further cleansing properties of soap and hot water.

The average canoeist—the average man, in fact, be he canoeist or otherwise—is not fond of putting his hands in hot, greasy dish water, and a most excellent substitute for the humble but useful dish cloth is made by cutting a stout, forked twig from the nearest tree, leaving each prong of the fork about an inch long, and around this forked end wrapping a small piece of canvas, securely wrapping and tying it with stout string. Thus equipped the camp scullion can do as quick and serviceable work as with the more orthodox cloth, and it possesses the further advantage of allowing scalding hot water to be used, which simplifies matters, for dish-washing is not a favorite pastime among canoeists.*

"Yes; an early camp is a great thing," I replied, as I returned from my canoe, whither I had gone for a fresh cigar, which I proceeded to light as I seated myself on my camp stool alongside of the Colonel, the better to enjoy seeing George and Lacy clean up. "It's an all-round nuisance to be obliged to make camp and get supper after darkness has set in, poking around by the light of a lantern. There are so many little things to do; so many little details to attend to, that are not only no special trouble in daylight, but are really a part of the little pleasures of camping; but when one has to grope around after night with a lantern to do them, they become so many troublesome little tasks that must be gotten through with in the quickest and best manner possible under the circumstances."

"Yes; and if you lay a thing down you can't find it until morning," said Lacy, as he laid aside his cleaning utensils, and piled the tinware in a bright, shining heap on the mess table, turning a large pan over all to keep off the dew.

"From first to last," said George, as he returned from the spring, whither he had gone to wash his hands in the copious outflow, "this is, I think, perhaps the most beautiful camp ground on the whole river."

It certainly was a beautiful camp ground. A bold, rocky bluff rose from the river 150ft. or so, densely clothed with fine old forest trees. A little level strip of sandy, well-shaded turf between the bluff and the river and elevated some 6 or 8ft. above the water, afforded ample room for the tented canoes, as well as for the dining fly, mess table, camp stove, etc., while a few yards below the camp the water gushed out from the foot of the bluff in a great flood, from not only three but a dozen—a score—of springs, the volume of water discharged being equal to a large creek. Indeed, the water gushed out from fissures more or less large for 100yds. along the river front, and, while wading around among the reefs last summer not far from shore on fishing bent, I discovered a hole in the bottom of the river in a foot or two of water, into which I could have thrust my leg, from which the water boiled up in a fountain, some 6 or 8in. above the surface of the river.

A comfortable farm house stood on the verge of the bluff just above the springs, a flight of rude steps—wood and stone—leading down to a spring house built on the rocks and in the side of the bluff, just above the main flow of the spring. In front the river flowed, broad, swift and deep, rippling over and among the reefs, while the musical brawl of the great spring filled the air with melody. It was an ideal camping spot, and one we never pass, even if we arrive here—as we have more than once done—as early in the day as lunch time.

Twilight began to steal softly around us, throwing a gentle, bluish haze over the landscape and rendering softly indistinct the boles of the trees up the steep slope of the bluff behind us. As the darkness came on apace, the full moon swung into view above the lofty ramparts of the Blue Ridge in front of us, and threw her searchlight-like beams in among the trees, bringing out our tents in curious little patches of lights and shades. The river sparkled brightly in front of us, the bright, shining expanse being lost on the further side in the dense blackness of the shadows cast by the overhanging trees. Light, hazy clouds drifted across overhead, through which the moon seemed to shoot swiftly across the sky, her bright light now and again obscured and the landscape of river, trees and mountains temporarily blotted out.

A little blaze of a camp-fire, around which we sat enjoying our evening pipes, cast its fitful, flickering lights and shades on the objects nearest it, while the more distant, tented canoes outside its little circular range loomed up ghostly and indistinct in the faint glare.

"Looks like rain," the Colonel observed, as he refilled his pipe.

"Yes," replied George, handing the Colonel the lighted match with which he had just lit his own pipe. "From the looks of that bank of clouds piling up from down the river there, I think it will rain soon. In fact, I shall not be surprised if we have a rainy day of it to-morrow. Here comes some one!" as footsteps were heard approaching, and two figures loomed up indistinctly in the fitful, rapidly waning light, bearing a ghostly looking, recumbent burden between them.

"What in the mischief is that?" Lacy exclaimed, as the party approached the camp. Before answer could be made to his query, they had stepped within the little circle of light thrown out by the camp-fire, revealing the familiar figures of our acquaintances of the day, Dr. Tomkins and Mr. Avis, while the ghostly burden between them resolved itself into nothing more ghostly than a big canvas wheat sack, within which they were carrying a noble watermelon—a present from Mrs. Walker.

The melon was placed in the spring while the visitors were made welcome. Mr. Avis proved to be the son of an old friend of the Colonel's, and both gentlemen were well acquainted with friends and acquaintances of ours in Charleston, consequently the hour or so's chat with them

*A dish swab may be bought at any department store or church fair for a nickel, which will be still better.

around our little camp-fire was a pleasant one, and when the rain finally came with an unexpected dash and a little premonitory soughing sweep of the wind through the trees, scattering the embers of our dying camp-fire into a little train of scurrying, whirling sparks, we were all of us taken by surprise, and were quite sorry to see them take their leave with all haste to get back to Walker's ahead of it as much as possible.

"Well, I declare!" said George, as we all made haste to scramble into our respective tents out of the rain. "Not one of us had gumption enough to lend those men a rubber coat apiece. They could easily have brought them back before we got away in the morning."

This statement being unanswerable, no time was lost in commenting upon it. Hastily pulling down the flaps of my tent, I proceeded to make myself comfortable for the rest of the evening, as well as the night. First lighting my little candle-lantern, I hooked it over the coaming outside of the cockpit out of the way, while I proceeded to tightly button the flaps of my tent from the inside and to secure it at the bottom all round to the screw eyes under the gunwales of the canoe, well assured that the waterproof top and sides would perfectly shed the water.

I then arranged the inside of the tent for the night by piling the loose articles—coat, hat, helmet, etc.—scattered around over the blankets, into the open space in the back end of the cockpit. I then procured my book from my clothes bag, shucked off my outer garments, placing them on the little shelf above my feet, in the forward end of the cockpit, formed by the turned-back forward hatch, and crawled in between my blankets, lit a cigar, placed my lamp on the inside of the cockpit close to my eyes, and my arrangements were complete. Snugly housed in my tight, cozy little cabin, I lay and read for a couple of hours undisturbed by the storm, while the rain pattered on my little tent with that curious tearing noise only heard under a canvas roof. The wind soughed gently through the trees with a mournful swish. Occasional gusts would gently rock and sway my tent, but not a drop of water found its way inside.

Tired of reading, I hung my lantern over the outside of the cockpit out of the way and blew out the candle, drew my blankets well up over my shoulders and dropped off to sleep, soothed by the gentle lullaby of the wind through the trees, and the patter, patter of the rain on my roof—most soothing of all sounds to the tired, well-housed canoeist.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

MAY.

18. Huguenot, special, New Rochelle, Long Island Sound.
25. New Rochelle, special, New Rochelle, Long Island Sound.
30. South Boston, club race, City Point, Boston Harbor.
30. East Gloucester, club race, Gloucester, Massachusetts Bay.
30. Atlantic, Sea Gate, New York Bay.
30. Harlem, annual regatta, City Island, Long Island Sound.
30. Indian Harbor, special, Greenwich, Long Island Sound.
30. Bridgeport, special, Bridgeport, Long Island Sound.
30. Canarsie, opening and parade, Carnarsie, Jamaica Bay.
30. Brooklyn, opening, Gravesend Bay.
30. Staten Island, Stapleton, S. I.
30. American, opening, Milton Point, Long Island Sound.
30. Burgess, Marblehead, Massachusetts Bay.
30. Manhasset Bay, second series race for Jacob cup, Port Washington, Long Island Sound.
30. Seawanhaka Corinthian, races for raceabouts, Seawanhaka knockabouts and club catboats, Oyster Bay, L. I. Sound.

JUNE.

1. Knickerbocker, annual, College Point, Long Island Sound.
1. Atlantic, Sea Gate, New York Bay.
5. East Gloucester, evening race, Gloucester, Mass.
8. Canarsie, pennant championship, Canarsie, Jamaica Bay.
8. Hull-Massachusetts, club, Hull, Mass.
8. Manhasset, annual, Port Washington, Long Island Sound.
8. Brooklyn, open, Gravesend Bay.
8. South Boston, club handicap, City Point, Boston Harbor.
12. East Gloucester, evening race, Gloucester, Mass.
15. South Boston, club cruise, City Point, Boston Harbor.
15. Beverly, club, Monument Beach.
15. New York C. C., annual, Gravesend Bay.
15. Larchmont, spring regatta, Larchmont, Long Island Sound.
15. Seawanhaka Corinthian, first race, Center Island cup, Oyster Bay, Long Island Sound.
15. Burgess, Marblehead, Massachusetts Bay.
15. Hull-Massachusetts, club, Hull, Mass.
15-17. New York, 90-footers, Newport.
15-17. Boston, cruise, City Point, Boston Harbor.
16. South Boston, cruise, City Point, Boston Harbor.
17. Beverly, open sweepstake, Monument Beach.
17. Duxbury, club race, Duxbury, Mass.
17. Hull-Massachusetts, classes over 18ft., Hull, Boston Harbor.
17. Dorchester, classes 18ft. and under, Dorchester, Boston Harbor.
17. Corinthian, first club championship, Marblehead, Mass.
17. East Gloucester, club race, Gloucester, Mass.
17. Brooklyn, annual regatta, Gravesend Bay.
17. Pavonia, annual, Bayonne, Newark Bay.
17 Burgess, Marblehead, Massachusetts Bay.
18 Atlantic, annual, Sea Gate, New York Bay.
19. East Gloucester, evening race, Gloucester, Mass.
20. New York, annual, New York Bay.
20. Duxbury, ladies' day, Duxbury, Mass.
22. Beverly, Corinthian, Monument Beach.
22. Marine and Field, open, Gravesend Bay.
22. Hull-Massachusetts, club, Hull, Mass.
22. Manhasset Bay, third series race for Jacob cup, Port Washingington, Long Island Sound.
22. New Rochelle, annual, New Rochelle, Long Island Sound.
22. Atlantic, special, Sea Gate, New York Bay.
22. Seawanhaka Corinthian, second race for Center Island cup, Oyster Bay, Long Island Sound.
25. American, Newburyport, Massachusetts Bay.
25. New York, Glen Cove cups, Long Island Sound.
26. East Gloucester, evening race, Gloucester, Mass.
27-28. Seawanhaka Corinthian, special, Oyster Bay, L. I. Sound.
29. Boston, City Point, Boston Harbor.
22. Savin Hill, open, Boston Harbor.
29. Hull-Massachusetts, club, Hull, Mass.
29. Atlantic, annual, Sea Gate, New York Bay.
29. Burgess, Marblehead, Massachusetts Bay.
29. Seawanhaka Corinthian, annual race for Leland challenge cup for raceabouts, Oyster Bay, Long Island Sound.

JULY.

2, 4, 6. Newport, Y. R. A., cup defender class, Newport.
2. Indian Harbor, Greenwich, Long Island Sound.
3. Columbia, City Point, Boston Harbor.
3. East Gloucester, evening race, Gloucester, Mass.
3-8. Brooklyn C. C., cruise, Gravesend Bay.
4. Beverly, open sweepstake, Monument Beach.
4. Duxbury, club race, Duxbury, Mass.
4. Boston City, City Point, Boston Harbor.
4. Corinthian, second club championship, Marblehead, Mass. Bay.
4. East Gloucester, open, Gloucester, Mass.
4. Gravesend Bay Y. R. A., first open regatta, Gravesend Bay.
4. Annisquam, open, Ipswich Bay, Mass.
4. Larchmont, annual regatta and schooner races for Colt cup, Larchmont, Long Island Sound.
4. Hartford, annual, Saybrook, Long Island Sound.
4. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
4. Pavonia, McInnis cup, Bayonne, Newark Bay.
4. Canarsie, parade, Canarsie, Jamaica Bay.
4. Penataquit Corinthian, annual, Bay Shore, L. I.
4. Columbia, Chicago, Lake Michigan.
4. Burgess, Marblehead, Massachusetts Bay.
5-11. Atlantic, cruise, Sea Gate, New York Bay.
6. Shinnecock Bay, club, Shinnecock Bay.
6. Hull-Massachusetts, club, Hull, Mass.
6. Mosquito Fleet, City Point, Boston Harbor.
6. Riverside, annual, Riverside, Long Island Sound.
6. Beverly, convention, Monument Beach.
6. Savin Hill, club, Boston Harbor.
6. Seawanhaka Corinthian, third race for Center Island cup, Oyster Bay, Long Island Sound.
6. Burgess, Marblehead, Massachusetts Bay.
6. South Boston, ladies' day, City Point, Boston Harbor.
8. Norwalk, annual, South Norwalk, Long Island Sound.
8-9-10. New York, Newport series, Newport.
10. East Gloucester, evening race, Gloucester, Mass.
13. Moriches, club.
13. Corinthian, third club championship, Marblehead, Mass. Bay.
13. Beverly, club, Monument Beach.
13. Hull-Massachusetts, club, Hull, Mass.
13. Larchmont, open, first day of race week, Larchmont, Long Island Sound.
13. Seawanhaka Corinthian, race for Roosevelt memorial cup, Oyster Bay, Long Island Sound.
13. Manhasset, special, Port Washington, Long Island Sound.
13-20. Larchmont, race week, Larchmont, Long Island Sound.
15-19.—Interlake meet, Put-in-Bay, O.
17. Beverly, Buzzards Bay.
17. East Gloucester, evening race, Gloucester, Mass.
18, 20, 23. Newport Y. R. A., special races, Newport.
20. Westhampton C. C., club.
20. Hull-Massachusetts, club, Hull, Mass.
20. Savin Hill, club, Boston Harbor.
20. Winthrop, Winthrop, Mass.
20. Duxbury, ladies' day, Duxbury, Mass.
20. Beverly, Corinthian, Monument Beach.
20. South Boston, club handicap, City Point, Boston Harbor.
20. Stamford, annual, Stamford, Long Island Sound.
20. Seawanhaka Corinthian, fourth race for Center Island cup, Oyster Bay, Long Island Sound.
20. Trial race to select Canada cup defender, Chicago, Lake Michigan.
20. Burgess, Marblehead, Massachusetts Bay.
22. New York, cruise, rendezvous, Glen Cove.
22. Harvard, cruise, rendezvous, Morris Cove, L. I. Sound.
22. Canarsie, open, Canarsie, Jamaica Bay.
23. New York, cruise to the eastward.
24. Seawanhaka, cup race, Lake St. Louis.
24. East Gloucester, evening race, Gloucester, Mass.
25, 26, 27. Hull-Massachusetts, invitation races, Hull, Mass.
25-26. Erie, regatta, Erie, Pa.
27. Beverly, open sweepstake, Monument Beach.
27. Corinthian, fourth club championship, Marblehead, Mass. Bay.
27. Shinnecock Bay, special, Shinnecock Bay.
27. Sea Cliff, annual, Sea Cliff, Long Island Sound.
27. Northport, annual, Northport, Long Island Sound.
27. Seawanhaka Corinthian, fifth race for Center Island cup, Oyster Bay, Long Island Sound.
27. Manhasset, fourth series race for Jacob cup, Port Washingington, Long Island Sound.
29. New York, Astor cup races, Newport.
29-30. Burgess, open, Marblehead, Massachusetts Bay.
30-Aug. 3. Pan-American regatta, Buffalo, N. Y.
30-31. New York, trial races to select America Cup defender, Newport.
31. Corinthian, Marblehead, Massachusetts Bay.
31. East Gloucester, evening race, Gloucester, Mass.

AUGUST.

1-3. Corinthian, Marblehead, Massachusetts Bay.
1. New York, trial race to select cup defender, Newport.
3. Duxbury, club, Duxbury, Mass.
3. Beverly, Corinthian, Monument Beach.
3. Moriches, association regatta.
3 Atlantic, Sea Gate, New York Bay.
3 Hempstead Harbor, annual, Hempstead Harbor, L. I. Sound.
3. Seawanhaka Corinthian, Robert Center memorial cup races, Oyster Bay, Long Island Sound.
3 Manhasset Bay, special, Port Washington, Long Island Sound.
3. Hull-Massachusetts, club, Hull, Mass.
3. Savin Hill, club, Boston Harbor.
3-5-7. New York, trial race to select cup defender, Newport.
5, 6. Manchester, West Manchester, Massachusetts Bay.
7. Misery Island, Salem Bay, Mass.
7, 8. East Gloucester, Gloucester, Mass.
7. East Gloucester, evening race, Gloucester, Mass.
9, 10. Annisquam, Ipswich Bay, Mass.
10. Beverly, Van Rensselaer cup, open, Monument Beach.
10. Westhampton C. C., association regatta.
10. Brooklyn, Gravesend Bay.
10. Shelter Island, open.
10. Beverly, Van Rensselaer cup, open, Marion.
10. Hull-Massachusetts, club, Hull, Mass.
10 Bridgeport, annual, Bridgeport, Long Island Sound.
10. Horseshoe Harbor, annual, Larchmont, Long Island Sound.
10. Bridgeport, special, Bridgeport, Long Island Sound.
10. Seawanhaka Corinthian, sixth race for Center Island cup, Oyster Bay, Long Island Sound.
10-15. Chicago, races for the Canada cup, Chicago, Lake Michigan.
12, 13. American, Newburyport, Massachusetts Bay.
17. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washingington, Long Island Sound.
17. Moriches, open.
17. Wollaston, Quincy Bay, Boston Harbor.
17. Corinthian, fifth club championship, Marblehead, Mass. Bay.
17. South Boston, club handicap, City Point, Boston Harbor.
17. New York, New York Bay.
17. Indian Harbor, annual, Greenwich, Long Island Sound.
17. Seawanhaka Corinthian, seventh race for Center Island cup, Oyster Bay, Long Island Sound.
17. Hull-Massachusetts, club, Hull, Mass.
17. Savin Hill, club, Boston Harbor.
17. Canarsie, Corinthian regatta, Jamaica Bay.
17. Columbia, Chicago, Lake Michigan.
20, 22, 24, 27, 29. American cup races, Sandy Hook.
24. Shinnecock Bay, association regatta, Shinnecock Bay.
24. Corinthian, sixth club championship, Marblehead, Mass. Bay.
24. South Boston, ladies' day, City Point, Boston Harbor.
24. Hull-Massachusetts, club, Hull, Mass.
26. Cape Cod, Provincetown, Mass.
27. Wellfleet, Wellfleet, Mass.
29. Plymouth, Plymouth, Mass.
30. Kingstown, Kingstown, Mass.
31. Duxbury, Duxbury, Mass.
31. Beverly, Corinthian, Monument Beach.
31 Westhampton C. C., open.
31. East Gloucester, club, Gloucester, Mass.
31. Marine and Field, Gravesend Bay.
31. Hull-Massachusetts, club, Hull, Mass.
31. Hartford, annual, Saybrook, Long Island Sound.
31. Huntington, special, Huntington, Long Island Sound.
31. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
31. Larchmont, special, Larchmont, Long Island Sound.

SEPTEMBER.

2. Annisquam, open, Ipswich Bay, Mass.
2. Beverly, open, Monument Beach.
2. Duxbury, ladies' day, Duxbury, Mass.
2, 3. Corinthian, cruise, Marblehead, Massachusetts Bay.
2. Lynn, Nahant, Massachusetts Bay.
2. Gravesend Y. R. A., all classes, Gravesend Bay.
2. Norwalk, special, South Norwalk, Long Island Sound.
2 Sachem's Head, annual, Saybrook, Long Island Sound.
2. Larchmont, fall regatta, Larchmont, Long Island Sound.
2. Atlantic, special, Sea Gate, New York Bay.
2. Pavonia, special, Bayonne, Newark Bay.
2. Canarsie, ladies' day, Canarsie, Jamaica Bay.
2. Seawanhaka Corinthian, Oyster Bay, Long Island Sound.
2. Burgess, Marblehead, Massachusetts Bay.
2 Chicago, Chicago, Lake Michigan.
3 Shinnecock Bay, open, Shinnecock Bay.
5, 6. Seawanhaka Corinthian, open special, Oyster Bay, L. I. Sound.
7. Beverly, open, Mattapoisett.
7. Seawanhaka Corinthian, fall regatta, Oyster Bay, L. I. Sound.
7. Atlantic, Sea Gate, New York Bay.
7. Lynn, Y. R. A., rendezvous.
12. New York, autumn sweepstakes, New York Bay.
14. Hull-Massachusetts, club, Hull, Mass.
14. Brooklyn, fall regatta, Gravesend Bay, New York Bay.
14. Larchmont, Larchmont, Long Island Sound.
14. Indian Harbor, fall regatta, Greenwich, Conn.
14. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
14. Atlantic, fall regatta, Sea Gate, New York Bay.
21 New York C. C., fall regatta, Gravesend Bay.
21. Manhasset Bay, fall regatta, Port Washington, L. I. Sound.
21. Canarsie, commodore's cup races, Canarsie, Jamaica Bay.
28. Manhasset Bay, fifth series race for Jacob cup, Port Washington, Long Island Sound.

THROUGH the efforts of Mr. W. Butler Duncan Herreshoff traditions were thrown to the winds and the newspaper men and a number of outsiders were admitted to the shop a short time before Constitution was launched. To those who had not seen the boat before she was something of a surprise, for the majority rather expected to see a craft somewhat more extreme than Columbia. This is hardly the case, and as far as general characteristics go in design, there has been practically but one change, and that is the increase of the beam. Difficult as it was to get any definite idea of the boat in the cramped space of the shop, where the reflection from the boat's highly polished bottom and smooth, white topsides was very trying to the eyes, it was soon seen that Herreshoff had departed but little from Columbia's design in the new boat. Constitution's midship section is more like Defender's than Columbia's, and is the best turned and sweetest of the three boats. The depth of the boat at the midship section is practically the same as Columbia's, so in carrying out her ends to have fair buttocks without having them show any reverse curve her overhangs are almost identical with Columbia's, both in contour and distance from the water. The overhangs are very handsome and well-balanced, and the fore and aft sections are extremely fair and well modeled. In Columbia hard places might be seen in the fore and aft sections, but in Constitution she is absolutely fair and well turned viewed from any point. The boat's sheer line is almost identical with Columbia's, which is quite straight, with the freeboard apparently a little higher.

Constitution's increase in beam has also increased her power, but this is not alone due to form, but to the improved method of construction used in the boat and spars, but still giving her great strength in both.

The displacement of the boat is practically the same as is Columbia's, but she will carry about ninety-three tons of lead—a gain of three tons over the older boat. Her great power will admit of her carrying a large sail plan, and as far as can be learned her rig will contain some 14,400 square feet of sail. Constitution's superficial dimensions are as follows: 132ft. 6in. length over all, 89ft. 9in. length on the load waterline, 25ft. 2½in. beam and 19ft. 10in. draft. To sum up, Constitution is a second Columbia, with great power and the same sheer line and draft, with a foot more beam, a lighter constructed hull, and same displacement as Columbia, and more lead, and should easily carry her large rig (1,300ft. more than Columbia) and beat her in any weather, for she is such a moderate boat she should be the best all around performer in the trial fleet.

IT is most disappointing to observe the unpatriotic spirit that exists among the yachtsmen in the East in regard to the success of Independence. With the exception of those men directly interested in the boat, the impression seems to be that she has not a ghost of a chance. After a careful examination of the design and construction of Independence, the writer visited and spent some time going over Constitution, both before and after she was launched, the comparison resulting in favor of the Boston boat. At this time, with one boat the results of years of experience and the other an unknown quantity, it would be, perhaps, presumptuous to make invidious comparisons. Independence's construction is not materially heavier than Constitution's. Her ends are flat and full; they are well designed and she will utilize them at the smallest angles of heel. If the boat can be made to balance properly and her gear to stand the rack, she will undoubtedly make an excellent showing, for there is no question of her ability to carry the rig. Where she will lack the finish of the Bristol boat will be in the details of rigging, both on deck and aloft. The unfortunate delay in finishing the boat will greatly handicap her trial races, for the working out of a boat's men and rig is a most important and necessary feature, and it is to be regretted that she will not be ready for her first trial for at least two weeks after Constitution.

IN a race held between the two Shamrocks on Monday last, at Weymouth, England, Shamrock I. defeated Shamrock II. five minutes and five seconds, over a triangular course about twenty miles in length. The wind blew strong from the east at the start, but lightened up at the finish. It is stated that Shamrock II.'s sails were in very poor shape.

Mr. Vaughan D. Bacon, of Barnstable, Mass., is building from his own design a cruising cabin launch for a New York yachtsman. She is 33ft. long and 8ft. 6in. beam, and will be driven by a 10-horse-power Globe engine.

Our Boston Letter.

BOSTON, May 10.—The Regatta Committee of the Hull-Massachusetts Y. C. has been hard at work since the first of the year, and as a result has presented to the members of the club one of the finest racing schedules that has been offered by any yacht club in New England. The Regatta Committee has gone about its work with an organized plan. Through the experience gained last year, it has been found that the offering of cups has been very beneficial to the racing interests, and this year several will be offered. In the special classes in which the cups will be offered, no time allowance is given, but arrangements have been made to provide handicap classes in which cruising yachts can compete.

Perhaps the most important feature of the plan of the Regatta Committee is the establishment of a permanent class for 18ft. knockabouts that conform to the restrictions of the Eighteen-foot Knockabout Association. These boats have been described at length in FOREST AND STREAM, and their merits are known to its readers. In this class it is intended to provide a safe and handy boat for afternoon sailing and racing. They are almost as large as the 21-footers, and afford the same possibilities of sport and convenience, but they cost less and are much more easily handled.

Last year this club offered a championship cup in the 25-footers conforming to the restrictions of the Yacht Racing Association of Massachusetts, and enough was shown to warrant the committee in offering a similar trophy this year. A silver cup and a cash prize of $150 will be awarded the yacht winning the championship of the 25ft. class in the club series of races as scheduled. A second cash prize of $75 will also be awarded on the season's record. The races for this cup and the cash prizes will be open to yachts enrolled in the club and conforming to the restrictions of the class as established by the Yacht Racing Association.

The championship will be awarded on the best percentage for the series secured by a yacht under the following system: 100 per cent. for first place in each race, 65 per cent. for second place, 25 per cent for third place and 15 per cent. for finishing without having secured any of the foregoing places. A yacht's average will be found by dividing her total percentage by the number of races sailed, but a yacht must compete in at least seven races to qualify for the season's championship or the second prize.

Cash prizes of $20, $10 and $5 will be awarded in each club race for first, second and third place, respectively, regardless of any competition for the season's record. The prize of $5 will only be awarded in case of five boats starting. No second prize will be awarded a yacht that has not defeated a competitor. The schedule of races for championship award in this class is June 8, 15, 17 and 22, July 13, 25, 26 and 27, Aug. 3, 17 and Sept. 14.

A silver cup and a cash prize of $50 will be awarded the yacht winning the club championship in the 18ft. class in the club races as scheduled. A second cash prize of $35 will also be awarded for the season's record. The races will be open to yachts enrolled in the club and which conform to the restrictions of the Eighteen-foot Knockabout Association. The championship will be awarded on the same basis as that for the 25-footers, except that six races must be sailed to qualify.

As an incentive to owners of 18ft. knockabouts, the committee has devised a novel plan to secure the attendance of these boats at all races during the season. This plan will be to offer attendance prizes. These prizes and what will be necessary to obtain them will be announced in the first race circular.

Mr. Alfred Douglas, who owns the 18-footer Oriana, designed and built by Lawley, has presented a valuable silver cup to be competed for by 18-footers as the Regatta Committee may direct. The committee has accordingly offered for competition during the midsummer series of invitation races during July. This is the best possible disposal the committee could have made of the cup, for there are a number of 18-footers which qualify, in Duxbury Bay, and it is likely that most of them will be keen to wrest the cup from the Hull-Massachusetts boats. This, of course, will insure greater attendance at the races.

The Regatta Committee will arrange handicap races for Saturday afternoons throughout the season in one or more classes, as may be deemed best in view of the number and size of the yachts desiring to compete. Cash prizes will be offered for each race and the yachts will sail in cruising trim. The handicaps will be fixed for each race by the committee, and will not be changed for any particular event after once having been announced.

The following schedule of racing events is subject to possible changes, but will be substantially as given. The Yacht Racing Association open race is for Association classes, in which prizes may be offered. This race and the midsummer series of invitation races will count for the club 25-footers in the club championship series:

June 8, Saturday—Opening day, club race for 25-footers, 18-footers and handicap classes.

June 15, Saturday—Club race for 25-footers, 18-footers and handicap classes.

June 17, Monday—Annual open race off Boston Light, under the rules of the Yacht Racing Association.

June 22, Saturday—Club race for 25-footers, 18-footers and handicap classes.

June 29, Saturday—Club race for handicap classes.

July 6, Saturday—Club races for 18-footers and handicap classes.

July 13, Saturday—Club race for 25-footers, 18-footers and handicap classes.

July 20, Saturday—Club race for handicap classes.

July 25, 26 and 27—Midsummer invitation series; the race of July 27 will include a handicap class, open to yachts entered in the Hull-Massachusetts Y. C. only.

Aug. 3, Saturday—Club race for 25-footers, 18-footers and handicap classes.

Aug. 10, Saturday—Club race for 18-footers and handicap classes.

Aug. 17, Saturday—Club race for 25-footers, 18-footers and handicap classes.

Aug. 24, Saturday—Gala day and water sports.

Aug. 31, Saturday—Club race for handicap classes.

Sept. 14, Saturday—Club race for 25-footers, 18-footers and handicap classes.

Saturday afternoon the announcement was made at the office of B. B. Crowninshield, the designer of Independence, that the shed in which she is being built at the Atlantic Works would be open Sunday from 2 o'clock until 5 o'clock to the public, and that this would probably be the last day the public would have an opportunity of viewing the yacht before she is launched. Many stories in regard to a secret launching have been given out, and it is only justice to the designer and to those connected with the building of Independence to say that no deliberate intention has been made to defraud the public of witnessing the launch. Mr. Crowninshield is just as consistent in wishing the boat to be under the eyes of the public as he was in the beginning, but it has been deemed absolutely necessary for the safety of the people that the launching should take place privately. There is no opportunity for accommodating a great crowd of people on the dock of the Atlantic Works, and it is feared that if a large number should be admitted, serious results might follow.

For the rest of the week it is likely that very few people outside of the newspaper men will have an opportunity of visiting the yacht. The number of passes that will be given out will be extremely limited. From the fact that closed gates will be the order from now until launching time, it looks as though Independence will take the water during daylight and not at night, as was at first reported. If any specified time has been set for the launching, it has not been given out, and probably will not be, except at short notice.

The members of the crew have been hard at work during the past week polishing up the bronze plating with emery cloth and steel shavings. The plates now present a very good appearance, and will compare with those of Constitution. The deck has been finished with the exception of putting on the canvas. About 80ft. of the steel mast has been completed, and it is expected that the spar will be ready to go on the boat when wanted. Lawley is well along on the hollow wooden spars. The steel sheer strake has been given a coat of lead. The dark color suggests the appearance of the topsides if they should be painted black. Designer Crowninshield stated some time ago that he would like to give her a coat of black, if possible, but from all that can be gathered now the finish coat will be white.

Crowninshield is not confined to Cup defenders by any means. He has a number of orders for yachts from 18ft. to 40ft., and is busy looking after yachts of his design that are now being built throughout New England. This has been a busy season for the Boston designer, and the productions from his board are in the hands of builders of every section.

The Regatta Committee of the Annisquam Y. C. has arranged a preliminary schedule of races for the season. The first open race will be sailed on July 4. On Aug. 9 and 10 there will be a carnival of invitation and Y. R. A. open races. On Labor Day the last open race will be sailed. Club races will be sailed every other Saturday during July and August.

At Lawley's the Sloane 85-footer is having her interior work finished up. The Parsons 46-footer has been launched and the Burgess Y. R. A. 21-footer will be out of the shop this week. The King 35-footer and the Allison 32-footer, both designed by Crowninshield, are being rigged. The Boreland 86ft. steamer will be launched this week. The Wiggin Y. R. A. 21-footer is all planked. The Lowell 25-footer is about completed, and the Herter 35-footer is being finished up inside.

JOHN B. KILLEEN.

The Cruise of the Foam.

(*Concluded from page 293.*)

A SPELL of rainy weather detained the party in Annapolis until Saturady, June 12.

That day, like several which preceded it, began with frequent heavy rain squalls, accompanied by thunder and lightning, but at 6:30 A. M. it began to clear. At 7 it ceased raining and the wind shifted to the south and west.

The skipper was anxious to be off; just as soon as the weather showed signs of improvement and the rain stopped he sent the baggage down to the boat, following himself a few minutes later with Billy. They were soon alongside of the Foam, the tender was hoisted and secured, then, at 7:22 A. M., the anchor was tripped and we left Annapolis, bound for Shelter Island, N. Y.

At half past seven our staunch little craft passed through the draw of the Spa Creek bridge and fifteen minutes later was giving the keeper of the Greenbury's Point bug-light a farewell salute.

We stood to the northward, making fair progress against an ebb tide, the engine working smoothly and well. Off Swan Point the U. S. C. S. steamer Blake caught up with and passed us; we exchanged salutes, also a hearty but distant greeting. This was at 10 o'clock. The breeze was then light from the northwest, the barometer 29.81, the weather generally cloudy and hazy.

As we approached the mouth of the Susquehanna River the wind had a fairer sweep at us, the sea increased and the Foam rolled considerably to a rough quartering sea. This did not last long, however, for Turkey Point (the entrance to the Elk River) bore abeam at 2:26 P. M. and soon afforded a good lee.

A few minutes before four the red light on the end of a projecting point in Back Creek was sighted; the chart shows a bend to the southward in the channel after passing this point. To our cost we found that this bend does not exist, for we went ashore there at full speed, while the true channel continues near the northern shore.

The engine was backed without avail for a few minutes and then stopped, to prevent the condenser pipes from heating unduly. The dinghy was lowered, a line from her made fast to the launch's stern and then, while Ed and Billy pulled their best, the skipper shoved with an oar and rocked the Foam. Finally her stern was slewed into deep water and then, by hauling with the dinghy, backing the engine and aiding with oar and rolling motion, the boat was forced off the mud bank into deep water.

The dinghy came alongside, discharged her crew and was then dropped astern, while the Foam went on her way without further mishap.

Chesapeake City soon hove in sight and at 4:50 our craft was locked into the Delaware & Chesapeake canal. A telegram was sent to the home folks, the tender hoisted and secured; we then started for Delaware City, which place was reached at 7:18.

What with the rains and east winds of the last week and also a high spring tide, it was found that the Delaware River was fully eighteen inches above the canal level. It was, therefore, impossible for us to lock out until the tide had fallen considerably, so the skipper started out to hunt up a supply of naphtha.

Only the day before the sole dealer in the town had filled the tank of a launch returning from Florida waters, so that all we could secure without a long delay was fifty gallons. This we took aboard, also a few stores, and then the skipper, not wishing to be detained in the canal over Sunday, sought the lock-keeper and requested him to let the Foam pass out at 11:30 that night.

In reply this man stated that the Ericsson line steamer would lock through at about half past three the next morning, that he would speak to his relief about it and that we could pass out at that time. "But it will be Sunday morning," said the skipper. "That will be all right," replied the keeper, "and will save a waking up for my relief, and yourselves, also, at 11:30."

The Foam was therefore secured for the night, her crew turning in early.

Sunday, June 13.—The day opened cool and pleasant, partly cloudy. In his anxiety to get away Billy called all hands at 2:30 A. M. In consequence we had to wander around or catch catnaps until 4:10, at which time the steamer put in an appearance. She locked in at 4:20 and completely filled the lock so that even our little dinghy would have lacked room to go through safely with her.

When the steamer had passed through we expected to be locked out, as per agreement. It appeared, however, that either the first lock-keeper had forgotten to mention this arrangement to his relief, or else that his relief was inclined to be disagreeable; for upon our asking him to lock the Foam out he refused point blank, saying it was Sunday.

After a great deal of persuasion from ourselves and from the skipper of a schooner, who had received a similar promise, we finally prevailed upon the man to let us through. Both schooner and Foam were speedily moved into the lock and at 4:55 passed out into the Delaware River on the last of the ebb tide. At 5 A. M. the barometer marked 29.70; the river was smooth; light airs and breezes were blowing from the southwest.

The Foam passed New Castle at 5:56 and Wilmington at 6:35; having now a fair tide, smooth water, and an easy running engine, our boat made fair progress and at two minutes past nine passed the Elbow buoy (No. 44) on Fort Mifflin bar.

This time we met with no practical jokers and at 9:52 passed Broad street, Philadelphia. The strong flood tide hurried us along in fine style and at 1:30 P. M. we reached Bordentown, N. J., where the Foam was made fast outside the lock to await patiently the passing away of the Sunday.

The flood tide, which had been with us from the time we were abreast of Wilmington, continued to run until about 3 P. M., a total of 8½ hours.

Several steamers, some with tows, came up in the course of the afternoon, until finally there was a party of six of us waiting to lock into the canal. Willie and Ed had tried to get a nap, but the noise and bustle of the successive arrivals was too much for them, so finally they went over and had a chat with the crews of the various steamers.

On the Foam were several bats and a base ball; these were put in requisition and the afternoon was soon enlivened by a game of ball that was much more hilarious than scientific, but which furnished harmless amusement for a crowd of men.

The skipper received a visit from a naval officer and from several of this gentleman's friends, who showed much interest in our trip.

Monday, June 14.—At midnight called all hands. Though we had been the first to arrive we were the last to leave, as loaded boats and packets have the right of way, so at 12:45 A. M. we entered the lock in wake of the other steamers.

The Foam passed one steam canal boat in the first reach and all the others in the 13-mile stretch, again resuming the lead and making it a veritable case of "the last shall be first."

The weather was cool, clear and pleasant, while a bright moonlight made it easy for us to see ahead.

At 9:45 A. M. we locked out of the Delaware and Raritan canal; as it was then about the middle of the ebb we came down the Raritan River rapidly and at noon were off Seguine Point, Princess Bay, Staten Island.

Our craft was in the Narrows at 1:45 P. M. The wind was blowing fresh from the northwest and we carried a young flood tide with us; these, in combination with the backwash from the lee shore, produced a heavy, irregular, choppy sea that caused the Foam to bob about and roll heavily all the way from the Narrows up, through the Buttermilk Channel and into East River. Her conduct was so erratic that Billy grew uneasy, left the cabin and sat on the after deck "to keep her stern down," he said.

At 4 P. M. we passed through Hell Gate. There were heavy cloud banks to the southward and eastward, with other evidences that a heavy thunderstorm was then passing over the central part of Long Island. The wind was variable, the barometer steady. At 5 the wind came out from the northeast and it began to clear.

The light on the Stepping Stones bore abeam at 5:06 and at 6 the Foam was on a course east-northeast ½ east for Matinicook Point buoy. Centre Island Point was passed at 7:15 and the Foam stood in Oyster Bay Harbor, where at 8 P. M. she was anchored off the steamboat wharf, in 9ft. at low water.

It did not take long to secure everything for the night, so we turned in at once and slept right through until 6:30 the next morning.

Tuesday, June 15.—The day opened clear, cool and pleasant, but hazy. After carefully sounding around in

the dinghy, at 7 A. M. we got under way and went alongside the wharf; here we procured some needed stores and three barrels of naphtha to fill our tank.

At 9:15 the fasts were cast off and the Foam backed out into deep water. She then stood out of Oyster Bay harbor to the eastward.

The breeze continued light from the westward until well into the afternoon; the barometer was falling slowly, the sky clouding up gradually.

At 12:17 P. M. Old Field Point light bore abeam, distant about one-fourth of a mile.

The wind shifted to the northeast at four, blowing fresh for a few minutes, then more gently; the weather looked threatening while the wind was kicking up an irregular, rough sea.

Shortly after five we had quite a rain squall, accompanied by thunder and lightning. The rain did us a good turn, however, by beating down the sea and before long the wind shifted back again to the westward.

At 5:30 the tide changed to flood. A few minutes later Ed rushed into the pilot house in a great state of excitement, saying to the skipper: "Oh, Mr. C., the pressure has gone up suddenly to 180 pounds and I do not know what to do!" His face showed his apprehension and he evidently did not relish the prospect of a return to the engine room.

Through the open door the skipper caught the regular rhythm of the engine, which assured him that it was turning over at the normal rate, so directing Ed to take the wheel he went aft to take a look at the gauge. Sure enough this was indicating the fullest pressure. It required but a second's examination, however, to make it evident that the engine was all right, but that the gauge-spring was broken.

Closing the naphtha valve, the skipper allowed the engine to run on until it stopped of itself and the fire had burned out. He then removed and tested the gauge, to see that there were no leaks, after which it was replaced and the engine started again, slowly at first, then at full power.

It is true we had no gauge by which to note the pressure, but judging the revolutions by ear alone we ran the rest of the distance to Shelter Island without difficulty or danger.

The advisability of having some personal acquaintance with his engine, its design and construction, even of being able to run it himself, cannot be too strongly impressed upon every owner of a power boat.

The possession of this knowledge has helped the writer on more than one occasion; has kept repair bills from becoming an important item; has made him independent of and has enabled him to detect a tricky engineer, besides contributing much to the comfort and feeling of security of both his family and guests.

At 6:20 P. M. the Foam entered Plum Gut; despite an adverse tide and rough water, caused by the numerous tide-rips, she forced her way through and at 6:45 was standing for Ben's Point, which was passed close to at 7:12.

Then around the bug light on Long Beach Bar went our little craft, on close to the northern point of Shelter Island and finally, at 8 P. M., entered Derring's Harbor.

Ten minutes later she was made fast to a stake in front of our cottage, thus bringing her cruise to a successful ending and giving to ourselves a well-earned rest.

From Annapolis to Great Bed's Light	196.5 miles
Great Bed's Light to Brooklyn Bridge	22.0 miles
Bridge to Oyster Bay	37.5 miles
Oyster Bay to Derring's Harbor	84.0 miles
Total	340.0 miles

W. P. Clason.

Larchmont, N. Y.

Yachting on Buzzard's Bay.

Everything considered, the signs for a most successful yachting season all along Buzzard's Bay were never more favorable than at present. A large number of new boats have been built and the classes will be well filled, and as the boats are nearly well matched, the racing should be very keen.

The Regatta Committee of the Beverly Y. C. has already laid out dates for a number of regattas, the first of which will take place on June 17. The Beverly Y. C. is in a very thriving condition, the membership having increased largely during the past year. The club house at Wing's Neck has been greatly improved, and will be opened at the usual time, everything being in readiness for the season's yachting, which will surpass by far all other efforts in the history of the club.

The Wood's Holl Y. C. is also in a prosperous condition and a successful summer is promised. The racing dates have not yet been made up, but a schedule that will not conflict with any other racing on the bay will soon be given out.

The 18 and 25 footers and the fifth class of catboats were the best filled last season, but this year the fourth class will have numerous entries. Mr. Stewart McLoud's Alison, one of the fastest craft on the bay, which formerly sailed in the third class, has been rebuilt during the past winter and will now sail in the fourth class with Howard, Hod and several new boats as competitors. Huckins, of Onset Bay, who rebuilt Alison, has turned out a boat for Mr. W. O. Taylor, of Boston, who will race her throughout the season. She is 26ft. 6in. over all, 18ft. on the waterline, 9ft. 8in. beam and will draw 14in.; she is a good looking, powerful craft that should be fast. Huckins lost his plant by fire last year, but his new shops are an improvement over the old ones, and are in a more desirable location near the bridge which leads to Point Independence. Ever since the new shops were completed Mr. Huckins has had more work than he could attend to, and he will be busy on new work well into the racing season.

Mr. David Rice, a member of the Beverly Y. C., and who formerly sailed Kalama, has ordered a boat for the 25ft. knockabout class from Phinney, of Monument Beach. She is a powerful boat with long overhangs and should be at her best in a strong breeze. In the racing she will meet May Queen, Amanita, Ulula and several other well-known boats. Phinney is also building from his own design a 15ft. catboat for Mr. Arthur Hunnewell, of Boston; the boat will meet Imp, Laurel and Vif. Mr. W. M. Jameson, of Boston, has ordered from Phinney an 18-footer that is similar to Howard, and her designer expects great things of her. Mr. Walter E. Forbes, of Boston, has also ordered a boat from Phinney that will sail in the 25ft. knockabout class. It is stated that Mr. Robert Emmons will have a new boat this season to race against Quakeress.

Howland & Co., of Monument Beach, are turning out the largest yacht ever built along this shore. The boat was designed by Mr. B. B. Crowninshield for Mr. DeVer H. Warner, of Bridgeport, Conn. She is 65ft. over all and 40ft. on the waterline. She is a handsome centerboard boat, well built and with excellent accommodation. The boat is intended for cruising, and has a yawl rig; there is about eight tons of outside lead ballast. Howland & Co. are building an 18ft. knockabout for Mr. George H. Wightman, of Hull, and she will be taken around the Cape as soon as she is rigged. Mr. George W. Curtis is having Howland & Co. build from his own design a 15ft. knockabout. Four centerboard catboats are also being built by Howland. They will be raced on Bass River on the Cape.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter II —Materials.

Having got your tools and bench, and a suitable workshop or building shed, the next thing is to get the necessary timber, nails and other materials.

Without going into the question of the exact quantities required for building either of these proposed boats, it will be as well to consider the qualities of the various woods most suitable for the work. These are:

Keel.—English oak or American elm, though pitch pine, mahogany and English elm are all used at times, but are not so good as the first two.

Stem, Knees, Sternpost and Counter Frame.—These should always be natural crooks of English oak grown to shape.

Shelf or Inwale and Bilge Stringers.—American elm, mahogany, pitch pine or Oregon pine.

Bent Timbers.—American elm.

Floor Frames.—English oak crooks, unless they are steel forgings (rectangular or angle bars, well galvanized).

Deck Beams and Carlines.—Oak or Oregon pine.

Transom and Center Case.—Teak or mahogany.

Planking.—Teak, mahogany, American elm, cedar, Kauri pine or American spruce.

Deck.—Cedar, yellow pine or Kauri pine.

Coamings.—American elm, mahogany or teak.

Spars.—Spruce sticks or bamboos.

Oak should be English grown and winter cut, with a fine close grain, as nearly as possible following the required curve. Avoid open-grained, reddish colored oak, and of course see that it is well seasoned and free from sap.

American or Canadian elm should be as white as possible, and with hardly any grain showing, and quite clear of knots and shakes. Avoid dark brownish wood.

Teak is the best and most durable wood for planking and all sorts of deck fittings, such as cabin tops, skylights, etc., as it is less affected by weather than any of the other woods I have named. It should be slightly greenish in color when first cut, with a fairly strongly marked grain. The lighter colored red teak is not quite so heavy, but is not so strong or durable.

The only objection to teak planking is its great weight, which quite bars it from use in racing craft. It can be easily obtained up to 40 and 50ft.

Mahogany.—There are many varieties. Honduras is the best. It should be fairly light in color, and fine clear grained. It stands weather well, is lighter than teak, and at the same time fairly tough, and can be got to 35 and 40ft. long by 2ft. wide.

Cedar is the principal wood in use for planking racing boats, as for its strength and durability it is the lightest wood in the market, and, like mahogany, is very long and wide. It stands the weather better than pine, and is as easy to work as yellow pine.

As a rule, the light-colored cedars are lighter in weight that the dark red, but, though softer and easier to work, they absorb more water and lose their color very soon when varnished.

Pitch pine is very unpleasant wood to work, being full of resin, which clogs the tools very quickly. It is very durable and tough, but rather heavy. Pick it as light-colored and clear-grained as possible.

Oregon Pine.—A similar wood to pitch pine, but lighter both in color and weight, and not so durable. Still it is so much tougher for its weight that it is better for boat work, and can be obtained almost any size.

Kauri Pine.—A very durable wood for decks and planking, but rather heavy and not very tough for its weight compared with mahogany. It is fairly cheap, and very wide, but rather difficult to get in long lengths unless a whole log is bought.

Yellow pine is a very light and soft wood, with little strength, but the wood most frequently used for decks, as it is easy to obtain in long lengths clear of knots and discolorations; it is very white when scrubbed. It should show little or no grain.

American spruce is also a light, soft wood, but, though not so clear of grain, is far tougher than yellow pine, and is more suitable for planking and small spars; it can be got up to 35ft. by 12 to 15in. wide, and comes over in planks as a rule.

Archangel pine or spruce is not so clear as either of the last two, but is good enough for flooring and lining in plain jobs.

Larch is a very tough, strong wood, with a lot of grain and very good for planking, but hard to get in the south of England; it is durable.

Ash is the toughest English wood used in boat building, and is almost equal to American elm, but not quite so supple or durable. It should be white, without any very dark grain.

English elm may be used under water for very heavy keels, deadwoods and bottom planking, but it rots very quickly between wind and water, and is a coarse-grained common wood. The light colored wych elm is the best, but difficult to obtain. Be careful of rotten and sappy patches, which often go half way through a log.

Nails and Screws, Etc.—A good stock of flat-headed copper boat nails will be required, say 10lbs. of 1¼in. by 14-gauge, for planking and deck; 5lbs. 2in. by 12-gauge and 5lbs. 3in. by 12-gauge, for floors and knees; a couple of pounds of 4in. by 12-gauge and 4in. by 10-gauge, for heavy stem and stern fastenings; and 2lbs. of fine¾in. scarph nails; all these nails should have suitable roves or burrs; one gross each of 4in., 2in., 1½in., 1in. and ¾in. brass screws will be handy for the center case and various internal fittings; they should be fairly stout.

Copper rod will be required for bolting the stem and keel, scarph, etc., and should be ⅜in., ¼in. and 3-16in., with suitable rings to clinch it on.

Caulking Cotton.—A dozen balls will be enough to do a boat's planking and deck.

Paint, etc.—A stock of red and white lead, putty and paint, will be wanted; but the paint should not be got till the boat is nearly ready for it; it should be of the best quality, and well strained. A good priming for painting under the scarphs and in joints may be made of equal parts of red and white lead, and boiled linseed oil, as thick as cream.

To estimate the quantities of timber required for either of the two boats, proceed as follows:

Keel, stem and stern frame, etc., get natural crooks to suit the shape of the templates, and of sufficient thickness to give the required siding and moulding. The keel for the No. 1 design is cut out of an American elm plank of the required thickness and bent to the shape shown after it is cut out, so that it is only necessary to get a plank of the required length, breadth and depth. This also applies to the shelf and stringers, which can be bought ready sawn to the right section, and should be about 2ft. longer than the over all length of the boat.

In estimating the amount of planking required, take the number of planks a side, at the midsection, and get a similar number of planks of the wood which has been decided on, each plank being about three times the width of a finished plank. Then, say, you have seven planks a side, you will have seven large planks out of each of which you will be able to cut two finished planks. The rough planking should be 1-16in. or 3-32in. thicker than it is to finish. For the deck it is best to set out the planks on the deck plan, and then estimate the lengths required. The bent timbers must be counted, and the length of the longest taken; then get the requisite number cut to the required size and length. Deck beams are estimated by counting them, and getting sufficient planking of the required thickness to cut them out, allowing for the curve; the wider the plank the less waste, as they cut one out of the other.

[To be continued.]

Good Aluminum at Last.

It is possible that a new era has opened in the use of aluminum—at all events for fittings. "Magnalium" is the name given to an alloy of aluminum and magnesium invented by a continental scientist, and the reports upon it are of the most encouraging nature. It is lighter than pure aluminum, it can be worked and turned like brass or copper and it is stronger than brass. It is stated that it does not oxidize at all, fumes of ammonia and sulphuric acid not damaging it. It can be turned, bored, drilled, milled, filled, ground and polished easily. Tubes working one within the other slide without the slightest fretting. Screws made of it are very strong, with clean-cut threads and durable. The metal is patented and manufactured by the Magnalium Company of Berlin.—Yachtsman, April 14.

Manhasset Bay Y. C.

The Manhasset Bay Y. C. held the first of a series of races for the Jacob cup off their club house at Port Washington, Long Island Sound, on Saturday last. The boats started at 3:40 P. M. and sailed over a course fifteen miles in length.

YACHTING NEWS NOTES.

The 120ft. steam yacht building at the yard of the Geo. Lawley & Son Corp. for Mr. William Phelps Eno, N. Y. Y. C., from designs made by Mr. Clinton H. Crane, of the firm of Messrs. Tams, Lemoine & Crane, will be one of the handsomest and best fitted yachts of her size in this country. Her dimensions will be as follows: 152ft. over all, 120ft. on the waterline, 20ft. beam and will draw 9ft. She will be named Aquilo, the name of Mr. Eno's former boat. The old Aquilo was purchased by Mr. S. M. Jarvis, who changed her name to Priscilla. Aquilo will be schooner rigged and will be fitted with triple expansion engines which are calculated to develop between 650 and 700 horse-power, which is expected to propel her at a speed of 13 knots under natural draft, and 15 knots under forced draft. In the deck house will be the dining room, saloon and pilot house. The boat can be steered from either the bridge or the pilot house. Below decks her accommodations are large and well arranged. Aft is the library; forward of this on the port side are two bath rooms, while on the starboard side opposite are two staterooms. Next forward is the owner's room, running the full width of the boat; this apartment contains a double bed and has a bath room adjoining. Forward of the owner's room is the engine and boiler space. Forward of the engine are four staterooms and baths for guests and the captain's room. Still further forward is the forecastle with ample accommodation for the crew. Aquilo is fitted with every modern improvement in ice making, refrigerating, laundry and electric light machinery. The boat will be completed about July 1, costing about $150,000.

The auxiliary cruising schooner yacht Edris, designed by Messrs. Cary Smith & Barbey for Mr. Chester W. Chapin, N. Y. Y. C., was launched from Mr. Lewis Nixon's Crescent Shipyard, Elizabethport, N. J., a few days ago; she is intended for use in Florida waters and is 60ft. on the waterline.

Mr. David Barrie, the representative of Sir Thomas Lipton, has chartered the steamer Porto Rico for a tender to the Cup challenger, Shamrock II. She will go into commission on July 1. The Porto Rico belongs to the New York and Porto Rico Steamship Company. She was built at Toledo, O., in 1899. She is a steel vessel, 215ft. long, 32ft. beam and 13ft. 6in. draft.

There is under construction at the yard of Messrs. Townsend & Downey, at Shooter's Island, S. I., an auxiliary pole-masted schooner yacht for Mr. F. L. Sheppard, A. Y. C., from designs by Mr. Henry J. Gielow. She is 52ft. 6in. over all, 34ft. 6in. on the waterline, 12ft. 9in. beam and 3ft. draft. She will have a roomy cockpit and a large cabin with wide transoms. There will be no stateroom. Forward is a roomy galley and forecastle. The interior finish will be of mahogany. Her sail plan is small and her owner will depend largely upon her machinery, which consists of a four-cylinder 25-horse-power gasoline engine.

The following sales have been made through the Frank Bowne Jones Yachting Agency: The schooner Glendover, Malcolm Graham, Jr., owner, bought by George W. Copeland, of the Atlantic Y. C.; the steam yacht Papoose, Thomas B. Homer, owner, sold to J. Arthur Joseph, of New York; the sloop Saunterer, J. Berre King, owner, sold to Thomas H. Smith, N. Y. Y. C.; the sloop Daphne, George W. Copeland, owner, sold to Charles P. Armstrong, of New York; the sloop Irex, Cord A. Meyer, owner, sold to F. L. Rodewald, of New York; the yawl Hoodoo, Thomas H. Smith, owner, sold to E. N. Searles, of New Haven; the knockabout Lucille, Daniel Bacon, owner, sold to Henry H. Landon, S. C. Y. C.; the raceabout Badger, sold by Joshua Crane, Jr., to W. R. Thorsen, of New York; the steam yacht Uvira, Charles J. Canfield, owner, sold to Charles Hayden, Eastern Y. C.

Cary, Smith & Barber have chartered the schooner Indra, John M. Richmond, owner, to Robert McA. Lloyd, of New York.

The twin-screw steam yacht Amabel, J. Campbell Smith, owner, has been sold through the Gas Engine and Power Company to D. A. Loring, who will use the yacht

in the vicinity of Shelter Island. Amabel is now going into commission at Morris Heights.

It was announced that Col. Reginald Norman had sold his sloop Julnar to Mr. Theodore S. King, of Boston, and that Mr. Robert Bacon had sold the 30-footer Veda to Mr. J. Clinch Smith, of New York.

Mr. Chubb will challenge Navahoe in behalf of Vigilant for the Brenton's Reef cup, which the Genesta took away from here and then lost to Britannia, from which Navahoe won it back.

Two new events in the New York Y. C. series are the races for 90-footers, Class G, off Newport, on June 15 and 17, and the Newport series for all classes, in racing trim, off Newport, on July 8, 9 and 10.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the Maryland county shoot for amateurs, to be held on the grounds of the Baltimore Shooting Association, Baltimore, Md., June 5 and 6, J. Mowell Hawkins, manager, is varied and attractive. To give the State and county shooters the best possible opportunities, members of the Baltimore Shooting Association, the Standard Gun Club, and citizens of Baltimore are barred from some events. There are five target events on the first day for the county amateurs, the fifth being at 50 targets, a three-man team race for the county championship of Maryland. Three handsome gold medals to champions, three handsome silver medals to the second team, three handsome gold scarf pins to the third team, a barrel of targets to the fourth team. Event 5 of the second day is at 100 targets, for the county amateur championship of Maryland, the trophy of which is a beautifully engraved silver cup. There are fifteen prizes in this event, with an additional prize of a bottle of wine to low man. Practice on Tuesday at 1 P. M. Shooting commences each day at 9:30. Four moneys in all sweeps, 40, 30, 20 and 10 per cent. Guns, loaned on the grounds. On the first day there are nine target events open to the world, the last and most important of which is the Baltimore handicap, 50 targets, $1 entrance, distance handicap, for the Schiren cup. On the second day there are eleven events, the last of which is for physicians only, 25 targets, 50 cents entrance. The programme also contains interesting mention of the achievements of Baltimore crack shots, a dissertation on the "kicker and knocker," and a page of valuable information to all who contemplate entering in the tournament. For programmes and all pertinent information address Mr. J. Mowell Hawkins, P. O. Box 454, Baltimore.

Several members of the New Utrecht Gun Club and friends of Mr. Walter F. Sykes, president of the club, tendered a banquet and reception to Mr. Sykes at Interstate Park on Saturday evening the 11th inst. While the banquet was quite a feature in itself, it was only one item on the evening's programme, the main feature being the presentation of a handsome silver berry bowl to Mr. Sykes, as an earnest and inadequate recognition of what he had done in the way of helping the club to the position it now occupies. All the arrangements were in the hands of Messrs. J. H. Hallock and C. A. Lockwood. At the dinner Mr. Hallock sat at the head of the table, and was supported on his right by Mr. Sykes, and on his left by Mr. Lockwood. Among those who were present were Messrs. J. A. H. Dressel, L. C. Hopkins, Dr. G. W. Pool, Capt. Money, A. A. Hegeman, G. W. Hagadorn, M. R. Weightman, Edward Banks, T. W. Morfey, G. E. Greiff, J. H. Hallock, C. A. Lockwood, etc. In addition to the guest of honor at the banquet in honor of Mr. W. F. Sykes, there was also another guest of the club present, who came from quite a distance, namely, Mr. Elmer E. Shaner, who had been busily engaged for two days in rearranging and renumbering the lockers at Interstate Park and generally getting things in order for the G. A. H. at targets, which is scheduled for a date in the month of July.

The Boston Shooting Association announces a two-day tournament on its grounds at Wellington, Mass., May 24 and 25. Ten like events are provided each day, of which eight are at 15 targets and two at 20, with a uniform entrance of $1.25. "Average money each day will be paid to the three high guns shooting entire programme: first, $5; second, $3; third, $2. Events 8, 9 and 10 (50 targets) on Friday will also constitute a two-man team match, open to any two amateurs belonging to the same club. Any number of teams may enter from the same club, but no man to shoot on more than one team; $5 will be paid to winning team, and $3 to second on high gun system. Events 8, 9, and 10 (50 targets) on Saturday will constitute a three-man team match, open to any three amateurs belonging to the same club. Any number of teams may enter from the same club, but no man to shoot on more than one team; $6 will be paid to winning team and $3 to second, on high gun system. Professionals and paid agents may shoot for targets only, and cannot compete for sweeps or average money. Targets included in entrance at 1½ cents each. Money in all events 40, 30, 20 and 10 if twelve or more entries. Shooting on regular programme begins at 10 A. M. each day. Dinner served on grounds."

The programme of the Interstate Association's shooting tournament at Cleveland, O., given for the Cleveland Gun Club, June 19 to 21, may be obtained of Mr. J. L. Decker, 50 Euclid avenue, Cleveland. There are ten target events each day, at 15 and 20 targets, entrance $1.50 and $2. Added money, $300. On the third day there will be a special handicap event, 25 bluerocks, $1 entrance, for a sterling silver cup, valued at $35. This event is open only to the shooters who have shot throughout the entire programme. The grounds will be open for practice on June 18. Four moneys in 15-target events; five in 20-target events; class shooting. Shooting will commence at 9 A. M. sharp each day. To reach the grounds take the Woodland or Euclid avenue line of cars, and transfer to the Wilson avenue cars carrying signs "Through" and get off at Kershay street. Guns and ammunition shipped to the Chamberlin Cartridge and Target Co. will be delivered at the shooting grounds free of charge. First-class loaded shells will be for sale on the grounds. Price of targets at 2 cents each included in all entrances. Lunch will be served on the grounds.

The second contest between teams of New York and New Jersey took place on the grounds of Smith Brothers, Newark, N. J., on Friday of last week. As with the first contest, it was an exceedingly close competition, though New Jersey won by 1 bird. There were eleven men on a side, and each shot at 20 birds. The scores were: New Jersey 181, New York 180. In the first contest, Feb. 27, at Interstate Park, there were fifteen men on a side, each shooting at 25 birds,, and the scores were: New York 303, New Jersey 302. It was heretofore generally supposed that New Jersey could organize a team that would make a New York team look like a man who had missed a train, but the facts so far do not sustain this theory. It is possible that three more races may be arranged, the team winning three out of the five to be the winner Or one more race may determine who is who. The scores in the last race average low, but there was a heavy downpour of rain at the time, and the birds were mixed in quality, the good ones being what are called screamers.

Mr. S. G. Miller, secretary of the Haverhill, Mass., Gun Club, writes us as follows: "We will hold our all-day shoot Memorial Day, May 30. We extend a cordial welcome to all shooters, and will do our best to make it a pleasant day for them." The programme consists of fifteen 10-target events, $1 entrance, a total of $15, at 150 targets. Distance handicap: Shooters whose average is 60 per cent. or under, 15yds.; 70 per cent. or under, 16yds.; 80 per cent. or under, 17yds.; 85 per cent. or under, 18yds.; 90 per cent. or under, 19yds.; over 90 per cent., 21yds. The amateur breaking the greatest number of targets in events 7, 8, 9, 10 and 11 will receive a trapshooter's ammunition case; second, Thurman shooting blouse; third, a Powers cleaning rod. Money divided by Rose system. Targets included in entrance at 1½ cents each. Sweepstakes optional. Loaded shells for sale. Lunch served free. Take Main street cars for Dustin square. C. A. Griggs is the president.

The officers elected at the recent meeting of the New Jersey State Association are: President, George N. Thomas, of Trenton; First Vice-President, Marshal Herrington, Arlington; Second Vice-President, Rowland A. Ellis, Freehold; Third Vice-President, J. I. Wolverton, Trenton; Secretary, C. W. Feigenspan, Newark; Treasurer, I. H. Terrill, Newark; Executive Committee, C. W. Feigenspan, Chairman; W. R. Hobart, Newark; H. H. Stevens, New Brunswick; J. A. Blish, New Brunswick; Legislative Committee, H. H. Stevens, Chairman; L. W. Colquitt, Orange, N. J.; W. M. Davis, Bloomfield; T. Harrison, Freehold; Neaf Apgar, Plainfield; Board of Directors, George N. Thomas, Chairman; C. W. Feigenspan, Isaac H. Terrill, M. Herrington, W. F. Hoey, F. B. Sinnock, Newark, and F. B. Carlough, Rutherford.

Mr. J. B. Stipp, secretary of the Indiana Trapshooters' League, Bedford, Ind., informs us that the fifth annal tournament of the league will be held on June 11 and 12, under the auspices of the Bedford Rod and Gun Club. There is a large list of merchandise prizes, most of which are for fifth place in the competition. There are twelve events each day, at 15, 20 and 25 targets, entrance based on 10 cents per target. Competition for the individual championship of the State League is divided between the first and second days. Shooting commences at 9 o'clock. Programme held open till 10:30 A. M. Magautrap and Sergeant system. Targets 2 cents. Event 9 on the second day is the team race. Four moneys, 40, 30, 20 and 10 per cent.

The Rochester, N. Y., Gun Club has issued the programme of its annual spring tournament, to be held May 22 and 23. The programme is alike for each day—ten events at 15 and 20 targets; $1.50 and $2 entrance. It announces further information as follows: "Shooting to begin promptly at 10 o'clock each morning. Targets at 1½ cents each, included in entrance. Money divided Rose system. Five per cent. will be deducted from all purses for average money and will be divided at the close of shooting each day, 60 and 40 per cent., among the shooters winning first and second averages. Lunch and loaded shells on the grounds. Experts and manufacturers' agents barred. Committee: A. A. Mosher, H. M. Stewart, F. E. McCord."

The New Haven, Conn., Gun Club announces a Memorial Day tournament, May 30, shooting to commence at 9 o'clock. There are fifteen target events on the programme, at 10, 15 and 20 targets, 180 in all, at a total entrance of $14.60. Rose system, ratio 5, 3, 2, 1. Visitors welcome to shoot for price of targets. The programme states that Pap Garnett will serve an old-fashion New England clam chowder. His famous chicken pies and sandwiches will not be forgotten. In this event many clean scores are usually made. To reach the grounds take Schuetzen Park cars. Loaded shells for sale at Club house. Directors: B. W. Claridge, F. J. Potter, Geo. E. Ortseifer. E. L. Isbell, president; John E. Bassett, secretary.

In the New York and New Jersey team shoot, in which twenty-two men—eleven on a side—were engaged, but one contestant succeeded in killing his 20 birds straight. He was, and is, Mr. Wm. Hopkins, of Jamaica, L. I. He has, however, a distinct advantage over all other competitors, inasmuch as he weighs about 250lbs., and therefore can stand firmer on his feet on a stormy day. He also measures about 48in. around the chest, so that when his heart palpatates, there being room in his chest for the flutter, it does not affect his eyesight.

In the event at 7 live birds for a club prize of the New Utrecht Gun Club at Interstate Park last Saturday Mr. "J. H. Jack" won after killing 22 straight, of which 17 were shot in the shoot-off, miss-and-out, his most insistent competitor being Mr. G. W. Hagedorn, who killed 21 in the same event, and of these 13 were killed with one barrel.

Mr. J. J. Fleming, secretary of the Forester Gun Club, Newark, N. J., writes us as follows under date of may 12: "Our club for May 30 will hold an all-day shoot; live birds in the morning, targets in the afternoon. This is our last live-bird shoot till next fall. Optional sweepstakes in all shooting. Handicaps for merchandise events in afternoon."

On the first day of the New Jersey State shoot the E C cup, emblematic of the individual target championship of the State, was won by Mr. C. W. Feigenspan, of Newark, with a score of 46 out of a possible 50. There were fifteen other contestants, three of whom scored but 1 target less than the winner.

Under date of May 7 we are advised that "the Peters Cartridge Company will hold an amateur tournament at Bristol, Tenn., June 4 and 5. Added money and average trophy. John Parker manager. Address Peters Cartridge Company, or Barker Hardware Company, Bristol, Tenn., for programmes."

At a meeting of the Nebraska State Sportsmen's Association, at Lincoln, last week, it was decided that the next State shoot of the Association should be held at Omaha. Mr. Geo. W. Loomis, of Omaha, was elected president; G. A. Schroeder, of Columbus, vice-president; H. S. McDonald, of Omaha, secretary.

The distance handicap, the only common sense and equitable system whereby to conduct a competition with competitors of different degrees of skill, has the support of Mr. Chris Gottlieb, of Kansas City, who presents some sound suggestions to our readers concerning it in another column.

The Dunellen Gun Club won the three-man team target championship at the New Jersey State shoot, with a score of 82 out of a possible 90. The three-man team championship at live birds was won by the Brunswick Gun Club with a score of 29 out of a possible 30.

Mr. John S. Wright reports that his live-bird shoot for the launch, valued at $175, has most favorable prospects. The conditions are 10 birds, $10, birds extra; seventeen entries to fill. For further particulars address J. S. Wright, 318 Broadway.

Capt. A. W. Money, of the American E. C. & Schultze Gunpowder Co., and Mr. Howard Marlin, of the Marlin Fire Arms Co., departed from New York on Monday of this week, to participate in the Pennsylvania State shoot.

The Ossining, N. Y., Gun Club announces a holiday shoot for May 30, the sweepstakes of which will be for amateurs only. The new club house is now a feature of the club's grounds. A magautrap is used to throw the targets.

Mr. Elmer E. Shaner, manager of the Interstate Association, made a few days' stay in New York prior to a visit to Allentown, Pa., where he undertakes the arduous duty of managing the Pennsylvania State shoot this week.

The American team is due in New York on Saturday, May 25, at 7:40 A. M., and will leave on Sunday at 10 o'clock A. M., instead of on Saturday, as previously announced.

Mr. H. H. Stevens won the individual live-bird championship at the New Jersey State shoot last week, killing 37 birds straight, 22 of which were killed in the tie.

BERNARD WATERS.

Indiana Trap Shooters' League.

BEDFORD, Ind., May 9.—Since the programme is out for the annual tournament of the Indiana Trapshooters' League, to be held at this place under the auspices of the Bedford Rod and Gun Club, June 11 and 12, the question is being asked whether the shoot is to be confined to amateurs of Indiana only? I am pleased to say that it is open to all amateurs of all States. We hope to see our friends from neighboring States pay us a visit and enjoy the two days of shooting in one of the greatest stone centers of the world.

J. B. STIPP.

WESTERN TRAPS.

Garden City Gun Club.

Watson's Park, Chicago, May 11.—There was a strong phalanx of the Garden City Gun Club to enjoy the competition of that club on the famous Watson Bessemer-lined birds, and there were some good performances, though several birds escaped unpierced. The main event was at 25 live birds, handicap, for a silver loving cup, as follows:

Dr Miller, 2	11*20011*120020111121110212	—19

Street, 2	1002020020000121 01	— 8
Shellenberger	0000100001w	

In the shoot-off L. C. Willard won the handicap badge; J. H. Amberg won high average badge.

May 7.—Levi and Oliphant shot a match at 15 birds, as follows:

Levi	220120222222222	—13	Oliphant 2120*200121212 —11

Twenty-five birds:

Oliphant	2*1122121011221122121212 1—23
Street	2121012210202210122210112—20

Practice:

F Gackle	10211112222112122—15

May 10.—Twenty-five-bird match between Levi and Oliphant:

Levi	022201202220222022202*20—17
Oliphant	2112111122*20122*12202210—20

RAVELRIGG.

Garfield Gun Club.

Chicago, May 11.—The appended scores were made on our grounds to-day on the occasion of the second trophy shoot of the target season.

J. S. Boa again won Class A trophy on a score of 20. Dr. Meek and W. A. Jones tied for B medal on 19, while P. McGowan won Class C on 19.

The shooting was extremely difficult, there being a very strong and gusty wind from the rear, which caught the targets and either beat them down or caused their flight to become very erratic. Twenty-three members took part in the contest, notwithstanding the unpleasant day for target shooting:

Second trophy event, 25 targets:

		Broke.	Hdcp.	Total.
Delano	0100111101010001100011101—13		2	15

DR. J. W. MEEK.

Chicago Gun Club.

Chicago, Ill., May 11.—The scores of the Chicago Gun Club's shoot to-day are appended. There were thirteen contestants. In the monthly shoot Mr. King won, from the 16yd. mark.

In the weekly shoot Dr. Carson, scratch, was high gun, 23; Walters won second after shooting out the three Bs—Bowles, Balmer and Borroff.

Our friend A. G. Courtney was in town, and came out to see the boys. He did some good work, considering the strong wind that beat the targets down. Come again, Court!

		Broke.	Hdcp.	Total.
Walters	0111010111001010111011101111—17		8	25
Bowles	1111011111011010101111101—19		8	25

Courtney, 20	111111101111111	—14

ON LONG ISLAND.

New Utrecht Gun Club.

Interstate Park, L. I., May 11.—In the shoot of the New Utrecht Gun Club to-day there were some excellent scores, the performances of Mr. "J. H. Jack" and Mr. G. W. Hagedorn being sepecially noteworthy. The former killed 27 birds straight. In the event for the club prize at 7 birds Messrs. "Jack" and Hagedorn killed straight, and then shot at 17 in the shoot-off, miss-and-out. The scores:

No. 1:

Capt Money, 28	*112110—5	E D Creamer, 28	1221211—7	
H Fessenden, 29	2222222—7	J Shevlin, 28	220*122—5	
S B Jay, 29	212100w	C A Ramapo, 28	2221113—7	
J H Jack, 29	101220w			

Shoot-off, miss-and-out:

Fessenden	20	C A Ramapo	11
Creamer	20		

No. 2:

Capt Money, 30	22220—4	E Banks, 29	21102—4
H Fessenden, 29	2222*—4	J P Kay, 28	12222—5
J H Jack, 29	20w	T Riley, 28	21212—5
C A Ramapo, 28	22222—5		

Shoot-off, miss-and-out:

Banks	220	Ramapo	2*0
J P Kay	0	Fessenden	2*222
J H Jack	22222	Ritchie	11222
Riley	11202	S B Jay	20
Hagedorn	12221		

Seven birds, then miss-and-out, for club prize:

Capt Money, 28	1220211—6	
S B Jay, 29	1111121—7	210
Dr Martin, 29	1121122—7	0
J P Kay, 28	2122212—7	12210
G B Ritchie, 28	2211*20—5	
G W Hagedorn, 28	2222112—7	211112111112122120
J H Jack, 29	1111122—7	2122222222222222
C A Ramapo, 28	1211121—7	1120
F D Creamer, 28	1122111—7	0
M Rogers, 28	2220w	
E Banks, 29	2221112—7	*
G E Grieff, 28	2220w	
S Van Allen, 30	2122020—5	

Boston Gun Club.

BOSTON, May 8.—Though just the kind of a day all trapshooters should rejoice in having, just ten shooters took part in the second serial prize shoot of the Boston Gun Club's summer series to-day on their grounds at Wellington. For the first time in four months we were again favored with the presence of Mr. Poor, who is just regaining strength after encountering a very serious accident in his office some time ago. Although as yet not allowed to indulge in it to his heart's content, the chance to try a 16-gauge with no recoil caused the old enthusiastic spirit to bubble out, and nothing would do but to have a try with that gun, which we trust did not bring round any ill effects. In the prize match to-day high gun was G. W., one of the oldest standbys of the club, having shot with us now off and on for about fifteen years. The old-time skill was again shown, as the 22 targets out of the 25 could testify if there had been anything left of them to do so. Next in line is Frank, one of the latest enthusiasts, with 20, standing at 16yds., and it is safe to say that if he persists in keeping up his present gait his 16yd. days will soon be a thing of the past. Lane was third with 19, at 16yds., just getting used to a newly bored gun, and augurs well for shoots to come. Spencer, 18yds., fourth with 17, which will no doubt have to give way to higher scores in the totals. Williams, of 10-gauge fame, fifth, at 16yds., with 15.

Scores follow. All shooting handicap distance; all unknown angles:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	10	10	10	5p	10	15	5p	10	10	10	10	10	15

As You Look at It.

From the Woodcraft Magazine for April.

THE Fox and the Cat, as they traveled one day,
With moral discourses cut shorter the way;
"'Tis great," says the Fox, "to make justice our guide!"
"How god-like is mercy!" Grimalkin replied.
While thus they proceeded, a Wolf from the wood,
Impatient of hunger and thirsting for blood,
Rushed forth—as he saw the dull shepherd asleep—
And seized for his supper an innocent Sheep.
In vain, wretched victim, for mercy you bleat;
"When mutton's at hand," says the Wolf, "I must eat."

Grimalkin's astonished—the Fox stands aghast
To see the fell beast at his bloody repast;
"What a wretch!" cries the Cat; "'tis the vilest of brutes;
Does he feed upon flesh, when there's herbags and rotts?"
Says the Fox, "While our oaks gives us acorns so good,
What a tyrant is this to spill innocent blood!"
Well—onward they marched, and they moralized still,
Till they came where some poultry picked chaff by a mill;
Sly Reynard surveyed them with gluttonous eyes,
And made (spite of morals) a pullet his prize;

A Mouse, too, that chanced from her covert to stray,
The greedy Grimalkin secured as her prey.
A Spider that sat in her web on the wall
Perceived the poor victims, and pitied their fall;
She cried, "Of such murders how guiltless am I!"
And ran to regale on a new-taken fly.

JOHN CUNNINGHAM.

A Remarkable Score in an Unusual Match.

ON May 9 Mr. William McDonald, of Staunton, Va., and Mr. D. R. Snow, of Charlottesville, Va., settled the question as to who was the quickest and most accurate handler of the Winchester pump.

This is the only race of the kind ever shot in Virginia, and perhaps in the country.

The conditions of the match were 100 clay birds to each man, thrown from a magautrap, the birds to be thrown as follows: Fifteen pairs, making 30; ten threes, making 30; five fours, making 20, and four fives, making 20; total 100 birds per man. The trap was to be held open, throwing the birds as rapidly as possible. If the first bird out was a whole one, then everything after that was to be accepted, and if not shot at, scored lost. The scores were as follows:

Doubles

Snow	11 10 01 01 11 11 11 11 00 01 01 00 11 01 00—18
McDonald	11 11 11 11 11 11 00 11 01 11 10 10 10 11 11—24

Threes:

Snow	100 110 010 110 100 101 101 110 111 010—17
McDonald	101 111 110 110 110 010 101 110 110 111—21

Fours:

Snow	1001 0110 1111 1111 1110—15
McDonald	1110 0111 0111 1111 1111—17

Fives:

Snow	10010 11111 10001 10011—12
McDonald	11101 11101 11111 11111—18

Totals: Snow 62, McDonald 80.

McDonald was shooting a gun just from the factory, that he had never shot before, and being new, was necessarily stiff in working. Referees, J. O. Bird and W. M. Miller.

A Good Handicap.

KANSAS CITY, Mo., May 11.—The following form of handicapping the target shooting of the United States has suggested itself to me, and I think it will become not only fair but very popular, as follows:

A handicap committee to consist of one representative from each of the sporting journals; they to classify the shooting into four classes, namely: A, B, C, and D. A, 20yds., professional class; B, 18yds, expert class; C, 16yds., semi-expert class; D, 14yds., amateur class.

The handicapping to be revised every three months, or as often as the committee may see fit, and to be published in the sporting journals when so revised. It will only be necessary to publish the names of the A, B, and C classes, and any shooter whose name does not appear will know that he comes in the amateur closs.

Now, any shooter in the United States going to the tournament given under this system of handicapping will know his mark beforehand, besides relieving the tournament management of any criticism as to favoritism or prejudice.

A word as to the Rose system, that I have always favored:

I attended both the Beatrice and Lincoln, Neb., tournaments. Both programmes were advertised "class shooting," 40, 30, 20 and 10; but on the second day at each place the method of dividing moneys was changed to the Rose system.

CHRIS GOTTLIEB.

Winchester Gun Club.

DETROIT, Mich., May 4.—The weather man was kinder to-day than for several shoots past, and the membership was fairly well represented. Some good scores were made, but the uncertainty that pertains to any real sport was also evident.

Shiell was in good form, winning in Class A, with 23, while nobody in Class B was able to better Warner's score of 19. Randall won easily in Class C. The scores:

Events:	1	2	3	4	5	6	7
Targets:	10	10	10	10	10	10	25

Wollaston Trap Club.

WOLLASTON, Mass., May 11.—Fine weather favored the regular weekly shoot of the Wollaston Trap Club this afternoon. Horace was high man with 82 per cent. Events 5 and 6 were 10 targets, reversed; event 7, 5 pairs; all other events, 10 targets, unknown angles. The scores:

Concerning the Rochester Club and State Shoot.

ROCHESTER, N. Y., May 11.—The Trapshooters of New York State: The club under whose auspices the New York State Association for the Protection of Fish and Game was invited to hold its annual convention and tournament for the year 1901 having transferred its rights to the Audubon Club, of Buffalo, and asking the same support for Buffalo always accorded this Association, thereby relinquishing any rights they might have had, therefore be it known that the Rochester Rod and Gun Club, of Rochester, N. Y., does hereby invite the New York State Association for the Protection of Fish and Game to hold its annual convention and tournament in the city of Rochester in the year 1902, and under the auspices of the Rochester Rod and Gun Club.

Rochester has and always will give a first-class tournament. As we have done, so will we do again. Railroad facilities, hotel accommodations are unequaled.

ROCHESTER ROD AND GUN CLUB.

IN NEW JERSEY.

New Jersey State Shoot.

The New Jersey State shoot, held on Smith Brothers' grounds, Foundry and Ferry streets, Newark, N. J., May 7 to 10, was a successful event, though it was unfortunate in respect to weather, the last two days being rainy.

The target events were uniformly at 15 targets, $1.30 entrance.

On the first and second days the weather was pleasant and favorable. A majority of the contestants shot through the entire programme.

The E C cup is now held subject to challenge, but previous contests have demonstrated that it is no easy matter to defeat Mr. Feigenspan, and it is probable that he will hold this trophy through several contests. The scores on the first day, May 7, follow:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	15	15	15	15	15	15	15	15	15

The following non-residents shot along with the rest: Remsen 44, Griffith 44, Winchester 46, Le Roy 46, Glover 48, Martin 37, Van Allen 39, Day 41, Keller, Jr., 32.

The programme of the second day was a repetition of that of the first save that instead of the individual championship there was a three-man team race, at 30 targets, unknown angles, all members of teams to be bona fide members of the club which they represented. Seven teams engaged in this contest, and of these the Dunellen Gun Club, of Dunellen, won with a score of 82. The scores of the second day follow:

Events:	1	2	3	4	5	6	7	8	9	10

Team championship, 30 targets; three-man teams:

Dunellen Gun Club—Hoffman 29, Apgar 27, Brantingham 26; total 82.

East Side Gun Club—Webber 28, Hayes 25, Koegel 25; total 78.

Hudson Gun Club—C. Von Lengerke 29, Capt. Money 27, Piercy 21; total 77.

Freehold Gun Club—W. B. Ellis 26, Muldoon 25, Burtis 24; total 75.

South Side Gun Club—Feigenspan 27, Herrington 24, Gardiner 22; total 73.

Brunswick Gun Club—Bissett 24, Applegate 24, Stevens 23; total 71.

Scrub Team—Fox 29, Remsen 28, T H Keller 20; total 77.

In sweepstakes in connection with team race the scores were: Le Roy 29, Glover 28, Van Allen 25, Griffith 24, Demarest 20, Vandenberg 15, Stewart 14.

The third day had a live-bird programme. The weather was rainy and unfavorable for good scores. No. 1 event was a warmer up, 5 birds, $3 entrance, birds included. Out of the fifteen contestants seven killed straight.

The second event was the individual championship of the State at five birds, 15 birds, entrance $7.50, birds included. The prize was the N. J. S. S. Association's individual championship gold medal; winner of previous contest to receive the net purse in this. One miss out, with privilege. The winner to receive also a special gold badge which becomes his property. There were fourteen contestants in this event, and of these Messrs. Stevens, Applegate and Koegel killed the 15 straight. The tie was shot off miss-and-out. Koegel dropped out in the third round. Stevens won in the twenty-second round, killing thus 37 birds straight to win the medal. The scores in this event follow:

No. 1, 5 birds: Koegel 5, Stevens 5, Hassinger 5, Hoffman 5, Vandewater 5, James 5, Capt. Money 5, Feigenspan 4, Count 4, Woodruff 4, Van Allen 4, Outwater 4, Knevers 4, Williams 3, Timmons 3.

No. 2, State individual championship, 15 pigeons, one miss out, with privilege:

Stevens	222222222222222—15	Vanderveer	...1220
Applegate	222222222222222—15	Hoffman	22220

Outwater	1221220	Knevels	0
Hassinger	22210		

Ties, miss-and-out:

Stevens	221222222222222222222—22
Applegate	2222222222222222222220—21
Koegel	220

The three-man team championship was the next event. It had five entries. The conditions were 10 birds per man, entrance $15 per team, birds extra, net purse to winning team at last tournament. The Brunswick Gun Club proved to be the victor with a score of 29 out of a possible 30. The scores in this event follow:

Brunswick Gun Club.		Climax Gun Club.

No. 4, 10 pigeons, $5, birds included: Stevens 10, Feigenspan 10, Applegate 10, Koegel 9, Knevels 9, Hassinger 8, Outwater 7, James 6, Hoffman 5, and withdrew.

The fourth day was specially devoted to the team shoot between the States of New York and New Jersey. There have been for a long while differences of opinion respecting the excellence of the trapshooters of the two States, which could be settled only by an appeal to arms. The first battle, on Feb. 27, was won by New York, by the narrow margin of one kill in excess of New Jersey, and this settled the latter State's standing, also the standing of the former State, for the time being. As in such cases made and provided, New Jersey thought New York couldn't do it again—New Jersey was right. New Jersey was victor by the narrow margin of one kill in excess of New York.

It is possible that New York failed in this instance, in the matter of rooting. As rooters, though fairly competent, New York is slow in comparison with New Jersey. It is all the difference between a babbling brook and a cloud burst. The rooting of New Jersey and of New York does not signify a tumult per se, but it is an index of true, earnest friendship and State pride. New York, however, is too self-poised and calculating in its metropolitan dignity; New Jersew is joyously effervescent in its heartfelt sociability. This difference, with qualifications—because there were earnest rooters for New York, too—applies only in a fragmentary way, for after the shoot was over there was but one difference between the New Yorks and the New Jerseys—a difference of one bird.

There was, by the same token, one bird difference in the prior shoot. Taking the two shoots together, there was no difference between New York and New Jersey. Each team had shot at a total of 595 birds and scored 483. There really was no difference except as a shooting idea. Even in the matter of total misses each were alike, for each team in the two contests has missed 112 birds, concerning which each member considers the other fellows largely responsible.

But still there are unaccountable differences of opinion which cannot be buried—they must be shot.

The rubber will take place in the near future some time, and it is not improbable that there will then be a difference which also then will bring us back a few weeks to a date when several people will have claimed to have said, "I told you so."

The contest was shot in the rain. It was no common rain. It was what is commonly known as a steady rain. Some of the daily papers referred to it as a "deluge," but it wasn't. It would have been such if the sewerage system of Newark was less perfect.

The comfort of the shooters had nevertheless been well thought out and provided for. A tent had been placed over the score so that its eaves were just inside of the 30yd. mark, which was the score for each shooter. The water ran off the tent in generous profusion. As the shooter stood at "ready" the big drops caught the gun at right angles across the barrel a few inches in front of the breech, if the contestant stood with his foot at the 30yd. mark. If he stood back to evade the dripping downpour the big drops of the tent wash obscured his vision more or less, though the water of New Jersey, according to tradition, is proverbial for its clearness and soothing effect on the eyes, if taken internally. This, however, is mentioned only to inform the reader that the weather was largely in favor of the birds, which were a mixed lot, sitters, slow birds and three-flap birds, the latter being demon birds, which snapped their high 120-gear wings three times and were then outside of the boundary. There also was a good 9 o'clock wind.

The utmost good fellowship prevailed, and next to winning was the pleasure of being defeated by such pleasant shooters.

Following are the scores, with a difference of one bird, which means so much and yet so little, as the contest was for the price of birds sure, or an optional sweep of $5 to each shooter. Thus each contest is an event distinctly by itself, and is without trophy or token to commemorate it in the annals of the world's history.

Mr. H. P. Fessenden acted as referee:

New Jersey Team.

Trenton Shooting Association.

Trenton, N. J.—On May 2 a few of the members went down to the grounds for a little practice work, in view of the trip to Frankford, May 5, to take part in the championship team shoot. Well, we went to Frankford and got licked. Coming home, talking it over, about a thousand reasons were advanced as to the how, when and wherefore. It is sad work for me to write that we landed third in a field of eight. On behalf of the team, I put in a challenge for another trial before we came away. According to the terms of the contest, this must be accepted, and the match shot within sixty days. We won't brag this time before the shoot, but you will get an early line from me as soon as it is over.

Tuesday, the 7th, I received word that our new magautrap had been delivered at the grounds, and that I was wanted at once to set it up for use next day, the date of our regular monthly shoot. Billy Widmann telephoned that he would assist with the work, and we put in the afternoon getting it together, and had it working finely before we left, and I am glad to say that the war is over. I had intended attending the N. J. S. S. A. meeting at Newark that night, but by the time we had the work finished it was too late, and we were both too tired for the trip.

In my notes of some time ago I wrote that snipe were scarce in this locality. I was surprised that one journal had it "soup" and another "sheep."

Pigeon Shooting.

Editor Forest and Stream:

In reference to an article entitled "Excellent Nerve," which you quote on page 218 of your March 16 issue, I would like to say that your reply is very good, so far as it goes, but it does not, I think, go far enough, and does not touch upon what is to my mind a salient feature of the case. I quote from the article on which your comments were made:

"Two men shot 200 live birds. The loser was a trifle nervous; his opponent displayed excellent nerve. Reverently, we wonder what God thinks when he sees men made for His glory using their wondrous powers thus—slaughtering His birds, wasting time, money and life in ignoble contests, and sowing seeds of death in their souls. A trifle nervous! Strange that the delicate nerves, God-strung, do not quiver and shrink and snap when called on to do such acts of cruelty and debasement. But so fearfully and wonderfully are we made that the murderer's hand obeys his will and nerves consent to their own eternal undoing."

But for the word "reverently" I might suppose that the author of the above, believing in some other God, was indulging in a little irony at the expense of Jehovah. His forms of expression generally are such as are used by those who subscribe to the latter Deity, and therefore I conclude that in sincerity as well as "reverence" he alludes to that Supremacy.

The sentimental narrow-mindedness of the effusion may exempt its author from the charge of intentional reproach, but in reality it is a palpable crimination of omnipotence. I presume that no one will question the fact that God's designs must be accomplished—that they are inevitable—that they cannot be defeated. Now, if God for His glory designed these men who shot 200 live birds they must have been glorifying Him in this, as in every act, or else God failed somewhere in His intentions. As, under omnipotence, the latter is an absurdity, there could be no question in my mind, "reverently" or otherwise, as to what God thought about it. Unquestionably God was satisfied.

Then, too, as nothing can happen contrary to the wishes of an omnipotent Creator, and not a sparrow can fall to the ground without His notice, it must have been His wish that these 200 birds should die in this way. It follows then that the means by which they were to die must have been arranged. It is therefore plain that as God plans and directs the affairs of this life, these men and birds were simply fulfilling their destiny—simply consummating the plans of their Creator. Why blame these men for doing what was evidently not objectionable to God? I am reminded here of what is said in the book of Job, 4:17, "Shall mortal man be more just than God? Shall a man be more pure than his Maker?"

If the nerves of these men were "God-strung," why did God by means of practice in shooting birds so string them? According to the characteristics which were implanted in these men, did He not employ the very best method to string their nerves? As doubtless it is a good thing to have the nerves strung, could the author suggest in this case a better way than God took to do it? If the acts of these men were cruel and debasing, as is said, why did God permit them? Does He not prevent what He does not wish to occur? Were not these birds more fortunate than many of "God's birds" that are left to perish slowly of old age, starvation or cold? If it so happened that some of these birds were not instantly killed, or that they lingered for some hours, were they any worse off than if they had slowly died by one of the natural processes?

I quote again: "May God strengthen the nerves and hearts and hands of women everywhere to such heroic resolve that they shall leave no task undone that may tend to the restoration of man to his glory as the 'image of God'!" Let me suggest that when an omnipotent God desires to strengthen the nerves and hearts and hands of women for any purpose whatever, He will do so, and not until He does desire to do so; then He will employ some means, some method, or some instrumentality, to achieve it. Would it not be just as well to let God do these things in His own time and way?

No doubt, as is usual, the author will satisfy himself with the idea that these men voluntarily killed these birds; that they could have refrained had they wished to do so, and therefore they were responsible for all that pertained to the act. But, conceding that Jehovah overrules the affairs of the universe, that He is all and in all, that being omnipotent He must therefore be infinitely responsible, it is plain that these men were simply instruments intended to carry out His purposes in regard to the destiny of these birds. It is therefore manifestly impossible that the responsibility is theirs. Their volition in the matter, it is evident, could be but an essential feature of the plan. The author will hardly assert that if he himself were designed by an omnipotent being to accomplish a certain purpose he could by any possibility avoid it; and if he realized that he could have no choice in the matter, he would not condemn himself on the ground of voluntary action. He cannot say that Omnipotence plans a portion of the things which occur and that the other events are not a part of the omnipotent plan. In other words, he cannot maintain that God plans certain things in connection with certain people and leaves certain other things to be done or left undone at their discretion. That would be a rejection of the essential idea that an omnipotent God is all and in all.

To make the whole subject plainer, let us take an extreme case. Under omnipotence every creation must of course have its destiny prearranged. Accordingly let us consider the instance of a man whose fate it was to be cruelly murdered. Now, if this murder had to be done, somebody had to be provided to do it; if it had to be done in a special way, some one with the essential qualities had to be designed for the purpose; and as there was no escape for the one whose fate it was to die, so there was no evasion for the instrument who was designed to do the deed. Why, then, lay the responsibility or the charge of cruelty at the door of the instrument?

Probably I shall have my ears pulled for saying these things, though they are the logical deductions to make from the idea of an overruling Omnipotence; and doubtless the more logical I am the more likely I shall be to have my ears pulled. However, I would advise those who view such subjects as the one in question from the sentimental side alone to leave their Deity out of the consideration.

SPLASHER.

[The writer of the foregoing says in his letter of transmittal: "I was impelled to write the inclosed manuscript from reading in your issue of March 16 an article entitled "Excellent Nerve." It was my intention at first to write within such lines as I thought would not be unacceptable to you; but I do not like to restrict myself in such matters, and so in the end followed the bent of my inclinations, writing more for my own gratification than with any expectation that you would be willing to publish the article. So it resulted in my retaining the paper for some time. Recently, however, I gave it to a friend to read, and he advised me to send it to you, as he thought it not impossible that you might approve it after all." We consider what our correspondent has written to be a pertinent rejoinder to the original article under review; but we would not care to prolong the discussion on these lines. For one thing, when a person is cock-sure that the Divine view of a subject coincides with his own personal opinion, he occupies an impregnable position whence columns of nonpareil type could not budge him, and so arguments are wasted on him. Again, any debate which involves a consideration of the attitude of the Almighty inevitably leads to a discussion of religion; and religion and politics are two subjects which our readers have a right to demand shall be tabooed from these columns.]

Nebraska Tournament.

LINCOLN, Neb.—Tuesday morning early the shooters from this and adjoining States began unpacking their guns at the Lincoln Gun Club grounds to participate in Nebraska's twenty-fifth annual tournament. Many were the anxious inquiries for screwdrivers with which to open their several cases of shells, of which nearly all had two, and one was found with twelve cases. All were mighty keen to get a whack at some of the targets.

The heavy wind blew in the shooters' faces, and the cloudy sky was much in favor of the targets, and many a "tale of woe" was due to be told before the programme was shot through. The wind never let up, but kept blinding the shooters all day long; neither did the sun shine a little "wee bit."

There was a fair crowd present, yet far from the attendance expected when there was $500 cash in added money hung up and money divided on the percentage plan.

The following gunners were present: Chris Gottlieb, from Kansas City, who has lately taken to associate with Frank Parmelee since they were so congenial at Olathe, Kan.; Fred Gilbert, who came smilingly from Spirit Lake, Ia., and brought along his understudy, Kline. Then Omaha sent down a fair representation in H. S. McDonald, W. D. Townsend, D. Morrill, Geo. Loomis and Buffalo Hump. Beatrice was well represented, as Sheriff Waddington brought alone G. O. Raines, E. Bigler and F. E. Kimball. The home crowd were Forrie Moore, Dick Linderman, G. B. Simpkins, Mr. Williams and Freddie Mockett. Traveling men were not very numerous, as, besides Gilbert and Parmelee, heretofore mentioned, there were only J. E. McIlreevy, of the Dicky Bird, and Tramp Irwin.

The single delegates were:

Lee Bailey, of Norfolk; Geo. Rogers, of Peru Neb.; Lou Erhardt, of Atchison, Kan.; Dan Bray, of Syracuse, Neb.; C. C. Spaulding, of Ord, Neb.; Chauncey Powers, of Decatur, Ill.; C. R. Buffum, of Tecumseh, Neb.; S. L. Saunders, of Elgin, Neb.; C. C. Beverage, of Fremont, Neb.; J. H. Burk, of Elgin, Neb.; F. Miller, of Berwyn, Neb.; G. A. Schroeder, of Columbus, Neb.; Howard Edwards, of Oakdale, Neb.; W. H. Heer, of Concordia, Kan.; F. S. Johnson, of Milford, Neb.; A. J. Shirley, of Ord, Neb.; Otty Murschel, of Ord, Neb.

The events to-day were six 15-target events, open only to amateurs; then four 20 and one 25 target event that were open to all. The money was divided on the percentage plan—fifteen events, 35, 30, 20, 15; 20 and 25 target events, 30, 25, 20, 15, 10 per cent.

The 25-target event was named the Lindell Hotel event, as a complimentary notice for the valuable aid this hotel had extended to the gun club in their tireless efforts to raise money to add to the events. I am sure the visitors all approved of it, as they made their headquarters at this hotel.

The office was in charge of Mr. Mockett, the club's president, and by paying off at the hotel on the evening he got through his labors very satisfactorily to all.

First Day, May 7.

Second Day, May 8.

The overcast sky left but little conclusion to-day, other than that we would have a repetition of yesterday. Wind was not so strong, yet it came in same direction; but toward noon the clouds grew thinner, and before the day was over the sun shone forth, and the wind became mild, and how the target smashers did go after the little saucers in some events!—not more than one shooter was left entirely out of the money. As a sample of amateur shooting we had in one event twenty-nine entries, with eleven men scoring 20, eight getting 19, six with 18, three with 16, and one 15. There being five moneys none was shot out, and as there was $15 added money no one was much the loser.

No 6 event was known as the Nebraska State Sportsmen's event; open only to members. Linderman and Moore made a straight 25. Both men are from Lincoln, and their many friends congratulated them and much wished that there had been a cup or trophy of some kind for them to shoot for.

Following this was the King's Smokeless event; 20 targets, $2 entrance, $15 added. Here the boys all made good scores. There were eight straights, eight with 19, five with 18, three with 17, and one with 16.

It has come to the writer's notice that the absence of any prizes for a team shoot has had much to do with the small attendance. Most of the towns having only one delegate present could have sent a team if there had been a trophy for a team shoot. It is the best means of getting shooters together to stimulate team shoots. There are several towns having clubs which are not represented here by even one delegate. Some of this may be due to the very late hour at which the programmes were sent out.

The programme is large and well filled with advertisements, and deserves to be retained as a souvenir.

Third Day, May 9.

This proved a great day for getting on to the targets. The number of shooters was larger than on previous days. Those who were here yesterday remained over, and there were some new shooters present, viz.: N. G. Powell, of Lincoln, Neb.; W. A. Shadduck and Harry Frates of Hildreth, Neb.; Phil Everson, of Wilcox, Neb.; J. Ferryberry, of Lawrence, Neb.; W. G. Carpenter, of Wilcox, Neb.; F. D. Copsey, of York, Neb., and A. M. Bernhardt, of Hastings, Neb.

The shooters were in fettle to-day, shooting at 220 targets. Dude Gilbert made one run of over 100 straight, and a grand total of 216. Following him came Chan Powers, of Illinois, and W. H. Heer, of Kansas, with 215. Right on their heels came the old Tramp, who twenty years ago shot a match here with old Tuck, using wild pigeons and ground traps, and to-day when he had shot at 65 targets he had missed only 1, and going on through the programme came out with a total of 6 goose eggs.

The two cracks, Linderman, of Lincoln, and Dan Bray, of Syracuse, came down the line with such regularity that only eight went to the ground whole, or at least called lost. Saunders, of Elgin, and Moore, of Lincoln, and Waddington, of Beatrice, were 15 to the bad, while there were Parmelee and Townsend trailing them closely. There were such a lot of good shooters that I missed Kline, who was only one dozen to the bad. The totals of the other misses will all appear in the scores sent herewith.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot

Fourth Day, May 10.

At a meeting of the State sportsmen last evening, held in the parlors of the Lindell Hotel, there arose quite a discussion as to what best could be done to bring out the average country shooter to the State tournaments. Several methods were proposed and discussed, and perhaps good will result from some of it. One thing was accomplished—that of purchasing a cup for the next State shoot, to be an emblem of the State target championship.

What to do with the trade representatives is a question, and yet when it comes to winning the money there is another class that comes up and wins the first place. It would seem a good thing to have most of the events open only to members of the State. Then a team target race will do more than anything else to bring out a large number of shooters. Illinois is going to try a team race this year, and the success of the same will be watched with interest, I hope, by all who are interested in the State conventions.

To Omaha was conceded the next annual meet, and as all know the Omaha boys and the Omaha grounds, there will no doubt be a large gathering, owing to an attractive programme which these boys know how to get out. Omaha does not have as good grounds as Lincoln, as the wind blows and the sand flies, but otherwise the are better situated to draw a crowd, especially of outsiders, while there are many local shooters.

The officers selected for next year were: Geo. W. Loomis, of Omaha, President; G. A. Schroeder, of Columbus, Vice-President; H. S. McDonald, of Omaha, Secretary and treasurer.

The Lincoln boys have done splendidly, and carried everything out as advertised, and I know that if they are always as tired as they are to-night they will never have another State shoot. But this is the State capital, and most centrally located place, and easily reached from all parts of the State.

The target events really closed last night, and had it not been for the very high wind and dark, cloudy atmosphere, the scores would have been remarkable. As it was, out of 610 targets we have the following high scores, viz.: Gilbert .943, Linderman .939, Powers .939. Heer .934, Parmelee, .920, Bray .920, Kline .920, Saunders .915, Moore .911, Gottlieb .903.

There are but two professionals in the above list, so I say, "What's the matter with the Amateurs?"

Live-Bird Day.

This was the day for the great handicap live-bird race—and a handicap it was, as the birds and the wind had the best of it. There was a regular blizzard—cold and disagreeable, and many of the birds killed were blown over the fence. The best birds were right and left incomers, and towering and very fast, as the wind was straight in the faces of the shooters, and the pigeon house where the birds had been kept was behind the shooters' score. All the birds that went with the wind were bad as any one ever saw, and the wonder is how Powers, Gilbert and Burk ever got down in bounds all but 2. Parmelee after killing 13 straight came out a tie with Townsend on 21 for second, while Buckner and Gottlieb were third, with Linderman, Raines, Bray and Kline fourth on 19. Here is a 25-bird race with 19 paying money! The traps used here were so slow opening that the shooters got confused, and then the birds sat a while, and then sprang suddenly down the wind and off like a bullet. A majority of the lost birds were "dead out."

Little interest was taken in the target races, and nothing was doing save now and then a little practice.

It was a mistake to start the pigeon race in the morning, as the same was finished and the shooters had gone to town by the time the spectators began to arrive on the ground. There were plenty of birds for sweeps, but the weather conditions were not enticing, though the afternoon was much more pleasant than the morning.

Twenty-five live birds, $15 entrance, four moneys, Rose system:

LINCOLNITE.

Beatrice Tournament.

BEATRICE, Neb.—The gun club here is not very large, but it is the "get-up-and-get" kind. There are really three active members, and while two of them shoot in all the events the other one handles the office. The shooters are Waddington and Raines, while the office man is Bigler—and a good one he is, too, but says he doesn't care for the job any more. This shoot took place May 2 and 3.

This shoot was planned to keep the boys busy, and to give some of those coming from a distance a chance to practice previous to the State shoot, to be held at Lincoln next week. But it turned out that the attendance was small, there being but three squads in most of the events. Some of the Colorado shooters expected did not show up. The manufacturers' agents present were limited to three, viz.: Frank Parmelee, J. E. McIlreevy and Tramp Irwin—and this was a shoot where no one was barred from the money.

Mr. Waddington had plenty of business elsewhere, as he is high sheriff, and court was in session, yet he was on the ground when the last gun was fired, and comes up smiling with the announcement that during the fall, some time in September, there will be another tournament here. All the boys will then come to meet their friends Waddington, Bigler and Raines.

I wish to call the attention of shell loaders and target makers to the fact that the State of Nebraska is now a fine field for them to operate in. The last Legislature pjassed a law prohibiting quail shooting for two years. The duck shooting and chicken shooting is now very limited, being confined to northern and western portions of the State. Such shooting will soon be a thing of the past; and unless gun clubs are organized and target shooting kept up the many guns now owned by shooters will be useless and be destroyed by rust for want of use. Of course there are some good clubs now in the larger cities, but there are opportunities to organize a hundred where now there are ten. Who will be the lucky man to take advantage of this opportunity?

The weather was considerably "off color." While the sun shone out brightly, yet a very strong wind blew from the south, causing the targets to fly in very unexpected directions, as the wind was quartering, and coming around a big tent it was gusty and changeable.

The targets jumped up and jumped down, and started in straight lines, only to twist away in some circular motion, and when the report of the smokeless powder was heard, as the scores hereto attached will show, many of the targets did not connect.

'Tis true some good scores were made. There's Dick Linderman—no heading him off by a little thing like wind. The barrels of his gun are so short, the pressure on his powder so great, his wishbone so flexible, and his blue eye just matching the sky, that somehow or other those little saucers go to pieces before they reach that point where the referee gives that unwelcome decision, "Lost."

Now Dick has a partner. It is Heer. Sometimes Heer goes straight, and again he is just about 1 shy. Parmelee says they get along together very well, as they sit up all night and take turns playing the fiddle, meantime each deciding that the other does not play the tune correctly. This may make Heer a bit nervous at the traps, as he is generally found shooting next to Dick, and trying to beat Dick shooting is a very hard proposition.

Hump Parmelee was shooting well, but he had a good many of Tom Marshall's bad half hours, and failed to make a straight score during the day. Parmelee could shoot a little better possibly if he did not lose so much sleep by keeping awake nights trying to think of how to put up a job on some of the shooters.

He had the lookers on all in high glee to-day by telling them that Tramp Irwin was going to have a birthday to-morrow, and that he would be eighty-one years old. They got interested as the shoot went on, for the old Tramp came through the day with just the same score as said Hump, viz., 93% per cent.

It is too bad that most of the shooters present do not live in the voting precinct where they can vote for Waddington for re-election, for he and his lieutenant did the handsome thing by all present. Wad had plenty of help from those not shooting—and such a lovely time as we had in the evening. A boat ride on the smooth waters of the Big Blue. We sailed up the river about three miles.

We had songs and story telling on the way, and more of it when we went ashore. Then some of the boys went fishing, and Chris Gottlieb was champion, as he caught three channel cats. Frank Parmelee had agreed to eat all he would catch, but backed out because he could not have tomato catsup as a relish. We ate and we drank, and McIlreevy never stopped singing from the time we started until the landing was made at the dock from which we started.

My friends and fellow shooters, what a difference there is in clubs where shoots are held! Some of them see how much money they can make; others see how well they can treat the visitors, and spend what they make off the targets in some form of entertainment. Such, then, I am pleased to chronicle, is the big-hearted gun club and their friends whom we found at Beatrice.

There will be no game shooting this fall in the southern part of Nebraska, so we advise all shooters to watch for the dates of the Beatrice fall tournament, and do not fail to be present and enjoy a good time, such as we had at this meeting.

Those present were H. A. Knight, Blue Springs, Neb.; J. A. Brust, Nebraska City, Neb.; G. O. Raines, Beatrice, Neb.; J. E. McIlreevy, Kansas City, Mo.; D. Morrill, Omaha, Neb.; Geo. Rogers, Peru, Neb.; Wm. Tanner, Beatrice, Neb.; J. B. Morris, Homesville, Neb.; F. C. Schultz, Dewitt, Neb.; C. D. Linderman, Lincoln, Neb.; W. H. Heer, Concordia, Kan.; G. B. Simpkins, Lincoln, Neb.; F. C. Nicholson, Nebraska City, Neb.; F. M. Moore, Lincoln, Neb.; A. D. McCandless, Wymore, Neb.; F. E. Kimball, Beatrice, Neb.; Frank Parmelee, Omaha, Neb.; Tramp Irwin, Chicago, Ill.; Chris Gottlieb, Kansas City, Mo.; E. Bigler, Beatrice, Neb.; E. Leet, Fairbury, Neb.; R. D. Fuller, W. A. Waddington and Paul Walter, Beatrice, Neb.

Moore	22222222*2— 9	Heer	2*2122**22— 7

Second Day.

The morning opened up windy, as on yesterday, and the sky overcast with clouds. The dicky birds were used to-day, and owing to the yellow color could not be seen so easily as the white ones, and scores were not so good as yesterday.

The live-bird match was shot first, as the birds would be better than after noon. There were only eight entries. Money was divided by the Rose system. The scores will show the result.

Dick Linderman is the butt of the joshing, all the boys going for him; but what does Dick care so long as he has their money in his pocket? But a cruel joke was perpetrated this time by the management, as the percentage system was abandoned, and the Rose system was used, so that, while Dick was a winner, he was not so much ahead.

The division was 5, 3, 2, 1, which I do not consider justice, as a better plan is 5, 4, 3, 2, or 4, 3, 2, 1. There is no good reason for jumping so far from first to second place if you are going to make an equitable division of the money.

The Omaha and Lincoln crowd quit at noon to catch the train for home, and a few sweeps were shot by those left on the ground.

Known traps and angles was used, and proved a success.

As to live birds, I do not think the club will care to bother with them, as they are a losing game to it. There are too many "no birds," and not enough shooters to make it an object for the club to waste the valuable time that might be used in throwing targets at a profit.

The scores:

Events:	1	2	3	4	5	6	7	Shot	
Targets:	15	20	15	15	15	15	10	at.	Broke.

Bray and Gottlieb first, Parmelee and Linderman second, Raines third, Townsend fourth.

NON-NEBRASKITE.

The W. I. E. A. Tournament.

THE preliminary announcement of the fifth annal trapshooting on the grounds of the Winnipeg Industrial Exhibition Association, Aug. 1 and 2, is as follows:

One thousand dollars in added money, trophies and medals.

In connection with and under the management of the Winnipeg Industrial Exhibition Association the following programme has been arranged, open to all sportsmen. Professional experts and manufacturers' agents will be allowed to shoot for the price of birds only. They are, however, cordially invited to be present.

As the exhibition management wish to make this tournament a great annual fraternal gathering of amateur sportsmen, as well as trap shots, they have decided this year to so arrange their programme, that the novice, the sportsman from the country who has never shot at a clay bird, and all those who would not stand a chance of winning even a part of their entrance money back may participate in a number of the events on the programme for just the cost of the birds thrown to them.

They are satisfied that many who in the past stayed away because they were not sufficiently expert trap shots to compete on a level basis at a tournament will, under the liberal provisions of this year's programme, accept this invitation to be present and participate in the greatest meet of trap shots west of Chicago.

They wish to assure everybody that liberal arrangements have been made to handle the very much increased attendance they expect this year, and they promise that everything will go with the snap and vim so necessary to make a meet of this kind enjoyable.

The Canadian trap shots will have the pleasure of entertaining their American visitors at a complimentary supper as a wind-up to the tournament.

First Day—Thursday, Aug. 1—Western Canada Championship Day.—Nine events; magautrap and expert traps; total 165 targets; total entrance in sweepstakes $20; total for targets only $3.50; $145 added money. Extra events if time permits.

The Western Canada championship is open only to residents of western Canada, between Port Arthur and Vancouver. The trophy was presented by the Robin Hood Powder Company, of Swanton, Vt., and is valued at $200. This year for the first time the Exhibition Association, with the consent of the Robin Hood Powder Company, have decided to turn this event into a sweep and will add $25 to the purse, which will be divided in the following manner: To the holder of the trophy each year, if present on the grounds and taking part in the event, 10 per cent.; to the winner, 40 per cent; the balance to the next three high guns, in the ratio of 25, 15 and 10 per cent. of the purse.

The above clause does not apply to the present holder of the trophy. The first holder to get the 10 per cent. referred to will be the winner at the forthcoming tournament.

Mr. F. G. Simpson, the present holder of the trophy, has most generously offered to donate the $25 gold medal which will accompany the trophy.

Second Day—Friday, Aug. 2—International Championship Day.—Total number of targets in regular programme 189; total entrance in sweeps $20; total entrance for targets only $3.25; added money $170; extra events if time permits.

International Championship.—This handsome sterling silver trophy was presented by Mr. John G. Morgan, manager of the New York Life Insurance Company, and is valued at $200. A handsome $25 gold medal will accompany the trophy, and will become the property of the winner. The competition is open to any amateur trap shot, and if won three times in succession by the same man, becomes his absolute property.

The Exhibition Association will add $25 to the purse, which will be divided as follows: To the holder each year, if present on the grounds and taking part in the event, 10 per cent. of the purse; to the winner, 40 per cent.; the balance to the next three high guns, in the ratio of 25, 15 and 10 per cent. of the purse.

Ogilvie Doubles.—Mr. F. W. Thompson, president of the Winnipeg Industrial Exhibition Association, and general manager of the W. W. Ogilvie Milling Company, has shown a great interest in our forthcoming tournament, and has most generously contributed $25 to inaugurate what promises to be the most interesting event on our programme. This event will be at 12 pairs of targets thrown from three expert traps in the usual manner. The purse will be divided as follows: To the winner, 40 per cent.; to the next three high guns, the balance of the purse in the ratio of 30, 20 and 10 per cent. of the purse.

International Team.—This interesting shoot is for a handsome trophy of silk flags, presented by Mr. Thos. Lee, of the Western Cigar Factory, and is to be competed for between teams representing Canada and the United States. The teams must be composed of not less than four men, and must consist of an equal number of men on each side.

We want all visiting trap shots to thoroughly realize that they are the guests of the Winnipeg Industrial Exhibition Association, and that it will be our duty, as well as pleasure, to look after them in every way from the time they reach the city until we shake their hands and wish them a pleasant journey at the moment of departure. If you will write us we will secure you accommodation while in the city. We will look after your guns and ammunition when here. We wish you to use us as a general information bureau, and to understand that you have a right to do so. In all of this we will have the able assistance of members of the two city gun clubs.

Remember that within a few yards of the tournament grounds one of the greatest fairs in America will be in full swing. The list of vaudeville attractions this year will be better and greater than ever, while the horse racing will be superb. Just think of it! nearly $40,000 will be paid out for prizes and attractions. Come and participate in the biggest tournament in the Northwest, and see the big fair as well.

The tournament grounds are most beautifully situated for the purpose, and every arrangement will be made for your comfort. Luncheon will be served each day on the grounds in the best and most comfortable manner.

A magautrap and two batteries of expert traps, with a full staff of officials, all thoroughly competent, will keep everything humming.

All guns of a larger caliber than 12-gauge and the use of black powder are strictly barred in all of the events of this tournament.

Targets will be thrown for 3 cents each, and price of same will in all cases be deducted from the purse.

All purses, unless otherwise stated in the programme, will be divided by the Rose system in the ratio of 4, 3, 2, 1.

We want you to realize that over $2,500 in cash, trophies and medals will be divided among the contestants on the very conservative estimate of 50 guns competing. Our purpose in sending out this preliminary programme at such an early date is to enable you to compare it with others, and decide where you will spend your holiday. We are not afraid of the result.

If there is anything more you want to know, remember we will be delighted to answer any and all questions.

The regular programme will be issued later, with full and complete information, and a copy will be mailed to you.

F. W. Thompson, president; F. W. Heubach, general manager Winnipeg Industrial Exhibition Association.

Minneapolis Gun Club.

MINNEAPOLIS, Minn., May 2.—The first shoot of the Minneapolis Gun Club for the year 1901 was held at Intercity Park to-day. Some good work was done by those present. Mrs. Johnston, Thompson and Richter was of the gilt-edge order.

The St. Paul Rod and Gun Club have offered a very handsome trophy for a handicap shoot. The member of the club winning three times takes the trophy. On April 28 Joe Henry won out on shoot-off. Morrison is still after targets hard, missing 7 out of a possible 200, and made a good run of 89 straight. Wilkinson and P. Hanser are also doing good work. The scores: Morrison (0) 23, J. C. (1) 22, Novotny (5) 25, Fisher (4) 22, Carl (5) 23, Wilkinson (2) 24, Spratley (3) 25, P. Hanser (3) 25, Henry (5) 25, Kelsey (4) 25, Gotzian (4) 25, Irde (4) 20, Perry (4) 21, Miller (6) 23.

Paegel badge, 25 targets:

Johnston	1011110111111011101111111—21
Mrs Johnston	0111101111011111111111011—21
Hayes	1111111011101110110111111—21
Parker	1110010111101111110110111—19
Nelson	1010111010111011111110110—18
Rex	1011111110110100001110101—16
Spear	0111110111110111110101011—19
Thompson	1111111111101111111011111—23
Spratley	1111101111101111000111111—20
French	1110111110110111111111111—22
Richter	1111111111111111111111111—25
Dezotell	0111111111110010101111111—20
Jones	1101111111101111111111110—22

Richter won badge.

The Wheaton Gun Club have called for the Hirschy trophy, and will offer it in their shoot on May 28 and 29.

Club badges, 10 singles and 5 pairs: Johnston 14, Mrs. Johnston 13, Hays 12, Parker 16, Nelson 12, Rex 15, Spear 8, Thompson 18, Spratley 17, French 14, Richter 14, Dezotell 16, Jones 15.

Thompson won senior badge, Dezotell won junior badge, Rex won amateur badge.

Schlitz diamond badge, 25 targets: Johnston 19, Mrs. Johnston 20, Hays 20, Parker 23, Nelson 19, Rex 14, Spear 19, Thompson 24, Spratley 24, French 16, Richter 24, Dezotell 18.

Thompson won badge.

May 5.—Val Blatz diamond badge, 15 targets: Johnston 11, Mrs. Johnston 12, Hays 12, Parker 14, Nelson 9, Rex 13, Spear 11, Thompson 15, Spratley 13, French 12.

May 4.—St. Paul Rod and Gun Club scores:

The St. Paul Rod and Gun Club shoot of May 4 was well attended, and good scores were made. Morrison is shooting in better form than ever. To-day he made a run of 105 without a skip. Wilkinson, Hirschy, P. Hanser, Kelsey and Gotzian are also doing good work.

DR. BILL.

Aschenbroedel Gun Club.

NEW YORK, May 6.—Herewith please find the results of our shoot, held Friday, May 3. One event, 50 targets: Wagner 29, Walters 26, Ruhlender 23, Siemers 19, Wiezner 19, Moeslein 19, Heizer 16.

It was decided at the last meeting of our club that the secretary should give, in his next report to you, an account of his own antics while practicing the art of missing targets. As this is not as agreeable a task as describing the antics of others, he thought it the best policy to stay away. This accounts for the meagerness of this report. Still, I think it my duty to report that the supply of soft coal and dynamite cartridges has not yet given out.

Our friend Heiser, whose name appears at the foot of above score with 16 targets out of 50, uses a 20-gauge popgun. Wonder he hits as many as he does! We intend starting a subscription to buy him a man's gun.

E. MACDONALD, Sec'y.

Rifle Range and Gallery.

Fixtures.

May 30.—Pohlmann's Pavilion, Jersey City Heights.—Tournament of Our Own Shooting Society.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Rifle Shooting.

THE preparations for the international rifle shooting tournament to be held at Sea Girt, N. J., Aug. 30 to Sept. 7 next are well under way.

The information has reached this side that the Irish team have already gone in for training.

Quite a distinguished party will accompany the Irish team to this country, with whom will be the Marquis of Duffern and Sir Henry Thyme. Sir Thomas Lipton, who will have preceded them to this country with his yacht Shamrock II., for the purpose of lifting the America Cup will meet the party at New York and accompany them to Sea Girt. In a recent interview he said, "We hope to take back with us not only the America Cup but the scalps of the American riflemen."

The Irish party will be sumptuously entertained by the wealthy cottagers at and in the vicinity of Sea Girt, among whom is Martin Maloney, the millionaire contractor of Philadelphia, who is a personal friend of Sir Thomas Lipton.

The Canadian team will also bring with them several men of note in the Dominion. Little is known about the Swiss team that is coming, except that they won the world's championship at Paris last year, and will bear a lot of watching by our riflemen.

Efforts to bring the Argentine team from Buenos Ayres on an American war vessel have failed, owing to the fact that no vessel of the Atlantic Squadron will be coming up on or about that time.

The American team will not be gotten together until about the middle of the summer, but candidates for place on the team will begin work in a few weeks.

The Sea Girt range will be opened on May 25, when a large party of riflemen from New York, New Jersey and Philadelphia will go down for practice.

Expert riflemen connected with the guard of any State are invited for places on the American team. They may practice on their home range, which must have facilities for 800, 900 and 1,000yd. shooting. Official score cards for this purpose can be secured of Gen. Bird W. Spencer, Passaic, N. J., president National Rifle Association.

The coming of the foreign team has undoubtedly spurred the different States to make special efforts to send teams to the Sea Girt meeting. Already New York, Massachusetts, Maine, Rhode Island, Maryland, New Jersey, Pennsylvania, Delaware and District of Columbia have definitely decided to be represented, while the States of New Hampshire, Vermont, Connecticut, Illinois, Michigan, Ohio, Tennessee and Minnesota are at work trying to get teams to send. It has been definitely decided by the U. S. Naval authorities to send a team to compete for the Hilton trophy. This is the first time that the navy has ever been represented at these meetings.

Among the recent organizations which have affiliated with the National Rifle Association is the Seventy-first Regiment of New York. This is the first regiment of New York to take such action, and it is said that the Seventh and Twelfth regiments will shortly do likewise.

The National Rifle Association is fast getting on its feet, and is now in better shape than it has been at any time in the last twenty years.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, May 5.—Mr. A. H. Pape put up some of the best rifle averages ever made in the club. A. J. Brannigan, our new revolver champion, again excelled the pistol experts with his .38 S. & W. revolver, and beat the coast record for ten best scores 28 points, with a total of 426. He accomplished this feat in three club shoots and thirty-five entries. He is considered Anderton's equal, and expressed a desire to shoot Anderton a 100-shot revolver match when he comes on to the bund fest. Tom Anderton is the acknowledged champion revolver shot, and we hope he will come prepared for a match or two. He holds the 50-shot record (209) on the Columbia target; also the 10-shot record (31), but made them with a .44cal. revolver, which is considered a few points advantageous over the .38. Scores, on Columbia target, 10 shots, offhand:

F. O. YOUNG, Rec. Sec'y.

Our Own Shooting Society.

HOBOKEN, N. J.—That the members of the Our Own Shooting Society, of Hokoben, are determined to carry off a fair share of the money at their open to all comers cash prize shooting festival on Decoration Day at Pohlmann's Pavilion, Jersey City Heights, was made evident Wednesday, May 8, when about twenty-five marksmen appeared and practiced on the society's ranges. The scores in the main were first class, and an interesting fight for top score honors was participated in by a number of the Our Own's experts. The laurels were carried off by Adam Schmitt, who scored 241 out of the possible 250. Wm. F. Dilger was second high on 240. J. H. Kruse landed in third place with 239. The records follow: Capt. Louis Christ 233, J. H. Kruse 239, Wm. Schmitt 213, Adam Schmitt 241, C. G. Paul 219, L. L. Levy 222, Henry Hohn 224, John Spinck 235, Herman Bahn 238, Charles Bischoff 237, Fred Lohman 206, Geo. Neuner, Jr., 209, Gus Ising 206, Chas. Drees 224,, C. Oltmer 213, F. Flueger 202, F. Bunger 228, W0 Von Holten 220, R. Mehnert 217, H. Warnken 224, Fred Buehler 215, Owen Smith 232, Aug. Meyns 234, Julius Kreienberg 214, ex-Capt. Wm. F. Dilger 240.

During the evening a special meeting was held and the following new members were enrolled, making a total of 172: John E. Wunschel, Gus Ising, Julius Kreienberg and Wm. Von Holten.

Gun and Outing Club.

CLAY CENTER, Kan.—The following scores were made by the Gun and Outing Club, of Clay Center, Kan., at its weekly medal shoot on Monday night, May 6. The club is composed entirely of business men, who lay no claim to marksmanship. The club has fifteen members.

Indoor range, .22cal. rifles, off-hand, 75ft., German ring target, ½in. center counts 25:

A CRUEL INJUSTICE.

A CASE of terrible hardship and grave injustice is seen in the case of a young Cheyenne Indian named Little Whirlwind, now serving a life sentence in the Montana State Penitentiary for a murder of which he is absolutely innocent.

The facts in the case are these: About five years ago a sheep herder named Hoover was killed on the borders of the Tongue River reservation in Montana. His body was not found for some time after his death, but when found the indications were that he had been killed by an Indian. Not long after, a Cheyenne known as Stanley, who had served in Lieutenant Casey's company of scouts, and had been discharged therefrom as mentally unbalanced, acknowledged to his own people that he had killed the white man and had done it alone. He was arrested and held for trial. Pressure was brought on him to implicate other members of the tribe in the murder. Under the belief that if a number of men were convicted Stanley's punishment would be lighter, some of his relatives devised a plan for implicating two other Indians named Spotted Hawk and Little Whirlwind in the crime.

Spotted Hawk was first tried, and on testimony since proved to have been perjured, was convicted and sentenced to be hung. Stanley, the confessed murderer, was convicted and sentenced to five years' imprisonment. Little Whirlwind was convicted of murder in the second degree and received a life sentence. No attention whatever was paid to the testimony of a dozen witnesses to prove an alibi for Spotted Hawk and Little Whirlwind.

Since the trials, the sole witness for the prosecution—except Stanley—has confessed that his testimony was perjured, while Stanley, the real murderer, died in prison, but before his death made a statement that he alone had committed the crime, and that Little Whirlwind had nothing whatever to do with it.

In the case of Spotted Hawk, the Supreme Court of Montana decided that he must have a new trial, as he was convicted on insufficient evidence, and the county authorities, recognizing that they had no case against him, set him free. Counsel for Little Whirlwind, however, had failed to take the necessary steps to perfect his case so that a new trial could be asked for, and he, an innocent man, is now serving a life sentence with no legal remedy and with no hope of regaining his freedom, except through a pardon by the Governor.

The case has been investigated by the Indian Rights Association, by two or three of Montana's most eminent lawyers, and by one or two private individuals. It has been shown beyond the shadow of a peradventure that the young man is absolutely innocent. Literature giving the facts in the case may be had of the Association, 1305 Arch street, Philadelphia, Pa.

The case was presented last year to Governor Smith, a politician who feared to make himself unpopular among a certain element in Montana bitterly hostile to the Indians, and he declined to act.

In January last the matter was brought to the attention of the newly elected Governor, was by him received and its consideration promised. Governor Toole is a man of far greater breadth than his predecessor and one of far greater force. His long and creditable career in Congress justifies the belief that in this matter he will not be influenced by the petty prejudices of a special locality of the great State he governs. But the case should be acted on. The days which pass so swiftly to men occupied in life's struggle, move slowly for him who is confined behind prison bars. It may seem natural enough to put over from week to week and from month to month a matter where the individual interested is only an Indian, but the injustice is not less grave, the Governor's duty to right a wrong not less imperative, because the man belongs to a subject race.

It is but a few years since the whole civilized world was interested in an injustice done to a French officer, and was clamoring for the righting of his wrongs. Public opinion at length brought partial relief to his suffering, and Dreyfus was pardoned. Little Whirlwind has suffered as long as the Frenchman, but he still waits for justice. Far away on the northern Cheyenne reservation his old mother, his wife and his little children cannot understand why the white men will not permit the return of him who is so dear to them, and who is known by all to be innocent of any crime.

SWEEPSTAKE SHOOTING.

WHILE all forms of sport which make men stronger, braver and physically and mentally better, both as private individuals and as valuable units in the social system, have their beneficent uses, there is no special part of them which is of more universal interest than sport which refers to marksmanship. From time immemorial, all peoples, whether civilized or otherwise, have highly prized a proficiency in the use of arms. Such denoted an enviable pre-eminence in the skill and usefulness of the individual and a further valuable quality as a safeguard for the community. To be eminent as a distinguished marksman carried with it high honors in the esteem of all nations. If we consider the universality of the need of marksmanship, the esteem in which it is held through all history, and its usefulness as a form of individual training, we observe that it possesses within itself all the essentials of permanency.

However, with a higher civilization there has been imported into the more peaceful forms of marksmanship contests, known as trapshooting, an element of betting, designated as sweepstakes. There is by the sweepstake thus introduced a question as to both skill and money.

In a big public tournament the matter of the sweepstake can do but little harm, for such intrinsically is a competition for the prizes, and should appeal only to the best shots, those who have graduated through all the intermediate schools, as it were. But the sweepstake of the public tournament is often adopted as the true standard for conducting the competition of the home club. Events are arranged with entrance at a fixed amount, sweepstake shooting, the surplus money, after paying for the price of targets, to be divided among the higher classes or the higher guns. The average shooter may not be able to point a gun with deadly accuracy. He may be a novice in shooting and yet be an expert in figures. He observes that he, as a club member, in the matter of sweepstakes is what is colloquially known as a "producer." He puts up his money with a hope that the unexpected may happen in his behalf, while some other fellows or fellow puts up the money with a knowledge that steady skill will defeat luck in the long run. The persistency of the novice under such conditions is only a question of enthusiasm, of intelligence, of financial means. Whenever the novice as a class begins to lag, there is then a readjustment in the way of systems for dividing the moneys. There are most pleasing mathematical devices for his consideration in respect to how he may shoot poorly and yet win.

The ordinary club which cultivates the sweepstake as the true form of competition finds that after a time the most skillful shots have the competition to themselves. The novice has a thousand urgent reasons for being absent from the club shooting grounds. He can furnish a dozen at once, but the real one, the sweepstake, he very rarely mentions. The expert of the club, who, for the sake of illustration, we will assume was present regularly for the profits, also retires when the profits are no longer available. The club then is for a long time inactive or ceases to exist. This in a general way is a true history of hundreds of gun clubs. The sweepstake was a means of making the novice pay for the shooting or profit, or both, of others, and the novice, being a man of sense, when the proper time arrived, quit the sport entirely. Even the rebuke that it is not "dead game" to refuse to put up his money with a certainty of losing it, in time fails to appeal to the novice.

As illustrating, in a material way, what a club organized and conducted on true principles of sport can accomplish, we may call attention to the New Utrecht Gun Club, which shoots weekly at Interstate Park. No sweepstakes are sanctioned by the club. Each competitor enters for the birds, and adds a small amount for the purchase of a trophy, which is solely intended to commemorate a test of skill in successful competition, and though it is sure to be a work of art, it has no significance whatever as a matter of profit. If any purses are made up at all on matters of shooting, they are not in the slightest degree club affairs. Their significance is purely personal. This is the policy of the president and active manager, Mr. Walter F. Sykes, and the good attendance each Saturday and steady growth of the club in additional to the high personnel of its membership are sufficient testimony to the soundness of the policy which he has advocated and practiced.

If other clubs would eliminate the sweepstake and introduce the trophy entirely, they would soon reap the benefits in increased prosperity.

Of course in tournament matters other considerations are dominant.

SNAP SHOTS.

In the Iowa case of Graybill vs. Chicago, Milwaukee & St. Paul Railway, to recover damages for cattle killed at a crossing, it was shown that the engineer had neglected to warn the cattle by whistling; and when the railway's counsel contended that such warnings as were required by law were meant only for human beings, the court instructed the jury to the contrary, saying that "the provision is for the safety of persons and animals near the crossing and about the cross, to warn them of the approach of the train, and to enable them to avoid injury." The jury found for the plaintiff; whereupon the company appealed to the Supreme Court, taking exception to the instructions quoted. The Supreme Court sustained the lower court, Justice Sherwin holding that animals have sufficient reasoning power to recognize the locomotive whistle as a warning of approaching danger and to get off the track to avoid it. The railway's attorney has filed an argument for a rehearing, contending that while the whistle may frighten cattle, it is impossible by such means to convey to them "information which the animals can turn to account for their own safety." But the common experience of locomotive engineers is against the lawyer on this point. It is a daily occurrence on some roads for the engineer to whistle cattle off the tracks, and their quick recognition of the meaning of the warning and the prompt obedience they give to it negative the view that they do not understand it and "turn it to account for their own safety." If the attorney were arguing about the hen in front of the wagon he might make out a case; or about the massive cur dog that refuses to heed the bicycle bell; or the bull that fails to interpret the wig-wags of the timid angler; but cattle on the track know perfectly well what the locomotive whistle means and govern themselves accordingly.

Connecticut has followed the example set by Arizona, California, Indiana, Minnesota, Missouri and New Hampshire in 1901, and by many other States in previous years, in prohibiting the sale of game, and has taken the lead in a novel method of protection which consists in the establishment of town game preserves. This is an innovation which we hope to see widely adopted. The preserves consist of tracts of land of from 50 to 300 acres, which are leased by the Game Commissioners at a nominal rent, and are absolutely protected for a term of years. These protected tracts form game refuges from which the supply will certainly overflow into the adjoining territory. We print elsewhere the full text of the law as affording the best explanation of the plan in its details.

The sea lion has been popularly credited with a voracious appetite for fish, and has been regarded as such a destroyer of food fishes that the California fishery authorities have long waged a war of extermination upon it. Now comes Dr. C. Hart Merriam with a strong presentation of facts showing that the sea lion lives principally on squids, and is not a fish eater. The decrease of California salmon, Dr. Merriam suggests, has been caused not by the sea lions, but by the overfishing by man.

Our compliments to Paul Rush, of East Otto, N. Y., eighty-four years old, who "is perfectly well, can see to read without glasses, has always been a famous hunter in all kinds of weather; and hunting has seemed to agree with him." Of course it has. May he live to a ripe old age to enjoy it.

After all the gun license question in this country is not, Should we have the license? nor, Shall we have the license? but, When will the license come?

The Sportsman Tourist.

The Trout Stream.

AMONG the hills of far away
There flows an old trout stream,
And I am wandering there to-day
Just in a May day dream.

Down through the fields, so soft and green
The brook winds round the farm,
Folding the budding tranquil scene
Within its shining arm.

The orchard flings some blossoms down
Upon its ripples bright—
Frail argosies, that dip and drown
Their sails of gold and white.

The birds sing in the giant elm
Till all the brookside rings;
Or darting to the watery realm
They lave their glossy wings.

On through the meadow's mist and glow
At murmuring sleepy pace,
The grassy ribbons swinging low,
Half hide its smiling face.

But here and there it leaps away,
Sings to the open sky,
And holds the clouds of white and gray
Within its laughing eye.

The dipping willows by the mill
Caress its happy face;
So on it flows, its purpose still
To bless each thirsty place.

Beyond the mill, the eddies rush
With eager, clamorous shout,
Into deep pools, fringed by the brush,
Where lurk the royal trout.

See there! that dainty beauty shine
Out from his cool, dark nook;
Oh! for a swinging rod and line,
A trusty feathered hook.

Away with business—quire and ream—
My rod and reel are out;
To-morrow's sun fulfills my dream,
I'm going to fish for trout.

GEORGE DOUGLAS.

Two Dogs.

A GOOD many years ago I lived in a house that stood on a bluff overlooking the Hudson, and about a quarter of a mile back from the river. The tracks of the Hudson River Railroad ran at the foot of our place.

The following incidents, which happened at that time and place, bear upon the question as to whether animals will sometimes kill themselves from grief. They relate to a Scotch terrier (one of the wisest and canniest that ever cocked an intelligent eye out of an ugly face) of the name of Blucher, but called Bleach. His wiry coat being of a dingry cross between white and tan, the nickname fitted him well.

Bleach belonged to us neither by right of gift nor purchase; but of his own free will he chose to come to live at our stable in the train of a horse, an old friend of his, that my father had bought for me. Bleach hung about the stable, followed Billy, my horse, when I rode, and slept in Billy's stall at night.

One day my sisters drove out to pay some visits, and I followed the carriage on horseback, Bleach, as usual, at Billy's heels. One of the visits was at the house of the horse's and dog's former master. I did not dismount, but while my sisters were in the house had ample opportunity to watch a curious scene. The stable stood at a short distance from the house, and suddenly from out the stable door rushed a nondescript little yellow dog, who greeted Bleach with every sign of recognition and delight. To my surprise that usually grave gentleman responded to his greeting with equal warmth, and even Billy showed, through whinnies and playful nips at the dogs as they circled around him, that he too recognized an old friend.

As I knew that our coachman had been in the employ of the gentleman before whose house we waited, I rode up to the carriage and asked him why the little yellow dog was so glad to see us.

"That, Miss," said he, "is Dandy, and when I worked for Mr. —— them two dogs was always together, and both of them slept in Billy's stall."

"Well," thought I, "when we ride away we shall see which of his friends Bleach loves best," but I reckoned without Bleach.

At that moment my sisters emerged from the house, entered the carriage and drove off. I followed slowly, looking back to see how Bleach would settle the question. I could see by the glint of his eye that he also took in the situation, but he never let on—not he. Redoubling the enthusiasm of his gambols, he gradually increased their circle, until the lawn was traversed, the gate cleared, and the unsuspecting Dandy fairly launched upon the high road. A good quarter of a mile lay behind us before Dandy's conscience awoke. He suddenly stood stock still, his tail, indeed his whole being, drooped. He turned about and began trotting homeward. The day seemed lost for Bleach. But no! In this emergency the force of his character and the depth of his wile displayed themselves. Springing in front of Dandy he blocked the way, and while his whole body was, down to the stump that served him for a tail, quivering with excitement, challenged his long lost friend with giddy barks to another romp. Dandy wavered, but his ears pricked up and his dejected tail assumed a more jaunty angle. In another moment he was racing in the direction which the carriage had taken, scruples thrown to the winds, carried away by the rush of Bleach's high spirits.

This struggle between Dandy's conscience and Bleach's will occurred at widening intervals in the two miles that lay between Mr. ——'s house and our front gate. As we neared the latter Bleach put on an extra spurt of speed and rushed Dandy through, across the lawn and up to the front door. Then the little yellow dog seemed to come to his senses. He stared blankly at the door and in another moment would have run away. But in this crisis I became Bleach's ally. Jumping from the saddle I threw open the door and invited both dogs to walk in. Once within Bleach's whole manner changed. From playmate he turned to host. He led Dandy from room to room and showed him the sights. A pier glass rather fazed them for a moment, but Bleach led up to it with a swagger, as if he were saying, "Oh! this is nothing; a mere trifle," and both dogs looked at themselves in the glass. No one would have thought from Bleach's actions that it was the first time that he himself had ever been in the house. I brought a bowl of milk and set it before them. Dandy fell to, but though quite as thirsty, Bleach did not touch it until Dandy had finished, but stood by, wagging his tail with the pleasure of hospitality.

After the meal I bowed them out of the house with due politeness, and saw them head their way toward the stable, which from that time was their headquarters, both sleeping at night in Billy's stall. They were inseparable, and one was rarely seen without the other. Both would disappear at intervals for two or three days at a time on hunts for woodchucks or other small game, always turning up at the stable and staying there until the roving spirit moved them again.

This state of things lasted for about two years. Then one summer's day Bleach came home from a hunt alone. Dandy never came back. Bleach moped about the stable for a week or more, then he too disappeared.

On the following day some boys came to tell us that his body was lying crushed across the railroad tracks at the foot of our place. Now Bleach was a wise dog and knew as well as any man what would happen if he stretched himself across a rail. The inference, therefore, seems to be that grief over the loss of his companion led the lonely little fellow to seek death.

MARY W. MONTGOMERY.

The Samoan Giant-Killer.

LET it not be supposed that there are any giants nowadays in Samoa. The period of these interesting freaks who lived too early to enjoy the advantages of side show careers, is quite as far back toward the beginning of history among the islanders as with us. Still, we ourselves have the very exciting tale of Jack the Giant-Killer, and at certain periods of life his adventures are firmly believed. The stories of the killer of Samoan giants are not only credited in childhood, but also in ripe age it is felt by the islanders that in times so remote there is more than a bare possibility that such things could be. Once when I seemed to imply that the race of giants was imaginary I was floored by an apt quotation from Genesis to the effect that there were giants in those days, and then it dawned on me that to attempt to introduce the higher criticism would be difficult and undoubtedly useless. The stories are important to the older people for yet another reason—their chain of ancestors is deduced from some one of the giants, from some one of their victims, or from the hero who slew the terrors of island life. The latter descent is restricted to but few, for it is in the main line of the Malietoa race, and the last kings of Samoa came in direct descent from this public-spirited seeker after trouble. When his descendants indulged themselves in this family failing they found no giants left, and therefore were obliged to have trouble with some two or three of the great nations of the world, the result in the modern instance being that Samoa has been chopped up into two small mouthfuls, of which Germany has one and the United States the other and more desirable fragment.

Let it not be imagined that the Samoans do nothing but sit around and tell stories. Quite on the contrary, it is hard work to get the story when you know that there is one in existence, and to get on the track of it calls for vigilance to pick up some stray allusion in speech, to haul upon the end of the clue until it is certain that there is yarn behind, and then to cajole or to bribe some aged islander until he can be induced to spin said yarn.

So it was with this story of Polu, the giant-killer. It was hinted only by accident; it was long before I secured the whole story. One day I noticed in the lagoon before the consulate at Vaiala a small native canoe with what seemed to be a particularly white paddler making a most irregular course. The man at once struck me as far whiter than the climate permits the white residents to be, and the scantiness of clothing was something not to be expected even of the least progressive beach comber. When Tonga observed my curiosity as to the unusual sight she rested from her labors, and though an excellent woman she was prone to rest from such light toil as fell to her lot, and gazed with me.

"That shows you that Polu didn't kill all of them," was her sole comment.

"What is he that he should have been killed?" I asked.

"Oh, it's only one of the 'autetea' from Falefa," she replied. "He can't see much in the day time and that's why he's paddling so crooked. He'll run ashore on your beach and then you can get a good look at him."

The word "autetea" was explained to mean white people, but it had no reference to the foreign visitors, who are known quite generally through the Pacific as Papalangi. When the clumsy paddler did as Tonga had foreseen he would do and blindly ran his canoe on the beach before the house, it was easy to see that he was an albino. His hair was as yellow as straw; his skin was not only white, but devoid of all pigment whatever; his purblind eyes were pink, and in every particular he corresponded to the albinoes seen in other lands. The management of his canoe showed him to be afflicted with the characteristic intolerance of light which accompanies this morbid condition.

"But who was Polu, and why did he kill these afflicted people?" was my next question put to Tonga.

"That's only a devil story," she answered. "I think so it's a lie. He was a devil long ago; and some of our old men talk about him, but I don't know what they say."

This made it clear that there was a story and I made it my object to drag it forth, not from Tonga, for I had long since given her up in despair, but from all the old chiefs who came my way. That was the only course to pursue; when any old man came to ask me for food, or matches, or painkiller, he met the prompt query, "Why did Polu kill the albinoes?" In time I acquired quite a series of exploits of Polu, which proved him to have been a slayer of giants, mostly through the shrewdness which enabled him to get the advantage of position, which is the first thing a Samoan wants when it is a matter of fighting. His adventures seem to have been but seven in number, for, although I did not get them all from one man, I never found any informant who could recall an eighth adventure.

Polu, surnamed the Tricky, is represented in these savage stories of wild life in Samoa of the ancient times as a son of one of the Malietoas long gone by. From his first exploit it would appear that cannibalism was at that time practiced in Samoa. This custom, common enough in other archipelagoes of the Pacific, seems to have been abandoned in Samoa at some very remote period, and the first adventure which sent Polu out upon his career of purifying the social condition of his people professes to give an account of how this practice was given up. It is very certain that very few references are made to the custom in the island stories, thus showing that its abandonment was a matter of very long ago.

Polu was back in the bush one morning engaged in the interesting sport of netting pigeons. While he was waiting for the beaters to drive the birds to his stone platform he heard the complaints of three wayfarers who were unwillingly making slow progress toward the home of the paternal Malietoa. When they reached the hunting platform and sat down to talk, as is the custom of Samoans to the present day, Polu called them by name and asked the cause of their manifest and indeed expressed discontent. They told him that they were on their way to the home of Malietoa for the purpose of being eaten and that they were not particularly charmed with the prospect. It is explicitly stated that it was the habit of Malietoa to eat a man a day, and these three wayfarers had been designated to be the next three days' food supply. Polu, without further parley or delay, gave up his pigeon hunt and assured the men that he would see that they remained men, even if his father did go hungry. Accordingly he ordered them to plait him up in a cocoanut leaf in the same way that other men were treated when offered for the larder. A single leaf is large enough and strong enough to form a convenient hammock in which to carry the largest man, and when the leaflets are brought over from each side and woven together the whole package can be carried quite easily by making the ends fast to a pole, which can be borne on the shoulders of two men. In recent wars this method of packing has been employed in presenting a defeated chieftain to his conqueror, a ceremony with the meaning that he is as helpless as a man going to be cooked; but in these later ceremonial instances the cooking is omitted in deference to a change in public opinion. In this condition Polu was offered to his own father as the day's meat. When the parcel was undone and Malietoa saw his own son and heard the reason for the sacrifice, he issued an edict that men should no longer eat men, and sealed the legislation by having a great feast of pigs.

Having now definitely entered upon the career of hero, Polu sallied forth in search of wrongs to right, and neighbors to abate, when they had become nuisances. The first hard citizen who encountered Polu in this great hunt was known as Flashing Eyes, who had the unpleasant habit of stealing the most noble counsellors out of the very court of Malietoa. Polu made very few preparations for the extermination of this monster, who was a cannibal as well as a snatcher of live bodies. He simply inquired by which path the giant most commonly came, and there he sat down to wait. When he saw Flashing Eyes in the distance with a long trident spear, Polu turned around with his back to the enemy and still sat in the road. Flashing Eyes soon spied this tempting bait ready to his hand, and hurried along the road brandishing his spear. Although Polu made no sign that he was conscious of the onward rush of the giant he was keeping a sharp lookout for shadows on the path. When the shadows told him that Flashing Eyes was about to transfix him with the spear he dodged aside, the ogre was carried past in his furious rush and as he went by Polu hit him a crack with a log of wood, and that cannibal turned from his wickedness and died, greatly to the relief of the circle that was wont to gather about Malietoa.

From this deed of justice Polu traveled eastward and came to the town of Toamua, where he found the women having a good old South Sea island crying spell over their husbands and brothers, who were being dragged off to a cave by another cannibal, named Blazing Rock. Polu waited until he could be sure that Blazing Rock had set out on one of his predatory trips. Then he went into the cave itself and waited for the return of the giant. When Blazing Rock came home bearing another man on his back to be eaten at leisure, Polu fell upon him before his eyes had adjusted themselves to the dim light and while he was still hampered by his burden. A little work with the trusty club, and the women of Toamua found their lamentations changed to joy.

Then came the slaughter of the albinoes, and that took place in the next bay east of Apia. For some reason not very clear the albinoes of the town had been carrying things with a high hand over their darker neighbors. Here Polu was very tricky indeed, for he took advantage of the defect of vision which accompanies the pink eyes. Arranging an ambush over night, he had a town meeting called at daybreak. The albinoes took their seats in the place of honor in the council house, which happened to be at the west end. The meeting was prolonged until sunrise, and the level beams of the sun shone fair in the faces of the albinoes. That half blinded them, and while they were under these difficulties Polu and his party issued from the ambushment, took them at this great disadvantage and in the confusion slaugh-

tered them. But, as Tonga said, they were not all killed, for there are still albinoes in Samoa.

Eastward still went Polu in search of adventure, and not many miles away he found the giant Amaniloa, who seems to have been somewhat of a tight-rope walker. His path, when in search of people on whom to dine, lay along a cord stretched from a mountain top. Polu asked a woman how they knew when the giant was coming, and she told him that they could judge from the fact that the cord grew heavy. Accordingly, Polu took the woman's place, with his hand on the cord. When he felt the strain come on the cord Polu waited to make sure that the giant was coming across, and then he let go his end of the rope and the giant fell down into a deep valley and broke his neck, and the people had peace. This exploit, according to several informants, is quite satisfactorily confirmed by imperishable evidence; any person who is willing to go to Solosolo will find there both the mountain top and the deep valley referred to.

The next cannibal giant encountered was at Saluafata, a few miles beyond. The townsfolk warned the hero against using the most traveled road out of their town because it was devoted entirely to their particular ogre, who used it when he wanted to come into the town to select a man for food. This was all that the exterminator of giants and ogres needed to know; he set out on that path at once, and to show his disregard of this private ownership of a public highway, he tied a cord across the road. Without loss of time the giant came hurrying along his road to wipe out the insult, and leaped on Polu to kill him. But just as he was making his attack Polu called out, "Look out; what's that over you?" The giant stopped to gaze up into the tree tops and the hero got in the first blow and finished his opponent.

The last of the giants lived at the back of the island of Upolu, at Falealili, where is the most interesting cave in all Samoa. His name was Carpenter, and he practiced daily cannibalism. By strict attention to business he had reduced the population of the town to four individuals—two chiefs and two talking-men. Things had come to such a pass that the giant had actually moved into the town, where he could make himself comfortable in the tenantless houses, and the four survivors were living in the groves of screw-palm in fear and trembling. By a happy chance Polue turned up at Falealili in his hunt for giants, and discovered the four men in the thicket. They detailed their sad situation, and asked relief. Polu delayed only to ascertain in which house the giant lived, and made his way thither. The giant was from home, probably hunting for the four men in the thicket, but Polu sat down inside to wait for him. As soon as Carpenter bent under the eaves to enter the house Polu seized the opportunity, which gave him the advantage, got in the first blow, and killed this giant, also.

This was the last of the giants; all had been killed off by the exploits of this one hero, and there was peace in Samoa afterward, except for such little differences of opinion as could be settled man to man with clubs. Having converted his own father from cannibalism, and having secured an edict that the practice should cease in all Samoa, the young man dealt personally with all these worst offenders who set themselves above the law, and executed its provisions upon them. Since that time, Samoans say, there has been nothing of the sort.

LLEWELLA PIERCE CHURCHILL.

Adirondack Place Names.

The Adirondack region is a good deal like some old people one meets. It was young once and had a wild career for a while, especially when the whites got within the woods borders. Real pioneer adventure was of daily occurrence—but it is tame now. The wolves there went in the seventies, no one knows how; the moose in the fifties, everybody knows the reason why; and the Indians were as good as gone more than a hundred years ago. Even their very bones have become dust, much more the tracks they made in snow and mud have disappeared. Almost the only trace of the wild life now left is a lot of names. A few moss-grown moose horns may be seen, found by hunters in the swamps. Large steel traps of odd construction and very much rusted, are occasionally discovered by lake and stream sides. A few men have eyes capable of discovering arrow heads, of which there are bushels on all sides of the mountains. But the chief things by which the adventures and events of the early days are remembered, are the names. If one had the stories which gave the many "Indian" rivers, lakes and ponds their names, they would be thrilling enough. They were doubtless named from real adventures with redskins, and very probably by trappers who, like Nat Foster, murdered Indians to rob them, or for the sake of keeping them away from a favorite fur country.

So, too, there are moose ponds and moose rivers, real haunts, at one time, of the great animals. Wolf ponds, Otter creeks, Buck ponds, Mink lakes, etc., every one of them with a meaning now forgotten, though certainly associated with an animal of the sort indicated by the name.

Natural features have left their impress. A map shows dozens of names which the hunter and fisherman knows to be appropriate. The Rock lakes and ponds; the Spruce and Balsam ponds and lakes; Beaver Meadow and Flat streams of various sorts; Mica, Mountain, Sard and Mud ponds; Cedar, Marsh and Long Ponds are all truly named. But what can be said of such poverty of mind that calls the first chain of lakes in the mountains, First, Second, etc., to the Eighth? A little pond near by is called Quiver Pond, a name that at once conjures up a scene of woods beauty, which the Fulton chain never will, save to those who have been there, though it does suggest the first Yankee steamboat, as was intended.

"Odor" Lake is on the maps, but the real name is Stink Lake. Some forest commissioner, with delicate ears, probably, made the change, robbing the name of its meaning. A dead deer, or moose, doubtless gave the place its real appellation, the true significance of which is lost in the possibly delicious "Odor."

Many of the names now used are mere translations of the Indian nomenclature, especially those that relate to natural features and to the animals of one sort or other. The Indians knew how to describe, or appropriately name, a place. Lower Saranac Like is white man for the "Lake of the Clustered Stars;" Trenton Falls, on the West Canada (West *Ten*, I believe), is white man for the Kany-a-hoo-ka, Leaping Waters. The change in the name was just as well, for now the Trenton Falls chasm has been completely destroyed by a water power company for every purpose save running water into a pipe at one end and out of the other with the dollar extracted. Not that I would deny the use of commercial progress, but merely express regret that the beautiful so invariably vanishes when it is a question of dollars or the beautiful.

Where men's names have been used to designate Adirondack features there is usually cause for gnashing of teth, but not always. There is Herkimer county, for instance. General Nicholas Herkimer, the greatest man in the upper Mohawk valley, ruled and fought there, and finally died of his wounds. By the battle of Oriskany, in which, though wounded badly, he smoked a big pipe with relish, he saved the valley from St. Leger's Tories and Indians on Aug. 6, 1777, as well as made the battle of Saratoga, perhaps American independence, possible then. A good name for a rugged country! But what can be said when Tahawus, the Cloud Splitter, is known by the wretched name of "Mt. Marcy," with "McIntyre," "Colden" and "Seward" for companions?

Here is what Thoreau said under similar provocations:

"Flint's Pond! Such is the poverty of our nomenclature. What right had the unclean and stupid farmer, whose farm abutted on this sky water, whose shores he has ruthlessly laid bare, to give his name to it? Some skinflint, who loved better the reflecting surface of a dollar, or a bright cent, in which he could see his own brazen face; who regarded even the wild ducks as trespassers; his fingers grown into crooked and horny talons from the long habit of grasping, harpy-like. I go not there to see him, nor to hear him. Who never saw it; who never bathed in it; who never spoke a good word for it, nor thanked God that He had made it. Rather let it be named from the fishes that swim in it, the wildfowl or quadrupeds which frequent it; the wildflowers which grow by its shores, or some wild man or child, the thread of whose history is interwoven with its own; not from him who could show no title to it but the deed which a like-minded neighbor or legislature gave him—him who thought only of the money value, whose presence, perchance, cursed all the shore; who exhausted the land around it and would fain have exhausted the waters within it; who regretted only that it was not English hay or cranberry meadow—there was nothing to redeem it, forsooth, in his eyes—and would have drained it and sold it for the mud at its bottom."

All things considered, the Adirondacks have been rather fortunate in names, more so than one might expect. It is true there are Sampson's Lakes, Eckford Chain, O'Neil Flow, Swanson's Dam, Brown's Tract, Griffin (a man!) Brook, Stephen's Pond, Buell Brook, Tirrell Pond, My Pond, Your Pond, Jenkins' Pond and Merritt's Lake, and so on—and of what possible significance are these? But really descriptive names are seen and heard.

S. H. Hammond made a trip southward into the Adirondacks and in 1865 he printed a book about it. Meacham Lake was sixteen miles in the wilderness then, and a few miles beyond it in the "southeast corner of Duane" township, Hammond came to a pond of about 200 acres, nameless so far as he or his guide knew. Here is how it got a name:

"Having rested ourselves, we were about starting on our journey when we saw an animal called the fisher. * * * As he passed behind a large boulder, I raised my rifle, and as he again emerged into sight, I fired and killed him. * * * We took the gentleman's hide as the spoils of war, and to pay for the trouble of shooting and skinning him. The death of the animal was the occasion of the christening of this sheet of water. We hewed a smooth place on the side of an ancient birch, and with a knife carved thereon in large letters, 'Fisher's Lake.' Whoever shall hereafter visit it, let him respect the name we gave it and speak of it according'y." Whether the name lasted I don't know, but it is typical of one sort of names, including the Deer, Wolf, Bear, etc.

About three miles up from the foot of Lower Saranac Lake is a great rock, like a boulder. It is called Signal Rock, and with the bit of land behind it, is known as Bluff Island. The name Signal Rock is older than any one in Saranac Lake village, having originated in the days when Indians used smoke instead of the telegraph to convey information to their fellows. Indian Carry (near Sweeney's), on the Upper Saranac, leading to the Stony Creek ponds, has some significance, historically, as it is probable that Sir John Johnson, when he fled from the Mohawk valley in May, 1776, went to Canada that way, while doubtless small parties of Indians, with their canoes, followed the water route from St. Regis to the Bisby's on their way to attack the Dutch settlements along the Mohawk. Arrow heads are to be found around all the large Adirondack lakes, telling of prehistoric sport.

Some names are of doubtful origin. One of these is "Raquette," or "Racket," applied to a river and a lake. A guide would say that it was the tumbling of the waters on the rocks of the river, the roar or racket of which suggested an appropriate name. But a French Canadian may have seen a resemblance to a snow shoe—"Raquette"—in the shape of a marsh or flac, while traveling with Indians. The Iroquois Indians named it the Ni-ha-na-wa-te, or the Fall-of-Rapids, a circumstance likely to be noticed by canoe men.

The Indians called the present Mt. Seward "Ou-kor-lah, The Great Eye, because from its heights a vast territor could be seen and the warrior or hunter might observe the fire smokes of his friends or foes, and lay his plans accordingly. In some cases the Indian names have been merely translated into English. White face for White head is an example; Hurricane Peak, for Hill of the Wind. Lake Champlain was The Door of the Country; Schroon Lake, at first unattractive, grows to Scaroon, and Sca-ni-a-dar-oon, a Large Lake; and, incidentally, Scaroona, name of the Indian maiden whose French lover deserted her. It is interesting to note that several of the greatest Adirondack peaks derive their names from "five gentlemen," who "were engaged in the development of the iinn interest at the Upper Works." "Cod-a-cra-ga, the Dismal Wilderness, is just south of these; Seward Mountain, not far from the Long Lake summer resorts, where there is an Indian always on exhibition within easy walking distance. The Dismal Wilderness was a frightful region in the old days; not much visited by even the trappers and Indian hunters, who dreaded its dense solitudes, and the fierce creatures to which their experience and imaginations had introduced them on its borders.

Within the borders of the present tree line of the mountains there are numerous little clearings grown of ferns, or briers, and a sprinkling of second growth around the edge, or crowding to the very center. These clearings have more often than not curious histories. Refugees of every sort from France and England, as well as from inhabited portions of America, sought the shadows of the tree-grown mountains to escape the penalties of dissenting from the course of "public opinion." Joseph Bonaparte, ex-King of Spain, was honored by having a pure Adirondack lake named after him; while a high fall on Deer River was called the King's because he looked at it once. The French exiles that followed or preceded this man left many traces on the northwest side of the mountains in clearings, names, and the blood of the people with whom they commingled.

A stronger class than these Frenchmen was the Tories after the war of the American Revolution. Their property in the Mohawk valley, amounting to vast estates, was confiscated by the Americans, and they were exiles from their native haunts. The enmity of their old neighbors prevented them from returning, so they came as near as they dared to the fertile alluvial flats of the valley and settled on the rough, sterile and rocky southwest slope of the mountains, hewed out patches of land to live on until they could return to the Mohawk again without being shot. Young's Clearing and the old Vaughn place are of this sort. They are on the old trail followed by Indians and painted Tories, when on their way to surprise the lower valley settlements, and are within two miles of Butler's Ford, in the West Canada, where Walter N. Butler, after a wild flight from Johnston, with Indians and fellow Tories, was shot and scalped in October, 1781, by Colonel Marinus Willett's men.

The noted Tory names may still be recognized in many a place, commingled, now, with the Conklings, Quackenbushes, Fordas, Dygerts, etc., who were patriots, and eventually chopped their way to the borders of the clearings of their old time enemies.

The patriot trappers, after the war, who found these Tory clearings, sometimes had trouble over trap lines, or old questions, and odd duels were occasionally fought, after which the survivor never told his experience; decaying log cabins being the only clue to what had happened. The Indians, however, suffered most, for the Tories and the Yankees united to swindle them out of their lands, if leaders like Colonel John Butler, father of Walter, or if mere trappers like Nat Foster, shot them in the back to get their furs and traps, which made hard times for the Indians.

Hunters and trappers led the way into the Adirondack wilderness just as they have led the way into the Rockies and into the far north. Naturally, they gave names to a good many of the prominent features which have since become generally known by them. Their own names were likely to become attached to the ponds by which they made their camps, while their adventures or captures suggested fit appellations for localities round about. A trapper's life led him from 50 to 100 miles through the wilderness in the old days, usually in a circle. Hanging the head of the moose or deer he killed for bait on a tree overlooking a lake, was apt to give it the name of Horn Lake or Moosehead Pond. The ridge on which he trapped martens was likely to be called after that pretty though ferocious creature. When he came to a pond he had once seen, but had tried to find many times in vain, he was apt to call it the Lost Pond to distinguish it for the benefit of his sons or young partner.

Curious and various associations are connected with the many Adirondack mill brooks and streams. The ruins of grist and saw mills, erected by forgotten men, may sometimes be found by hunters tramping along streams of considerable size. It is natural to call such a stream Mill Brook. At Noblesborough, in Herkimer county, is a "Mill Stream," from which the mill has long since disappeared, and most people are doubtful whether it was to grind corn or to saw wood that it was erected. These mills were commonly put up by men who had failed in more "likely" situations, and who thought to do better "further back." I have never heard that anyone of these mills was noted as grinding the corn mash that makes moonshine whisky. The only home made intoxicating drink that is found among the Adirondack woods is made from various berries—black, rasp, and elder berries being oftenest used for that purpose. But on every road, trail and other Adirondack thoroughfare is a "whisky spring." Few woodsmen are so foolish as to drink under a pack, however much they may like it. So it happens that when the announcement of a "good drink of Adirondack whisky" is in sight it means simply the approach to a white sard, boiling spring.

RAYMOND S. SPEARS.

NORTHWOOD, N. Y.

Probability.

From the Springfield Republican.

IF Pegasus, winged horse of which we read,
Should wing his way to Earth as once he came,
Should browse in our green pastures, fiery steed!
He would be winged no longer but in name;
No fountain now would spring beneath his hoof,
His wings were more desirable, in truth.

No longer free to roam, without excuse,
He would be caught and tethered, put to use,
Nay, not for racing!—no one cares for that—
His wings would decorate some woman's hat,
While envious women, weeping, gathered around
To ask "where wings like these were to be found?"

—HELEN HART WOODWORTH.

In the Sub-Arctics.

J. W. TYRRELL, the Arctic explorer, who has for the past ten years been engaged in exploring the extreme northern portion of Canada in the interests of the Canadian Government, has recently returned to civilization. His last trip covered a period of ten months, nine of which were spent entirely outside of the limits of civilization, being unable to communicate in any way with the outside world.

While the Tyrrell brothers were traevling down the western coast of Hudson Bay in open canoes, during the month of November, they met with great hardships, a few of which are reported in the following account, written by Mr. J. W. Tyrrell himself.

When about perishing from starvation and cold, the Tyrrell brothers with the rest of their party were rescued by the missionary from Fort Churchill, who sent out men and dog sleds to bring them to that station.

After the great five days' storm, which lasted until Oct. 4, the whole country was buried in snow, and every possibility of finding even a little moss for fuel was excluded. Winter had overtaken us. Ice was forming all along the shore of the bay, and it was evident that within a very few days travel by canoe must be at an end.

On the above date, though light snow continued to fall, the wind had gone down sufficiently to admit of launching the canoes after a long portage out to meet the tide. In spite of the most vigorous exertion, all we were able to make during the day was ten miles, and that through a chilling spray, which froze upon us and incased canoes and men in an armor of ice. We had great difficulty in getting ashore at night, having again to portage a long distance over the low-tide boulder flats.

On the following morning the water of the bay was out of sight, and it was not until about noon, when the tide flowed in, that we were able to float the canoes. We were so obstructed by the new ice and a strong head wind that we were not able to make more than a mile or two before being again forced to struggle to the shore. At this rate we would be a long time in reaching Churchill. We had now been more than three weeks on the coast, and were still at least 250 miles from our haven.

Some different mode of travel must be adopted or we should never get in. The short ice was forming rapidly and might now block us at any time. We had not more than enough meat for another day or two, and the game had all left the country. What was to be done? My brother and I talked the matter over during the night. The plan suggested itself of abandoning everything but rifles and blankets and starting down the shore on foot. But then, how could the numerous large rivers, which were still open, be crossed? Again, to this plan there was the objection that having been in canoes all summer our party, though still strong enough to paddle, was in poor condition to walk. The only other feasible plan was then suggested. It was to abandon dunnage, instruments, rock collection, etc., everything except notebooks, photographs, plant collection, rifles, blankets and two small tents, and with these to start in only two light canoes, and with the increased force in them to travel for our lives.

This plan was decided on, and in the morning the men were set to work to cache all our stuff excepting the articles above mentioned. This occupied the whole morning, and to us it was a sad and lonely task, but as it seemed to be the only way by which we might hope to escape from this dreary ice-bound coast, it was felt to be a necessary one. As secure a cache as we could build was made, and then with heavy hearts we turned our steps toward the shore.

After launching the two canoes it was with great danger and difficulty we were able to force a way through the broken but heavy shore ice to the open water beyond. Having once gotten clear, we were able to make good progress, and even at great risk of being smashed upon some of the many rocks, we paddled far into the night; but at a late hour, being sheathed in ice from the freezing spray, we landed, and without supper lay down to sleep upon the snow.

Eight more dreary days passed, six of which were spent in battling with the elements and two in lying storm-stayed in our tents. During this interval our party suffered much from cold and lack of food, and to make matters worse, dysentery attacked us, and it appeared as if one of our men would die. Still, with hollow cheeks and enfeebled strength we struggled on, sometimes making fair progress and at others very little, until on Oct. 14, as we advanced, the ice became so heavy and extended so far out to sea, that in order to clear it we had to go quite out of sight of land.

Toward evening we began to look about for some opportunity of going ashore, but nothing could be seen before us but a vast field of ice, with occasional protruding boulders. We pushed on, hoping to find some bluff point or channel of water by which we might reach the shore, but the appearance of things did not change in the slightest. We stood up in the canoes or climbed upon boulders vainly hoping to at least get a glimpse of the land. Of course we knew the direction in which the shore lay, but it was so low and we were so far out that it was beyond our view. We were utterly helpless and could do nothing but remain where we were or go where the tide chose to carry us, until the return of daylight.

The hours of that night were the longest I have ever experienced, and the odds seemed to be against us surviving till morning; but at last the day returned and found us still alive. My brother was nearly frozen, having been obliged to sit or lie in icy water all night. Poor little Michel had both of his feet frozen, and the rest of us were badly used up. Still we were in the same position as the night before. We could not hold out much longer; we must gain the shore or perish. At the time of high tide, the ice being somewhat loosened, our canoes were thrust into the pack, and by great exertion as well as much care we succeeded about 9 o'clock in reaching solid ice, upon which we were able to land and, for the last time, haul out our noble little crafts. We had been in them just thirty hours, battling with ice, exposed to a chilling winter blast, our clothing saturated and frozen and our bodies faint and numb with starvation and cold. But we were now within reach of the land, and all of us who were able gladly scrambled out upon the ice to stretch our cramped and stiffened limbs. A fire was quickly made, camp pitched and, better still, a meal prepared. On the previous day a seal, the only one secured on the trip, had been shot, and we were now in a position to appreciate it. The three Western men were still fairly strong, but the remaining five of us were very weak and badly used up. We knew now, however, that we could be no great distance from Churchill, for we had again reached the wooded country, and two or three miles back from the shore could be seen dark clumps of spruce trees. This was a most consoling fact, for besides having meat for several days, we felt that we would have shelter and fire.

As to launching our canoes again, that was entirely out of the question. If we would reach Churchill at all it must be by land.

As most of us were unable to walk, the only course open appeared to be to send on some of the stronger men to, if possible, reach the fort and bring back a relief party. This plan was proposed and two of the Western men, Jim and John, volunteered to undertake the walk. We thought the distance could not be more than fifty miles, and it might be considerably less. On the morning of the 16th the two men set out on their journey, while those of us remaining proceeded to move our tents back from the shore about two miles to the nearest woods, where we might make ourselves more comfortable, to await the success or failure of the relief party. A sheltered spot was selected for camp, in a thick grove of spruce trees, and after clearing away about 2 feet of snow which covered the ground, tents were pitched, then well carpeted with spruce boughs and a big fire made. This was indeed a happy change from lying in canoes in the ice pack. Clothing and blankets were now dried, and with the seal meat and some ptarmigan which we shot in the grove, we were soon comparatively comfortable, with the exception perhaps of poor Michel, who suffered much from his frozen feet.

On the morning of the 17th, feeling somewhat revived after a long night's rest, I undertook to go hunting ptarmigan, which we were glad to find were plentiful in the woods about us. Had it not been for the fact that our ammunition was almost exhausted, the occurrence of these birds in abundance would have afforded us great consolation, but being as we were reduced to a dozen charges, the opportunity for living on feathered game seemed limited to a short period. We were hoping that Jim and John might be successful in reaching Churchill. Before I had walked a hundred yards from camp I was forced to realize how weak I had become, and after making a circuit of about half a mile and shooting only two or three birds, I was scarcely able to crawl back to the tent. On my return, François, taking the shotgun, went out and returned in the evening with a fine bag of game.

On waking the next morning my brother amused us by relating an extraordinary dream, in which he imagined he was luxuriating in good things, and particularly sweet currant cakes, for which he was exhibiting a wonderful capacity. But, alas! with the visions of the night the cakes had vanished, and for breakfast he was to be content with unseasonable boiled ptarmigan.

At about 1 o'clock in the day, as we were seated within the tent, partaking of our second meal, we were suddenly startled by hearing the exclamation, "Hullo, Jim!" The eagerness with which we scrambled over dinner and dishes to the tent door can better be imagined than described, and on looking out, sure enough there was Jim returning. Was he alone? No; thank the Lord! Behind him a moment later emerged from the woods a number of men, followed by teams of dogs and sleds. One after the other there came scampering along no less than four teams, hauling long, empty sleds capable of furnishing accommodation for our whole outfit.

After a hard two days' tramp, Jim and John had reached the fort, where they had found kind friends ready to send us a prompt assistance. Dog teams had been placed at their disposal, provisions supplied and early in the morning of the same day on which they had found us, the train had set out for our relief. With light sleds they had traveled at a rapid pace over the thirty miles of snowy plains which separated us from Churchill. Another day of good travel in the canoes would have taken us in had this been afforded us.

As the relief party drew up at our camp, Jim advanced and handed letters to my brother and myself, expressing kind wishes and sympathy from Mr. and Mrs. Lofthouse, the Church of England missionary and his wife at the fort, whose friendship I had the privilege of making on two former visits to Churchill. Along with the letters was handed a box, which, when opened, was found to contain the very good things of my brother's dream, even to the sweet currant cakes. Staple provisions were also produced, and it is scarcely necessary to say that they were joyfully welcomed. It would be impossible to describe our feelings upon this occasion, the termination of so many hardships and sufferings. During the afternoon preparations were made for the journey to the fort the following day. The canoes were hauled up from the shore, where we had been obliged to leave them, and loaded upon two of the dog sleds. Camp outfit and provisions were loaded upon the others and as far as possible everything was put in readiness for an early start in the morning.

A change in the weather was already forecast, the wind shifting round to the south, and toward evening it became decidedly milder. During the night a rain set in, and between it and the warm wind a wonderful change was wrought before dawn. It began to look very much as if the fates were against us, and that now with the sleds and dog teams we should have no snow to travel on. But before daylight camp was astir, and finding that enough yet remained, breakfast was partaken of by the light of the camp-fire, and at the first streaks of dawn the journey on sleds to Churchill was begun.

The arrangement of our party was as follows: As guide an Indian named James Westasecot led the way some distance ahead of the train. Next after him came a team of six big Eskimo dogs, hitched two and two abreast to a long sled carrying the big canoe, in which Michel was given a passage. Following this team was another hauling the smaller canoe, in which I was rolled up in my blankets. The third team consisted of only four dogs, and, in a carryall, hauled my brother and some of the baggage, and at the rear end of the train trotted another full team of six dogs, with Louis, the sick Iroquois, and the camp outfit. The rest of our men walked behind or beside the various sleds, resting themselves by jumping on when the traveling was easy, as it often was when crossing level plains or frozen ponds—of which latter there were very many.

The day was beautifully bright and pleasant for one traveling as I was, but for the drivers and dogs it was much too warm for comfort. In many places the higher ground was bare, and progress consequently slow.

About noon a halt was made for lunch. About 3 o'clock in the afternoon we reached Grassy Island, at the bottom of Button's Bay, and two hours later gained the base of a long range of rocky hills. We skirted the foot of these for some time, until we reached a low place in the ridge, where, dismounting to lighten the loads,, we turned up the steep pass, and after a short climb to the crest found ourselves within full view of Fort Churchill. It was not an imposing place, but even though consisting of only four or five old frame buildings, the sight to us was one of deep satisfaction. For a moment we paused on the summit of the ridge, then at the crack of the driver's whip the teams bounded forward, galloped down the steep slope, sped across the plains below, and in a few minutes landed us at the house of the Hudson Bay Company's traders. Here, after extricating ourselves from the various conveyances, we were presently received by a tall young Scotchman, who announced himself as Mr. Matheson, master of the fort.

Natural History.

The Starling.

THE starling (*Sturnus vulgaris*) is one of a family which is confined to the old world, but it is closely allied to our blackbirds and in many respects resembles them in its habits. It is a little smaller than our red-winged blackbird, but has longer and more pointed wings. During the breeding season the principal color is black, with green and purple reflections, and with buff tips to the feathers on some parts of the body. The bill is yellow. At other seasons nearly all the feathers have buff, or, on the under parts, whitish tips, giving the bird a spotted appearance, and the bill loses its bright color.

In Europe the starling is one of the most abundant birds and is said to be increasing in numbers in some districts. In the northern countries it is more or less migratory, most of the individuals passing the winter in southern Europe, but it is everywhere one of the earliest to appear in the spring, often arriving before the snow is gone, and in most places a few are to be found at every season of the year.

In its breeding habits it differs from our blackbirds. The nest is built in hollow trees or in crevices in rocks, walls and cliffs, but more often about buildings, after the fashion of the English sparrow, or in boxes where they are placed for its accommodation. From four to seven greenish-blue eggs are laid, and two broods are regularly raised each summer. When the breeding season is over the starlings congregate in flocks, and their habits are about the same as those of the red-winged blackbird at the same period of the year. Immense flocks of starlings resort to suitable marshes and swamps to roost, and during the day scatter over the country to feed, return again every evening to the same roosting place, until the approaching winter and consequent scarcity of food compels them to resort to more southern latitudes.

Like our cowbird, they are particularly fond of feeding where cattle are kept, and are said to alight on the animals themselves in search of the insects which infest them.

The song of the starling does not amount to very much, but it is a good mimic, and in captivity it will, as is well known, learn to produce a great variety of sounds.

It is not particular in regard to its food, and although it is injurious in certain places and at certain seasons, it is well established that the benefits that it confers by the destruction of insects, grubs and snails far exceed the harm done by occasional attacks on fruit or crops.

The foregoing remarks must be understood to apply to the starling in Europe. In America the bird has been introduced, and for some years past has been found in and about New York city, and has spread over the surrounding country. It is common on Long Island; I have seen it in southwestern Connecticut, and have heard of it in eastern Massachusetts, though it seems not unlikely that the birds in the last mentioned State, if the report that they occur there is correct, may have been independently introduced. Probably the birds already occur in other places besides those which I have mentioned.

Because the starling is a desirable species in Europe it does not follow that it will be so in America. The case of the English sparrow, which is becoming a far greater nuisance here than it is in Europe, and of the rabbit in Australia, are examples of what a naturally hardy and prolific species may do when suddenly placed in a new and particularly favorable environment. The starling certainly is a hardy and very prolific species, and it has had many centuries of experience in getting its living in a thickly populated and highly cultivated region, while our birds, in most parts of the country, have had but a few generations in which to adapt themselves to greatly changed conditions of life and environment due to the occupation of the country by man. Like the English sparrow, the starling is one of the most clever and versatile of birds, quick to perceive danger and well able to take care of itself if once its suspicions are aroused, but tame and familiar where it is not molested. It has thoroughly learned the art, which many birds seem entirely incapable of learning, of availing itself of every advantage to be derived from man's labors and productions. It is making itself at home here as if it had no intention of leaving, and it is losing no time in spreading into new districts.

There is no reason to expect that the starling itself will be harmful to agriculture in this country. Unless it should become very numerous it will probably do more good than harm, as far as direct effect is concerned. The writer is not aware that any study of the habits and food of the starling in America has been made which would

justify making any positive assertion in regard to this, but judging from what is known of our blackbirds, the above is the natural conclusion. Yet it cannot be expected that it will be as useful here as over a large part of continental Europe, where it is exceedingly valuable because of the vast numbers of land snails which it eats. Fortunately, in most parts of the United States we do not have the large and abundant species of snails which cause so much destruction in the European fields and gardens, though we will probably have them some time if the mania for introducing things continues. In America the starling must depend on other food.

This is not the only side of the question. The starling will not establish itself here and increase without causing an accompanying diminution of our native birds, many of them more desirable species than itself. It would seem as if the English sparrow might have settled here without such effect on the American birds, because it is thrown into so little direct competition with them; such competition being limited chiefly to occasional disputes over nesting sites, for the sparrow utilizes a source of food for which our native birds have but little use, and which was, until the advent of the sparrow, allowed for the most part to go to waste.

Apparently there was an opening for the English sparrow and for our birds also. But already the introduction of the sparrow has resulted in the practical extermination of the purple martin from a large part of the country, in the gradual disappearance of the bluebird and in driving such insectivorous species as the house wren and the vireos away from the vicinity of our homes, thus causing an apparent though probably not actual decrease in the abundance of a great number of others of our native species. In view of the recent discoveries of the part played by flies and mosquitoes in the transmission of disease, the driving away of such birds—particularly the above mentioned species of swallows, which feed very largely on such insects—from the vicinity of our houses and substituting a non-insectivorous species, cannot be looked upon as an advantage from an economic any more than from an aesthetic point of view. Though the starling is not by nature so pugnacious as the sparrow, yet it will come into far more direct and unavoidable competition with the American birds, and it does not follow that the species which will be most affected are those most nearly related to the starling—that is, the blackbirds. The birds which have been most affected by the coming of the sparrow have been those of different families, and in most respects of different habits.

It is probable that it is already too late to accomplish the extermination of the starling in America. Possibly it might be brought about by destroying the nests and the birds during the breeding season. But the starling is a clever and irrepressible bird, and if persecuted would soon become wary. An injudicious attempt to exterminate it by offering a reward for specimens would result in a great destruction of native species and in endless violations of the game laws, rather than in exterminating the starling. However, the task is not so hopeless now as it will be in a year or so more.

Of course what the starling is going to do in this country still remains to be seen. At present we can only judge from our knowledge of the habits and nature of the bird, and from the rapid progress it has already made in the short time that it has been here. There was nothing to gain and much to lose by introducing the bird, and the mildest way of putting it is to say that the experiment was such a dangerous one that it should never have been tried.

Whatever may be thought in regard to the possibility of still getting rid of the starling, there is not the least indication that any serious attempt will be made in that direction; at least not until so late that it will be a farce.

Already the bird has spread into several States, and what possibility is there of prompt and concerted action under our miserable system of leaving such matters to the control of the State instead of to the Federal Government? With all due respect to those who framed the Constitution of the United States, they knew nothing about either the preservation of valuable birds and animals or the protection against harmful ones when they left it to the State governments. The birds know no State boundaries. The system is just as sensible a one as it would be to leave the command of the contingent of troops furnished by each State in time of war to the Government of the State from which it came, and for the War Department to confine itself to experimenting with disappearing carriages and to compiling statistics.

W. G. VAN NAME.

The Bird's Strenuous Life.

MILHURST, N. J.—*Editor Forest and Stream:* A few days since when going near a fence of coarse wire netting, I found a sparrow hawk and a robin lying side by side, and both recently dead. I should judge that the hawk had been after the robin and the two must have struck the fence with force enough to knock the life out of each.

Two days afterward, while walking near a pine tree, I heard a robin peeping over my head. Looking up I saw it was hung on a string some two feet in length by one foot, and to the end of a branch of the tree some fifteen feet from the ground. By standing on a garden chair with a long-handled garden hoe, I pulled down the branch, which I broke off, and found the bird was fastened simply with a half-hitch by only the middle toe above the claw, and the other end of the cotton twine was wound several times around the branch near the terminal buds. When disentangled the bird flew away seemingly as well as ever.

A. L. LYON.

Owl and Skunk.

TORONTO, Canada.—In a conversation with Mr. Maughan, the Ontario and Dominion governments' taxidermist, he gave me the interesting information that all the great horned owls (*Bubo virginianus*) and even the large white owls (*Nyctea nivea*) that he has had sent to him recently, had a very strong odor of skunk. This is decidedly interesting, to think of owls living on skunks. One can imagine what a struggle takes place—the absolutely noiseless flight of the owls, the strike, one talon in the shoulder and neck and the other on the rump. The impossibility of the skunk to turn upon its assailant and the impossibility of the owl to either fly or let go, and there you are. How many skunks have been eaten by owls and how many owls have been eaten by skunks? Here is a midnight forest scene between two equally strong vermin that no kodak enthusiast has snapped and probably never will.

G. H. CORSAN.

Squirrels as Pets.

SINCE writing my letter on "Squirrels as Pets," last June, I have had to spend about $3 on postage stamps, informing individual inquirers that I am not a dealer in black squirrels, my few score specimens having been smothered by smoke through a fire in the stable next to mine. I think I mentioned the incident.

A gentleman from England writes to me, through your paper, on squirrels and their teeth. I have seen squirrels in and out of cages whose teeth were so curved through the habit of feeding or cracked nuts that they died. He will observe that when a hickory or black walnut is cracked the kernel is not entirely liberated, but can be scooped out with a curved tooth, and without grinding. Hence the temptation to be lazy results in the death of the squirrel. It is a great mistake to crack the nuts for squirrels, as they then grow fat, shapeless, and short-tailed, and, moreover, are too lazy to breed. By the way, black squirrels are very scarce in Ontario this year. I had the greatest difficulty in securing nine specimens for breeding purposes.

"Julius, the fox-hunter," is another correspondent of yours who thinks that I am in error. No such mixture as hare and rabbit ever occurred; nor frog and toad; nor wolf and fox. An egg bearing reptile, such as most snakes are, could not fertilize a copperhead, that has its young entire. The external appearance may be very similar between hare and rabbit, but the reproductive structures are entirely different.

Another of your correspondents asks if the black squirrel of Ontario is a gray squirrel suffering from melinism. I say, no. The shape of the tail is my proof, as well as certain differences in habits.

G. H. CORSAN.

TORONTO.

SAUK CENTRE, Minn.—I must side in with Hermit in regard to the red squirrel. I have strung out a line of meat-baited traps every winter for the last twenty-five years, and I do not know that I ever had a red squirrel take a bait. Ground moles and weasels are sometimes quite troublesome, also bluejays and moose birds. I have seen where many rabbits have been caught and partly devoured by owls, but never have I seen where a skunk has been killed by an owl.

Game Bag and Gun.

State Game Preserves.

Text of the New Connecticut Act Concerning the Establishment of State Game Preserves

SECTION 1. The Commissioners of Fisheries and Game shall have power to establish State game preserves, and to that end may, in the name of and for the use of the State, lease for the term of either twenty-five or fifty years tracts of woodland in this State suitable for the propagation and preservation of game and game birds; said tracts shall contain not less than 50 and not more than 300 acres, and shall during the term of said lease be and remain State game preserves.

Sec. 2. Said Commissioners may lease any tract of woodland pursuant to the provisions of this act which in their judgment is adapted to the propagation and preservation of game and game birds, and shall, upon the petition of five resident land owners of any town so to do, lease such tract of woodland as may be particularly described in said petition; provided, such woodland can be leased upon the terms of this act; and provided, also, that not more than two State game preserves have been previously established in such town.

Sec. 3. The owners of the fee of such tracts of woodland as may be leased under the provisions of this act, their heirs, executors and administrators, may alienate, use and enjoy such lands for all purposes, except the taking, capturing or killing of game or game birds, as fully as if said lease had not been made.

Sec. 4. Said Commissioners, in leasing any tract of woodland for a State game preserve, may include in said lease any piece of open land connected therewith, which in their judgment is necessary and essential to the propagation and preservation of game and game birds in such State game preserve.

Sec. 5. Said leases shall contain the usual covenants, a particular and detailed description by metes and bounds of the tract or tracts included therein, and the number of acres of each lessor, and when duly executed shall be recorded in the land records of the town in which the land described therein is situated, and the proof of such record, upon the trial of any person for a violation of the provisions of this act, shall be proof that the entrance upon the State game preserve was knowingly made.

Sec. 6. The State shall pay to the lessor of any State game preserve, and to the lessor of any part thereof, a sum not to exceed five dollars in full payment for the restrictions imposed upon said land by said lease under the provisions of this act.

Sec. 7. The said Commissioners shall, during the period when hunting game and game birds is permitted by the laws of this State, cause notices to be posted along the boundary lines of each State game preserve forbidding entrance therein; said notices to be posted at such places and at such distances apart as will in their judgment fairly warn all persons from entering upon such game preserve; but the failure to post such notices, or a removal or destruction of such notices after they have been posted, shall not be a defense in prosecutions under the provisions of this act, when the lease of such State game preserve shall have been duly executed and recorded as herein provided.

Sec. 8. The taking, trapping, snaring or killing of game or game birds in any State game preserve at any time is hereby prohibited.

Sec. 9. It shall be lawful during the closed season, but at no other time, to hunt, kill or trap foxes, skunks, raccoons, wildcats, minks, weasels, hawks and owls in any State game preserve. Any person who shall enter upon any State game preserve for any of the purposes specified in this section and shall trap, snare or kill any ruffed grouse (called partridge), quail, woodcock, pheasant, squirrel, hare or rabbit, or deer, or shall injure the nests, eggs or young of any ruffed grouse (called partridge), quail, woodcock or pheasant, shall be fined not more than $100 nor less than $50.

Sec. 10. Any person who shall at any time enter upon any State game preserve to hunt, trap, snare, net, pursue, kill or destroy or attempt to kill any ruffed grouse (called partridge), quail, woodcock, pheasant, squirrel, hare or rabbit, or deer, and any person who shall at any time in any State game preserve hunt, trap, snare, net, pursue, kill or destroy any ruffed grouse (called partridge), quail, woodcock, pheasant, squirrel, hare or rabbit, or deer, and any person who shall at any time enter upon any State game preserve to destroy or remove from the nests of any of the birds aforesaid any egg of such birds, or who shall destroy the nests or eggs of such birds, shall be fined not less than $50 and not more than $100. The detection of any person with a gun, trap or snare upon any State game preserve, during the open season, shall be presumptive evidence of a violation of this section.

Sec. 11. In case of conviction under any of the provisions of this act, one-half of the fine imposed by the court shall be paid to the informer.

Sec. 12. All the powers conferred and duties imposed upon said Commissioners of Fisheries and Game and the fish and game wardens by the laws of this State, not inconsistent with the provisions of this act, are made a part hereof, and may be exercised and discharged by said Commissioners and wardens relative to said State game preserves.

Sec. 13. All acts and parts of acts inconsistent herewith are hereby repealed.

Deer and Bear in Wisconsin.

Editor Forest and Stream:

Some have an idea that a wounded deer won't fight, but not the person who has had one in a position to know, or the person who has taken many annual outings in quest of deer and found them and secured them in many numbers, where at times he could successfully bring them to bay from a shot which, perhaps, only crippled them until they could be approached.

During the sixties my brother was a successful and apt hunter in Clark county, this State, where he could kill dozens during the season, using the old muzzleloader. On one occasion he dropped a deer at short range, and not taking time to reload approached the animal, which was struggling, and drew his knife to bleed it, when it gained its feet and made a charge at him. In less time than it takes me to note the incident a part of his wearing apparel was in shreds, and only for young saplings, which stood quite thick, which gave him a chance to dodge the repeated attacks of this vicious, maddened, spike-horned buck until he could draw from his belt the tomahawk which he carried, and after the third blow knocked the animal down, the deer would no doubt have been the victor. He was only "finned," shot through above the backbone near the shoulders, which sometimes only causes a paralysis or numbness of short duration.

In the fall of 1880 a party of four of us found that deer were seen around an unoccupied tract of land within thirty miles of this city. The season was then open in December. We spent less than two weeks in that locality, and came home with sixteen deer on our sleigh. Three other, wounded, got away. We did not use dogs, but still-hunted them, as there were favorable conditions—plenty of good light snow. One buck (and we now have his horns in the shape of a parlor stool) I dropped as he got out of his bed within six rods of me. When he fell he was out of sight. When within forty feet of him I saw him raised on his front feet, facing me, ready for battle. He was shot through the back and could not get away. His eyes were like balls of fire, and his hair bristling toward the head, and stamping with his fore feet he defied nearer approach. I started to walk around him, getting nearer, until I came very close to him, while he tried his utmost to drag himself and attack me. I was ready for him with the then new-fangled pepperbox, as it was jokingly called in those days, the 15-shot Winchester repeater. With this same kind of a gun a schoolmate of mine in younger days, Elder David Downer, an expert glass ball shot, until his death some five years ago was a hunter in our northern counties, and I'll tell the FOREST AND STREAM readers what he did one day when out hunting. You may think it a good story, and so it is; but the person who was with him, Mr. Sargent, of Stanley, Wis., is yet alive to vouch for the statement, as he helped dress the deer at the time the Elder killed them, which was some ten years ago, near Cable, Wis. I have had it from the lips of Elder Downer, who was not more prone to large stories than other ministers; and also from Mr. Sargent last fall at his daughter's, where we were staying during our hunt, which was in Taylor county, Wis. It came about in this way: These two gentlemen were out one day, had separated to make a little tour, and were to come together again. Shortly after their separation the Elder heard sounds of deer jumping. He soon discovered that they apparently were coming in his direction, which was on a little ridge. A deer came out of a thicket along a runway where there was a fallen tree, which it had to jump, which then brought it in view of the Elder's position, and while it was in the air his gun cracked, and was instantly reloaded again, when another deer made the same jump. They kept on coming until five shots had been fired at about a distance of eight rods. As no others came in sight the Elder went to the place and found four deer lying on the ground nearly in a heap. The fifth was found some twenty rods away, dead. Two bucks and three does were the result of less than two minutes' work. It is a well-known fact that these creatures usually run in file, one following the other. It is the chance of a lifetime of few persons that such incidents occur.

Well, as some readers are interested in diversified sports, we will give them one on bears. The incident took place near Cox, Taylor county, Wis., in November, 1899, near the house of Mr. and Mrs. Charles Little. A party of us spent our outing last fall with the same genial family, and the person, Mr. Sholts, from near Palmyra, Wis., who was there for his health, had been the principal in the contest the year before. He was then in such low physical condition that only on pleasant days could he get along the roadside within a half mile of the house. He had already shot with his rifle two deer from among the cattle, which were in a small field near the house, and having taken his shotgun, he went out one day for a few pheasants. After getting only a few rods from the house, he said he had a foreboding that something would happen. He returned and gave Mrs. Little his purse, saying he had queer feelings. Then he took three buckshot cartridges and started down the road, in sight of the house, where there was a cross road with a brushy thicket. He had just entered the thicket when he caught sight of a bear cub. He changed from fine shot and put in buckshot, as his gun was a breechloader, and shot the cub dead. Then he went up and bled it, and while he was doing this another cub came in sight, which he shot and wounded. It then put forth such a cry that the mother came to its rescue and started for him, when he let her have the contents of the other barrel, with the last load of large shot, which killed her. The scene that followed was the one that shocked the old hunter the worst. The fourth bear—the old male one, nearly as large as a cow—had espied him and was making for him, only a few rods distant. Only one barrel was loaded and that with fine shot, which he let the bear have in the head and eyes, and while the old fellow sat up, rubbing his eyes and face with his paws and crying, Mr. Sholts went around the thicket and wended his way slowly back to the house in a completely exhausted condition. Mrs. Little and daughter being at home had heard the shooting, and as soon as they were informed by Mr. Sholts of the encounter, they got some neighbors together and went to the place and found three dead bears. The day following dogs and men followed the one shot last, but lost the trail without getting him. O. S. S.

LA CROSSE, Wis.

Massachusetts Association.

68 DEVONSHIRE STREET, Boston, May 20.—*Editor Forest and Stream:* The Massachusetts Fish and Game Protective Association held its last dinner meeting of the season at the Copley Square Hotel on Thursday evening, May 16. There was a very good attendance considering that several of our most active members are away on fishing trips, as is always the case at this time of the year.

The announcement that Hon. J. R. Thayer, of Worcester, would speak on the benefits of hunting and fishing to people of sedentary habits awakened an interest among our members to hear what the distinguished Congressman and President of the Worcester Fur Company might say.

After speaking in commendation of all outdoor sports as tending to develop muscular energy and alertness, and to counteract the natural tendency to inaction and laziness as people advance in years, he pictured in glowing colors the excitement incident to fox hunting as well as the delight with which after the day is over the participants in the hunt rehearse the events of the chase.

Mr. Thayer put in a plea for "the under dog," as he characterized the class of sportsmen who can hunt and fish only on Sunday. He said that in his opinion the golden mean between open and flagrant violation of Sunday and a moderate indulgence in sport in secluded places where no one would be disturbed by the firing of a gun was a matter difficult to attain by legislation.

The too rigid enforcement of Sunday laws, he said, might provoke a reaction that would be disastrous to the interests of protection, and it would be the part of wisdom "to wink" at some things.

Mr. A. B. F. Kinney followed with several anecdotes touching upon his observations of Mr. Thayer on various occasions and which he characterized as "founded on fact," and excited a good deal of merriment on Mr. Thayer's part and of all those present.

President Reed presided with his usual facility and reported for the committee to purchase and distribute quail that twenty-three dozen had been sent out to fourteen localities, and that reports from the recipients showed that about 90 per cent. reached their destination in good condition.

There were fifteen names proposed for membership, and the candidates were elected as follows: Ezra C. Fitch, Waltham; Dr. M. A. Morris, Charlestown; Charles E. Dresser, Leominster; H. W. Abbott, Boston; Frank Fallon, Medford; George B. Dodge, Boston; Nathaniel C. Nash, Boston; Wilbur F. Blake, Wollaston; Dr. Wm. Sturges Bigelow, Boston; Z. T. Hollingsworth, Cohasset; Edward L. Osgood, Hopedale; Charles H. Taylor, Jr., Boston; Dr. I. M. Lovett, Boston; Paul Butler, Lowell; Charles Bradbury, Boston; Charles C. Richards, Boston; John Read, Cambridge; Edward Read, Cambridge; R. Wilton Lockwood, Boston; Charles C. Clapp, Boston; O. R. Dickey, Wellington; Wm. O. Taylor, Boston.

H. H. KIMBALL, Secretary.

Death of Guido.

WE regret to learn of the death of W. A. Wheatley, of Memphis, Tenn., who as Guido was widely known to the sportsmen of this country by his contributions to FOREST AND STREAM. This is the estimate of him as written by one who knew him well:

"Few men in Memphis could claim so many close and enduring friendships as this quiet and genial-hearted gentleman. He cared little for general society, preferring the companionship of his intimates, but to them his association was a rare pleasure. Highly educated and cultured in his tastes, he was a rarely good talker and as a raconteur he had few equals. In other years he was ardently devoted to field sports, but of late he had been compelled to abandon those cherished enjoyments. It is perhaps safe to say that Mr. Wheatley was absolutely without enemies, and by his friends he will be remembered as a brave and gallant soldier and a most courteous and honorable gentleman."

CHICAGO AND THE WEST.

The Minnesota Pine Lands.

No one interested in the success of the Minnesota park project need let his heart be troubled. There is an exceedingly strong likelihood that we shall see in Minnesota forest reservation, although it is not likely that there will be any Congressional junket for the purpose of investigation. Upon the contrary, there is very likely to be one of those deadly still hunts, undertaken by one or two officials who are strictly in earnest and who will go to the bottom of the facts regarding the timber on the Indian reservation in Minnesota. Col. John S. Cooper, of Chicago, is as blue eyed and as enthusiastic as he ever has been in regard to the success of this movement for a Minnesota park. He seems to be the real agent, specially appointed by fate to see this thing through. The Minnesota park ought to be called the Cooper Memorial Reserve.

Every year and every month the dishonest and disgraceful actions of the lumbering companies on the Minnesota reservations come more and more into the full light of day. After awhile we shall come to the truth regarding the way the property of the United S ates and the Indian tribes has been handled in Minnesota.

The following is the latest news from Minneapolis on this question, sent out under date of April 20:

"The Journal to-day prints a page report of its investigations into the depredations on the Chippewa Indian reservations this winter by logging contractors under the 'dead and down' act. In almost every camp quantities of green timber have been cut. In many instances the logging contractors openly admitted illegal cutting. The special Government inspectors found that out of 49,000,000 feet cut this winter 9,000,000 feet has been illegally cut.

"Joseph R. Farr, the special inspector sent to investigate by Indian Commissioner Jones, has forced the lumbermen who buy these logs of the contractors to pay for them at $11 a thousand, thus securing for the Indian fund $100,000 extra.

"Captain W. A. Mercer, the Indian agent at Leech Lake, has closed up several camps entirely. He and Mr. Farr have gone to Chicago to report to Commissioner Jones."

The Value of the Outdoor Air.

It should not be forgotten that one of the most prominent influences brought to bear in this movement for the establishment of the Minnesota park is that wielded by the State Board of Health of Minnesota in its attempt to establish a forest sanitarium. A wilderness of blackened stumps does not appeal to the invalid as does the wilderness of the cathedral pines, covering a floor carpeted with soft and odorous needles, and carrying in their boughs the whisperings of rest and comfort. There is medicine in the outdoor air, but first you must get the ailing person out of doors. No man can measure the value which this Minnesota park would have for the strong or the weak, the healthy or the ailing of the people of the country. To an unprejudiced mind it might seem that the welfare of these many handicapped ones should not be placed second to that of the financial well being of lumbermen who have already enough of this world's goods.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Connecticut Adopts the Plank.

NEW LONDON, Conn., May 14.—*Editor Forest and Stream:* The Legislature has enacted a law providing that for two years no person shall sell or have in his possession to sell any ruffed grouse, called partridge, quail or woodcock. For such an offense a fine of $50 or imprisonment for thirty days or both is ordered.

The Legislature is made up by a large majority of farmer representatives in House and Senate, and this is a very strong indication that our farmers do think. The market-hunters who infest every village and hamlet of the State, in conjunction with the Game Dealers' Association, have nearly exterminated the game as well as other birds, and the farmers have voted a halt for at least two years. There was a strong opposition, and we owe the success of the measure to the sturdy defense of the Hon. Arthur B. Calkins, chairman of the Committee on Fisheries and Game, and his committee, made up of intelligent men. Mr. Calkins is every inch a true sportsman, and has earned the lasting praise of the sportsmen of not only Connecticut, but the whole Union. He has struck at the root of the whole evil of game bird extermination—the sale and marketing of game. Stop the sale of game and it will increase.

JAMES H. HILL.

To Go Around the World.

THE folder recently published by the Pennsylvania Railroad Company announcing its fourteen round-the-world tours is a novel marvel of interest and information. These tours take the traveler from Washington or New York to San Francisco, Japan, China, India, Italy, France, and England, and back to New York; or from San Francisco, through the South Sea Islands, to Australia, Northern Africa, Italy, and England, and so home again.

The folder is intended primarily for use abroad, so that travelers from Great Britain and Europe may learn how to see the most of this country, and having done that, to return by way of the East to their homes.

The great map which accompanies it is a superb piece of mapmaking, and must interest every one who sees it. The cost of railroad and steambship fares, including meals and berths on a steamship, ranges from $642 to $680, and the time limit is twelve months from the date of sailing. It is truly said that considering the accommodations on shipboard included in the rates named, it would almost seem cheaper for a person having sufficient leisure to make a trip around the world than to stay at home.

These folders can be obtained at any of the principal ticket offices of the Pennsylvania Railroad Company.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

A Summer on the Severn.

To the one who takes his summer outing each season it is a hard matter to tell when vacation begins and when it ends, for one anticipates the pleasures of the one to be and lives over and over again all the charms of the many vacations past and gone. Still there are special events of unusual interest that serve as anchors for many minor events that go to make up our recollection, and if asked when my last vacation began I would say the second Saturady of last June, when Mart Kinzer, an interesting boy of 15, drove me eight miles into the country for moss to pack angle worms we expected to gather later in the month. We drove north and soon saw far to the rear the smoke hanging over grimy Pittsburg like the mantle of blackness that hangs over Mt. Vesuvius.

Our journey ended some eight miles out, and hard by was a large carp pond and two poachers were busy seining the same.

They had taken in their nets about a hundred carp and had them nicely concealed in two large milk cans. None of the fish would go a pound and most were mere minnows. Those ruthless robbers bemoaned their hard luck. The older one said three years ago he had seined the same pond and taken 100 pounds at the first haul.

On a fine sloping bank we gathered two bushels or more of fine moss and at noon we sat down under a big black oak tree to lunch. Mart said, "if there is one thing mamma can do well it is the putting up a nice lunch," and the contents of that basket showed Mart was right, as the boy usually is. We unharnessed Bob, fed him and watered him, and then strolled up a valley full of ferns, flowers and birds' nests to a spring that came out of the rock by a gnarled old birch tree, where we had a fine drink; and also the chance of seeing at close range the pranks of a pair of "Kentucky cardinals."

The drive home ended the first series of events immediately prior to our summer outing. The second series came a week later. All day we had warm showers, and a drenching rain at nightfall. I borrowed Dr. Lucas' lantern and my boy and I went out in search of the big angle worms that come out on the grass after dark after a rain. The ground was covered with them. Worms eight and ten inches long, and as thick as a lead pencil. Now there is real sport in catching these worms. They lie with one end of the body in their holes and quick as a flash they can dart down in. It requires considerable skill to catch them. I had a patent bucket full of worms by midnight and by 2 o'clock we had caught nearly 5,000 worms. These we carefully packed away in the green moss. The worm feeds on the moss, and will live for months if moss is changed and kept moist.

I saw many toads out hunting worms. It was laughable to see toads tugging at the worms and struggling to haul them from their holes. Garter snakes are very fond of these angle worms and like the proverbial early bird may be seen in the morning hunting them. One snake ate a great part of a bucket of bait we kept in our tent in Canada. He secreted himself in the moss and lived at his ease. These worms we carefully sorted, throwing away any that had been broken or injured in catching. The balance we packed away in the moss. These worms are the best bait I have ever found for bass or pickerel. I have used them for years in Canada and know of no better bait—convenient to carry, easy to put on hook, and the most effective bait I ever found.

These preliminary pleasures and the purchase of additional hooks and snells, sinkers, etc., finished the first section of our summer outing, and on July 8, the Rosselle Fishing Club met at the Allegheny station of the Buffalo, Rochester & Pittsburg Railroad. The party was headed by Captain R. C. Beatty and wife, Messrs. Yockie, Prof. R. M. Martin, Miss Ada Martin, Lester M. Brobeck, W. C. Price, George M. Meanor, J. H. Kinser and wife and son, Martin, Thos. Hauser, Miss Campbell, Miss Rhein, Miss Distler, Mrs. Campbell, Miss Annie Campbell, Mr. and Mrs. John Graebe, Miss Hawes, Dr. Rosselle and wife, and about twenty others.

This was a new route for every member, and we were all uneasy about delays and dangers of new lines; but in this we were disappointed. We all voted it the most desirable way of reaching Buffalo. At midnight we were at Reynoldsville and were soon climbing the Allegheny mountains. The moon was full and the mountains were flooded with mellow light, reminding one of dreams of fairy land. At 4 A. M. we were at Mt. Jewett—just at daybreak. This is 3,000 feet above the level of the sea and the air was clear, cold and bracing. Far down the mountain we could see what we decided were lakes, but the conductor informed us was fog.

The sun was soon up and these old mountains, that geologists tell us are so old that wind and water have worn them away until they are mere shadows of their former selves—mere stumps—were radiant in the sunshine.

In a short time we were coming down the other side of the mountains, gliding in and out of the valleys like a great serpent. Everywhere may be seen oil derricks in various stages of construction and decay—some rotted down, some new—and the brakeman informed us we were in the world famous Bradford oil field.

Some trouble with a valve on the engine caused us to stop on the mountain side and I went over and examined the minnows in a mountain stream and was rewarded by seeing some small trout. I got to understand that all these streams had once been famous trout streams and good creels may still be taken from these mountain streams in early April.

Passing Buffalo we were soon within the sound of Niagara and its delicious green-colored water, and the wondrous beauty of the falls would have fain enticed us to stay; but nothing could woo us from the visions of bass, pickerel and muscallonge of northern Canada. At 11 A. M. we left Toronto over the Grand Trunk Railroad and at 2:08 P. M. we came to our destination at Severn station, 10 miles due north from Toronto.

Our hearts were soon gladdened by a sight of the Severn River. The dear old river we hadn't seen for a year, and we greeted it with a shout of gladness; for on its banks and in its shady pools I have spent many a delightful season and every bend, yea, every shady nook from the station, five miles down to Sparrow Lake, was dear to me. The next day or two I spent in varnishing my boat and repairing my tackle and getting ready to angle in earnest.

Monday morning early I was out fishing for bass at the mouth of Grass Lake, and in a short time I had taken four or five bass and some nice pickerel. These I took to Bennett's and had for breakfast. In the afternoon I went trolling; in fact, I am too restless to stay in one place to fish. I very much prefer to be moving about and for this reason trolling specially commends itself, and the methods of taking fish this way are varied and afford the earnest angler abundant opportunity for studying out new devices for luring his quarry to doom.

I have never fished much anywhere else than in northern Canada and mostly in this Severn River region. For many years I have fished the Severn River and Sparrow Lake and always found enough fish to reward an earnest effort, and the hope of an unusually large muscallonge has kept me out in the sunshine and fresh air and has been to me a boon in the way of health and strength.

This Severn River drains Lakes Simcoe, Lake Couchiching and Sparrow Lake, and after numerous water-

CAMPING ON THE SEVERN.

falls empties into Georgian Bay. All the way from Lake Couchiching to Glouster Pool there is fine fishing, and perhaps as good muscallonge fishing as may be found in Canada. Above Sparrow Lake there are two swift currents, where I have whiled many an hour away in trolling, and since trolling seems to suit the taste of so many anglers, I will here say a few words about the method that seems successful.

In fishing from a boat I row up stream very, very slowly, with a live frog for bait, or a minnow. I usually have out forty or fifty feet of line and keep the bait moving and far away from the shock of the oar, and I try to row with as little shock as possible. Always work your bait in around any lodged drift or exposed rocks. In the journey up stream I more frequently take bass than any other fish. In drifting down I do not use the oars only to steer and use a large live angle worm and drift down stern foremost. As a rule fish lie with their heads up stream and catch their food as it drifts toward them. After a steamer has passed I have found they bite unusually well. These two worms and frogs are my standard baits, although there are days when minnows are better, and again grasshoppers and crickets are best. Every angler should keep as large an assortment of baits as he can; for bass are rather choicy at times; but for every day fishing no bait beats the large angle worm. I do not mean the one you dig in the garden, but the large one that crawls out on the damp grass at night, and especially after heavy warm rains. No one who has not hunted for them has the faintest conception of the vast numbers that may be gathered. I fancy nearly every cubic foot of soil in the bottom lands of Pennsylvania passes through the bodies of these angle worms once in every two years, and the angle worm is certainly the farmer's most faithful friend in pulverizing the soil.

I can hardly pass by without emphasizing the importance of gathering these worms when the opportunity presents itself during wet weather; for in dry weather it is impossible to get them except by wetting with hose lawns or garden spots, which is much more troublesome than gathering after a warm rain.

In trolling with hook and line the slower you go the better; and the quieter you handle the oars the better are your chances; if possible, don't jar the water at all. Fish cannot hear, but are exceedingly sensitive to jars. The only inconvenience is the frequent fouling of your line; but by rowing back it usually comes free; or a very small piece of cork fastened to the hook by a thread will usually float the hook over the rocks. A file of very fine serrations should always be carried and hooks need frequent sharpening. I am satisfied many fish are lost because of dull hooks.

Occasionally you catch a fine muscallonge and then you have an experience long to be remembered.

Last summer my wife and I were trolling around the mouth of Grass Lake and had taken some fine bass. Finally I hooked a small bass and as I drew him to the boat he got off and just as he did so a magnificent muscallonge darted for him, missed, but grabbed the frog I had for bait. I let the line run out fully forty feet before I set the hook. When the fish felt the pain of the hook he vaulted two feet clear of the water and turned clear over. He then started for some tree tops, but I turned him to deeper water. I had a very light silk line and was afraid his teeth would cut the line and cause me to lose my prize. I handled him as lightly as I could, putting very little pressure on him, and when he drew alongside I saw the line was cut to a shred. A blow with the boat paddle dispatched him and I lifted into the boat a 10½ pound 'lunge, the finest of the season for me.

A few days later I trolled the current below, keeping my hook close to a reef of wild rice that fringed the shore for 200 yards or more. I hooked the largest bass I ever saw outside of a fish market. All the boats drew alongside to see the capture. After fifteen minutes' play the big fellow broke and made off. He would have weighed five pounds at least, and my disappointment was greater than his size. Last season I had more than my usual luck with large bass. Three days after the above experience I hooked a very large bass by some shelving rocks—our boat was passing a lodged stump. The big bass was in plain view, for the water was shallow. We saw him dive again and again into a bunch of grass that grew on the bottom. Whether he caught the weeds and pulled them loose with his mouth or not the water was soon full of floating grass that had been pulled loose by the bass. After a long, hard battle, Mr. Kinser lifted him into the boat. A few moments later my friend Kinser hooked another beautiful fish and he manipulated him in fine style and I netted him just as a party of tourists passed up the river in their canoes. I held up the pair, saying, "What do you think of them?" "They are the finest I ever saw, and I've caught hundreds," said the leader." The two weighed over seven pounds—the larger weighing four pounds.

In Deep Bay at Sparrow Lake, one week after, and a few days before I left Muskoka, I hooked another that weighed 3¾ pounds, and another 3½. These are the largest I have ever caught and were larger bass than any other member of our party has caught in the Sparrow Lake region. A Pittsburger, a Mr. Douglass, caught a bass that weighed 7½ pounds. These are all small mouthed variety. This 7½ pounder is the record for size so far as I know.

Sparrow Lake and Severn River are both well fringed with reeds and wild rice. This cover is choice cover for the lordly muscallonge, and trolling with a copper spoon is splendid sport if you can have some one to do the rowing, otherwise it is laborious.

I have always had best luck trolling with a small copper bait and keeping the boat going lively and very close to the weeds. Your file will here come very handy for trolling hooks seem easily dulled, and a muscallonge has a hard, bony mouth, and a sharp hook is a necessity. In August, 1899, I took seven fine fish in a couple of hours; but I never again found muscallonge so ready to bite. I had that day a copper minnow, with a gang of hooks, and above I had a copper spoon fastened. The bait was fully eight inches long, and was a curiosity. I am of the opinion that during the last half of July and early August it is wise to bait the troll with either a large green frog or live perch. During this time the 'lunge have sore mouths and seem to prefer live bait and the scintillating spoon attracts them. A little silver polish applied each hour or so during time of trolling helps your chances greatly. I learned this trick from the Chippewa Indians.

I have frequently known muscallonge to swallow bass that were on stringers and when anglers were playing bass 'lunge frequently take them.

Some time during last August there was quite a party of us fishing in Deep Bay, a branch of Sparrow Lake. Mr. Hill and his wife were fishing in a bay and had caught several bass, which he fastened to a stringer and dropped them into the water to keep them alive. My wife and I were fishing hard by when we heard the most unearthly screams. It seems Mrs. Hill was holding the stringer when a thirty pound 'lunge swallowed the largest bass on the string and tried to pull Mrs. Hill out of the boat. Mr. Hill shot it with his revolver, but didn't kill it. It disgorged the bass and got away. The poor bass had its head almost torn from its body and several angry gashes down its sides. In its efforts to free itself it had drenched Mrs. Hill with water.

I had always considered that only experienced anglers were licensed to catch this noble fish with impunity; but this notion was set at naught last summer by a mere tyro, J. B. Coen, a Pittsburg business man, who had hardly wet a line until he landed a 7 pounder and a few days later his wife took a 15 pounder. We all adivsed him to have it stuffed, as he would never get another so large. He took our advice and sent it to Orillia to be mounted, little dreaming how much better things were in store for him.

The following day, Thursday, Dr. Rosselle, Rev. Miller, Coen and I went to the Ragged Rapids, some fifteen miles down the river. After carrying our heavy boats a quarter of a mile around the McDonald Rapids we learned our labors were lost, for we might just as easily have floated down, for a dam at the Ragged Rapids had backed the water over the falls. All our fishing grounds were flooded with water and the fishing was the poorest I ever struck in this region; but on the following day there came a genuine surprise. On our way home, between McDonald's Chute and the first falls, it began to rain. At the foot of the rapids we drew our boats ashore, turned them upside down, crawled under for shelter and ate what remained of our provisions. In front was a fine circular bay, fringed around with wild rice and rushes, an ideal lair for a 'lunge. Presently fish began to break water, sending out concentric rings in ever-widening circles. To think of wasting time eating when one might be fishing seemed great prodigality to Mr. Coen, and by the time a second fish broke water Mr. Coen exclaimed: "Boys, this looks too fishy to be wasting time," jumped into his wet boat and pulled away in the rain paying out his troll as he went. Fifty yards out I saw him scrape off a lot of weeds from his troll and he had not gone five rods more when lo! about five feet of fish flung itself from the water and we heard the splash on the shore. Coen was rowing with his line in his teeth. The fish jerked loose and we saw his pine shingle wrapper scudding up the river with Coen in full chase. He recovered his line and then there they had it out for fifteen minutes, when Dr. Rosselle haunded him a gaff and he hauled in a fish that tipped the scales at 30 pounds and was 47½ inches long. We again looked wise and advised Coen to have it mounted, which he did.

When Coen came home to camp carrying his captive with him, he was soon the center of an admiring host, and that lucky angler received honor and compliment that would cause Edward VII. to wonder. Among the throngs on Sparrow Lake his name was likely unknown, but the fact that he had caught the largest 'lunge for many moons was uppermost in their minds, and we quickly gave him the honor that was due, and from that time—for his name was Rabboni.

The season was now well spent and had been the most delightful of the many our party had spent on the Severn. When my mind goes back, oh, what delights each day did bring! Fishing, exciting and enchanting, for morning and evening; bathing at Monahan's Point in the afternoons; boating and singing by moonlight, and as each day dropped from the calendar we felt one more jewel had fallen into the sea. Pleasant as it is on the Severn River it is hard to go home without making the trip around Muskoka lakes, which are among the most beautiful in the world. The cool ozone laden air is so fresh and bracing it blows wrinkles away, and though old you feel young.

The journey from Muskoka Wharf down through the narrows to Bala Falls for pleasant scenes of both land and water is rarely equaled and never excelled. Everywhere brown rocky terraced islands, covered with Douglas pine, gay with the flags and banners of happy-hearted campers, and from Bala up through the shallow Indian River through the locks of Port Sanfield and Port Cockburn and return, completes as pleasant a tour as may be found. No tourist who visits the Pan-American Exposition should fail to see one of the fairest spots in the domain of Edward VII.

On Aug. 26 E. S. Bennett hauled us on his hay wagon to Severn Station, Grand Trunk Railroad, and shipped our bodies to smoky Pittsburg, but our spirits remained lulled to a dream of peace by murmuring pines, tinkling brooks and tumbling water falls.

JAMES M. NORRIS.

Rhode Island Waters.

PROVIDENCE, R. I., May 10.—*Editor Forest and Stream:* Tautog have struck in down Narragansett Bay and during the past week several large catches were reported, especially from the vicinity of Conimicut Point. From present appearances tautog will run larger than usual this season. Their appearance is somewhat later than last year, which is attributable to the cold weather.

The Barrington Town Council, on Monday afternoon, passed an ordinance prohibiting fishing on Sunday at the "Fish Ditch," in the highway, at the foot of Prince's Hill. On Sundays of late the banks of the ditch have been alive with anglers. There is really good fishing in this ditch, as fish come up from the river to spawn, and for this reason there are plenty of them. The new ordinance does not affect fishing on any week day, so that anglers will have plenty of chances to enjoy themselves.

The State Commissioners for the enforcement of the lobster law have given notice to the Newport fishermen and dealers that after Wednesday they will rigidly enfore the law. They will board craft and demand free inspection wherever they will, and if opposition is offered will be prepared to use force. They made special visits to the Greek fishermen, who, it is charged, have been the chief offenders, and the general feeling is that they mean business. This impression was so strong that immediately after the notice was issued "shorts" were selling as low as a cent each, and there was a general hustle to unload, while a buyer of these unlawful goods from Tiverton failed to put in an appearance. The fishermen in general are much pleased over the situation, for they declare that now the lobsters will have some chance to grow and multiply.

James Reynolds was arrested at Pawtucket last week for trapping yellowbirds. He was arraigned on a warrant which specified two birds, although he had eleven in his possession when placed under arrest by Officer McGlowe. He pleaded guilty, and was fined $20 and costs. The birds were released by the police.

In accordance with an act passed at the last session of the General Assembly the commissioners of inland fisheries have appointed three deputy commissioners whose duty it will be to see that the laws are more highly enforced. The deputies named are William T. Luth, of Newport; Edward M. Kelley, of Newport, and George W. Griffin, of Wakefield.

Trout fishing has been almost spoiled by the heavy rains of the last month. The streams have overflowed their banks, and fishermen can't get near enough to the fishes' haunts to hold any intercourse whatever with them. Another trouble to the angler is that the floods have washed down so much good and dainty food to the trout that they would hardly think it worth while to consider a store fly or any other kind of bait. No catches that could be exaggerated into making a good story have been heard of so far, but anglers say that inside of two weeks with, good, warm weather and receding streams, there ought to be some sport again.

W. H. M.

ANGLING NOTES.

How Little Water Can Trout Swim In.

ON Monday a gentleman wrote me saying he had two ponds, artificial, which he intended to devote to trout, and desired to connect one with the other by a channel that trout could swim between them, and he wished to know how little water it would take for a two-year-old trout to swim in comfortably. As a two-year-old trout is just about as big as a piece of chalk, that part of the question was easy, but I really do not know the depth of water a trout would regard as comfortable to swim in, and for this reason: On the Saturday before the Monday I was with a foreman of a hatchery looking at some trout fry in some fry ponds, the water flowing finally into a box supplying a pipe to other ponds, and the waste water passed through a spillway into a wild pond. The spillway was about 14 inches wide and perhaps a foot high at the sides, and from the end this water dropped fully 18 inches, perhaps 20 inches, to the surface of the pond. As we stood on the cover of the reservoir box looking into the spillway we saw a trout in it, and it may have been two years old, also it may have been only a yearling, for it had jumped up from the wild pond into the spillway, and appeared to the eye to be about 9 inches long. The water was so shallow in the box that the trout was from one-third to half its depth above the water, but occasionally it turned from side to side, immersing its body completely. This was a deliberate motion, as if to keep the exposed skin wet; then there was another motion as if rubbing its belly and sides on the bottom of the box, and perhaps that was what it was doing, cleaning its sides of slime. After watching the fish for some minutes I brought my heel down on the boarding and the trout swam up and down and across the spillway as rapidly and as easily as though it had been in water a foot deep, and finally out of the spillway into the pond. The water on one side of the spillway was deeper than on the other, for on the shallower side the water barely covered the green mould, so that in its efforts to escape it was at times almost entirely out of water. Whether this was comfortable or not I cannot say, but the fish made lightning darts with its body partly in the water and sometimes almost entirely out, with the same facility and apparent grace displayed by a fish which swims in waters that are over its head and its body.

Tarpon and Shark.

To be chronologically correct, on the Sunday between Monday and Saturday already mentioned, I was spending some time in the studio of Mr. Chas. F. W. Mielatz in New York city looking over drawings and paintings and etchings, all relating more or less to fish and fishing, when the artist put before me a black and white drawing of a shark that had risen and seized a tarpon which an angler had previously filed a claim to by hooking it, and this reminded the artist of a story. Mr. Mielatz had gone to Florida for the fishing, and to make studies of the fish to be transferred to canvas later. Camped at Captive Pass, he had been attracted by the tarpon jumping from the water one moonlight night, and had gone out in his boat for moonlight fishing for the big herring. He said he had hooked and killed a small tarpon (the manner in which he mentioned the size of the fish was not really contemptuous, but it caused me to ask what he called a small tarpon, and he replied about 50 pounds, and so I record here what a small tarpon is supposed to weigh by those who seek the giants and are on familiar terms with them) and lashed it to the gunwale of the boat to keep the fish in the water and its scales intact, that he might make a drawing of it in the morning. Seated in the stern of the boat, he finally told his boatman to row to camp, and taking the cord by which the little tarpon was fastened to the boat, towed the fish behind. He heard a hissing sound as though a naphtha launch, which had been seen in the pass, was approaching and he turned his head from side to side to locate it, when suddenly he was startled by an exclamation from his boatman to "Look out!" Then for the first time he looked behind him, and in the water, and saw the great dorsal fin of a shark cutting the water as though the Empire State Express was propelling the fish but it was too late, for the shark had the tarpon. However, Mr. Mielatz stood by his guns and pulled as the shark seized, and actually recovered his tarpon, but in such shreds and ribbons that it was only fit for Indian basket work.

Tarpon in Colors.

It is twelve or fourteen years since my friend, Mr. Harry Allchin, did a tarpon in black and white that was considered a perfect drawing of the fish in form and action. Since that day I have seen a great many drawings of tarpon in all sorts of positions, but never one in colors that I was actually enamored of until Mr. Mielatz placed on the easel on the Sunday aforesaid a water color of a hooked tarpon leaping from the water. The coloring suited me exactly, and the scene of the fisherman, the boat, the water and all was so characteristic of tarpon fishing that though I am not an apostle of tarpon fishing, when my friends come into my den to talk fish and smoke a cigar, I will show them this picture on my wall.

Tarpon in Rough Water.

When tarpon fishing was a new form of angler's relaxation, it was the thing to cast a baited hook overboard and wait for a tarpon to come along, stand on his head and take it, provided he came along at all. This uncertainty and waiting did not lend a charm to tarpon fishing, and to-day the tarpon fisherman in swift water rather turns up his nose at the first form of tarpon fishing. At first the tarpon was allowed to swallow the hook to get it in his gullet, as it was believed that a hook would not penetrate the bony structure lining the head and mouth of the fish. Now the strong water tarpon fisherman casts his bait and strikes, or rather the fish does this part of the work, and the hook does penetrate the bony lining and the fight is on from the moment the bait is taken, but the hooks wears a hole in the bony structure and many fish are lost in consequence, but the angler has a fight more or less prolonged even though the fish is lost in the end. Mr. Mielatz tells me that often this hole is as large as a silver dollar when the fish is gaffed, so no one can tell the size of the hole in the fish that gets away. Let no one criticise the pictured leaps of a hooked tarpon, for Mr. Mielatz showed me a number of snap shots that he had taken with a camera of the fish when hooked and leaping. They were straight in the air, head to the zenith; they were belly up and back up; they were curved in all sorts of curves; they were head down and tail up, and they were coming toward the camera, so that little could be seen of them but an open mouth like a cavern, and an undefined something behind it. One snap shot showed a leaping fish with his head hanging backward as though its vertebrae had been severed back of its head. In fact the camera showed them in what otherwise would have been called impossible positions for a fish to be in.

Landlocked Salmon in Lake George.

Several letters have come to me asking about the landlocked salmon fishing in Lake George this year. I have not been in a position to learn much about it, but I have heard of three being killed and one being hooked and lost. It would not pay any one to go to the lake for salmon alone, but if content with lake trout fishing with the possible chance of a salmon, the visitor may be sure of the trout.

A. N. CHENEY.

Food of Sea Lions.

From Science.

THE California State Board of Fish Commissioners during the past two years has taken steps to kill off a very large number of sea lions on the California coast, on the ground that these animals are highly destructive to the salmon fishery. The President of the Board, Mr. Alexander T. Vogelsang, claims that it is not the intention of the Board to exterminate the sea lions, but merely to kill "10,000 of the 30,000 that now infest our harbor entrance and contiguous territory."* The opinion of observers familiar with the sea lion rookeries is that the number of animals has been greatly exaggerated, and that long before Mr. Vogelsang has killed the contemplated 10,000 there would not be a living sea lion left on the whole coast. Already many have been killed, and, unless public sentiment is aroused to check the movement, some of the most interesting rookeries of the State are in danger of depletion. The Fish Commissioners have employed men to shoot the sea lions, and are loud in their lamentations because the Government lighthouse reservations have not been thrown open to the slaughter.

The local fishermen, the State Fish Commission and others assert without qualification that the sea lions feed extensively on salmon, and the inference from their statements is that the animals subsist chiefly, if not entirely, on fish. A few years ago, when similar complaints were made against the fur seals, I took the trouble to examine the stomach contents of a large number of these animals, and found to my surprise that the great bulk of their food consisted of squids, hundreds of whose beaks and pens were found in the stomachs, while in only a few instances were any traces of fish discovered.

In 1899 a well-known naturalist, Prof. L. L. Dyche, of the University of Kansas, spent the months of June, July, August and September on the California coast, at a time when the sea lions were being slaughtered in the alleged interests of the fishermen. Prof. Dyche became interested in the question of their food, and took the trouble to examine the stomachs of twenty-five sea lions, not one of which contained so much as a trace of fish. The region visited extends from Monterey Bay southward along the coast for about twenty-five miles.

Between June 25 and July 16 there were washed ashore within three miles of Point Pinos, at the mouth of Monterey Bay, eight sea lions which had been shot, the fishermen said, because they were feeding on salmon. Prof. Dyche examined the stomachs of all of these and has given me a detailed record of the contents of each. It would take too much space to print this in full. Suffice it to state that the remains of squids and cuttlefish (*Octopus*) were found in all, and that several were filled with large pieces of the giant squid. Notwithstanding the fact that at the same time and place salmon were being caught by fishermen, not a fish scale or bone was detected in any of the stomachs. Whenever possible Prof. Dyche opened the stomachs in the presence of the fishermen, who invariably expressed the greatest surprise at the result. On July 20 Prof. Dyche moved his headquarters southward and established a camp about twelve miles below Monterey Bay, between Point Carmel and the lighthouse, near which is an extensive rookery of sea lions. Between July 20 and Aug. 16 the stomachs of seventeen additional sea lions were examined. Eight out of the seventeen were well filled with the flesh of the giant squid; two were gorged with large octopus, while the remaining seven contained pens and beaks of squids, the quantity varying from half a pint to about a quart.

Prof. Dyche was told that there were no fish within two or three miles of the sea lion rookeries near his camp as the sea lions had caught or driven them away. In the face of this statement, he himself caught a dozen rock cod one morning between shore and the seal rocks, and his boatman, George Carr, an old salmon fisherman, caught plenty of rock cod weighing from 1 to 8 pounds each, within 60 feet of the flat rock where from one to 300 sea lions landed each day. The water close to these rocks, where the sea lions had lived for ages, proved to be the best fishing ground in the locality. Prof. Dyche states further that he had landed a number of times on the rocky islands where in places the excrement from the sea lions formed a layer a foot thick. He hunted through this for fish bones and scales, without being able to discover a single one. On the other hand, the tough pens from the backs of the squids were abundant.

Prof. Dyche found the fishermen loud in their denunciation of the sea lions on account of their alleged destruction of salmon, but, although he was on the fishing grounds continuously for more than three months, the fishermen were unable to show him a single instance in which a sea lion had killed a salmon. He adds, "You can hardly imagine the surprised look on these fishermen's faces when they saw the great masses of squid meat roll out of the sea lions' stomachs when cut open."

The fact that sea lions in captivity will eat fish rather than starve has little bearing on the question, and the additional fact that salmon in nets are sometimes found bitten off or eaten is by itself no evidence at all, particularly in places where either sharks or otters occur.

It is not claimed that sea lions in their native element never eat fish; at the same time the only actual evidence we have on the subject fails utterly to substantiate the allegations of the fishermen. On the contrary, all of the twenty-five stomachs of sea lions examined by Prof. Dyche contained remains of squids or cuttlefishes, and not one contained so much as the scale or bone of a fish. And is it not significant that in former years, when sea lions were much more plentiful than now, salmon also were vastly more abundant? If the fishermen will look into their own habits and customs during the past twenty-five years, it is believed that the cause of decrease of the salmon will not be difficult to find, and this without charging the decrease to the inoffensive sea lions, whose rookeries constitute one of the greatest attractions to the visitor on the California coast.

C. HART MERRIAM.

*In letter to Hon. Lyman J. Gage, Secretary of the Treasury, dated San Francisco, June 3, 1899.

New England Waters.

BOSTON, May 18.—Word comes from Upper Dam, Maine, that Mr. W. P. Clark, the veteran angler of so many seasons there, has landed a trout weighing 9¾ pounds. Mr. Clark's friends in Boston are all much pleased, since this is the biggest fish he has ever caught in thirty-two seasons' angling at that noted point. Still, it must be remembered that larger trout have been taken there. The largest brook trout on record was taken at Upper Dam, Sept. 29, 1879, and weighed 11¾ pounds. This is no fish story. The skin of this trout, mounted, was in the Smithsonian Institute at Washington, under Professor Baird, and should be there now. Unbelievers need not cry "Lake Trout!" as they so frequently do when hearing of the Rangeley giant salmo fontinalis, for both Professor Baird and the senior Agassiz have declared that they are perfect brook trout. Later, Fish Commissioner Henry O. Stanley has demonstrated that the spawn taken from these big trout hatches out the little brook trout, and that if they do not get down into the lakes and feed upon minnows they never reach a very great size. Cobbosseecontee reports of fishing are good. An Auburn gentleman writes that there were taken on one rod, in one morning's fishing the other day, two trout of good size and three bass. The recent warm weather has increased the sport there. The latest reports also mention better fishing at Lake Auburn. A Mr. Waugh, of Boston, fished that lake three days last week without a strike, however. Judge Whitehouse, of Augusta, and Judge Savage, of Auburn, have returned from a fishing trip to Upper Dam. Judge Whitehouse took a couple of good trout on Monday. Returned Moosehead fishermen mention very high water, cold weather and high winds, and poor fishing. They advise sportsmen to go later.

A representative party of Boston merchants is planned to leave for a fishing trip on Thursday. The number includes J. E. Toulmin, W. J. Leckie, W. J. Follett, C. P. Hall, George W. Brown and P. S. Allison. Mr. Allison is from Bristol, England, and this will be his first trip to Maine for trout fishing. He is in with a party of live merchants and fishing enthusiasts, and is one himself. They have had so much to say about Maine fishing that he is alive with expectation, and hopes to go back to the old country with a good deal in the shape of angling experience. J. L. Richards is purveyor of the party, and that means a good deal to the boys. They go to Norcross by rail; thence by canoes, sixteen miles through the Twin Lakes to their camp on the West Branch.

BOSTON, May 20.—Great expectations are in the wind concerning the Belgrade lakes, in Maine, and several Boston parties will go there for bass fishing, which is scarcely at its best till warmer weather. There are reports of some good speckled trout being taken there last week by local sportsmen and Augusta and Waterville fishermen. D. Whitehouse, of Portland, has taken seven handsome trout, and P. O. Vickery, of Augusta, has taken one of 7 pounds weight. Reports from Kineo say that Moosehead Lake fishing is good for togue, or lakers, with some fish up to 8 and 10 pounds being caught by Boston parties, among whom are A. W. Chester, F. D. Hall and C. B. Devereaux. A. C. Millner, of Mormontown, Utah, is fishing there, and made a good catch of lakers last week. Salmon fishing has scarcely shown up much yet, but a few have been taken, and good fishing for them is looked for. Fly-fishing for squaretails, for which that lake is noted, will begin as soon as the weather is warm enough. Calais, Me., reports continue to mention great success at Grand Lake. Fish are beginning to rise to the fly in Grand Lake Stream. It will be remembered that this stream has long been noted for landlocked salmon that will rise to the fly. While the fish are not large, the sport is counted great. Several Boston parties are ready to be off for that stream as soon as the fly-fishing begins. Dr. F. M. Johnson, C. E. Taylor, J. E. Brittian and H. M. Cutter, Boston; P. E. Mansfield and J. W. Hoyet, Lynn; William E. Beggs, Woburn; H. H. White, Cambridge, are among the more successful fishermen at Grand Lake thus far. The Underwoods, of the Duck Lake Club, are going the last of this month. The season at the big Bangor Salmon Pool still promises to be a record breaker. An account kept by a Bangor citizen interested in the sport says that sixty salmon have been taken, of a united weight of 1,066 pounds. This shows an average of a little over 16 pounds. The greatest number of fish has been taken by

Thomas Canning, of Bangor, who has seven salmon to his credit. Miss Janette Sullivan has landed three and Mrs. William H. Munroe has caught two, landing both in one afternoon and both weighing about 18 pounds.

At the Rangeleys the fishing continues excellent. A Haines' Landing report says that Francis A. Nichols, of Boston, has already taken over a hundred trout and salmon. Admiral Bunce and H. A. Redfield, fishing at that point, have a salmon of 7½ pounds to their credit, and a great many trout of fair size. Fish and Game Commissioners Stanley and Oak have been fishing Mooselucmaguntic, and have had great success. It is reported that over 1,000 pounds of trout and salmon have been taken from that lake since the season opened. At Rangeley Lake fishing is good. Anglers will be sorry to learn that Capt. R. A. Tuttle, of Boston, who has been at that lake every season for twenty-five years, and the founder of Lake Point Cottage, is laid up with rheumatism, and may have to give up his spring fishing trip altogether. Mr. and Mr. C. F. Hutchins, of Boston, will be at Lake Point Cottage the same as ever. Fishing has continued good at Bemis, foot of Mooselucmaguntic. In one day last week 125 trout were landed. These were of good size, running up to 4 pounds and over. At the Birches the cottages are rapidly filling up, while Bemis cottages are all full of fishermen. One day last week a Mr. and Mrs. Walton, of Newton, Mass., came to Bemis for fishing. As they could not be accommodated there, they were taken up to the Birches, or rather started for that point, when the little steamer gave out and they could make no progress. They had a guide with them and boat in tow. The guide proposed that they try the fishing while another steamer was signaled for to tow the disabled boat to the Birches. They did so. Evidently the guide knew the fishing ground well, for soon Mrs. Walton had a salmon weighing 3 pounds. They also took several trout before the steamer was ready to take them to the camps.

Again the old trouble as to the meaning of the terms "When the ice is out" in the Maine fish and game laws has arisen. The law reads that there shall be an annual close time on trout, togue and landlocked salmon from the first day of October till the ice is out the following spring. This term "ice is out" has been construed by the Commissioners to mean when the lake, pond or stream is entirely clear of ice. But sportsmen have thought differently, and on several instances last year they claimed the right to fish as soon as there was any open water, although a greater part of the lake might be covered with ice. This year a number of Bangor fishermen went to Green Lake, one of the best salmon lakes in that part of the country. The ice was only partly out, but they shoved boats over the ice into the open water and went to fishing. Local sportsmen and residents objected, and have entered complaint against the Bangor sportsmen for illegal fishing. The matter will have to go to the courts for settlement. I am quite sure that the Legislature of Maine was asked to make the meaning of "when the ice is out" more plain last winter, but failed to do so.

Fishing at Lake Webb, Weld, Me., has been good so far the present season. Ned Stanley, of Boston, goes there every year, and has just made a record of eight trout and salmon one day and twelve the next day. A large number of Maine fishermen have been there, and the catches have been good. New Hampshire waters continue to report good success. At Newfound Lake and Sunapee the fishing has continued good. SPECIAL.

American Fishermen in Canada.

THE news that the high spring water in most of the northern Canadian streams and lakes had fallen to the level at which fontinalis rises to the fly, has caused quite a rush of anglers into the country, and there are few club houses along the St. Maurice and the line of the Quebec & Lake St. John Railway that are not now occupied.

Dr. Geo. L. Porter, of Bridgeport, went up to his club waters with a party of friends over a week ago.

On the Stadacona Club lakes a number of trout weighing over 3 pounds each have already been taken this season with the fly, and anglers from the Rivière aux Sables claim to have taken fish there weighing over 4 pounds each.

A party of New Yorkers belonging to the Laurentian Fish and Game Club passed through here on Thursday on their way to their club limits, via the Quebec & Lake St. John Railway and the crossing by Lake Edward and a chain of lakes to the west of it to the St. Maurice. In this party were Mr. C. Grant La Forge, the architect, and Mrs. La Forge, Mr. Walter E. Maynard and Mr. Geo. L. Heins.

On the Metabetchouan Club's limits there is quite a large party at present, which includes Samuel Dodd, C. P. Bradley and George A. Fay, of Meriden, Conn., and Cyrus Berry Peets, of New Haven. With Mr. Coe is a guest, Mr. Charles A. Russell, of Washington.

Salmon fishermen are also in expectation of an early season, and a number of them will go down to their rivers in about a fortnight. Mr. Stearn, of Montreal, and other members of the Chamberlain Shoals Club, leave for the Ristigouche in the first week of June.

Ivers W. Adams and party of friends expect to be here about June 5 on their way to the Moisie, where they have recently acquired both the riparian rights and those of the Provincial Government. Several members of the St. Marguerite Salmon Club are expected here in about fifteen days on their way to their river.

Notwithstanding the high water in Lake St. John, ouananiche fishing is already pretty good there, and the natives are catching them from the steamboat wharf at Roberval. The fly-fishing in the Grande Décharge will certainly not be good until the water is much lower, however, which will probably be about June 12.

Mr. McCormick, of Florida, has already returned, some time ago, to his summer cottage at Lake Edward, and some very good catches of heavy brook trout are already reported from that vicinity.

E. T. D. CHAMBERS.

QUEBEC, May 18.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Bass Fishing in the Delaware.

BLACK bass fishing in the Lower Delaware River—and by the Lower Delaware is meant that beautiful portion of the stream between Trenton, N. J., and the Water Gap—is less known to sportsmen than it should be. Perhaps this part of that noble stream may never become as popular as it ought to be among anglers from a distance owing to the fact that before you go a-fishing there you must make certain from some one residing near it that the condition of the water is just right for good fishing. If you trust to luck you may find upon arriving at the river that a rain has made the water muddy and caused a rise of a foot or two, and then there will be no fishing. If you find the river in that state you might just as well not unpack your tackle but take the next train for home. But wind, weather and water right, the angler is pretty certain to find royal sport here. This bass fishing territory possesses the merit, too, of being easy of access. It is within two hours' ride of New York or Philadelphia and the coming and going, especially if your destination takes you over the Belvedere-Delaware Railroad along the river, is well worth the trip. The scenery in this historic valley is simply perfect, unsurpassed by beauty anywhere, and picturesque landscape contributes largely to the pleasure a true sportsman takes in his outings. When the beauties of nature appeal strongly to one, the angler gets the deepest enjoyment from his trips.

The Delaware River, not a natural black bass stream, has been stocked long enough to have made pretty good bass grounds. Had it not been for two public nuisances —the pot-hunter, who has now been pretty thoroughly abated, and the coal dirt washings from the Lehigh valley coal mines, a nuisance that has not been abated at all—the Delaware would now be a famous home for this splendid game fish. If ever a fish took naturally to strange water the small-mouth bass did to the Delaware. It has a rocky bottom, at places is very deep, affording safe harbors, and has numerous tributaries, at whose mouths are gravel bars, making the best of feeding grounds. Though probably thrice decimated by the nuisances just referred to, bass have thrived here to a wonderful degree, breed rapidly, and are increasing every year in numbers, and the angling is consequently better now than it ever was.

The Lower Delaware can be fished with the fly, yet fly-fishing is not exactly the sport for this section of the river. Since the days of aged Caleb E. Wright, lawyer, novelist and devoted lover of angling, who disdained to use anything but the fly, nobody whom I can recall has been bold enough to try this branch of the fine art here. Pardon a digression of a minute or two while I tell about Caleb. He was a Quaker and would have his friends call him only by his first name. He could always get one or two congenial companions to accompany him on his fly-fishing trips. White-haired, with a strong, refined face, the short, frail figure, clothed in a picturesque fishing suit, standing in the foaming ripples, braced against his steel-tipped staff to prevent the swift current carrying him off his feet and reeling in a struggling bass with the nervous adroitness born of sixty years' practice—this is one of the pictures indelibly photographed upon the memory of his friends. He was a typical grand old man from the sportsman's view point. And the old man often got fish, but more often the drive of ten miles to and from the river was the only pleasure he derived out of a day's trip; but when this happened he always took his bad luck philosophically and had a plausible explanation as to why they would not rise. You could not help but admire his resolution not to use live bait, yet you were sometimes provoked at his perversity when you felt instinctively the fish, which steadily refused to fly, would take a minnow. If the bass were not in that buoyant mood when they come up into the sunlight of the surface and dash at bits of brilliant color, he would have none of them.

One day Caleb's companion wandered up the river, leaving the old man behind absorbed in the task of getting a rise. When a bend in the stream hid the old gentleman from view, the youngster put his fly back in his book, rigged for live bait and impaled a couple of helgramites, found along the water's edge. The change worked like magic. The bass wanted something more substantial than a fly, and he soon had his creel well filled. Returning to where the old lawyer still stood patiently whipping the strong current, Caleb asked in his characteristic drawl:

"Well, Martin; what luck above?"

"Oh, fine," said Martin, relentless as to the old gentleman's sensibilities; "look at that!" and Martin raised the flap of his creel.

"Ahem! Well, that beats me, for I haven't had a rise." Voice and countenance both betrayed his chagrin.

"I've been working hard here all morning," he continued, "with every fly in the catalogue; and look at that water—why, it's a paradise for bass, and with this kind of a sun and wind, too. Aha, Martin, aha!—what fly did they take?"

Further deception was now out of the question and Martin held up his hooks, with two squirming "googlies" dangling from them.

"Helgramites!" exclaimed the old man. "Helgramites! Bait fit only for the devil! No Christian gentleman or civilized angler would ever use them." The look of contempt he gave Martin as he waded ashore and began to "take down" his tackle was succeeded by a smile of satisfaction that seemed eloquent with the thought possibly in his mind that he had not been conquered by a man using the legitimate appliances of the fine art.

Yet, notwithstanding Caleb's aversion to it, live bait fishing is great sport. There are three months when this sort of fishing is at its best—August, September and October. In these months you are pretty sure to find the water conditions right. When you go in August you cannot reach the fishing grounds too early. I have found daybreak a good time. One of these August trips I shall attempt to describe. We reached our skiff along the river's edge just as it began to get light. The boat was tied up to a raft of logs, against which the waves lapped musically as "the dawn came creeping slowly up over" the river. The river was in fine condition, the water being slightly hazy, not too clear. It was too early to tell what kind of weather the day would bring forth, but indications pointed to fine weather. We deposited our "traps" in the boat and by the time we were ready to start it had become light enough to see readily. We knew that trolling would not bring good results at this time of day, so we rowed for a bar a quarter of a mile down stream. The bar edged off into deep water. Here we had found fish upon other occasions feeding early in the morning. We put four kinds of bait in the boat—chub, lamprey eels, helgramites and small hop-toads. The toads we had caught the afternoon before on some sand hills along the river bank near the water's edge. A short row brought us to the bar and we anchored near the current, with the bar to our left. It was a beautiful morning. A deep haze lay on the high hills which skirted the river banks. Blue smoke curled from a few chimneys of the modest houses along the river road, indicating preparations for an early breakfast. Streaks of deep red marked the sky where the sun was about to rise. The clang of a small bell heralded the approach of the first canal boat for the day down the Delaware Division Canal and presently the slow moving mules hove in sight. The canal adds a picturesque feature to the surroundings.

We rigged our rods and lines quickly, knowing that every moment lost meant sport thrown away. I baited with toads and my companion put on chub. Hardly had my line floated twenty feet from the boat when there was a signal. The fish struck hard. I hooked him and after a brief struggle brought him to the net, a splendid small-mouth, weighing all of two pounds. He had taken the toad with great avidity and at the first cast I had found what the fish's favorite bait was that morning. The next cast I had another strike much like the first. It was a new experience to me to have bass strike like they did that morning. They seemed to make a fierce dart at the bait, catching it true in their mouths every time while under full speed, their momentum carrying them five to ten feet after they had secured their prey. Such striking was thrilling, almost wresting the rod from your grasp and affording the keenest sport possible. Indeed, the fish struck so hard they hooked themselves, and we lost not a bass that morning. Four fish, running from two pounds to two pounds and three-quarters struck in exactly the same way, when the sport was over.

Meanwhile my companion landed a nice fish, but, finding the chub bait slow, he also tried the toads, and in a short time he brought two more to the boat, one of which weighed nearly three pounds—and a beauty he was, too. We waited fifteen minutes longer, but not another strike; the Delaware small-mouth had shown us one of his peculiarities by quitting us as suddenly as he had begun. Knowing we could do nothing more at that time and place we came off the river with seven as pretty fish as you ever saw, and then ate our breakfast.

Our next scheme was to try trolling. Taking as rower an old riverman who thoroughly understood his business, we pointed the scow's prow toward deeper water at a beautiful bend in the river in what is known as Lower Black Eddy. Here is a stretch of a mile or more of deep water, backed up by the dam of the Pennsylvania Railroad Company, the dam acting as a feeder to the Raritan Canal. An ideal spot is this for trolling and we found fish there. For trolling an artificial minnow is best. A small spoon is also good. We had neither with us on this day, and instead we used large dead minnows, with swivels to prevent the lines from becoming kinked. We had proceeded only a short distance when the bass began to strike. We missed our first two or three strikes and one big fish succeeded in snapping my hook squarely off. Care and skill, as well as some experience, is needed to catch bass by this process. We soon caught on to the tricks of the fish and the next strike resulted in hooking and landing a beauty. We succeeded in adding a half dozen fine fish to our morning catch and then "laid by" during the heat of the day. Early in the afternoon we drove homeward with thirteen very fine fish, a total weight of about twenty-five pounds, which we considered a very good day's sport.

But the ideal month for bass fishing in this territory is September. Then, unless you should strike very warm weather, you can fish all day. And it is a great pleasure to fish then. The river is at its best then, as well as beautiful beyond description. The green hills begirting the river have changed to autumnal reds, purples and golden tints, and, ascending high above the surface of the stream, are an important element in this most charming scenery. The wooded islands add to the beauty, while the long quiet stretches of water at the foot of a rift almost deceive one into the belief that he is rowing upon a placid lake.

In September, especially during the latter part of the month, it is not important that you should reach the grounds very early in the day. The fish usually bite best from 11 A. M. to 2 P. M. And you must change your bait, too. Helgramites, toads and small frogs are not good bait now. Lamprey eels, minnows and stone catfish are best, especially stone catfish; do not go for bass that month without some of them.

I cannot close without describing an October day's fishing on this section of the Delaware. October is often regarded as a little late for bass. That notion is wrong. Of course, rains sometimes unfit the river for good fishing, but a dry October, preceded by a favorable September, gives the angler the very finest sport he could desire. Last year I was a member of a party that made three October trips to the famous fishing place below Lumberville. All these days will live in memory. I shall describe in detail only the last. The first trip was made during the first week in the month. When we found the bass in pretty much the same feeding grounds as during September. In the middle of the month they had taken to deeper water. Our last trip was in the last week in October. So late as that it is not often that river bass fishing can be found, but we were fortunate enough to find it in the greatest perfection. "We" comprised a party of four. The day was such as you can hope to find only occasionally. We started from shore in two boats. A cool night was succeeded by a perfect morning. The sun rose in a heavy fog which filled the valley and obscured the shore and shut out the view down the river like a wall of steam. Faintly the rich browns and reds of autumn were visible through the haze. It was like a

scene in an enchanted land, as though a magician had touched nature with a wand and transformed the landscape in shades and shapes of finest delicacy. We had two miles to go down the river to reach the fishing grounds, and as we drifted with the lazy current of the clear, low water the fog clouds were slowly dissipated into a blue and purple haze that stayed with us throughout the day. As our boats drifted we trolled, but, though we had some success, we did not get down to business until we reached the deep water at the head of Eagle Island—that is to say, a half to a quarter of a mile above the island. We had a nice supply of helgramites, minnows and stone catfish. It was some time before we located the game. At this late day in the season the angler who "knows" the river knows also that the conditions for successful fishing have very materially changed from those of a month before. The bass are now in their winter quarters and have sought the very deepest portions of the water. While they have not gone into hybernating and still swim out upon the rocks to sun themselves and feed, they do not roam the river, but stay close to the spot where they expect to spend the winter months.

We located the fish that day along a ledge of submerged rocks that ran parallel with and about 100 feet from the Pennsylvania shore. Some of the rocks almost reached the surface. On the shore side of the ledge there was not more than eight or ten feet of water; on the side next to the channel it slanted abruptly to an unknown depth, probably 20 to 30 feet. Anchoring upon this rocky ledge, our boats being about 300 yards apart, we cast into the deep water and soon each boat had several nice fish, weighing from three-quarters of a pound to two pounds. The bass struck well until about 12:30 o'clock, when there was a cessation, and with our baited hooks bobbing around in the current, we took out our lunch baskets for a bite ourselves. While discussing the merits of a hard-boiled egg and a Schweitzer cheese sandwich, my companion and I noticed a commotion in the boat below us. One of our friends in that boat was frantically tugging at his reel, while the tip of his bethabara fairly touched the surface of the water. The other friend, standing upright in the boat, with landing net balanced in his hand, eagerly watched the contest and dropped a word of counsel now and then to the man handling the fish. We could catch bits of their conversation: "Play him carefully, now!" "Great Scott! he's a dandy," and the like. Then there was a break in the placid river surface and three or four rods from the boat the big bass leaped into the air and shook his head in a vain effort to dislodge the hook. With the river birch and sycamores on Eagle Island for a background, that was a picture of color and action to delight a sportsman's heart. You could not help but feel sympathy and admiration for the noble fish in the gamy struggle he was making for freedom. But the hook was in his hard mouth to stay; the contest began to tell upon the big fellow's powers of endurance, and gradually the circles and rushes he made grew shorter and shorter, he was guided gently nearer and nearer the boat, and with a last leap into the air he dropped back into the landing net, exhausted and conquered. He was a famous fish, weighing, as we found out afterward, nearly five pounds; the largest taken from that pool during the season.

At the close of the afternoon's fishing at sundown, each boat had a dozen nice bass, a couple of pickerel and several large river sunfish, the last named taken with the helgramites. The row back to the landing furnished new delights in the way of scenery. Every particle of breeze had died away and the surface of the river was like a mirror. The deep, dark reflections of the hills at the bends contrasted strangely with the strong lights of sky reflections, making a weirdly beautiful picture that lasted fully half an hour and that we were loath to see fade into the darker night that it was when we pulled our boats up on the river bank, tired, but elated with the finest catch we had made in the season. It was with an air of extreme satisfaction that two hours later we drove into town and exhibited our trophies to admiring, wondering, and, we regret so say, incredulous friends.

The Vermont Pike Hatchery.

THE work of hatching pike eggs of the State hatchery here will be completed this week and a brief résumé of the work and the results obtained should be of interest.

The State appropriation of $1,500 to establish the hatchery was largely used in the purchase of the large two-story building on York street, where the hatchery is located. The remainder of the appropriation, together with the $550 derived from seining licenses—the generous allowance by the State for running the hatchery—was mainly spent in necessary repairs on the building and equipping it for the work of hatching. All this, while it gave the State a splendid plant, left practically no funds to run it, and coupled with the fact that the hatchery bill was passed so late last fall there was no time to clean a seining ground in the river made it necessary to co-operate with the United States Fish Commission to obtain any eggs. This arrangement was made by Commissioner Gilmore with Commisioner Stone, in charge of the Government work here, on a per cent. basis. The result was that of the fifty million eggs hatched the State obtained twenty million. These twenty million fry have been about all distributed, and have been placed in the following waters: Missisquoi River, Lamoille River, Winooski River, Otter Creek, Lake Champlain at St. Albans Bay, Fairfield Pond, Elmore Pond, Nelson Pond, Ticklenaked Pond, Island Pond, Groton Pond and Berlin Pond.

The work at the hatchery has been in charge of Mr. Mason, of the Cape Vincent, N. Y., hatchery, assisted by H. W. Carman. Myron Green has been the overseer of the work down the river, while Commissioners Stone and Gilmore have had the general oversight.

Considering the difficulties to be overcome in starting the hatchery and the small amount of money to work with, the result of the first year's work is a great success and fully demonstrates that a hatchery can be operated here which will be of great benefit to the State.—Swanton, Vt., Courier, May 16.

Trout in West Virginia.

WASHINGTON, D. C.—The legal season for taking speckled or brook trout in West Virginia is from Jan. 1 to Sept. 1. It is not lawful to catch trout less than 4 inches long.

The mountain region of West Virginia affords the most convenient trout fishing waters for sportsmen in New York, Philadelphia or Washington. The fishermen can leave New York at 4:55 o'clock in the afternoon on the Chesapeake & Ohio Railway train over the Pennsylvania Railroad and arrive the next morning at 7:25 o'clock at the Hot Springs, take a team and drive thirty miles through a most picturesque mountain country to the waters of the Cherry River, W. Va., and there find trout in great numbers; or a more direct, nearly all rail, route is direct to Roncevert and there take the Greenbrier River branch road to Serbert or Marlinton, W. Va., at which points they will arrive before noon—walk or go on horseback over Black Mountain on a good trail, twelve miles to the forks of the Cranberry River in the heart of the trout region. I spent a charming vacation of one week there last May. The trout took my flies beautifully.

GEO. HENDERSON.

New Brunswick Salmon Rivers.

CHATHAM, N. B., May 15.—*Editor Forest and Stream:* Inquiries as to the appearance of salmon and sea trout in New Brunswick rivers are coming in in considerable numbers, and I presume many anglers look to your columns for information on the subject. I beg, therefore, to say that salmon have come into the northern rivers—such as the Ristigouche, Jacquet, Nepisguit and Miramichi about a week earlier than the average, and no mistake will be made by those who fish those rivers if they are upon them, say, June 1.

I may also say that the lessee of the Nepisguit from Eleven-Mile Tree up to Great Falls will not fish his leasehold this season owing to engagements elsewhere, and parties desiring to secure that water can do so by communicating with me.

D. G. SMITH, Fishery Commissioner.

An Antidote to Mosquito Poison.

CONSUL-GENERAL GUENTHER writes from Frankfort, April 16, 1901: Prof. Dr. Voges, the Director of the National Board of Health at Buenos Ayres, according to German papers, has found a remedy for mosquito bites. He states that he discovered it by accident during his trip to Paraguay to study the pest. He had been supplied with all sorts of remedies, among them "naphthalene," an article of no value whatever against the pest; but on using it for mosquito bites, he found it of surprising effect. It neutralizes the poison, even when the spot bitten is greatly inflamed. If fresh bites are rubbed with naphthalene, no swelling follows. The professor considers naphthalene almost a specific against mosquito poison.

Wisconsin Trout Fishing.

LA CROSSE, Wis., May 19.—The trout season opened up April 15, and some fine strings have been caught. The 25th inst. the open season commences for pike and bass. The Mississippi and other streams are falling, and the water is clearing up. By the time the season opens, unless heavy rains come, fishing for them will be good, as they are reported to be quite numerous, of which we can report later. O. S. S.

Penalty for Seining.

JAMES LEMMING, who was arrested by Deputy Game Warden Rayborn for seining in the waters of the Little Miami, was yesterday tried for the second time before Squire Herrick, and was found guilty and fined $50 and costs, the latter amounting to $277.60. In default of payment he was committed to jail.—Cincinnati Commercial-Tribune, May 11.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

A First Day Experience.

HARTFORD, Mich.—*Editor Forest and Stream:* The first of May ushered in the trout season, and early morn found your scribe on the road to Cow Creek, seven miles southwest of Hartford. I struck the stream below two or three saw mills of ancient date, and did not get a rise until I got above the mills, and then both banks were lined with tracks, which made me wish I had commenced to fish above the mills. Just then two men with trout poles and creels came out of the brush just above me and were dropping their flies or worms, for the stream is so small that casting is out of the question; the brook will not average 20 inches wide, and brush and dry weeds line both banks. I did not see them catch a single fish, and as they passed me, I went up stream, and the first place the water made a swirl around an old log I presented a nice angleworm in the most delicate manner, and was surprised to see the line dart under the log. With a sudden swish of the split bamboo, a 12-inch trout was landed on the grass, and the first trout of the season was soon flopping in my creel. I soon caught another, and when my watch told me it was 4 o'clock and time to start for home, eleven fish were in the pocket. The drive home was very pleasant, for added to the trout was the welcome Bob White from across the fields.

SULLIVAN COOK.

New Jersey Coast Fishing.

NEWARK, N. J., May 20.—Bass have begun taking the hook at a few points along the Jersey coast. They are of small size, 2 to 3½ pounds in weight. The only one of good size which has been heard of was hooked by an inexperienced product; result, smashed rod and a disconsolate man. I arrived on the scene a few minutes afterward, and he said, "I thought the way was to hold them." That opinion, though, does sell a lot of cheap tackle, and then results in selling that which is good. Kingfish are in evidence, too; a few have been on the hook. Weakfish appear to be unusually plentiful along the entire coast and fine in size and condition. I have been among the market men pretty freely the past three weeks and there is a general sentiment that fish of all kinds are moving well and fully up to the standard in condition, despite the inclement weather the past several weeks.

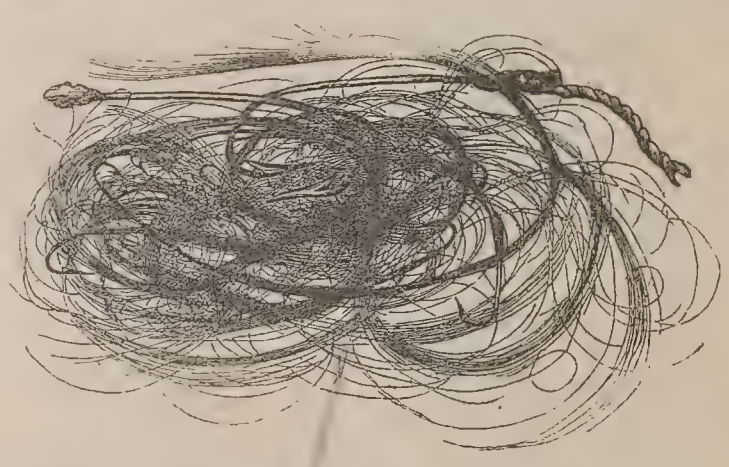
LEONARD HULIT.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

63

Here are ten fishhooks with a mass of horsehair and string, matted and intertwined; and it was all found in the stomach of a cod. The fish probably had somehow or another managed to get hold of haddocks or whiting caught on hooks, and in whose bodies the hooks still remained. The flesh of the whitings or haddocks had been entirely digested by the juices of the cod's stomach; the horsehair and metal of the hooks, however, resisted its action. That whiting and haddock have frequently



hooks left in them is well known to all those who have the care of seals. Sea fish hooks are very cheap; and the fishermen, rather than take the trouble to extract the hook from the fish's mouth, very frequently cut off the snood or line to which the fish is attached, and let the hook remain *in situ*. The seal swallows the fish, hook and all, the hook gets entangled in the poor seal's intestines, and, of course, proves fatal. "The cod is what is generally called a voracious fish. I have now in my museum," once wrote Frank Buckland, "a portion of a tallow candle, about seven inches long, also a pair of sailor's mitts, both taken from a cod's stomach."

64

A startling surprise, after the fashion of the story of Ginevra, comes from Styria, where a party of hunters in the forest of Drommling discovered in a hollow oak a skeleton in excellent preservation. Even the boots, which came above the knee, were almost perfect. By its side was a powder horn, a porcelain pipe bowl, and a silver watch, on which was engraved the name, "H. von Krackowitz, 1812." The teeth were perfect. It would seem to be the skeleton of a man between thirty and forty years of age. It is conjectured that, while engaged in hunting, he climbed the tree for some purpose, and slipped incautiously into the hollow trunk, from which there was no release, and he probably died of starvation.—London Times.

65

While hunting in the Chico Mountains, near the Rio Grande, seventy miles south of Alpine, Tex., a party of Americans discovered a large cave in which were the skeletons of twenty-six men, lying side by side. On exploring the cave further they found several copper kettles, two Spanish hatchets, three short swords with Spanish inscriptions, some stone utensils and crude mining tools. Deeply cut in one of the stone jars was the name "Navaez," and below it the figures, "1526." In 1528 a Spanish expedition, under the explorer Navaez, left Tampa Bay, Fla., and was never seen again.

The Kennel.

Fixiures.

Sept. 2-5.—Toronto, Can.—Dog show of the Toronto Industrial Exhibition. W. P. Fraser, Sec'y. and Supt.

Men and Dogs.

SAN FRANCISCO, Cal., May 11.—*Editor Forest and Stream:* The annual bench show of the San Francisco Kennel Club in progress at Mechanics' Pavilion, San Francisco, May 8, 9, 10, 11, proved very successful and generally satisfactory. A greater number of dogs have been entered and exhibited in former years, but the entries have never before averaged as well in class selection. Many more dogs were brought from distant and Eastern kennels than in any year heretofore.

The officers of the club are: A. B. Spreckles, President; John E. de Ruyter, First Vice-President; Henry J. Crocker, Second Vice-President; J. P. Norman, Secretary-Treasurer; Captain C. B. Knocker, Delegate to American Kennel Club. The bench show committee in charge are Dr. F. W. d'Evelyn (chairman), N. H. Hickman, W. S. Kittle, J. P. Norman and E. Courtney Ford. Judges, J. J. Lynn, of Port Huron; Henry Jarrett, of Philadelphia, and John Bradshaw.

The show has demonstrated, as do many other events in field sports of late years, that the west coast is neither far behind nor notably isolated from those Eastern or European centers that were wont to pose as encompassing the best and most of everything in high class and professional expositions. The growth of population, development of western resources, and improved transportation service have reduced the stretches of plains and the mountain barriers until San Francisco is not so very remote, and the great realms, California, Oregon and Washington, are really identified with the United States. North America is not nearly as vast and vague as it used to be when there were more buffaloes than men in Kansas, and more grizzlies than dogs in California. It looks quite neighborly when many people bring dogs from New York and New Jersey to win a bit of commendation and blue or red ribbon for them in San Francisco. Three thousand miles are not as formidable as they used to be.

There is the touch of nature that makes the world akin in the incident of men from distant points collecting at some rendezvous to compare, discuss and admire dogs. The daily newspapers send their technical pencilers to the dog shows and give the public, which does not read much of it, all the pedigree, record and expert lore that can be put into miles of type. If an introductory preamble is undertaken it is usually an effort at humor, and the noblest animals of their kind are described as bow-wows, canine orchestras, bayers of the moon, blue-blooded and high-priced barkers, etc.

Dog fanciers themselves do not often contemplate the animals from any very elevated standard, but rather from fancied professional distinctions that the best friends of the animals seldom comprehend or study. A dog may have all the fine technical points of outward show, but in reality be inferior in every commendable trait to some unmarked and seemingly insignificant dog that has never a hope to be decorated with medal, ribbon or pedigree, or anything but a flying brickbat or an ignoble poundmaster's seine. Nevertheless the men who establish kennels and talk pedigrees, points, coats and whatnot, who originate and carry out exhibitions, make rules and fix standards and adjudge awards, are the great systematic benefactors of the faithful animals.

Contemplated from an unprofessional point of view, one that may not be without its advantages, a dog show is not the least wonderful nor the least profitable exhibition in the world. Here are many hundreds of the animals of every notable strain, brought originally from every inhabited corner of the earth. They have been redeemed, or at least changed from a natural wild state and adopted or domesticated by men of all time and every race as companions, slaves and friends. They are carnivorous creatures whose progenitors depended upon other living creatures that they could catch by strategy, or by suprior intelligence or speed, and must all have been ferocious and pitiless in their battles for subsistence and life.

Their intelligence, improved by contact with mankind and the universal protection of their superior fellow creature, has developed them into the most docile, exemplary and faithful of dumb brutes. How many millions of them have lived their brief lives and passed with the generations of man in the world, and how vast has been their contribution to human welfare, who will compute?

The children that have grown to manhood or womanhood without the affection and companionship of one or more of these creatures, have missed something worth having in life. They have been companions, defenders, protectors, slaves—and the faithfulest of friends to princes and paupers, to the wise and the ignorant. They have been fought for by warriors, caressed and protected by kings and queens, and eulogized by the best intellects and the greatest of thinkers and poets of all time.

Who has no admiration and feeling for the faithful animals can be neither sincere in religion nor notably human in character. Considering the enormous number of dogs in the world, their affiliation with the many pursuits and conditions of mankind, how rarely do they permit their brutality to manifest itself unless provoked beyond endurance, to the injury of any. Mankind himself often feel humiliated by the contrast of examples.

There is scope for sentiment—for what the hard, practical spirit of the times in which we live may call whimsical fancies—in the contemplation of an assemblage of dogs. Here are six or seven hundred of the animals placed in stalls or cages littered with fresh straw. They are chained or tethered with little chance to move about, even to stretch themselves. There are but a dozen or so of them placed beyond the reach of the throngs of spectators. For many hours each day the patient creatures, accustomed to freedom and activity, are submissively approached, aroused, ogled, whistled to, talked to, caressed and annoyed by crowds of the most inquisitive and aggressive of animals—men, women and children. They are in direct contact with people, most of them entirely strange to them and many of them merely curious without any tact or appreciation. People approach them in every possible fashion, speak to them in all tones. The sensitive animals quickly recognize the friendly, the indifferent, and those of them who do not like dogs. The creatures of the highest earthly intelligence are arrayed in all sorts of raiment and color, with all sorts of ornamentation, and carrying canes, shawls, parasols and packages. The inferior creatures are as nature made them—naked and unadorned. They are subject to the trying ordeal of being familiarly approached, inspected, commented upon, caressed, handled and diverted by a thousand annoyances without a chance to evade or escape.

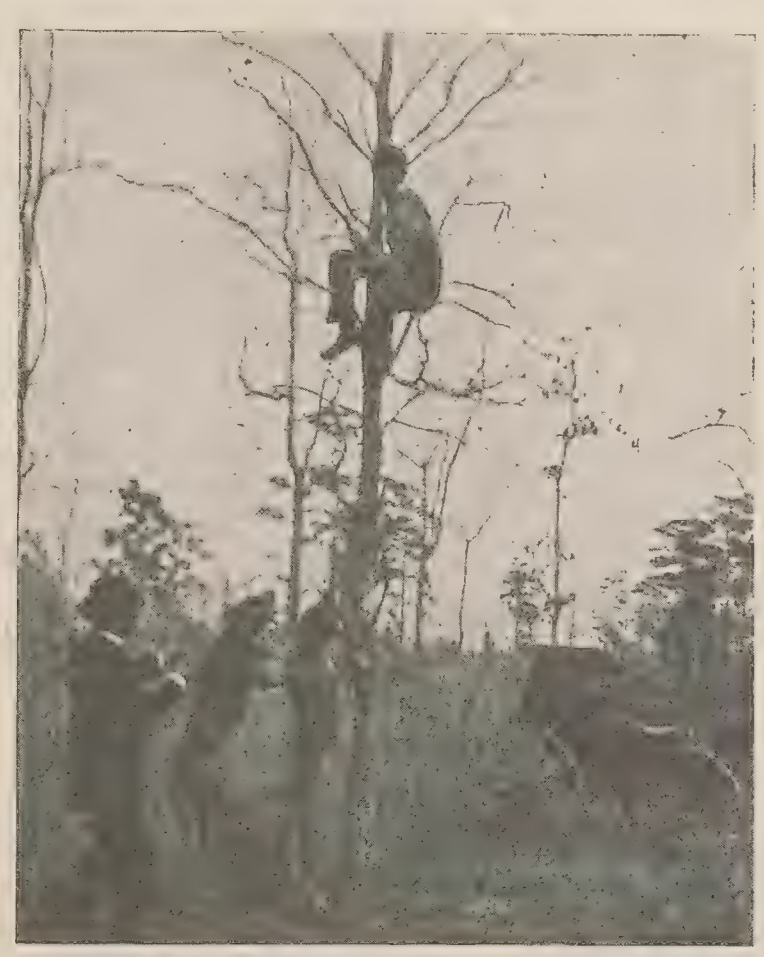
And yet, under it all, it is seldom that a kind word to any one of them is not responded to with a beaming, happy look, a joyous wag of the tail or a ready greeting that no other dumb creature can express so well. There is a gleam of pleasure and assurance in the eyes of a dog, thus responding to a word of kindness, that has made mankind better for its existence. It is, and always will be, the best kind of a compliment to the virtue in the tone of the human voice. A dog may wag his tail to many overtures, but he has an expression in his eyes for his friends that is not conventional or affected. His instinct will not lead him astray.

Some human philosopher, with broad, wholesome powers of observation and expression, ought some time to create a book upon the dog, doing him and all his tribe great honor. Such an historian would glean information for a very thick book, for his work would necessarily comprise notes from many lands, and of many races of dogs and men. Beyond all his other participation in the affairs of mankind, the dogs' intimate association with sportsmen from the day and generation of Esau to the present time would afford a wide field from which to glean tributes to the greatness of both these sportsmen and hunters. It would be difficult to conceive of a real sportsman who had not received inspiration, pleasure and profit from the faithful dog. While there is genuine appreciation and gratitude in the world the dog should not lack for it from any man who has thoughts beyond and above leather and prunella.

CHARLES L. PAIGE.

A Run with Florida Hounds.

GRAND RAPIDS, Mich.—I spent the winter in Florida and had sport of various kinds—duck, quail and dove shooting, fishing and some sport following the hounds. The latter may not have been strictly legitimate sport, but it was field sport, however. I inclose photos of the "game" after the hounds had him treed. This was a practice run for the hounds; it was taken at Palatka; the photos were



A RUN WITH FLORIDA HOUNDS.

taken by myself, and although I am an amateur, they were successful. The "game" was a convict taken from jail and allowed an hour start. The hounds were put on his track and furnished as rich music as any fox hound. This run gives the hounds practice and also gives the man much needed exercise. CLAUDE SINTZ.

[Subsequently to the writing of this note by our correspondent, the hounds referred to were put on the trail of two murderers at Hastings, near St. Augustine, and trailed them to their hiding place in the woods, and the men have since been tried and convicted.]

He Took the Dog.

THERE was once a crowd of boys sitting on the ground in a circle, and in the middle sat a strange dog. An old gentleman happened along at that time and asked them what they were doing. They said they were telling hunting stories, and the one that told the biggest lie got the dog. The old gentleman said that wasn't right, as when he was a young man they never told lies about hunting. One youngster then spoke up and said, "Give him the dog." C. W. V.

'Mid Reef and Rapid.—XI.

BY F. R. WEBB.

IT stopped raining some time in the night, and morning broke with a sky obscured with low-hanging, leaden-colored clouds drifting athwart the sky, in whose somber folds the mountain tops were shrouded from our view, and under which the river flowed darkling, sullen and forbidding.

Every indication pointed to a rainy day, and we were strongly tempted to remain quietly in camp all day, but we were due at Bear Lithia Springs in the evening, where we were invited to stop for a day or so, as the guests of the management, and as Bear Lithia was a good day's cruise on the present scant water, an early start was necessary, so we turned out at 5 o'clock as usual and made preparations for resuming the cruise, in case the rain did not catch us before we got off.

In order to guard against this contingency as much as possible, the tents were struck at once, and the blankets, mattresses, clothes, bags, etc., packed and stowed away before the rain came on, as it is difficult to take down the tents, pack the blankets, etc., in a rain without getting them wet, after which we addressed ourselves to the task of getting breakfast. A fire was speedily started in the camp stove. George, who is chief of the firewood bureau, had thoughtfully placed his little stack of firewood under the mess table the night before, where it was protected from the rain, and in a short time we were doing justice to an ample breakfast of fried bass, bacon, soft-boiled eggs, biscuits and coffee.

While the boys were polishing up the club plate and packing the kitchen outfit, I prepared a plentiful lunch of cold ham, tongue, hard-boiled eggs, cheese, biscuits and butter, which, with a bottle of pickles and a couple of lemons, were stowed in the mess chest.

We were well known here, and this was one of our supply stations, and while we were chatting with old Mr. Kyger, who had hobbled painfully down the long, steep hill on his canes to have a talk with us, a colored servant came down the hill, bringing with her a big basket containing a fresh supply of biscuits, lard, butter and eggs, which had been spoken for the evening before, and which were duly stowed away in the various bags, cans, buckets, etc., provided for that purpose.

"Now tell me," the old gentleman asked, after a little further weather and crop conversation, "what do you men make these trips for? Are you surveyors or exploring the river, or just fishin', or what?"

The average rural inhabitant finds it hard to satisfactorily account for our cruises. To his practical mind the idea of three or four grown men undertaking such a trip in business hours and just for fun, is incomprehensible, and many and various, as well as ludicrous, are the hypotheses advanced from time to time in explanation. One bare-footed rustic back up on North River took us for peddlers, stating in explanation that he had noticed two or three pairs of socks in a bag, evidently being quite at a loss to understand what any one man could possibly want with so many socks. Another popular theory is that we are running a race, or working out a bet or wager of some kind, while the most commonly accepted explanation is that we are traveling photographers, and as the average rustic is fond of having his picture taken, we would not suffer for lack of business if such were really the object of our trips. George generally obliges them by taking a shot with his kodak at the numerous family groups brought into our various camps from time to time for that purpose, with the inquiry for "The feller that takes the picters."

They are usually greatly mystified when they learn that no charge is made, as well as disappointed when he laboriously explains that he cannot open the camera then and there and take out the finished picture, and that all the finishing and printing is done after his return home in the fall, and that it will be a couple of months or so before they will get their pictures.

Another amusing feature is the general distrust of our diminutive, fragile looking boats on the part of the aforesaid average rustic, the general consensus of opinion being that "I don't want to take no chances in them there dad-blamed little punkin seeds of boats; gimme a good ol' scow, like that 'n' thar" (indicating the usual ubiquitous 20ft. wooden punt), "an' a good pole an' that's good's I want."

We were on the point of packing the mess chest, kitchen ware and mess table in the canoes which still lay on the bank, where they had lain during the night, and launching them and resuming the cruise, when the rain came down with a soft, gentle patter on the broad sycamore leaves overhead, and shimmered grayly on the wide, flat surface of the river, so we tightly closed our canoe hatches, with the heavy, oiled canvas aprons drawn well over the space for the crews, relighted our pipes, donned our long rubber coats and rubber hats, and prepared to sit it out where we were. There is no better out-of-door protection from the rain than that afforded by the canoes when arranged for bad weather.

With all hatches tightly closed, apron pulled well up over the breast, and rubber, canvas or gossamer cape buttoned tight and high up around his neck under the ample sou'-wester hat, and coming well down over the apron and hatches in front of and all around him, the canoeist can bid defiance to the heaviest rains as long as he stays in his canoe, but if there is much getting out and in to do, with the consequent opening up of apron and hatches, he is apt to get wet from the hips down, as well as sure to get the inside of the canoe, including mattress seat, wet also. So, while we might easily have resumed the cruise regardless of the rain, even had it been much heavier than it was (for it was light and gentle), as we had the Shaver mill dam to portage but a mile below, we decided to sit out the rain where we were rather than embark and be obliged to make the portage in the rain.

In an hour it had passed over; and although it still gave promise of more or less rain all day, we decided to chance it, and get as far down the river as possible; so we opened the aprons and amidship hatches of our canoes, throwing out the quart or two of clear, pellucid water collected in the hollow of each apron; doffed and packed our rubber coats and hats, arranged our backrests and mattresses and prepared to launch.

George found himself in a very frisky mood after the shower, and cavorted around the boats with the grace and agility of a yearling bull calf; finally, in the course of his cavorting, ambling over to the bow of his canoe; Lacy and I, with the canvas surcingle, an arrangement rigged up in my work room, consisting of a strip of heavy duck long enough to reach around the canoe amidships, with a wooden handle rove into each end, which proved to be a great convenience in handling the canoes, meanwhile having hold of the other end, impatiently awaiting his pleasure. In answer to Lacy's impatient, "Hurry up, there, can't you?" he picked up the bow of his canoe and rushed off, backward, of course, down the bank with it into the shallow water, dragging us after him at break-neck speed as we went stumbling and plunging down the bank over the rocks and roots. He splashed out into the shallow water until his heels fortunately encountered a reef projecting above the sandy bottom, which put an effectual check to his career by tripping him up, and over he went backward, bringing up in a sitting posture, with the canoe across his lap and the water up to his arms. Our end of the canoe was, of course, dropped, while Lacy went off into convulsions, in the course of which he rushed over to the Colonel's canoe and unpacked it, throwing things right and left, until he reached and got out the Colonel's camp stool, upon which he threw himself while he had his laugh out, the Colonel and I meanwhile enjoying our laugh more moderately on the bank. Finally, when we had come to the conclusion that George's enthusiasm had sufficiently cooled, the Colonel and I waded out to him and lifted the canoe off his lap and released him, after which he found himself in a frame of mind to properly assist in the launching of the other canoes without any further monkey business.

The sky was still heavily overcast and hung with low-lying, leaden clouds, in which the mountain tops were hidden, as we paddled out from our camp ground, past the musical, murmuring outflow from the great spring, and picked our way slowly and carefully among the reefs down into the slack water of the Shaver mill pool. Old Mr. Kyger stood on the bank, calling a cheerful farewell after us, while his women kind gathered in a little group in the dooryard of the house on top of the bluff to see us pass by, the bright garments of some of the younger ones showing in pretty bits of color against the green background of the forests, while George enlivened the scene with some of his choicest discords on his bugle.

The paddle through this usually tedious mill-pond was a pleasant one, as there was no head wind to retard our progress; and the heavy, wet cloud-masses protected us from the rays of the sun; and in a short time the canoes were lying along the face of the dam, whose sloping, plank-sheathed crest stood up a foot or more above the water, wet and slippery from the rain, and affording a very precarious footing.

The dam is a perpendicular timber dam, about six or seven feet high, and is built on a perfect wilderness of reefs, which extend clear across the river from shore to shore. The portage was easily made by George standing in the water on the reefs below while Lacy and I stood on the dam above and slid the canoes over and let them down to him; the Colonel, meanwhile, whose footing on the narrow, steeply sloping edge of a dam like this one was very insecure, climbed down upon the rocks below, and found ample occupation in bossing the job. The Colonel is an excellent boss, and his freely offered suggestions were very good, inasmuch as they coincided exactly in each instance with what we were about to do.

Our method of portaging is effective and simple—the men above slide the canoes over, one by one, until the bows topple over and down upon the man below, who eases them down into the shallow water, or upon the rocks; after which the sterns are eased gently down, by means of the aft painters. If there is a depth of three or four feet of water below the portage is simplified still further by dispensing with the man below, and simply sliding the boats over the crest of the dam and dropping them head first into the water. Care should be taken to first examine the water thoroughly with a paddle or pole, to see if any sunken rocks are lurking around or lying in wait for unsuspecting canoes. I once nearly smashed the nose off of my canoe on one of our Middle River cruises by not taking this precaution.

When so portaged the canoes dive deeply under and a sheet of water several inches deep rolls over them from stern to stern; but if the hatches and aprons are closed and fastened, but little, if any, water will be shipped.

It began to rain again just as we finished the portage and ensconced ourselves in our canoes, and as there is a swift, shallow rapid half a mile below the dam, which on the present stage of water it is impossible to run without disembarking and lifting the canoes down over the rough fringe of loose stones, boulders, etc., spread out clear across the bottom of the broad, shallow tail of the rapid, we decided not to enter the rapid at all until after the rain was over. We accordingly pulled up to the bank, below the dam, in the still water under the dripping trees, and donning our hats and capes sat there for half an hour. This soon grew monotonous, so we took the dining fly and went ashore and put it up, taking ashore with us our camp stools, books, smoking materials, and such other luxuries as we thought we might need, and tightly closing our canoes behind us. Here Lacy, the Colonel and I remained for two hours; the Colonel and Lacy passing the time in a friendly little bout at the seductive and distinctly American game of poker, while George remained in his canoe and I read my book.

A party of rustic fishermen were located under the trees directly across from us, making unsuccessful efforts to secure some protection from the pelting rain under the dripping foliage of the trees, and taking turns in cowering under the slanting trunks of one or two of the largest ones. As they seemed to be meeting with considerable success, George paddled over to their side of the river and added to his stock of piscatorial lore by watching their proceedings and studying their methods, his canoe lying up out of the way against the bank just above, with the rain beating fiercely on his decks and closed hatches, and hissing in the water around him, the while it fell briskly dripping through the trees overhead upon our fly, and ran in little streams off the edges, and in long, slanting rows of bead-like drops down and off the slender tent ropes.

The Cup Trial Races.

THE daily papers have published long accounts regarding Mr. Lawson's right to enter his yacht Independence in the trial races for the defense of the America Cup. We understand that there has been no correspondence between the Cup Committee of the New York Y. C. and Mr. Lawson; but if there has been any, its nature is known only to those directly concerned. In any event, at this time, when nothing definite is known regarding the matter, any criticism on the course pursued by either party would be entirely premature. It seems that the yachting public are misled and misinformed regarding the true facts of the case, so a few words pertaining to the situation may not be amiss.

The New York Y. C. is the custodian of the Cup, and the Cup Committee interpret the rules governing the matter as prescribing that the defender of the Cup must sail under the flag of a member of the New York Y. C. This means also, of course, that yachts sailing in the trial races must sail under the flag of a member of the New York Y. C. Boston has been too well represented in the trial races and actual Cup races in years past for any one to go astray on this point. Puritan, Mayflower, Volunteer, Jubilee and Pilgrim sailed under the New York flag. The owners of both Columbia and Constitution, having found it impossible for various reasons to sail their boats in the forthcoming trial races, have turned them over to capable men who are members of the New York Y. C., Mr. E. D. Morgan and Mr. W. B. Duncan, Jr., respectively, under whose private signals the boats will be seen in the racing as though actually belonging to themselves. It is the perfectly practicable plan for Mr. Lawson to adopt the same method of procedure, and there are a number of amateur yachtsmen in the vicinity of Boston who are members of the New York Y. C., and as able yachtsmen as any in the country, and to whom the sailing of Independence in the trial races might well be entrusted. While the Cup Committee has no discretion in the matter of departing from this specific rule as to ownership, to meet an individual's requirements and wishes, it is on the other hand a very simple thing and under the circumstances it would be the expected course for Mr. Lawson to turn the boat over to a member of the New York Y. C. for sailing in the trial races and the Cup races if she should prove the better boat. If under these conditions Independence should sail in the Cup races, the credit and honor accruing to her owner would not in the least be diminished.

We are confident that the New York Y. C. is anxious to see Independence in the trial races, and we hope that Mr. Lawson may see his way clear to change his policy in regard to the matter and may allow his boat to enter the trial races under the flag of a member of the club.

THE London Field commenting on the new measurement rule recently adopted by the Larchmont and Seawanhaka Corinthian yacht clubs, says:

American yachtsmen are at loggerheads over the rating rule. There is a strong feeling in favor of adopting a rule which will produce a type of yacht more like those encouraged by the British Y. R. A., and the Seawanhaka and Larchmont clubs have adopted a rule, which was quoted in the Field of March 23, with a view to favoring this class of boat and penalizing the scow type. This rule, as we have already pointed out, has a very complicated appearance, and we believe that, chiefly owing to this reason, it has not been very well received in New York. Every thoughtful yachtsman should be by this time convinced of the necessity of adopting a rule that will check the construction of the scow type, but we cannot express surprise that the new Seawanhaka rule has met with severe criticism, because it contains what Thalassa would call such a minutiæ of detail. It includes length, sail area, beam measured in three places, draft and midship section area. If the new Y. R. A. rule does not fulfill the ideas of some scientific observers by avoiding reference to detail, the new Seawanhaka rule will be held to be even less satisfactory because it is still more restricted in its scope. It would be interesting and instructive to know the opinion of the American measurement committee upon Thalassa's theory that a perfect rating rule should embody only such general quantities as a yacht's displacement and the sail area used to propel such displacement through the water.

Now that Shamrock II. has been given a better suit of sails and stronger spars, she made a better showing against Shamrock I. in the race last Monday, beating the older boat thirty-seven seconds. The race was sailed in a topsail breeze and smooth water. Word from abroad states that in the previous race against Shamrock I. no attempt was made to drive the boat, as it was simply a trial to stretch her sails and test her spars and gear. A letter received a few days ago from an American yachtsman who is abroad watching Shamrock II.'s performances states that her rig and gear are heavy and clumsy and the boat is a disappointment throughout.

CONSTITUTION was ready for a trial under sail on Saturday last, but continual rainfall and bad weather has kept the boat at her moorings until Tuesday. As we go to press the weather is clearing and undoubtedly Constitution will be seen under sail shortly.

THE 65ft. cutter Nevada, built for Mr. P. M. Inglis from designs made by Mr. Charles F. Herreshoff, 2d, was launched on the Clyde on May 20.

Our Boston Letter.

BOSTON, May 20.—After months of patient endeavor on the part of the builders of Independence and waiting on the part of those who have been anxious to see the greatest effort of the Boston designer, Mr. B. B. Crowninshield, in her native element, the yacht, which has been a source of pardonable pride to Bostonians, was launched from the shed in which she was built at the Atlantic Works just fifty-three minutes before midnight on Saturday night. She was christened by Miss Gladys Lawson, the oldest daughter of the owner of Independence, and the launching was successful in every respect. The launching was twenty-three minutes ahead of the time scheduled, which feature one of Mr. Lawson's friends avowed was a good omen.

It was hardly so pretentious a night for launching as that on which the Herreshoff-designed 90-footer, Constitution, took the water at Bristol. There was a drizzling rain, which was calculated to dampen the ardor of Independence's admirers. But in spite of this all those who were fortunate enough to obtain the necessary cards of invitation were present, and there were plenty more who would have braved the elements if they could have gained admission to the yard by so doing. For while the launching could not be properly called a secret one, still the number of spectators was limited. This was much against Mr. Lawson's desires, but was considered necessary because of the possible danger to life and to the boat if a great crowd were allowed upon the wharf.

Mr. Lawson's magnificent steam yacht, Dreamer, was anchored out in the stream and the rays from her powerful searchlight lent a charm to the event which was fully appreciated by the spectators. Dreamer has been in Simpson's dry dock for the past few days completing the necessary details of her fitting out, but she is now ready for sea. Almost at the instant that her searchlight was turned on Independence, a stream of many-colored electric bulbs, extending from the stem over the heads of the

masts and down under her counter, were lighted, and the effect was beautiful. By midnight Independence had been made fast to the north side of the dock and Dreamer had gone to her anchorage on South Boston Flats.

Independence will lie at the north side of the Atlantic Works' dock until her hollow steel mast is stepped, when she will probably be towed to some other dock to complete fitting out. The Atlantic Works would only guarantee Capt. Haff 18ft. of water at mean low tide. Soundings were made on the north side of the dock last week, with the result that at the end of the dock 21ft. were found, and this depth decreased gradually to about 17ft. Where the forward part of the fin, which is 72ft. from the taffrail, will come, there was about 18ft. of water. When Independence was launched she drew about 19ft., and this was at the extreme after end of the keel. The bottom of the dock is very soft and the keel can easily sink a foot or two into the mud. Capt. Haff is of the opinion that this can do no possible harm. If she were to lay at the end of the dock the swash of passing steamers might cause her to bang against the piling and injure her plating.

Work has been carried on night and day on the steel mast during the past week, but the spar is not yet completed. It is expected, though, that it will be ready to be stepped early in the week. The work of plating on this spar is first class, and it is as smooth and true as skilled labor can possibly make it. The riveting is particularly well done. Both the hollow wooden boom and the hollow wooden gaff have been completed at Lawley's. These are both very fine spars. George F. Lawley has been of the opinion that the hollow wooden boom will be better than the steel one. As the steel boom is far from being completed, it will be necessary to use the wooden one first, when its merits can be fully tested.

The Regatta Committee of the Winthrop Y. C. has arranged its schedule of dates, which provides events for every Saturday throughout the season. They are arranged as follows: Class races, May 25; June 1, 15, 29; July 13; Aug. 10 and 24. Special handicaps, June 8, 22; July 6, 27; Aug. 3 and 17. Club cruises, June 9, 16; July 7; Aug. 11 and Sept. 7. Y. R. A. open race, July 20. Water sports, Sept. 2.

An advance copy of the year book of the Yacht Racing Association of Massachusetts has been sent to your correspondent by the secretary of the Association, A. T. Bliss. It is by far the best book that has yet been published. The books will be ready for delivery some time this week. In the racing schedule the dates of the Lynn, the Wellfleet and the Cape Cod yacht clubs are left open. This is because it has been found that there is poor water in Cape Cod Bay on the dates given to the Cape Cod and the Wellfleet yacht clubs. They are anxious to have the Lynn club change its date. As the Lynn Y. C. has made a feature of the Labor Day race, it is doubtful if it will agree to give up this date. JOHN B. KILLEEN.

The House-Boat Lah-ne-o-tah.

Editor Forest and Stream:

Having read your article in March 2 number on "House-boats," and noting your request for plans, photographs and descriptive articles on this important question, I take the liberty of sending you a copy of an article that appeared in my newspaper, the Athens Reporter, a couple of months ago. The house-boat was built on my premises in Athens, Ontario, which is five miles from Charleston Lake, a beautiful little inland lake about ten miles long and eight wide. The house-boat, when completed, weighed about three tons, and was drawn to the lake, mounted on skids or runners, by two traction engines, and although the road was a very rough and stony one, the five miles was made in less than six hours. This was a feat never, as far as I can learn, attempted in in this country at least. Inclosed with this I send you a couple of kodak views, one representing the house-boat on the road drawn by the engines, and the other as she appears in her native and proper element. So much by way of introduction to the article referred to. If you think the views are worth reproducing in FOREST AND STREAM, you are at perfect liberty to use them.

Lah-ne-o-tah.

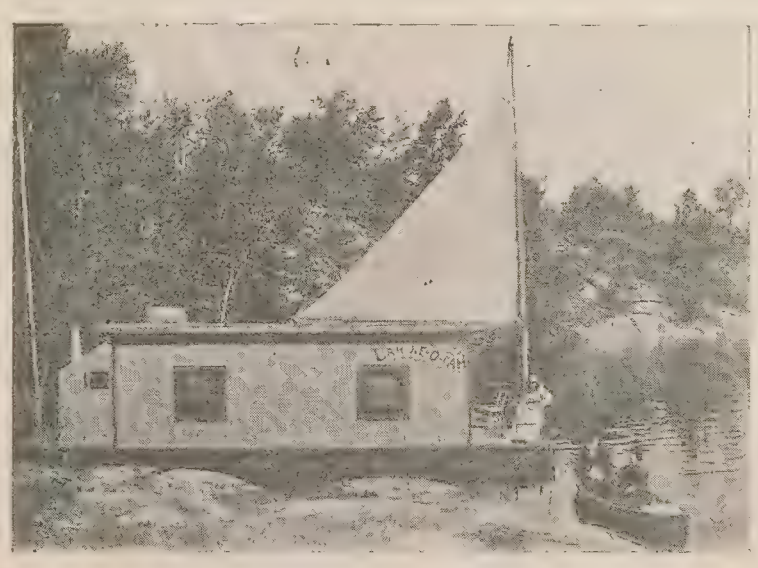
The Scribe of the Reporter's House-Boat—A Short Description of This Novel Floating Ark, the First to Be Built and Successfully Launched in Canada's Inland Waters.

Nearly every day since the house-boat—originated, built and occupied by the Scribe of the Athens Reporter—was launched into the water of Charleston Lake, the editor has had to answer a thousand and one questions as to its construction, design and adaptability to its proposed purpose, and how it has met his expectations in many different ways. As a reply to these questions the present article is penned. The Scribe and family have occupied the house-boat more than half the time since it was launched, and during that time have rowed or sailed it to nearly every part of the lake, often making trips of five or six miles daily. The object of moving from place to place was to have a variety of scenery, and it was seldom that the boat remained more than half a day in the one place. To those who did not read the description of the house-boat given in the Reporter of May 3 last, we would say that the Lah-ne-o-tah is 36ft. in length by 13ft. wide, with a height of 9ft. 4in. from bottom to top of roof. The hull is constructed of 1¾in. pine plank securely spiked to two solid pine planks, 30ft. 6in. long and 24in. wide and 2in. thick. Instead of putting the hull together after the old and hackneyed form usually employed by boat builders, the planks were grooved on each edge and sliptongue used to fill the space instead of using oakum. This was certainly an innovation on the old time-honored custom of constructing water craft, and many wiseacres shook their heads and deplored the want of sense exhibited by the builder. But time proves all things, and after two seasons' trial the plan adopted is found to work admirably. The joints were covered with a liberal coating of McLaughlin's asphalt roof paint, and after the hull was completed a couple of heavy coats were put on both inside and out, and although the house-boat has been anchored out in some of the worst gales experienced on the lake in the last two years, as well as sailed across the "big waters" on several occasions when the whitecaps were rolling so as to make it dangerous to be out with a large rowboat, the pump that was provided has never been called into requisition to take water from the hold. The roof was another thing that seemed likely to give trouble in keeping it water tight, as it only had a pitch of 2in. in nearly 7ft. The rafters were first covered with ¾in. cedar; on this a coat of the asphalt roofing was spread and then a covering of coarse canvas cloth was nailed down. A couple of light coats of asphalt cement were next spread over the canvas, and since the house-boat has been in the water it has been walked on when sailing from place to place and not a spot as large as a penny piece has given way.

The space used for living in is 13 x 21ft., with an 8ft. ceiling, and has a couple of sheet iron annexes at the stern. One of these is fitted up as a kitchen and con-

tains a neat little cooking stove with the required amount of cooking utensils. Shelving around the sides of the cooking galley make a handy receptacle for the culinary articles required for the convenience of the cook. The other annex is fitted up as a lavatory, having all the required conveniences. Perhaps the most novel as well as the most convenient articles are the two folding beds, which during the day are turned up into the front par-

tition and easily let down and made into comfortable bedrooms at night. There is comfortable accommodation for six, and a cupboard in one corner contains a supply of delft and table requisites for a party of twelve. Lounges, chairs and seating for a like number are provided, and visitors are surprised at the amount of room available in so small a compass. A platform 6 x 13ft. at each end (the hind one projecting out over the water), surrounded



by a neat railing, makes a very pleasant place to sit or stand while moving from place to place, or for loung ng on a warm afternoon or evening. An anchor and 75ft. of heavy rope cable enable the boat to be securely held in any desired place, although when stopping for only a short time it is customary to run the bow end up on the rocks or sand and thereby have free access to the land, the boat only drawing 5in. of water. The floor is of alternate strips of beautifuly grained ash and soft maple, and the sides, from the floor up 3ft., are wainscoted with a fine grade of cedar and pine, the balance of sides and ceiling being covered with an attractive design in linoleum. Four stained glass windows furnish all the light required, but the two doors have each glass panels, which allow parties on the platform to see through the boat to advantage.

A mast in front holds the sail in place. The sail has a boom of 25ft., and contains about 100yds. of canvas. A plank 18ft. long and 20in. wide fastened on each side of the boat and so arranged as to be shoved down 4 or 5ft. below the bottom of the boat, act as lee boards and prevent the boat from drifting when sailing close to the wind. A flag pole at the rear floats the Union Jack whenever the house-boat is occupied. On the front walls are hung three trophies of the rod, captured by the Reporter Scribe during the past season. One salmon weighed 19lbs., another 12½ and the other 10¾, and are stuffed and hung up as evidence that Charleston Lake can and does beat the record as the producer of fish of large size and excellent flavor. Thousands of people have visited the Lah-ne-o-tah during the two years that she has been on the lake, and all have expressed themselves as pleased with the appearance of this new departure in craft building and mode of spending a pleasant outing on Canada's most beautiful inland water—Charleston Lake. The proprietor expects to spend the greater part of his time on the Lah-ne-o-tah during the summer of 1901, and will be pleased to show visitors to the lake over the craft and give them all the information possible as to its construction, cost, etc.

Note.—The above article was written solely for the benefit of those readers of the Reporter who had a curiosity to get an idea of the manner of construction and adaptability to the purpose intended. If its reproduction in FOREST AND STREAM will add anything new or of interest to those interested in house-boating, the writer will be amply repaid for all the time spent in his effort. To our American cousins desirous of going to the best lake for salmon or bass fishing in Canada, we will cheerfully give them full particulars on application by addressing

B. LOVERIN,

LEEDS, Ontario.

Huguenot Y. C.

THE Huguenot Y. C. went into commission and opened the local yacht racing on Long Island Sound with its spring regatta on Saturday, May 18. In the morning the prospects for a race seemed very slim, as there was a continuous rainfall and but little breeze. As the time drew near for the boats to start a light southeasterly breeze came up with the prospect of increasing during the afternoon. Owing to the light air during the early part of the day the regatta committee decided to postpone the start of the race until 2:30 P. M., thus giving a number of boats that had been delayed in getting to the starting line an opportunity to race. Some fifteen boats came to time, filling all but one of the classes. The two new Herreshoff raceabouts, Rogue and Oonagh, attracted the greatest amount of attention, and their performance was watched with much interest. The course was a triangular one, seven and one-half miles in length, and at the end of the first half there was but one second difference between them when the times were taken. The course for all the larger boats was from a starting line off the easterly end of Whortleberry Island, then to a red and black buoy off the northeasterly end of Execution Rock, then to a red spar buoy off the southwesterly end of Hen and Chickens, then to the mark boat at the starting line, this being sailed over twice. For the dories the course was from the starting line between the striped buoy off the northeasterly end of Whortleberry Island and the committee boat, then to the black buoy north of David's Island, then to the black buoy north of middle shoal, and then to the striped buoy at the starting line. The small boats sailed over this course twice, making a total distance of three nautical miles.

The first leg of the course was a beat to windward, the second a reach with booms to port and the third the wind abeam with booms to starboard. With sheets in flat, all on the starboard tack, the raceabouts crossed in the following order: Oonagh, Snapper, Rogue and Sis. Rogue was well on the other boats' weather. In the 25ft. class Alcedo started in the lead. The Manhasset one-design boats crossed with Arizona in the lead and Firefly, Bab and Mist following in the order named. Shortly before the start the 18-footer Gazabo lost her rudder, which forced her to withdraw, so her opponent, Nora, was sent up a class and sailed against Ox, a boat considerably larger than herself, but she had no difficulty in beating her handily. The times taken at the end of the first round were as follows:

Sis	3 24 20	Bab	3 45 10
Rogue	3 24 25	Ox	3 45 12
Oonagh	3 24 26	Arizona	3 48 05
Alcedo	3 41 00	Mist	3 48 20
Nora	3 42 00	Firefly	3 50 40

On the second round the Herreshoff boats Rogue and Oonagh split tacks with Sis. On rounding the Execution Rock buoy Rogue caught a better breeze and with excellent handling passed Sis. The Manhasset one-design boats were sailing for a special prize, given by Mr. Guy Standing, in addition to the one offered by the Huguenots. Mr. Standing's trophy is to be given to the boat having the greatest number of points at the end of the season. In this race Bab receives three points, Arizona two, and Mist one.

The regatta committee was made up of the following gentlemen: Messrs. J. Nelson Gould, H. C. Ward and G. C. Allen. The summary follows:

Raceabout Class—Start, 2:35.

	Finish.	Elapsed.
Rogue, F. T. Bedford	4 06 35	1 31 55
Snapper, A. B. Alley	Withdrew.	
Oonagh, G. C. Pirie	4 09 15	1 34 15
Sis, C. T. Bedford, Jr.	4 08 40	1 33 40

Sloops—25ft. Class—Start, 2:40.

Alcedo, G. C. Allen	4 28 32	1 48 32
Bingo, W. B. Greeley	4 33 50	1 53 50

Sloops—21ft. Class—Start, 2:45.

Nora, L. Iselin	4 29 17	1 44 17
Ox, R. N. Bavier	4 33 50	1 48 50

Manhasset Raceabout Class—Start, 2:45.

Mist, J. W. Alkire	4 41 37	1 51 57
Bab, W. F. Morgan, Jr.	4 33 45	1 43 45
Firefly, Guy Standing	4 42 15	1 52 15
Arizona, George Cory	4 36 18	1 46 18

Dory Class—Start, 2:55.

Prize, H. H. Van Rensselaer	4 19 50	1 19 50
Ketch, H. E. Janes	4 05 30	1 10 30
Scamp, W. Westervelt	4 17 40	1 17 40

The winners were Rogue, Alcedo, Nora, Bab and Kitch.

The Year Book of the Yacht Racing Association of Long Island Sound, which is ready for distribution, contains, in addition to the racing schedules of all the Sound clubs, the conditions governing the association championship races for 1901. Copies of this excellent little book may be secured from Thompson & Co., 9 Murray street, New York city.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter III.—Laying Off, Making the Moulds and Setting Up the Frame.

HAVING got all the necessary tools and materials, and a suitable workshop with a good light, the first thing to be done is to lay off the design full size on the floor. If, however, the workshop has not a boarded floor, it is quite possible to work without laying off the whole design, and only lay off the body plan and the profile of the stem on a large sheet of paper for the 22ft. centerboard boat.

In the case of boats of the hollow-bottomed fixed keel type, a full sized drawing of the whole profile from stem head to the end of the counter should be laid off, and if the workshop has no boarded floor, some long, clean floor boards must be clamped together to make a temporary mould floor; but we will suppose there is a suitable floor.

When laying off full size, start with the L.W.L. as the main base line, from which all vertical measurements are taken, and the fore and aft center line for setting off the half-breadths. Then rule the floor or board to exactly correspond with the design from

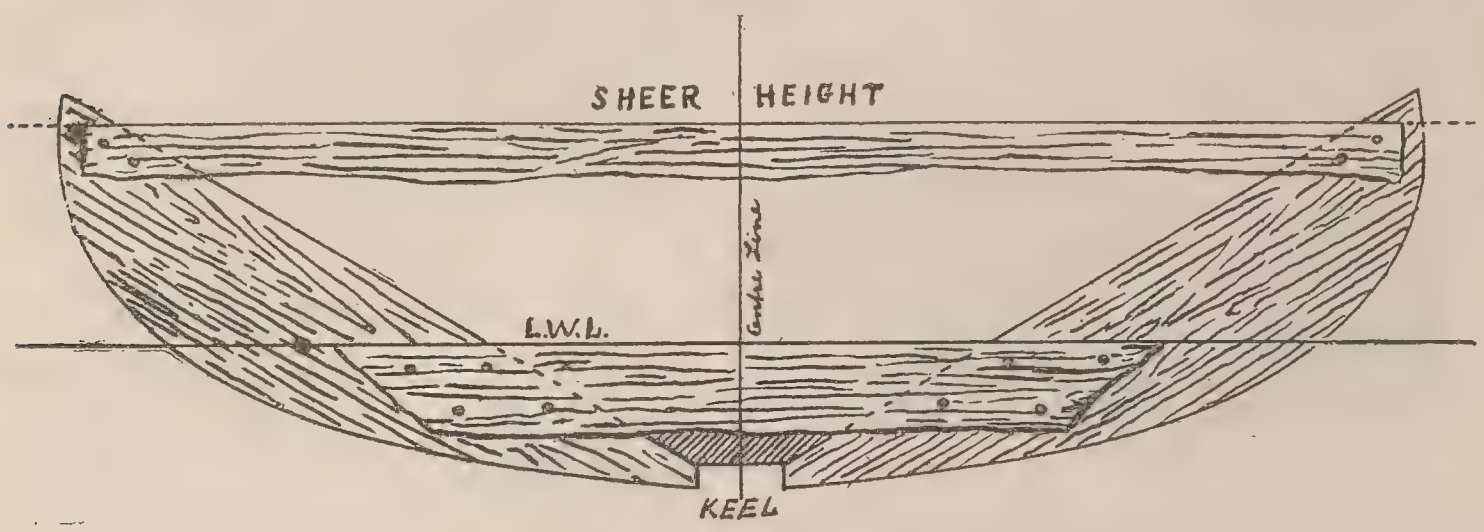


Fig. 3

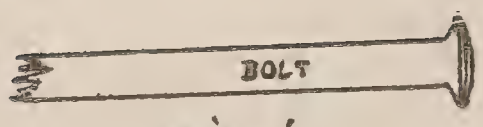

Fig. 4

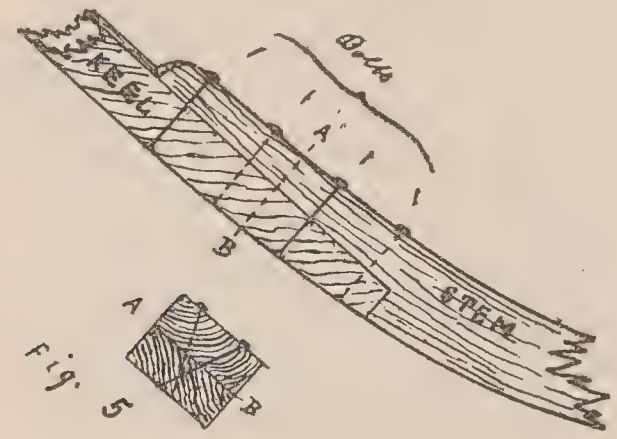
which you are working. This is done by setting off all the distances of the waterlines, buttocks and diagonals from the center and stretching a chalked cord from one end of a line to the other and then pulling it up in the middle and letting it snap on the floor, leaving a clean line, which is perfectly straight and can be penciled in. Be sure all your lines are parallel and square to one another, and that you have not mistaken decimals for inches. Decimals are generally used throughout the design, but inches would be used in the construction drawing.

Having got the floor ruled to correspond with the design, start with the body plan. Set off half breadths of the mid-section along each horizontal line from the vertical center line, taking the utmost care that the distances are absolutely correct. Then mark



the vertical distance on the center line from the bottom of the keel, below the L.W.L., the height of the deck above L.W.L. at the half breadth on deck, and the vertical heights above or depths below the L.W.L. where the section crossed each buttock line. The diagonals are set off by taking the distances from where they intersect the center vertical line to the points where they intersect each section on the body plan.

When all these points are set off, a thin flexible batten should be bent so as to pass through all the spots, and is kept in position by some wire nails till a clean line has been drawn around the whole section. From this line a parallel line is drawn inside it

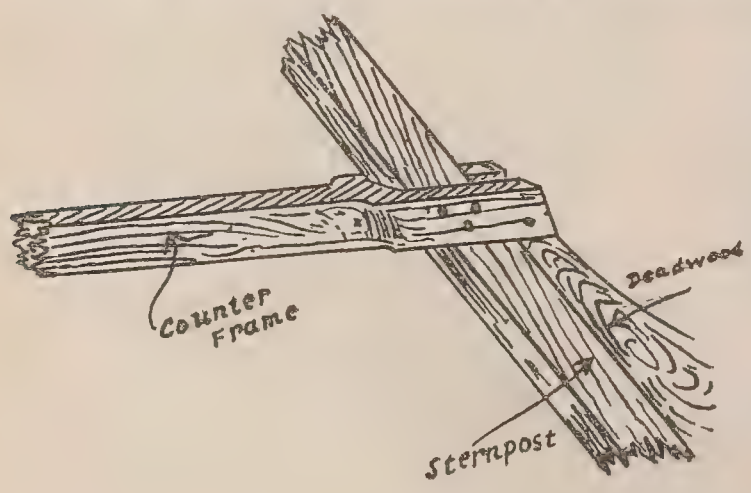


Fig. 7

exactly the thickness of the planking to be used; the other sections are drawn in the same manner. Then the sheer and profile are taken from these sections, and checked by the design. In small boats it is not really necessary to lay off the half breadth plan, as well as the sheer and body plans, but of course it helps toward accuracy, and is always done in the case of larger vessels.

The moulds should be made of some common floor boards or any cheap wood, about ¾in. or 1in. thick, and to transfer the cant them to each side alternately on the inside, as in Fig. 5, and tacks or nails with their heads along the line of the inside of the plank on the section, thus:

The object of the nails is, that when the piece of board to be used for the mould is placed over the nails and tapped all over with a mallet, the heads of the nails are driven half into the drawing on the floor and half into the wood for the mould, leaving a clear print of dents all around the curve, which is quite enough

guide to saw it out by. Now saw out the rough shape of the section in duplicate, and then carefully fit it to the curve of the section till it is exact. Mark the L.W.L., center line, and sheer height of the deck edge on each half, and fasten them together with two cross battens at the L.W.L. and deck level, thus:

Then cut out the section of the keel at that station so as to let the mould fit over the keel to its proper depth—that is to say, till it is flush with the rabbet in the keel; but don't cut it too big at first. Be sure and take the greatest care that each mould is accurate, and that the center line is square with the L.W.L. and sheer line on it; also number each mould as you finish it.

When you have finished making the moulds you must make a thin wooden pattern or template of the stem from the full-sized drawing on the floor, in the same way as the moulds, and lay it on a suitable piece of crooked oak, drawing a pencil all around it to mark the curve of the moulding or depth. Saw it a little outside the line, so as to have a bit of spare wood for trimming up with plane and spokeshave. Cut the scarph as accurately as possible, and square it carefully.

Get out similar templates for the keel and stern frame (for No. 2 design, or the transom knee for No. 1 design) in the same way, and prepare the wood as before, in all cases marking the center line along both top and bottom when finished.

The keel should now have the stations for the moulds marked accurately on it, measuring from the construction sheer plan and taking the distances along the top edge of the keel on the drawing (not the horizontal spacing of the sections). At each of these sections set off the half breadth on each side of the center line, as shown in the half breadth drawing of the keel and stern, etc. A batten should be bent through these spots and a fair line drawn through them from end to end of the keel, which may now be cut out a little larger than this line and then planed up ready for setting up and scarphing to the stem, etc.

Fit the scarph between keel and stem, painting between the two, and bolting them together with about four ¼in. copper bolts, clenched inside on copper rings. These bolts can be made in a few minutes in the vise by cutting off pieces of the ¼in. copper rod

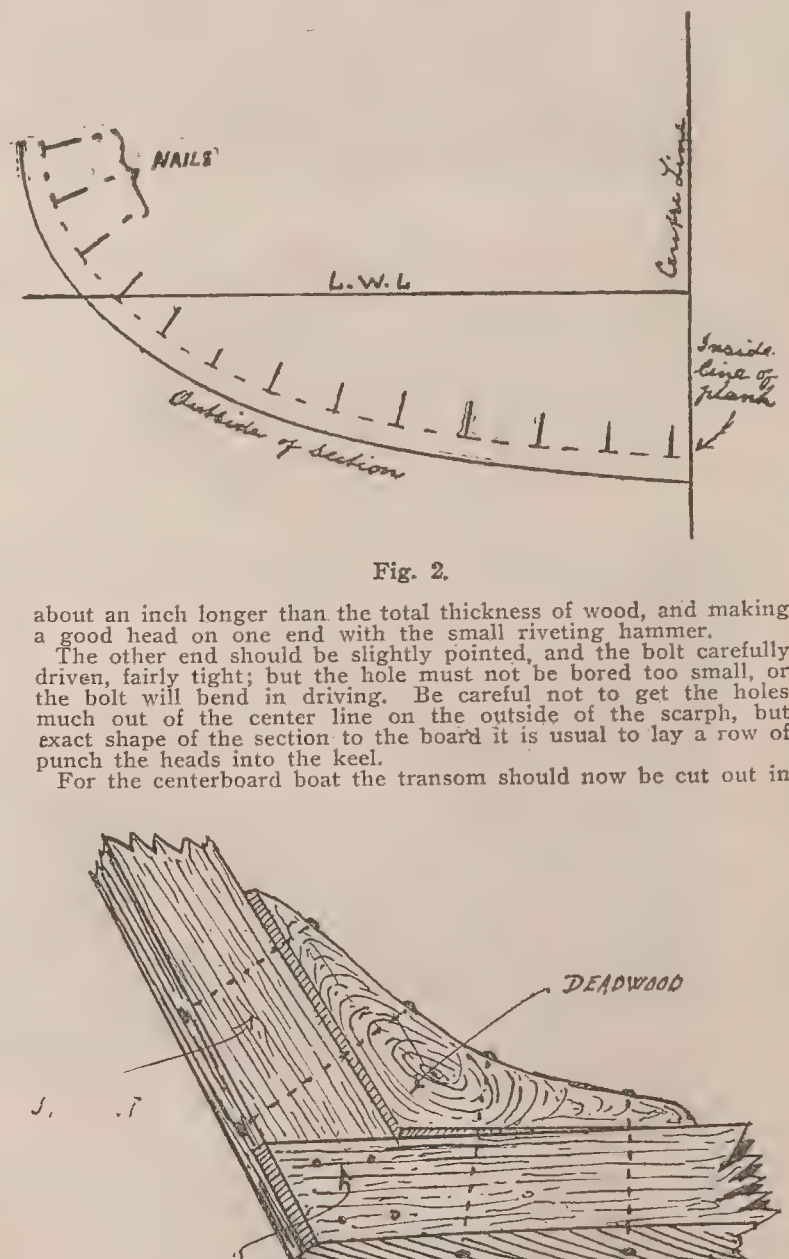

Fig. 2.

about an inch longer than the total thickness of wood, and making a good head on one end with the small riveting hammer.

The other end should be slightly pointed, and the bolt carefully driven, fairly tight; but the hole must not be bored too small, or the bolt will bend in driving. Be careful not to get the holes much out of the center line on the outside of the scarph, but exact shape of the section to the board it is usual to lay a row of punch the heads into the keel.

For the centerboard boat the transom should now be cut out in

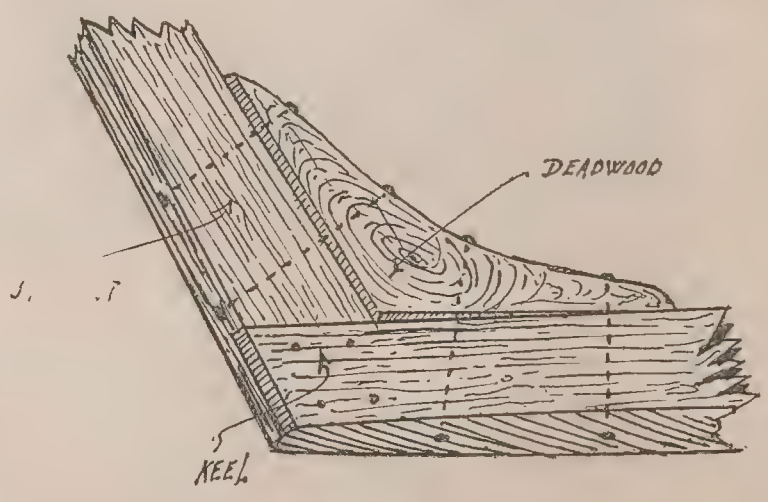

Fig. 6.

the same manner as a mould, but of course from a single piece of mahogany ¾in. thick. It must be carefully planed up and fitted to the drawing on the floor, and it should be cut with about ¼in. bevel on the edges, so that the inside is ¼in. larger all around than the drawing. It should be at least 3in. higher than the deck level to allow for trimming up afterward; and also to fasten the shores. Now fit it over the end of the keel, like the moulds; but in this case the joint must be watertight. The transom knee must now be bolted to the keel with three 3-16in. bolts, similar to those in the stem scarph, and of course the joint painted first. The transom should be fastened to the knee, with three stout 2in. copper nails or screws; it must be perfectly square with the keel and its center line plumb with the stem. Cut the slot for the centerboard in the keel, and also the rabbets along each side of it for the sides of the case. Before setting up the keel in its place these rabbets must be very carefully finished to the section shown.

In the case of the fixed keel boat (No. 2) the keel should be set out from the body plan and half breadth and bolted to the stem as before; but instead of a transom and knee on the after end of the keel there is a sternpost and counter frame. The sternpost should be cut out according to the drawings and specification, and scarphed to the keel by cutting away half the keel and half the sternpost where they cross, and securing them by four 3-16in. bolts. When the sternpost and keel are properly scarphed and fastened, the dead wood must be roughly cut to the thickness of its largest part and fitted to the angle of the keel and sternpost and well bolted with ⅜in. bolts, as shown in the sketch above.

Then trim it roughly with the adze to the thickness of the sternpost on its after edge and to the keel at the bottom, but leave the full thickness along the top till the moulds are up. See that the sternpost and stem are both plumb with each other and not one over to port and the other to starboard, as often happens at first.

Cut out the counter frame to the moulding and siding given in the drawing, and cut the inner end carefully to fit around the sternpost, to which it must be well bolted with two or three ¼in. bolts; but be sure the angles of it and the sternpost are right by laying a rough template of keel, sternpost and counter frame against the frame when it is ready to bolt together.

A German Singlehander.

WE have several times published from the Wassersport the designs of Max Oertz, of the firm of Max Oertz & Harder, Neuhof am Reiherstieg, near Hamburg, Germany, keel craft of exceptionally handsome lines. The little boat here shown, also from the Wassersport, is only a single-hand cruiser, without the refinements of form which distinguish the modern racing yachts, but she is most shapely in her form, below and above water, and should make a good boat for those who prefer a yacht to a barn door. Her dimensions are:

Length—			
Over all	24ft.	5	in.
L.W.L.	16ft.	5	in.
Breadth—			
Extreme	5ft.	10½	in.
L.W.L.	5ft.	3	in.
Draft	3ft.	2½	in.
Mast—			
From stem at L.W.L.	3ft.	9	in.
Deck to hounds	20ft.		
Boom	20ft.	4	in.
Yard	15ft.		
Mainsail	266	sq.	ft.
Jib	68	sq.	ft.
Total	334	sq.	ft.

The lead keel weighs 1,815lbs.; for cruising only an iron keel of the same weight may be used without increasing the draft or decreasing the stability by giving a bulb form instead of the tapering sides and rounded bottom. In building the main keel may be 4in. thick, the stem and sternpost each sided 2¼in., the frames sided ¾in., moulded 1¼in. at heels, 1in. at flat of floor and ⅞in. at the heads, spaced 9in., and the plank and deck each finished to ⅝in. If enlarged to 18ft. waterline, the design would give a snug little cabin for singlehand work. The scales shown on the drawings are in meters, 3.28ft.

Alvina.

THE steam yacht Alvina, which was recently built at the yard of the Harlan & Hollingsworth Co., of Wilmington, Del., for Mr. Charles Fletcher, N. Y. Y. C., of Providence, R. I., arrived at Manning's Basin, South Brooklyn, on April 22, after a very successful trip up the coast. Alvina was designed by Mr. A. S. Cheeseborough, of Bristol, R. I., who superintended the construction. Alvina cost over $250,000. On her recent run from New to Newport, the Alvina, on an eight-hours' trial, averaged 15.34 knots, with natural draft. This speed was made with 130 tons of coal in the bunkers.

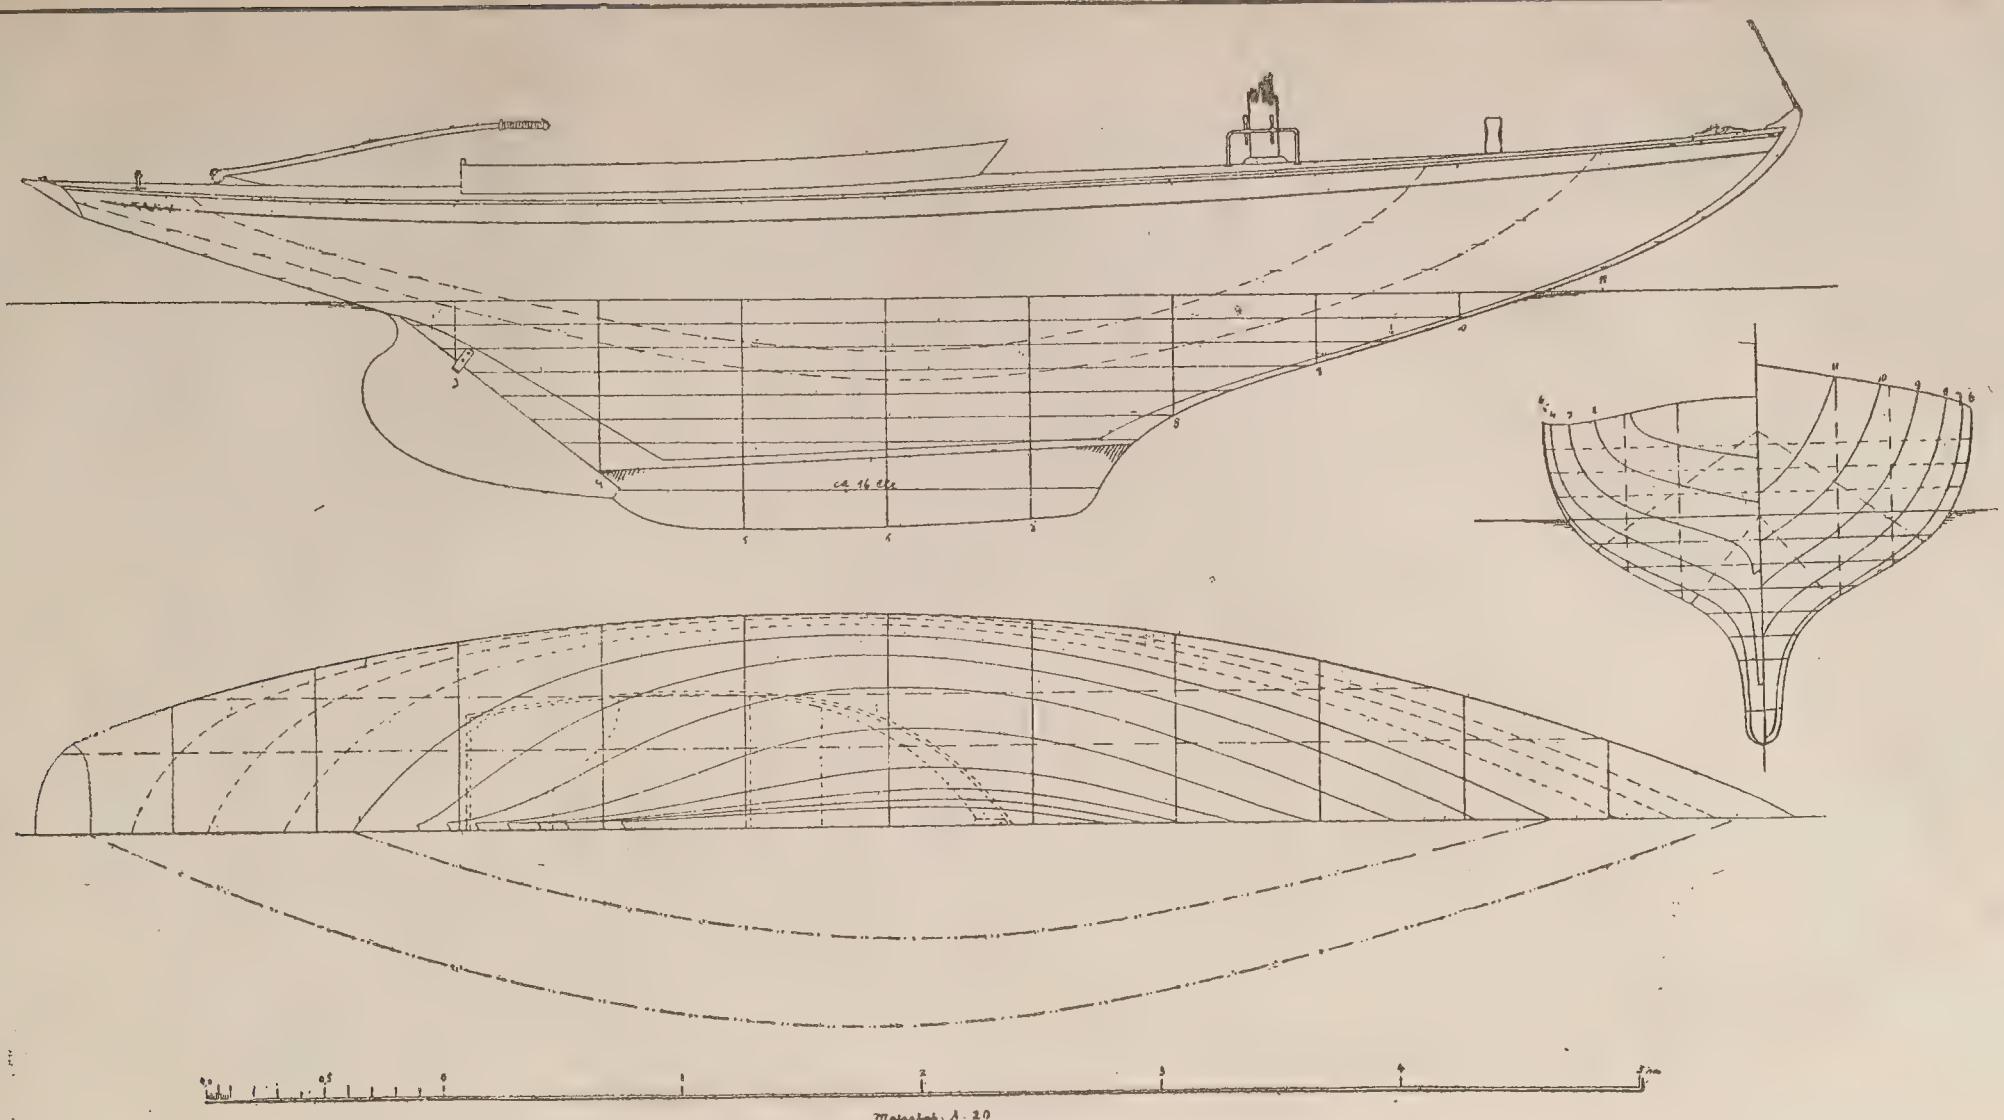
She is a very handsome vessel, with high freeboard, and has the appearance of an English designed and built yacht. The vessel is a steel twin-screw steam yacht with the following dimensions: 215ft. over all, 178ft. waterline, 26ft. 8in. beam, 11ft. 6in. draft. She is to be rated 100 A1 at the British Lloyds. In the hull there are seven water-tight bulkheads and two decks. At the forward end above the main deck are a forecastle deck, under which are arranged the windlass, crew's mess, firemen and oilers' quarters; also a large galley for officers and crew.

There is a long continuous deck house extending from just abaft the foremast to just abaft the mainmast. In the forward end of this house is the dining room, aft of which is a hallway on the starboard side, connected with a covered passageway leading aft. The pantry and galley of the owner are situated on the port side of the deck house; boiler inclosure, a large laundry and engine room casing, then a library, large stateroom and hallway complete the whole deck house accommodations. On top of the main deck house and just forward of the smoke stack is a structure in which is arranged the captain's room and a chart room.

The yacht will be steered from a flying bridge above this structure. She is schooner rigged and will carry three boats on a side, one on the starboard side well aft to be steam or naphtha launch. Going below through finely fitted companionways, the visitor will find the accommodations very roomy. Beginning forward under the decks are located the sailors' quarters, then the officers' quarters and next aft three large staterooms, besides owner's bath room, coal bunkers and machinery space. Further aft there are five staterooms of good size, three being very large, also two bath rooms and a large cabin. The yacht's finish is most elaborate throughout, and she is built strongly and with great care.

Arrangements have been made for water ballast, and for this provision she is fitted with two large tanks, one forward of the machinery space and the other aft of it.

The yacht will be driven by two sets of triple-expansion engines, together developing 1,300 horse-power, natural draft. Steam will be furnished by two Scotch boilers, and there also is a donkey boiler. Auxiliary machinery, consisting of air and feed pumps, two electric light plants, evaporator, distiller and ice-making machinery, is installed. There is a bunker capacity of 170 tons of coal. The contract speed of Alvina is 14 nautical miles an hour for a four-hours' run. She is intended for long voyages, and will probably be taken to Europe this summer. She has a waist of good depth, with bulwark rails constructed from just abaft the foremast to the stern. A brass rail is placed on the sides forward of the foremast.



DESIGN FOR A GERMAN SINGLEHANDER.

Yacht Club Notes.

The third general meeting of the New York Yacht Club for the year was held on May 16, at its club house, West Forty-fourth street. Commodore Ledyard presided, and about 100 members were present.

The matters of the new station on East River and the removal of Station No. 1 from Staten Island to Bay Ridge were referred to the Committee on Uniform and with power to act. The Committee on Uniform and Dress reported a change of club buttons for members to black and gilt. Rating marks and buttons for sailing masters, engineers and stewards will be silver. It was decided to allow retired naval officers to become members of the club.

Two challenge cups were presented to the club by the Alumni Association of the United States Naval Academy. One will be sailed for by schooners, and the other by sloops.

The club presented a club flag to Captain Evelyn B. Baldwin, in command of the steamer America, owned by Mr. William Ziegler, and now enrolled in the club fleet, which flag will be carried by the vessel on her expedition to the North Pole.

The following were elected members:

Daniel Prentice, Ogden Bachus, M. D.; James A. Welsh, J. H. Cockburn, Howard F. Frothingham, Otto L. Petersen, Frederick T. Ames, E. W. Fitch, James L. Laidlaw, Henry W. Bull, F. D. Mollenhauer, James H. Oliphant, William L. Briggs, George A. Adee, Charles H. Tenney, William M. Laffam, John Kerr Branch, Warner B. Nash, James B. Tailer, Lieut.-Commander Alexander Sharpe, U. S. N.; Lieutenant Joseph H. Rohrbacker, U. S. N.; Surgeon Edward R. Stitt, U. S. N.; Edward D. Lentilhon, H. Burnside Potter, W. W. Anthony, Frederick Bull, Henry Tilden Swan, George Joseph Smith, Ensign Thomas Charles Hart, U. S. N.; William F. Mohr, James Hart Welch, Arthur P. Sturges, W. B. Chisholm, Theophiles Parsons, Henry P. Watson, John Seeley Ward, Jr.; Albert Bradlee Hunt, Ensign Victor S. Houston, U. S. N.; E. G. Burns, Lieutenant-Commander Henry McCrae, U. S. N.; C. J. Coulter, John Aspinwall, Daniel J. Reid, Thomas A. McIntyre, Jr.; John C. Sharp, James Warren Lane, George W. Ely, Richard King, Charles B. Mason, George J. Weaver, John Lorillard Arden, Cyrus Edwin Lothrop, J. M. McCarthy, H. F. G. Wey, Charles F. Booker, Elisha P. Wilbur, Jr., Theodore F. Vail, William H. Truesdale, Winthrop Rutherford, Alvan Markle, A. W. Hallenborg, Elisha Dyer, Jr., Henry Clay Pierce, W. P. Douglas, F. H. Clerque, James Park, D. M. Owen, Captain Theodore F. Kane, U. S. M. C.; Naval Constructor W. J. Baxter, U. S. N.; Rear Admiral John H. Upshur, U. S. N.; Rear Admiral J. N. Miller, U. S. N.; James Elverson, Jr., Max Fleischmann, Charles W. Lee, Ensign Frank W. Toppan, U. S. N.; R. S. Hebden, W. L. S. Jackson, Captain Seth M. Ackley, U. S. N.; Regis H. Post, J. R. Maxwell, Jr.; Henry L. Maxwell, Joseph C. Willetts, Henry A. W. Wood, L. C. Lothrop, William McDonald, Lieutenant John A. Tobin, U. S. N.; E. L. Frisbee, Jr.; John Dupee, Charles E. Sampson, George S. Terry, Melville D. Chapman, James R. Steers, Frederick L. Rodewald, William McClure, William M. Lovering, Henry Sampson, Jr.; Dallas Bache Pratt, Miguel R. Martinez and Roy A. Rainey.

ALVINA—Designed by A. S. Cheeseborough for Charles Fletcher. Photo by C. D. Mower, New York.

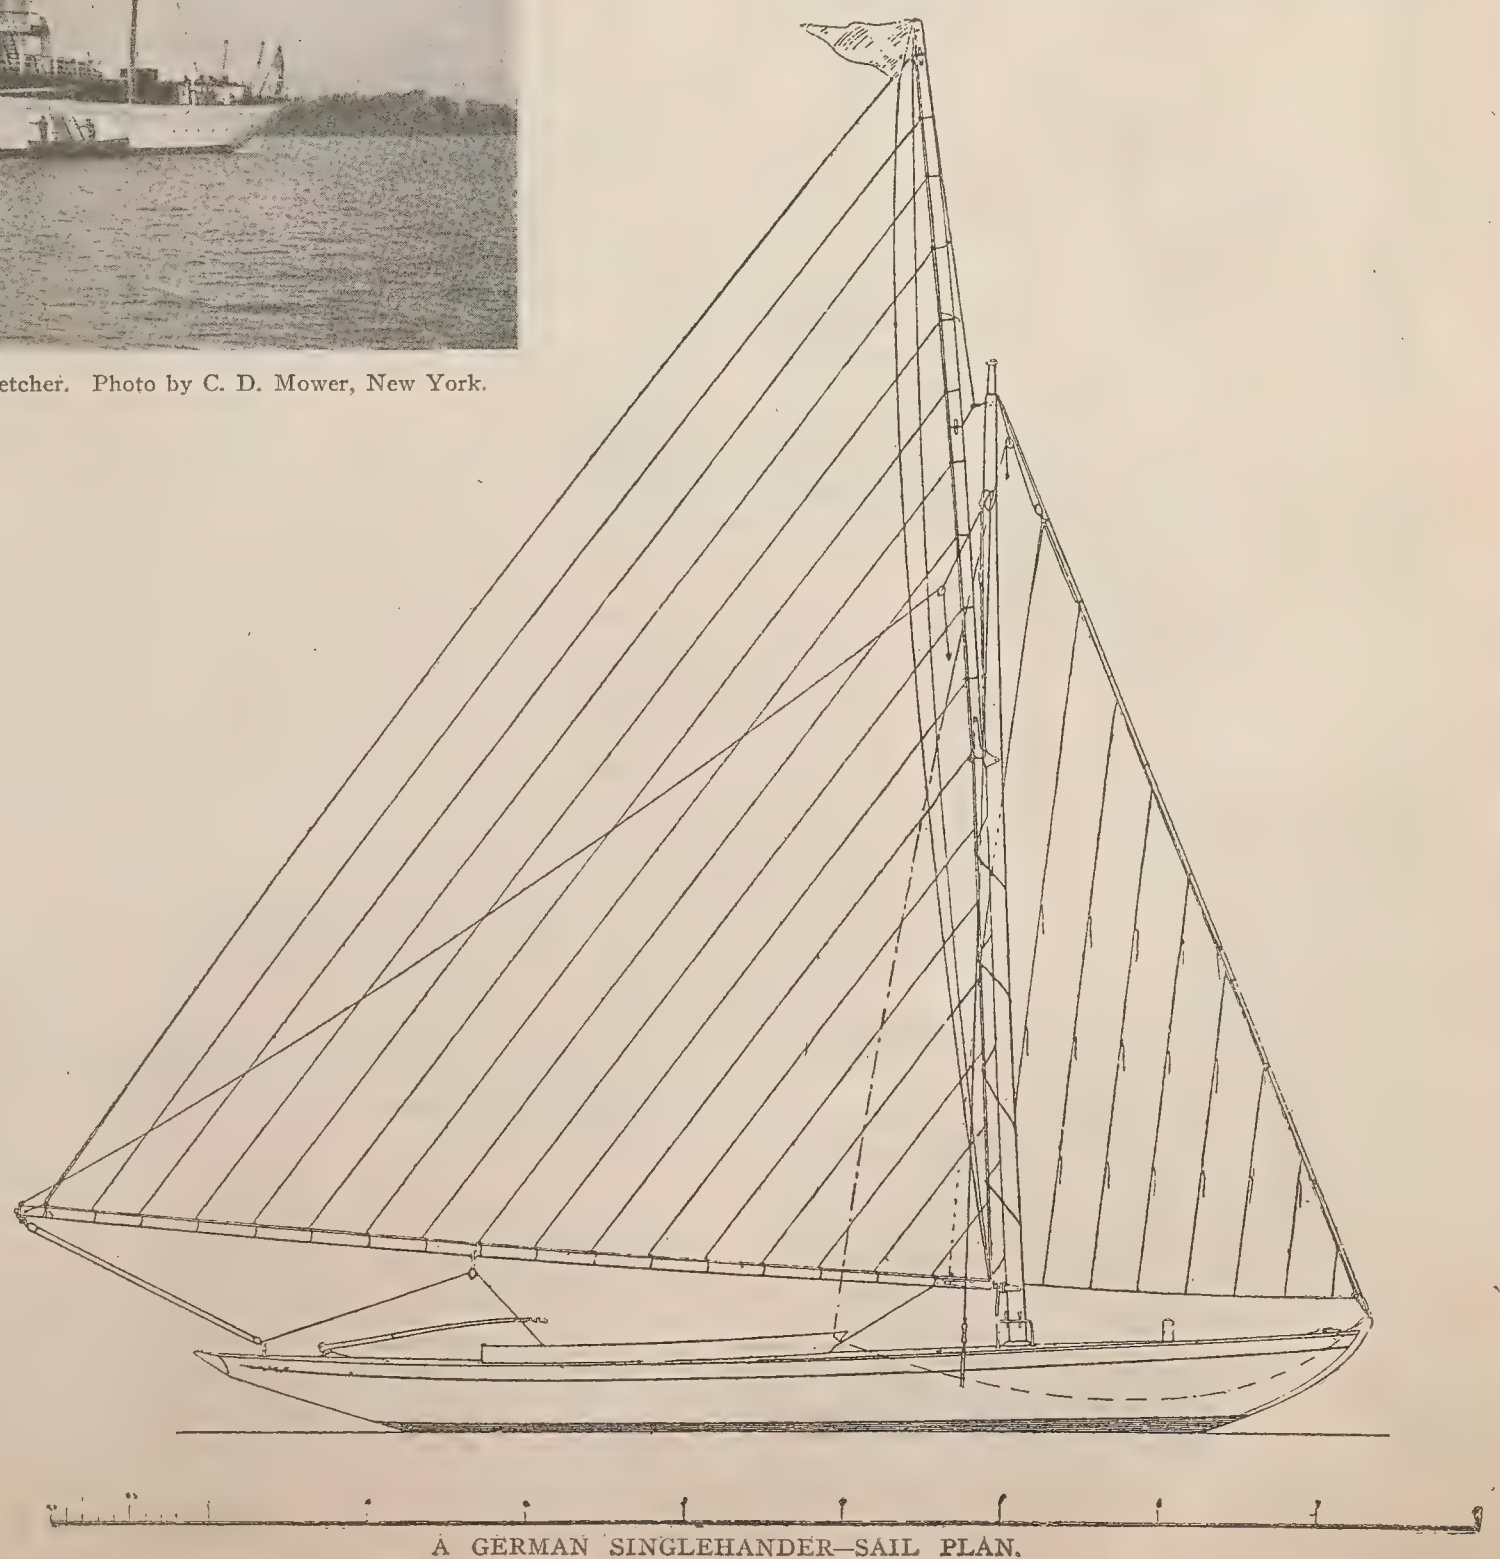
* * *

The Regatta Committee of the Atlantic Yacht Club has issued the schedule of the races for the coming season. The first one, which is for members of the club only, will be sailed on Decoration Day and the yachts will go over the upper bay courses. The annual regatta will take place on June 18, and the annual cruise will start on July 6 at City Island and last until July 13. The boats in the squadron will make short runs on the Sound, ending at Shelter Island. In conjunction with other yacht clubs on the lower bay the Atlantics have arranged a schedule of races, those to be managed by the latter being on June 1, 29, Aug. 3 and Sept. 7.

* * *

Pavonia Yacht Club members formally opened their new quarters at the foot of Forty-first street, Bayonne, N. J., on May 11.

The new house is handsome in appearance, and contains nineteen large room, fitted up with everything con-



A GERMAN SINGLEHANDER—SAIL PLAN.

ducive to comfort and ease. In addition to the accommodations for members and their families, there is a large work shop where the ambitious amateurs may build boats if they so desire, or repair old favorites, that have grown old in the service. There are also sail and spar lofts, where the spare gear of the fleet may be safely housed.

Seawanhaka-Corinthian Yacht Club members held their fourth regular meeting on May 14 at Delmonico's, Fifth avenue and Forty-fourth street. Commodore Arthur C. James presided and Allen E. Whitman performed the duties of Secretary. Reports of the various committees were read and approved, and the club announced its readiness for the season. There will be an informal opening of the club house at Oyster Bay on May 25, and on Decoration Day, May 30, the regulation opening ceremonies will be held and a club regatta for raceabouts, knockabouts and catboats will be sailed over the courses in Oyster Bay.

The Newport Yacht Racing Association, which in past years has done much to promote yacht racing and has this year offered prizes which will bring the cup defenders and other racing classes together in several contests to be sailed off Newport, is enlarging its membership and endeavoring to increase its sphere of usefulness. It announces that it already has a racing fund of $12,000 raised by voluntary subscription.

The new club house of the Columbia Yacht Club, at Eighty-sixth street and the Hudson River, was formally taken possession of on May 13, when a largely attended reception was given. Commodore Walther Luttgen was presented with a handsome loving cup by members of the club.

The new home is very attractive in design, and is constructed of rough stone and brick, with shingled roof and gables.

On the lower floor is a large grillroom heavily timbered with oak. This extends fifty feet, the entire width of the building. At one end is a billiard table for the men, and at the other is a snug harbor decorated with yachting trophies and emblems.

YACHTING NEWS NOTES.

We have received the Beverly Y. C. book for 1901: it is well bound in brown canvas and gives much information regarding Buzzard's Bay and vicinity.

Sir Thomas Lipton is having a launch built by the American Motor Co. which will serve as a tender to Shamrock II. The launch is to be named Duffierin, in honor of Lady Dufferin, who named Shamrock II. Her dimensions are 40ft. over all, 7ft. 8in. beam, 30in. freeboard, and she will draw 22in. She is equipped with a 4-cylinder mogul engine, and is expected to make 12 miles an hour. She will be an open boat, and over the cockpit there will be a hood for protection in rough weather.

Ermina, the steel schooner yacht designed by Messrs. Cary Smith & Barbey for Mr. F. F. Brewster, of New Haven, was successfully launched from the yards of the builders, the Townsend and Downey Shipbuilding and Repair Co., Shooter's Island, S. I., on May 16. She is 99ft. over all, 68ft. on the waterline, 20ft. beam, and draws 12ft.

At a general meeting of the Royal Yacht Squadron in London, held a short time ago, the Marquis of Ormonde was elected Commodore, succeeding King Edward. The Duke of Leeds was elected Vice-Commodore.

The steam yacht Taurus, recently purchased abroad by Mr. John H. Hanan, N. Y. Y. C., arrived at Greenport, L. I., a few days ago from the Mediterranean, stopping at the Azores. The yacht had a rough passage.

The official number given the cup defender Constitution by the Commissioner of Navigation at Washington is 127,530, and her signal letters are K. G. T. S.

Alueda, the auxiliary yawl built by Townsend & Downey for Mr. E. A. Fairchild, from designs made by Mr. Henry J. Gielow, has been satisfactory in her trial spins, showing good speed under all conditions. The auxiliary power is a three-horse-power motor, which will give the boat a speed of 4½ knots an hour. She is 39ft. over all, 11ft. beam and 3ft. 9in. draft.

Rear-Commodore C. L. F. Robinson, N. Y. Y. C., owner of the Fife designed cutter Hester, has purchased in England the steel steam yacht Kethailes, designed by Mr. St. Clair J. Byrne, and built at Leith in 1897 by Messrs. Ramage & Ferguson. She is 178ft. 4in. between perpendiculars, 167ft. on the waterline, 24ft. beam and 13ft. 6in. depth, and 479 tons, Thames measurement. The yacht has two decks, four watertight bulkheads, pole masts, and is lighted throughout by electricity.

Mr. Larz Anderson, of Boston, has chartered for the coming season through Messrs. Tams, Lemoine & Crane, the English built steam yacht Katoomba. She was designed by Mr. G. L. Watson and built by the Ailsa Shipbuilding Co., of Troon, in 1898. She is 175ft. between perpendiculars, 163ft. on the waterline, 24ft. 3in. beam, and 13ft. 9in. deep.

The steam yacht Sultana, owned by Mr. John R. Drexel, N. Y. Y. C., has arrived from Gibraltar by the way of Bermuda, at New York. Sultana has been absent nearly a year.

Mr. F. N. Smith's new 43-footer Effort II., built this year by the Herreshoffs, has been rigged and is now ready for her trial trip. Her sails will be bent at once. She is a good looking boat, with considerable overhang, both fore and aft. Her topsides are of mahogany, which give her rather a handsome appearance, but the whole effect is spoiled by a light oak cabin house.

Dr. W. Barton Hopkins, N. Y. Y. C., of Philadelphia, has purchased of Professor J. Harvard Biles, of Glasgow, Caress, designed by Mr. G. L. Watson, and built by the Hendersons, of Glasgow, in 1895. She was rigged as a cutter until last year, when she was rigged as a yawl.

The New York Herald's foreign correspondent states that the new royal yacht Victoria and Albert has gone through extensive alterations made by Mr. G. L. Watson, which make the vessel perfectly staple and seaworthy. King Edward will live on board during Cowes week.

Rifle Range and Gallery.

Fixtures.

May 30.—Pohlmann's Pavilion, Jersey City Heights.—Tournament of Our Own Shooting Society.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Rifle at Shell Mound.

SAN FRANCISCO, Cal., May 13.—About 200 marksmen visited Shell Mound range yesterday. The proprietor is getting the shooting stand in fine shape for the bund shoot to be held two months hence. The glittering prizes offered for that festival have led to much practice. Our locals hope to keep some of the plums here, though they realize that it will take first-class skilll to do so. Scores:

San Francisco Schuetzen Verein, monthly medal shoot—Champion class, A. Pape, 440; first class, J. D. Heise, 413; second class, A. Jungblut, 386; third class, D. Craig, 355; fourth class, T. Beuttler, 373; first best shot, F. Bachman, 25; last best shot, E. Goetze, 24.

Swiss Rifle Club—Prizes for the monthly bullseye shoot were won in the following order: A. Von Wyll, J. Lemann, A. Studer, P. Croce, J. Sheible, A. Gehret, J. Bachman, C. Bachman, R. Hauser, F. Suter, A. Monotti, F. Baumgartner, E. Suter, E. Lacroix, G. Grandjean.

Swiss Rifle Club, monthly medal shoot—Champion class, J. Leeman, 396; first class, R. Hauser, 382; second class, Monotti, 331; third class, C. Bachman, 285.

Golden Gate Rifle and Pistol Club, handicap—A. B. Dorrell, 220, 215, 226, 218, 220; A. Gehret, 206, 208, 220, 213, 220; L. O. Rodgers, 224; F. E. Mason, 225, 226; D. B. Faktor, 222, 223; F. P. Schuster, 218. Gold Medal—M. F. Blasse, 196; B. Jonas, 212, 215. Silver Medal—W. F. Blasse, 181, 187; E. L. Riemenschneider, 193; M. J. White, 202.

Germania Schutzen Club, monthly medal shoot—Firt champion class, F. P. Schuster, 226, 224; second champion class, R. Stettin, 206, 201; first class, J. D. Heise, 204, 195; second class, L. Ritzau, 209, 208; third class, William Doell, 201, 175; first best shot, F. P. Schuster, 24; last best shot, L. Ritzau, 255.

Independent Rifles monthly medal shoot—R. V. Bitlerr, 40; J. W. Nowdeska, 21; H. Frederickson, 22; G. Mitchell, 37; J. H. Peck, 31; H. Mitchell, 20; M. Barto, 15; E. Moenning, 39; B. Hilken, 38; C. Herring, 32; J. Donovan, 19; H. Goetjen, 37; M. Moenning, 23; H. Mazolf, 37; F. H. Saun, 37; M. Moenning, 23; H. Mazolf, 39; G. Peterson, 34; A. Wolfgram, 26; Dr. Meierdierks, 18.

Norddeutscher Schuetzen Club, monthly medal shoot—L. Thierbach, 185; A. Mocker, 235; F. Koch, 399; F. P. Schuster, 426; Captain John Thode, 452; J. de Wit, 580; J. D. Heise, 597; A. Hohmann, 648; J. Gefken, 716; G. White, 829; O. von Bostal, 940; W. Doell, 1,036; F. Rust, 1,186.

ROEEL.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, May 12. Conditions, 200yds., off-hand, at the German ring target. Gindele was declared champion for the day with the good score of 222. Weather, cloudy; thermometer, 70; wind, strong, 3 to 6 o'clock:

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the twenty-fourth annual tournament of the Missouri State Game and Fish Protective Association, under the auspices of the St. Louis Shooting Association, offers an exceedingly attractive competition to all amateurs. It in particular will appear to the large class of shooters who do not care to compete when the entrance money is rather large. The merchandise list is long and valuable. On May 28, the first day, the shoot for the State Association team medal takes place. This is a four-man team race at 15 birds per man, entrance $20, birds extra; $100 to go to the club last holding the medal, and $100 guaranteed to be divided among second, third, fourth and fifth teams in the race, 40, 30, 20 and 10 per cent. In the afternoon two events, the Missouri State individual championship and the Interstate individual championship, are on the programme. Each is at 25 birds, $12.50 entrance, birds included, $50 added. On May 29 event 1 is the St. Louis Republic trophy, a handicap open to the world, 25 birds, $25, birds included; $1,000 guaranteed. There also are eight target events, at 15 and 20 targets, $1 and $1.50 entrance. May 30 is devoted to merchandise events. On May 31 the Lemp medal, representing the amateur championship at live birds, 25 birds, $15 entrance, handicap, and eight target events are on the programme. On June 1 there is a handicap, open to the world, at 10 birds, $7 entrance, followed by the conclusion of the Lemp medal contest. There are also eight merchandise events on the programme. Shooting commences at 9:30 each day. The handicap committee will be selected from among the shooters present. Magautraps and bluerocks will be used. No percentage is taken from the purses. Live birds, 25 cents; targets 2 cents. The Rose system will govern. High guns will govern in the live-bird competition. Professionals may shoot for targets only, except when otherwise specified. The Lindell Hotel will be headquarters. Ship shells to the Rawlings Sporting Goods Company, 620 Locust street. Mark your name on the box, and it will be delivered on the grounds free of charge. The annual meeting of the Association will be held on Tuesday evening, May 28, at 620 Locust street. Any shooter who contemplates a participation in this great shoot should send for a programme. The conditions governing the numerous trophies are set forth therein in full, besides much other valuable information essential to the shooter. Mr. Herbert Taylor is the secretary.

A series of club contests for a Parker hammerless, a Lefever hammerless, and an L. C. Smith hammerless, has been arranged to be shot for at Richmond, Va., between June 1 and Oct. 1. Clubs to be eligible must have an active membership of not less than fifteen, and must hold at least twenty shoots during the season. Each contestant must shoot at 50 targets at each regular shoot, and during the season, thirteen times at least, with the club to which he belongs. Handicaps are arranged in an equitable manner. The three high men of each club will meet at the West End Gun Club's grounds, Oct. 5, and shoot for the guns, 100 targets per man, 50 expert, 50 magautrap.

The programme of the fifth annual tournament of the Ohio Trapshooters' League, to be held at Circleville, June 4, 5 and 6, $300 added, can be obtained of the secretary, Mr. G. R. Haswell, in whose care guns, etc., may be sent. They will be delivered on the grounds free. The club is prepared to shoot, rain or shine. Targets 2 cents. A warm dinner will be served on the grounds; $70 added for high averages. The league adds $50, which is to be given to the ten lowest guns shooting through the programme. Shooting commences at 9:30. The Rose system, 7, 5, 3 and 2, will govern. Manufacturers' agents will pay $2 per day extra; other shooters 50 cents, which will be divided among all the amateurs who shoot through the first regular events each day. Each day the first eight events are at 15 targets, $1.50 entrance, $7.50 added. On the first day, June 4, event 9 is for the State Journal cup, at 30 targets, 60 cents entrance, optional sweep $2.50. No. 10 is a special event at 25 targets, $2.50 entrance. No. 9 on Wednesday is at 25 targets for the Press-Post trophy, 50 cents entrance, optional sweep $2.50. No. 10 is a two-man team race for a trophy, 25 targets, entrance $1 per team. On Thursday event 9 is at 50 targets for the Smith trophy, 50 targets, $3 entrance. Event 10 is a five-man team contest, 30 singles and 10 pairs, entrance $1. Conditions and history of the trophies are fully set forth in the programme. The annual meeting will be held on June 4 at 7:30 in the evening. Magautrap and Sergeant system will be used.

The programme of the Michigan State Trapshooters' League, May 28, 29 and 30, under the auspices of the East Side Gun Club, Saginaw, Mich., may be obtained on application to the secretary, Mr. John M. Messner. Mr. John Parker, famous as an expert, will manage the tournament. The first day provides ten events at 15, 20 and 25 targets. Event 6 is for the championship event, for expert, semi-expert and amateur trophies emblematic of the State championship. There are $5, $10, $15 added money to the different events, and $10 each day to State league membere making the three highest average; divided 50, 30 and 20 per cent., and $5 to the non-resident making the highest average. The main events of the second day are the State three-man team championship and the Iron City's trophy, a handicap by distance. The third day is devoted to live birds, and has six programme events, one at 5 birds, $5 entrance, $5 added, money divided 60 and 40; one at 7 birds, $7 entrance, $10 added, money divided 60 and 40; one at 10 birds, $10, $15 added, money divided 50, 30 and 20 per cent; the championship event for the live bird trophy and championship of the State, 15 birds, entrance $15, $50 added, or 15 birds, entrance for the trophy only, $3; and a miss-and-out, $2, $5 added. Average money the same as on target days.

The New York World of May 20 has the following maidenly editorial on live-bird shooting at the traps. It is of about the same degree of accuracy and worth as many other sentimental vaporings presented as arguments by the antis. It states: "As a slight tribute of respect to the late anti-pigeon shooting bill, explosive shot will be furnished, it is said, for next Wednesday's live-bird tournament at Interstate Park. Of course, it is expected that people who have been so weak as to indulge in a sentimental feeling over maimed and tortured doves will be instantly relieved by this assurance that the feathered victims will be blown to pieces and have no chance of lingering in pain. The outcome, however, will hardly be as the trap shot promoters fondly hope. This year's bill is dead indeed, but the feeling against the cruel, useless 'sport' of live-bird shooting persists. It will force another bill, and the next Legislature will be made to understand the conditions better. Dove slaughter is under the shadow of popular disapproval. It must come under the ban of public law." Of course all shooters know that there is no such thing as explosive shot used as above mentioned. Some practical joker has been making merry with the World's credulity.

The programme of the Peters Cartridge Company's amateur tournament at Bristol, Tenn., June 4 and 5, may be obtained of Mr. John Parker, the manager, care of the Peters Cartridge Co., Cincinnati, O., or Dr. Rhea, Bristol, Tenn. This tournament is open to amateurs only. There is $100 added money. The programme provides ten events each day, at 15, 20 and 25 targets, $1.50, $2 and $2.50 entrance. It presents other information, as follows: "Targets will be thrown at 2 cents apiece. The shooting will be from expert traps, Sergeant system. The purses will be divided by the Rose system, five moneys, 7, 5, 4, 3, 2 points. A handsome gold medal for highest average for the two days. Any profits arising from the shoot to be placed in an extra event at close of second day, open only to shooters who have shot in all the events. American Association rules. Referee's decision shall be final. Manufacturers' agents to shoot for price of targets only. Programme will be started at 9 A. M. each day. Please make entries for all day, and cashier will refund all uncontested events. Traps open for practice Monday, 22d. Guns and shells sent to the Barker Hardware Company will be delivered on grounds free of charge."

The enterprise Gun Club, of McKeesport, Pa., announces that its fifth annual sparrow and target tournament will be held on May 30. There are ten target events on the programme, 10 and 15 targets, alternating, $1 and $1.50 entrance; bluerocks, 1½ cents extra, thrown from a magautrap. Those who wish may shoot for targets only. Mr. George W. Mains is secretary. Shooting will begin promptly at 10 A. M. The first event will be at 25 sparrows. Entrance $2.50. From five traps, 25yds. rise, 50yds. boundary; dead line 5yds. behind score. Bird comes to ground inside of boundary will be scored dead. This event will be simply for sport. Entries should be sent on or before the 25th, so that the management may know the number of sparrows to order. Shells for sale on grounds. All purses will be divided according to the Jack Rabbit system; surplus in 10-bird events, 50 30 and 20 per cent.; in 15-bird events, 40, 30, 20 and 10 per cent. The enterprise Gun Club's new grounds are outside of the city limits, on the Park Farm, opposite the new Hoffman Hotel. Take United street cars to Brady.

The letter head of "The Indians" bears a list of membership, with the official titles of the officers and other members as follows: Tom A. Marshall, Grand Sachem, Chief Long Talk; Frank C. Riehl, Grand Scribe, Chief Piasa; Chas. W. Budd, Custodian of Wampum, Chief Dago; Rolla O. Heikes, Chief Bald Eagle; William R. Crosby, Chief Kinnikinic; Fred. Gilbert, Chief Heap Talk; Chan M. Powers, Chief Wipe Stick; E. H. Tripp, Chief Ride in the Wagon; E. E. Neal, Chief Black Diamond; George W. Loomis, Chief No Talk; Richard Merrill, Chief High Kick; Harvey McMurchy, Chief High Ball; Frank Parmelee, Chief Buffalo Hump; John J. Hallowell, Chief Arizona Jack; J. A. R. Elliott, Chief Brook Trout; A. B. Daniels, Chief Jack Rabbit; John S. Fanning, Chief Bull Seal; Emil Werk, Chief Rio Grande; Jack Parker, Chief Des Kra Chaska; Guy Burnside, Chief Spoon River; Edward Bingham, Chief Crooked Talk; A. G. Courtney, Chief Sitting Bull.

Mr. E. L. Greenin, the secretary, writes us as follows: "The Westwood Gun Club, of Westwood, N. J., will hold its regular monhtly club shoot on Saturday, May 25. This club is making great preparations for its shooting tournament on Decoration Day, having two matches on that day. In the morning there will be one with the Oradell Gun Club, of Oradell, N. J., and in the afternoon the gun club of Spring Valley, N. Y., will try conclusions with the Westwood gunners. After the match there will be shooting for prizes, which will prove very interesting. Refreshments will be served to all shooters. Admission free, and seats will be reserved for ladies. The grounds are pleasantly situated, the company agreeable, and the shooting will be sufficiently hard to test the skill of all."

The Intercollegiate championship was won by Princeton last Saturday at Wissinoming, Pa. The contestants and scores were as follows: Princeton—Spear 35, Elbert 44, Laughlin 35, Frost 32, Archer 34; total 180. Pennsylvania—Parish 35, Baldwin 42, Weaver 37, Sowdon 26, Ballard 22; total 162. Harvard—Bancroft 36, Blake 20, Phelps 33, Dana 29, Mallinckrodt 37; total 155. The officers elected for the ensuing year are: President, G. M. Phelps, Harvard; First Vice-President, P. P. Archer, Princeton; Secretary and Treasurer, J. G. Sowdon, Pennsylvania.

The attention of club secretaries is called to the fact that FOREST AND STREAM goes to press on Tuesday of each week. Not infrequently programmes are received for review by us after FOREST AND STREAM is on the news stands, and in the week before the shoots to which they refer take place. A little forethought in such matters is quite as useful as in all other matters where common sense is a factor.

Mr. Paul North, of Cleveland, O., was married on Wednesday of last week. Mr. and Mrs. North sailed for England Saturday last, on their wedding tour. Mr. North will arrange the preliminaries for the great international trapshooting contest so that on the arrival of the American team the match will be ready for competition.

The West Chester, Pa., Gun Club announces that its annual spring shoot will be held on June 6. Added money $25. Targets 2 cents. Competition commences at 10 o'clock, and is open to all. The programme has ten 15-target events and four 10-target events. Class shooting. Lunch and loaded shells can be obtained on the grounds.

The American International trapshooting team is scheduled to arrive in New York on Friday of this week. In the evening of that day the Interstate Association will give them a banquet. Saturday will be devoted to rest and sightseeing. On Sunday morning the team sails for England.

The programme of the Canajoharie Gun Club's annual shoot, May 30, 15 events at 15 bluerocks, entrance $1.30, targets included: For best averages in events 5 to 14 inclusive, $100, divided 30, 25, 20, 15, and 10 per cent. Targets two cents. Mr. Charles Weeks is the secretary.

In the team race, eleven men on a side, between the Boiling Springs Gun Club, of Rutherford, N. J., and the South Side Gun Club on the grounds of the latter at Newark, on Saturday of last week, the latter won by a score of 218 to 211. Each man shot at 25 targets, Sergeant system.

Owing to the dates, June 5 and 6, conflicting with the Rochester, Minn., shoot, the date of the Wisconsin tournament has been changed to June 3 and 4.

The Peters Cartridge Company, of Cincinnati, O., informs us that its tournament at Bristol, Tenn., is postponed for about three weeks.

BERNARD WATERS.

Fort Smith Gun Club.

THE club resumed operations for the present season on May 2, although some few preliminary events were shot before that time. It has been decided, for the present, to shoot Thursday afternoons at the regular time, about 4 P. M. A little later in the season, say June 1, the club will shoot twice each week, on Tuesday and Friday afternoons, at the grounds on Governor Fishback's place, at the end of the Little Rock avenue electric line.

The past season has been such an unusually busy one that business men have not yet got things straightened out and consequently the attendance is not what it will be a little later in the summer, when we have more leisure.

The feature of this season's shooting will be the contest for the beautiful loving cup presented through the Webber-Seely Company, by the Peters Cartridge Company, to the Fort Smith Gun Club, to be contested for on such terms as shall be determined by the club. This cup will be contested for on a distance handicap basis, so that the weaker shots may stand a show to win this handsome trophy. The handicaps will run from 14 to 18yds., and the distance at which each contestant will stand will be determined by the handicap committee. The first 1,000 shots fired by each man will be counted for average on this cup shoot, and the winner will be the man who makes the highest average in this 1,000 shots. Already several scores have been shot, and all scores will count on the cup unless the shooter distinctly announces beforehand that he is not shooting on the cup.

Following are the scores to date, shot in strings of 25. It will be seen that Kimmons, who has only shot three sets of 25 each, leads in the cup race, as he has a 19 and two 21s to his credit, or an average of 81 per cent. Eighty per cent. will come pretty near winning the cup on our grounds, as it is equivalent to an 85 per cent. on any ordinary ground, the background here being exceedingly difficult.

Wat Webber, who has been shooting about 55 to 60 per cent. heretofore at 16yds., liked his 17yd. handicap so well that he reeled off a 19, a 21 and a 22 on one evening, the first of the shoot, and if he keeps up that clip will certainly land the prize. Wat says he wants that cup to drink buttermilk (or something that commences with the same letter) out of, and he is going to have it:

										Shot at.	Broke.	Av.
Kimmons	21	19	21	..	..	..	..	..	..	75	61	.81
Leach	19	18	17	20	19	17	18	22	22	225	172	.76
Webber	19	21	22	17	18	18	..	..	..	150	110	.73
Echols	19	18	18	15	19	19	..	..	..	150	108	.72

*Spicer	12	20	13	17	11	16	..	..	..	150	86	.57
†McCorkle	4	10	..	..	..	..	..	..	..	35	14	.40
Gardner	6	8	13	..	..	..	..	..	..	75	27	.36
Dowd	3	..	..	..	..	..	..	..	..	25	3	.12

*Visitor. †Shot at 10 targets in first string.

Messrs. Gardner and Knott, of the Jenny Lind, and Mr. Spicer, of the Dupont Powder Company, St. Louis, and Mr. Hilman, of the Winchester Arms Company, were visitors during the shoots. We have also been honored by a visit from Mr. Joel French, of the Peters Cartridge Company.

The eleventh annual tournament of the Arkansas State Sportsmen's Association will be held at Pine Bluff some time in July, and it is expected all records will be broken, as to attendance, as the Pine Bluff boys have the best equipped grounds in the State, barring, perhaps, Hot Springs, and they are in the center of shooting towns, and have ten residents who will shoot through the entire programme, and anybody that gets their money is welcome to it; they are hard propositions.

LEACH.

Missouri State Shoot.

ST. LOUIS, Mo.—The twenty-fourth annual tournament of the Missouri State Game and Fish Protective Association will open in St. Louis on May 28 and continue for five days.

Dave Elliott will have charge of the grounds, and he has a car load of targets on hand and several thousand pigeons at Dupont Park and at his aviary in Kansas City that will be shipped each day during the shoot.

The prospects are that this tournament will far excel the efforts of former years, in number of shooters, contesting, and in the value of the prizes to the shooters.

The programme is not long, only 140 targets a day, with the smallest entrance fee, $10 per day. This is an experiment, and the only one that the St. Louis Shooting Association has attempted; but it bids fair to increase the attendance, as there are a good many more sportsmen who can afford to risk $10 than $20, which is the usual entrance fee at a big tournament.

The Republic cup will attract many live-bird shots, and I wish to say that the $1,000 purse in this event will be divided on the popular Rose system. This will enable many sportsmen to enter who feel that only a great stroke of good fortune will permit them to land the cup, but who would like to shoot if they knew that they would get a portion of their money back if they should lose two or three or four birds.

There are a great many shooters who feel that way, and the high gun system prevents them from entering because all the money would go to the 25 and 24 men.

This race is a handicap, and the handicap committee will be selected from among the sportsmen on the grounds, and the visiting newspaper men.

Fred C. Whitney, of Des Moines, Ia., will be in the cashier's box. To those who have met this gentleman no words are necessary; but to the new shooters, his kindly words and accommodating ways will make him popular.

Dupont Park is now accessible by the street cars from both sides, and there will be no strike to interfere with the convenience of the shooters in getting to the park from the Lindell Hotel and back again.

The programme is so short that each day the boys will have time to visit Delmar Garden, which is only a few blocks away, and where there are a host of pretty girls in the chorus every afternoon.

If you want a good time come to St. Louis; you will save both money and shells, and have an opportunity to win both fame and glory—and some money.

HERBERT TAYLOR.

ON LONG ISLAND.

New Utrecht Gun Club.

Interstate Park, L. I., May 18.—The weather was cloudy and some rain fell. The birds were mixed, some excellent ones betimes testing the skill of the shooters. In the first event E. W. Reynolds won. Mr. F. D. Creamer won in the second event, at 7 birds, making a score of 17, 10 additional birds being scored by him in the miss-and-out. Messrs. Sykes, Reynolds and Wynn qualified in the shoot for the monthly trophy. The scores follow:

Event No. 1, 7 birds, then miss-and-out:

E W Reynolds, 28.2222222	222—10	W F Sykes, 29...2220201	— 5
Capt Money, 28...11*2221	— 6	H M Brigham, 29.2*0w	
F D Creamer, 28.2222110	— 6	Dr Wynn, 29.....1211121	110— 9
E Banks, 29.....2122122	20 — 8	B Waters, 28.....1212212	— 7
C A Ramapo, 28..22*0w			

Event No. 2, 7 birds, then miss-and-out:

E Banks, 29	1221112	22212* —12
F D Creamer, 28	1211221	1111121122—17
W F Sykes, 29	2*00222	— 4

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J.—Herewith please find the scores made at last Saturday's matinee, May 11.

Events 1, 2, 3 and 4 were optional sweeps; 5, 6, 7, 8, 9 and 10, capon sweeps, and the events marked T were shoot-off of ties. The attendance fell off slightly owing to the beginning of the fishing and yachting season. A number of the members spend considerable of their time on the river during the summer, and their work at the traps is of the intermittent variety. The improvement in some of the scores, I think, is due to 24 grains of Ballistite. I became interested in it, and some of the boys followed suit. My latest combination is a Scott ejector and 24 grains Ballistite—1⅛oz. No. 7½ chilled. The first day I tried it I ran 25 straight in the last event of the day's shoot, and to-day I averaged 91 per cent.

TOM A. MARSHALL.

Pennsylvania State Shoot.

Allentown, Pa.—When the holding of the eleventh annual tournament of the Pennsylvania State Sportsmen's Association was awarded to the J. F. Weiler and Allentown Rod and Gun Clubs, Mr. Charles Kramlich, secretary of the Weiler Gun Club, announced that they would hold the biggest shoot in the history of the organization, and every word Mr. Kramlich said came true. The programme was much the same that has been in use for several years past, and one which has always been shot through on two sets of traps. At this Allenton tournament, three magautraps were used; but in spite of this increased shooting facility the attendance was so large that several programme events could not be shot.

The tournament was held at the Duck Farm Hotel, at Griesemersville, on the outskirts of Allentown, at which place is located the shooting park of John F. Weiler and Allentown Rod and Gun clubs. The grounds were well arranged, and were equipped with three magautraps, two for the State events and one for the open. The ground was level for about 150yds. from the traps, then came a very high hill, at the base of which a long high sign had been built. This made the background bad, and the background was especially bad where targets were thrown toward the big sign.

The tournament was managed by Elmer E. Shaner, manager of the Interstate Association. John K. Starr, of Philadelphia, looked after the affairs in the cashier's office. Shaner and Starr had troubles of their own from the very start, as all their assistants were willing but very green at the work. Had the help been more experienced the target programme might possibly have been shot through.

That the tournament was going to be a huge success was demonstrated on Monday night, when a round of the hotels was made by Messrs. Shaner and Starr and ten full squads for the State events and five squads for the open events were made up for the next day. There was a noticeable absence of experts, which was probably due to an error in the programme, which announced that they would be barred from shooting in the open sweeps. This was an error, as the sweeps were open to all. The experts present were Capt. A. W. Money, J. R. Hull, J. J. Hallowell, B. Le Roy, A. H. Fox, J. H. Marlin, B. H. Norton, W. L. Colville, E. D. Fulford, G. E. Greiff and T. H. Keller.

The rules governing the tournament were those of the Pennsylvania State Sportsmen's Association. The purses were divided into four moneys by the Rose system.

List of Assistants.

Cashier's Office—Cashier, J. K. Starr; assistant cashier, R. Gelb; clerk, Chas. Lang.

No. 1 Set of Traps—Referee, Ed Beck; scorer, J. Gelbert; puller, M. Beidler; messenger, H. Crader; trapper, J. McElroi; squad hustler, A. A. Fink.

No. 2 Set of Traps—Referee, H. Acker; scorer, H. Nagle; puller, Ed Bernhard; messenger, F. Strain; trapper, U. Shiffert; squad hustler, R. Werner.

No. 3 Set of Traps—Referee, M. Desch; scorer, W. King; puller, P. Fegley; messenger, O. Greismer; trapper, N. Shaffer; squad hustler, C. Gilbert.

General Manager—Elmer E. Shaner.

Live-Bird Referees—W. L. Colville, open traps; Herman Acker, State traps.

First Day, May 14.

The weather was clear and the bright sun would have been a little uncomfortable for the shooters had not a roof been built over the scores and large tents erected. The State events started on Nos. 1 and 2 traps, and both traps were in full blast by 9 o'clock and continued until nearly 7 o'clock, making nearly ten hours of steady work. During this time six sweepstake events and two team matches were shot off, the sweep having an average entry of seventy-eight. The average was on the first five events, 80 targets, and was won by L. B. Fleming, who broke 95 per cent.

The sixth event was the four-man team match for the State championship and the Reading trophy. Ten teams entered, including the Oil City Gun Club, Tyrone Gun Club, Keystone Shooting League of Philadelphia, two teams from the New Castle Gun Club, Chambersburg Gun Club, Spring Valley Gun Club, Keystone of Lebanon, Harrisburg Shooting Association, and the Florists' Gun Club of Philadelphia.

The conditions were 100 targets per team. New Castle No. 1—Fleming, Pills, Atkinson and Moore—won the trophy with 88. Their nearest competitor was the Harrisburg Shooting Association with 86. The Keystone Shooting League scored 84.

The seventh event was for the two-man team championship and the Milt Lindsley team trophy, 25 singles and 5 doubles per man. Sixteen teams entered this contest: Oil City, two teams; Tyrone Gun Club, two teams; Keyston Shooting League, two teams; New Castle Gun Club, four teams; Chambersburg, two teams; Keystone of Lebanon, one team; Harrisburg, one team; Clearview Gun Club, of Philadelphia, one team; Florists, one team. The New Castle team No. 1—Fleming and Pills—won the trophy with 65 for a total. The Keystone of Lebanon was second with 62. The Keystone Shooting League and Harrisburg Shooting Association tied for third with 61.

The final event on the State traps for the first day was the Remington gun handicap, 50 targets, handicap rise. This was one of the big events, and it took 3,800 to shoot it off. There were two ties for the gun, Fleming and Landis, and through an arrangement of their own the tie was not shot off.

Eight events were shot off on the open traps, having a total of 150 targets. Sim Glover made the high average. The eight events averaged forty-five shooters.

H B Fisher	23	7—30
Cowan	22	9—31—61

Second Day, May 15.

The weather was nice and clear, although perhaps a little too warm out in the sun. The shooters began arriving as early as 7:30, and by 9 o'clock there were over 100 on the ground. With this number of men it was impossible to shoot off all the programme events, even on the three traps. By dark five sweepstake events, including the individual championship and the Parker gun handicap, were finished, these five events having an average of eighty-six entries, with a total of 145 targets. The State's average money was based on the events, which were from an even distance, the Parker gun handicap being handicap rise. Charles E. Mink won this average with 92 per cent, Fleming second with 89.

The fifth event on the day's programme was for the individual championship and Wolstencroft trophy, 50 targets. Out of a field of sixty-six entries P. J. Trego was the final winner, tieing with I. C. Elder and Brey with 47 out of 50 and then winning out on the shoot-off.

There were seventy-five entries in the Parker gun handicap, at 50 targets. Mink and Perkins tied for the gun with 49, and as was the case with the Remington gun, they did not shoot off.

The team race for the day was for the three-man team championship of the State and the Harrisburg trophy. Ten teams entered, including two from New Castle, two from the Keystone Shooting League, one each from the Harrisburg Shooting Association, Ambler Gun Club, Oil City Gun Club, Florists' Gun Club, Keystone, of Lebanon, and the Clearview Gun Club. Out of this field the New Castle team—Atkinson, Fleming and Watson—won, breaking 70 out of 75 targets. New Castle was the winner last year, and by winning this cup they won all three of the team trophies this year. The Florists' team were second with 69.

There was quite an increase in the open entries, and consequently the entire programme could not be shot off. Seven events were completed, an average of 58.5 entries, those shooting through the day having 150 targets. Le Roy made the high average, 95.33.

Third Day, May 16.

The programme for this day was at both targets and live birds. Four events were scheduled for the State target traps and five for open traps. At 8 o'clock there was such a large crowd of shooters present that Mr. Shaner announced that the Lefever gun handicap would be the only event shot on the State traps, and that entries would be taken for two events on the open traps. The Lefever handicap was at 50 targets, handicap rise, with seventy-two entries. H. Stevenson won with 50 straight, shooting from the 15yd. mark. H. C. Watson was second with 49, shooting from the 16yd. mark. Ridge, Krueger and Stine broke 48.

The two open events averaged 78 entries at 20 targets each, and

both State and open events were finished at noon. All 50-target events were divided and shot on two traps.

Live-bird shooting commenced soon after lunch, and one event was shot on each set of traps.

The attendance of spectators on Thursday was very large—probably 3,000—and several of the old-timers say it was the largest crowd they have ever seen at a shooting match.

Two sets of traps were used for live birds. The birds were a very fair lot for summer birds, but with all of the building in sight at the back of the shooter, nearly all of the birds were incomers. A 5-bird event was shot on the State traps and a 7-bird race on the open traps. The open and State events follow:

OPEN EVENTS.

Fourth Day, May 17.

The weather was just as fine as on the previous days, and the crowd of shooters remained about the same.

The first event to be shot on the State traps was for the three-man team championship and the L. C. Smith trophy. Ten teams entered, and the Keystone Shooting League was the winner.

To finish the trophy events it became necessary to double up and the Williamsport diamond medal, the Denny-Wilson cup and a 10-bird sweep were all shot in one 15-bird match, using the two sets of traps. The shooting was not concluded until dark, and the ties could not be shot off. Lots were drawn, and F. B. McCoy, of Philadelphia, won the badge; and Atkinson the cup. The scores follow:

Event No. 1, open, 6 birds, entrance $3:

Annual Meeting.

The annual meeting of the Pennsylvania State Sportsmen's Association was held in the rooms of the Allentown Rod and Gun Club Tuesday, May 14, at 8:30 P. M. Over one hundred shooters from different parts of the State were present, and President J. O'H. Denny occupied the chair. The minutes of the last annual meeting, which was held at Chambersburg, were read and approved.

Secretary Runk's report showed the Association to be in a flourishing condition, several new clubs being admitted during the year.

Treasurer J. H. Worden was unable to be present. His report, read by the secretary, showed a substantial balance in the treasury.

Considerable business of minor importance was tranacted, the most important being the rescinding of the resolution passed at Chambersburg which prohibited manufacturers' agents who were members of the State Association from taking part in the sweepstake events. The motion to rescind was introduced by Dr. Goeble, of Philadelphia. Messrs. I. C. Elder, of Chambersburg, and W. L. Kinzer, of Pittsburg, spoke against rescinding, while Dr. Goeble and Elmer E. Shaner spoke in favor of it. The motion to rescind was passed almost unanimously.

Mr. Seitz, of Glen Rock, introduced a resolution amending the by-laws so that none other than white citizens could take part in the annual tournaments of the Association.

Under the head of New Business Mr. Loomis, of Oil City, placed that city in nomination as the place for holding the meeting in 1902. Carlisle was placed in nomination by Mr. Caufmann. Oil City was seconded by Messrs H. P. Shaner, of New Castle; Harry Thurman, of Philadelphia, and Elmer E. Shaner, of Pittsburg. Carlisle was seconded by Mr. R. E. Shearer. Before being put to a vote Carlisle withdrew, as it was apparent that the great majority of the delegates present were in favor of Oil City.

President Denny called Elmer E. Shaner to the chair, and Mr. Shaner proceeded with the election of officers in record-breaking time. The old officers were all re-elected, and they stand for 1902 as follows: President, J. O'H. Denny, Ligonier; Vice-President, J. A. Wilson, Franklin; Secretary, J. M. Runk, Chambersburg; Treasurer, J. H. Worden, Harrisburg; Board of Directors, W. H. Burnham, York; J. F. O'Neil, Wilkesbarre; Geo. Crane, Mountville, and Elmer E. Shaner, Pittsburg.

On motion the meeting adjourned to meet at Oil City in 1902.

Boston Gun Club.

BOSTON, May 15.—The Boston Gun Club's regular weekly prize shoot took place on their grounds to-day and eighteen shooters assembled to do justice to one of the best of sports. That each and every one enjoyed himself to the limit goes without saying, as who ever heard of a trapshooter who could not enjoy himself at a target shoot? The boy on the magautrap thought the enthusiasm had run away with every one, as at no time would they allow him to halt, only "Pump these birds out to the best of your ability," was the cry. His ability meant a good 1,500 targets, which were trapped in the short space of two and one-half hours' time, which says quite a good deal for the modern trapping appliances. The usual amount of interest to-day was swelled out a little larger by one of the shooters bringing a new 10-gauge with shells loaded for coot or duck shooting, which, after the target was shot at, looked as though they might have contained a pound of powder and a quart of shot. The way it was handled does not bid fair for next season's duck shooting around Massachusetts, but we are in hopes there will be some left for others. High gun in the prize match was Horace, 18yds., with 22, though hard pushed by Woodruff, 17yds., with 21, who has now got his shooting eye in just the right kind of condition. Third was taken care of by Ford, 16yds., with 19. The rest trailed just a small amount of targets in the rear. Scores below, all shooting distance handicap, unknown angles:

Peru Gun Club's Fifth Annual Amateur Tournament.

PERU, Ind.—The Peru Gun Club's fifth annual tournament was held here on May 7, 8 and 9, and while this club's four annual tournaments preceding this were all successes in every way, this tournament must go down in the history of Indiana shooting events as one of the most successful in point of attendance, number and continuance of entries, good management and general smoothness of running, coupled with the great enjoyment participated in by all present, ever held in this or in fact any other State. There was in attendance during the three days something like fifty shooters, including the home contingent. The entries for the first two days averaged nearly thirty, and in the live-bird events about twenty-one shooters took part.

When the week opened on Monday, Secretary Chas. Bruck was delighted with the prospect of fine weather, as it was a beautiful day, and he with his corps of able assistants put in the entire day setting up tents, putting out the expert traps, filling the magautrap house with some 6,000 targets, and otherwise preparing for the proper care and entertainment of the big crowd of boys which always favor our tournaments with their presence, and as they began to arrive on Sunday, when E. C. Fort, of the Robin Hood Powder Company, put in his appearance, and as the Monday evening contingent, consisting of E. H. Tripp, of Indianapolis; F. T. Sherwood, of Bedford, and a little later in the evening Dr. Britton, also of Indianapolis, put in their appearance, it began to look like the regular thing at a Peru tournament. With Dr. Britton on Monday evening came a downfall of rain, which kept up all night, but it did not keep the crowd of amateurs away from Peru, for, while Tuesday morning was a wet one, and the rain kept coming down, the following came in on the morning trains: Guy Burnside, Knoxville, Ill.; H. J. Sconce, Sidell, Ill.; H. W. Cadwallader (Cad), of Danville, Ill.; J. A. Blistain (Slow), of Lafayette, Ind.; Al Bussell and Mr. Ousler, of Noblesville, Ind; Chas. E. Adamson, of Muncie, Ind.; Messrs. Jack Livingtone, Wayne Leeson and Harbet, of Elwood, Ind.; Messrs. Kellar and Bardt, of Fort Wayne; Mike Smith, of Huntington, Ind.; E. Foust, of Warren, Ind.; Messrs. Clark, Aukerman and Rose, of Wabash, Ind.; Messrs. Elliott and Southard, of Rochester; Mr. Savage, of Macy, Ind; Elmer Apperson, of Kokomo, Ind.; Chas. Townsend, of Knox, Ind. These, with the home contingent—J. L. Head, Jack Cavanaugh, Frank Dunbar, Will Daniels and Charles Bruck—and Mr. Chas. North, of Cleveland, to look after the "maggie," constituted the contestants for the first day, and while the weather was against us, the scores will show that this was a crowd of stayers.

John Parker, of Detroit, Mich., representing Peters Cartridge Company and King Powder Company, and who has always managed our spring tournaments, came in on the morning train from Detroit and immediately took charge of affairs in his own inimitable way, and after a couple of preliminary events the regular programme was started, running both the magautrap and a set of expert traps, Sergeant system. No man ever saw a shoot start prettier. Good hard old bluerocks went sailing out of the "maggie" and the expert traps at a good 60yd. gait, and never a broken a target in the traps, when all of a sudden an important part of the magautrap broke, and Charlie North threw up both hands, as he said that was the only extra part he did not have with him. However, he was hustled off to a foundry near by, where by your humble servant's persuasion an expert machinist was put to work under Charlie's watchful eye and the piece was soon repaired. In the meantime the crowd was good-natured, as the expert traps were working beautifully and the shoot went merrily on.

Nearly 6,000 targets were thrown on this day from the set of expert traps. The scores:

Wednesday, the second day, brought better weather, a new piece for the "maggie" and Charlie North was correspondingly happy, and it also brought a lot of new faces in Emile Werk, of Cincinnati; Mr. Robinson, of Huntington; Col. A. G. Courtney, representing Remington Arms Company and U. M. C. Company; Dr. White, of Elwood; S. A. Jackson, of Montpelier, O.; Messrs. Yelton and Larue, of Anderson, Ind; Charlie Lamme, of Attica, Ind.; C. B. Wiggins, of Homer, Ill.; F. W. Myrick, of the Nonpariel Gun Club, of Chicago, and Mr. Shepard, of the home club, whose business had kept him on the road the first day. This lot of new comers made the attendance fully as large as on the first day, and as the magautrap was now again in commission and the expert traps still doing business at the old stand the programme was run through in jig time. Scores:

*Extra events. †Shot for targets only in regular events.

Extra No. 1 was at 15 targets, 25yds., rise, use of both barrels. Extra No. 2 was at 5 pairs over expert traps. Extra No. 3 was at 5 pairs over magautrap, walk around.

Extra No. 7, 10 targets: Dunbar 8, Myrick 9, Shepard 10, Cavanaugh 10, Fort 10, Cad 10, Duke 5, White 10, Jackson 9, Butler 10.

Extra No. 8, 25 targets, $2.50 entrance, three moneys: Fort 25,

Tripp 24, Sconce 24, Burnside 23, Head 23, Sherwood 22, Neal 22, Cavanaugh 22, Cad 19.

Extra No. 9, miss-and-out, 25yds. rise, $1 entrance; one-half of purse to go toward expenses of American team to England, targets free; other half of purse to go to winner: Tripp 10, Sconce 3, Cad 0, Sherwood 0, Robinson 0, Butler 0, Wiggins 1, North 0, Neal 11, Werk 0, Myrick 0, Burnside 2, Parker 1, Head 0, Courtney 0, Fort 6. There were sixteen entries, and Neal won $8, and the other $8, with 50 cents donated by Dr. Britton, went to American team.

The third day was live-bird day, and brought still better weather, also Ed Voris, of Crawfordsville; C. Foust, of Warren, Ind.; J. H. Cox, of Detroit, Mich., and J. S. Butler (Ben), of the home club. The scores:

Event No. 1, miss-and-out, entrance $1, birds extra; handicap rise:

Head, 30	11*	Smith, 28	121220
E Foust, 27	112111	Neal, 30	220
Fort, 30	11*	Burnside, 30	212122
Voris, 30	111222	Sconce, 30	2220

Neal	2222	Sherwood	2222
Head	10	Aukerman	10
Fort	2220	Ben	0
Werk	220	Dunbar	10
Clark	0		

The management had secured what we supposed would be an ample number of live birds to shoot out a one-day programme—i. e., about 550, with another 150 to be shipped in on call, they being confined in a barn in a neighboring city. These were called for, but failed to arrive in time, and as the 550 on hand were exhausted by the foregoing events the remainder of the day was devoted to target shooting. In fact there was only one way to get the boys to quit shooting, and that was to run out of daylight.

The target scores for this day are appended herewith:

Fifteen targets, $1.50 entrance, four moneys: Wiggins 12, Sheffer 10, Voris 12, Head 13, Butler 10, C. Foust 10, Ben 12, Duke 8, Yelton 8, Larue 8, Sconce 14, Burnside 14, Neal 15, White 12, Schlosser 9, Dunbar 15, Daniels 13, Fort 15, Courtney 13, Sherwood 14.

Fifteen targets, $1.50 entrance, four moneys: Burnside 14, Voris 12, Sconce 15, White 10, Butler 12, Wiggins 14, Sheffer 12, Neal 14, Head 13, Dunbar 11, Schlosser 11, Fort 14, Daniels 13, Sherwood 15.

Fifteen targets, $1.50 entrance, four moneys: Burnside 15, Sconce 15, Neal 12, Butler 13, Sheffer 10, Head 14, Dunbar 13, Fort 14, Sherwood 15, Schlosser 8, Daniels 8.

Five pairs, over magautrap, entrance $1, two moneys: Burnside 9, Sconce 8, Head 9, Fort 5, Butler 7, Sherwood 7, Sheffer 8, Schlosser 4.

Match at 10 targets shot from point 50yds. to left and in front of magautrap: Burnside 6, Sconce 7, Sherwood 4, Head 7, Butler 5, Sheffer 4, Fort 6, Dunbar 4.

Walking match, 10 targets, $1 entrance, two moneys: Head 6, Butler 7, Sheffer 3, Fort 7, Schlosser 8.

Another match was shot by the same as above at 5 pairs, and was won by Butler 10, Head and Fort 9 each, taking first and second moneys, the scores being lost.

When an amateur tournacent can throw 13,000 targets and nearly 600 live birds in a three-day tournament, I call that a pretty fair tournament.

Mr. Fred Erb, Jr., of Lafayette, was on hand with three retrievers—a Chesapeake and two promising pointers. The Chesapeake is a wonder, and Mr. Erb surprised the management by his fast retrieving. It was expected that the birds would last until dark. As it was, with his dogs, they were all shot off by 3 P. M.

Harvey Sconce, with his red head, red necktie, red shooting jacket, red hat, etc., shot a lurid streak through this programme and the assembled cracks like the tail of a comet across a starry sky. He had a run of 91 straight the first day, winning high average for the tournament.

Ernie Tripp, Indiana's very best target shot, and so good at the game that he has been selected as a member of the American team, shot Harvey a close race and had more fun than is usually accorded a man in a year's time. He makes a lot of trouble with his shooting, but he lights up a shooting match with his wit and fun in a delightful manner.

The club added $20 in prizes of $5 each to the two high and two low guns shooting through the programme for targets. Sconce won first, Tripp second, and the two low prizes went to Messrs. Dunbar, of the home club, and Adamson, of Muncie.

Charlie Adamson, of Muncie, is quite an enthusiast, and holds up his end well for a man of his experience. He has invented a top shot wad that appears to be about the thing, and was very busy demonstrating its merits. I hope to see this wand on the market soon.

Elmer Neal, jolly, fat, rosy-cheeked and round-faced, shot a very good clip, and helped Ernie Tripp have a good time. Ask Elmer about his new diamond ring. It's worth seeing.

Mr. Guy Burnside, a nice little quiet gentleman, shooting a splendid clip with never a word to say, was in a little hard luck the second day, as he shot a gait of about 94 and yet could not land a winner, while others shooting lower were good winners. In fact Guy was the only high class shooter who did not win, thus demonstrating the faults of the percentage system.

The writer had provided a means of adding something by this tournament to the fund for the American team, which fund amounted to $11.20, as the manufacturers' agents present—Messrs. Courtney, Fort, Parker and North—paid for birds, $22.40. The event gotten up for this same fund provided $8.50, and I had the pleasure of forwarding the Big Chief, Marshall, $20 in total as the subscription from this tournament. Wish it had been $1,000.

Dr. O. F. Britton and Elmer Apperson now hold the record of being the only visitors who have contested in our five annual tournaments. Elmer is so busy making automobiles that he could only give us one day, but the Doctor stayed the programme through. May he be with us many years to come.

Mr. Robinson, of Huntington, is not bigger than your thumb, but he is as game as a pebble, and shoots well for his experience.

Mike Smith, of the same club, was shooting a new gun, and only shot well in streaks. They are both stayers.

The Foust brothers, of Warren, are a couple of game cocks that will bear watching. They shoot any old time and any old place and any old kind of a race for any old sum. Come again, gentlemen; your kind make a tournament.

Mr. E. C. Fort, representing Robin Hood Powder Company, shot well indeed. He landed 25 straight in the big extra race and shot the boys to a standstill in the miss-and-out at the pigeons. He works hard for his company.

The inimitable John Parker, of Peters Cartridge and King Powder Companies, managed this shoot as only he can. He never fails to get in good words for his powder and shells, and when he has time, he shoots a very hot pace.

The Elwood boys were out in force. They are a little new at target shooting, but Wayne Leeson held his end up well. We are all going to their tournament next week.

The Wabash, Ind., boys are a little out of practice, and with the exception of Hugh Clark they found our fast targets a little swift. Understand, they are to have a shoot in June, which should be well patronized.

Charlie Lamb, of Attica, shooting under the name of Butler, has a new Smith gun, which he certainly handles well for a new one. Charlie is an old Peru boy, a member of this club, and is at home here. He had two friends, Messrs. Sheffer and Schlosser, of Attica, who came up last day to see him shoot and be with the boys. The only way we could make this trio quit shooting was to put out the sun.

Old reliable Jack Cavanaugh, of Peru, Ind., by gum, and who is so busy dispatching trains that he really attends but two shoots a year—i. e., the Grand American Handicap and our annual tournament—shot the targets through, and is showing splendid form. He is shooting a pump, and with a little more practice will lead the Peru boys if they don't watch him.

Frank Dunbar and Will Daniels, of the Peru Club, did not shoot quite up to form, but they stuck to the game, and Frank landed several straights. He made a reputation among the visitors for being very straight himself, and the Peru Club is proud of these boys.

J. S. Butler (Ben) and Roxy Duke are two crack Wabash engineers, and could not be spared from their runs to take part in all the events, but they were with us every minute they could spare. Mr. Shepard, another new member of the club, who has been showing the boys "how" in practice, was called out on the road, but stayed with the tournament as much as possible.

Charlie Townsend, of Knox, got in just in time to get his feet warm. In his first race he landed 15 straight alone, and bagged about $12. Charlie is a fine fellow and a good shot. Come again, Charlie.

Mr. Frank T. Sherwood, secretary of the Indiana Trapshooters' League, and who resides at Bedford, where the league's annual tournament is to be held in June, was with us from start to finish. Frank is far from well, but he shoots like a giant and made many friends in this vicinity, this being his first visit to this part of the State in a shooting way. Frank shot as long as his shells held out, and when he borrowed some special loads from your humble servant and broke 44 out of his last 45 and lost the one by a flinch he came in asking a lot of questions about this load, You can bet he got the information and he will have to be watched from now on, as they just fit his gun. This was Frank's first effort at the pigeons, but he did well.

Emile Werk, of Cincinnati (Chief Rio Grande), was on hand and was pleased to see the fine lot of tents provided for the shooters. He said he did not believe he could protect the life of the writer, as he did last fall, if that Old Round Top Tent the Indians remembered so well had been on the grounds.

The Indians were well represented by Chief "Ride in the Wagon," E. H. Tripp; "Black Diamond," E. E. Neal; "Spoon Rover," Guy Burnside; "Rio Grande," Emile Werk; "Sitting Bull," A. G. Courtney; and "Des-Kra-Choska," Jack Parker.

Letters of regret were received from Whitney Thompson, C. R. Stevens, Rollo Heikes, Ed Rike, Dr. R. B. Short, and Charlie Budd. You were missed, gentlemen, and coulld you have been with us the fun and good fellowship woulld have just been that much greater. It is impossible to attend every tournament and the writer knows from experience that business comes first.

A little philosophy from Chief Sitting Bull: "Whenever you meet a 'lobster,' or a man who is not just right in his principles, take off your hat to him, for if it had not been him, you fool, it might have been you, and see what you have to be thankful for.

The writer, on behalf of the Peru Gun Club, wishes to thank each and every individual present for his attendance, and fully assures you that by lending us your presence you contributed just that much to the enjoyment of the occasion, whether you shoot one or one hundred times, and you were all equally welcome. On the other hand, if there occurred anything at any time during this tournament to annoy any man present or cause dissatisfaction, I am truly sorry for it, and assure you that you have our apologies and we will do better next time.

J. L. HEAD.

Mississippi Valley Notes.

THE Progressive Gun Club, of East St. Louis, held its regular semi-monthly medal shoot on the 12th inst., with an attendance of twenty shooters. The feature of the day was the shooting of Stephen Le Page, who went through the programme of 70 targets thrown from a magautrap, including the medal event and a miss-and-out, without a miss. The scores are appended:

Deletine	10	8	10	17	10	..	P Baggerman	10	9	8	16	8	7
T Ruff	9	5	10	15	8	10	Corray	9	9	8	17	..	..
J Ruff	8	8	10	17	9	8	Bellcour	8	9	8	14	9	5
Frei	..	6	7	12	8	6	Bunning	8	7	7	17	8	5
Holl	..	8	10	14	10	..	Doyloy	8	10	6	17	5	9
Neibrook	6	8	8	15	8	9	W Baggerman	10	9	10	18	10	9
Le Page	10	10	10	20	10	10	Dr Simms	5	9	8	17	8	9
Delarm	8	10	7	15	10	8	Grote	8	10	7	16	9	..

Funk	8	6	10	20	10	10	J Baggerman	..	..	..	..	8	..

The North Alton Gun Club has begun regular weekly shoots, and is grooming some first-class timber that will be heard from ere long in the amateur class of Illinois. There are several of the boys already who may safely be relied upon to put up a score any day better than 80 per cent., and that is not slow for beginners.

The programme and prospectus of the twenty-fourth annual tournament of the Missouri State Game and Fish Protective Association is out this week, and it presents a long list of attractions to the amateur shooter, such as perhaps no State tournament has offered in recent years. It is essentially an amateur shoot, all target events for sweeps or merchandise prizes being closed to the paid professionals, except that they may shoot for scores at price of targets. Live-bird events are open to all, but under the handicap plan, so that the amateur is here also looked after.

The tourney will be held at Dupont Park, west of the city of St. Louis, during the week of May 28 to June 1. Tuesday the ball opens with the State team medal shoot at live birds, four men, 15 birds each, entrance $20 per team, and birds extra. On the same date the Missouri State individual championship trophy will be shot for under same conditions as the preceding event. Then follows immediately the Interstate individual championship race, entrance $12.50, including birds. The Association adds $50; winner gets medal and purse goes to four moneys. On Wednesday comes the race for the St. Louis Republic trophy, and on Friday the Lemp amateur individual championship trophy. The live-bird programme closes Saturday with short open sweeps and shooting off ties. Birds will be charged for at 25 cents each, and trapping will be done from the Fulford traps.

The inanimate target events call for 140 shots per day through the week, targets being charged for at 2½ cents each, and the Association adding $100 each day. Bluerocks and magautraps will be used, and on two days alternate events will be shot for a long list of excellent merchandise prizes.

Illinois Gun Club Trophy.

Another spirited contest for the Illinois Gun Club trophy was shot on the range at Springfield May 15. Guy Burnside, of Knoxville, was the defender of the cup, there being six challengers, and he again won out against the field. He began poorly, by losing his eighth bird dead out, and it looked very much as if the original challenger, Tom Holl, would win, but he drew a stunning bird in the twenty-second round, and it died outside the wire. Richardson, a local and comparatively new shooter, was in splendid form, and after losing his eighth bird finished out straight. This left Burnside, Holl and Richardson high with 24 each. In the shoot-off Holl lost on his seventh bird, a very lively one, and Richardson missed his twentieth, giving Burnside the honors and the cup. The birds were a fine lot. Both high men shot in fine form, but the work of Richardson as a man new at the game was especially noteworthy. The scores are appended:

Burnside	2121112*1111112221212112—24
Holl	2122212221212222222222*222—24

Holl	21122*
Richardson	21211221112222112210

WESTERN TRAPS.

Chicago Gun Club.

Chicago, May 18.—Appended are the Chicago Gun Club's scores. The weather was fine, and there was a good attendance. Mr. Chas. Willard came down to the shoot to-day, and by the scores he put up shows that even three years without practice doesn't put him out of the game. When Charlie lived in Chicago and was in practice he was hard to beat. In event No. 2, 25 targets, weekly handicap in birds, Dr. Carson scored 24 and broke 25. The referee did not see the pieces. Bowles won second prize after shooting out four in tie. Event No. 4, 15 targets, monthly handicap in rise, was won by Dr. Miller, after shooting out Lovell.

Trophy event, 25 targets, handicap:

	Broke.	Hdcp.	Total.
Bowles	1111111111111111111011101—23	6	25
Miller	1111101111111111110111111—23	2	25
Shelley	1111111111101110010101111—20	7	25
Jones	0100110111100000111111110—15	8	23

Dr Morton, 20	011101111111111—13

Tie:

Lovell, 16.....0111000111—6 Dr Miller, 18.....1101101111—8

Dr. Miller wins monthly handicap trophy on shoot-off.

BLUE JEANS.

Garfield Gun Club.

Chicago, May 18.—Twenty-three members took advantage of the beautiful weather to-day for an afternoon's sport at the target trap. A light breeze blew across the traps, making it cool and pleasant, and not strong enough to interfere with the flight of the targets.

In the trophy event Dr. Shaw and C. P. Richards tied on 22 for Class A. N. H. Ford and W. A. Jones tied for Class B on scores of 22. P. McGowan won Class C on the splendid score of 21. Other scores follow:

	Broke.	Hdcp.	Total.
Dr J W Meek	1111111110011110101111111—21	0	21

PUBLISHERS' DEPARTMENT.

Summer Homes.

IN the Lake Country of Northern Illinois, Wisconsin, Minnesota and the Upper Peninsula of Michigan, on the line of the Chicago, Milwaukee & St. Paul Railway, are hundreds of most charming summer resorts. Among the list are: Fox Lake, Delavan Lake, Lake Geneva, the Lauderdale Lakes, Waukesha, Oconomowoc, Palmyra, the Dells at Kilbourn, Elkhart Lake and Madison, Minocqua, Star Lake, Frontenac, White Bear, Minnetonka, Marquette, Spirit Lake, Okoboji, Big Stone Lake, etc., etc.

For illustrated booklets "Summer Homes for 1901" and "In the Lake Country," send address with 6 cents in postage to F. A. Miller, General Passenger Agent, Chicago, Milwaukee & St. Paul Railway, Chicago.—*Adv.*

The Great Bristol Automatic Fishhook is claimed by its manufacturers to be more humane than other hooks on the ground that under no circumstances does it tear the fish, and a fish caught by it cannot escape, but is at once captured and killed.—*Adv.*

"What attracts my attention shall have it, as I will go to the man who knocks at my door, while a thousand persons as worthy go by it, to whom I give no regard."—Emerson.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 1, 1901.

VOL. LVI.—No. 22. No. 346 BROADWAY, NEW YORK

I wish I had long ago started, on a big plan, a series of FOREST AND STREAM scrap books for articles, just as I did for illustrations. I have material now cut out and piled up which would fill several big folios, but unless I break my leg I fear I shall never have a chance to put together these scrap books. The four big ones that I made of the FOREST AND STREAM pictures, which I once described to you, are a thing I am proud of, and my little boy values among his choicest possessions. A.

COLD STORAGE GAME.

THE seizure of unlawful game by Protector Overton in the cold storage vault of the Arctic Freezing Warehouse in this city is the most notable affair of the kind since the memorable confiscation of the Racey birds, more than a quarter of a century ago, which gave us the important Phelps-Racey game law decision. Protector Overton's rummage of the cold storage vaults has already disclosed many thousands of birds, and at this writing is still in progress. The complete statistics of the seizure cannot be given until next week. Nor can it now be foretold what the result of the prosecution will be in the amount of penalties recovered. The sum in which these law breakers are liable would, according to the strict letter of the statute, run into tens of thousands of dollars, but, of course, an attempt will not be made to recover any such maximum. It is customary in such cases to bring suit for a part only of the entire liability, and to inflict a penalty which while severe enough to fulfill the purpose of the law will still commend itself as reasonable and just. In this specific instance, with the evidence of their law violation so abundant and conclusive, the offenders should be punished so severely that they may be discouraged from persisting in defiance of the statute.

The cold storage warehouse people have in published interviews sought to evade responsibility for possession of the contraband articles by explaining that as receivers of sealed packages for storage they were not aware of the contents of the packages. This may very well be true in some cases, but on the other hand the circumstances which led to the detection of the game by the protector go to show that in this instance at least the freezer people did know what they were storing. It is reported that the protector was sent by a dealer from whom he had bought a half-dozen birds to the warehouse to get the birds; and that they were delivered to the protector at the warehouse out of a lot of birds which the warehouse was storing for the dealer. Moreover, the well-known facts as to the general practice of certain game dealers in this town go to sustain the supposition that the cold storage concerns know perfectly well that they are so storing game in the forbidden season, and are thereby making themselves parties to the offense. For in this town game may always be had at any time of the year and in any quantities asked for, and as it is kept during the close season in cold storage the dealer can supply it to the customer only by going to the cold storage warehouse and taking therefrom the amount of game required, or, as in this case, sending the customer to the warehouse for it. It is utterly preposterous for the cold storage people to pretend that they do not know that they are storing forbidden game, and it is difficult to perceive any important distinction between receiving and holding contraband game and receiving and holding stolen goods. In ethics the two things are the same.

There is good reason to assume that the game in the Arctic vaults is in a double sense illicit. Not only is it held unlawfully in close season, but never at any season could it lawfully have been shipped to market and become subject to possession by New York game dealers. The laws of the several States now so generally prohibit the killing of game for sale, or its export to market, that the presumption as to game exposed for sale in New York city always is that it has come there illegitimately and in surreptitious ways. In this State the law forbids the transportation of woodcock, grouse and quail from the county wherein killed, except in limited numbers and accompanied by the possessor. The intent of this law, and its operation, so far as enforced, is to stop the marketing of New York game. To get such game, certain of the city dealers send to their country correspondents instructions for packing it and shipping it with false labels, so that it may come through to New York without detection. When a dealer gets such a package of game he has in hand something to which he can no more legitimately have title than the Bowery fence can have to the booty he receives from the sneak thief. The laws of the States around New York, Conecticut, New Jersey, Pennsylvania and of other States near and far forbid the export of their game; and whatever game reaches New York from these States is contraband, and may not be dealt in by an honest man. In part at least the game seized in the Arctic warehouse belongs to this category, and the men who have come by it by devious means and are now deprived of it by the act of the protector deserve no sympathy for their loss.

Nor is there anything in the representation made by the storage people that the dealers finding themselves stocked up with game at the close of the season have no other recourse than to put the surplus into storage. The answer to this is that they need not get stocked up. The law provides a certain season for the sale of game. The dealer knows what the season is and knows perfectly well that after a given date he may not lawfully have game in possession. Knowing this he can regulate his buying of game, and acquire only such a supply as he can dispose of. Failing to exercise this ordinary, every-day business precaution, he lays himself open to the penalty for game in possession in close time. The real reason for overstocking with game, however, is to have it for sale the year around, and it is kept for this purpose in the cold storage freezers, with the complicity of the proprietors of these concerns.

INTERNATIONAL TRAPSHOOTING.

SINCE the inception of target shooting at the traps, the intervening years are not so many that one needs to be old to remember it. In the latter part of the '70's, the doings of Capt. A. H. Bogardus and others in feats of glass ball shooting were the marvels of the shooting world, although as compared with some of the modern performances at the trap they are commonplace indeed. The Bogardus patent glass ball trap, which was a piece of plank with a cross piece at each end, to which was fastened by one end a curved piece of steel which served as an arm to throw the glass ball, price $12, was soon superseded by more ingenious and efficient mechanical devices for throwing the glass, and the glass balls, which sold at first for $2.50 per 100, were superseded by the clay and composition disks now used. It will be noted that the prices in the early days were far higher than they are now. However, the inanimate target shooting of the world had its origin in those simple and crude beginnings.

The sport grew rapidly in popularity. The game resources of the country were becoming scarcer, and in such sections as contained game in abundance it afforded sport through but a relatively short season. Live bird shooting at the traps was expensive, and owing to the area of ground required for traps, boundary, etc., it was difficult to arrange near the large cities. The inanimate target filled the shooting wants of the masses better than anything else. Target shooting soon became a form of national sport, both as a means to acquire skill in the use of the shotgun and as a test of skill in competition.

Astonishing perfection has been attained in this form of shooting. The records of continuous runs, formerly measured by tens, are now measured by hundreds.

The sport has at length grown in interest from the national to the international, as evidenced by the arrangement of an international series of matches between England and America and the departure of the American team on last Sunday for England, to be there in time to commence competition on June 11. The purse is, in amount, $5,000, or $2,500 a side.

Great as has been the growth of this form of sport, there is no doubt that the international contest will greatly stimulate interest in it and add to its healthful growth.

It is to be hoped, however, that the future international contests of this kind, should there be such, will be on even terms, for the Englishmen enter into it confessedly inferior, by the acceptance of a handicap—that is to say, they have the use of two barrels, while the Americans have the use of but one. Should the English win, it would not be classed as a perfect win, and should the Americans lose, they would still feel that they were not beaten on even terms. However, this match is much to be desired, and it may be hoped is the prelude of many more wherein neither give nor take a handicap. In any case, may the best men win.

The FOREST AND STREAM has arranged to have the trip and the shooting fully reported by Mr. Edward Banks, one of the best trapshooters and newspaper men in the country. His weekly letters will cover the whole time from the date of the team's leaving New York till its return home. In view of the very widespread and general interest in the contest, the publication of this report will cause the FOREST AND STREAM to be read more extensively than ever in the trapshooting world, both here and abroad.

BETWEEN CASTS.

OUR supplement illustration this week is from a drawing by W. P. Davison, who gives us an admirable picture of a trout stream. It is a moment of rest, when the anglers have stopped to quaff a draught from the cool stream and to make a change of casts. It is just such a scene and such a stream as many a one who looks on the picture can recall in memory, and better still, just such a spot as one may hope again to look upon in the reality on some of these June days of 1901. The picture will have an added interest for those who can recognize in the features of the older angler a portrait of Mr. J. L. Davison, who has for many years been known to readers of FOREST AND STREAM as a contributor to our natural history columns.

This is the third picture in the current series of illustration supplements; the others being: April 6—The Trapper's Camp; May 4—Rap Full, and July 6 (to come)—The Home of the Bass.

SNAP SHOTS.

AFTER a protracted correspondence between the New York Yacht Club and Mr. Thomas W. Lawson, announcement is made that Independence will be given an opportunity in the trial races to compete for the defense of the America Cup. The one point upon which the whole controversy hinged—namely, the qualification of the Boston boat by being put under the control of a member of the club—was so simple that a reading of the correspondence fails to disclose any sufficient reason for its voluminous bulk. One effect of the discussion has been vastly to stimulate interest in the trial races and the final selection of the boat which shall have the honor and responsibility of meeting Shamrock II. Until the relative merits of Constitution and Independence shall have been settled there will be much livelier speculation concerning the result between these two boats than about the final outcome of the race for the Cup, for no one questions that the record of 1901 will be of another victory for the American yacht.

We reprinted from Science last week an article by Dr. C. Hart Merriam calling into question the course of the California authorities in their destruction of the sea lion as a consumer of food fishes. To-day we take from the last report of the California Fish Commission a letter addressed to the head of the national Fish Commission, in which is set forth the other side of the case. This forms part of a somewhat voluminous correspondence between the California Commissioners and the Treasury Department and others, but the case is essentially summed up in the letter which is here reprinted. The California authorities claim that instead of having acted ignorantly and precipitately, they did not move for the war on the sea lions until after deliberate consultation with such authorities as Messrs. Jordan and Gilbert, and they say that while the sentimental side of the question appeals to them as strongly as to any one, they have been impelled by stern necessity to undertake a reduction of the sea lion supply.

The last session of the New York Legislature empowered the Game Commissioners to acquire by gift or purchase a stock of moose for restoring the species to the Adirondacks, and an appropriation of $5,000 was made for the purpose. Just what steps will be taken the Commissioners have not made public. The problem of acquiring the live moose is much simpler than that of protecting them after they have been put out. There are among the Adirondack guides incorrigible rascals who stand ready to kill the moose whenever opportunity offers, and the villainy of these human brutes is the only serious obstacle the Commissioners have to meet. Whenever the game can be assured protection, moose will be given to the State by the owners of private game preserves.

The Sportsman Tourist.

The Repentance of Peshtigo Sam.

THE day was drawing to a close and the shadows were deepening in the forest, when the big stag bestirred himself and arose from his couch of sweet-smelling ferns. He stood for a moment sniffing the air and listening intently for any indication of the presence of a lurking foe, and then stepped forth with lordly air on his way to the running water where, each day at the setting of the sun, he was wont to quench his thirst. A faintly traced runway led him, with many a turn, through the heart of a virgin forest where tall pines of mighty girth towered aloft on all sides, stretching away in unbroken ranks as far as the eye could reach, like the sculptured columns of some vast temple. A great stillness brooded over the forest, broken occasionally by a slight sound—the snapping of a twig or the faint rustling of a bush. At each sound, at each suspicious movement of some low hanging branch, the stag became a living statue, motionless as an image of bronze, ready at a moment's notice to seek safety in flight, if necessary, or else to give battle to the intruder should he prove to be one of his own kind trespassing on his domains.

He reached the bank of the river unmolested, and stepping down to the water's edge lowered his antlered head and drank a deep draught of the cool water. Suddenly he started and half turned as if to flee. His quick ears had detected a faint, unfamiliar sound which seemed to be drawing nearer and nearer, and the next instant a canoe shot around a bend in the river just below him. Seated in the canoe were two white men, each plying a paddle with long, powerful strokes that sent the frail bark through the water at a rapid speed. An indefinable but none the less dreadful fear clutched the heart of the noble stag. He had never before seen a white man, but his instinct warned him that here was a new enemy, and one greatly to be feared. He hesitated a moment and then wheeled about and disappeared like a shadow in the depths of the forest, nor paused in his flight until he had put a safe distance between himself and this new terror.

"Gosh almighty!" the man in the bow of the canoe exclaimed. "Did you see that buck, Bill?"

"I sh'd say I did," the other replied. "He was a whopper, an' no mistake. That makes the tenth we've seen to-day, don't it?"

"Yep. The tenth or eleventh, I forget which. They're thicker'n sheep."

"We might 's well land here fer the night," the man called Bill suggested.

"Guess so," his companion asserted. "It's a likely lookin' place."

With a skillful touch of the paddle that denoted long experience in the art, the canoe was headed for the shore, and as the keel grated on the pebbly bottom the man in front leaped out and drew the light bark after him on to the gently sloping bank. His companion followed him, and together they beached the canoe high and dry for the night. The simple camp outfit was then unloaded, and in an incredibly short time a fire was blazing merrily a short distance back from the river and the woodsmen prepared their evening meal. Their hunger appeased, they filled their pipes and stretching themselves out beside the camp-fire, proceeded to enjoy the comfort of an after supper smoke and a quiet chat before turning in for the night.

The cruisers had traveled far on this trip in their search for a growth of pines of the proper requirements; they had tramped many miles, toiling over some rough portage or carry, and had paddled many more in their frail birch bark canoe. In spite of all the hardships and dangers, however, it was a life full of charm and excitement—the life that suited them.

"They ain't no use goin' no futher, I guess," Long Tom remarked, stirring the fire with his foot. "This is the best lookin' timber we've struck yet by a long shot an' they's plenty of it an' it's handy to the river."

"Couldn't be handier ef 'twas made t' order," his friend replied. "Guess we'd better start back to-morrow an' report. We'll jest 'bout be in time fer the boys t' git things in shape fer the crew."

"Tell y' what it is, Bill," Long Tom observed irrelevantly, "I'd like t' git a shot at that buck afore we start back. He's the biggest ever."

"What's the use!" Bill objected. "Ther's plenty more to be had fer the shootin' of 'em. It's a leetle early fer venison, anyhow."

"Mebbe so," Long Tom admitted, half reluctantly, "but he was a whopper an' no mistake."

A brief silence followed, which was broken by Bill's voice.

"Say, Tom," said he, "you promised t' tell me what you shook Green Bay so all of a sudden fer. I never could figger that out, nohow. Let's hev the yarn now."

Long Tom puffed silently at his pipe for some time before replying.

"Same old story," he at length began. "'Twas all long of a gal an' another feller. Y' wouldn't think t' look at me that a slip of a gal could git 'round me an' make a reg'lar durn fool o' me, would you, now?" he questioned, sheepishly.

"Seein' as one o' them same gals done the same t' me, I kin," Bill solemnly replied. "They're funny critters, gals is."

"Waal," Long Tom continued, "'twas long o' one o' them that I shook Green Bay an' a good job. I was dead gone on a gal, an' was calculatin' t' hitch up an' travel double fer the rest o' my days. Seein' as Sal—her name was Sal—seein' as Sal was more'n half willin', I'd got my dander screwed up t' the pint o' puttin' the queschin', when 'long comes another feller an' goes in fer t' cut me out. He warn't much of a feller, but he could git 'round the wimmin folks somehow, an' he sorter got 'round Sal. He warnt much fer size, jest a onery sort of a duck, but Sal seemed t' like him, an' the dern cuss know'd it. I allers thought he lied 'bout me, but I couldn't prove it, an' when he give it out that he an' Sal was goin' t' git married an' Sal didn't deny it, I jest naterly didn't wanter be 'round when the funeral come off, so I shook the hull bizness. That's all they is to it."

"What was the feller's name?" asked Bill.

"Haskins. Sam Haskins."

"Wha-at!" Bill exclaimed, sitting erect and staring at his companion in amazement. "Y' don't mean Peshtigo Sam? Waal I'll be derned! The onery cuss!"

"Y' don't mean t' say you know Sam Haskins?" Long Tom demanded, equally surprised.

"Know him! Wall, I jest guess I do. Why, he come near doin' fer a feller by the name o' Hogarth, a friend o' mine over in Peshtigo. Me an' Hogarth come near fightin' 'bout it. 'Twas all consarnin' a gal, too, her I spoke 'bout. We run Peshtigo Sam out o' camp. That was two years ago. Know him? Waal I jest guess."

"Y' don't say!" Long Tom could find no other words in which to express his feelings.

"Yes-sir-ee. An' I'll bet he warn't squar' in his dealin's with you," Bill emphatically asserted. "Ther aint a honest hair in Peshtigo Sam's head, b' gosh. Did he marry the gal?"

"Course," Long Tom replied. "They was all ready fer the bizness when I cleared out."

"It's too all fired bad," said Bill in sympathetic tones. "He was such a onery, sneakin' cuss. You mark what I say; he done some onderhand bizness consarnin' you an' the gal."

They finished their pipes in silence, each busy with his own thoughts of the past and of the "gal" he had tried to win. But these thoughts faded into confusion ere long, and their weary eyelids drooped and their heads nodded on their breasts. They replenished the fire for the night, rolled themselves in their blankets and soon their deep, heavy breathing announced that the cruisers had forgotten the cares of the day and rested from their labors.

In the still watches of the night the big stag cautiously drew near and gazed, half in wonder, half in fear, at the flickering fire and the shadowy forms lying there within the dim circle of light. He could not understand it. He

AND NOT A GOOD DAY FOR COONS.

was all new to him, and he gave vent to his feelings of perplexity in a loud snort. At that sound one of the figures stirred uneasily and muttered in his sleep, and the stag, fearing he knew not what, vanished silently into the black darkness of the forest. Early the next morning Long Tom discovered the stag's footprints in the soft, mossy soil, and swore a big oath that before the winter snows had come and gone that stag should be his venison.

Having marked the spot where they had camped with blazes on the trees, the cruisers bundled their traps into the canoe, headed the prow down stream and with the aid of current and paddle were borne swiftly away on their journey back to the settlement.

* * * * * * *

The logging camp was completed; the main road, with its numerous branches extending to different portions of the "logging swamp," had been cut and well graded and leveled; everything was in readiness, and there was nothing to do but await the arrival of the crew with the teams and provisions for the winter camp. Scarcely a trace remained of the runway that led to the big stag's drinking place. In its stead was the main logging road with all its branching arteries, one of which led to a small clearing where the newly finished log house and the adjoining stables had been erected.

All this was the result of that visit of the two cruisers not long before. They had conducted the pioneer crew, the vanguard of the real army of the destroyers of the forest, to this spot, and at their arrival the ringing blows of the axe had resounded for the first time through this wilderness, and the work of destruction had had its beginning. When the big stag beheld these unwonted sights he gathered his herd about him and led them, trembling and afraid, far from the scenes of danger, but not beorfe three of their number had yielded up their lievs to their new enemies.

It had been snowing all night and all the morning, and still the light, swirling flakes fell unceasingly; the ground was covered with an ever thickening blanket of white, and the branches of the fir trees drooped heavily, weighted down with the unaccustomed load. Winter had arrived in all his panoply of state. The crew had finished their mid-day meal and were lounging in their bunks idly smoking, or engaged in some light occupation of mending or what not. There existed a certain similarity in the appearance of these men—the similarity that is noticeable in a regiment of well drilled soldiers who have campaigned together for many seasons. There was Bill White, and "Long Tom" Bartlett, and Seth Jenkins, the captain of the crew, and two or three others, none of whom looked up to six foot two, and last, but by no means least, "Slim Jim," the ever busy French Canadian cook, a man of medium height but of mighty girth, the most important man in the camp—three times a day. These men had performed the labor of Titans in clearing the way and making all the necessary preparations for the great work soon to begin.

"The teams ought t' be comin' along putty soon." Captain Jenkins remarked to no one in particular. "They've had sleighin' fer a week now an' they're just about due."

"How many men y' got this trip?" Long Tom inquired.

"Twenty-four all told," the captain replied. He stepped to the door, and opening it, looked out upon the snow bound forest.

"It beats all how it keeps on a-snowin'," he observed, half to himself, as he turned back into the room.

"Say, Cap'n," one of the men called out, "jest leave the door open, will yuh? It's hoter'n blue blazes in here."

As none of the others objected, Captain Jenkins complied with the request. He had scarcely taken his seat on the rude bench that served in lieu of chairs, when a faint, far distant cry came borne across the snow from the depths of the forest. In an instant the men all sprang to their feet and made a rush for the door.

"The teams at last," cried Captain Jenkins in jubilant tones, as their loud chorus of, "ho-hee's" was answered by another distant shout. "Here, Slim Jim, git a move on an' git grub ready fer sixteen hungry men. They'll be hungrier than wolves. You'll have to rush things."

"Certainly," Jim the cook answered. "I cannot cook ze grub in one minute, but she be ready dem quick. Mon Dieu," he grumbled to himself as he flew about among his pots and pans, "but it always is 'Slim Jim get a move on,' as if anybody move fast like me."

Presently the long train appeared toiling slowly and wearily along through the deep snow; the sleds laden with provisions and tools for the camp, and fodder for the cattle, and the lumbermen trudging along beside the sleds, or straggling behind in parties of twos and threes. Loud greetings were exchanged as they drew near enough to the camp for familiar faces to be recognized.

Long Tom and Bill White stood side by side, shouting out the names of the men they knew as they appeared in sight. Among the very last of the new comers was a man somewhat undersized in comparison with the rest. Apparently he was unknown to any of the pioneer crew, for he exchanged greetings with none of them, but as he approached nearer Long Tom suddenly grasped Bill's arm.

"I'll be cussed ef thar aint Sam Haskins," he exclaimed in suppressed tones.

"Peshtigo Sam, fer a dollar," Bill ejaculated in the same breath.

The two men stared at one another with looks that bespoke many varying emotions, and then turned their gaze on this last straggler as he slowly advanced toward them.

"Better not do nuthin' rash, Tom," said Bill in an undertone. "Let's see what his game is fust."

"All right, I won't," Long Tom growled, "I'd like t' smash his face, though."

"Hello, Peshtigo," Bill called out, as the man suddenly stopped with an exclamation of surprise at sight of them. "Whar'd y' come from, an' what brung you up here?"

Long Tom said not a word. Peshtigo Sam was clearly disconcerted, but he made the best of an awkward situation, and putting on a bold face stepped forward with outstretched hand.

"Why, hello, Bill," he cried with a would-be expression of pleased recognition on his countenance. "I didn't know you and Long Tom was here."

"I reck'n not," said Bill with a grim smile, ignoring the proffered hand. "Guess you'd a tried some other loggin' swamp ef y' had."

"Waal, I guess not," Peshtigo Sam retorted with a blustering air. "You don't s'pose I'm 'fraid o' you, do yuh?"

"The last time I seen you it looked some like it," Bill drawled.

"O, waal, there was two of you then," replied Peshtigo Sam, "You an' Hogarth, an' you wouldn't listen t' no reason. There want nuthin' agin me but circumstantial evidence, as the lawyers say."

"I don't give a cuss what y' call it," Bill rejoined, "but you acted like a dern sneak, an' I want t' tell you right here that yer room's better'n yer company, as the lawyers also sez."

"I s'pose Long Tom's mad cause I cut him out with the gal he wanted," said the other spitefully.

Long Tom flushed with anger.

"Drop that," he commanded in menacing tones, "or I'll break yuh in two." And then on second thought he inquired: "I want t' know ef you married her, though."

"Course I did," Peshtigo Sam declared boastfully, "an all I've got t' say is, it's small bizness gittin' riled cause Sal liked me best."

"That's all I want t' know jest now," Long Tom interrupted. "From what Bill tells me y' seem t' have a likin' fer wimin, but ef you mention that gal's name agin I'll break yer infernal head fer yuh."

Captain Jenkins, happening to be standing near by just then, overheard Long Tom's threat.

"Here, what's the rumpus," he inquired, joining the

"Here, what's the rumpus?" he inquired, joining the group of angry men. "None o' your scrappin' here in camp, y' know. You kin save all that till spring, when there aint nuthin' else doin'. Sam, you better be gittin' your grub or you'll git left, an' Tom, you an' Bill lend a hand at the sleds there. There's plenty t' do without jawin'."

Peshtigo Sam was only too glad to escape from his disagreeable position, and the other two men turned their attention to the unloading of the sleds. The Captain's word was law in camp, and there was not much danger of a recurrence of the stormy scene.

And now all was bustle and confusion. The oxen were unyoked and led away to the stables; the sleds were quickly unloaded, and the surrounding forest echoed with the sound of loud laughter and coarse jokes, while through it all, like an accompaniment to a song, a steady

stream of profanity flowed, unceasingly, which added local color to the scene and made the men feel more at home. Profanity is one of the precursors of civilization.

In the evening, when they were all gathered indoors, "swapping lies" and repeating stale news from the outside world for the benefit of those who had been buried in the wilderness so long a time, some one called upon Long Tom for a song.

"I ain't in good voice," he objected with a laugh.

"Give us that one about 'When the ship went sailin' away,'" Bill White requested.

"That's too old," said Long Tom. "Here's a new one I learned off'n a Down-Easter last summer. It's called 'Eagle O.'"

This is the song that Long Tom, the cruiser, sang with mournful cadence as he lay sprawled out upon his back in his bunk; some of his hearers listening with all due attention, while others soon drifted away into the land of dreams, lulled to sleep by the sound of the singer's voice.

"O 'twas in the town of Eagle, O,
Where I did live and dwell;
'Twas in the town of Waxford
I owned a flour mill.
I fell in love with a Waxford gal
With a dark an' rollin' eye-ee;
I asked her for to be my wife,
Her wishes to comply-ee.

"I went into her father's house
About eight o'clock at night;
I asked her for to come an' walk,
Our weddin' to app'int.
We walked an' talked along the road
Till we came to level ground,
When from a hedge I drew a stake
An' knocked this fair maid down.

"She fell upon her bended knees,
An' for mercy she did cry-ee,
Sayin', 'Willie, dear, don't kill me here,
For I'm not prepared to die-ee.'
But none did I heed her pleadin',
An' I beat her all the more,
Till on the ground an' all around
Was strewn a bloody gore.

"I took her by her golden locks
An' dragged her o'er the ground,
An' threw her in the river
That ran through Waxford town,
Sayin', 'Lie there, lie there, you pretty fair maid,
Who was to be my bride;
Lie there, lie there, you Waxford gal,
To me you'll never be tied.'

"When this young man returnèd home
About ten o'clock at night,
His mother, bein' weary,
Woke up all in a fright,
Sayin', 'Son, O son, what have you done
To bloody your hands an' clothes?'
The answer that he gave to her
Was a bleedin' at the nose.

"He callèd for a candle
To light his way to bed,
Likewise a silken handkerchief
To tie his achin' head.
But tyin's an' all tanglin's,
No rest could this man find,
For the gates of hell before his eyes,
Before his eyes did shine."

Long Tom's voice had grown drowsy and drowsier as the song progressed, and at this point died away altogether into an incipient snore. History does not tell what became of the man from Waxford town.

* * * * * * *

The men were up before daybreak the next morning. Captain Jenkins assigned them to their different duties, and then headed the procession for the woods and the real work of despoiling the forest soon began. It transpired that Peshtigo Sam was to occupy the position of teamster, and after the first day or two the cruisers were obliged to admit that in this rôle he was a success.

The short days sped swiftly by, and the beautiful forest of tall pines was transformed into a graveyard of protruding stumps and huge piles of brushwood scattered about in wild confusion. With tireless energy the woodcutters plied both axe and saw; the crash of falling trees was ever in the air, while down at the river the great pile of logs was steadily increasing in bulk. It was a bitter cold winter. The snow deepened on the ground, hindering the loggers in their work, and many a savage oath rose from their lips as they floundered about in the deep drifts. Venison was hard to get, and the wolves, emboldened by hunger, grew daily more fearless about the camp, tempted by the odor of cooking food. The Captain was the only contented member of the crew. The deep snows meant plenty of water in the river for the spring drive and the Captain had an eye to business.

Peshtigo Sam had hauled his last load for the day and was now on his way to camp. He was not in a cheerful frame of mind. That last load had caused no end of trouble and delayed him until the dusk had begun to fall, and he glanced apprehensively over his shoulder from time to time, half expecting to see shadowy forms creeping up behind him, and urged on the weary, patient oxen. He was not popular in camp, and he knew that there would be little real sorrow felt if he should be torn to pieces by wild beasts. Long Tom would probably rejoice at his death. He had just turned off from the main road into the branch road that led to camp, when the sound of a light footfall behind him startled him. He wheeled about, and there standing in the road he had just left was the biggest stag it had ever been his lot to behold.

The stag paused a brief moment at sight of the man and team, and then bounded forward and disappeared in the direction of the river before Peshtigo Sam had time to raise his rifle to his shoulder.

"Thunderation! but he was a whopper," he exclaimed aloud. "Waal, to-morrow'll be Sunday, an' I'll jest go arter you, then, old feller."

The prospect of triumphing over the rest of the men (for none of them had shot a deer for weeks) was so pleasing that he cracked his whip and caled cheerlily to the oxen, arriving at camp in a happier frame of mind than he had been in for many a day. Had he lingered awhile longer he would have seen a dozen dusky forms speeding swiftly and silently down the road on the trail of the big stag, for there were other hunters abroad in the forest.

The next day was Sunday, and for once in their lives the men were glad of a short respite from their labors. As a rule the enforced idleness was irksome to them and they said hard things about the Captain in consequence. Shortly after breakfast Peshtigo Sam took his rifle and started forth on his hunt for the big stag.

"Whar y' goin'?" Captain Jenkins called after him, his curiosity somewhat aroused.

"Goin' t' git some venison," he called back.

This announcement brought forth a roar of laughter from the others, but Peshtigo Sam ignored their mirth and went on his way unconcerned. The more they ridiculed him, the greater would be his victory. His undertaking bid fair to succeed beyond his expectations, for he had not tramped more than a mile from camp when the big stag again crossed his path. The animal discovered him at the same moment and fled. Peshtigo Sam was too far away to risk a shot, so he followed in pursuit. It was an easier matter for the stag to elude a man than to shake off a pack of hungry wolves, and he forthwith proceeded to lead this hunter an interesting chase, doubling many times in his tracks, but always keeping near the road that led to the river, for a two-fold danger constantly threatened him.

Peshtigo Sam followed the trail where it showed plain in the deep snow. It was tiring work, and more than once was he half tempted to turn back and give up the chase; but the fear of the other men's ridicule constantly spurred him on to fresh efforts. Stumbling and cursing he toiled along, receiving many a nasty fall over some hidden obstruction in his path. The hours sped swiftly by, and it was late in the afternoon when he finally gave up the unequal struggle and turned his steps homeward.

In making his way through a "swamp" where the loggers had been at work, he suddenly tripped over a log buried in the snow and fell headlong. He scrambled to his feet with an oath, but the first step brought a sharp cry of pain from his lips. He realized in a moment what had happened. In falling he had caught his foot, and sprained his ankle.

He hobbled over to the nearest stump in sight, and sat himself down to think over the situation. Here he was miles from camp, with a sprained ankle, and only a few short hours of daylight left. There was no time to lose if he expected to reach home before dark. He started up, using his rifle as a crutch, and began the long painful journey back to camp. He made but slow progress, and before he had covered a mile of the distance the shadows were beginning to deepen in the forest. He apprehended that he could never accomplish the journey before nightfall, and the terror that men feel when lost in the woods assailed him.

As the short winter's twilight gradually faded, a chilling wind began to moan dismally through the tall pines, and the cold began to make itself felt. He tried to light a fire, but the wood was wet and he exhausted his scanty supply of matches, and the fear of freezing to death added new terrors to the situation. And then the far away cry of a wolf came to his ears. The cry was taken up and repeated from all the different points of the compass. Peshtigo Sam shivered with fright. He had no fear of the wolves so long as he could defend himself, but what if the cold should overcome him and he should lose consciousness before help reached him—would they not attack him in his defenseless state? The thought was terrifying and incited him to renewed endeavors. He struggled forward a short distance and then sank down utterly worn out beside a big beech tree.

He had been firing off the rifle at regular intervals until he had used all but three cartridges; these he reserved for emergencies. Oh, if help would only come before it was too late! He dreaded to die like this. As he now thought about it, he had not made a very good use of his life. He had done many things which he now felt ashamed of and which he would gladly undo if he could.

If he could! Well, there was one wrong he could undo, and that was his treachery to Long Tom. In his pocket he carried a memorandum book and a stub of a pencil. As he was dishonest in most of his own dealings he naturally judged others by himself, and so, for fear of being cheated, acted as his own timekeeper. He tore a leaf from this book and in the dim, uncertain light, scrawled the following message:

"Long Tom i lide about Sal. i didunt mary her she luvs you Sam."

He pinned the paper to the tree, in a conspicuous place, with his jack-knife. This act relieved his mind somewhat, and he hoped that Long Tom would forgive him when he read the message.

He wondered how much longer he could hold out, and if his frozen body would be devoured by the famished wolves now howling about him. He began to grow drowsy. He roused himself with an effort and in a fit of despair fired one of his three remaining cartridges. To his joy the shot was answered by another shot sounding far away. He waited impatiently until he heard a repetition of the sound, and then responded with his second cartridge. His third signal was answered by a faint, halloo! and he sent back an answering cry.

"Guess we got here jest in time," Captain Jenkins observed, as they raised Peshtigo Sam and forced a flask between his set teeth.

"Looks that away," said Long Tom. "He's comin' to all right."

Peshtigo Sam opened his eyes, and in the light of the three lanterns carried by his rescuers, recognized Captain Jenkins, Long Tom and Bill White.

"I can git on all right with a little help," he declared. "I sprained my ankle. How'd you ever find me?"

"Jest by luck," Captain Jenkins replied. "Waal, ther' aint no use lingerin' here."

"What's that stickin' in the tree?" Bill asked, as the light of his lantern flashed on the piece of fluttering paper.

"Oh, that's my dyin' message," Peshtigo Sam answered with an evasive laugh. "Guess I wont need it now," so saying he pulled out the knife and thrust it, along with the note, into his pocket.

Peshtigo Sam related his experience in his pursuit of the big stag, and was profuse in his thanks to his rescuers.

"Thank Long Tom," Captain Jenkins interrupted. "Ef 't want fer him you'd still be lyin' where you was. He proposed this searchin' party."

"Was it you? Honest Injun?" Peshtigo Sam demanded incredulously of the big fellow on whose shoulder he was then leaning. "It was dern good o' you, Tom, an'——"

"Oh, let up," Long Tom commanded; "I'd a done the same fer one o' the cattle. 'T want cause I love you a heap. 'Twas jest t' git ahead o' the wolves, that's all."

Peshtigo Sam had not another word to say. He was not deceived by Long Tom's disavowal of worthier motives for his actions, and his thoughts were busy with the confession which he had written on the leaf of his note book, and which, but for the big-hearted fellow beside him, might have been left to flutter on the trunk of the beech tree while the hungry wolves fought over his bones.

That night, as he sat all bundled up before the blazing camp fire, his glance constantly wandered from a silent figure in one of the bunks opposite him to a small piece of crumpled paper in his own hand.

"Ef 't want fer him I wouldn't be here now," he mused. I orter tell him. Mebbe I'd better wait awhile, though. I'll tell him in the spring. He can't go back thar now. Ther' ain't no hurry—but I orter tell him now. Ef 't want fer Sal——." He hesitated, and then tossed the piece of paper into the fire.

FAYETTE DURLIN, JR.

Where the Loon Laughs.

In Three Parts—Part One.

"OF course you are not well, and I doubt that you are particularly happy," says Kitchener at the close of a twenty-page letter, "and for the reason that you have forgotten the traditions of your lusty youth, that you have drifted away from the sweet and satisfying things that used to put the tan on your cheek and the brawn on your shoulders. Man! how long is it since you had a gun in your hands with a cocker ranging the blueberry scrub ahead of you, or held a troll in your teeth while you drove your canoe softly over the water in the shadow of the bank where the black bass lie? Sick Thing, will you yield to the snare I have tried to set for your unwilling feet through all these many pages? Will you come with us for one glorious month to the land where the loon laughs in the hush of the night and the crane stands on one leg to gravely consider your camp in the half-light of the shadowy dawn; to the haunts of the wood duck, the partridge, the big fight-full bass and pickerel, to the land where high serene thoughts come unbidden and the town-worn, weary man sits humbly at the Master's feet, learning again the half-forgotten lesson of life? Or do you intend to remain upon your knees, babbling sordid prayers to the unresponsive wooden god you glorify by the name of Business, until such time as Death comes stalking silently and lays his cold hand upon your shoulder?"

The Sick Thing heaves a great sigh and then reads Kitchener's long letter all over again. But he has made up his mind before the sigh is well begun, and the rereading of the letter is now only for the further delight of the thing. When he has finished, he touches a button under his desk.

"John," he says to the boy who appears in response to the summons, "find out for me the quickest and best way to get from New York to Toronto. And when you have done that, secure me a through sleeper for to-morrow night. Then telegraph to this address in Toronto and say I am coming."

Forty-eight hours later Kitchener meets him at the railway station in Toronto.

"Everything is ready," he announces. "All the stores are bought and the canoes have gone on by express. We leave at noon for Orillia, and the other two men are to meet us at the South Parkdale station."

"What about the guides?"

"Do you happen to know what a Corinthian is, in modern parlance?"

"Can't say that I do."

"Well, a Corinthian is a gentleman who scorns all guides and cooks when he goes into the wilderness. This is a Corinthian expedition. We'll all have to work like beavers, and that means that we'll get all the fun and all the benefits without having to endure any of the ordinary drawbacks."

By 4 o'clock of the same day the party of four stands on the wharf at Orillia. City clothes have been exchanged for comfortable and durable camp togs—the butterfly having crept back into the chrysalis, so to speak. With rough work to do, rough clothes must be worn. When the clothes have to be washed and mended by the man who wears them, they are neither numerous nor ornamental. A flannel shirt, woolen socks, khaki tunic and trousers and substantial laced boots of amphibious character, are, more or less, what each man has on. And the greatest of these is the boots, for they must wade, cramp under the canoe thwarts, climb over jagged rocks, plunge through tamarac swamps, submit to be baked by the sun, parboiled by the bog and supersoaked by water, and yet remain to the lattermost day a tough yet pliant protection to the wearer's feet.

The Sick Thing is gazing upon the two long, slender canoes lying side by side upon the wharf, and looking like a couple of pickerel treated to a coat of red paint.

"Kitchener," he says, solemnly, "do you seriously contemplate putting all these dunnage bags, guns, four men and a dog into those things? You'll sink 'em if you do, and they don't seem designed for submarine work. If you don't mind, I think I'll walk. I used to be very fond of walking."

Kitchener, with an arm thrust deep in a dunnage bag, bestowing the last of the loose articles, grunts softly as he works.

"Huh!" he grunts "point of view of the latter part of a misspent life in New York. You used to care mighty little whether you traveled above or below the water. But for to-day, we'll keep on top—mostly—just till you get used to it."

"There isn't anything of these ridiculous little things—they haven't any beam worth mentioning," the Sick Thing grumbles, squatting down to a closer examination of the canoes.

"Goodness knows that isn't the trouble with you, nowadays. Now we're all ready. Just get hold of the end of the canoe, Scik Thing, and lift it into the water. Good! Now, then, the bags. Now step in yourself."

"You don't happen to have a derrick about you, Kitchener, do you?"

"Nonsense! Just lay your foot fairly in the middle of the floor and step in. She's as steady as the Bank of England. There you are! That was splendidly done—for an elephant."

"If the Bank of England isn't any steadier than that," the Sick Thing remarks, clutching the sides of the canoe as Kitchener steps in, "then the Lord have mercy on the nation's finances."

"Come along, you fellows," Kitchener shouts to the others. "We've got to make camp somewhere before sundown. You don't mind the sea, Sick Thing, do you? It's running a bit high for the amount of freeboard we've got. Are you pretty comfy?"

"Lord, yes! This is simply luxurious. Vestibuled limiteds are not in it for a moment with this. I'm wet to the waist already."

"Hark!" says Kitchener, pausing in his paddling. "See if you can make out what Cyclops is shouting back there on the wharf. Confound this wind, even a fog horn like that can't carry against it! Something's wrong. I suppose, and we'll have to go back. We can't put about in this sea. Just back water, will you? We've only got twenty or thirty yards to go."

They backed up to the wharf, keeping the nose of the canoe to the wind, Cyclops in the meantime shouting prodigiously.

"Shut up, you infernal calliope," Kitchener growls. "Now then, what is the matter?"

"Have you got any tobacco?" Cyclops says, mildly.

"Chuck him your pouch, Sick Thing," Kitchener says with feeling. Then as the Sick Thing bows his head over his paddle in an anguish of laugher, Kitchener gives himself over without let or hindrance to a glittering flow of profanity.

"I wish I could swear like you, Kitchener," the Sick Thing says, wiping his eyes on his shirt sleeve. "It's beautiful."

When they are once more well away from the wharf they are brought to a halt by another voice.

"It's the Little Officer Boy this time," Kitchener says, gloomily. "He seems to be dancing and waving his hands. Now I wonder what in the name of Job he wants. Well, back her up again. If this goes on, we'll have to sleep at the hotel to-night."

When they are alongside once more, the Little Officer Boy makes himself understood:

"Why the deuce didn't you fellows stay where you were?" he cries, indignantly. "That's what I was telling you. You looked fine out there with the sea coming over you and the light was just right. I should have had a bully picture in a minute if you'd only kept still. Go out again, will you?—and come round into the trough of the sea, so as to get it good. I'll have my camera out in a jiffy."

"Step out, Sick Thing, and land the bags," Kitchener says, in the tone of a man who sees the sheriff coming with a writ. "We'll have to dump—the water's half-way to the thwarts already."

While this operation is being performed, Kitchener turns to the others and says quietly, but in a way that brooks no question, "Get off, you fellows, and we'll follow."

When the emptied canoe is again placed in the water and the bags are being lifted in, the other canoe is seen to be backing toward the wharf.

"Well," roars Kitchener, "what is it now?"

"Either of you fellows got a match?" Cyclops inquires, in a casual way.

"He insisted upon coming back, you know," the Little Officer Boy says, in explanation.

"Here, catch my match safe," Kitchener growls. "Now then, get away with you, and don't stop paddling until I give the signal to make camp. It's a quarter to five now, and the tent's got to be up by seven. Get off now, and don't let me hear another word out of you."

The expedition is started upon its first stage at last with all Lake Couchiching ahead of it and a stiff breeze to work against.

"How are you feeling, Sick Thing?" Kitchener sings out presently.

"Both feet asleep," the Sick Thing responds. "Don't mind me. I'll be all right when it spreads. It's creeping up my legs now."

"Don't bother about your feet. It always strikes a man like that the first day or two. Are you pretty comfy otherwise?"

"Long, thin pain from the small of my back to the nape of my neck; big square-built pain in my diaphragm; my left ear and the right side of my nose are itchy, and if I stop to scratch 'em, I know I'll get a tubful of cold water in my stomach. Yes; quite comfy, thank you. What was that poetical thing you said in your letter about the land where the loon laughs in the hush of the night? If he has any sense of humor, he'll laugh himself sick when he sees this procession go by, hush or hurricane. I say, Kitchener, don't you imagine that I'm not enjoying this thing. It's splendid, of course, but I don't want to glut myself with it. What's the matter with making camp now and getting something to eat?"

"Do you see that little island straight ahead? Well, we'll make for that and put up there for the night. I figured it out from the wharf before we started as about eight miles, so we'll only have about six more to go. Just stick to your paddle and you'll be there before you know it, and with an appetite of heroic proportions."

"One of my hands seems to be stuck tight to the paddle now, oozing blood, and with a loose bone working out between. Only six miles more—eh? Well, I'm going to give myself over to a silent enjoyment of it. Please don't talk to me. When you reach the island, just lift me out and put me to bed. I shan't want any supper."

The canoes reach the objective point about seven o'clock, the Sick Thing is helped out, and being beyond all inclination for speech, is laid away in a blanket. Within half an hour the tent is up and the supper is cooked. Kitchener gently prods the Sick Thing with the toe of his boot.

"Supper's ready," he announces. "I say, supper's ready. Do you think you could manage a mouthful? Poor old chap; we've worked you too hard the first day. Do you want to go on sleeping, or will you join us at the festive board?"

"Gracious!" says the Sick Thing, rolling over and opening his eyes, "I feel as if I'd been in a railway collision. Yes; I think I'd best try to swallow a little something. What's for supper?"

"Fried bacon, boiled rice and raisins, hardtack and tea. How does that strike you?"

"Strange to say, it strikes me as somewhat alluring," the Sick Thing says, getting painfully to his feet and beginning to limp toward the fire.

A rubber sheet is spread upon the ground between the tent and the camp-fire, and on this, four tin plates, four tin cups and a working force of knives and forks and spoons are ranged, with a tin plate in the center heaped with hardtack. At the edge of the fire stands a big, blackened tin pot containing a couple of quarts of tea, and near it a frying pan with eight thick slices of bacon half-submerged in brown juice and covered, more or less, with a deposit of wood ashes. Kitchener gathers the embers of the fire into a heap and places the frying pan on top for a last warming. When the brown juice is boiling he drops into it a handful of broken hardtack. When the hardtack has absorbed all of the juice, the preparations are complete. Each man gets two slices of bacon, a spoonful of fried hardtack and a big cupful of tea.

"Not in the spirit of criticism," says the Sick Thing, "but merely by way of friendly comment, I note the absence of butter."

"You do?" says Kitchener. "And ditto the absence of cream. You've left the dainties behind you, and for the next month will have nothing but plain soldier's fare, bar the fish and the partridges we take—and they won't come our way for the next day or two. I've never been over this route before, but as I figure it out on the Government maps, we'll have to have a rapids or two behind us before we get into the fish and partridge country."

"Did you bring a saw with you?" the Sick Thing asks, turning a hardtack biscuit over and over in his hands and being evidently unwilling to risk his teeth on it. "What do you mean about having rapids behind us?"

"Just lay it on the ground and smash it with your heel. What I mean is that for the first day or two we shall be in the country of the summer vacationer—the thing that comes from the inland towns of the States and wears a yachting cap and fishes with a worm. That kind of a fellow doesn't like either rapids or portages. Consequently he stays on the safe side of them and fishes and shoots all day, taking all the game he can get, whether he can eat it or not. He's probably been hard at work upon this part of the country for the last ten years, with the inevitable result that nothing is left but the scenery. How do you like the grub, now that you've got into it?"

"It's really very good. All one needs to enjoy it thoroughly is teeth, confidence and hunger. I never half believed the starvation stories of men eating their boots before. There doesn't seem to be anything improbable in it. What's in that other pot?"

"That's the rice pudding, my boy. It's the coping stone of the feast. If you're ready for it, just wander down to the water and wash your plate if you're particular to have a clean one."

"I think I'll have the pudding on the plate just as it is, thank you all the same. And give me another pint of tea and one of thost cast-iron biscuits of yours."

When the supper is ended and dishes, pots and frying pan washed and set away, the four voyageurs group themselves comfortably in a convenient position for viewing the wonder picture of the lake. The wind has now gone down, and the moon throws a palpitating track of silver light over the expanse of black water, making a central point of attraction from which the eye strays reluctantly. The black lines of the mainland and the dim shapes of distant islets are merely a frame and setting for it. For the moment that shimmering highway of light, leading—who knows?—to the gates of paradise itself, is the recompense of human suffering, the reward of human effort, the guerdon of life.

"Any of you fellows got any tobacco?" Cyclops inquires, casually.

"Child," says Kitchener, "you would do well to thank God daily that your jaws are permanently attached, for you have at least that part of the machinery of smoking always about you. Hand me over the Sick Thing's pouch and my match safe, which you will find in your pockets, together with your own pipe, which may be anywhere, and I will endeavor to supply the principal need of your existence."

Cyclops makes a lazy effort in the direction indicated, but finding the labor involved too great, presently desists.

"Just roll over, you know," the Little Officer Boy says, "and I'll go through your pockets for you."

W. E. AITKEN.

A Flower to Guido.

WILLIAM ARTHUR WHEATLEY, who for many years past has kept in touch with the sportsmen of this country by his many contributions to the sporting literature of the day, under the nom de plume of Guido, is dead. His life went out in the full vigor of his manhood in the twilight of May 11, 1901, while he was descending the stairs of his own home in Memphis, Tenn., to greet an old friend and sportsman who had called to see him. Wearied with the burden of life and overcome by the fell swoop of the "scythe of time," he sank by the wayside to rest, and fell asleep in the beyond ere loved ones could arouse him from his slumber. And before the lengthening shadows of that fatal day had been chased away by the somber clouds of night, a legion of his friends in this city had dropped a tear to his memory.

Mr. Wheatley was born in Memphis, Tenn., in the winter of 1843. He came from a parentage highly honored, the record of whose lives form a bright page in the development of this section before the Civil War. His father being possessed of wealth, he had the advantages of the best schools in the country, and therefore received an education befitting a Southern gentleman, which he used with fine effect in after years by scattering sunshine with his pen through the columns of journals of his choice, greatly to the delight of devotee of dog and gun.

Mr. Wheatley was far above the average man. As a citizen there was none better, as a friend he had few equals and as a sportsman no superiors, in the full acceptance of the term. The place to learn the good and bad qualities of a sportsman's nature is on an outing around the camp-fire. There petty strifes and jealousies rapidly develop into selfishness, which are never noticed in every-day life. There little meannesses crop out which show the true inwardness of the man and make him an objectionable companion. There, on the other hand, a true sportsman to the manner born, makes himself a lion among his companions and occupies a first place in their affections. Such a man was our dead friend. He was thoroughly unselfish, big hearted and liberal to a fault. No sacrifice was too great for him to make to add to the pleasure of a friend on an occasion. The more inconvenience he gave himself the greater was his pleasure when others profited thereby. He was alwyas on the alert to contribute to the happiness of others without any regard whatever for his own comfort. His even temper, good nature and fund of jokes rendered him the life of all occasions and the "bright particular star" around which they all gathered, and earned for him the just appellation of "the only Wheatley." Sad, indeed, is his loss to his friends, and none will feel it more keenly than myself.

A FRIEND.

MEMPHIS, Tenn., May.

Natural History.

The Beaver at Home.

Editor Forest and Stream:

Your different articles on "Experience With Wild Animals" are bringing out many interesting points concerning some of our wild animals, and are also developing some very interesting opinions and observations on the part of those who come in contact with these animals.

There have recently appeared many articles in our different outing papers concerning the beaver, and most of the writers give it as their opinion that very few opportunities are presented for observing the beaver at work or play on his native "using ground."

Inasmuch as most of the writers agree that the beaver is rarely seen in daylight, I am prompted to write you of an experience we had last September while on a moose hunting trip in New Brunswick. The region in which we hunted abounded in small lakes, the water of which was on an average of not more than three or four feet deep, and almost without exception these lakes had been formed by beaver building dams across the narrow portion of the marshes. Many of these dams are not over 2 feet high, while others were almost 3 feet. Each lake would have from one to three beaver houses, and in almost every body of water we were on we found recent cuttings and other signs to show that the lake was inhabited by beaver at that time.

One morning about 9 o'clock my guide, Mr. David Ogilvy, of South Tilley, Victoria county, New Brunswick, and myself were paddling on a lake about eight miles south of Trousers Lake—this body of water was about two miles long and almost 300 yards wide—a brisk breeze was blowing directly out of the north, and while drifting with the wind, we noticed, several hundred yards ahead, a large V in the water, as if made by some animal swimming. Ogilvy told me to be quiet, that he believed the same was made by a beaver, and that we would try and get as close up as possible. We gained on him rapidly at first, and the guide then allowed the boat to drift with the wind, the beaver gradually veering off to the bank and the boat fortunately taking identically the same direction. At the time the beaver struck the bank we were probably 50 yards from him, and, notwithstanding the fact that the wind was blowing directly from us to him, he had thus far paid no attention to us. As he crawled out upon the bank he turned round and looked at us intently, but after he saw that we remained perfectly motionless in the boat and were slowly drifting, he turned round and went about 8 or 10 feet up the steep bank into the bushes and commenced to work upon a black alder bush, the butt of which was about 1½ inches in diameter. It took a remarkably few incisions of his chisel-like teeth to cut the same through, and grabbing it by the butt he dragged it to the water's edge, backing into the water and pulling the bush after him. When he was about 2 feet in the water the bush became wedged between two rocks on the bank; he crawled out again and attempted to dislodge the bush by pulling the same back up the bank. This he was unable to do, and after a few futile efforts he attacked the bush and severed the limbs, which were acting as an obstruction, then entered the water and made toward the butt of the bush the second time.

Our canoe had now drifted down within 15 feet of the bank and was directly opposite the point where the beaver and the bush were on the shore. As he approached the bush the second time, he for a moment was directly facing us, and he seemed to catch my eye as he approached the boat. He stopped instantly, remaining perfectly placid on top of the water, and we stared at one another for perhaps the space of a minute and a half. At the end of that time he seemed to have made up his mind that things were not exactly right, and with an upward lunge he dove into the water, giving the same a resounding whack with the flat of his tail. The report of this blow was sufficiently loud to have been heard several hundred yards away. In order to get into deep water, he dove almost immediately beneath the boat and came to the surface on the far side, not over 10 feet away from the boat. Upon arriving at the surface he struck the water another resounding whack and immediately went under again. This was repeated five or six times as he made off out into the middle of the lake, coming to the top of the water about once every 30 feet. As he struck the water the first time on the lake side of the boat, he splashed the water in our faces and at no time seemed to be afraid or alarmed, or very much in a hurry to get away. We watched him clear across the lake, and as I have repeatedly stated the pleasure of watching this animal at such a close range was sufficient recompense to me for all the outlay of money and time and hardship spent upon the trip which we had in New Brunswick last fall.

On another occasion on the same water two beaver passed within 50 yards of Mr. Nolan, of Chicago, and myself as we stood on the lake shore. These animals

were swimming in the water, and as they passed by turned their heads repeatedly and looked at us, but seemed in no way alarmed. We had a log cabin built near the shore of another lake, about two miles from here, where we made our headquarters, and had a fine spring right at the water's edge. A hundred yards from this spring was a large beaver house, and frequently while going to the spring for water we would see beaver swimming in the water around this house. They appeared, however, to do all their work on the house (which was a new one) at night, and if we went down to the spring almost any time at night we could hear them striking the water with their tails. Evidently this sound which they made with their tails upon the water was a signal of some kind to their friends.

We had many beaver cuttings at our camp and at almost any point along the shore of these lakes could be found old beaver chips and beaver cuttings of various sizes. We saw many trees, some of which were by actual measurement 8 or 10 inches in diameter, cut down by beaver, and in numerous places found the runways leading from the water to the banks. A remarkable thing to me was how they manage to sink the cuttings which they stored in the lake for winter use. Many of these twigs, when dislodged, would come to the surface, but I was unable to find any in the shallow water which appeared to be run into the mud.

The dams, of which I send you a photograph, appear in large numbers, and are made of bushes, from which the bark had generally been stripped in feeding. This dam also contained stones weighing as much as 7 or 8 pounds which they had pushed up on the dam itself. Upon several occasions we made small breaks in their dams and would invariably find the same repaired next morning.

I know of no more interesting sight than to watch beaver and observe the care and intelligence which he

BEAVER HOUSE.
Photo by Dr. C. P. Ambler.

uses in locating his dam and also his house. Their method of building their dams, the arrangement of the sticks, the placing of the mud, and the position in which they locate the dam so as to give most bracing against the highest current of the lake, and all, make one highly respect their engineering ability. In the construction of a house the arrangement of the sticks and mud as an outside protection makes their house almost proof against any of their foes, while the great labor they expend in excavating around the house in order to allow them to make a way from the house to the deeper water is simply marvelous.

We were in the New Brunswick woods in this section twenty-nine days, and my diary shows that on fourteen different days I have noted seeing beaver by daylight.

Was I among a colony of beaver which had been so little visited by man that they had no fear of him, or are these beaver freaks as regards their habit of appearing in the day time?

To any one who wishes to study this animal, he certainly would make no mistake in going into the section mentioned.

I would like to hear from others. C. P. AMBLER.

ASHEVILLE, N. C.

Philadelphia Zoological Society.

THE Twenty-ninth Annual Report of the Board of Directors of the Zoological Society of Philadelphia has just appeared. It covers the period from Feb. 28, 1900, to Feb. 28, 1901, and is an interesting document. The number of visitors to the garden during the past year was 191,906, an average attendance of 526 throughout the year. Last year the attendance was somewhat larger, owing to the presence in Philadelphia in September, 1899, of the encampment of the Grand Army of the Republic. Compared with ordinary seasons, however, the receipts by the society from admissions show an increase.

During the year there have been exhibited in the garden 613 specimens of mammals, representing 169 species; 817 specimens of birds, representing 317 species; 1,069 reptiles, of 129 species, and 58 batrachians, of 11 species. Nearly 50 species of animals have been exhibited this year for the first time. Of these, 13 were mammals, 18 birds and 16 turtles and snakes.

A very considerable number of animals were born in the garden, among them monkeys, wolves, a brown bear, antelope, various deers, some birds and a number of snakes. There have been also a number of deaths in the collection, among which the most noteworthy is that of the male Indian rhinoceros, which has been in the collection for twenty-six years, and has been thirty-six years in the country.

The usual repairs and improvements have gone on, and the quarters of the collections are better than ever before, while their general wellbeing is looked after by Mr. Arthur Erwin Brown, the secretary of the Society, whose great knowledge and singular success in this particular field are well understood.

Game Bag and Gun.

Cold Storage Warehouse Raided.

IT has never been a very profound secret that New York cold storage warehouses were crowded with illegal game, but to obtain evidence of this that could be used in court has many times proved impossible. A few years ago, when the notorious Section 249 stood on the statute books, it was legal to have in possession at any time during the year game that had been legally killed in the State, or that had been killed out of the State. Happily, however, Section 249 was repealed, and at the present time the possession of game birds by any one in the State of New York at this season is a misdemeanor.

Mr. John E. Overton, State Game Protector, who has done excellent work on Long Island, has long realized that the cold storage warehouses of New York were a dumping ground for game killed all over the country, and at all times and all seasons. He knew, as most New Yorkers know, that at any time game can be obtained from almost any butcher, if ordered a day or two in advance. Some of the restaurant keepers do not sell illegal game, and those who do are careful about it, and besides calling their birds by a variety of foreign names, cut off the heads and feet from the birds so that identification becomes practically impossible. Butchers who sell to private families, however, are not so careful, and snipe, quail, grouse and certain other birds which the law says shall not be had in possession or sold at this season are, as a matter of fact, commonly bought and sold. Practically all these birds come from the cold storage warehouses, where they have been frozen, until they have lost all taste and character, and have become dry, tasteless morsels which are game birds only in name.

For a long time Mr. Overton has been at work trying to get evidence against the cold storage people which should be legal. When he had obtained this, he went with it to a police court and obtained a search warrant, on which he raided the Arctic Freezing Warehouse at 120 West street on Thursday May 23.

In two rooms on the second floor of the building he found 2,100 birds, among which are said to have been snipe, woodcock, partridges, quail, grouse, redhead and canvasback ducks. It is said that the managers of the freezing plant deny their responsibility in the matter, declaring that the birds are not their property, but are sent there in cases and barrels to be stored. In fact, they deny any knowledge as to precisely what is stored in their place. They do not deny that birds were in their place and thus physically in their possession, and precisely how they are to avoid the responsibility for this is not clear, since the language of the statute is quite plain.

The Arctic Freezing Warehouse is only one of many similar places in the city, and the knowledge of the raid which has been made caused abundant excitement in the other similar places. People thought to be in a position to know state that for a night or two after the raid they had busy times at these cold storage plants moving out illegal property. If the full legal penalty should be enforced against the persons interested here, the fine would amount to something over $50,000.

On Friday, the day after the raid, Magistrate Brann, who originally gave the warrant for searching the Arctic Freezing Company's warehouse, seemed to have whipped around and faced in the other direction. He is reported as having been more or less offensive to the State officer, and to have expressed sympathy for the warehouse people, whose disregard for law and order had been so strikingly shown the day before. He refused to grant a warrant for a further search through the warehouse. However, not at all discouraged, Mr. Overton applied to Judge Foster in General Sessions, and found in him some one apparently a little more familiar with the statutes than Magistrate Brann appears to be. Armed with this warrant, Mr. Overton returned to the West street place, and resuming his search unearthed 2,000 additional game birds, besides some barrels of venison. Besides that, a lot of "French pheasants" were found, and some barrels full of "song birds," which as yet do not appear to have been identified. Of these there were said to be about 1,400. Altogether more than 7,000 illegal birds are believed to have been captured, and the fines if enforced would probably amount to nearly two hundred thousand dollars.

Of course the birds in question were not truthfully labeled. Most of the barrels and boxes were tight and bore such labels as "young turkeys," "spring broilers," "puddle ducks," etc. "Squabs" is a favorite title for a great variety of birds, none of which to the simple minded ornithologist appear to have any relationship whatever with the pigeon family.

Mr. Overton seems to have the strong backing of District Attorney Philbin and of Assistant District Attorney Walsh, and as he has thoroughly established the illegal character of the contents of one storage warehouse he is likely to have the backing of the authorities in investigating others. However, the scare has been such a thorough one that it may be doubted if any similar success will follow his further investigation.

It may be remembered that it is but a short time since Mr. Overton was removed from the position of Game Protector, to which he was afterward restored. He is certainly entitled to great credit for the way in which he has worked up this matter of illegal game storage in New York city, a course which fits in admirably with the energy shown on Long Island, as frequently reported during the past fall and winter.

Texas Ducks and Tarpon.

Editor Forest and Stream:

I want to say a few things about shooting in Texas and spring duck and snipe shooting. The duck shooting has been tremendous this year; there were more ducks around Galveston and on the mainland than have been seen for years, but if there is no stop put to spring shooting they will soon desert us (and I don't blame them) and look for new winter quarters. Now, I shoot ducks in the spring, but for this reason every one does so, and I cannot hear reports of good bags being made without wanting ter git inter de game mesilf. I hope and pray that before long we will have a law in Texas to stop the murderous slaughter of ducks and snipe in the spring. If we don't, then good-by ducks and jacksnipe. Think of two guns taking 185 jacksnipe in seven hours. This is the way they are killing them, but it is about over now. Well, all I can say is that every true sportsman in Texas should pray for a law to prohibit duck and snipe shooting after the first of March for five years, or, still better, forever. Teal and mallards, bluebills and redheads, and, in fact, nearly all the ducks that now visit us in the winter used to breed in Texas.

An old market-hunter told me that during the Civil War in almost every pond on Galveston Island you could find a brood of ducks, generally mallards or teal. But now if a duck hatched out a brood in less than a week some man would find it out and then good-by to those ducklings. One cannot express himself in decent language about men like these, yet they live, carry a gun and flourish, and are only waiting for just such a chance as I have mentioned. On the mainland east of Galveston toward Beaumont there are still a few ducks that stay there all summer, but they would not be hard to count. If these ducks were left alone they would breed there every year and soon things would resume their former state and shooting would be grand. As it is now, every one who has a gun is doing all in his power to run the ducks out of the country, and consequently ruin the shooting, and then they will wonder where the ducks have gone and why they don't come to certain death.

There is another thing. When a man kills a duck in the spring he kills a whole brood, because ducks breed as a rule before they start on their northward journey home. Another thing, if you kill one mallard out of a pair, the one that is left will not mate again that year. It is the same with snipe. If we don't have a law to stop all of this we will have no snipe, as well as no ducks.

There are lots of men in Texas who would welcome a law to prohibit wildfowl of any kind being killed in the spring (these are the real sportsmen), but they see every one else shooting and they see the ultimate end of it all—no ducks; so while it lasts they are not going to let the others have all the fun. There are men whose only idea is to kill as many birds as possible, who never think of the consequence, nor care where or how they kill a bird except that they prefer to get them on the ground or on the water bunched up.

We are going to have everything in fine shape for tarpon fishing—boats, men to row you around, in fact everything the tarpon fisherman requires, every comfort. I have described the tarpon fishing at Galveston before. Everything will be ready by the end of May, and I intend to get a new tarpon rig and then when I return to Galveston I will spend many a day on the north jetties. The new pavilion is being put up now, and is going to be great. I hope Mr. Waddell will be able to pay us a visit; he will not go away without having enjoyed himself.

Game laws are scarce in Texas?

Yes; something else going to be scarce, too, soon.

What is that?

Answer—Game.

C. K. H. B.

Rabbit Hunting.

SOMEWHERE in FOREST AND STREAM or some other journal I noticed some time ago a rather harsh criticism on the use of ferrets in rabbit hunting. Of course locality or circumstances may alter cases, but to my mind shooting a rabbit chased out of its hiding place by a ferret is no more unsportsmanlike than shooting a hare or deer chased by a keen-scented hound, or a pigeon liberated from a trap, and yet the sportsmanship of our deer hunters and crack pigeon shots is never assailed. All things considered, I think the rabbit has the better chance of getting away, for usually his retreat is located in uneven ground, or in some fence corner, or is surrounded by trees, shrubs or weeds, of the cover of which Bunny is sure to take full advantage. With the pigeon it is not so, for the locality of the trap is generally chosen with a view to giving the shooter every advantage. Were I asked for a definition of the word "sport" as applied to rod and gun, I would say that it is the pitting of the skill, courage, endurance and knowledge of woodcraft of the marksman or angler against the speed, courage, endurance and natural means of offense, defense and concealment of the denizens of the woods and streams. I do not mean to deprecate the sport of shooting live birds at the trap, for I have spent many a pleasant hour there, both as spectator and participant, although I must say I would rather hunt rabbits; but I do not think it just to draw too close a distinction and condemn wholesale the use of ferrets in rabbit hunting as unsportsmanlike.

It must be remembered that I am only speaking of rabbit hunting as we have it around here, where they are not very numerous, but have good cover and plenty of almost inaccessible retreats. A bag of from two to four per gun per day is considered very good, and one has more often to be satisfied with but a single one, and to get this perhaps many miles are covered, up hill and down dale, through deep snows and tangled swamps, over brier-covered ridges, boulders and fences.

Of course I do not attempt to defend the netting of rabbits except to procure like animals for breeding purposes. That is unsportsmanlike.

Were it not for the use of ferrets around here I believe rabbits would soon multiply to an injurious extent, for it is very seldom you can get a shot at one except perhaps just at dusk, when they come to the edge of the bush to feed, or else at daybreak. Occasionally the dogs will start one while hare hunting and run it pretty well for a time, but owing to the very erratic course it takes it is hard for them to hold the scent, and after a short run it will almost invariably hole up. Then it is that the ferret comes in so handy, and the man who can kill "ten straight" rabbits as they bounce from the hole, hollow log or stone pile is indeed a good shot. A pigeon may be able to make pretty good time through the air, but the way a rabbit can get over the snow-covered ground and twist and turn and dodge around bushes and stumps is an eye-opener to the uninitiated.

Perhaps I may be prejudiced in favor of rabbit hunting on account of the surroundings. The club or shooting grounds are usually situated within easy distance of the city or town, and there is unavoidably a certain amount of artificiality about it all. On the other hand, rabbit hunting takes you right into nature's lap—and who is there that can walk nature's winter carpet and breathe the pure, keen, frosty air for a day or half-day without coming home the better for the outing, even though he has nothing to show for it, except, perhaps, a bunch of green, delicately leaved moss, found on some old log, from which he has swept the snow in passing, or a root of winter firns dug from the frozen ground beneath the sheltering snow-laden arm of balsam or spruce? JAY BEE.

GUELPH, Canada.

A Pleasant Duck Hunt.

DID I feel like taking a hunt? I should say I did. The long winter had passed, in which I do not remember having so much as taken my gun from its resting place until there came one of those warm, still, balmy days of spring, made doubly enchanting by song of bluebird and robin, that makes a man feel, no matter what his temperament, that melancholia had never an existence save in the imagination of painters and poets.

My cousin, who had been mustered out at the close of the Civil War, felt, with me, a longing for the fields and meadows over which reigned most blessed peace in glorious contrast with the scenes of years in war's horrid strife, and so we took up our fowling pieces and started for the Black Creek and Shadigee Pond, about four miles distant, accompanied by a golden-haired setter of almost sacred memory.

After an hour's walk we came in sight of Black Creek, which far below us meandered through the meadows with scarcely a perceptible current, and which looked as inviting for ducks as a mill pond to me in the swimming days of my boyhood.

"There!" Sailing at considerable height over the creek was a quartet of ducks which soon pitched into the water, and down we started. As we got near them we took every precaution to cheat their vigilance, creeping behind bushes and whatever else might come between us and our game. When we thought we were near enough we rose suddenly from our covert and the ducks took instant flight. As quickly two shots rang out, dropping one bird, which fell on the opposite side of the stream. I bade my dog (as good a retriever as ever brought to hand a dead bird) go over and get the prize. As the current of the creek is very sluggish, the ice on either side had not been worn away. The dog plunged into the water, but could not succeed in getting upon the ice at the opposite side, and I instantly called him back. With an obedience not possessed in a greater degree by any other dog, he turned and essayed to get on the ice on our side, but his efforts were in vain. I saw his danger—he was weakening. Something desperate had to be done. Unexpectedly, to my joy, the ice yielded to the vigorous stamp of my feet, and in a moment or two I reached him, but not much too soon. When I got him on terra firma his hind legs were useless—benumbed by the cold water. He tried to shake himself, but what a shake! It was all fore and no aft, but he soon warmed up and was as active as ever.

Henry took a stroll up the creek, while, for some reason, I remained with the dog. He soon returned with a beautiful small-crested duck.

We sauntered along the creek as if to enjoy as much of the beauties of nature as possible, as well as keeping a sharp lookout for game. We came to a ditch, and as we jumped across it two big ducks rose, but were rather too far away to risk a shot. We watched them, and, to our surprise, they turned and flew directly over our heads. As they saw us all the while, one may be assured they were very high. Henry had a large, heavy gun of great reputation, but he thought it useless to fire, because of the great height of the birds, but as we were out to burn powder, more or less regardless of chances, I sent two loads after them. To our utter astonishment one of the ducks had to go on his way alone, as the other, swaying to and fro, came down to our very feet. Had I not yielded to Henry's solicitation to put a load of his big shot into my gun, that duck would not have been reached. He was struck by two pellets.

We now struck out for the pond, or rather lake. As we approached the inlet, which for about 75 yards was clear of ice, we espied a dozen or two duck in the water, very close to the ice. We stole along through the trees and bushes until we were afraid to advance further lest we should expose ourselves. We sat or lay there some time, not able to decide whether or not to open on them. After some deliberation, concluding they would come no nearer, we decided to pull trigger, hit or miss. Just as the word "Now" was spoken, I saw the green head of a mallard that was swimming a little out from the rest of his companions, and let drive. All took wing but the mallard.

The question now was, How shall we get the old fellow? We looked toward the shore on the left of us, and saw a boat bound in the ice. In order to get to it we had to cross the creek. We called to mind a bridge that spanned it a few hundred yards back, which we crossed and were soon in the boat breaking the ice before us to get to the open inlet. The task was not very great, as the ice had become very mellow. When we reached the water the duck made a desperate effort and succeeded in getting on the ice, and was walking pretty rapidly for one of his kind. Not relishing a long duck race through the ice, I leveled my gun and laid him dead.

On our way homeward we took the other side of the creek, and as good luck would have it, we came across the duck which the dog had failed to retrieve.

The sun was sinking behind the hills as two pretty well fagged out young men turned into their yard on Washington avenue, Highland, N. Y., but not at all regretting the tramp on that glorious, sunny April day.

CENTRAL CITY, W. Va.

CHICAGO AND THE WEST.

Death of Governor Tanner.

CHICAGO, Ill., May 25.—In the death of ex-Governor John R. Tanner, of Illinois, which occurred on May 23, this State lost not only a prominent political figure but one not unfamiliar in the circles of sportsmen. Governor Tanner in his later years was not averse to a bout at the traps with a friendly competitor, and he was for many years an ardent lover of field shooting. Robust and powerful by nature, he was, like other strong men, too careless of his health, and it is stated that the exposures undergone during a snipe shooting trip which he undertook a few weeks earlier had much to do with the progress of the malady which carried him away. He was overheated, then underclad, and he slept in a cold draft upon the train while going home, the result being that he was assailed with a severe case of rheumatism, which is said to have been the cause of his later demise. Governor Tanner took an active interest in game protection as well as in field shooting, and he was a warm friend of ex-Warden Loveday, with whom he annually opened the fall shooting season upon some of the better preserves of lower Illinois.

Western Game in New York.

The news from New York this week, stating that State Game Warden Overton had raided the Arctic Freezing Warehouse, of New York city, and discovered 2,100 game birds illegally held in possession, comes like a thunderbolt from a clear sky. Most of these birds came from the West, and we Western shooters have a very much undivided interest in them. It is stated that Mr. Overton traced most of the shipments, discovering them to be largely from the West. Now if any Western man needs stronger argument than this to induce him to hoist the banner of "Stop the sale of game," he is surely narrow minded enough to want to throw away his own goods, or liberal minded enough to want to give away his neighbor's.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Deer and the Railroads.

DUNBARTON, N. H., May 23.—Some time since a train coming to Concord, N. H., from the north, came to a stop (as I am told) a few miles from the above city to allow a herd of some six or seven deer to get out of the way. (The engineer of this train certainly deserves praise.)

A few days ago a deer was killed a short distance below Concord. It is supposed the newspaper train which reaches Concord very early in the morning killed the deer. A freight train which came next found the deer and brought it to Concord, where it was turned over to Commissioner Wentworth (who happened to be in town). Mr. Wentworth gave it to a market man with the understanding the latter was to pay what he could. It was found the deer was so badly bruised that it was only fit to be buried. I saw the deer, and it was a very small doe, as I judged, weighing not over 75 pounds. It was a very scrubby looking deer as compared with those I have seen in November and December. It had not shed its winter coat, although the hair was very loose and could be easily pulled out by the handful. It was also very evident that it was carrying a fawn. I know very little (from practical experience) as to the time does usually drop their young, but I supposed it was somewhat earlier in the spring. One of our prominent daily papers mentioned the killing of this deer, saying, "The paper train to Concord killed a beautiful deer just below Concord." As I looked at the dead deer, I thought any man who called himself a sportsman ought to be ashamed to kill such a specimen. I certainly would not bring home such a deer. Should I be unfortunate enough to kill one, we would use it in camp.

C. M. STARK.

A Fine Moose Head.

BOSTON, May 25.—Boston hunters have been interested this week in Mr. Thomas Ripley's moose head, which has been shown in a store on Washington street. The coloring has been preserved on the mounted head, a beautiful yellowish brown. Old moose hunters say that they have never seen that coloring on moose antlers before. Besides this coloring, the veination of the antlers is remarkable, reminding one of the veination of a net-veined leaf. The veins can be traced all adown the antlers, in a most remarkable manner.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

ANGLING NOTES.

De Witt Clinton's Letters.

ONE evening at the Suffolk Club on Long Island, Mr. Daniel B. Fearing told me that he had Dewitt Clinton's letters upon the "Natural History of the State of New York," and later wrote me that he would have them copied for me, and this he has done. Ex-Mayor, ex-United States Senator and ex-Governor Clinton, the father of the "big ditch," wrote a series of letters over the pen name of Hibernicus upon "The Natural History and Internal Resources of the State of New York," which appeared first in the columns of a newspaper in 1820, and were later (1822) printed in book form. The volume is now very rare, though the letters are of great interest even in this day. The editor of FOREST AND STREAM tells me that one of them was once reprinted in whole or in part in this paper, but I have no recollection of it, though I have read the paper since its first issue, and have hoped that I might some time read the letters which I have heard of but never seen until Mr. Fearing was kind enough to have them copied for me. Governor Clinton predicted in one of the letters that the building of the Erie Canal would bring Western fish into Eastern waters, and, in fact, it did bring the black bass from Lake Erie to the Hudson, to spread over not only the State of New York, but into the waters of New England.

The latest edition of the "Manual of Fishculture," published within the year by the U. S. Fish Commission, states that the ovaries of a 75-pound codfish have been computed to contain 9,100,000 eggs. In 1820 Clinton wrote: "The vast fecundity of fishes is astonishing. Their powers of production transcend their powers of destruction. A single ovary of the large cod has been known to contain nine millions of eggs."

Now that salmon (salar) have reappeared in Salmon River, in this State, as the result of restocking by the U. S. Fish Commission, and the State of New York is erecting fishways to enable the fish to ascend to proper spawning grounds, it is of great interest to read what Clinton said of the salmon more than eighty years ago:

"The salmo salar, or common salmon, is found in Lake Ontario, and some of the secondary lakes which communicate with it, but in none of the waters above the Falls of Niagara. It is too well known to need description.

"This fish, it is said, is caught all the year in the lakes; perhaps some of them remain without ever returning to the ocean. They have never been observed at Ogdensburgh. May they not be deterred by the porpoises at Quebec from descending? The received opinion is that they are naturalized to the lakes, and stay all the year.

"Trout in ponds run up into streams to spawn. Fishes in lakes ascend the rivers which supply the lakes for the same purpose, and in like manner they proceed from the ocean. This is probably for a two-fold object—for the safety of their young in shallow waters, and for food. The salmon of Lake Ontario go up the great Salmon River in August, and return in September. In some other places they ascend twice a year and spawn.

"In Champlain River there is no dam for seven miles, and salmon go in about the middle of April, and are good till the first of June. The Little Sable River has plenty, also the Great Sable, because there are no mill dams. The Saranac River at Plattsburgh is a rapid stream, and its bottom is sandy and stony. Formerly it contained so many salmon that laborers, when about to be hired, would stipulate that they should not have it often; and the only danger in passing the ford, before the erection of a bridge, proceeded from the darting of the salmon through the water and frightening the horses. A mill dam was erected on it close to the head of the bay, and the salmon endeavored, for a number of years, to ascend, but failing, they abandoned the ground. This fish does not ascend the Champlain Lake above Ticonderoga. Salmon have been caught in the Oneida Lake and Lake Champlain by the hook. Some of the lakes and ponds are filled in July, August and September with the ova and teguments of aquatic insects, which substances go under the name of lake blossom. The ova are hatched on the surface of the water, and the winged insect flutters a short time in the air during the process of ejecting the ova, after which it perishes in a short time. During this state of these insects, the salmon and other fishes fare luxuriously and disdain the hook. In July the salmon of some of the small lakes are greatly annoyed by aquatic insects, which fix on the gills and fins, and eat the latter so that the fish can hardly swim.

"It is supposed by some that they go up into the creeks to get rid of this annoyance. The salmon has small, short teeth, and is undoubtedly carnivorous. When most as-

sailed by vermin, it is the fattest. The greatest weight is 48 pounds."

Then and Now.

In reading the above extracts in the light of modern knowledge of the salmon and its habits, it may be said that there are many errors concerning the life history of the fish in Clinton's letters, but to me, knowing how long it has taken to arrive at what we now know positively of the fish and its habits, and how many questions concerning it are yet unsolved, it is surprising that Clinton should have been able to arrive so near the truth as he did. Undoubtedly he depended upon hearsay evidence to a certain extent as to the habits of salmon in certain places, and some points are now explanable, but for one I cannot understand why it was reported that salmon ran up Salmon River from the lake in August and returned in September. It is easier to understand why it should be understood that salmon spawned twice a year, for there may have been an early and a late run of fish, as in some Canadian streams to-day, and therefore assumed that the early run spawned and returned before the late run. Within my day I have heard the belief that salmon once remained all the year in Lake Ontario, and I think the late D. W. Cross, of Ohio, so declared it on the statement of some old resident, and this was probably handed down from the same source from which Clinton obtained it. There is no question that Clinton would be an ardent advocate of fishways were he the Governor of New York to-day, for apparently he saw the necessity for them and how the erection of dams cut the fish off from spawning grounds. His reference to the "bloom" or "blossom" of the lakes, and the fish not biting at such times, is rather novel. That the "bloom" of fresh waters should consist of the eggs and skins cast off by aquatic insects is decidedly novel. His account of the birth of the May fly is incorrect if taken literally, for though the eggs are deposited in the water, they sink to the bottom, and there for at least two years the insect is in the larvæ form before it rises to the surface, bursts the skin—the tegument he mentions—and emerges a perfect fly to reproduce and die as he states.

More About Salmon.

In another letter than the one from which I have already quoted, Clinton writes more about the habits of the salmon, and I quote in part as follows:

"The science of ichthyology is pregnant with instruction and amusement. The migration of fishes, their occasional appearance and absence, their habits, etc., are subjects of interesting inquiry. The most remarkable circumstance in their natural history is their extreme longevity and rapid growth. A salmon weighing 7¾ pounds was taken on Feb. 7 at Warrington (England) and marked with scissors on the back fin and tail, and turned into the river, and was again taken on March 17 and was found to weigh 17½ pounds. Some of the salmon (I mean the salmo salar of Linnæus) stay in the Western lakes all the year. But these may perhaps be considered estrays. The history of this fish is involved in much obscurity, and so indeed is that of all erratic fishes. Pennant says that every species of salmon is found in the rivers of Kamtschatka. It is observed that each shoal keep apart from others of different species, and frequently prefer a separate river, notwithstanding the mouths may be almost contiguous. Every species of salmon dies in the same river or lake in which it is born and to which it returns to spawn. In the third year male and female consort together, and the latter deposits its spawn in a hole formed with its tail and fins in the sand. A fish of a year's growth continues near the place, guards the spawn and returns to the sea with the new-born fry in November. The salmons of Kamtschatka spawn but once in their lives; those of Siberia and Europe, the rivers of which are deep and abound with insect food, are enabled to continue the first great law of nature frequently during the period of their existence.

"The common salmon of the Western waters spawn, it is said, twice a year; also the brook trout. Linnæus enumerates between forty and fifty different species of the salmo. I have reason to believe that there are several in this country. Besides the common salmon, the salmon trout and the brook trout, there are, I think, different species of trout in rivers and lakes which are confounded under the general name of salmon trout and common trout. I have seen two kinds of the common trout which are considered as of the same species, but which are specifically distinct. One species generally inhabits streams, although they go into the shallows of lakes in the fall and conceal themselves in the grass. They have red spots on the body and square tails. The other kind have yellow spots and forked tails, and never leave the lakes. I am told that Oneida Lake is filled in July with a small substance called lake blossom, which is undoubtedly the exuviæ or ova of insects. I have seen on Lake Baikal, the greatest lake in the old world, vast quantities of the skins of the *Onischus trachurus,* a species of insect which abounds on the rocky shores of the lake, and is the food of the salmo lenok and sig. The salmo salar and its congeners are probably attracted into these lakes by the vast quantity of insects. * * * Along the canal I have been regaled with the salmon and pike in great perfection. The salmo fario, or common trout, is visible in various places in the canal."

Comments.

In Clinton's letter there is a curious mixture of fact and, I was about to say, fancy, but I suppose in his day it was most difficult to arrive at the actual truth in regard to the habits of fishes, and hearsay evidence, or belief handed down, was accepted, in the absence of practical investigation, as facts. A myth given currency for years will in time arrive at the dignity of a positive truth, and it will require more years to dispel it. Note in these letters I have quoted about the laborers stipulating that they shall not be fed too often on salmon. This myth was located on the Connecticut, again on the Hudson, which never contained salmon until they were planted; then it dated back to England before this continent was peopled by the white race, and not long ago an English writer traced it back to a hieroglyphic inscription of the stone age, cliff dwelling or drift period, or something of that sort. To-day we are not of one mind regarding the life history of the Atlantic salmon in all details, and to me the wonder is that Clinton should have come so near to the truth in so many things. The influence of English literature regarding the natural history of fishes is often apparent in his letters—in fact, he could have had no other ichthyological guide at that time. He refers to the common trout as *Salmo fario,* a common error in the early history of our country, as the specific name of the English trout was applied to our native fish before investigation proved it to be a charr and Mitchell had designated it *S. fontinalis.* The reference to yearling salmon guarding the spawning beds and "returning to sea" with the new-born fry in November is very obscure, but there is no difficulty in recognizing the two common trouts, as he describes the red spots and square tail of the *fontinalis* and the yellow spots and forked tail of the lake trout, or *namaycush.* By what process of reasoning he confused certain habits of the black bass, as we now know them, with the sea-going habits of the salmon, and sends the salmon fry to salt water in November and returns yearling from the sea to fresh water, will probably never be known. That he understood the habit of the Atlantic salmon of returning to the streams of its birth is apparent, though he locates the fish elsewhere, and the now known fact that salmon in the Columbia River die after spawning, he seems to have a glimmering of, though as in the former matter the location is moved a peg or two. To me the letters are very fascinating, as doubtless they will be to others interested in our fish and fisheries, as a voice from the past.

Black Bass.

I have always contended that the black bass was not native to any waters of the State of New York, except Lake George, unless the waters had direct connection with Lake Erie, Lake Ontario or the St. Lawrence River, and so far as I know no one disputes this, except that some years ago an old gentleman told me that Lake George was stocked with black bass from Saratoga Lake. He had no evidence to support this, and I believed then and now that he had confused Lake George with Schroon Lake. Of the black bass, Clinton says: "This fish inhabits all the western and northern waters." I find that he named it for Dr. Franklin, *Perca franklinia,* and adds: "This fish formerly abounded in Lake George, where he exercised dominion without a rival, there being no pike to contest his ascendency; but in late years he is said to diminish in number and to have retired toward the foot of the lake, and that scarcity is observed in all the other fishes, and is imputed to the erection of so many saw mills and to the burning of the pine forests on the mountains, which, it is supposed, frightens the fish into deep water.

"The waters of Lake George are, I am told, impregnated with lake blossom in June and July. This is undoubtedly the ova and exuviæ of aquatic insects, from which fish derive at certain seasons their principal subsistence. How easy to mistake for this food the saw dust which is unquestionably the principal cause of the destruction of fish, although the increased angling has a tendency to thin their numbers, or to terrify them from the hook."

I have long been familiar with Lake George, and never saw the water in blossom. There is a flight of May flies at the lake, and after they rise the teguments are blown on shore and make a windrow of filmy matter. The "bloom" mentioned so often in Clinton's letters is not the eggs of insects, as he supposed, for the eggs of aquatic insects, like the May fly, sink to the bottom, but it is generally conceded to be the seeds of water vegetation floating in the water. Strange it is, but true, that the growing scarcity of fish is attributed to everything but the real cause. Clinton charges it to saw dust and forest fires, but the men who settled this country, and those who descended from the settlers, to the present generation, have fished without ceasing with all sorts of devices in season and out of season, taking fish at the spawning season and from their spawning beds, and the engines of destruction have grown more numerous and formidable as the population has increased, and the demand for fish has increased with the population, with never a thought of the future on the part of those who are waging the war of extermination.

A. N. CHENEY.

CHICAGO AND THE WEST.

Fishing Season Slow.

CHICAGO, Ill., May 25.—The Western fishing season is starting off very slow, if, indeed, it may be said to have started at all. To-day the weather is semi-Arctic in its quality, and barring two or three torrid days, the whole season has been backward and cold, too chilly to invite fish to the surface of the waters or anglers to the banks thereof. How long this state of affairs is to continue one cannot tell, for spring is due here now, and past due. Let us hope that within the next ten days we shall have milder weather and better fishing. Thus far, with the exception of the bass fishing at Cedar Lake, Ind., which early flurry is now about worn out, there have been no very good takes of fish made in this immediate vicinity.

For Trout.

Several of our Chicago anglers tried the Pere Marquette a few days ago, in the hope of being able to transact some business with the rainbows, but they failed utterly of any sport. Messrs. F. N. Peet, A. C. Smith and L. H. Chadwick made up the Chicago party, and were joined on the banks of Pere Marquette by John Waddell, Mr. Stuart and others of the Grand Rapids anglers. A great many fish showed, rising at some sort of feed on the surface, but utterly refusing to take the fly. They rose even during the progress of the severe snow storm which was one of the pleasant incidents of the trip.

Messrs. H. E. Warner and A. N. Fuller are now absent in upper Wisconsin after trout, but they have not sent back any word of success. Mr. E. Critchfield is another north-bound trout fisher, and he is at this writing located at Dudley, on the Prairie River.

The faithful little Prairie River seems to be about the only one to show any trout fishing this spring worth mentioning, or at least during the first two weeks of May.

Mr. Edward G. Taylor, who regularly opens the season on this stream at Delos Cone's place, below Dudley, had better sport this year than he had last. He and Chester Cone took forty trout in one day, and they had very fair fishing during Mr. Taylor's stay.

Just as Mr. Taylor left the Prairie, Charlie Antoine, of this city, went up to Cone's place, and has just returned from that point, where he spent two weeks. Mr. Antoine had very fine fishing this time—that is to say, he caught a very nice class of fish. On one day he took sixteen, and had nothing less than 10 inches, with several up to a pound and a quarter. He brought home fourteen fish, and out of the lot, four picked up at random weighed over 4 pounds. These are very good fish for the Prairie. Mr. Antoine reports the stream very low and clear, and fishing difficult, as the trout are working on ground feed. He was alone on the stream, except for Chester Cone, that very industrious young fly-fisherman, who can give many a city angler tips on big trout. The two had very good sport.

It is much to be regretted that the fish hog is beginning to search out this delightful little river, which a few of us have tried to enjoy and keep sacred to fly-fishing. Last week a party of four bait-fishers went in above Dudley, stopping at Bates' place. They brought out over 500 trout with them, all taken on bait. The trout in this part of the stream are smaller than they run below, but big or little, such destruction is greatly to be deplored on this little river, which can soon be fished out by such work as the above. It is much to be hoped that Mr. Dudley will stop that sort of thing, or pretty soon he will find his part of the river without any visitors.

Mr. B. W. Goodsell, of Chicago, starts next week for an extended trouting trip on some of the better boating streams of Wisconsin and Michigan. He will fish first the Brule, then the Paint and then will camp where he can reach not only these two streams, but also Cook's Creek and Bush Creek. He will then strike the Ontonagon River near Watersmeet. Later he will run the Michigamme River, with boat, and here he expects to take his biggest trout. He says the fish in this stream are not so numerous, but they run from one to three pounds and give great sport.

Mr. Fred S. Tinthoff starts this evening for Kalkaska, Mich., where he joins a friend from Jackson, Mich., for a trout fishing trip among the different streams adjacent to that point. The South Peninsula of Michigan is going to take a good many Chicago anglers this summer, and there is reason to suppose the trout fishing there will be better this year than it was last.

For Muscallunge.

Mayor Harrison of Chicago leaves next Tuesday for Squirrel Lake, near Minocqua, where he will spend a few days trying for muscallunge and bass. This is one of the better muscallunge waters of the Wisconsin region.

Messrs. Frank Stuart, C. D. Bertolet, D. B. Butler and L. Young are billed to start to-day for Woodruff for a little circus with the muscallunge. Mr. W. T. Davis, the hustling representative of the Kansas City Star, at this city, will head a party of fifteen friends who will start to Manitowish, Wis., after muscallunge early in June. They will either bring back fish or excellent reasons.

For Bass.

Mr. George Murrell, Mr. W. H. English, Mr. M. A. Devitt, Mr. J. B. Wallace and Mr. A. Wolfarth all start for Lake Beulah, Wis., to-night. Mr. English takes with him his wife and child, and will remain for several days. They all expect good bass fishing.

Mr. C. F. Hills, one of the veteran bait-casters of the Fox Lake Club, and one of the most successful fishermen of Chicago, starts to-night for some of his favorite fishing grounds on the Fox Lake Chain. Others to stop at the Lake Villa entering point are Harry Miner, Alex Friend, J. W. Law, F. E. Schall and Tom Waters. Given a touch of warm water, all these should have fun.

Chicago Fly-Casting Club.

At this writing the members of the Chicago Fly-Casting Club are holding their first meeting for the season at Garfield Park. Practice will be had in "obstacle casting" to post the members up in overgrown-stream work. The team contest and the delicacy bait-casting contest furnish other features of interest.

HARTFORD BUILDING, Chicago, Ill.

The Adirondacks in 1870.

THIRTY years ago the Adirondacks was almost a wilderness. Paul Smith's, Bartlett's and Martin's were the only hostelries, through several cabins entertained. It was a forty-seven-mile drive from the railway terminus at Ausable Forks to Smith's, on St. Regis Lake. Mr. Charles Hallock, who was there for the June trout fishing in 1870, wrote to his wife on the 8th day of that month, as follows: "I have just returned this evening from Tupper's Lake and a round trip through the wilderness. I took about 125 fish during my absence, but had better luck than any one else. The fishing so far—at least for three weeks—has been very poor on account of the weather, which has been very hot and dry. There has not been a heavy rain in this part of the country this spring. All that wet week previous to my departure from home it was about 90 degrees in the shade, and it was fully as hot during the first four days that I was out, so that I have come home so sunburnt and tanned that you would scarcely know me. Fires have been raging in all directions through the woods, burning over an immense amount of timber, and some houses. The flames were leaping up to the tops of the trees in some places near where I passed. It was very grand, and somewhat dangerous. Once Steve Turner and I had to carry our boat through the still burning remains of a burnt tract.

"There is scarcely any one in the woods now. At Paul Smith's, only Tom Denny, an old schoolmate of mine, and a friend of his. Now there are fourteen—seven of whom came to-night. There are three (antiquated) ladies here. At Bartlett's and other places there might have been a dozen persons altogether."

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Sea Lions as Fish Destroyers.

WE reprinted from Science last week a letter from Dr. C. Hart Merriam, in which it was sought to be shown that the sea lion did not destroy fish and that the warfare waged upon the sea lion by the California Fish Commission was unwarranted. On the other hand, the California Fish Commissioners contend that the fish-eating habits of the sea lion are well established facts, and that the fishery interests of California demand a reduction of the sea lions. The following passages, from a letter addressed by the California Commission to Commissioner George M. Bowers, give the views of the Commissioners and of such authorities as Dr. David Starr Jordan, Dr. Charles H. Gilbert and others:

All of the protestants have declared to the Treasury Department that this Board was proceeding unwisely and upon assumption rather than upon fact. They took the liberty of so declaring without inquiry of us in any respect, notwithstanding the accessibility of this office, notwithstanding that we are at all times ready to give such information in justification of any policy we may adopt, and notwithstanding that the courtesy of such inquiry was, in all conscience, due to us.

The sea lion question has been a burning issue in fishery circles in this State for more than twenty years. These animals have increased greatly in numbers during the past fifteen years, owing to the fact that they are no longer killed for commercial purposes. Prior to 1884, or thereabouts, vessels were outfitted at this port for sea lion hunting. They were then taken for their hides, oil and trimmings, and the industry was profitable; the oil, however, has now fallen in value; the skins, which were used for belting and kindred purposes, have been supplanted by other textures, and the pursuit of the animal is no longer profitable. When they were so hunted and destroyed for commercial purposes, there was no outcry in the land by biologists, scientists or others, upon the ground that another form of marine life was being exterminated, nor is there now any greater reason for such scientific distress.

The non-molestation of these animals has resulted, as aforesaid, in their great increase, and they have become the most cunning and destructive of sea robbers. It is utterly useless for men to talk of scientific examinations of the stomach contents, etc. The bold, bald fact stands forth before us every day that this animal pursues the salmon schools through the Golden Gate, through San Francisco, San Pablo and Suisun bays, clear to the railway bridge at the city of Sacramento, more than one hundred miles from the ocean shore. They are voracious and destructive to the last degree. It is estimated by the fishermen upon the rivers and the salmon canners that from twenty to forty per cent. of the fish entering the bays are destroyed by this means. They enter the nets of the fishermen and take the fish already gilled. They tear and destroy the nets, and cause irreparable damage to the hardy and industrious fishermen. They are seen every day during the salmon run with fish in their jaws, and almost no net is hauled that does not show a large percentage of fish destroyed by these animals. It is so now that the fishermen when laying out their nets must patrol them from end to end as they drift with the current or the tide, armed with Winchester rifles to protect the nets from the depredations of these beasts.

The situation has become intolerable. Our patrolmen upon the rivers early this year reported the devastation of these animals to be more than ordinarily excessive, and the cannery men and fish dealers also protested to us. Petitions, signed by every licensed fisherman in these waters, were presented to us, praying for our intervention for their relief.

Before undertaking any action, and in order to give all sides of the question a fair hearing, this Board called a public meeting, which was held in the general assembly room of this building, at which were present delegations from the fishermen, representatives of the cannery men, most of the wholesale fish dealers of this State, Dr. Jordan, of Stanford; Mr. Scofield, of Stanford; Dr. Harkness, ex-president of our Academy of Sciences, and many others.

Dr. Jordan took a prominent part in the discussion, and announced his appearance as attorney for the seals. All other matters pertaining to the subject were duly considered. At the conclusion of the hearing, Dr. Jordan stated that while he yet had some doubts as to the destructiveness of the gray seal (*Eumetopias*), there was no question in his mind but that the brown sea lion (*Zalophus*) was a terror and a robber who deserved no support. He also stated that the fishermen, the fishery interests, and others had been more than patient, and expressed wonder that they had not taken the matter into their own hands long ago. He distinctly approved of the killing of a large percentage of the herd. He also stated that the fact that the sea lion entered the rivers only during the run of salmon was strong evidence of the fact that they must do great injury to the schools of salmon in the sea, and there could be no doubt but that in the sea they destroyed great quantities of salmon.

Dr. Harkness said that he had favored the reduction of the herd for years, and admitted that there was no question but that they did a great damage to the fishing interests.

Dr. Charles H. Gilbert, of Stanford, sent his regrets at being unable to attend, and wrote as follows:

"My knowledge of the fish-eating propensities of the California sea lion dates from 1880, when I assisted Dr. Jordan to take the census of the fisheries of the Pacific Coast. I had then a fairly extensive experience upon the fishing grounds in company with fishermen, and I became convinced, from my own observation and from conversations with these men that the sea lion is enormously destructive of fish and fishing gear. I have seen these animals patrolling the gill nets. I have seen them eating fish, and I have seen the holes in the nets, said to be caused by their tearing out the captured fish. I am in favor of the reduction in the size of the herds of the sea lions on the California coast, believing that such reduction will materially increase the fish supply in these waters. That such a reduction is feasible can hardly be doubted. It may in the long run be most advantageously secured through the reduction of the pups and breeding females on their hauling grounds."

After the Treasury Department suspended the permit granted us to kill sea lions on the lighthouse reservations, Dr. Gilbert wrote us on June 8, saying, "I am sorry to learn of the interruption of the sea-lion reduction."

Dr. Jordan also wrote us, under date of May 20: "In the case of the small, black, barking sea lion (*Zalophus*) there can be no question. It enters the rivers and takes fish from the nets, and is probably very destructive."

Dr. Gilbert also says that he has visited Año Nuevo Island on two occasions, and that there is no lack of evidence that the sea lions there destroy many fish.

Therefore, against the biologists and scientists, C. Hart Merriam, B. W. Evermann and William T. Hornaday, who, confessedly, know nothing of the practical side of this question and who know nothing of the character and habits of these beasts, we set Dr. David Starr Jordan, Dr. Charles H. Gilbert, Dr. H. W. Harkness and our Mr. Schofield, who do understand this question from both a practical and a scientific standpoint, and who have devoted years of study to the subject. It, therefore, will not do to say that our campaign against the sea lions was conceived in ignorance and born in wantonness and brutality. The sentimental side of this question appeals as strongly to us as it does to any human being who feels a repugnance to take the life of any creature. Stern necessity alone has driven us to this extremity.

With all this evidence before us, and with the knowledge gained from personal observation, we determined to take steps to reduce the herd, and we sought and obtained permission to land upon and shoot from the rookeries at the lighthouse reservations at Año Nuevo and the Farallones. We fitted out our crews and had them landed upon the islands, when the Lighthouse Board revoked our permits.

So far as the examination of the stomachs of these animals is concerned, we have to say that nearly all of the stomachs examined by us were found to be empty. This was owing to the fact that the animals were killed during the breeding season upon their rookeries. We are informed, however, by Captain Butwell, chief light keeper at Año Nuevo Island, that within the past few weeks he made an examination of the stomach of a large gray sea lion, and found therein more than 60 pounds of fish bones of various kinds.

We have no desire whatever to exterminate the animal, and we may add this is impossible. Our desire is simply to make a material reduction in their numbers, and that number is very great. At one time this year there were 3,000 of these animals at the Año Nuevo Light Station, 3,000 at the Purissima rookery and fully 8,000 on the Farallone Islands, besides a large number upon Point Reyes rookery, all within fifty miles of the Golden Gate, and before entering our bay or our rivers each fish must run the gauntlet of these sea wolves.

We submit that protection, under the circumstances, to this animal is as reasonable as would be protection to a herd of grizzly bears that entered upon your fishery reservation at Baird in this State and regaled themselves upon the salmon which you have trapped for spawn-taking purposes. We cannot perceive any reason why your Department and ours should spend annually large sums of money for the purpose of breeding salmon simply to have a large percentage of them destroyed by these sea lions. It is not fair to those engaged in the fishing industry, nor is it fair to the taxpayers of the country. We in California breed salmon in order that a waning industry in this State may be revived and perpetuated, and we are pleased to say that the results of our labor are now being harvested each year in greater measure. We ardently hope that it may so continue, and we trust that in our efforts to subdue, in some degree, the greatest enemy of the salmon we may meet with your cordial approval and support, and not with your opposition. We are confident that if you knew the situation as we do, you could not but indorse our position.

An Afternoon with the Chinooks.

THERE were some three hours before sunset when Dr. Moore and I stepped into our boat that was tossing fretfully on the Rogue River. The Rogue River—how well it is named! One moment it glides by you as gently as a meadow brook; the next, white draped in foam, it rushes forward, lashing the rocks and boulders with flashing arms of spray. At the foot of each bar where the froth is lost in the dark blue swirl of a deep hole lies the king of game fish, the mighty Chinook salmon of the Pacific. He differs from his Eastern namesake, being thicker set, while his entire color is of molten gold.

During the early part of the day he keeps very quiet, but as the Western shadows commence to fall he comes to life. I know of no more beautiful sight than the Western glow of a September evening upon the foaming waters with the great golden fish leaping in the rainbow spray.

Again, unlike the Eastern salmon, he does not jump for flies. The most expert angler cannot coax a rise from him, nor does the patient bait-fisher fare any better, for, strange to relate, the Pacific salmon never tastes a morsel of food from the time he leaves the ocean until he dies far up some mountain stream. He never returns to the sea. How then is a sportsman to kill him with rod and reel? By using a spinner. A bright object seems to attract him, and he will strike it very fiercely.

We had been spending the last week of our summer vacation in an attempt to land a salmon on a fly-rod. So far our efforts had not been successful. We had no trouble in getting plenty of strikes, but the brush on the banks prevented a running fight, and so we had inevitably lost our fish together with most of our tackle.

With but one day remaining, we had decided to try our luck in a boat. Why had we not done so before? There are few men who can handle a boat in the Rogue River. I do not believe there are over a dozen in Oregon who would attempt to row you to the foot of one of the rapids where you must go if you want salmon. Fortunately, however, we had with us one of those men—Henry Hoover, an Indian, lieutenant of the police of the Kalamath Reservation. I have never seen his equal with the oars.

"Well," I said, as we took our seats, "if we don't get a salmon I shall be disappointed."

"If we don't get drowned I shall be happy," replied the Doctor, as he looked toward the tumbling waters of the bar.

The Doctor carried a 14-ounce split bamboo fly-rod, while I was armed with a steel one 8 ounces lighter. We each used a quadruple multiplying reel, carrying 100 yards of F line.

Trolling with about 30 feet of line out, back and forth across the current, we zigzagged up the stream. Suddenly the Doctor's line came taut and his reel commenced to sing. My spoon was struck at the same moment, and a giant salmon flashed in the air, but as he was not well hooked he was off at the first leap. The Doctor fared little better. He had a longer fight, it is true, but after fifteen minutes or so the handle of his reel caught in his watch chain and away went the salmon with several feet of line.

Luck, however, was certainly coming the Doctor's way, for, as we swung back across the current, he hooked a steelhead. One who has not caught this member of the trout family cannot realize how gamely he fought. It was a good eighteen or twenty minutes before the Doctor was able to bring him to gaff. Touching the scales, as he did, at a trifle over 6 pounds, he was a prize of which any angler might well be proud.

But we had not come for trout, so after Hoover had rested a moment we once more started toward the rapids. Luck seemed to have deserted us. We went as far up as we could, to the very foot of the bar, without so much as a nibble. The water boiled around us, and our boat was tossed as by a choppy sea. The weight of the current on our spoons bent our rods nearly double. "We'll go back and try it again," said Hoover. The words were hardly out of his mouth when the Doctor exclaimed, "By Jove, I've got him this time," and he had.

Out of the foaming waters shot a form of molten gold. Fully half a minute the great fish flashed in the sunlight. Five times in as many minutes he leaped a good 10 feet out of water, shaking his head from side to side in a frenzied attempt to cast out the spoon. So fierce were his efforts that the rod, as the Doctor pointed it downward, vibrated with the shaking head. Then like a shot he started down stream, and we were obliged to follow him. Yet with the oars and the current bearing us along, the handle of the reel was blurred as it whirled round and round. Three hundred yards he went without stopping, then, without a moment's warning, he was coming back up stream as fast as he had gone down. But we were ready for this move. As Hoover instantly reversed the course of the boat, the Doctor worked the multiplier for all it was worth. Between them the fish did not gain an inch of slack. Enraged at the failure of his plan, three times he hurled himself like a rocket into the air, then sank like a stone to the bottom.

A salmon's most dangerous moment is when he is sulking. Like a log he will cling to the bottom, until you think surely he has fouled the line. Suddenly he will give a quick little jerk away, then run toward you. Often this takes the most expert angler off his guard. If an inch of slack is gained the fish is lost. All these tricks were well known to the Doctor, and he did not give him a moment to rest, but kept steadily pumping him, until, goaded by the spring of the rod, the fish suddenly resumed the battle royal.

Twice he broke water, then darted up stream. This was a dangerous move. For a quarter of a mile we could have followed him down stream, but we could make little progress against that heavy current. Hoover with the oars and I with a pole forced the boat up stream as fast as we could. The Doctor, with the brake set and his thumb acting as a drag, forced the salmon to fight for every inch of line he took. But he tore it off by yards. When the strain of line and current became too severe, he would leap 6 or 7 feet into the air, and the Doctor must drop his tip and release the reel. Before he could regain control, the fish would have taken out precious yards of line. Thus the salmon fought his way to the foot of the rapids. There he certainly must stop, for surely no fish that ever lived could swim the first few feet of that cataract. One moment he paused at the foot of the bar, then, graceful as a trained hunter taking a fence, with one leap he cleared the worst of the rapids and started for a big rock. Unless the Doctor could turn him now the fish was lost. There were only 10 feet of line left in the reel. But the salmon lost his nerve at the crucial moment. He was exhausted by his long run up stream, and just as we were expecting to see the line snap he stopped to rest, with life and liberty all but won.

For a moment he sulked at the bottom; then, unable longer to maintain himself in the rushing waters, he once more started down stream. A second crisis had been reached. As he passed through the rock-strewn rapids only the most delicate and expert handling of rod and boat could have prevented the line from fouling, and we all gave a sigh of relief as he shot from the seething waters into the dark, still hole below the bar. In successfully bringing the fish through the rapids and during the entire afternoon Hoover deserved as much credit as the Doctor. He silently watched the battle. When he saw the line growing short in the reel, he followed the fish up stream or down again, or swung the boat this way or that to keep the fight in deep water.

Up to this point the salmon had fought upon old-time tactics, but now he seemed to lose his head. Desperate with fear and rage, he would come to the surface and fling himself to right and left. He lashed the water into foam and created a dozen small geysers around him. Now sulking, now breaking water, now dashing this way and that, he fought for his life as I had never seen a fish fight before.

But as a fencer's foil follows his adversary's circling point, so the Doctor's tip followed each move. Now it was raised high in air, now pointed low, now gently, as a mother's caress, it coaxed the struggling fish from rock and shoal. The drag and the break on the reel checked his runs; the swiftly moving multiplier took up the slack; the supple rod bent but never broke.

The fish was worn by the strain, and, unable to gain an inch of slack or to snap that silken thread that held his life as in a vise of steel, his rushes became shorter and shorter, his sulking longer and longer. He was drawn nearer and yet nearer to the boat, until at last he turned exhausted upon his golden side and was brought to the gaff.

Dr. Moore was nearly as tired as the fish. Well he

might be, for he had played him all the afternoon. The sun had set nearly an hour before. The night hawks were swooping low over the darkening waters, relieved here and there by the phosphorescent gleam of bar and rapid. For a few minutes we sat resting, enjoying the twilight—for what is more pleasant than a summer evening after a day of sport?

But if the light of day was fading, our boat was illuminated by the flush of the Doctor's cheeks, and his smile was as happy as that of a child who has just received a new toy.

"Isn't he worth working for a week?" he exclaimed. "Did you say he weighed only 28 pounds? Are you sure the scales are right? I should have thought he would have weighed at least 50. Do you know, I'd give a hundred dollars if my wife could have seen me land him. When I tell her about it she will think it is just another fish story."

NORMAN S. STERRY.

Still-Fishing.

PLEASANT LAKE, in Henrietta township, Jackson county, Michigan, is situated about twelve miles from Jackson and nine from Leslie. The lake is about one and a quarter miles long and one mile wide, fed entirely by springs. Toward the northwest end is a very pretty island, which the picnickers seem to make the most of. On the southeast side is an elegant grove with a small hotel and boats, owned and run by J. W. Cowan. Here you will find the finest spring of water in the State. At the northeast side of the lake is a resort run by E. C. Crumb. Here you will find a fair hotel, six or eight cottages and fair-sized pavilion; he also owns and runs a small steamer. On the southeast side is a resort owned and run by Patrick Hankerel, with a good hotel, large pavilion and over sixty cottages, owned by people of Mason, Leslie and the surrounding country. One of the cottages is the Oasis, 16 by 40, two stories high, five bedrooms upstairs and dining room and kitchen below complete, which is owned by Wm. Hutchings, A. C. Du Bois, M. L. Campbell, of Leslie, and Charles M. Norton, of Lansing, who likes to fish. The Oasis has been stocking the lake for the last five years with black bass, so in time we expect good fishing. At present the fish caught are a few perch, plenty of bluegills or roach, black bass and a few pike and pickerel. Among those owning cottages at Hankerel's resort is Mr. James Blair, of Leslie, one of the youngest on the grounds, although he claims to have seen seventy summers; but we have to take his word for that.

One evening Mr. Blair and Norton were out fishing. On their way home Mr. Blair made the remark that Mrs. Blair would like to go fishing with Norton in the morning, as she had not been fishing since she was a school girl. Norton was pleased to have her go, so next morning he rigged her out with an 18-foot rod, 20-foot line and Burgess weedless hook, with pork rind for bait. Off they started trolling. Norton picked up a couple of bass, and as he was reeling in the last one Mrs. Blair made the remark that she would like to get one like that. Inside of five minutes she had a strike; at first she thought that she had the bottom of the lake, but in a moment she realized that there was something alive on the end of her line, and called to Norton to take the rod, but he simply said, "No," as the worst cursing he ever got was for touching another man's line when out in a boat with friends, for he knew nothing about fishing at that time. So he quietly rowed along, and finally Mrs. Blair landed a 2-pound bass, and a more pleased woman you never saw. She did not hesitate to let the campers know that she caught the bass. The next day she went home to Leslie, and when she was telling of her success, one of the gentlemen asked her if she caught it "still-fishing." She answered, "Yes; I think so; we were not saying a word."

JULIAN.

Restocking Ontario Bass Waters.

OWING to the thousands of tourists and anglers who each year make the districts of northern Ontario their summer resort, the fish in several of the lakes have suffered to some extent; and to obviate any depletion or extermination the Ontario Government, in conjunction with the Grand Trunk Railway, has formulated a scheme for restocking many of the waters in the Highlands of Ontario, not by depositing eggs, fry or fingerlings, but by transplanting the parent fish early in the spring, in time to take advantage of the spawning season. With this end in view the Grand Trunk Railway system had built in its shops at Point St. Charles a special car for the transportation of these fish from the place of their capture to the different lakes which are being stocked.

Heretofore the stocking of the lakes has been hampered for the want of the proper means for the transportation of the fish. Young fish, fry and fingerlings, were carried by messengers in baggage cars on regular passenger trains. This method was inadequate and the Grand Trunk recognized the fact that a fish car would have to be put in service to transport fish in large numbers. A car was therefore constructed specially adapted for the distribution of live fish, the requirements of such a car being compartments for carrying fish in which an even temperature could be maintained, proper circulation of water and air in the tanks containing the fish and sleeping and living accommodations for the attendants. The interior of the car is arranged with a series of galvanized iron tanks to hold from 1,000 to 1,500 fish. At one end of the car is an upper and lower berth, like those in a Pullman car, to accommodate two men. The ice for keeping the water at a certain temperature is carried in two compartments built for this purpose and holding about one ton each. Arrangements have been made for replenishing the water in the tanks en route, which will be done by attaching a hose, provided with a coupling, to any of the hydrants at stations on the Grand Trunk.

The Ontario Government has already contracted for 10,000 parent bass. The first shipment has been planted in the waters known as the Lake of Bays, situated in northern Ontario, about 145 miles from Toronto. The fish now being transplanted are what are known as the smallmouth black bass, one of the gamiest species of the finny kingdom, and are being caught at St. Williams, on Lake Erie. Those which have been captured and transplanted are considered by experts as an exceptionally fine lot of fish, not one out of all that were loaded on the first shipment being less than a foot in length and many weighing three to four pounds. Another carload has been forwarded to the Muskoka lakes, and the fish have been deposited in Lake Rosseau. This work will be continued, until the lakes in the northern districts are thoroughly stocked.

The other lakes which will be restocked are Lakes Joseph, Muskoka, Couchiching, Simcoe and the Kawartha lakes. Though the fishing in all these waters has been good in the past, the lover of the rod and the amateur angler will be assured now of unlimited sport in any of these districts.

Canadian Angling Notes.

TROUT fishing in this Province is described as exceptionally good this season, and much better sport is reported than was enjoyed at the same time last year. The knowledge of this fact is accountable for quite a rush of visiting anglers, and though there are still many parties at most of the club houses in the Lake St. John and St. Maurice districts, every train is now taking more sportsmen into those sections of the country.

Messrs. Frank H. Hiscock, A. F. Hiscock, E. C. Stearns and R. S. Bowen, of Syracuse, N. Y., passed through Quebec to-day on their way to the limits of the Triton Club, of which they are members. Mr. J. H. Barclay, of New York, with a party of friends, has gone to the Nonantum Club's preserve, and W. M. Peelsham and party to the Laurentides.

W. C. Bryant, of Bridgeport, will be here with friends early next week, on his way to fish the Metabetchouan Club's limits. Mr. Folhurst, of Troy, who had excellent sport with the trout in the Laurentides, had also a painful experience before returning. His guide, a Lorette man named Gagné, was seized with an epileptic fit while in the boat with him, and his contortions caused its upsetting. Mr. Folhurst, being a good swimmer, was able to save himself. The guide sank in 20 feet of water, and his body was only recovered some days later.

Mr. Palmer, of Middletown, Conn., arrived here yesterday and left with his friend, Mr. G. M. Fairchild, Jr., of Quebec, for the camp of the Tourilli Fish and Game Club, in whose waters good catches of trout are reported this spring.

Dr. Zimmerman and party are expected next week at Lake Edward. A number of very heavy fish have already been taken out of this lake within the last fortnight.

All the Quebec men who have been fishing up along the line of the Quebec & Lake St. John Railway report good sport this year. Among their numbers have been Hon. Messrs. Dechene and Turgeon, of the local Government.

Messrs. Samuel Dodd and Wm. F. Hall, of Meriden, and C. B. Peet, of New Haven, returned home yesterday from a very successful fishing trip to their preserves on the Metabetchouan Club limits, carrying with them some pretty specimens of *Salvelinus fontinalis*.

Fortunately for the preservation of this beautiful fish in Canadian waters, the efforts of the Sportsmen's Fish and Game Protective Association of the Province of Quebec to stop the export of trout have been crowned with success. A delegation of the Association, justly alarmed at the enormous export of this fish last season to the United States, waited upon the Hon. S. N. Parent some time ago and urged that it be made illegal. Mr. Parent pointed out that it was the Federal and not the Provincial Government that regulated the export of fish, but promised to urge the prohibition of the destructive industry upon the Federal authorities. Mr. Parent acted in this matter with his usual promptness, and the result is seen in the passage of an order-in-council by the Dominion Government, putting in force the following regulations:

"No one shall receive, ship, transport or have in possession for the purpose of shipping or transporting out of the Dominion of Canada any speckled trout, river trout or sea trout taken or caught in the Provinces of Ontario, Quebec, New Brunswick, Nova Scotia or Prince Edward Island; provided, any person who may so ship such trout caught by him for sport, to the extent of 25 pounds in weight, if the shipment is accompanied by a certificate to that effect from either the local fishery officer in whose district the fish were caught, or from the local station agent adjacent to the locality in which they were caught, or accompanied by copy of the official license or permit issued to the person making the shipment. No single package of such trout shall exceed 25 pounds in weight, nor shall any person be permitted to ship more than one package during the season."

E. T. D. CHAMBERS.

QUEBEC, May 25.

"Killing" Fish.

Editor Forest and Stream:

I don't like the use of the words "I killed" in referring to the number of fish caught and "killed" in referring to a spoon, etc., for catching fish. It is improper. The mode or manner of obtaining a fish is by catching. You get possession of a bird or animal by killing, but a fish by catching. Saying I killed so many fish does not necessarily mean you caught them. You might have killed the fish your friend caught.

Again, the word "catch" implies skill and strategy. The word kill implies murder. To speak of killing a trout grates on my ears. It's harsh, and implies an absence of an effort, resistance or art.

Summer before last (in Maine) I was fishing from a raft made of three logs, on which was the guide and myself. To keep the fish from floundering off as I caught them, I would take them from the hook and hand them to the guide, who broke their necks. He could truthfully have said, "I killed forty trout," although he caught none. He did not even have a rod. It would be very unsportsmanlike to fish with a spoon or other appliance that killed your fish instead of catching them.

Catching is the sport in fishing. It's the chance, the art, the be all in fishing. Let us hear no more about killing—or killers—unless you are using a rifle and smokeless powder.

TERRY SMITH.

NEW YORK CITY.

A Member of the Ananias Club.

A MAN up our way went fishing—trout fishing—and when he came home said that he had caught in one day 700 trout. This fish story went unchallenged—in fact, unheeded by every man in town, save the game warden. He took down the statutes and therefrom learned that the legal limit was just fifty trout. Then doing some figuring he arrived at the conclusion that there was due the State from this over-zealous fisherman just $6,500, being 650 trout at $10 each. Now the trout were not in evidence, and the game warden was acting upon the admission of the fisherman, in which he pleaded guilty and made himself amenable to the law.

The matter assuming a serious shape, the fisherman explained that the fish were caught in a stream on the boundary of Canada. But the game warden would not stand for this, and to his own knowledge denied the existence of any trout in the stream mentioned.

Then the fisherman became hazy as to just how a trout looked, was quite certain these trout had no spots—in fact, was not sure they were trout—and when he came to think over the matter, was quite convinced that they were not trout at all but smelts. The plea that he had caught trout was changed to one wherein he admitted that they were smelts, and the game warden having no evidence to the contrary, was obliged to let the man go.

From the above one might judge that it was not either proper or safe to tell the truth at all times, this holding especially good when one has returned from a fishing trip. It is generally to be regretted that the warden did not cinch this boaster and force him to go down into his breeches pocket and yank up 6,500 plunks. It would have proved a lesson in morality and veracity to the fishermen of the country. The fish story of the future would have been tame in matters of numbers and would be confined strictly to size and weight and the hours of fight the fish put up before coming to the net.

There is a latent idea that this fisherman caught neither smelt nor trout—in fact, caught nothing, and having to tell the boys something in doing his little story, got beyond his depth and consequently into trouble.

This is the nearest I have ever known a fisherman to come to paying $6,500 just because he stretched matters a little.

If the recital of this episode tends toward making some people a little more careful in future around the campfire, I will not have written in vain.

READER.

ST. PAUL, MINN.

Maine Waters.

UPPER DAM, Me., May 26.—The fishing season is at its height. Sportsmen are in the land of realization instead of expectation. One not an angler is likely to catch the spirit, if he sits by the giant fireplace here for a single evening and listens to the recital of capture. Some of the more noted trout fishermen of the country are here, or have just gone home with pretty well filled creels. Anglers of many seasons declare that the fishing has never been better in Mooselucmaguntic, and good in Richardson Lake. Where so many trout come from is the wonder. Another remarkable feature is the fact that almost as many salmon are being taken as trout from the waters here, the natural home of the big salmo fontinalis of the world. This is a result of restocking. While the supply of trout has scarcely lost anything, a supply of landlocked salmon has been added. T. B. Stewart, of New York, who has spent so many seasons here, an enthusiast on the subject of trout, believes that the salmon are an added charm. Mr. Frank P. Waterhouse, of Boston, with Mr. S. Henry Emery, caught a salmon weighing 5 pounds in Richardson Lake a day or two ago. Mr. Freeland Howe, of Norway, Me., brought in a couple of good ones the other day, an every-day occurrence with him. A. C. Manson, of Boston, and son, H. C. Manson, are just in. C. A. Stearns, of Boston, is up and at it. State of Maine fishermen are numerous here. Lewiston and Auburn have been particularly well represented, and the anglers have taken home a great many fish. If angling enthusiasm continues to increase as fast among Maine people as it has been doing for two or three years, this great State of tremendous woods and waters will soon have room only for her own lovers of the rod and reel.

At the Bemis end of the Rangeley waters angling excitement has run to a great height. It is certain that more trout have been taken at that point than ever before and a great many salmon. A. S. Woodworth, of Boston, went up to the Birches Friday. He will try the fishing all round. D. J. Flanders, of the B. & M., has gone to Haines' Landing. At Billy Soule's the fishing has been great, and sportsmen go up there every day from the other points along the lakes. At Mountain View they have taken many good fish, as well as at Haines' Landing. H. W. Clark, of Boston, one of the veteran anglers, is at the Mountain View for his season there of more than a score.

At the Narrows, Richardson Lake, the fishing has been pleasing—fully as good as former seasons, if not rather better. Mr. Frank H. Stevens, of Boston, is home again from his fishing trip to Vine Vale camps. He caught a good many good fish. E. J. Shattuck, of Boston, and of the same camp party, had good fishing. He is an angler of the right sort. Having all the dead fish in his creel that he cared for, he turned a 6-pound trout loose, after weighing and admiring him, "for the good he would do some other fellow."

Mr. Shattuck and Mr. Stevens were treated to a rare sight when out fishing one day. The steamer Minnie French was coming down from the Upper Dam. They noticed that she had a batteau in tow. Suddenly there was a cry of "Fire! Fire!" The batteau was jerked up to the steamer's stern and one man clambered quickly from the batteau on board; another jumped overboard. Smoke was rising from the batteau. Suddenly there was a tremendous explosion. Mr. Stevens says that it seemed as though the whole earth had opened. The batteau carried 150 pounds of dynamite in a gunny bag. In the same bag were caps for exploding it. It belonged to Jack Lary's drive of logs. The two men were in the batteau to watch it. They fell asleep, evidently, and the gunny bag caught fire from the steamer's sparks. Alarmed by the cry of fire, the men saved their lives by getting out.

The batteau was reduced to flinders, and all the light work blown off the steamer. The man overboard was picked up, considerably hurt by flying debris, but not seriously. Nobody on the steamer was badly hurt. Four or five fishermen and guides in boats not far away were not hurt, though considerably shocked.

J. B. Watkins, of New York, goes home happy with a trout of nearly 8 pounds, beating Mr. Suffern by at least a pound. SPECIAL.

Eastern Tuna.

NEW YORK.—*Editor Forest and Stream:* Several fishermen who have spoken of prospective trips to California for sport with the tuna seemed to be much surprised when I informed them that the tuna was a common fish on our Eastern Atlantic coast. The fact does not appear to be generally known. If any one will take his tuna outfit to Halifax or Canso when the herring approach the coast he will have no trouble in finding all of the sport that he wants, provided that he can find boatmen who will accompany him. They are afraid of these monsters, and several natives whom I have tried to employ refused to go, saying that they did not care to "get upset quicker'n lightnin'." The tuna is called albicore and horse mackerel from Massachusetts to Newfoundland, but it is the same fish that is just now attracting fishermen to California.

ROBERT T. MORRIS.

A Little Story from the French.

M. E. P., employed by the administration of the railroad of the State, is a very enthusiastic fisher with the line. His passion is well known to his chiefs and his fellows, and each one knows how he improves every occasion and invokes all the pretexts for himself to devote to his pastime favorite.

Wishing to profit by the opening of the fishing of the trout, he himself presented the other day in the office of his chief of bureau:

"My sister herself marries, monsieur; I would like——"

"Certainly, my friend; I not have any objection to this that you should go from time to time to the marriage of your sister, only you would do well me to bring a little of the fish."

Adirondack Fishing.

JOHNSTOWN, N. Y., May 27.—Our local paper reports that the largest lake trout ever taken out of Lake Piseco was caught by W. N. Courtney on Tuesday. The weight was 29¼ pounds, length 43 inches, girth 25 inches. John Yost, of Johnstown, held the record until now, having caught one which weighed 26¾ pounds. The fishing for trout has not been up to usual standard, although there has been a few exceptionally fine catches. High water and cold rains have made the season backward. Very few trout have been taken with the fly. The best catches have been made trolling with spoon and live bait.

C. M. R.

Canadian Trout Export.

AN Order in Council, May 13, forbids the export of speckled trout, river trout or sea trout from Ontario, Quebec, New Brunswick, Nova Scotia and Prince Edward Island, except that an angler may export 25 pounds of trout, if accompanied by certificate issued by local fishery officer.

New Jersey Weakfish.

BAYVILLE, N. J., May 24.—The first school of weakfish (that is, biters) came in to-day. I caught some one mile south of the pier. There were plenty of them, so I do not think that the bad weather has affected the run. Parties would better hold off a short time longer. HERB.

Fly-Fishing for Pickerel.

WEST ROXBURY, Mass., April 24.—The other day while talking with a friend he remarked that he had read that pickerel could be caught with a fly. Perhaps some of your readers can settle this question, and if it is true what flies are best. MUSKODOSA.

Shenandoah River Bass Fishing.

BLACK BASS fishermen should not overlook the account of Shenandoah River fishing in our canoeing columns this week.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

66

EDDYVILLE, N. Y., April 24, 1901.—Robert O'Neil, while fishing in the Ulster & Delaware Canal, below the creek locks, last week, caught a large German carp. He says he found imbedded in the back part of its mouth a pair of false teeth. The teeth were identified as the property of Benjamin Torbush, of Eddyville, who, about three years ago, while removing driftwood from the sluice on the upper level of the canal, was taken with an attack of sneezing. The teeth became loose, dropped overboard and were lost.—New York World.

A Battle in the Dark.

I AM not going to assert that there is any of the scientific brand in the following story, nor thoroughly trained dogs or crack shots, for there are not. There never are in a plain, old-fashioned coon hunt; but, as for a few hours of excitement and uncertainty, the night I am about to describe was about as full of it as any I ever had the pleasure of mixing up in.

In the late autumn of 18— all the farmers and farmers' sons were greatly excited over some animal that was said to be making its home in a piece of heavy timber, containing, perhaps, three or four hundred acres, and consisting principally of oak, ash and elm, of all sizes, and a greater portion of it covered with wild grape and ivy, while the ground was thickly covered with shrubbery, making an ideal spot for the wily old coon to rest during the day and go forth in search of stray cornfields at night; and you were pretty sure to run one into a tree almost any night with a fairly good dog.

Nearly all the farmers round the neighborhood had dogs of some breed, and most of them had, in some portion of our lives, killed or been unceremoniously whipped by some old long-legged papa coon, and it was the pride of the young men's heart to own a dog with a good coon record. At this particular time excitement was at fever heat. There had appeared in the woods, from no one knew where, some animal said to be all sizes, from that of a Newfoundland dog to a large coon, and before the coon hunting season was three weeks old he had whipped somewhere about twenty different dogs, and had whipped them singly and in pairs, threes and fours, and had done it in such an artistic manner that he left no show for an argument, and the referee's decision always stood. His mode of scrapping consisted of a warm reception for the dogs from the first, and a neat break-away and run at the first chance; and the dogs never cared to follow after the first mix up. He had made himself famous; he was the talk of the village and surrounding country. Small boys needed no curfew to get home before night. Men waited for their neighbors going home from the corner grocery and postoffice, no matter whether they were friends or not, and coon hunting parties became fewer and fewer, until the old woods were silent at night. This was the state of affairs when three other boys and myself, all considering we were past boyhood, met one Saturday night and the conversation turned on the animal in "the big woods." The elder of two brothers proposed we go after it, saying they had a dog that he felt sure would stay to a finish and give a good account of himself. The dog in question was not considered a coon hunter; he would, however, hunt anything else, from a field mouse to the pantry. He was a good tracker, however, and as a fighter he was a winner from the jump, and if that animal could have looked him over once he would certainly have given up the fight; he was as large as an ordinary timber wolf and about the same color, and his breed was descended at least 100 years from registered stock. He was a vicious brute and was never unchained.

We talked it over, and as we were all reluctant to show the white feather in a crowd, we finally decided to tackle him. As there was no gun nearer than a mile, we took an axe, in case we had to cut a tree, and marched forth. We called at Tom's place and he got old Major. We all owned dogs of some sort, but we decided to take only one, as one good dog is better alone than in company with several, as they get in each other's way or fight among themselves, and we wanted to give old Major a show for his white alley. As soon as we got in the woods we lighted the lantern; and it's really strange the feeling of affection that existed between us boys that night. We seemingly could not walk close enough together; and we were so alert that a falling leaf was not passed unnoticed. Old Sleuth would have been a four-horse team compared with us in regard to noise. We turned old Maj loose just before we went into the wods. None of us expected to hear the dogs, as we had no idea he would find the game. But after penetrating the woods for a hundred yards or so we sat down on a log and waited. But I noticed the two boys on the outer end of the line soon preferred to stand, so we were huddled pretty close together, and didn't talk much.

We had sat for some time and listened, but not a sound reached us, and we had just begun to think that Major had gone home, or taken it in his head to go after some stray mutton which, by the way, he was sometimes accused of, and was looked upon with suspicion accordingly, and we were trying to brace up our caurage to jokingly telling Tom the same, when, from the thickest and gloomiest part of the swamp, as that portion was called, we heard old Major's deep, hoarse bark. Usually, when coon hunting, the bark from the dog meant for us to spring up and the man with the lantern to head the line and plough through the woods, single file, as fast as we could go. Not so this evening; oh, no; we don't up and away. We sit still for a couple of minutes, when Tom says hoarsely: "Yes, that's Major, by thunder; he's in the thickest of the swamp. Wish we had a gun." We talked for a few minutes, then we decided to go on. The dog was barking more furiously, and we each armed ourselves with a good heavy club, and Tom taking the lead we commenced the toilsome tramp of nearly a mile through the heavy brush.

We had no trouble locating the dog, as he barked incessantly. We found him gazing up a large ash, about 16 or 18 inches in diameter and probably 25 feet to the first limb. We were meditating whether to cut it or stay till morning, when Tom took the axe and said: "Boys, I wonder if she's holler." Chipping the bark off he gave the trunk a resounding whack. Again and again the back of the axe struck the trunk, probably six or seven times, and Tom dropped the axe with the exclamation, "Sound as a bell!" when, hark! whish, thud, and a heavy body struck the earth not thirty feet from where we stood and was up and away in an instant with old Major in hot pursuit, pouring out such a volume of howling yelps that the woods echoed and re-echoed until it seemed to be full of dogs. Until now we had hoped that it might be a coon, but all doubts were dispelled—for no coon ever leaves a tree until nearly forced to, and we knew also that had it been a coon he would not have gotten away so rapidly.

Our spirits were somewhat risen by the way Major got away after it; and while we had no idea as to the identity of the stranger, we had great faith in the dog's ability to take care of him should it come to close quarters. The race was not a long one, however; and we had little time for reflection, as Major came to a standstill about 200 yards toward the endge of the swamp. We found him at the foot of a basswood about the same size as the first one, but he was in a different frame of mind; his hair stood on end and his eyes blazed; he was simply spoiling for a fight. We tried sounding the tree again, but to no purpose; his lordship had either grown tired from the fast run or didn't like the looks of the dog. There was none of us who cared to climb the tree and we had about decided to camp there for the night, as after having gotten warmed up we were determined to solve his identity if it took us all night. I, however, volunteered to shin up a tree that stood near it and take a birdseye view of the surroundings, which I did, and located the game on a limb running directly toward me, but some twenty feet away. I am not going to say I felt quite as comfortable as I do right now. But, corraling all my courage, I told the boys to look out—I would shoot him. The assertion was backed by a .22 caliber revolver of the most useless type, but I drew on him, so to speak, or on the bunch in the tree that looked like him, took deliberate aim and fired. The bunch in the tree did not fall, however; it simply seemed to run a few short jumps on the limb, rise and soar away, circling downward. He struck the ground as before and was up and away before the dog got to him; but Major made it much hotter for him this time and put him up a tree inside of 100 yards. I slid down the tree and joined the boys and we were soon at the foot of the tree. As I was the only one that carried firearms I was delegated to climb the tree, and as it was in compartively clear ground we thought we could bring our game to bay. We had noticed in the two previous times we had treed him, he, she or it had made his graceful descent as far from the light as possible, and as the dog was always with the light I volunteered to hold the lantern, inwardly thinking, "I should be delighted." But Tom said something about not wanting it broken, and as he owned it I told him I would hold the dog, thinking I would be about as safe with the dog as the lantern. But as I was delegated to climb the tree I could not hold either until Tom's brother Jack, a lad of sixteen, who always wanted to shoot off a revolver, said he would go up the tree "and blow his gol durned head off" on sight, and as the animal had hitherto always shown a disposition to get away if possible, he stuck my popgun in his coat pocket and scrambled up the tree. He had gotten nearly to the first limb when there was a scratching in the tree, and Jack said he guessed he would come down as there seemed to be nothing up there. I was holding Major by the collar and his eyes were riveted on something in the tree top. I told Jack to go on, for the dog saw him. Jack crawled to the first limb and surveyed the surroundings. He did not survey long. His voice trembled when he said, "I can see his eyes; they are like coals of fire," and right after he let out a yell like a foghorn and said, "There he goes right toward the dog." It was unnecessary for him to have said this. Old Major let out a roar like a caged beast, reared up, and in another instant there was nothing to it but a shower of flying leaves and dust, mingled with a few bunches of gray hair, and out of this mix-up came in a beautiful discord, yelps, howls and snarls, accompanied by the occasional whine of pain from the dog. Whether it was an instinctive and accelerated desire to give the dog a show, or, as we hear in a street fight, to "make room," I cannot answer; but certain it is I made room, and made room very rapidly, clearing about 15 feet of space the first leap. Tom, however, started to run—I am not saying which way—toward the dog, he says, and I am not trying to rob him of glory. At any rate he got tangled in the brush and fell, putting out the lantern, and we were in inky blackness. I have witnessed many fights in the woods between dogs and animals, but this was the fiercest I ever saw, or, rather, heard. They went over the ground so rapidly it seemed as if there were a dozen of them, and the uncertainty of the affair made it seem like a night scene from the infernal region. We hastily got the lantern and attempted to relight it, but as such is the case always, we were too excited to go about it in a manner that would bring haste, but as all things have an ending we at last got a light and, following as best we could the turmoil, which had somewhat abated, we found old Major fighting desperately with an animal which we could tell by the fleeting glimpses we caught of it was light yellow in color and larger than a coon, and as full of fight as a man hit in the face with a piece of pie from an excursion train. We could also see that the dog was holding his own; if anything, was getting the better of it, and finally getting a firm hold of it by the back, he pinioned it to the ground, and we saw that the struggle was nearly over and it had been a battle royal. After a few vicious shakes the animal ceased to struggle, and a few blows on the head with a club finished it and old Major was the hero of the hour. But he had not come out scathless; he was cut, scratched and bitten; we found blood flowing from over a dozen places on our arrival home. We examined our game, and though some of us had never seen anything like it, Tom, who had traveled, being to Barnum's circus once, proudly stated it was a wildcat, and "a whopper," too. He was correct in the first—it was a real wildcat, but was rather small, or I fear old Major would not have come out of it so easily, as many of the old pioneers said when viewing the skin which Tom had tanned and to this day occupies a conspicuous place in his mother's parlor. We were very jubilant over our capture and rather made life miserable for those who had failed before us. But we were justly proud, as no game of this sort had been seen around that locality for years.

Where the short-tailed, sharp-eared gentleman came from we never knew, but he was the last one ever captured there.

One laughable circumstance remains to be told. We were ready to leave for home, when we missed Jack, and called him. He indignantly replied, "You didn't expect a fellow to come down in the dark, did you?"

Jack was still up in the tree. A. E. JAY.

Canoeing.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

A MAIL vote has been taken on the petition for changes in the racing rules of the A. C. A., the result being sixteen in favor of the new plan as a whole, three in favor of it except on certain points in regard to paddling, and three votes against it, so that the sailing men won the day by a vote of nineteen to three. By this vote the sailing decked canoes that were in use last year can sail this year with unlimited sliding seats and also a fixed drop rudder. Only one rig can be used, which must be a practical hoisting and lowering one, not exceeding 112 sq. ft. in area, so that now a canoeist owning a sailing decked canoe has only to buy two sails instead of the usual four or more, and he must have a practical double blade paddle, which may be jointed in the middle. In the future a decked sailing canoe can lower her sails and be paddled ashore, instead of being a racing machine whose sails could not be lowered in case of necessity. Heretofore racing canoes have seldom carried paddles, so that if a man pulled out the canoe's masts and threw them overboard he was quite helpless, as he could not get ashore. Under the new rules a decked sailing canoe is safer in every way than an open canoe, and the only disadvantage is the extra weight and cost. The general impression among the sailing canoeists is that the price of the sailing decked canoes will be reduced to nearly the same cost as the open canoes.

A peculiar feature of the meeting at Gananoque was that the paddling men voted against the decked canoes being forced to carry a paddle. As a number of the sailing canoeists have written us in regard to this matter, we trust that some of the paddling men will write and explain their motive in voting as they did.

MR. B. B. CROWNINSHIELD has gotten out plans for three canoes for Mr. Herman Dudley Murphey and two of the boats have been constructed; whether the third boat will be built has not been definitely decided. The first boat was built by the Mather Boat Works, at Atlantic, Mass., and has already been tried on Mystic Lake and has given the greatest satisfaction to all those interested in her. The second boat is nearing completion at the yard of Mr. W. F. Stevens, at Bath, Me., and as soon as she is finished she will be tried out against boat number one. Whichever boat is selected to compete in the Royal C. C. race in England next August will be named Uncle Sam. Mr. Murphey is being assisted in his work by the veteran canoeist, Mr. Paul Butler, of Lowell, Mass.

MR. JOHN VOSS, who made a trip to South America in an open boat a few years ago, started in company with Mr. Norman Luxton on May 21 for a voyage from Victoria, B. C., to Great Britain by way of Australia and South Africa in a 40ft. Indian war canoe. Mr. Luxton is a journalist and he carries with him a complete photographic outfit, and if the voyage is a successful one he is to publish an illustrated account of their experiences.

'Mid Reef and Rapid.—XII.

BY F. R. WEBB.

"THOSE fellows are having considerable luck over there," said Lacy, as he raked in the Colonel's last chip, and both paused to take a little nip of something hot to keep out the dampness before replacing the cards and chips in their walnut case.

The Colonel and I looked over in time to see one fellow playing a big fish, the play ending—in fact, consisting principally—in his rushing up the bank with his long pole over his shoulder and dragging the struggling fish to the water's edge, where the other two fellows, who in the meantime had taken in their tackle, threw themselves bodily upon it, regardless of the fact that it was still in the water, and, one of them capturing it, climbed in triumph up the muddy bank with the wet, struggling fish clasped in his arms and hugged tightly against his breast.

"That's a big fellow," said Lacy; "he'll go 2½ or 3lbs."

"Yes; and that's one way to land a fish," replied the Colonel in deep disgust. "I'll bet that fellow's wet; I hope so, anyhow."

"I suppose he thinks he can't get any wetter than he already is, out there in the rain," Lacy replied.

"That's the way they land all of them," said I. "While you fellows have been interested in your game, I've seen them land several in that way, all big ones, too. They're making a fine catch there."

"Yes; I always considered this a fine fishing place," said the Colonel.

"So did I," I replied; "it's a great resort for Harrisonburg fishermen.

Published in Forest and Stream June 16-23, 1894.

The Shenandoah is an ideal bass stream, both for the bass and the bass fisher. Its swift water, its rock-ribbed bed, with its myriads of reefs and ledges; its deep, cool pools and bright, sparkling shallows make of it a paradise for bass; while its accessibility, its surpassingly beautiful mountain scenery, its bracing healthful climate, its freedom from malaria, its pure, sparkling waters, make it equally an ideal stream for the bass fisher.

The bass are quite numerous in the stream, particularly in the more remote and less fished portions. As a rule, they rise readily to the fly, although with the usual uncertainty of this peculiarly capricious fish, in some localities I have never yet had a rise while taking them freely with bait.

With the liability to imperfection which is the lot of all things terrestrial, the Shenandoah has one serious drawback as a fishing stream, viz.: its tendency to get muddy after a heavy rain. The surface wash from the red clay soil of the well-tilled fields along its banks speedily converts it into a stream of liquid mud of a vivid brick red, which tint sometimes remains in the water long after the thick mud has run out, with a persistency most aggravating to the patient fisherman. On this account, therefore, probably the months of August, September and October, with the latter part of July, will be found the most favorable seasons in which to essay the river.

The best bait is a small piece of catfish, or bull pout, locally known as the "mad tom," which can be caught in abundance in almost any of the small side streams with a small seine and a lantern (it is a peculiarity of this little fish that it can best be found after night). Minnows, of course, are always good, but the "mad tom"—in addition to being if anything a more attractive bait—is so tough and hardy that it will outlive half a dozen minnows. It must be handled with care, however, as a stab from one of the vicious little horns or stickers concealed in the fins on either side just back of the gills, and on the back, is as painful as a bee sting, and the little fellow is so slippery that it is difficult to grasp him without coming in contact with his horns. Helgramites are also excellent for bait and are found in abundance in the river in the shallow, swift water under the rocks, and are readily taken by means of a small-meshed landing net, by turning over the rocks and holding the net below as the rock is turned and scooping in the creatures as they loose their hold and roll up into a little ball, to drift away with the swift current.

The local customs of the resident fishermen, some of whom along the upper river are noted for their success, are peculiar and interesting. While the town fishermen use light tackle—either a light bamboo or lancewood fly or bait rod, or a short Henshall rod with light line, leader and rather small hooks—the local fisherman uses tackle of enormous proportions, calculated to strike terror into the heart of the stranger. The pole (for it certainly is anything but a rod) is usually of the cane species, and is seldom less than 20ft. long and large in proportion, and would make a fairly respectable steamboat jackstaff. It must, of course, be used with both hands. The line is of oiled silk, rather thick and heavy, and of considerable length, rarely less than 200ft., and is wound upon a large multiplying reel, which is usually lashed to the butt of the pole. Two very large shelled hooks are used (without leaders), about 4-0 Carlyle being the usual size and pattern, and with this tackle, and standing up in the boat, the large, heavy "mad toms" can be cast out over the water to a considerable distance. No sinker is used (except in fishing from the bank), even in swift water, as the line is generally allowed to run out with the current to a great length and a sinker would be a source of endless trouble in fouling among the ever-present reefs.

The local fishermen seldom fish from the bank; but either wade—not infrequently up to the shoulders—or, as more usual, fish from a boat, which is a broad, flat-bottomed, comfortable, slow-moving affair about 20ft. long and capable of holding six or eight men, and is always propelled by a long pole wielded by a man standing in the stern of the boat. Some of the fishermen and boatmen attain great skill in handling these clumsy, heavy boats, and they can be forced up a rapid or against a swift current by this means, where a pair of oars would be entirely ineffective.

The boat is anchored directly across the stream, where the current will permit, by means of a heavy stone at each end; generally attached to a piece of fencing wire, that will not chafe or cut on the reefs, and the anglers make themselves as comfortable as circumstances will permit, casting down stream, of course, and letting the line run out in the current to considerable length; while those in the ends of the boat have considerable side sweep. When a strike is secured, the line is paid out to the fish to a considerable extent—some 20 or 30ft.—before striking, and the fish allowed to run with the bait. After running some little distance the fish usually stops, and when he again gets under way, the angler strikes, with a steady, sweeping pull on the long sagging line, which rarely fails to hook the fish.

The theory that the fish seizes the bait by the tail and then ejects it and turns it head first before swallowing, seems to be well founded, and is sustained by careful observation; for, if struck too soon—before turning the bait and getting the hook well in his mouth (the bait is usually hooked through the lips)—the fish generally escapes, and when the line is reeled in and the bait examined, it will be found to be scored with the marks of the teeth of the fish, in some instances crushed and killed, the marks being always on the lower part of the body down to the tail, showing that the bait was seized tail first; while, when a fish is caught, if the bait is still in his mouth (for frequently a bass strikes so ardently that the bait is sent spinning several feet up the line, or is thrown clear off) it will be found to be swallowed head first, with the tail sticking out of the fish's mouth.

When struck, the fish is reeled in and landed as quickly as possible, without any preliminary playing; indeed, with such tackle, which is capable of lifting a 3 or 4lb. bass bodily out of the water and into the boat without undue strain upon pole, line or hook, "playing" is unnecessary, and the local fisherman is generally desirous of landing and securing his fish as promptly as possible. In fact, I confess to the same desire myself; and never indulge in any more playing than is necessary for the safety of my tackle, having no particular relish for the cat and the mouse game.

In wading, their long, heavy tackle strikes me as being bulky, cumbersome and unhandy to the last degree; and I find my little 8oz. Henshall rod of 8ft. 3in. with a medium weight of line—not too long—to be as near perfection for this kind of fishing as is attainable in this imperfect world of ours; but in boat fishing the heavy long tackle possesses some undeniable advantages. In some two or three weeks' fishing in the Bear Lithia neighborhood last summer, most of which was done from a boat, there was not a day's fishing in which I did not lose one or more fish from having the fish shoot under the boat or foul the anchor chain. The fellows with the long heavy tackle, if their fish made for the boat, could check him or steer him off, while with my light, delicate tackle, if my fish took a notion to go under the boat, I had to let him go or smash my rod.

While the Henshall rod is unequaled for wading, probably the best tackle for boat and shore fishing is a rather stout lancewood or steel rod about 10½ft. long and fully as many ounces in weight, which is stiff and heavy enough to safely snub a fish when he darts under the boat, and long enough to be serviceable; with 150ft. of good, medium weight oiled silk line (not enameled) and hooks of medium or fairly large size, ranging from No. 2 Sproat to 2-0 or 3-0 Carlyle, with or without leaders, according to taste. I generally use a 6ft. looped leader, but I cannot say that I consider it strictly essential in bait-fishing.

In fishing from the bank a sinker is, of course, a necessity. The generally accepted method used by Shenandoah fishermen of preparing and using a sinker is to prepare a number of different sized pieces of lead by first splitting them with a chisel and then closing up the split by means of a hammer with some 6 or 8in. of common white cotton wrapping twine or string closed in the split or opening. One of these sinkers thus prepared is selected, the size and weight depending on the character of the water, whether swift or shallow or deep and still, and tied to the end of the line, and the hook (for but one hook is used in shore fishing) attached to the line some 18in. or more above the sinker.

A small piece of cork looped in the middle of the snell or snood of the hook will not add to the neat appearance of the tackle, but will prove invaluable in keeping the bait off the bottom, which, considering the tendency of mad toms and helgramites to creep under rocks, is quite an essential. The advantage of this peculiar combination is that the hook is kept off the bottom, and if anything fouls (and in such reefy waters fouls are of common occurrence) it is the sinker, and by a steady, strong pull the string will break instead of the line or hook, and the tackle will come free, leaving the sinker in the river instead of the hook; and as lead is much cheaper than hooks this is of no special importance.

In fly-fishing in the Shenandoah, as elsewhere, the finest and best tackle is the most satisfactory and produces the best results; the popular theory of the small boy with the willow pole, the tow string and the pin hook to the contrary notwithstanding. A fine bamboo, lancewood or steel rod, from 10 to 11ft. in length and of moderate weight, not too light, an enameled, tapered, size F line (25yds. is sufficient), a 6ft. looped leader of heavy single gut, and two flies of moderate size—No. 4 being about right—will probably prove most satisfactory.

The bright-colored flies, such as scarlet-ibis, Parmacheene-belle, white-miller and professor, seem to be the most attractive, although I have had considerable success with the Governor-Alvord, particularly in trolling, where the slow, steady drag of this mouse-like object through the water seems particularly tempting. George is a skillful and successful fly-fisher, and his favorite combination is a bright fly as dropper and a dark one as tail fly. His theory is that the fish is attracted by the bright fly, and if in making a dash for it he should miss it, or for any reason decline it, the dark fly is close at hand and is seldom missed. Whether this theory is correct or not, his uniform success would seem to indicate that there is at least something in it.

The fish do not, as a rule, rise or break above the surface, but generally strike from below, and it is but rarely that I see a fish take the fly, unless I am standing on a reef or other elevation from which I can look down into the water and see him make his rush; consequently, in casting, the flies should be dropped lightly out upon the water and allowed to sink a few inches below the surface—a foot is not too much—and then be gently drawn in through, not over, the water. I generally get my strikes just as this drawing-in movement has begun. It is not usually necessary to put out a great deal of line, except to reach special places or spots not otherwise attainable.

George and I have had some of our finest sport in trolling from our canoes on our various cruises, as we cruise along. A collar of flies is attached to the line as in ordinary fly-fishing, and the casts made from the canoe, throwing from side to side until some 40 or 50ft. of line is out, after which the rod is laid out over the stern of the canoe (the reel at the canoeist's feet, so placed that it will turn freely and readily), and the tip projecting aft under his right arm, with the line trailing out astern. The paddle is then taken up and the course resumed. A sharp lookout must be kept for stray ledges, and in running rapids or threading intricate, reefy places, the line is taken in. When not in use, the tackle is carried on the decks of the canoes, being secured by a simple contrivance.

It is not advisable to use a fine fly-rod in trolling, as in spite of care fouls will occur, and before the canoe can be checked and turned the rod is liable to be sprung or broken. I once ruined two tips in one afternoon in this same way, while on the same day George only saved his rod by dropping it overboard; a tedious half hour's fishing being required before he could find and recover it. A common stout lancewood or steel rod, moderately heavy, is best for this kind of work. When a strike occurs the fish promptly notifies the canoeist that he has arrived by a jerk that makes the reel whiz with a vigor and suddenness that never fails to startle him, however much he may have become accustomed to it. The paddle is then dropped, the rod taken up and the sport commences. If the fish does not much exceed a pound in weight, he may be landed aboard the canoe without much trouble, although at all times a landing net is a convenience that cannot be dispensed with without risk of losing the fish; but if a large, heavy fish is struck great care and patience are required in order to successfully handle him from the light, cranky canoe and get him safely aboard. I once saw George strike a 4-ponnder which gave him a fight for at least twenty minutes before he succeeded in securing the fish, and during which fight the fish actually towed George's canoe slowly and gently

clear across the river in his rushes, until he had worked him in so close to the right bank that I had to come to the rescue by paddling gently in and securing his bow painter and towing him out into midstream, where he finished the fight and landed the fish. This sounds like a veritable fish story, but it is a fact.

The local fishermen handle their immense tackle quite skillfully and effectively, but when placed for the first time in the hands of a man who has not been brought up on it, it is usually quite alarming. I was out one day last year with Will Compton and Tom Naylor, of Bear Lithia, and Will's father, a prominent member of the Harrisonburg bar. Compton, Sr., is an enthusiastic and expert fly-fisher, and it is doubtful if he ever before caught a bass with bait. He had run over to Bear Lithia from Harrisonburg for a couple of days, and, not expecting to fish, had brought no tackle with him, and his consternation may be imagined when one of these 20ft. flagstaffs—halliards and all—was placed in his hands and he was told to fish with it.

In the fullness of time, Compton, Sr., got a strike.

"Give him line! Give him line!" "Let him run!" "Give him plenty of time!" were samples of the advice showered on him by his companions as he sprang to his feet, the better to handle his cumbersome unaccustomed weapon, and was on the point of striking promptly, as he was accustomed to do in his fly-fishing experiences. He recovered himself and paid out some 15 or 20ft. of line, which the fish took up as rapidly as it was paid out.

"Now strike!" exclaimed Naylor, as the fish, after pausing a little, started off briskly again.

Compton, Sr., struck; not with the long, steady swing of the native, but with the sharp, quick, fly-fishing, 6oz. rod strike, forgetful of the tremendous latent energy stored up in that 20ft. pole. The fish—about a ¾-pounder—came up flying out of the river, through the air, directly toward the boat. Everybody dodged, but there was no danger. That fish sailed up the river like a flying fish, high above our heads, the full length of the 60 or 70ft. or so of line out before he dropped into the water again. There was a shout of laughter, and Compton, Sr., who probably in all his previous existence had never been guilty of yanking a fish out of the water like that, sat down, covered with confusion, while he reeled in and landed his fish, receiving, meanwhile, the congratulations of his friends.

He got the fish, though, which afforded him some consolation.

[TO BE CONTINUED.]

Red Dragon C. C.

THERE is at present an unusual amount of activity around the Wissinoming home of the Red Dragon C. C., of Philadelphia, and from all appearances canoeing will be more popular than ever in this club. Several new boats have been added to the fleet, Mr. Shaw having purchased a new half-rater from Clapham, and Messrs. Murray, McLeod, Park and Cook augmenting the fleet of canoes with new ones.

The first run of the season was taken on May 5, a number of the men paddling up Pennypack Creek, lunching near the falls.

On May 11 Snug Harbor, the new Rathskeller, was formally opened in the club house, and a most enjoyable evening was passed.

An up-river cruise was ordered by Com. Wilt on May 19, but the unpropitious weather kept many from attending.

The annual camp was held at the old favorite site near Delanco, N. J., May 30 to June 2, and the usual pleasant time was enjoyed by many of the members.

The trapshooting contingent closed the season the last week of May, and the honors were awarded to Messrs. Fenimore, Gross, Hemingway and Park. Two matches were shot with the Philadelphia Y. C. during the season. The yachtsmen had a little the best of it, winning handily on the Red Dragon's range, and making a tie on their own grounds. Pleasant suppers followed both matches.

Harper's Ferry.

Editor Forest and Stream:

I have been much interested in Mr. F. R. Webb's experiences as related in "'Mid Reef and Rapid." The well written story tells of a country and river of which I ought to know something, but of which, I am ashamed to confess, I know very little. Yet my parents were born right there, in the most beautiful and sublime spot in the Shenandoah Valley—Harper's Ferry. My mother was a Virginia Lee; my father a Virginia Avis. Capt. John Avis, of John Brown fame, was a great-uncle of mine, and John Brown's silver watch is in the possession of a branch of our family to-day. It was given to Capt. Avis by John Brown himself just before he stood on the scaffold.

When my mother was alive, and we were all at home, it was very interesting to hear my parents tell of the "John Brown raid," his fortifying of the "old armory engine house," his capture of prominent citizens, including Lewis Washington, a relative of George Washington, and the final capture of himself and men by Government soldiers. My father was a member of the local militia at the time, which was called to guard the jail in which Brown was confined. Finally came the war, the capture and recapture of the battle-scarred place, the dramatic blowing up of the armory and arsenal, and many other stirring events of those stirring times.

I was in Harper's Ferry but once. It was when nine years of age, and memory retains a faint vision of a sleepy little village, the crumbling ruins of long buildings near the edge of a sparkling, tumbling, foam-laced river, flowing turbulently through a great wondrous gorge—a place pronounced by Jefferson to be "the most stupendous thing in nature."

I would feel thankful if Mr. Webb could furnish me the full name of the Mr. Avis, of Charleston, W. Va., whom he met at the Walker place. I feel interested, and am sure he has discovered a relative of mine.

W. H. AVIS.

HIGHWOOD, Conn., May 20.

Clouds.

Glory beyond all glory ever seen
By waking sense or by the dreaming soul!
The appearance, instantaneously disclosed,
Was of a mighty city—boldly say
A wildnerness of building, sinking far
And self-withdrawn into a boundless depth,
Far sinking into splendor—without end!
Fabric it seemed of diamond and of gold,
With alabaster domes, and silves spires,
A blazing terrace upon terrace, high
Uplifted; here, serene pavilion bright,
In avenues disposed; there towers begirt
With battlements that on their restless fronts
Bore stars—illumination of all gems!

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

MAY.

30. South Boston, club race, City Point, Boston Harbor.
30. East Gloucester, club race, Gloucester, Massachusetts Bay.
30. Atlantic, Sea Gate, New York Bay.
30. Harlem, annual regatta, City Island, Long Island Sound.
30. Indian Harbor, special, Greenwich, Long Island Sound.
30. Bridgeport, special, Bridgeport, Long Island Sound.
30. Canarsie, opening and parade, Carnarsie, Jamaica Bay.
30. Brooklyn, opening, Gravesend Bay.
30. Staten Island, Stapleton, S. I.
30. American, opening, Milton Point, Long Island Sound.
30. Burgess, Marblehead, Massachusetts Bay.
30. Manhasset Bay, second series race for Jacob cup, Port Washington, Long Island Sound.
30. Seawanhaka Corinthian, races for raceabouts, Seawanhaka knockabouts and club catboats, Oyster Bay, L. I. Sound.

JUNE.

1. Knickerbocker, annual, College Point, Long Island Sound.
1. Atlantic, Sea Gate, New York Bay.
5. East Gloucester, evening race, Gloucester, Mass.
8. Winthrop, special handicap race, Winthrop, Mass.
8. Canarsie, pennant championship, Canarsie, Jamaica Bay.
8. Hull-Massachusetts, club, Hull, Mass.
8. Manhasset, annual, Port Washington, Long Island Sound.
8. Brooklyn, open, Gravesend Bay.
8. South Boston, club handicap, City Point, Boston Harbor.
12. East Gloucester, evening race, Gloucester, Mass.
15. South Boston, club cruise, City Point, Boston Harbor.
15. Beverly, club, Monument Beach.
15. New York C. C., annual, Gravesend Bay.
15. Larchmont, spring regatta, Larchmont, Long Island Sound.
15. Seawanhaka Corinthian, first race, Center Island cup, Oyster Bay, Long Island Sound.
15. Burgess, Marblehead, Massachusetts Bay.
15. Winthrop, class handicap, Winthrop, Mass.
15. Hull-Massachusetts, club, Hull, Mass.
15-17. New York, 90-footers, Newport.
15-17. Boston, cruise, City Point, Boston Harbor.
16. South Boston, cruise, City Point, Boston Harbor.
17. Beverly, open sweepstake, Monument Beach.
17. Duxbury, club race, Duxbury, Mass.
17. Hull-Massachusetts, classes over 18ft., Hull, Boston Harbor.
17. Dorchester, classes 18ft. and under, Dorchester, Boston Harbor.
17. Corinthian, first club championship, Marblehead, Mass.
17. East Gloucester, club race, Gloucester, Mass.
17. Brooklyn, annual regatta, Gravesend Bay.
17. Pavonia, annual, Bayonne, New York Bay.

20. Winthrop, Winthrop, Mass.
20. Duxbury, ladies' day, Duxbury, Mass.

AFTER a number of very successful trials during last week, Constitution was formally turned over to her new owners last Saturday, Mr. August Belmont acting for the syndicate and Mr. W. Butler Duncan's private signal being hoisted aloft. Constitution's headquarters will now be at Newport, although she will be taken to Bristol occasionally to be inspected. A new mainsail and some spare steel spars are now being made for the boat at Bristol. Constitution's trials will go on with as much regularity as fair weather will allow.

WHILE maneuvering for a start in a race against Shamrock I. and Sybarita on Tuesday, May 21, Shamrock II. had her entire rigging swept away in a sudden squall. Shamrock I. had her gaff broken and her topsail was torn to pieces. King Edward was aboard Shamrock II. at the time of the accident and narrowly escaped serious injury. Sir Thomas Lipton was struck by a piece of wreckage, but was not hurt. All the sails and spars are now lying in nine fathoms of water off the West Brambles. There will be a delay of six weeks in replacing the lost gear and spars of Shamrock II., and it therefore became necessary for Sir Thomas Lipton to ask the New York Y. C. for a postponement of the Cup races at least a month. The New York Y. C. readily consented to his request, and the date of the first race is set for Saturday, Sept. 21, 1901.

The Independence Correspondence.

THE New York Y. C. has given out the correspondence relative to the sailing of Independence in the trial races, and the full series of letters are as below. The outcome of it all is that the Boston yacht will enter the races, and this is a subject of universal satisfaction.

41 West Forty-fourth street, New York, April 23—T. W. Lawson, Esq., 31 State street, Boston, Mass.—Sir: The committee appointed by the New York Yacht Club, to which was referred the challenge of the Royal Ulster Yacht Club for a match for the America cup, with power, among other things, to select a vessel to represent the club in the match, has been officially advised by the owners of the Columbia and Constitution that those vessels will be prepared to enter trial races to be held under the supervision of the New York Yacht Club, with a view to the selection of its representative vessel.

The committee is informed that you are the owner of the Independence, now in process of construction in Boston, from designs by Mr. Crowninshield; that she is of the same class as Shamrock II., and the vessels above mentioned, and, as is generally believed, is being built for the purpose of being offered as a possible defender of the cup.

It has seemed to the committee proper that it should officially confirm to you what was informally communicated by its chairman several months ago to Mr. Crowninshield as to the conditions which would govern entries for the trial races.

The cup is held by the New York Yacht Club under the deed of gift. According to that deed, it is not open to contest between individuals, but a match can be sailed only between the challenging club, on the one hand, and the club holding the cup, on the other. By its terms the vessel selected to defend the match is made the representative of the challenged club.

The challenged club is made responsible for the vessel defending the cup, and for her management and conduct during the match.

It is evident that no club can justly assume such responsibility unless it be vested with corresponding authority and control over the vessel by which it is represented and for the conduct of which it is responsible. The challenged club can be effectively vested with such authority and control only by having the vessel under its flag and under the responsible management of one of its members, for only a member is bound by its rules, amenable to its control, and subject to its discipline.

These conditions have in fact existed in all former contests.

The committee are, therefore, compelled to hold that a vessel, in order to enter the trial races, must be qualified to fly the flag of the club, and must be under the responsible management of one or more of its members, and that if selected to defend the cup these conditions must continue to exist until after the conclusion of the match.

It is proper to add that in their selection of a vessel the committee, in accordance with the custom which has always been observed, would reserve to themselves absolute freedom to designate that vessel which, in their judgment, is, under all the circumstances, best adapted for the purpose. The result of the trial races will not be considered as necessarily conclusive, and the committee will regard themselves as at liberty to consider or not, at their discretion, the evidence furnished by performances of the respective vessels prior to the trial races. The committee believe that they are expressing the unanimous sentiment of the New York Yacht Club in saying that the appearance of the Independence as a competitor for the honor of defending the cup would be very heartily welcomed. They are not forgetful of the distinguished part which Boston yachtsmen have taken in these events in the past, and they are anxious to extend to the Independence every possible courtesy consistent with the duty of the club as trustee of the America cup.

Respectfully yours, LEWIS CASS LEDYARD,
Chairman of Committee.

Boston, April 25.—Commodore Lewis Cass Ledyard, chairman of committee, New York Yacht Club.—Sir: Your letter of the 23d inst., wherein you make clear to me the desire and intention of your club in regard to the selection and sailing of the vessel which will defend the America Cup, was duly received, and I thank you for the information which you have so fully and plainly given to me about the rules, regulations and customs which must, by the deed of gift, precedents and decisions of your club, control the entire match from the beginning of the trial races to the conclusion of the match. I also thank you, and, through you, all the members of your club, for your kindly expressions in regard to Independence and Boston yachtsmen.

That there may be no misunderstanding in this matter, which is one of great moment to us, who have exerted every effort and have been actuated by only one desire, namely, to create a boat which all Bostonians will be proud of, I ask the privilege of briefly reviewing your letter.

Your committee is correctly informed. I own Independence; she is of the same class as Constitution, Columbia, and Shamrock II., and I built her for the purpose of offering her as a defender of the cup. My understanding of the deed of gift is in accordance with your committee's, that "it is not open to contests between individuals, but a match can be sailed only between the challenging club on the one hand and the club holding the cup on the other," and that "the vessel selected to defend the match" must be "made the representative of the challenged club." "The challenged club is made responsible for the vessel defending the cup and for her management and conduct during the match."

I believe, as does your committee, "that no club can justly assume such responsibilities unless it be vested with corresponding authority and control over the vessel by which it is represented, and for the conduct of which it is responsible." And I also believe with your committee that your club should be vested with authority and control, and that the vessel representing your club should, during the entire match and until its conclusion, be absolutely under the management and control of your club, and I do not see how, in fairness to all who have any right to any interest in the great contest for the cup, your committee could do otherwise than to rule that all vessels which enter the trial races must be prepared to have your club absolutely manage and control them at all times, until the conclusion of the match.

I entirely agree that it is only right and fair that your committee "reserve to themselves absolute freedom to designate that vessel which, in their judgment is, under all the circumstances, best adapted for the purpose," and that "the result of the trial races will not be considered as necessarily conclusive and the committee will regard themselves as at liberty to consider or not, at their discretion, the evidence furnished by performances of the respective vessels prior to the trial races."

I therefore ask that the Independence be allowed the honor of defending the cup, if on the fair and wise judgment of your committee she demonstrates she is, everything considered, the best boat for the purpose, and I pledge myself, if the Independence is selected to defend the cup, to give to the New York Yacht Club absolute control and management of her until the conclusion of the match.

In my anxiety to hurry this matter along to a conclusion that will be satisfactory to every one interested, I have, immediately upon the receipt of your letter, and without opportunity to consult with Mr. Crowninshield or any of the other Boston gentlemen who are to sail the Independence, thus briefly answered

it. At the first opportunity I will lay it before them, and have little doubt but they will indorse my views.

Again thanking you, your committee and your club for your courteous attention, and assuring you that I know you will deal with the entire subject in that broad spirit of true sportsmanship for which your club is famed, believe me, sir, yours very truly,

THOMAS W. LAWSON.

New York, April 30.—Thomas W. Lawson, Esq., Boston, Mass.—Sir: The committee of the New York Yacht Club upon the challenge of the Royal Ulster Yacht Club, to whom I have submitted your letter of April 25, desire me to express to you their gratification at learning that the Independence will be offered as a competitor in the trial races, under the conditions communicated in my letter of the 23d instant.

In reviewing my letter, you omit to call attention in specific terms to the condition that the vessel must be qualified to fly the flag of the New York Yacht Club—but I assume from your cordial assent to these conditions in general that the omission is inadvertent.

I am requested to inform you that the committee will be glad to receive the entry of the Independence for the trial races, when she shall have been qualified under their ruling.

Should she before the trial races be qualified, under the rules of the club, to enter club events, there will be a number of occasions on which she can meet the Constitution and Columbia and thus enjoy equal facilities with those vessels for getting her crew thoroughly trained and disciplined and the vessel herself in the best possible form.

The committee has no other desire than that the Shamrock II. should meet the very best boat this country can produce. Respectfully yours,

LEWIS CASS LEDYARD,
Chairman of Committee.

Boston, May 1.—Commodore Lewis Cass Ledyard, Chairman of Committee, New York Yacht Club.—Dear Sir: Your letter of April 30 was received today. In reviewing your favor of the 23d ultimo, I purposely omitted calling your attention in specific terms to the condition contained therein, that the vessel must be qualified to fly the flag of the New York Yacht Club. I did not know what your club would hold to be necessary qualifications to enable the Independence to fly your club flag, but I was satisfied your committee would at a time and in a way they deemed best convey to me this knowledge, which I could in no other way obtain, and in pledging myself to give to your club absolute control and management of the Independence, should she be selected by your committee to defend the cup, I felt I had covered beyond all possibility of misunderstanding any and all requisite details; but as you are good enough in the letter just to hand to invite my views on this point, I will give them to you frankly, asking only that your committee will receive them in the same spirit in which they are sent.

In asking your committee to accept the entry of the Independence for the trial races I would remind you we agree upon five essential points: I am the sole owner of the Independence; I am not a member of your club; your club is unanimous in its desire to have the Independence a competitor; I desire to have her compete, and consent to have your club absolutely control and manage her until the conclusion of the match. It is my opinion that in giving to your club the absolute management and control of the Independence I cover the condition that she must be qualified to fly the flag of the New York Yacht Club. As I understand such matters, your club's power as to who or what shall fly its flag is supreme; you can qualify the owner of the Independence to fly it, or you can qualify the Independence without me by having her intrusted to your club by charter or by loan.

If your committee will inform me at its earliest convenience what steps it will be necessary for me to take to qualify the Independence to enter the trial races and the club events to which you refer, I assure you I will appreciate it, as I realize it may be essential to her success that she enjoy the same facilities for tuning up as the Constitution and Columbia.

Again thanking you for your courteous attention believe me, yours very truly,

THOMAS W. LAWSON.

---

41 West Forty-fourth Street, New York, May 10.—T. W. Lawson, Esq.—Dear Sir: Your letter of the 1st inst. would have been answered before, but I have been unable, until to-day, to procure a meeting of the committee.

The question what qualifications are necessary to enable a vessel to fly the flag of the club must be determined by the constitution and by-laws of the New York Yacht Club.

There are two methods in which a yacht may be thus qualified: First, by being enrolled in the name of one or more members of the club and registered on the club's records in the name of such member or members; second, by being chartered to a member or members for a period of not less than two months. Under the first of these methods she becomes entitled to all club privileges which any vessel can have, including the right to enter all club events. Under the second, she acquires the right to enter the squadron runs upon the annual cruise, but no other club races. She would, however, under the ruling of the committee, communicated to you in my former letter, be entitled, if thus chartered, to enter the America's Cup trial races.

Either of these courses is open to the Independence, but you will perceive that the adoption of the former would give her a complete equality of privilege with the Constitution and Columbia as far as concerns preliminary opportunities for tuning up and comparison, the importance of which, to those interested in her success, the committee fully recognizes, that could not be obtained by resorting to a charter.

Should you desire either to put the Independence in the name of a member, or to charter her to a member, of course the selection of such member would be a matter for your own personal choice, and the arrangement made would be one wholly between you and the member elected by you. The club itself could neither charter nor borrow a vessel for this purpose. Its control over the general conduct of the vessel selected to defend the match as its representative is acquired through the fact that the individual who is responsible for her management, by ownership of record or by charter, is a member of the club and subject to its jurisdiction. Respectfully yours.

LEWIS CASS LEDYARD,
Chairman.

Boston, May 11.—Commodore Lewis Cass Ledyard, Chairman of Committee, New York Yacht Club.—Dear Sir: Your letter of the 10th instant was received to-day, and I would again (that there may be no misunderstanding) ask your indulgence in reviewing its contents. You state that your club will neither charter nor borrow the Independence, and that the only possible way for her to enter the trial races and, consequently, the races for the cup, will be for me to have her enrolled and registered in the name of a member of the New York Yacht Club, and that she can only be so enrolled and registered when I cease to be her owner by making a member of your club her owner, or by giving a member of your club absolute control and management of her by charter,

In other words, if my understanding of the meaning of your letter is correct, the New York Yacht Club, with the knowledge that I am the sole owner of the Independence, that I have built her for the sole purpose of competing for the honor of defending the America Cup, and at a time when she is so far completed as to appear to have an equal chance with the chellenger, and of being as good a boat as any other candidate for the cup defense, informs me that it is the unanimous desire of its members that she be granted an equal chance with the other American boats, only to show to me that she will not be given any chance unless I make a gift to some member of your club of all that which belongs to me by the right of my having assumed the responsibility of an act which no member of your club or any other individual desired to perform.

If my understanding is correct, I deeply regret that your committee should have so poor an estimate of my intelligence as to have thought it necessary to call to my attention that it was within my power to transfer my ownership of the Independence to a member of your club; for, if my understanding is correct, the substance of all your committee has said to me in its courteous and welcome but nevertheless unsolicited correspondence is that I, being the sole owner of the Independence, can, if I desire, in any way that I deem best, transfer the ownership from myself to a member of your club.

I can give her, I can sell her, or I can charter her. I would respectfully call the attention of your committee to the fact that I did not build the Independence for the purpose of financial gain and I therefore, would not sell an ownership, in whole or in part, or by charter to any individual. Furthermore, if it was my intention to profit in ship dicker, she would, of course, be sold to the highest bidder, regardless of his membership in any club.

Of course your committee and all members of your club know that it is impossible for me to find an individual of sufficient respectability to have been admitted to any club who would treat with anything but contempt a proposition that he go before your club and the public with the deceptive assertion that he was the owner of the Independence, and, therefore, entitled to those things that necessarily go with such ownership, and I think your club members upon second thought will agree with me that no man sufficiently housebroken to be at large would ask any one to assume a position of such duplicity.

Imagine the situation of a respectable owner who had voluntarily intrusted a ship like the Independence to an individual—irresponsible as one would necessarily have to be to become the beneficiary of such a subterfuge—if, in the first race, she sank an excursion steamer or in any one of many ways was held responsible for heavy damages; or if at a critical moment in the race this peculiar individual, actuated by motives similar to those which prompted him to pose as owner of a ship in which he had no ownership, should purposely lose to the opposing yacht. Of course the ludicrousness of such a situation must appeal to your committee.

Recognizing that it might be absolutely necessary for the successful defense of the cup that the New York Yacht Club should have the supervision, management and control of all candidates for the defense, I determined, at the time I decided to build a candidate, to do anything it was possible for a self-respecting individual to do to have my boat defend, if she proved best for that purpose.

I had decided before I received your first letter that, regardless of personal feeling to the contrary, I would, upon request, turn over the absolute management and control of my boat to your club, and at the same time free your club absolutely from all responsibility and bind myself absolutely to do all those things which in the judgment of your club were deemed necessary, and supposing, as I did, that the power of your club to make or change its by-laws or constitution, its rules or its regulations, was supreme, and that it was the custom of your club to fly its club flag from its club house, buildings, club tenders, yachts, or other property at will, I am frank to admit I did not think the New York Yacht Club would have any trouble in deciding a way which would allow the Independence fair play; but if my understanding of the meaning of your correspondence is correct, it is impossible for the Independence to defend the cup, therefore impossible for the Independence to enter the trial races for the selection of a candidate to defend the cup, and I am not sure that it is not unfair for the Independence to race, previous to the cup race, against any vessel which may be selected for the defense; furthermore, I am not sure that it may not be unfair to the Independence to race, subsequent to the cup match, the loser of that match, or unfair to the loser of that match for the Independence to race, subsequent to the cup match, the winner of that match—that is, separately.

Therefore, I am of opinion that, if my understanding of the meaning of your correspondence is correct, the reason for the Independence no longer exists, for it is impossible to ascertain whether the best American boat is that boat which defends the cup, because it is impossible for any boat owned by an American other than a member of the New York Yacht Club to have any part in the cup defense.

As we are rushing work on the Independence in an endeavor to launch her next week, and as I have already entered into engagements to race her against the Constitution and the Columbia, will not your committee favor me as soon as possible after receipt of this with a reply, by telegraph if convenient, whether my understanding of the meaning of your correspondence is correct, that I may decide whether to abandon finishing the Independence and cancel her entries.

Thanking you in advance for your reply, and assuring you I most deeply regret the Independence was not created under conditions which would allow her at least an equal chance with a foreign vessel for a trophy that has until now been supposed by all to represent the highest type of American and English fair play, I am, sir, yours very truly,

THOMAS W. LAWSON.

---

41 West Forty-fourth Street, New York, May 15.—Thomas W. Lawson, Esq.—Sir: Your letter, dated May 11, was received by me on Monday.

As I said to you in my first letter, the substance of the conditions which would govern entries in the trial races was communicated to Mr. Crowninshield, the designer of your yacht, at least four months ago, in answer to a request by him for information on the subject.

As appears from your letters, you "built the Independence for the purpose of offering her as a defender of the cup," fully "understanding that it was not open to contest between individuals, but that a match could be sailed only between the challenging club on the one hand and the club holding the cup on the other," and "that the vessel selected to defend the match must be made the representative of the challenged club." It would have been at least natural, under these circumstances, for you to inform yourself in advance of the conditions necessary to qualify her, if the information furnished Mr. Crowninshield was not sufficient.

It is true that the correspondence which has taken place between us was, as you say, not solicited by you. This committee voluntarily addressed you upon the subject, in an attempt to enable you to procure your vessel to be entered as a competitor for the honor of defending the cup, in the only way in which it was possible for her to be entered under the constitution and laws of the club.

If the committee erred in extending you this courtesy, the error is not one that causes them any regret.

We have no desire to enter into any controversy with you, and do not care to review your letter in detail. Your principal objection to the terms of "competition seems to be that in your judgment it would be impossible to find any individual of sufficient respectability to have been admitted to any club who would be willing to have a competing yacht transferred to him of record or by charter, and you criticise, in language which I refrain from repeating, the position of any member accepting such a transfer. Yet his position would differ in no respect whatever from that occupied by Mr. W. Butler Duncan, as manager of the Constitution, or that assumed by Mr. Edwin D. Morgan, as manager of the Columbia, and I have yet to hear the suggestion from any one that either of these gentlemen would consent to assume any relation that was not justified by the highest sense of honor.

We have already shown that it is entirely within your power to qualify the Independence for these events, by conforming to the rule which has been in fact observed in respect to all previous matches, viz., that a competing vessel should be qualified to fly the flag of the club and entitled to be entered by a member. The suggestion that to meet your individual views the New York Yacht Club should change its constitution and laws, for the purpose of departing from the custom of years, is, of course, one that cannot be entertained.

The committee can only regret that it has been possible for a correspondence, which was initiated by it entirely in a spirit of courtesy toward you and in a desire to do all that was possible to enable you to realize the object for which you had built the Independence, to close with such a letter as that just received from you—a letter which causes us no little surprise and disappointment, as in it you assume a position which we find ourselves at a loss to reconcile with your communication of April 25, in which you accepted with such apparent cordiality the committee's ruling as transmitted to you.

Respectfully yours,

LEWIS CASS LEDYARD.
Chairman.

Boston, May 23.—Commodore Lewis Cass Ledyard, Chairman of Committee, New York Yacht Club.—Dear Sir: Your letter of the 15th instant was duly received. I trust you will pardon my delay in answering it.

I regret that your committee misconstrued my last letter. It hardly seems possible your committee can be dealing with the matter with only a desire to do all that is possible to enable you to realize the object for which I built the Independence. I have frankly stated that in building her I had no motives whatever other than to meet the urgent requests of Boston yachtsmen that a boat should be built, and incidentally to enjoy the pleasure which I anticipated would come with her ownership. I understood fully her position and how it might be affected by the deed of gift, your club's construction of it, or your club's possible action with reference to inviting the Independence to race. I understood fully I might have no opportunity to race, and with this knowledge I was satisfied with my position. I have made no complaint nor entertained any feeling that I had been in the least injured or unfairly treated by your club or by any one, and whatever feeling I had in connection with your club was that of admiration only for its past achievements in sports.

At this stage your committee opened a correspondence with me for the purpose, as you stated, of inviting the Independence to participate in the cup races. Your correspondence was not only courteous, but, as I stated in my last letter, very welcome to me. I entertained no thought while the correspondence was in progress but pleasant expectations that its results would surely be the racing of my boat under fair and honorable conditions, which I felt sure your club would evolve. I will frankly admit that when your letter containing the suggestion that it might be necessary to transfer the ownership to some individual came to me, in answering it on the spur of the moment I used strong expressions, but I emphatically disavow any intention in that letter or in any of my correspondence of treating your club, your committee or your members with anything but respect, and I ask you if you deem it fair to accuse me of desiring to hold controversy with your club or intending to insult two of your most representative members when all I have done is to answer the letters sent by your committee. Is it not possible that your committee have confounded my acts or intentions with those which have been attributed to me by rumor, for which I am not in any way responsible?

My case is a simple one: At an early stage of building the Independence, I was obliged to answer false public statements, and in answering I took the position that it was impossible for me to give my boat to any individual. Later, when your committee opened correspondence with me, it was, as I tried to show you, impossible under the existing conditions (not ideal conditions which might have been) for me to give my boat to an individual. The cases of Mr. Edwin D. Morgan and Mr. W. Butler Duncan, I still insist are in no way similar. Those gentlemen were selected by their fellow club members for the highest honor within their gift, and acceptance by these gentlemen of the ownership or management of the Columbia and Constitution has not placed them and could not place them in the eyes of sportsmen, fellow club members or the public at large in anything but an enviable and hororable light, and I ask that you accept my emphatic protest against the suggestion that anything which I have written in any way reflects upon the honor of these gentlemen.

I regret, as does your committee, if it should happen that our correspondence ends in anything but the pleasantest manner, and I beg to repeat to you I hold myself in readiness to do anything which it is possible for me to do to enable the Independence to race that, in the wise judgment of your committee, is deemed best, and I pledge myself that if your committee notifies me it is impossible—I do not care for what reasons—for my boat to take part in the cup defense, I will cease all effort in that direction and do all in my power to dispel any bad impression that may exist by arranging to in some other way settle to the satisfaction of all yachtsmen and others the question of which is the best American boat. Believe me, yours very truly,

THOMAS W. LAWSON.

New York Yacht Club, 41 West Forty-fourth Street, New York, May 24.—Thomas W. Lawson, Esq.—Sir: Your letter of yesterday was received this morning.

You appear to entertain an erroneous impression concerning the position of Mr. Duncan and Mr. Morgan. These gentlemen were not selected as managers of the Constitution and Columbia by the members of the club. In each case the selection was by the individual owners of the yacht, and the arrangement was one wholly between such owners as individuals on the one side and the gentlemen selected as managers on the other.

This committee certainly does not purpose to notify you that it is impossible for your boat to take part in the trial races or the cup defense. On the contrary it has very distinctly notified you that it is entirely possible for her to take such part, and has fully explained to you the conditions which it is open to you to avail yourself of for the purpose of qualifying her as a candidate for the match. Respectfully yours.

LEWIS CASS LEDYARD,
Chairman.

Boston, May 25.—Commodore Lewis Cass Ledyard, Chairman of Committee, New York Yacht Club.—Dear Sir: Your letter of yesterday with the assurance that my boat can take part in the trial races and, if selected, may defend the cup, was received this morning. I will at once charter an interest in her to such person or persons as may be agreeable to your committee and will give such person or persons full control and management of her during the match. I thank your committee for having suggested a way to fairly determine in a sportsmanlike manner which boat shall be selected to defend the cup, and I will do all in my power to make the contest a success. Believe me, yours very truly,

THOMAS W. LAWSON.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter III.—Laying Off, Making the Moulds and Setting Up the Frame (Continued).

IT is easier to fit the rudder trunk or case now than after the boat is planked, as would be the case with larger craft, and this is made like a box with two 1in. mahogany or Kaurie pine planks on each side of the sternpost, with a 1½in. centerpiece on the after side. The latter is rabbeted into the two sides, and all three are rabbeted into the counter frame.

All the joints, like the scarphs of the stem and sternpost, etc., must be well fittted and painted with thick red and white lead before bolting together.

Both boat's keels and frames are now ready to set up, but they will be treated in different ways, as the centerboarder will be built bottom up, and the keel boat keel downward.

Starting with the centerboarder, draw a central chalk line on the floor and mark all the sections out, then set up the midship section exactly square with the central line, so that the keel will be about 3ft. above it, using the plumb line to make sure the center line of the mould is vertical and right over the line on the floor. Fix the mould in place with a center post, which should be fixed to the mould so that one edge is on the center line. This post must be nailed to a cleat on the floor and well stayed fore and aft to keep it in a vertical position. Two side posts will be necessary to keep the mould level.

The exact distance apart from center to center of the moulds should now be checked along the center floor line and the height of the L.W.L. on the midship mould noted, as all the other moulds must be leveled to this height above the floor. They will all be set up in the foregoing manner and well stayed fore and aft so that they are all square with the center floor line and their vertical center lines plumb and L.W.L.'s level. This is a long and tedious business, but on its accuracy all the rest of the work depends, so do not spare a little extra care and time over it, and fix them so that they will not move when you come to work on them.

I would advise working to the fore edge of the moulds forward of and including the midship section and to the after edge of the others—that is to say, place the forward moulds so that the mark for their places on the central floor line comes just on the fore side of each, and on the after side of the after moulds. The object of this is to avoid bevels on the edges of the moulds, which would be required if the center of each were taken instead of the edge, as shown by the sketch.

Check the squaring of the moulds by measuring from the center of the stem to the outside of the first mould at the sheer level on each side, and see they are the same; then do this between each pair of moulds till all are exact.

The moulds are now ready for the keel to be bent over them and screwed to each, when it is seen to be correct and fair to the curve of the drawing, and the stem and transom must then be stayed in a similar manner to the moulds, squaring and plumbing from the central floor line as before, and a line should be stretched through all the moulds at the L.W.L. and carefully leveled. A sheer batten should be nailed around the moulds at the deck level to fair them and hold them all in place while the rabbet is cut.

The moulds for the keel boat will not be set up first, but after the keel and frame are set up in place on the stocks, and fixed by shores and stays from the roof and walls. The stocks are best made from a 3in. by 9in. deal on edge, firmly fixed to the floor at exactly the same angle as the keel.

When the frame is fixed, a clear center line must be marked along keel, stem, sternpost, and counter frame, and the stations for the moulds marked on it in the same manner as on the floor line in the case of the centerboard boat. The moulds can now be set up as before, except that they are now right way up and stayed from the roof, or if that is too high a fore and aft 3in. by 9in. deal must be fixed from stem to stern, and well secured to the roof and walls, and the moulds stayed from that.

When the moulds are all fixed square and plumb in their proper places and the sheer batten on, the next job is to cut the rabbet,

SHAMROCK II.
From The Yachtsman.

Our Boston Letter.

BOSTON, May 27.—Mr. Thomas W. Lawson's letter to Com. Lewis Cass Ledyard, of the New York Y. C., which was sent Saturday, ends a controversy that has been painful in the extreme to yachtsmen in this city. There are some who claim that Mr. Lawson should not have receded from the stand he had originally taken, but the majority of the fair-minded ones are glad that the Boston man has taken the means at hand to qualify his yacht. All are glad that Independence is to have an opportunity of competing in the trial races and this feeling at present seems to outweigh all others.

The mast of Independence was stepped last Friday. It took several hours to complete the work, but it was carried out without a hitch, and there was no trouble in fitting the spar when it was lowered into the boat. Before the mast was sent up, the wooden topmast was fitted inside the mast head and a spar was lashed to the mast and to the topmast. With this stiffener the two were sent up together. Independence was hauled out from the north side of the dock, and when the mast swung clear she was hauled forward to the end of the dock and the two spars were lowered into her.

After the mast had been stepped she was again hauled to the north side of the dock, where her bowsprit was fitted to place. The bowsprit passes through two gammon irons. Directly over the stem there is a band with two great steel rods passing aft, on either side of the gammon irons. They do not come quite to the after gammon iron. The ends of these rods are threaded and carry big nuts. The rods pass through a steel fid, which is run through the bowsprit, and the spar is held in place by the two nuts pressing against the fid. The position of the bowsprit can be regulated by the nuts on the steel rods by turning them forward or backward as may be necessary.

Billman started to fit the bowsprit Thursday night, but it was found to be too large and would not pass through the irons. The heel was put in and the riggers tried to force it in by jumping it, but it would not work. A becket was then put around the spar and a luff tackle put into it. The crew set up on the hauling part of the tackle, but could not get the spar in but a little distance. Under the strain the hauling part of the tackle parted and the block came inboard like a shot from a cannon. Henry Billman, the rigger, was bending down close to the stem at the time and had his hand on the rail. The block caught him before he realized it was coming. Blood spurted from his hand, but he calmly wound his handkerchief around it, stuck the hand in his pocket and went along directing the rigging. It was learned the next morning that two of Mr. Billman's fingers were crushed, which speaks well for the grit of the Boston rigger.

When the mast and topmast of Independence, joined, were lying on the wharf, their combined length seemed enormous. As they were hauled up under the shears, this appearance seemed exaggerated, and it seemed that the topmast looked very small. When the mast was stepped it commenced to look proportionate, but it has a very lofty look yet. The spreaders, which have been put in place since, have greatly modified this. The lofty look of the spar caused several spectators to express doubts as to her being able to carry it, but they evidently did not figure that there are 20ft. of boat and keel below the waterline, which was visible to them and that there is much more stability of form in that under body than one would imagine from looking at her as she floats in the dock.

The riggers have been hard at work since the mast and bowsprit were put in, but the wire rigging is very heavy and takes considerable time to splice, and the work is necessarily slow. The eye splice for the turnbuckle on the big bobstay was made Saturday, but it was not screwed up. There are two shrouds on either side in which the eye splices have been made, and they have been secured to the turnbuckles. Most of the standing rigging has been cut. All of the splices on the standing rigging are served with wire. The mast head runners have been spliced and fitted to the tackle. Only the hauling part of the tackle of the mast head runner is manila rope, the rest being all plow steel wire.

With the mainmast, topmast and bowsprit in place, the stem of Independence is brought nearer the water and the bow line shows less of that distinct rise which was seen when the yacht was first launched. In fact, the forward overhang is going to lay very close to the water. The whole appearance of the boat is now changed by this and she commences to look the racer all over. One thing that is particularly noticed is her small beam as compared to her over all length. She certainly has the promise of speed, and from what I know of her model, she certainly should show much of it when sails are hoisted on her.

That extreme forward overhang does not seem so extreme as many sharps have tried to make it—in fact, it does not look any longer in proportion than the 25-footer Flirt's. It has something the look of Flirt's forebody, except that it is much flatter. There is not much to be obtained by looking at a boat in a dock, and to say positively that Independence would defeat all competitors would hardly be the statement of a sane individual; but one can perhaps be pleased with the lines shown. Independence is certainly pleasing to the eye, from a racing standpoint, and there are many who think that Crowninshield has turned out a boat that will keep Constitution busy at all times.

The first club handicap race of the Winthrop Y. C. was sailed Saturday in a strong, puffy wind from the northwest, which made reefing the order, some of the little fellows being tied down to close reefs. The preparatory gun was fired at 3 o'clock, and five minutes later the 25-footers were sent away, followed at five-minute intervals by the other classes.

In the 25-foot class there were two Cape cats, Alert and Ideal, both of which have won a number of prizes in these waters before long overhangs came into use. There was a good race between these two, only 42 seconds separating them at the finish. In the 21-footers Privateer, which has always kept the boats of her class hustling in the Y. R. A. races, had a pretty soft time of it, finishing before the class above her. Harriet might have made a good race for Privateer if she had been traveling in company with her, but Harriet started with the 18-footers, and was thrown out of her class. Della won in the 18-footers and Clara in the 15-footers, both easily. The following is the summary:

	Actual.
25-Footers.	
Alert, B. Ridgeway	2 00 32
Ideal, H. B. Whittier	2 01 14
21-Footers.	
Privateer, John MacConnell, Jr.	1 49 20
Zoe, H. Waite	2 04 19
Ruth, A. S. Richards	2 06 12
Magic, C. Field	2 24 00
18-Footers.	
Della, H. Kelly	1 52 04
Thelma, E. H. Tewksbury	1 55 57
Hector, A. W. Hubbard	1 56 46
Martha, W. Jenkins	2 01 25
Henrietta, J. S. McCloskey	2 13 55
15-Footers.	
Clara, W. Burgess	1 57 14
Flash, W. H. Myrick	2 06 13

The judges were E. P. Morse, S. M. Crane and C. W. Gray.

At Lawley's the 85ft. auxiliary schooner Idler, designed by C. H. Crane for Henry T. Sloane, was launched Friday. An attempt was made to launch her on Thursday, but she stuck in the mud. She was hauled off Friday morning and is now at the end of the basin fitting out. The east shop is now pretty well cleared. The Binney 70ft. steamer, the Herter 35-footer and the Lowell 25-footer are expected to be launched very soon. The Wiggins 25-footer is all planked. In the west shop the plating is being put on the Crane 70ft. steamer and the Eno 120ft. steamer is being fitted up inside. The Boreland 86ft. steamer is ready for launching. Fred Lawley's 15ft. scow, Melodie, has been launched and was given a trial spin Sunday.

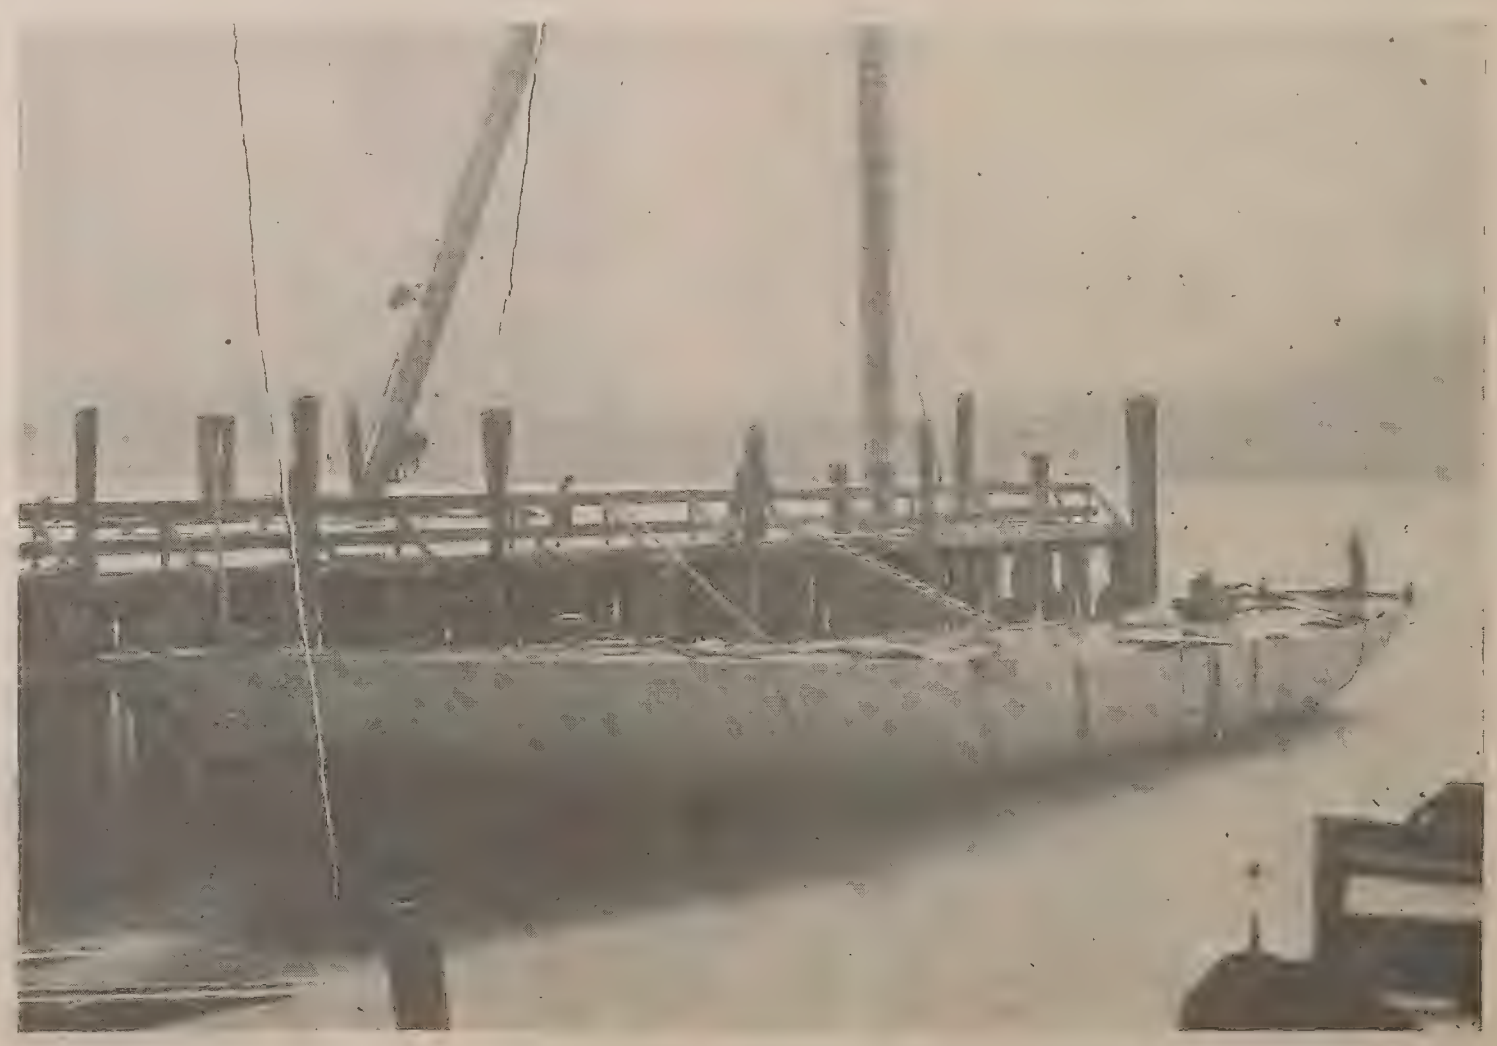
Hanley has the Canada cup defender Cadillac nearly ready for launching. She is 28ft. on the waterline, 40ft. over all and has 11ft. beam. She looks like Genesee. She will have a bigger centerboard than Genesee, and will carry about 1,400 sq. ft. of sail.

Crowninshield has designed three 20ft. raceabouts, which have been built by Graves, of Marblehead, and from all accounts they are all proving very fast in the preliminary sailing.

JOHN B. KILLEEN.

New Rochelle Y. C. Spring Regatta.

THE New Rochelle Y. C. held its spring regatta on Saturday, May 25, under trying weather conditions. Mr. Charles T. Power, secretary of the Regatta Committee, received some twenty entries, but only seven boats showed up, and but two classes were filled. In the morning lowering skies and a chilly wind did not offer many inducements for a race. About noon it started in to rain and continued to do so for the rest of the day. The race was scheduled to start at 2 o'clock, but so few boats had materialized and the weather was so bad that the start was postponed until 3 o'clock. Four raceabouts were ready at that time, and the two new Herreshoff boats Rogue and Oonagh. Mr. Frank Bowne Jones was on hand with Badger, a boat of Crowninshield design and a sister ship to Jolly Roger and Scamp, and Nirvana, another Crowninshield boat that made a remarkable showing, considering she was not intended for racing and was in cruising trim. In the Manhasset one-design class three boats started—Lambkin, Bab and Arizona. The raceabouts were started at 3:20. Badger had rather the best of the start, until Oonagh forced her to give way just as they were crossing the line, and Badger had to take the leeward berth, although she crossed ahead. The starting line was a short one, and all the raceabouts were maneuvering at the easterly end of the line near the stakeboat. Rogue



INDEPENDENCE.
Designed by B. B. Crowninshield for Thos. W. Lawson. Photo by G. W. Dow.

unfortunately got pocketed and had to give way to Nirvana, the third boat, and cross last. In the Manhasset one-design class Arizona got away first, but to leeward of Lambkin, which boat was beautifully handled by Harry Ward. Bab crossed last. The first leg of the course was to the buoy off Hen and Chickens, and with the wind about east it was a beat to windward. The second leg was from the mark of Hen and Chickens to the buoy off Execution, thence to the starting line off Echo Bay. The raceabouts were sent around the course twice, and the Manhasset one-design boats only once. These little boats made good weather in the strong breeze and lumpy sea. The summary follows:

Regular Raceabouts—Start, 3:20.

	Finish.	Elapsed.
Rogue, F. T. Bedford	4 38 45	1 18 45
Badger, F. B. Jones	4 34 11	1 14 11
Oonagh, Pirie Brothers	4 36 26	1 16 26
Nirvana, F. W. Robinson	4 37 34	1 17 34
Manhasset Bay Raceabouts—Start, 3:25.		
Lambkin, S. W. Roach	4 12 14	0 47 14
Bab, Phillips & Morgan	4 12 43	0 47 43
Arizona, George Cory	4 13 31	0 48 31

The winners were Badger and Lambkin.

YACHTING NEWS NOTES.

Messrs. Huntington & Seaman have sold for Messrs. Westcott & Story, of Washington, D. C., the auxiliary yawl Dione to Mr. Albert L. Pope, of Hartford, Conn.; the sloop Weona for Mr. J. H. Fermier, of Newark, N. J., to Messrs. P. M. & J. G. Oldner, of Brooklyn, N. Y.; the sloop Ojibway for Mr. John R. Brophy, of Brooklyn, to Mr. Daniel P. Morse, of New York; the knockabout Kittywynk for Dr. John B. Palmer, of New York, to Capt. John J. Phelps, of New Haven, Conn.

The following yachts have been recently sold through the agency of Mr. Frank B. Jones: The schooner Coronet, sold by Mr. John I. Waterbury to Mr. Louis Bossert, former owner of the steam yacht Mayita; the schooner Rosemary, formerly Elsemarie, sold by Mr. F. C. Fletcher to Mr. Cornelius P. Rosemon; the racing sloop Countess, sold by Mr. Oswald Sanderson to Mr. Edward Dimock King; the sloop Choctaw, sold by Mr. George B. Watts, Jr., to Mr. John Foley, Jr.; the yawl Clarice, sold by Mr. Walter Burgess to Mr. Frank S. Hastings; the raceabout Colleen, sold by Mr. L. R. Alberger to Dr. William L. Baum, of Chicago. Mr. Jones has chartered the speed launch 1492 for Miss Lotta Crabtree to Mr. John J. Phelps.

Mr. Frederic C. Penfield, N. Y. Y. C., has bought the auxiliary schooner White Rose.

We have received a copy of the year book of the Massachusetts Yacht Racing Association of Massachusetts. It is beautifully gotten up, and is far superior to any book yet published by the Association. Copies may be secured from Mr. A. T. Bliss, 60 Pearl street, Boston, Mass.

The yawl Ailsa, owned by Mr. Henry S. Redmond, N. Y. Y. C., which sailed from Southampton on April 5 for Greenport, L. I., arrived at Hamilton, Bermuda, on May 21.

The America Cup challenger, Lord Dunraven's Valkyrie III., which was defeated in 1895 by Defender, has been sold to a firm of iron brokers in Glasgow, and will be broken up at once.

Mr. Harrison I. Drummond's auxiliary yacht White Heather arrived at New York on May 21. The yacht sailed from Cowes on May 5 and experienced bad weather on the passage.

Messrs. Walling & Gorman, of South Brooklyn, are building a naphtha launch for a member of the Atlantic Y. C. She is 36ft. over all, 31ft. 6in. on the waterline, 9ft. 6in. beam and draws 3ft. 6in. The boat will be driven by a 12 horse-power motor. There will be a roomy cabin forward with a large cockpit aft. The boat has an oak frame and is planked with cedar. The same firm has recently completed a cabin catboat for Mr. S. C. Hunter from a design made by Mr. H. C. Winteringham. She is 32ft. over all, 24ft. on the waterline, 10ft. beam and draws 3ft. 6in. The cabin house is 11ft. long and there is 6ft. headroom under beams. The cockpit is large and is 11ft. long. She will be named Juanita. Capt. Paulding has had Walling & Gorman build for him a cruising catboat for use in the vicinity of Block Island and Martha's Vineyard. She is 26ft. over all, 22ft. on the waterline, 10ft. beam and draws 3ft. 6in. She is a powerful boat with high freeboard. The boat will be called Miss Betsey.

Rifle Range and Gallery.

Fixtures.

May 30.—Pohlmann's Pavilion, Jersey City Heights.—Tournament of Our Own Shooting Society.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Our Own Shooting Society.

HOBOKEN, N. J.—Good attendances continue to mark the weekly practice meeting of the Our Own Shooting Society and the session held here Wednesday, May 15, at Gallenkamp's Hall, 110 Grand street, Hoboken. During the evening new members were found in former Capt. John Stein and Jacob Flad, another well-known business man. William F. Dilger secured the highest score of the set at shooting, he tallying 240. The two shooting masters, Herman Bahn and John Spinck, took care of second and third honors. The records follow:

Wm. F. Dilger 240, John Spinck 236, J. H. Kinse 235, Chas. Drees 218, Fred Bunger 225, Dr. F. C. Wolff 227, Max Pfundheller 230, August Jacobsen 220, Julius Holm 225, Lieut. Robert B. J. Albeter 225, Wm. Ruhe 231, Lesser L. Levy 215, Wm. Schmidt 210, John Stein 217, E. Warnecke 215, E. Kallmann 205, Emil Jurgenson 206, Wm. Von Holten 210, William Donald 206, Gus Ising 217, Herman Bahn 239, C. G. Paul 220, John Schreier 210, Chas. Ullrich 205, G. Gallenkamp 210, John E. Wunschel 200, Wm. Haag 224.

May 22.—The regular weekly meeting of the Our Own Shooting Society was held at headquarters, 110 Grand street, Wednesday, May 22, and once again the meeting seemed to get the usual amount of pleasure out of the practice on the ranges and alleys. Robert Goldthwaite and Charlie Bischoff each succeeded in turning out the first-class record of 245 at shooting. Herman Bahn tallied 242, Adam Schmitt 240 and J. H. Kinse 235, Charles Drees tallied 69 at the headpin game in bowling, and won a gold medal. The members expect to carry off a fair share of the money Decoration Day at their all-comers' cash prize shooting and bowling tournaments at Pohlmann's Pavilion, Jersey City Heights. The rifle scores follow:

Lieut. Herman Warnken 220, Julius H. Kinse 235, John Spinck 231, Herman Bahn 242, Adam Schmidt 240, Otto Kruse 201, Max Pfundheller 228, Lester L. Levy 212, Fred Bunger 227, C. Drees 207, Gus Armhein 216, C. G. Paul 224, H. Mohrmann 208, H. Peyermhoff 202, Wm. Schmidt 214, George Neuner 206, John Clark 205, Gus Ising 225, John Martin 230, Fred Buehler 209, Chas. Bischoff 245, R. Goldthwaite 245, W. Donald 203, Wm. Van Holten 205, Wm. Haag 202, Julius Kreienberg 225.

The National Shooting Bund of the United States announces a long list of trophies and merchandise prizes, at its third national bundes shooting festival to be held July 14 to 23, at Shell Mound park, San Francisco. Write to Mr. L. Haake, corresponding secretary, 108 Ellis street, San Francisco, for programme.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

May 28-June 1.—St. Louis, Mo.—Twenty-fourth annual tournament of the Missouri State Game and Fish Protective Association. Herbert Taylor, Sec'y.

May 28-29.—Wheaton, Minn.—Wheaton Gun Club's target tournament.

May 28-29.—Dubuque, Ia.—Dubuque Gun Club's second amateur tournament.

May 28-30.—Xenia, O.—Xenia Gun Club's tournament.

May 30.—Ossining, N. Y.—Holiday shoot of the Ossining Gun Club; magautrap; sweepstakes for amateurs only.

May 30.—Haverhill, Mass.—All-day memorial shoot of the Haverhill Gun Club. S. G. Miller, Sec'y.

May 30.—Newark, N. J.—All-day shoot of the Forester Gun Club; live birds and targets. J. J. Fleming, Sec'y.

May 30.—New Haven, Conn.—Memorial Day target tournament of the New Haven Gun Club. John E. Bassett, Sec'y.

July 5-6.—Duluth, Minn.—Central Gun Club's tournament. J. W. Nelson, Sec'y.

July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

Aug. 8-9.—Lafayette, Ind.—Tournament of the Lafayette Gun Club. J. Blistian, Sec'y.

Aug. 12.—Winnipeg, Man.—Fifth annual trapshooting tournament, under management of the Winnipeg Industrial Exhibition Association; $1,000 in money, trophies and medals. F. W. Heubach, General Manager.

Aug. 27-30.—Okoboji, Ia.—Lake Okoboji Amateur tournament, at Arnold's Park; $400 added. For programmes, address E. C. Hinshaw.

Sept. 2-3.—Richmond, Va.—Tournament of the Virginia Trap Shooters' Association, under auspices of the West End Gun Club.

Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds, $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament, under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.

July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 23-26.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament, under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York

The American team sailed on the Canadian, from pier 50, New York, on Sunday morning. The team consists of Hon. Thomas A. Marshall, R. O. Heikes, W. R. Crosby, C. W. Budd, J. S. Fanning, J. A. R. Elliott, Fred Gilbert, Frank S. Parmelee, C. M. Powers, Edward Banks, E. H. Tripp and Richard Merrill. Mr. Merrill will sail by a later steamer. Accompanying the team are Capt. A. W. Money, Mr. Emil Werk and his daughter, Miss Eugenie B. Werk; Mr. F. S. Harrison, F. Elliott, Mr. D. F. Pride and Mr. B. Leroy Woodard. Messrs. Banks, Tripp and Crosby are accompanied by their respective wives. A large number of friends were gathered to bid them bon voyage when the steamship sailed. A party of friends chartered a tug, Sea Wall, and accompanied the steamship down the harbor to near Governor's Island, when the giant, with its increasing speed, drew away from the tug. The passengers of the latter gave three cheers and a tiger to the departing team. There was a waving of handkerchiefs, a chorus of good-bys, and the team was on its way. The Canadian is due at Liverpool about June 4 or 5. The team will proceed to the Hotel Cecil, London, and will shoot the first match on June 11. The team is booked to return on the steamship Cestrian, which sails from Liverpool on June 29. The international match will be for a stake of $2,500 a side, play or pay. A series of five contests constitute the match. Each team consists of ten men, each man shoots at 100 targets, so that each contest of the series has 1,000 targets per team, or a total of 5,000 to each team for the match. Each team may use substitutes, but not in a contest after it has begun. The English team has the use of both barrels; the American team the use of but one barrel. A number of people have expressed the belief that such is a severe handicap, but when it is considered that the American team, on form, are good for 90 per cent or better, that the conditions of the contest require that targets shall not be thrown lower than six feet nor higher than ten feet at a point ten yards from the trap, the English team have no special advantage with the second barrel. It will be noted that the conditions make a very low flying target, and one barrel, in quick time, on such is infinitely better than two in slow time. Still, a race is never won till it is finished, and we are sure that English and Americans alike heartily wish the best team to win.

The Haverhill (Mass.) Gun Club desires to remind the shooters that its first annual prize series of shoots commence on June 1, at Hoyt's Grove, and continue every Saturday till Aug. 31. The following is taken from the programme: "List of prizes—First, Winchester repeating shotgun; second, dress suit case; third, sole leather gun case; fourth, 6¼ pounds nitro powder; fifth, Thurman shooting blouse; sixth, Powers cleaning rod; seventh, Tomlinson cleaner; eighth, Heikes holder. Ties, if any, shot off Aug. 31. High guns win. Conditions: Thirty targets, (15 known and 15 unknown). Distance handicap—subject to readjustment at any time. Open to all; no entrance fee. Targets 1½ cents each. Eight scores must be shot to qualify for prizes. Contestants shooting the full series may select their eight best scores. Prize event begins each Saturday at 3 P. M. No provision is made for late comers. Practice shooting before and after prize event. Ammunition for sale at the clubhouse. S. G. Miller, secretary. Take Main street car for Dustin square. Everybody invited."

The Frankford Gun Club, of Philadelphia, announces a second grand tournament at targets on June 15, to be held on its grounds at Summerdale station, Frankford branch of the Reading railroad. The main event is the 12-man team championship of Philadelphia and vicinity. It is open to all organized clubs within that locality. Each man of the teams shoots at 25 targets at 1 cent each; no other entrance fee. Individuals optional sweep, 50 cents; Rose system. The team trophy, won by the Frankford club on May 4, will be put up again. Any club may enter more than one team. There also are twelve sweepstake events; known and unknown angles. Sweepstakes commence at 10 o'clock; team race at 1:30. Send entries to Mr. Howard George, assistant secretary, Frankford, Pa.

Mr. Carl Von Lengerke, who has been with the firm of Von Lengerke & Detmold, 318 Broadway, for a number of years past as salesman, a position which he filled most efficiently and pleasingly, has accepted a position as traveling salesman for the American E. C. & Schultze Gunpowder Co. In addition to being thoroughly conversant in business matters Mr. Von Lengerke is an expert shot. He has been a formidable competitor in several grand American handicaps, and in numberless other tournaments. He will have charge of the interests recently supervised by Mr. W. Fred Quimby. Mr. Von Lengerke's thorough training and integrity, wide acquaintance and industry insure his success from the outset.

Mr. Haze Keller, who is a representative of the Peters Cartridge Co., of Cincinnati, is progressing rapidly as a skillful trap shot, in addition to his success as a salesman. While competing at the tournament held recently at Pottsville, Pa., he shot in the event the individual championship of the county, and out of forty-nine shooters was the only one to break 25 straight, but as he was a non-resident he could not win the trophy. We are informed that it is the only straight score at 25 made on the Pottsville grounds. Mr. Keller also was high average for the day. The popular T. K. will have to look to his laurels, else they will be shot off by his son.

Mr. S. G. Miller, secretary of the Haverhill (Mass.) Gun Club, writes us concerning his club's forthcoming series of shoots, from June 1 to Aug. 31, as follows: "We shall be glad to see any and all lovers of the sport and will spare no pains to give them a good time. Anyone that has any particular grudge against that B-root of Providence will find our Saturday afternoon shoots excellent opportunities to practice and get in trim to go down to their interstate shoot in August and have it out with him. Any shooter who misses that tournament will have something to regret as long as he lives. I have been to Providence and know whereof I speak."

Mr. R. A. Welch, of the Carteret Gun Club, famous as an expert trap shooter, arrived in Paris on May 12. He has been doing some excellent shooting since his arrival abroad. At the Gun Club, on May 11, he won the £25 cup, from the 30½ yard mark, killing 16 straight. There were seventeen contestants. At Paris, May 13, he divided the first two events, and was one of the last three in the others. In the two days, he killed 53 out of 55. He has competed in eight events in Paris, up to May 16, and had divided in four of them, winning about £100. He will be in England to witness the international team shoot.

Mr. F. T. Sherwood, secretary-treasurer of the Trap Shooters' League of Indiana, Bedford, Ind., under date of May 24, writes us that "the Trap Shooters' League of Indiana has this day granted to the Lafayette Gun Club, of Lafayette, Ind., a sanction for a tournament on Aug. 8 and 9. For further information address Joe Blistian, secretary."

The Massachusetts Amateur Shooting Association announces its second annual tournament, to be held at Palmer, Mass., on Thursday of this week. Shooting commences at 9 o'clock. The main event is the five-man team shoot, five teams respectively from Springfield, Holyoke, Winchendon, Brookfield and Palmer. There are thirteen events on the programme, 185 targets, total entrance $9.25; targets 1 cent; sweepstakes optional. Professionals, for targets only; Rose system governs; lunch served on grounds. Dr. S. B. Keith, secretary.

Capt. A. W. Money, of the American E. C. & Schultze Gunpowder Co., was one of the passengers on the Canadian, which sailed with the American team and a number of its friends on Sunday of this week for England. Mr. Edward Banks, of the same company, went along as a substitute member of the team, and will also be of great assistance to it in England, as one who thoroughly knows the customs and geography of that country, he formerly having been a resident of that country. Mrs. Banks accompanied him abroad.

Owing to the fact that, to fit the Stadium up properly for the Pan-American shoot would cost more than the holding of the shoot would warrant, the managers decided to declare that shoot off. The ornamental work within reach of the shotgun loads would need to be boarded up to protect them from damage, and this would necessitate a larger expenditure of money than those in charge cared to apply to that purpose.

Mr. W. J. Weller, secretary of the Frankfort Fish and Game Protective Association, Frankfort, N. Y., writes us that "the Frankfort Fish and Game Protective Association will hold their third annual target tournament on July 4. We will have a very fine programme, and one first-class merchandise event, with prizes such as double and single barrel shotguns and rifles, etc."

The tournament of the Zoo Rod and Gun Club, at Elwood, Ind., May 14 and 15, was a gratifying success. The Lieber trophy, an event at 25 live birds, $20 entrance, had seventeen entries. Messrs. Neal, Fort and Parker tied on 24, but the two latter, being non-residents, were ineligible in respect to the trophy. Mr. John Parker, the famous expert, managed the tournament.

Mr. J. W. Nelson, the secretary, writes us that at the meeting of the Central Gun Club, May 13, the date of the annual tournament was fixed for July 5 and 6. Several hundred dollars will be hung up in averages and added money, and it is probable that the event will be one of the best held in the city. Railroad rates good until Monday, July 8.

We are informed that Mr. Geo. R. Benjamin, who for the past seventeen years has represented the firms of M. Hartley Co., Remington Arms Co., and the Union Metallic Cartridge Co., has connected himself with the eastern department of the Peters Cartridge Co., 80 Chambers street, New York city, and will represent them on the road.

The New York State shoot will be held at Interstate Park. Each member of the American team is provided with a neat gold button, bearing a red, white and blue shield, very neat and tasty, without being gaudy in the slightest degree. They also have a full set of the Thurman shooting jackets, on which are the initials U. S. A.

The programme of the Westminster (Md.) Gun Club's tournament, May 31, provides eight target events at 15 and 20 targets, and two events at live birds, one at five, the other, the Westminster handicap, at ten birds; $7 entrance, birds included; three moneys, class shooting. Shooting commences at 10 o'clock.

In a match at 50 live birds, 30 yards rise, between Messrs. H. H. Stevens, of New Brunswick, and J. E. Applegate, of Freneau, N. J., on the grounds of the Middlesex clubhouse, South River, N. J., May 23, Mr. Stevens won by a score of 47 to 45.

The first contest of the series of six between teams of the Leominster, Gardner and Fitchburg Gun clubs, of Massachusetts, took place on the grounds of the Fitchburg Gun Club, on May 24, and was won by Fitchburg. Score 210.

The Nonpareil Gun Club, of Chicago, have fixed upon the last Saturday of each month for its contests. They will be held at Watson's park, Burnside Crossing, Ill.

Mr. J. H. Jack won the monthly live-bird cup for May, at the shoot of the New Utrecht Gun Club last Saturday, killing 23 straight from the 29yd. mark. Ex-Sheriff Creamer lost his twenty-third, dead out, in this event.

Mr. E. C. Hinshaw, of Okoboji, Iowa, informs us that the Lake Okoboji tournament will take place on Aug. 27 to 30, at Arnold's park. Added money, $400. Mr. Hinshaw will send the programme on application.

Under date of May 27, Mr. Charles A. Bogart, the club's secretary, writes us as follows: "On June 19 the Gloversville Gun Club, of Gloversville, N. Y., will hold their annual tournament."

The Peters Cartridge Co., of Cincinnati, announces that the tournament at Bristol, Tenn., will be held on June 25 and 26.

BERNARD WATERS.

The Farewell Dinner.

The Interstate Association, among its members, officially and personally, felt the glow of friendliness and good will toward the American team, which has been so conspicuous in the trap shooting interests during some weeks past. As a friendly attention, the Interstate Association gave a farewell dinner to the team and a few friends of it, at Muschenheim's Arena, on Friday evening, May 24, the day on which the team arrived in New York. The president of the association, Capt. J. A. H. Dressel, was at the head of the table. At his right sat the Hon. Thomas A. Marshall, the captain of the team; at his left sat Mr. Chas. Tatham, who urbanely acted as toastmaster. There also were Messrs. E. S. Lentilhon, A. W. Higgins, Ed Banks, Emil Werk, Chas. Daly, T. W. Stake, J. H. Marlin, T. H. Keller, Mr. Lienhart, Mr. Cook, L. J. Gaines, Mr. Heilman, Capt. A. W. Money, G. Bingham, L. Erhardt, H. Dressel, Mr. Marsh, members of the press and others to the number of thirty-nine.

The after-dinner talks were specially interesting. Capt. Dressel spoke most interestingly and pertinently. Mr. Marshall expressed the pleasure he felt in being selected to take charge of so great a team, representing the United States. Talks were also made by Messrs. Palmer, Banks, Higgins, Gilbert, Parmelee, Werk, Pride, Capt. Money, Heikes, and others. The dinner was marked by the utmost good fellowship and hearty interest in the success of the team. The dinner itself was perfection, as a matter of course, when we consider by whom and to whom it was given.

Stevens vs. Applegate.

MIDDLESEX CLUB HOUSE, South River, N. J., May 23.—Herewith are the scores made in a live-bird match held here this afternoon between H. H. Stevens, of New Brunswick, and J. E. Applegate, of Freneau. Conditions, 50 birds, $50 a side, 30yds. rise. A large-sized gathering witnessed the match. The birds were of excellent quality, all being selected:

W. L. RHODES.

ON LONG ISLAND.

Trap at Interstate Park.

Interstate Park, L. I., May 22.—The launch shoot managed by Mr. J. S. Wright had nineteen entries. The conditions were 10 birds, $10, birds extra. First prize was a launch valued at $175. This was won by Mr. Carl Von Lengerke and Col. J. H. Voss, who tied and divided. Messrs. Money, Van Allen and Glover divided second money, shooting off miss-and-out. The 8s divided. Mr. Herrington refereed the shoot:

A Doncort, 25	1200100122— 6		

New Utrecht Gun Club.

Interstate Park, L. I., May 25.—A rainy day was prevalent as to weather conditions, yet there was a good attendance when that circumstance is considered. No. 1 event was marked by a closely contested finish, the tie on this event being decided miss-and-out on the sixteenth bird. Mr. F. B. Stephenson won. The shoot-off of the monthly cup event was won by J. H. Jack. There were four contestants in it who killed straight. In the miss-and-out shoot-off ex-Sheriff F. D. Creamer lost his thirteenth bird dead out, and that left J. H. Jack the winner. The scores follow:

No. 1, 7 birds, for club prize, miss-and-out:

		Shoot-off.
E W Reynolds, 28	2212211—7	2211122222111120
J H Jack, 29	2220w	
F D Creamer, 28	1210w	
C A Ramapo, 28	220w	
G Stephenson, 29	2222222—7	222212112220
F B Stephenson, 28	2221222—7	21212112222111111
Dr Martin, 29	2212112—7	11111210
Dr Wynn, 29	20220w	

No. 2 shoot-off of monthly event, at 10 birds, then miss-and-out. All those entered in this event had previously qualified at 10 birds, at one of the previous shoots this month:

C A Ramapo, 28	2220122220— 8	
F D Creamer, 28	2222212221—10	1211212211122*
Dr Wynn, 28	1211121121—10	2120
J H Jack, 29	2222222222—10	2222222222222
E W Reynolds, 28	21210w	
Dr Martin, 29	2212222212—10	20

IN NEW JERSEY.

Hudson Gun Club.

Jersey City, N. J., May 20.—No. 6 is the club shoot. Following are the scores made at the Hudson Gun Club's shoot to-day:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Shot at.	Broke.	Av.
Targets:	15	15	15	15	15	25	15	15	15	15	25	10

DUKE, Ass't Sec'y.

Trenton Shooting Association.

Trenton, N. J., May 18.—Charlie Maddock proved to be the leading lady at the matinée to-day, and Assmblyman Page also made very creditable scores. The weather conditions were unfavorable for making good scores, and also cut the attendance down.

The best scores were made over the magautrap, which the boys seem to prefer, and when it came to shooting reverse pulls over the five-trap battery it made them open their eyes.

In the expert rules event Thropp broke straight, with Taylor as the runner up with 9.

I have tried to impress that it is wiser to mix the shooting, and have several times arranged the programme to include both sets, so that when we go away from home it would be easier to catch on to the altered conditions of speed, elevation, etc., that one is certain to find. We intend to cover the score in front of the magautrap and make some other improvement, so that we can shoot in comfort, rain or shine.

The striped bass are giving fine sport just now; one that was caught the other day weighed 40lbs. It was landed by some shad fishermen in their seines.

The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Targets:	25	15	10	10	10	10	10	10	10	10	10	25
J R Taylor	19	7	6	..	7	5	..	5	5	6	9	21
Wilkes	20	11	4	7	9	9	9	8	..	4	8	19
J H Thropp	20	11	4	7	8	8	6	7	8	6	10	21
C Maddock	21	10	5	7	7	9	7	8	7	4	8	23
Satterthwaite	..	9	4	5	7	6	5	2	5	..	..	..
Page	..	..	..	9	6	6	7	10	7	5	8	19
Smith	..	..	..	6	5	9	7	6	5	7	9	19
Rowan	..	..	..	6	5	9	9	..	6	7	5	19
Croft	..	..	..	4	3	5	5	8	..	6	7	15
Borden	..	..	..	8	6	7	7	6	6	6	..	17
Kirby	..	..	..	..	..	..	..	5	6	4	..	3 16

Events Nos. 1 and 2, magautraps; event No. 3, 5 pairs doubles, from five traps; events Nos. 4, 5, 6, 7 and 8, magautrap; event No. 9, 5 pairs; event No. 10, reverse pulls; event No. 11, expert; event No. 12, magautrap.

Fort Smith Gun Club.

FORT SMITH, Ark., May 24.—The regular weekly shoot of the Fort Smith Gun Club took place at the club grounds and the contest for the beautiful loving cup, presented by the Peters Cartridge Co., to the Fort Smith Gun Club was resumed.

The targets were thrown hard, and as the background is very bad, being a heavy growth of forest trees, the scores always rule about 5 to 10 per cent below what they would be on a sky background.

Mulraney came out for the first time this season and shot steadily throughout.

Ed Blattner was out selling chances for a raffle on a beautiful Smith gun, with two sets of barrels, and everybody took a chance, as it is hard to resist the possible opportunity of getting a $125 gun for 50 cents.

Mrs. Kimmons and Mrs. Leach favored the club with their presence, and seemed much interested in the shooting, applauding each good shot that was made.

Kimmons, who has been shooting an 80 per cent gait ever since he broke into the game last season, had an off day and made a very poor score, getting 10, 13 and 16 out of three sets of 25.

The scores yesterday were as follows:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Leach	75	62	.827	Boyd	50	28	.560
Williams	75	49	.653	Kimmons	75	39	.520
Mulraney	60	39	.650				

The scores to date on the cup race are as follows:

	Shot at.	Broke.	Av.		Shot at.	Broke.	Av.
Leach	300	234	.780	Boyd	275	171	.623
Webber	150	110	.730	Knott	75	44	.590
Echols	150	108	.720	Spicer	150	86	.570
Williams	300	201	.670	McCorkle	35	14	.400
Kimmons	150	100	.666	Gardner	75	27	.360
Mulraney	60	39	.650				

The loving cup, for which the club is now contesting, can be seen in the window of the Boston store. It is very beautiful, and will be a handsome souvenir for the lucky winner.

LEACH.

West End Gun Club.

RICHMOND, Va., May 20.—Appended find scores made by Richmond's two best clubs at their last weekly shoots. I inclose you a circular showing what is stirring the boys up here. There are over 100 men competing for these prizes, which speaks well for Richmond and its suburbs.

The scores of the West End Gun Club's weekly shoot follow:

Fifty targets, 25 over magautrap and 25 over expert traps; shot May 16: J. Jackson 34, J. A. Purdie 41, Dr. Bagby 23, Dr. George 32, W. Harris 29, G. A. Smith 28, Dr. Rudd 14, A. J. Warren 36, E. B. Wilson 16, J. C. Tignor 37, W. Buckner 34, F. Stearns 44, R. H. Johnson 41, J. W. Young 27, D. Edmond 21, Ed Hewitt 35, R. L. Gill 33, H. B. Greene 36, C. W. Saunders 40, O. H. Berry 32, W. Massie 38, T. Williams 32, H. S. Hawes 46, J. W. Harrison 21, T. Whittet 19, G. D. George 41, S. Fairlamb 22, R. B. Jones 23, Geo. Tiller 35, H. Blair 46, W. L. Boyd 46, J. Shuman 30, W. H. Colquitt 39, T. F. Green 28.

The Deep Run Hunt Club's weekly shoot, May 18, resulted as follows: Jackson 39, D. O. White 22, Boyd 43, Doyle 37, Colquitt 39, T. M. Tignor 37, Buckner 34, Woodruff 6, Wood 28, Stearns 48.

May 23.—Herewith please find scores made by members of the West End Gun Club, of this city, at their fourth weekly shoot, May 23. This is the oldest and largest club in Richmond, being now in its twelfth consecutive active year, and having forty-eight active members.

It will give the second tournament of the Virginia Trapshooters' Association on Sept. 2 and 3, which will undoubtedly have a larger attendance than last year:

The scores were: Stearns 46, Hawes 44, Blair 44, Hewitt 43, Purdie 43, G. D. George 43, Boyd 42, Gill 41, Ellyson 39, Anderson 39, Colquitt 39, Buckner 36, Wilson 36, J. C. Tignor 36, Williamson 36, Warren 34, Jones 34, Dr. A. S. George 33, Wood 32, Jackson 32, Hart 32, Johnson 29, Tiller 29, H. B. Greene 29, Berry 28, Fairlamb 28, Shuman 28, Cannon 27, Massie 27, Young 26, Bridgeforth 26, Dr. Bagby 25, Edmond 23, Harris 22, T. F. Green 19, Dr. Rudd 16, Whittet 14.

FRANKLIN STEARNS.

The National Gun Club.

MILWAUKEE, Wis., May 24.—The following is the result of the monthly prize shoot of the National Gun Club, which took place at National Park to-day:

Regular monthly prize shoot:

Klapinski	11201*1120— 7	Gumz	2*20020101— 5

LINDLEY COLLINS, Sec'y.

Wollaston Gun Club.

WOLLASTON, Mass., May 25.—Six shooters faced the raw east wind this afternoon at the regular weekly shoot of the Wollaston Trap Club. Clean scores were scarce. Whitmarsh made the only one. Barry was high man with 59 out of 80. Events 1, 2, 6 and 8, 10 targets, unknown angles; events 3 and 4, 10 targets, straightaway; event 4, 10 targets, reversed angles, and event 5, 5 pairs. The scores:

Events:	1	2	3	4	5	6	7	8
Barry	8	8	9	6	5	9	8	6
Whitmarsh	7	4	10	6	4	7	6	8
Elwell	7	7	7	7	5	7	6	..
Muldown	7	6	4	2	..	5	7	3
Baker	3	6	7	2	5	..	..	..
Doell	3	4	7	3	3	..	..	..

The Peters Cartridge Company Tournament at Bristol.

CINCINNATI, O., May 20.—We have just wired you asking you to make notice of the postponement of the Bristol, Tenn., tournament for about four weeks. This we now confirm. We have letters from several of the prominent members of the Bristol Gun Club giving some very excellent reasons why the tournament should be postponed, and we therefore take pleasure in complying with their request. The boys want to make this the best tournament that has ever been given in that section, but they fear that on account of the Confederate reunion early in June, and for a number of other reasons, it would be impossible to give the tournament the desired attention of the earlier date. They therefore wish more time, and will select their own date, probably early in July.

J. H. MCKIBBEN, Sec'y.

WESTERN TRAPS.

Trap Matters at the Twin Cities.

CHICAGO, Ill., May 25.—Dr. Bill, of the Intercity Shooting Park, which accommodates the lovers of the gun who live at Minneapolis and St. Paul, sends a big bunch of shooting information from his part of the world, covering events for the past two weeks, from which it would indeed seem true that trapshooting is gaining in favor in the Northwest. He states:

"On Thursday of this week the Minneapolis Gun Club held its regular weekly shoot here. The attendance was not up to the standard, as the day was very hot and sultry. The old standbys of this club are trying their best to increase their shooting numbers, and no doubt will do so before long. The work of Mrs. Johnston, Johnston and French is of high class, showing great improvement from the first of the year.

"On Monday, the 13th, a squad of five came over in the afternoon and kept the traps going until dark. The best shooting of the day was done by Thompson, of St. Paul, who scored 94 out of 100.

"On Tuesday, May 14, Messrs. Coff, Dunn, Emerson, Andrews and Hunt shot a 100-bird race for the dinners, with Hunt low man and Emerson high man."

Thursday, May 16.—Minneapolis Gun Club scores were made as below:

Club diamond badges: Johnston 17, Mrs. Johnston 7, French 19, Danz 18, Mick 13, Thompson 12, Spear 10, Brown 15.

French won senior badge, Danz won junior badge, Mick won amateur badge.

Schlitz diamond badge: Johnston 23, Mrs. Johnston 22, French 20, Danz 16, Mick 13, Thompson 22, Spear 19, Brown 13.

Johnston won badge.

Val Blatz diamond badge: Johnston 11, Mrs. Johnston 13, French 10, Danz 12, Brown 17, Thompson 11, Mick 7, Spear 7.

Mrs. Johnston won badge.

Paegel diamond badge: Johnston 21, Mrs. Johnston 20, French 23, Danz 18, Mick 17, Thompson 22, Spear 22, Brown 23.

French won badge.

Saturday, May 18.—St. Paul Rod and Gun Club.—This was the largest attended of any club shoot of the season, forty-one shooters participating. The interest taken by this club is phenomenal. They continue to add interested shooters to their list, and expect by June 15 to have fifty regulars here each Saturday. The untiring energy displayed by the club's able president, Paul Hanser, and the secretary, A. E. Perry, assisted by Messrs. Morrison, C. Hanser, Joe Henry, Paul Gotzian, Jacob Danz, Chas. Thompson and Chas. Seibrook, shows what can be done for a club if they only hustle. The shooting of Morrison, Hanser, Gotzian and Wilkinson is of very high order. Morrison yesterday broke 15 pairs straight as a fitting climax of his day's shooting. Scores:

St. Paul Gun Club Cup Race.

Events:	1	2	3	4	5	6	7	8

Nonpareil of Chicago.

The Nonpareil Gun Club, of Chicago, whose inaugural shoot recently furnished so interesting a variation of the club shooting programme in this city, holds its second shoot to-day at Watson's, and will henceforth claim at that park the date of the last Saturday of each month. It is anybody's race in this club at any event, and great interest attaches to these contests, the scores of which go forward from the ground.

Michigan Trap Shooters' League.

The first annual tournament of the Michigan State Trapshooters' League, under the auspices of the East Side Gun Club, of Saginaw, begins next week, May 28-30, with two days at targets and one at live birds; $300 added. There will be two magautraps, and two squads will shoot at the same time. This will be a warm little proposition, and Mr. John Pop, president, and John M. Messner, secretary, will have a large contingent of visitors, who, it is needless to say, will all be satisfied.

Too Much Lemonade.

Mr. H. C. Hirschy, well known among all trapshooters, is in town to-day on his way from Springfield to his home in St. Paul, Minn. Mr. Hirschy is still feeling some slight effect from the case of lemonade poisoning which he with others sustained at the Springfield grounds. The beverage was made in a galvanized iron pail, and it came pretty near knocking out the whole combination. Harry Dunnell and Chris Gottlieb were both taken violently ill, and Mr. Hirschy himself was for a time unable to walk. No one was to blame for this little accident, which might occur at any time. In the Western towns, where everybody lives out of tin cans, it is a common matter of caution on the part of camp cooks never to allow a can of tomatoes to stand in the tin for more than a few minutes after it is opened, as the action of the air and the acid of the fruit upon the tin results in a compound which may be mildly or dangerously poisonous. It would be unwise for trapshooters to forsake lemonade entirely for other beverages on account of the little incident at Springfield.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, May 25.—The appended scores were made on our grounds to-day on the occasion of the fourth trophy shoot of the season. Notwithstanding the very uncomfortable day for target shooting, fourteen members came out to participate, and considering the conditions the scores were quite fair. The wind blew from the northeast, directly across the traps and was so cold that the shooters almost all wore coats while shooting, and several wore overcoats. S. E. Young won Class A medal, Dr. Meek Class B medal, and P. McGowan Class C medal on scores of 21, 20 and 20 respectively.

Fourth trophy event:

Dr J W Meek	1111101110111110011111101—20
J. D. Pollard	0011000110111111111101011—17
J. McDonald	0000011000111111110111100—14
A. McGowan	1001101111111010111100101—17
P McGowan	1011110111110111111110011—20
E W Eaton	1100100011111000011110101—14
T Eaton	1011111111110110001111111—20

Chicago Gun Club.

Chicago, May 25.—Herewith find scores of the Chicago Gun Club's weekly shoot. Quite a number of the boys were at Springfield. The State shoot is on, and of course was the drawing card.

Dr. Carson won the weekly trophy handicap in birds. He shot scratch, breaking 23. Bowles won second trophy, 5 birds allowed him. Dr. Carson also won the distance handicap monthly trophy, shooting at 20yd. mark after shooting out Bowles at 18yds.

Next week we expect the regular attendance.

No. 3, weekly trophy handicap, 25 birds:

		Broke.	Hdcp.	Total.
Walters,	1011001110100001100110111—14	5	19	
Bowles,	0011011111100111101111111 0—18	5	23	
Dunbar	1001010100111111111010111 1—17	5	22

First tie:

Bowles, 18	1001110101—6	Dr Carson, 20	1110111111—9

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass., May 24.—This proved a very windy afternoon, and most of the boys did very good work, considering it was blowing a gale most of the time. Several of the Gardner and Leominster men came down to get in a little practice for the prize five-man team shoot between Gardner, Leominster and Fitchburg, which is to commence next Wednesday afternoon on our grounds.

The scores on May 17 were:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13

May 22.—The first leg of the triangular prize team shoot between Gardner, Leominster and Fitchburg was pulled off this afternoon. The weather conditions were as nearly perfect as possible. This was the first of six shoots—two to be held in each town, five men on each team, 50 shots per man. The prize is a very beautiful cup. Fitchburg won the first shoot, breaking 210 out of the 250 shot at. Leominster was second with 203 broken, and Gardner third with 192 broken. The highest score for Leominster was made by Rice, who went out with 49 out of his 50. Cutler was high man for Fitchburg with 48 breaks. Knight was high man for Gardner with 43 out of his 50. With all the men in form, these clubs are very closely matched, and it will be a matter of whose day it is to win. Several others took part in the shooting before and after the match.

Match shoot, Leominster, Gardner and Fitchburg:

Leominster.

I. O. CONVERSE.

Aschenbroedel Gun Club.

NEW YORK, May 25.—Below please find report of our last club shoot, held Friday, May 17. Five events, 10 targets each:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	10	10	10	10	10	Targets:	10	10	10	10	10
Wagner	8	2	5	7	2	Heidelberg	1	3	4	5	2
Ruhlender	5	6	6	3	6	Baier	3	5	4	2	0
Spargur	0	1	1	1	1	Moeslein	3	1	5	5	..
Wiegner	5	6	4	2	4	Walters	1	2	3	3	5
Siemers	6	3	5	3	3	Macdonald	0	3	1	1	3

Owing to a strong wind, the scores look very poor, which they really are, with the exception of the score of our secretary. His score is not poor at all. To the contrary, it is so good that he could never duplicate it, unless our friend Jack Spargur would accommodate him. Still it is hard to convince a man when he does not want to be convinced, and therefore our secretary has been trying ever since to find the reason why it was thusly. First he blamed the wind, then the traps, then a gun that he was using for the first time. He also blamed the cartridges. In fact, he blamed every one and everything but himself.

The truth of the matter is—and no one knows it better than the writer—he was too stuck up. Heretofore he used to walk the distance between the cars and the shooting grounds, a matter of three-quarters of a mile or so. He always said that he could make a better score were it not that he was tired walking such a distance, carrying a gun and a lot of cartridges. This time he thought he would get ahead of the others, and therefore engaged the help of one of his friends, who is the happy owner of a horse and buggy, to drive him to the grounds. All the way over he was happy in the anticipation of what a great score he would make. Nothing short of 45 out of 50 would do, with an occasional 10 straight hits thrown in. Alas! how pride comes to its fall. The first ten shots he fired were straight misses, and his total score was 8 out of 50. No wonder he disappeared in the woods after the trouble was over, and was not seen again for several days, which accounts for the lateness of this report. One occurrence is worth mentioning. Two of our members, whom I will designate by their initials only, fell into a discussion as to the identity of a bird whose notes they heard in a neighboring tree. H. said it was a sparrow hawk, while W. was sure it was a robin. H., however, was so certain that his knowledge of natural history—and especially the ornithological branch of it—was superior to that of W. (although it is rumored that he does not know the difference between a jacksnipe and an ostrich) that he offered to bet $10 that he was right. The bet was taken up immediately, but now the question arose how to settle it. To shoot the whilom songster was not a matter so very difficult even for a member of our club, who, as a rule, finds it a hard matter to hit any game smaller than an elephant. But as it was thought that one of the birds was a robin, and shooting it meant breaking the law, it was out of the question to do so for any law-abiding citizen. Still, H. being convinced that it was not a robin, and not seeing any particular harm in shooting a sparrow hawk, went up to the tree in the style of an aboriginal Indian, which he had learned by attending some Wild West show, and planted a shot where he thought it would do most good. To the surprise of every one, an old crow, which had been dead several months and which in its mummified state had wintered in a crotch of the tree, fell before the hunter's feet, while two birds, scared nearly to death, flew out of the tree, at too great a speed for any one to tell if they were two robins or two sparrow hawks or one of each. So all bets were decleared off, and H. was sentenced to buy the wherewithal to quench our thirst, which had become great during the excitement.

E. MACDONALD, Sec'y.

Winchester Gun Club.

DETROIT, Mich., May 18.—Another windy day kept down the scores at the regular shoot of the Winchester Club, although 23 was apparently easy for Lewis in Class A, and no one disputed his right to the medal.

Class B medal, like the America Cup, seems hard to lift; no one in his class could see Warner's 18, and he still smiles.

Class C is developing some good ones, Brown winning the medal with 12.

In a little event at doubles Lewis afforded considerable pleasure by shattering 5 targets, singly, thrown as nearly simultaneously as possible by the magautrap at 14yds.—surely a very creditable performance.

The scores:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	10	10	10	10	10	25	Targets:	10	10	10	10	10	10	25
Warner	9	..	..	9	4	..	18	Wren	..	..	..	..	..	..	17

Barlow	12	10	Brandreth	11	9
Barlow	12	10			

C. G. B.

The Twenty-seventh Illinois State Tournament.

THE twenty-seventh annual tournament and convention of the Illinois State Sportsmen's Association, held this week in the city of Springfield, has established new records and made new standards of excellence in the shooting history of the Mississippi Valley. The tournament was held on the grounds of the Illinois Gun Club, which are unequaled in the State, or, for that matter, anywhere in the West. Add to this fact that some of the ablest and most wide-awake men in the State gave to this event their whole time and attention for weeks, and we have the key to the conspicuous success of this meeting. To the president, Col. Jas. R. B. Van Cleave, and secretary-treasurer, Chas. T. Stickle, are especially due the thanks of every sportsman who attended, and this expression was conveyed by word of mouth many times during the week. This is one of the very few grounds where target and live-bird shooting can be carried on simultaneously with good success, and it was done here this week without a hitch anywhere.

The office work was handled under lease by Mr. F. C. Whitney, of Des Moines, Ia., and the active management of the shoot was in the hands of the genial Charley Budd, whose name has been synonymous with good marksmanship and good fellowship in the shooting fraternity for, lo, these many moons.

It proved a week of record-breaking, work all round, in the general high scores made, most notably in the Dupont contest, when three men killed 100 birds straight, and Crosby's continuing score the next day. The 20-bird squad record on targets was made on the second day, when R. R. and E. S. Graham, B. Dunnell, R. Kussenberger and F. C. Riehl scored 99, and on the following day by the Messrs. Graham, Dunnell, Kussenberger and J. S. Boa, when they scored 75 straight.

First Day, May 20.

The week of shooting was happily begun to-day. Weather was at first threatening, but turned out cool and pleasant, with but little sunshine, and a refreshing breeze blowing over the prairie. The traps worked beautifully, and scores were several per cent. above the average tournament work. The squads were captained by the Indians and moved along like clockwork, so that the programme was finished by 4 o'clock. Fred Gilbert was high man for the day, losing but a single bird in the programme of 175. Crosby, Heikes and Dunnell tied for second place with 3 each lost, while Winchester and Conner dropped but 5 each. There were sixty entries in all, and 10,255 targets were shot. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Broke.	Av.

A very interesting feature of the day was the contest for the Governor's cup, emblematic of the ladies' championship at live birds. Any woman shot in the United States is eligible to compete for this prize, a handsome sterling silver cup, which becomes the property of the winner. There were six entries, Mrs. Shepherd and Mrs. Dr. Shaw, of Chicago; Mrs. Johnston, of Minneapolis; Mrs. Cabanne and Miss King, of St. Louis, and Mrs. Butler, of Springfield. The trophy went to Mrs. Shepherd, who scored 17 kills of the 20 birds, which constituted the race. The scores are appended:

Mrs Cabanne ....*2120121121211*11011—16
Mrs Shaw ....1*0122*1012021011211—14
Miss King........0100112120**10112110—12
Mrs Butler ....00010012211110000121—11
Mrs Johnston ....10200111122*11202121—15
Mrs Shepherd ....12221111101211102220—17

Second Day, May 21.

Heavy, dark weather and occasional rain handicapped the work at the traps to-day, notwithstanding there was an increased attendance of shooters and visitors. The main event was the contest for the Dupont trophy, shot under the usual rules, except that moneys went to four high guns. The birds were a rather indifferent lot, but perhaps as good as can be had at this time of year, and scores consequently unusually high. The main race was finished early in the afternoon, with sixteen straight scores. Then began a shoot-off which lasted until night, and was only stopped for darkness when the three last men in, Fred Gilbert, W. R. Crosby and H. J. Sconce, had each killed 100 straight, they agreeing to conclude the contest on the morrow. The retrieving was done by Fred Erb's splendidly trained string of dogs, under his personal charge, and birds were trapped for the Association by Ullman & Co., of Chicago. Some discussion was occasioned by the fact that Mr. Parmelee declined to agree to a division of the purse among those who made clean scores. He carried his point under a literal interpretation of the conditions as published; but after Parmelee had missed a bird a divide was finally agreed on among the last five men in the contest, Messrs. Sconce, Gilbert, Crosby, Fort and Barto.

Scores in the day's events are subjoined:

Events:	1	2	3	4	5	6	7	8	9	10	Broke.

Third Day, May 22.

Targets and live birds were again shot to-day simultaneously on four sets of traps. Ten thousand targets were thrown, while the special features were the Smith cup contest at targets and the Board of Trade diamond badge at live birds. Entries were record-breakers in both these events. But all worked nicely, and the long programme was finished by 5 o'clock in the afternoon.

Annual Meeting.

The annual meeting of the State Association was held at the Leland Hotel at 8 P. M., with a representation of most of the gun clubs in the State. A number of resolutions were adopted, among them one limiting the number of teams that any one club may enter to two, and one warmly indorsing the splendid work done by State Game Commissioner H. W. Loveday, in protecting the game of the State, and instructing the officers to request, in behalf of the Association, his reappointment. Springfield was again selected as the place for holding the next annual meeting. Col. Jas. R. B. Van Cleave was again chosen President; Chas. T. Stickle, Secretary-Treasurer; C. R. Stephens, First Vice-President; O. Von Lengerke, Second Vice-President, all by unanimous vote. A resolution was then adopted by standing vote and a tiger, extending Godspeed to the members of the All-American team who were to leave at 10 o'clock for New York to sail for Europe for the international target championship contest, and the meeting was adjourned to permit all members to accompany the team in a body to the depot.

Scores for the day were as follows:

Fourth Day, May 23.

The State team contest at live birds and an amateur target programme, with Rose system of money division, were the attractions to-day. There were many new faces on the grounds, and the attendance was quite up to the high-water mark for the week. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Broke.

Taylorville—T. W. Long 7, J. P. Spear 9, Hewitt 8, J. Murphy 9; total 33.

Last Day, May 24.

It is regrettable to have to report two disastrous occurrences as marking the close of this most successful and satisfactory meet ever given by the Illinois Association. Late Thursday afternoon a terrific wind and hale storm struck the shooting ground with such force and suddenness as to level tents, trap houses and score boards to the ground in a twinkling, and for a few moments it seemed as if the club house would be carried away. It was one of the worst storms ever known in this section, and left much to repair and rearrange for the continuance of the programme. Then, almost simultaneous with this occurrence, came a message to Col. Van Cleave, president of the Association, that ex-Governor John R. Tanner had just died very suddenly at the Leland Hotel. He had lain down on his bed during the afternoon, and later an attendant found him dead. Governor Tanner was a member of the Association, and the Illinois Gun Club, and one of the genuine ardent sportsmen of the State and the West. This sad occurrence and the storm cast a shadow over the crowd of attendant shooters, and the officers concluded, after carrying through the scheduled events for the week in all club and team matches, to call the announced programme for Saturday off, and close the meeting Friday night.

The features of this day were the State team race at targets for individual medals and cup, an informal programme of ten 15-target events and a 7 and 10 live-bird sweep. The Illinois team won the first, Long Lake second and Twin City team third average. The latter two teams tied for first on 88, again in a shoot-off at 94, and finally the Garden City team won by a single bird, each man having shot at 60 targets. The Quincy team took fourth money.

In the shoot-off for the Parker gun between the five men who killed straight in team and diamond badge matches, T. G. Hall, of Springfield, was successful. The Lefever gun for longest continuous run at targets went to Bert Dunnell, of Long Lake.

Target scores for the day follow:

Events:	1	2	3	4	5	6	7	8	9	10

F. C. RIEHL.

Zoo Rod and Gun Club.

ELWOOD, Ind.—The second annual tournament of the Zoo Rod and Gun Club opened here on May 14.

Finer weather for an outdoor event of any kind could not have been desired than that which favored the second annual live-bird State championship tournament, held under the auspices of the Zoo Rod and Gun Club, at Elwood, Ind., May 14, 15 and 16. The attendance was considerably increased over that of last year, and many well-known marksmen from a distance were present. The cities of the State were represented by a number of new entries over the list of last year. The Zoo Club had spared no pains to provide every convenience and comfort for the visitors.

Capt. Jack Parker, of Detroit, acted as manager of the tournament, and much of its success was due to his skillful conduct of affairs.

First Day, May 14.

The opening day of the tournament opened favorably, with bright skies and just enough wind to temper the heat and call for the best efforts of the shooters. The day was devoted entirely to target shooting, and the schedule of fourteen events started at 10 o'clock. The register showed the following attendance: R. O. Heikes, E. D. Rike and C. H. Miller, Dayton, O.; Tripp and Partington, Indianapolis; Ballheim and Kirby, Greenville, O.; Miller, Toledo; Fort, Swanton, Vt.; Parker, Detroit; Courtney, Syracuse, N. Y.; Cavanagh, Peru, Voris and Lacy, Crawfordsville; Adamson, Farrell, Bender and Meredith, Muncie; Houser, Bussel and Ousler, Noblesville; Yelton, Anderson; Erb, Lafayette; Neal, Bloomfield, and others.

The first day's scores were as follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	10	15	10	15	15	10	15	10	15	15	15	10	15	15

Second Day, May 15.

The programme for the second day consisted of fourteen events of 15 targets each. The fine weather of the opening day continued, and the number of shooters in attendance was increased by the arrival of a number of new contestants. The traps worked well, and the following were the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14
Targets:	15	15	15	15	15	15	15	15	15	15	15	15	15	15

Of course the shoot would have been incomplete without the Indians being represented. Of these veterans, Elmer Neal, Chief Black Diamond; Ernest Tripp, Chief Ride in the Wagon; Rolla Heikes, Chief Bald Eagle; Jack Parker, Chief Des Chree Shos Ka, serpentine dancer and medicine man, and A. J. Courtney, Chief Sitting Bull, were present.

Third Day, May 16.

Of course the interest centered in the live-bird contests, which were the programme of the third and closing day. A crowd estimated at 1,000 people were at the grounds of the club to witness the shoot for the championship. The weather warmed up considerably from the temperature of the day before, but the enthusiasm of the shooters was not affected by the sun that shone as though it were July. The birds were good ones, and flew well. Two events were scheduled, the first one of 5 live birds. The scores were as follows: Voris 5, Rike 5, Fort 4, Howard 5, Yelton 4, Heikes 4, Lacy 2, Cavanagh 2, Hoosier 2, Adamson 4, Seniour 1, Parsons 4, Dunbar 4, Neal 5, Parker 4, White 3, Farrell 1, Courtney 4, Leeson 4.

The shoot for the State championship and the Lieber silver trophy, 25 live birds, $20 entrance, excited the greatest interest. There were a number of entries and the contest was close and exciting. The championship shoot lasted until late in the afternoon, and when the scores were finally footed up it was found that the title of State champion and the possession of the loving cup fell to Elmer Neal, of Bloomfield. The scores were as follows:

Voris .....2222222002211122220022 2*1—20
Hoosier .....2022*21221112222222222222—23
Neal .....22222212222222222222202222—24
Parsons .....20222222222222222221120220—22
Rike 22021220210w
Howard .....12212222222222222022*2222—23

Leeson .....22002220202222222*22222222—20
Cavanagh .....2002*1**10200011211010112—14
Adamson .....2222222**22221222102*2221—21
Courtney 202210*

Jack Parker, of Detroit, and Harry Fort, of Swanton, Vt., were tied with Neal at 24 birds, but were ineligible for the cup because they lived outside the State. Heikes was also an outsider, so his good score could not land him the trophy. The other scores were made by Indiana marksmen. Neal did excellent work all through the tournament, and the shooters present agreed that the coveted prize was well won.

The cup was won at the tournament last year by Ed Voris, of Crawfordsville, who relinquished the trophy and title of champion to Neal with the best of feeling, and notice that he would be present to win it back next year.

Following the championship shoot were two handicap events of 5 birds each, with the following scores:

No. 1: Voris, 31yds., 5; Neal, 32yds., 4; Fort, 32yds., 4; Dunbar, 28yds., 3; Parker, 32yds., 5; Hoosier, 32yds., 5; Howard, 29yds., 5; Leeson, 26yds., 5; Cavanagh, 28yds, 5; Erb, 30yds., 4; White, 27yds., 4; Williams, 26yds. 4; Jack, 27yds., 3; Adamson, 29yds., 5; Newcomer, 26yds., 3.

No. 2, with the same handicaps, resulted as follows: Neal 5, Leeson 5, Fort 5, Voris 5, Dunbar 4, Parker 5, Cavanagh 5, White 3, Newcomer 3, Jack 3, Adamson 4, Williams 4, Hoosier 3.

Fred Erb, of Lafayette, Ind., was present with his kennel of fine trained dogs, which did the retrieving in all live-bird events, adding much to the interest. The dogs worked splendidly.

The many visitors returned home Friday evening, expressing themselves as well pleased with the second tournament, and promising their attendance at the future meetings.

Wayne Leeson is captain of the Zoo Club, and the committee having charge of the tournament consisted of Wayne Leeson Dr. M. L. White, Carna Williams, Nona Harbit, Charley Smith and W. J. Carleton. M. L. White is president and J. M. Livingston secretary.

Random Notes.

Neal had the keys of Madison country presented to him.

Tripp enjoyed the trip to the tinplate—he was chairman of the committee that opened the tinplate works here in 1892.

Somebody ask Neal to see his diamond ring.

Courtney doesn't like to walk, but says he shoots the best gun made.

Parker can hold a shoot in Elwood every week and make the boys feel good.

Watch us next year.

SECRETARY.

Virginia Trapshooters' Association Tournament.

RICHMOND, Va., May 25.—I would be pleased to have you announce in your columns the dates and place of the second great tournament of the Virginia Trapshooters' Association. This tournament, as last year, will be held under the auspices of the West End Gun Club, of Richmond, Va., and will be on Labor Day and the day following, Sept. 2 and 3, 1901.

As you may recall, this Association last year gave one of the largest tournaments ever held in the United States, 130 men taking part in the various events, shooting at 19,825 targets.

The Association is now regularly organized (which was not the case last year), and is composed of fifteen clubs, as follows: Chesapeake Gun Club, Newport News, Va.; Portsmouth Gun Club, North Side Gun Club, Barton Heights, Va.; Blue Ridge Gun Club, Roanoke, Va.; Wytheville, Va., Gun Club; Ashland, Va., Gun Club; Lynchburg Gun Club, Staunton Gun Club, Charlottesville Gun Club, Lawrenceville Gun Club, Norfolk Gun Club and the West End, East End, Deep Run and Lakeside clubs, of Richmond, Va. These clubs have in the aggregate a membership of over 400, and the way they will flock to Richmond on Labor Day will be a surprise to the talent.

The two great features of the tournament this year will be the team race the first day between five-man teams from the several clubs for the club championship cup, which was last year won by the West End team from a field of eleven competing teams, each team shooting at 250 targets.

On the second day there will be a race at 100 targets for the individual championship of the State for 1901, a gold medal to go to the winner.

The balance of the two days' shooting will be for merchandise prizes and sweepstakes. Handsome programmes of this tournament will be issued in due time. Every shooter in the United States is invited to take part. They are barred from merchandise prizes, but can shoot for sweepstakes to their hearts' content. Manufacturers' agents are barred from all competition, but Virginia will be more than glad to see them all. They will find here a field well worth cultivating, as those who have been among us well know.

Not less than three sets of traps will be used at this tournament, and if the attendance justifies it, several more will be quickly put down.

I thank you in advance for any assistance you may render toward promoting the second tournament of the greatest State organization of trapshooters in the United States.

FRANKLIN STEARNS,
Pres. Virginia Trapshooters' Association.

Sherbrooke Gun Club.

SHERBROOKE, Can., May 20.—The coming Interstate tournament at Sherbrooke, July 1 and 2, has stimulated more than the usual interest in the sport, and several new members have taken up trapshooting this season. The club is in its seventh year, and has become one of the permanent institutions of the place. Every Saturday afternoon sees an enthusiastic lot of shooters and spectators at the grounds, and many ladies and gentlemen who never shoot find the club house veranda a pleasant place to spend an hour or two.

A series of handicap matches was begun on May 11, to continue through the season. Twenty matches at 25 targets each will comprise the series, the winner of the greatest number taking a gun cabinet. At least twelve matches must be shot to qualify. Each winner goes back a yard after each win. Ten shooters opened the series: Walton (18) 20, Loomis (16) 17, Foss (14) 17, Craig (18) 16, White (18) 14, Thompson (19) 14, Ingalls (14) 13, Matheson (14) 13, Cockroft (13), 13, Hood (13) 13.

On May 18 the result was: Craig 21, Loomis 19, Ingalls 17, Walton 15, Thompson 15, Bray 15, Matheson 15.

It rained, strange to say, and many thought there would be no shooting, so the attendance was small.

Several members of the club will attend the Westmount tournament on May 24. They always like to go to Westmount. It is one of the nicest places to go to, and Sherbrooke and Westmount have become somewhat related. JES.

Southeastern Iowa Amateur Shooting Association.

DURING the last year there has been a great deal of agitation toward forming a league of the gun clubs of southeastern Iowa. In order that some definite action could be taken on the matter the Ottumwa Gun Club called for a meeting of the clubs of the above-named portion of the State for April 25, 1901.

The meeting was held at Wheeler's gun store, in Ottumwa, and the following gun clubs were represented: Osceola, Centerville, Oskaloosa, Williamsburg, Pella, Waterloo, Marengo and Ottumwa. George W. Guinn, of Centerville, was elected temporary secretary and Lee Wheeler, of Ottumwa, secretary. Dr. Douthett, of Osceola, stated the object of the meeting.

After the matter had been discussed at some length it was decided that the organization be known as the Southeastern Iowa Amateur Shooting Association. The following officers were then elected: President, Dr. D. K. Douthett, of Osceola; Vice-President, L. T. Crisman, of Ottumwa; Secretary-Treasurer, Lee Wheeler, of Ottumwa; Captain, J. W. Knapp, of Centerville; Executive Board, President, Vice-President, Secretary and C. L. Holden, of Marengo, and A. F. McFarland, of Osceola.

The membership fee was made $2.50 for clubs, or 50 cents for individuals.

It was decided that two or more tournaments should be held each year at such places as the executive board decides, and that each club of the Association contribute $10 to each tournament, to be used as added money in the events of the tournament.

The first tournament of the Association will be held in Osceola about the third week in June, and a very interesting programme is assured,

LEE WHEELER, Sec'y.

Iowa State Tournament.

Newton, Ia., May 17.—The twenty-fourth annual tournament of the Iowa State Sportsmen's Association had a larger attendance than at any meeting of the Association for the past five years. The weather was pleasant. The shooting was from two sets of traps, Sergeant system, and about 20,000 targets were thrown.

The convention was held on Wednesday evening. Ottumwa was selected as the place for holding the next convention and tournament. Dr. W. B. Kibby, of Marshalltown, was elected President; Geo. Macartney, of Des Moines, Vice-President; T. T. Crisman, of Ottumwa, Secretary; Walter Gephart, of Ottumwa, Treasurer; Joe Kersher, Dr. Kibbey, W. R. Milner and Geo. Macartney were appointed Legislative Committtee. D. Tripp, C. W. Budd, Dr. Douthett, Fred Gilbert and Ed Rothrock were elected directors

Just before the convention was called to order, Mr. Tom A. Marshall, in behalf of the sportsmen present, in a neat little speech, presented Mr. W. T. Irwin with a fine grip. Mr. Irwin has many warm friends among the sportsmen, and is one of the oldest trap shots in the West.

After the convention was over the Newton Gun Club gave a smoker to the visiting sportsmen.

Mr. F. C. Whitney, of Des Moines, had charge of the cashier's office, and Dr. Kerr made a good squad hustler, and kept things moving nicely. The business men's association gave the American team which sails on Sunday, the 26th, for Europe, a banquet at the Churchill. The Hon Tom A. Marshall, captain of the team, was called upon for information in regard to contests abroad. Mr. Marshall responded by giving a full account of how the matches came about, how many and when they were to be shot, and closed his remarks by saying his team would use every effort to return victorious in all the contests. Major Long then presented the team with the keys to the city, which would unlock all but the city treasury, and, for reasons he would not mention, he thought best to retain this key until the return of the team from Europe.

The Newton Gun Club is deserving of much credit for so ably managing the tournament. In the contest for the L. C. Smith cup, Mr. Selbhers, an amateur, and a member of the Newton Club, was the only one to make a straight score, and won the cup. In the team shoot for State trophy Kline and Gilbert, of Spirit Lake, made straight scores, and won the cup. Sixteen teams were entered. The conditions were 25 live birds per team. The birds were a good lot, and as fast as a member of a team lost a bird the team withdrew.

Marshall, Parmelee, Gilbert and Budd leave for Keithsburg tomorrow morning, where a reception will be given them to-morrow evening, and on Sunday morning will start for Springfield to attend the Illinois State tournament.

First Day, May 15.

Hawkeye.

Twin City Cun Club Shoot.

The Twin City Gun Club, located midway between Peoria and Pekin, on the Illinois River, gave an excellent two days' tourney on May 16 and 17. Chan Powers made another one of his excellent records, carrying off first honors, while A. C. Connor was second and Guy Burnside third. Expert traps were used, throwing targets by the Sergeant system. The scores are appended:

F. C. Riehl.

Intercity Shooting Park.

Minneapolis, May 11.—The events of this summer's sport will be the contest for the Chas. Thompson and the Jacob Danz trophies. The first is a beautiful loving cup; the second is a very handsome silver tea set. The conditions of this race are 300 targets to the man, shot in strings of 25, each Saturday. After the last race a shooter's total score will be figured, and to this his handicap will be added. In case of any ties the race will then be at 100 targets, with handicap allowance.

The above shoot is under the auspices of the St. Paul Rod and Gun Club, and the above-named race has increased their membership twelve in the past five days. The scores:

Events:	1	2	3	Events:	1	2	3
Hirschy	0	22	..	Danz	4	18	22
Slocum	3	25	19	Wilkinson	2	23	18

Henry	4	19	14	Alberts	7	23	20
Gotzian	3	18	29				

No. 1, handicap allowance. No. 2, St. Paul Rod and Gun Club cup. No. 3, Thompson-Danz trophy.

Schultz diamond badge, 25 targets, unknown angles: Parker 24, Hirschy 24, Biffton 19, Hays 17, Mrs. Johnston 19, Thompson 20, Spear 17, Danz 19, Jack 19, Wellaband 16, Johnston 24, Dezotell 20, Werrick 16, Dr. Bill 14.

Ties, 5 targets: Parker 4, Hirschy 5, Johnston 4. Hirschy won badge.

Paegel diamond badge, 25 targets, unknown angles: Parker 23, Hirschy 24, Biffton 21, Hays 22, Mrs. Johnstotn 19, Thompson 21, Spear 17, Danz 21, Jack 19, Wellaband 14, Johnston 20, Brown 21, Dezotell 18, Werrick 19. Hirschy won badge.

Val Blatz diamond badge, 15 singles, unknown angles: Parker 15, Hirschy 13, Biffton 15, Hays 12, Mrs Johnston 10, Thompson 13, Spear 11, Danz 7, Jack 10, Wellaband 9, Johnston 13, Dr. Bill 10, Werrick 7.

Ties: Parker 5, Biffton 3. Parker won badge.

Club badges, 10 singles and 5 pairs: Parker 15, Hirschy 16, Biffton 16, Hays 14, Mrs. Johnston 15, Thompson 13, Spear 9, Danz 10, Jack 11, Wellaband 14, Johnston 12, Dezotell 15, Werrick 12, Jones 15, Palmer 18.

Hirschy won senior badge. Dezotell won junior badge. Hays won amateur badge.

The Coming Anglo-American Match.

All the preliminaries for the Anglo-American match are satisfactorily settled, the acceptance of the challenge having been cabled last Wednesday. The match will be shot by teams of ten shooters representing each country, and will commence in the second week in June on the grounds of the Middlesex Gun Club. Five test matches will be shot on five succeeding days, and each team will shoot at 100 birds per man each day. The aggregate score of the three best days of each team will determine the winner. The stake is £500 a side. The conditions of shooting adopted by the two teams will be those used respectively in the two countries. The British team will use both barrels, carrying a maximum of 1⅛oz. of shot, while the Americans will be confined to the use of one barrel, with a maximum charge of 1¼oz. of shot. The relative efficiency of these two methods of shooting is much canvassed by those discussing the prospects of the British team, but the advantage, if any, is apparently with the home team. The American scoring, as a rule, is good, but frequent use is made of the second barrel. On the other hand, after a certain amount of practice the precision of aim with the first barrel is greatly increased, as a consequence of knowing that there is no reserve barrel in case the first scores a miss. No doubt the match will arouse a degree of interest in inanimate bird shooting not hitherto displayed in this country.—London Field.

Boston Gun Club.

Boston, May 23.—Thirteen enthusiasts battled with a tricky wind at the Boston Gun Club's grounds this afternoon, the occasion of their regular weekly shoot. To be sure nature had left the steam heat on by mistake, but every one was equal to the occasion, and soon was sitting round the platform in shirt sleeves for the first time this season.

Leroy's shooting brought forth lots of applause and most assuredly it was due him, as he did powder those targets in a most businesslike manner. The new gun seems to benefit him in more ways than one, if his percentage of the afternoon is any criterion, and we are more than wishing that he will keep up his present form on the European trip. Shooting from the 21yd. mark in all the events, just 8 targets were permitted to escape unscathed out of the 100 shot at, which goes to show that man, gun and charge were in the right place and at the right time. While he was doing such good work others were plodding along in the usual style, with Spencer's straight 15 as top-notcher.

The prize match had eight contestants, each endeavoring to better his competitor as much as possible. How well each succeeded can be seen by the scores: Leroy, 21yds., first, 22; Frank and Williams, 16yds., second, 20; Woodruff, 17yds., and Cole, 18yds., third, 17; Andres, 16yds., fourth, 16; Ford, 16yds., fifth, 15; Spencer, 18yds., sixth, 13. Scores below, all shooting unknown; distance handicap:

Smith—Cabanne.

Match for Mermod championship trophy, May 19. The birds were a good lot. Both men stood at 31yds. Dr. Smith was the holder:

Dr. J. W. Smith	2121222221120211121222221—24
Dute Cabanne	2221112022102 11*221*12122—21

Event 1, $2, miss-and-out, May 19: Dr. Smith 5, J. Cabanne 2, F. Meier 3, F. Orvis 5, Bowman 0, Walker 2, Mrs. Cabanne 2, Conrades 3, Spencer 5, Ed Prendergast 0, Brown 3, Clark 2, Pendy 5, Capt. Sedam 5.

Event 2, $2, miss-and-out: Pendy 7, Sedam 6, White 5, Orvis 4, Meier 7, Dr. Smith 7, J. Walker 6, Baggerman 6, Conrades 4, Dr. Morris 5.

Match, Dr. Gaines vs. Mrs. Cabanne, 15 birds. Mrs. Cabanne shot in excellent form, though she lost, and the birds were first class:

Mrs Cabanne	210112222222011—13
Dr Gaines	022221121212212—14

Cincinnati vs. Blue Grass.

Paris, Ky., May 14.—The return race between the Cincinnati and Blue Grass gun club teams resulted in a victory for the Cincinnati team by a score of 747 to 717. It was shot at Paris, Ky. The scores follow:

Blue Grass Gun Club—J. Q. Ward 48, T. H. Clay 47, Buckner 46, F. Clay 44, James 42, J. Ferguson 42, G. Clay 41, W. Thomas 40, S. Clay 40, J. Spears 39, E. Ferguson 39, B. Clay 39, Brennan 37, V. Ferguson 37, Bell 36, M. Ward 35, Crawford 33, T. P. Smith 32; total 717.

Cincinnati Gun Club—Phil 48, Rhoads 48, See 46, Maynard 46, Ahlers 46, Richmond 45, Goodman 43, Heyl 43, Trimble 43, Sullivan 42, Kirsch 41, Jay Bee 40, Fredericks 40, Dick 37, Robertson 36, Gambell 36, C. H. B. 34, Roll 33; toal 747.

Amateur championship of the blue grass region of Kentucky, shot at Paris, Ky., May 15, on the grounds of the Blue Grass Gun Club: Buckner 48, Brennan 46, J. Q. Ward 45, Allen 45, T. H. Clay 45, James 44, V. Ferguson 44, Kemper 44, J. W. Ferguson 43, Crawford 43, White 42, J. F. Clay 41, Mastin 40, E. Ferguson 40, J. M. Ward 39, Smith 36, Sellars 35, Oldham 31, Steele 26, Johnson 16, S. Clay 17, Moore 7, B. Clay 41.

PUBLISHERS' DEPARTMENT.

Canada, with its trout, its ducks and its big game, is much more easily reached than the average sportsman imagines. To make the wanderer's path more smooth, the Canadian Pacific has just issued two interesting pamphlets, one on "Fishing and Shooting in Quebec," the other entitled "Hints about Camping in Canada." Both are interesting, the former as giving localities, the latter as explaining the ways of getting about, prices to be paid, the kind and quantity of provision to be taken, and other matters. In the last there is some useful information about cooking in camp and some hints on taxidermy which cannot fail to be helpful. Either or both these pamphlets will be sent on application to Robert Kerr, Passenger Traffic Manager, Montreal, Canada.—*Adv.*

This week the striking full-page advertisement of the Winchester Repeating Arms Company announces facts interesting to all gunners. That the New Rival shells, loaded by the Winchester Company, possess such strength as to admit of reloading will tend to make them very popular. The factory loaded New Rival shells are thoroughly waterproof, are gas tight, and are loaded by exact machinery. In other words, they are the most modern thing in improved ammunition.—*Adv.*

A large and beautiful pamphlet, recently issued by the Jos. Dixon Crucible Company, of Jersey City, N. J., shows not only the various products of the company, such as pencils, graphite for lubricant, and for the hundred other purposes for which this material is used, but also the process by which it is prepared for its various uses. The pamphlet is fully illustrated, and a very beautiful piece of work.—*Adv.*

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 8, 1901.

VOL. LVI.—No. 23. No. 346 BROADWAY, NEW YORK

The trout fly is a "conventional" creation, as we say of ornamentation. The theory is that fly-fishing being a higher art, the fly must not be a tame imitation of nature, but an artistic suggestion of it. It requires an artist to construct one; and not every bungler can take a bit of red flannel, a peacock feather, a flash of tinsel thread, a cock's plume, a section of a hen's wing, and fabricate a tiny object that will not look like any fly, but still will suggest the universal conventional fly.—Charles Dudley Warner.

THE DEPTHS OF THE SEA.

FEW things are more mysterious to us than the depth of the sea. We read of them and of the fathoms of water beneath which they are buried, yet these great depths convey to the average man no meaning whatever. If we know that more than one-half of the actual surface of the globe is buried under more than two miles of water, that the Challenger found depths of more than 4,500 fathoms in the north Atlantic Sea, and that recently a United States vessel found near the Island of Guam a depth of 5,200 fathoms, none of these things mean very much to us.

We know also that the fishes and other marine life living at great depths in the sea are specially fitted to endure the tremendous pressures to which they are subjected by the weight of water in which they live, and that when they are brought to the surface and this pressure removed, they seem to fall to pieces.

Much has been written too of the strange forms of life found at these great depths, and one of their most unexpected peculiarities is that many of these forms of life are brilliantly colored. This seems very extraordinary, because it appears inconceivable that color should exist without light, and it is believed that sunlight does not penetrate the waters of the ocean to a depth greater than about 125 fathoms. In fact, it is said that sensitive photographic plates are unaffected beyond that depth.

Animals which live in subterranean streams in absolute darkness—such animals as are found in the Mammoth or Wyandotte caves—are almost always colorless and practically blind—that is to say, they have no eyes useful for seeing, although the rudimentary eye may be there. This lack of color and lack of eyes is supposed to be due to the absence of light. Why then should the animals of the deep sea, where the light of the sun does not reach, be often brilliantly colored and also be possessed of large functional eyes? These animals may be white, red, orange, purple or green, and they are often far more brilliantly colored than the invertebrates of the shallow waters.

In a lecture recently delivered by Prof. C. C. Nutting, of the Iowa State University, attention is called to these facts, and with regard to the colors of these deep sea animals he announces that we are justified in making these general statements:

1. The colors are often as brilliant as in shallow water.

2. The reds, orange, yellows, violet, purple, green and white predominate.

3. The colors when present are usually in solid masses in striking contrast, or else the whole animal is brilliantly colored. Fine patterns are very scarce and nature seems to have used a large brush in adorning her children of the depths.

It would appear that the presence of these brilliant colors in the deep sea inhabiting animals presupposes the existence of light in these depths. Without light these colors would serve no purpose, would have no reason for existing, and the animal should be white as is the case in the cave dwelling species. But if there is light in the depths of the sea, then colors in these deep sea creatures mean precisely what colors mean in animals inhabiting the shallow water or dwelling in the air—that is to say, they are protective, attractive, directive, as the case may be.

Moreover, we cannot conceive that colors are useful, except among creatures possessing eyes to see them, which the great majority of animals living in the deep sea possess. While it is true that there have been dredged up from a depth of less than 200 fathoms blind crustaceans and other invertebrates—some of which possess not even rudimentary organs of vision—it is also true that the majority of animals living at a depth of 2,000 fathoms possess eyes. These may be rudimentary or may be like those of their allies of the shallow water, or may even be huge.

From these conditions it is deduced that there is light in the depths of the sea, and, to account for the bright coloring of these deep water creatures, it is evident that this must be light of some brilliancy. It must be more than that given by the stars or the moon at night, for we all recognize that—to our eyes at least—colors, even in the brightest moonlight, cannot be distinguished. There is white and black and gray, but nothing that we can call color.

It is of course well known that a great number of fishes and marine invertebrates give forth phosphorescent light, and Prof. Nutting believes that the light of the deep sea is phosphorescent. The power of producing this light is possessed not only by free swimming forms of life, but also by those that are fixed, as corals, hydroids and other forms which are anchored to the bottom. He believes that this light tends to attract the animals on which these fixed forms of life subsist, and to bring them within the reach of the creatures that prey upon them.

Another fact brought out in Prof. Nutting's discourse, while sufficiently familiar to specialists, is not generally known. This has to do with the very uneven distribution of life on the sea bottom. In certain places the dredge will bring up a profusion of forms of animal life, while other places near by will prove absolutely barren, the dredge bringing to the surface nothing but sand and the débris of the bottom. Thus the distribution of life on the floor of the deep sea is as uneven as it is upon the land.

THE NEW YORK GAME SEIZURE.

WE reported last week the seizure of a large store of contraband game in the Arctic Freezing Company's cold storage vaults in this city. The search was continued through last week, under a warrant secured from Justice Meade, and the goods found by Protector Overton comprised 32,688 pieces of protected game, divided as follows: Grouse, 3,934; quail, 2,791; web-footed wildfowl, 1,056; protected wild birds, 24,819; Mongolian pheasants, 36; gray squirrels, 40; carcasses of venison, 12. This makes a total to date of 48,367 pieces of illegal game discovered on the premises of the Arctic Freezer Company.

A cursory examination of a few specimens of the confiscated game shows, besides the quail, grouse and deer, the following birds: Mallard duck, green-winged teal, golden and black breasted plover, English snipe, greater yellowlegs, lesser yellowlegs, upland plover, pectoral sandpipers, snow buntings, Lapland longspurs and bobolinks.

Abundant evidence has been found to sustain the opinion we expressed last week that quantities of the game found in this New York storage house were of game of which the dealers and cold storage people could never have acquired lawful possession. The game was on a par with stolen goods. It had been killed for market unlawfully and shipped to market unlawfully. For example, there were found barrels of game birds shipped by the American Express from points in Indiana directly to the Arctic Freezing Company. But the Indiana law, in force when these shipments were made, reads:

Sec. 2115. It shall be unlawful for any railroad company, express company or other common carrier, or any other person, to transport or take beyond the limits of this State any deer, buck, doe or fawn, any quail, pheasant, wild duck, grouse, prairie chicken or woodcock.

The exported Indiana game, then, was an illicit commodity; the shippers violated the law, the American Express Company violated the law, and the Arctic Freezer Company became party to the violation of law when it received the contraband goods. (Parenthetically, it would be a wholesome proceeding if the New York and Indiana authorities could co-operate to convict the American Express Company's offending agents in Indiana.)

Under these circumstances, the complaint of Mr. Robinson, of the freezer establishment, that his business was being interrupted is precisely the protest that might be made by a fence when the police raided his place.

The material gathered by Protector Overton affords abundant evidence to be used in the suits which will be brought against the law breakers; indeed it is understood that the cold storage people will admit the facts as to the number and species of the game found. They also give out that they propose to carry the cases up to the United States Supreme Court. If they shall do this, we may await the outcome with the utmost confidence that it will establish the constitutionality of the statute prohibiting the possession of imported game in the close season.

LITTLE WHIRLWIND.

Two weeks ago we called attention to the case of Little Whirlwind, the Cheyenne Indian, who, on perjured testimony, had been convicted of murder and sentenced to life imprisonment in the Montana State Prison. We urged the case on Governor Toole's attention, and expressed confidence in his willingness to examine into it and to do substantial justice.

It is most gratifying to announce that this has now been done. After a careful study of the case, Governor Toole has reviewed it at length and has recommended to the State Board of Pardons that the prisoner receive a full pardon. This action is only what might have been expected from a man of Governor Toole's record and experience. He has studied the case on its merits, unswayed by the narrow prejudices of locality, and has considered only the question of justice.

In his trouble, Little Whirlwind—like Spotted Hawk, a relative condemned to death for the same crime, but equally innocent—has not been wholly without friends. Besides one or two private individuals who have taken an interest in this case, the Hon. Cornelius N. Bliss, former Secretary of the Interior, and the Indian Rights Association have contributed money and interest to save him.

When all is said, however, Spotted Hawk and Little Whirlwind owe, the one life, the other liberty, to the law firm of Sanders & Sanders, of Helena. These gentlemen, who were not called into the cases until after the trials, have by means of legal knowledge, calm judgment and wise discretion, succeeded in protecting these innocent men from what was practically mob violence set on foot by the local officials of the county where the prisoners were tried.

Col. Wilbur F. Sanders, the head of this firm, is one of the ablest lawyers and most eminent citizens of the great State of Montana, of which he has been a resident since 1863. With the greatest credit to himself and honor to his constituents, he has filled many offices, from United States Senator down, and in all his State there is no man better known or more highly respected. In ability, integrity, stern adherence to principle and a glorious courage to fight in behalf of his beliefs, whether he has to fight merely an individual or a whole community, Col. Sanders stands forth as a model citizen and an example to those about him. The influence for good of such a man cannot be estimated.

A. B. F. KINNEY.

If you should happen to meet A. B. F. Kinney, of Worcester, and hear him talk on one of his favorite themes, "Our old Massachusetts partridge," you would reflect, "Here is a man profoundly convinced of the value of shooting as a recreation, and who is doing what he can to protect the game, not for himself, but for others." It is this public spirited nature of Mr. Kinney's long service in the cause of game protection that is the most deserving of recognition and praise. The person who is working strenuously for his own individual shooting interest we have ever with us, but in the field of game protection, as in others, those whom we delight to honor are the men who are prompted to give their time and their means for the public good. As chairman of the Massachusetts Central Committee and in various other capacities, Mr. Kinney has been a force in game protection. He has contributed freely not only time and money but hard common sense to achieving results, and has been a most valuable ally in all movements to save the game for the people. To him is due a generous share of the credit for the capital law prohibiting the sale of ruffed grouse—a law which has stopped the killing of grouse for market and has saved the bird from practical extermination. We quote elsewhere a pleasant personal sketch of Mr. Kinney as citizen, churchman and sportsman.

Here is another contribution to the sea lion subject. Oregon has put a premium of $2.50 per head on sea lions killed in its waters. An error in the wording of the law rendered the appropriation for the purpose unavailable; but the fishermen's union has raised a fund by private subscription, and the work of killing is now in progress. The sea lion in Oregon waters is charged with an enormous destruction of salmon and of fishing gear.

The Sportsman Tourist.

When the Logs Went Down.

Being the sequel to "Peshtigo Sam's Repentance," in issue of last week.

THE early days of spring had come. The voice of the young god was abroad through the land, bidding the dead world arise and cast off its frozen fetters, for the time of rejoicing was nigh at hand. The forest had not as yet fully awakened from its long winter's slumber, but there was a strange stirring among the tall trees in response to the summons of the god, like the restless movements of some heavy sleeper, half-aroused from his dreamings. Instead of the "cauld, cauld blasts" that swooped down from the north upon the frozen world, howling and shrieking through the stiffened, lifeless branches of the trees and piling up the snow in great drifts, the first low murmurings and soft sighings of the gentle south wind sounded overhead, whispering its message of hope and of balmy days soon to come.

These signs of the changing season were not unnoticed by Captain Jenkins and his crew of loggers. They had toiled hard during the long, cold, dreary winter months and had stripped acres upon acres of the surrounding forest of its richest treasures—its crowning glory of towering pines; and although their labors in this direction were at an end, the coming of spring but meant work of another kind for them. Down at the river the great mass of logs—the accumulation of the season's cutting—lay ready to be launched on their long journey to the abodes of men, so soon as the snows melted and the spring freshets swelled the volume of the river's water. Preparations for this new work had been going on for some days; everything was in readiness and the men waited impatiently for the command to move.

Long Tom Bartlett called to mind the vow—still unfilled—which he had at one time made to encompass the death of a certain big stag before the snows left the ground, and he therefore availed himself of the opportunity presented by this period of enforced idleness and went forth in search of his prey. This was in no wise his first endeavor of a like nature, for he had made many ineffectual attempts to outwit the ever-wary stag. The hunter tramped many miles on the trail of the big stag during these days of waiting. He learned many things about the ways of a hunted deer that were previously unknown to him, but there his success ended. Beyond an occasional fleeting glimpse of an antlered head, or the flash of a disappearing white flag, he never got within shot of the ever-watchful and resourceful quarry.

At last came the thaw, and Long Tom's hunting days were over for the time being. A warm south wind had been blowing for two days, and the temperature was steadily rising. One could almost see the snows melt and disappear before the eye. The mild-mannered river was the first to feel the effects of the south wind's breath—the first to show signs of life. Like a giant refreshed with sleep, it aroused itself and the first spree dispelled all gloomy thoughts. Old songs were sung with a fresh gusto; old jokes were told with a new relish as they packed their kits and made ready for their departure.

Sleep—heretofore a guest most gladly welcomed by the weary lumbermen—was not admitted to the camp until late that night, and even then her touch was light upon their drooping eyelids; so light that all through the night many a restless form stirred uneasily, and many a drowsy head was lifted with listening ear to catch the wished-for sound—the dripping of the melting snows.

One there was whom she forsook altogether, and that was Peshtigo Sam. His treachery to Long Tom—the lie he had told about the woman they both loved—stared him accusingly in the face; and to make matters worse, he owed his life to the man whom he had so basely deceived. He had intended to make a full confession before they broke camp, but the time had come and the words that would bring happiness to his rival still remained unspoken. The forlorn hope that with Long Tom out of the way he might eventually prosper in his suit kept him silent, but added nothing to his peace of mind. A guilty conscience is an unwelcome bedfellow, as Peshtigo Sam had discovered long ere this. The man with a sensitive conscience is poorly equipped for villainy, and Peshtigo Sam was not of the stuff of which successful villains are made; he therefore tossed uneasily in his bunk trying to decide upon some course of action that would serve as an atonement to Long Tom, and at the same time fit in with his own selfish inclination. He finally compromised with himself by postponing the meditated confession until they were out of the woods, or until he had again seen the object of his affections and learned beyond a doubt that his love was hopeless.

"All hands up!" Captain Jenkins' voice thus aroused the camp before daybreak the next morning. "Hey, there, Slim Jim," he shouted, shaking the sleepy cook. "Git out o' this. Git a move on an' git grub ready. We're goin' to bust camp to-day."

In a moment the place was alive with hurrying, bustling men, and by the time Slim Jim had the breakfast on the table the sleds were half-packed and the camp already had the appearance of being empty and deserted. That last breakfast was an all-important meal, and the men did full justice to the good fare.

When the logs went down it would be a different story, for in the days of toil about to come eating would be a matter of secondary consideration. How well the loggers realized this fact was evidenced by the quantities of food set forth by Slim Jim and the rapidity with which it disappeared down their capacious throats. After they had "eaten and were filled," they finished the packing of the sleds, and then with a chorus of good-bys to the drivers of the teams, the drivers of the logs shouldered their axes and other tools and started for the river.

When they reached the landing the men whistled softly to themselves or muttered an occasional oath under their breath as they gazed upon the swollen flood of water now rushing and foaming upon its way. Cakes of ice were whirled swiftly by, grinding themselves to pieces in their mad flight; in places where the banks were low the waters had overleaped their natural confines, forming new channels, so that the whole scene as far as the eye could reach was metamorphosed. The river, now thoroughly roused, rejoiced in its freedom after the long winter's bondage and shouted and roared in riotous glee, calling loudly to all things within hearing of its voice that spring had come at last.

"Let's git t' work, boys," Captain Jenkins cried, cheerily. "Here, Long Tom, you an' Bill White an' Jack Billings an' Peshtigo Sam start with the leaders. Git ready t' knock the chocks out."

"We kin git 'long without Peshtigo ef you need him anywhere else," Long Tom remarked, in an off-hand manner.

"No," said Captain Jenkins. "He goes with you. He kin hold his own with the rest of you at log drivin', can't you, Sam?"

"I reck'n so," replied the latter. "'Tain't allers the biggest ox what kin pull the biggest load."

Long Tom made no further objection. He merely shrugged his shoulders, and consoled himself with the thought that Peshtigo Sam might get drowned before they reached the settlements, in which event—well, he understood that widows had been known to marry a second time.

With skillful blows of the axe the chocks, or blocks of wood, that held the logs in place on the skids were knocked out and the first lot of logs was released, and gathering headway rushed impetuously down the skids into the turbulent water with a great splashing and commotion; here caught up by the flood they were hurried away on their long journey.

This is where the perilous work of the driver begins. The logs must be kept constantly in motion, and the men in charge labor like Trojans to prevent them from grounding in some shallow place, or, worse luck, from forming a jam in the first narrow bend they come to. Leaping from one slippery, rolling log to another, where a misstep may mean death, the driver watches over his charge like a shepherd over his flock, piloting it safely over all the difficulties of the way.

After the departure of Long Tom and the rest of the vanguard, the remainder of the logs was released, and the whole river for a mile or more was soon strewn with the floating sticks of timber, and the exciting work had begun. In the meanwhile the teamsters who had been left behind were not idle, and by the time the last log had rolled down the skids all was in readiness and the train pulled out from camp, the men merrily cracking their whips and making the forest echo with snatches of some rude song, glad at heart to be once more homeward bound.

From his hidden lair the big stag watched them until they were swallowed up in the wilderness and wondered greatly what this new move might portend. That night he cautiously drew near the recent abode of his enemies, marveling at the brooding stillness where but yesterday all was noise and disorder, and where danger ever lurked. The unwonted silence brought with it a feeling of peaceful rest to the heart of the hunted stag. He stood for a long time in the deep shadow at the edge of the clearing, gazing upon the abandoned lumber camp; but he dared not expose himself in the bright moonlight that flooded the open for fear of becoming a target for the rifle of some hidden enemy who had lingered behind.

Many days passed by and spring had come in all its glory before the big stag trod these new roadways through his former trackless domain—now, alas! so sadly altered and defaced—with his old-time freedom. In time he brought his mate with her fawn to this spot and showed them the deserted cabin, all overgrown with weeds and brambles, and told them the story of that dreadful winter when he had hung about this dwelling of their new enemies, risking his life almost daily that he might learn all their ways, against the time to come when they should overrun all the land, leaving death and destruction in their path.

Three days had come and gone since the logs were turned loose, and the drivers were in the midst of their exhausting labors, daily encountering and daily overcoming ever-increasing dangers. The angry flood into which the river had transformed itself grew mightier and more treacherous with every mile that was traversed, and the big logs were tossed about on its heaving bosom like so much driftwood. The men followed along the flooded banks through slush and icy water, and released the logs that were caught by the fringing trees and bushes. To venture out upon these slippery, tumbling "sticks o' pine" was to take your life in your hands, and yet these men had done this thing many times, and thought but little of the deed.

For bold recklessness and skill in their craft the men composing the vanguard excelled all others. They became heroes. To Peshtigo Sam the labor was a relief, and the ever-threatening danger acted as a tonic to his nerves. Long Tom and his friend Bill White laid aside their old grudge against him for the time being, and the feeling of ill-will between these three gave place to one of mutual admiration and respect for one another's courage, although no word was spoken to indicate this change of sentiment.

When Long Tom slipped and disappeared beneath the rushing water, it was Peshtigo Sam who caught his vanishing hand and dragged him from the very jaws of death onto the log which he himself had gained by a daring leap that meant death if he had failed in the attempt.

"Guess we're quits now," Long Tom had said as he clasped Peshtigo Sam's hand with a grip that meant more than words, when they were safe on shore again.

"'Twa'n't as bad as freezin' an' bein' eat up by them wolves," Peshtigo Sam had protested. "We ain't squar' yet."

When the logs jammed at the big bend it was Bill White and Peshtigo Sam who worked side by side in cutting it loose, where the slightest hesitancy or the least miscalculation meant a swift journey into another world, and when the jam broke and the men had rushed for shore at the first warning sound of snapping timber it was big Bill White who seized Peshtigo Sam as he slipped and fell and bore him bodily out of harm's way just as the great mass of logs rushed forward with the roar of an avalanche, crushing and grinding everything in their path.

Thus did these men of the woods toil together like companions in arms, risking their lives for one another without a thought of self; sleeping wherever the nights found them and getting their provisions—such as they were—from the crew following in their rear. But each day brought them nearer the end of their journey, and after the big falls were passed the worst of their labors would be over.

The longer Peshtigo Sam deferred his confession, the more reluctant did he become to acknowledge his treachery. Many a time was he on the verge of disclosing his secret to Long Tom; but the thought of the woman whom they both loved and the forlorn hope that success might some day attend his own wooing always restrained him. Possibly the affair might have terminated as he desired, had not the evil genius that had so far acted as his counselor suddenly deserted him and brought confusion upon him.

It happened at the falls. He and his three companions with several others of the crew were posted at that point, to keep the logs from jamming in the narrow channel through which the river rushed with mighty force, boiling and foaming in great white-crested waves about the huge boulders that strewed the way before it took its final plunge into the deep pool 30 feet below. At the mouth of the channel the river, now swollen to many times its natural size, was hurled back upon itself by the very pressure of the waters ahead, thus forming a broad and ever deepening whirlpool, and there all the trials and dangers of the drive seemed to culminate. Strive as they would the drivers could not keep some of the logs from being caught in this whirlpool, from which they were suddenly shot forth again athwart the current, where they created endless confusion in the ranks of the army of logs rushing by in a continuous procession with the speed of race horses.

Sometimes the logs approached singly or in pairs, and then again they charged down upon the narrow opening in solid phalanxes. During one of these assaults the inevitable happened. A log of enormous size and girth was suddenly caught in the whirlpool and thrown across the channel. So great was its length that it reached from one steep, rocky bank to the other, and in that position became jammed fast, forming a complete barrier across the river. In an instant the course was blocked; in an instant a violent tumult ensued. The logs in front, pressed upon by those in the rear, were raised on end and tumbled about in every direction in inextricable confusion. Thus arrested in their rapid course, the vast army of logs following in their wake charged upon the barrier, and soon the narrow channel was choken with an ever-increasing mass of huge timbers that formed a rough dam behind which the river began piling up its waters, striving to force its way through the obstruction. This was the jam which the drivers had tried so hard to prevent, and high above the crunching and grinding of the logs sounded the cursings of Captain Jenkins and his crew.

But there was no time to be lost. Every moment added to the difficulty of breaking the jam. Captain Jenkins called for volunteers to cut the big log—the original cause of the trouble. This was the "key log" of the jam, and when it was cut, if it were done speedily, the pent-up mass of timber would be liberated and many days of arduous labor saved. However, the man that undertook this task would incur a risk to which none of the crew was insensible, and there was therefore a moment's hesitancy on their part, as they thought of the dangers to be encountered. It was but for a moment, and then Bill and Long Tom stepped forward, and much to the surprise of every one—but of himself more than any one—Peshtigo Sam took his place beside them. He had no desire to die and could not tell what prompted his action; nevertheless he took the fatal step, and regretted it the next instant when it was too late to withdraw.

"Two kin do the business," said Long Tom. "I reck'n you'd better let me an' Bill 'tend to it, Peshtigo."

This plan met with the latter's warm approval, but he was afraid to appear afraid. He therefore simulated a confidence he was far from feeling, and replied:

"Why not me an' you, or me an' Bill? I ain't no slouch with the axe. Do y' think I'm 'fraid?"

"You're wastin' valuable time," Captain Jenkins interposed. "Why don't you draw lots t' see who'll go?"

"Good idee," Long Tom assented. "You hold the straws, Cap. The shortest one stays behind."

Captain Jenkins lost no time in settling the question. He held out the three fatal straws, and each of the three men drew one, while the rest of the crew looked on in silence. Long Tom drew the shortest straw.

Peshtigo Sam laughed nervously, and assumed an air of reckless indifference. Big Bill White evinced but slight interest in the proceeding. With him it was all a part of the day's work, and like Pet Marjorie's callous-hearted fowl,

> He "was more than usual calm,"
> He "did not give a single dam."

The two men fastened the life lines about their waists, and axe in hand started on their perilous undertaking. With difficulty they made their way over the barriers of logs until they reached the point of attack. Here they paused, and after a careful inspection decided that two logs would have to be cut in order to break the jam. They set to work with a will, on the alert for the first danger signal, and ready to seek safety in flight at the first suspicious sound of rending timber.

Peshtigo Sam had attacked the smaller of the two obstructions, while Bill was cutting an ever-deepening gash in the side of the big log which bore the brunt of the terrible strain. Suddenly there came a sharp cracking sound, and Bill scrambled for shore as the pile of logs trembled and began to move. A cry of distress rang out above the other sounds, and he paused and looked back. Peshtigo Sam was waving his arms frantically in the air, and shouting loudly for help.

"Fer God sake come help me," he cried wildly. "I'm caught, an' the logs are movin' down."

Bill stood irresolute for an instant, and then turned and began making his way toward the imprisoned man, heedless of the cries of warning from the men on the bank. He reached Peshtigo Sam's side, and a single glance revealed the cause of his plight. His log had parted without warning, although the other one on which Bill had been at work still held firm. The breaking of the log had relieved the strain on that portion of the jam and started a movement of the whole vast pile. Taken unawares, Peshtigo Sam had been caught between two of the moving logs, where he was now held a fast-bound prisoner. The threatening movement and stirring of the

jam warned both men that there was little time left for the work of rescue. At any instant the key log might snap asunder, and that meant a swift and certain death for Peshtigo Sam, with but slight hope of escape for his rescuer.

Bill swung his axe and sent the chips flying in all directions, as he attacked one of the logs that held Peshtigo Sam a prisoner. Few men could wield this implement as he could, and he now worked as he had never worked before.

"Y' can't make it, Bill," Peshtigo Sam groaned in an agony of terror. "She'll bust in a minute. I kin feel her goin'. You better clear out while ther's time."

The ringing blows of the axe was Bill's only answer.

"It's hell to die like this," Peshtigo Sam continued, with something like a sob in his voice. "I ain't ready t' die. Bill, I ain't treated you an' Long Tom on the squar'. Seein' as I'm a gonner, ef you git out o' this alive tell Tom I lied 'bout Sal. I didn't marry her, an' she ain't hitched onto nobody as fer as I knows. I was allers goin' t' tell Tom, but somehow I kept puttin' it off an' puttin' it off, an' now it's too late. You tell him, will you?"

The axe paused in the air over Bill's shoulder.

"Is that straight?" he demanded in stern tones.

"Honest Injun!" the other declared. "It was a mean trick, I know, but I couldn't give up Sal. She loves Long Tom, an' I was 'fraid ef he knew it he'd go back thar an' git her. His savin' me from freezin' to death made me change my choose, an' I figgered to confess; but it's too late now."

The axe descended with redoubled force and buried itself in the log.

"Won't you shake, Bill?" Peshtigo Sam pleaded. "Won't you call it quits, an' everything squared, seein' as I'm goin' t' pass in my checks?"

"Y' ain't goin' to—pass 'em in—to-day," Bill grunted between blows.

This confident assurance inspired Peshtigo Sam with renewed hope, and he watched each blow of the axe in torturing suspense. When the log was finally severed and he felt himself free at last, he became almost hysterical in his joy. He was too badly bruised to move without assistance, so that Bill was obliged to lift him to his feet, and thus supporting him with his strong arm he half-carried, half-dragged him over the heaving logs toward the shore. Long Tom sprang forward and met them half-way, and together he and Bill bore the helpless man to safety amid the cheering and shouting of the crew.

They were none too soon. There came a sudden loud report, the big log burst in twain and with a crash and a deafening roar the jam broke. The imprisoned logs were hurled forward by the raging flood of water in their rear, and with a deafening roar plunged over the falls into the deep pool below. Captain Jenkins and his crew sent up a great shout of exultation.

They camped that night at the falls, working in shifts by the light of bonfires to keep the passage clear and prevent a recurrence of the trouble from which they had so fortunately escaped.

Peshtigo Sam was resting easily, so far as his bodily comfort was concerned, but his mind was in a tumult of conflicting emotions. His secret was no longer his own, and he would now be compelled to acknowledge his duplicity to Long Tom and relinquish all claim to Sally. Why had he been in such a hurry to confess to Bill White? He might have known that Bill would save him, and even though they both had perished Long Tom would have discovered the truth for himself sooner or later. Now he would have to surrender all hope of winning the affections of the girl of his choice, while Long Tom stepped in and walked off with the prize. Truly it was an unfortunate state of affairs, and he felt very sorry for himself.

His meditations were interrupted by the approach of Bill White, with Long Tom bringing up the rear, and he realized that the unwelcome moment had come at last.

"I bin tellin' Tom you had somethin' t' say to him," said Bill, by way of introduction. "Jest tell him what you told me when you thought you was a gonner."

"You tell him, Bill; I can't," Peshtigo sam entreated.

"Not by a dern sight," Bill firmly replied. "Tell him yerself," and with that he turned away and left them.

The next morning Long Tom drew his friend aside. There was an expression of quiet happiness on his face that Bill had never seen there before.

"Say, Bill," Long Tom began, blushing like a school boy, "I wanter invite you to a weddin' what'll come off soon as we git back t' Green Bay, an' I want you fer my best man."

"Ain't it sorter rushin' things?" Bill inquired, dubiously. "Course I don't know nothin' 'bout Sal, but I allers had a sneakin' notion the gal herself had somethin' t' say 'bout this yere marryin' business. Leastwise that's bin my 'sperience."

"Oh, Sal's willin'," Long Tom replied. "Peshtigo Sam sez she allers was willin' ef I'd had sense 'nuff t' see it. Say, do y' know I'm sorter glad I didn't shoot that buck, 'cause ef 'twarn't fer him we'd never have saved Sam's life an' he'd never have confessed. He was a dern big buck, though."

"He was that," Bill agreed. "You must have it bad fer Sal if you're glad 'bout the buck."

"You wouldn't be s'prised ef y' knowed Sal," Long Tom declared.

"I ain't s'prised," Bill responded, after due reflection. "No, I ain't s'prised none; but I sorter got my doubts 'bout the business. It's a dern risky thing, b'gosh. Be you dead sot on it, Tom?"

"As sot as a settin' hen," Long Tom emphatically asserted.

"Waal, then," said Bill, resignedly, "ef you're that sot they ain't no use sayin' nuthin more. Count me in fer the funeral."

Where the Loon Laughs.

In Three Parts—Part Two.

EARLY the next morning the canoes moved across beautiful Lake Couchiching to the mouth of the Upper Severn River, indicated by an iron railway bridge thrown across it. This part of the Severn is a narrow and tortuous stream shut in by clay banks and broken at close intervals by small rapids and falls about which short portages have to be made. Half way down, the canoes are confronted with the problem of floating logs, and lumber booms stretched either straight across or lengthwise through the middle and edging gradually toward one of the banks to end at last in a "bag" of logs constituting an absolutely impassable barrier. By creeping among the floating logs and shoving them this way and that, gradual headway is made. The booms across the stream have usually an opening at either end large enough to let a canoe through; and the lengthwise booms are crossed by running the nose of one canoe atop and sinking the timber sufficiently to allow the other to scrape over. By nightfall the little saw mill town of Severn Bridge is passed, and camp for the night is made below. Next morning the expedition moves on, crossing Sparrow Lake to the entrance of the Lower Severn.

The whole character of the country seems to change from this point, the banks of the river rising high and almost sheer and formed of granitic gneiss, with pines clinging to every little point of vantage, and the stream flowing between with greater depths of dark color, and a new air of strength and majesty. It is the first real taste of the wilderness—the beginning of the end of human settlement. The wind sweeps through the high walls with a touch of coldness in it and with that keen tang of the forest that quickens the pulses of the town-bred man shaking off the shackles of convention at last and claiming his share in the joy of a common birthright. From this on no blade of grass is seen—nothing, indeed, but gray rock covered with stag-moss and lichen, masses of dark forest of white and red pine, with here and there a small oak or maple, and a sprinkling of juniper and spruce. Here and there along the banks of the river and lake the cardinal flower stands forth flauntingly against the background of dark green and slaty gray—a little shaft of vivid scarlet that comes upon one like a suddenly shouted defiance. The Indian or the French Canadian may pass it by all unheeding; but when the town-bred man meets it, his dripping paddle comes out of the water and he pauses to do instinctive reverence to the wonder and the beauty of the thing. More shy and modest, and crouching low at the feet of its splendid relative, the little water lobelia grows. Find a cardinal flower and go down on your knees by it, and you will come upon its timid little neighbor hiding in the shadow as if dreading discovery. From afar you may see the cardinal, but you must search for the lobelia if you would find it. Yet it is always there. Here and there, in little sheltered streams, by far and by far, you come upon patches of water lilies, with olive and green sepals and pink edges, pure white petals and perfect hearts of gold—smaller, daintier and sweeter-smelling lilies than grow in the southland.

The first stage of the next day's journey brings the two canoes to a rapids, the roar of which has been heard through the previous night. As the first canoe is swept down toward it, Kitchener stands up and makes a quick examination.

"All right, Sick Thing!" he shouts above the roar of the water, "We'll try it. When I give the word, paddle as though all hell were behind you and all heaven before!"

Then, as the first inrush of the water grips the canoe and whirls it forward, he shouts to the others, "Land, you fellows—land! Don't follow!"

The rapids is something lustier than he had expected, and disaster seems imminent. But he is an old voyageur, cool and quick, and with the most sympathetic wrist that ever worked wonders with a paddle. There is a boiling column of water spouting in the center that means destruction to the poor canoe if once it lay hold of it. The canoe sweeps forward, helpless in the grasp of a mighty force. In another instant that spouting devil that stands there waiting must have it. A lightning turn of Kitchener's flexible wrist, and the canoe sheers off, ducks under a mighty wave, and escapes.

"We're awash to the thwarts, Sick Thing!" he shouts. "Make for the shore and get the bags out."

The Little Officer Boy comes dancing down over the rocks with his camera in hand.

"Oh! oh! oh!" he shouts; "confound it, all you know! I missed that, and it would have made the bulliest kind of a picture. It was lovely when you shot under that big 'un. If it isn't too much trouble, you know, would you fellows mind going back and doing it over again?"

The Kitchener curses him softly in Moccasin—and that always hurts the Little Officer Boy's feelings.

"You seem a trifle wet, Sick Thing," Kitchener says a moment later when the bags are safely out of the water. "Just slip your clothes off and hang them up to dry. We might as well have a swim and lunch here, before we go on."

From this on the river widens into a series of beautiful little lakes and inlets, all fringed about and shut in by high headlands. A few miles further along, and it rushes through a narrow gorge, the whole body of it compressed into a fifty-yard channel. It goes through in swirling maelstroms and sucking undertows that snatch the control from the paddler's hands, but really mean no danger to the canoe, for the banks are smooth, the water deep, and the course straight. Below this is the Raggedy Rapids, a half mile dash of roaring water and gaping rock that no canoe could live through. The beginning of the portage stands out, fair and clear, on the left bank, and for this the canoe makes. The tump-lines are adjusted on the dunnage bags and a pair of paddles lashed lengthwise to the center thwarts of each canoe. Cyclops whirls a canoe about on the point of its nose, bottom up, and slips his head between the paddles. Then, grasping the sides in his hands, he proceeds to climb the precipitous bank of rock and slipping sand as unconcerned as though he were doing an everyday thing of the most commonplace character. Then the Sick Thing follows with a tump-line over the top of his head and a big dunnage bag resting in the hollow of his back. Before he reaches the top, his head has been nearly jerked from his shoulders, his breath comes in painful gasps, his hands and knees are cut and bleeding with falls, and he is bathed in perspiration.

"All right, old chap!" cries the Little Officer Boy, laden with another dunnage bag about as large as himself; "you're doing fine. Keep close after Cyclops or you'll lose the trail and get lost in the bush. Here comes Kitchener with the other canoe. If we get in his way, he'll swear horrid."

As the Sick Thing staggers along the trail, feeling that every step must be his last, he is turning a curious reflection over in his mind. Up to this point in his life he had taken it for granted that he knew how to walk; he now realizes that what he knows of the matter is very rudimentary. With twice his load Cyclops has climbed the face of a precipice without a slip, and now he is traveling at a kind of jog trot over every conceivable kind of obstacle with as much carelessness and certainty as though he were traversing a flagstone pavement.

"Out of the way, you fellows!" Kitchener roars.

They step off the trail into the bush, and Kitchener goes trotting by with a canoe on his shoulders and a couple of guns in his right hand.

"He's as strong as an ox, that chap," the Little Officer Boy remarks. "He and Cyclops are just the deuce and all at this kind of thing. I'm a bit soft myself. What do you say to a rest?"

"You are just saying that for my sake. Thank you for your kindness, but I can hold out a bit longer."

"I'll go ahead, if you don't mind. Take it easy, you know, and drop the blooming bag when you've had enough of it. I'll come back and fetch it when I get to the other end."

A few minutes later and the Sick Thing has the trail to himself. He moves slowly, picking his steps with the utmost circumspection, but missing his footing every yard or two, nevertheless, and with each such experience the dunnage bag swings to the right or left and gives his neck a further twist in the direction of ultimate dislocation. The solution of his troubles would be to set his load down, but something in him forbids the thought as unworthy of his manhood. He toils on, gasping and trembling, but grim and determined. Presently he meets Kitchener and Cyclops coming back for the remaining bags.

"Poor old chap!" Kitchener said kindly. "This is a deuce of a hard portage for you. It's a good three-quarters of a mile. Do you think you can stick it out?"

The Sick Thing says nothing, passing them without a word. He is not without appreciation of Kitchener's sympathy, but he has no breath with which to express it.

"Clear grit to the heels!" Kitchener shouts after him. "You're as right as they make 'em."

The Sick Thing's benumbed hands grip the tump-lines closer yet, and his whole body braces under the tonic of the compliment. He knows that he is far from deserving it—indeed, he tells himself now that he is only a doddering old man from whom the glory of youth has passed, and with it the courage to endure. Nevertheless, upborne by his friend's commendation, his determination to carry the intolerable load to the end is confirmed. There is only one thing that can prevent him. He may faint. He fights against the growing sickness which he recognizes as the forerunner of this disaster, and he strains forward with every ounce of force which his will can lend to his failing body. The Little Officer Boy comes running along the trail toward him.

"Oh, I say, old chap, you know!" he says, "You're like Jack Falstaff, larding the ground as you go. Let me take the beastly thing and you lie down and have a rest. You won't do it? Well, you're a tough one. All right; I'll go along with you and show you the way. It's only a few hundred yards more."

How the Sick Thing gets over the remaining distance he does not clearly know. He has an indistinct idea that the Little Officer Boy chatters without ceasing, and that he likes it and gets a sort of comfort from it, though what it is all about he has not the remotest conception. But at last he is at the water's edge, where the canoes lie, and he shoots the big bag over his head and drops down beside it. When Kitchener and Cyclops arrive, he is fast asleep.

"Let him rest a bit, poor old chap!" Kitchener says. "And while we are waiting, I am going to try a cast in that pool. There ought to be something good to eat in it, from the looks of things. See if you can't find me a young and innocent frog, one of you fellows, while I get my rod out."

In a few minutes, Kitchener, his hook baited according to his desires, has crept out upon the rocks to a point where the tail-end of the Raggedy comes swirling past, leaving a sheltered pool in the lee of the land. With his first cast, there is a quick strike, and the reel pays out with a shriek.

"He's a big 'un, a big 'un!" the Little Officer Boy shouts, beginning to dance with excitement. "For glory's sake, don't let him get off!"

The Sick Thing opens his eyes at the shout, and gets up with alacrity, forgetting all about his late sufferings.

"Any you fellows got any——" Cyclops begins.

"Stuff that brute up with tobacco and keep him quiet," Kitchener calls. "One of you fellows get the gaff out and bring it here. I've got my hands full with this chap. If it's a bass, he'll leap in a minute."

The line, which has been tense as a bow string against the curved rod, suddenly slackens. At the same moment Kitchener begins to pay out from the reel and then the fish leaps high in the air. But with the slack line which Kitchener had provided, the fish fails to jerk the hook from its hold—an ancient device of the bass—and he plunges again into the water, defeated and raging. The wary fisherman lets him take all the line he wants, keeping it taut only until such time as the intention to try another leap is shown by a sudden slackening, when he pays out quickly again. Three times does the bass try the device of the leap, and each time Kitchener defeats him with a slack line. Then, little by little, the line is reeled in, the bass fighting stubbornly for every inch of the way, but bass strength and bass courage cannot much longer endure this strain, and so it comes to pass in the

course of the next ten minutes that the doughty fish is brought into shallow water and there landed without the help of the gaff.

"A fine fight, a fine fish and the certainty of a fine supper," Kitchener announces. "And, now, gentles, let's away."

The canoes are floated, bags and what-not packed in, and the expedition moves forward once more. A few miles further down the Severn, another rapids is reached, but so wide and straight and free from rocks that there is no question about running it. Nevertheless, as the canoes shoot through the dancing water, the paddlers catch a fleeting glimpse of a gleaming white cross standing out from one of the banks, commemorative, doubtless, of the drowning of some unfortunate voyageur. A few miles below this camp for the night is made. While Kitchener is preparing the big black bass for supper, and Cyclops is getting the tent up, the Little Officer Boy goes back into the country upon an exploring expedition for blueberries. He returns in half an hour with his hat filled with the luscious fruit.

"Boys," he says, "I never saw so many blueberries in my life, and the partridges are so thick it's just disgusting. They've fed on those berries till they're too fat to fly. I was falling over them at every step. We'll have to stay here to-morrow and have a go at them with the guns."

"Season doesn't open until the first of next month," Kitchener announces quietly.

"Look here, Kitchener!" Cyclops says, growing suddenly excited, "there isn't any law of God or man that'll keep me off those birds. What the dickens did we bring the guns and the dog for, I'd like to know! A fellow that croaks about laws in such a country as this ought to have his head stove in and be fed to the pike."

"Oh, well!" Kitchener responds with an amused smile, "sooner than suffer an ignominious death at the hands of outlaws I suppose I'll have to submit. If the worst comes to the worst we can plead the necessities of hunger."

Plead nothing!" Cyclops cries, indignantly. "You talk as though there were a magistrate around the next point. Why, confound it all, we might stay here for a month and never see a human being. It's downright immoral to talk about laws under the circumstances."

"Right, child, right!" Kitchener responds serenely. "I stand corrected. As the poet says, 'there's never a law of God or man runs north of fifty-three.'"

"This isn't fifty-three by a long shot," Cyclops says sulkily; "but it's far enough north for a decent man to do any bally thing he wants to."

"There, there, Cyclops; there, there!" Kitchener answers soothingly. "You have ridden me down, and there's no need to trample me to death."

"Kitchener," says Cyclops in a milder tone, "have you got any——"

"Yes, yes, child; here's my pouch and my match safe, and you can get my pipe out of my coat if you can't find your own. I hope you'll not stop smoking for so many minutes again. It seems to get on your nerves."

Next morning, long before the others are awake, Cyclops steals off with his gun and the dog. Kitchener and the Sick Thing are roused at last by an angry malediction from the Little Officer Boy.

"What is it?" Kitchener exclaims, springing to his feet. "What has happened?"

"Here's Cyclops gone and hogged all the fun for himself," the Little Officer Boy cries. "He's sneaked off with the dog and he'll not leave a bird in the whole blooming country. I call it a dirty low mean trick to do a thing like that, and I'm blessed if I won't tell him so when he gets back."

"Oh, is that all? It isn't enough to get wild over. He'll be back by breakfast time, and you can have your go at the partridges later. Come along, Sick Thing; roll out of your blankets and get into the water."

A moment later they have their night woolens off and go shivering through the raw air of the morning to a point of rock where the river runs dark and deep. One after the other, they plunge in. The Little Officer Boy and Kitchener come to the surface at about the same time.

"Hello, where's the Sick Thing?" the Little Officer Boy exclaims, looking about him.

"Oh, he'll be up after a bit. He's the most swimmingest chap I ever knew when his hand's in. And I fancy he's beginning to feel a good deal more fit than when he started. Isn't the water jolly warm!"

"Yes; it's like coming in out of the cold to get into it. I wish that beggar'd come up. I'm getting anxious."

"There he blows!" Kitchener cries. "We thought you were lost, old chap! You're feeling pretty coltish this morning—eh?"

Half way across the stream the Sick Thing's head bobs to the surface and he blows the water out of his nostrils with a mighty sound.

"I haven't done the like of that," the Sick Thing shouts back, "since somewhere about the beginning of the century. Kitchener, I believe I'm getting to that state of body which the Americans describe as 'so's to be around.' I'm feeling fit as a fiddle. Don't wait breakfast for me—I'm going down the river for a bit of a swim."

"You are going to do nothing of the sort," Kitchener retorts peremptorily. "You are coming ashore at once for a rub down and to get into your clothes."

"All right" the Sick Thing answers with a good tempered laugh. "I suppose you know best. But, really, I feel fit for anything this morning."

When they are dressed, Kitchener sends the Little Officer Boy off in the canoe with a trolling line and an order for something weighing about seven pounds, for breakfast; and he then sets to work to build the camp fire and get the kettle boiling. In ten minutes the Little Officer Boy is back with a big black-backed pike; and thirty minutes later breakfast is ready.

"I'm not going to spoil my fish by waiting for Cyclops," Kitchener announces. "I'll keep his share hot, and we can go ahead without him."

Breakfast is finished and the matutinal pipes smoked out, and still Cyclops has not returned. The miscellaneous work of the camp keeps everybody busy for another hour, during the latter part of which a general disinclination for conversation is observable. At last the Little Officer Boy voices the general uneasiness.

"I believe the chap's lost, you know. It's the worst looking country back there you ever saw. Nothing but nasty little lumpy hills that you can't see over, and scrub and scraggly pine till your heart aches. I didn't tell you fellows, but I had to climb a big white pine to find my way back yesterday. One spot looks for all the world like another, and there isn't a landmark to swear by. I believe that Cyclops has gone grubbling along after the birds, just watching the dog and slipping the shells in, and never looking where he was going. I've been sick about the thing for the last hour. Will anybody come with me? I'm off to hunt for him."

"Yes," says Kitchener quietly; "I'll go with you. We'll take the guns and the compass. As the wind blows now straight against us, there is no use in trying to signal to Cyclops, for he couldn't possibly hear the shots. But the wind may go down, and the guns will be the best way I can think of to foregather with him. Sick Thing, I'll leave you to take care of the house. We ought to be back in a couple of hours. If we're not, don't be uneasy, for the compass makes us safe enough."

The Sick Thing settles himself down to do a little necessary sewing. There is a large rent in one of his garments which he decides may be remedied by a neat patch. He gets the sewing-huzzy out and selects a needle which he thinks to be of about the right caliber. After spending an exciting half hour in a perfectly futile effort to introduce the thread into the eye, he decides that what he needs is a larger bore. He therefore puts away his first choice and selects instead a darning needle of heroic proportions. The thread goes through the eye without the slightest difficulty. "This," he tells himself, "is something like it." He inserts the point of the needle in the cloth, and is astonished to find that it refuses to go entirely through. He therefore inverts the needle, lays the head against his leg and bears down upon it, with the result that he at once inflicts a painful stab upon his anatomy. Profiting by this experience he now uses a small stone as a means of ramming the needle. This proving eminently successful he proceeds to draw the thread through. His thread is so long, however, that the utmost stretch of his arm fails to carry through more than half of it. He therefore places his mending on the ground with the stone on top, and moves a yard or two away, from which point of vantage he is able to achieve his object. He is a good deal chagrined, however, to find that the thread, not content with going to its limit, passes entirely through the cloth and comes out in his hand. "What that thread needs," he soliloquizes, "is a knot." He digs the needle into the earth to keep it safe, and crawls back to the end of the thread. He makes a knot and examines it critically. "Not big enough," he decides. So he makes another one with the intention of sliding it down on top of the first. But instead of doing this the contrary thing makes itself fast about an inch higher. He now tries to make a third knot which will fit in between the two first. When he has finished it, he finds, to his intense surprise, that it stands half an inch above the second. Abandoning the knot problem as quite hopeless, he proceeds with his mending. By keeping the article to be mended on the ground and kneeling a foot or two away from it, he is able to draw the thread through to the knots without moving his knees. He has simply to lean back over his heels and extend his arm in the same direction over his head. He decides, after a few minutes of this, that sewing is an uncommonly good exercise. The problem of holding the garment to the ground while he does this, he solves by laying a large stone on top, and he thus has the smaller stone to use as a needle-rammer. Despite the most skillful manipulation of the rammer, however, he stabs himself with the needle over and over again. Sometimes it is the point that catches him; sometimes the head, and occasionally he gets both of them at once, the head going into his hand and the point into his leg. "I believe," he says, reflectively, "that this is how Kitchener learnt to swear. It certainly is very aggravating." He finds on examining his work, when he thinks he has made some progress, that the thread, instead of passing through evenly, has left a lot of various sized loops on both sides of the cloth. Moreover, the patch will not lie flat, but insists upon humping itself into annoying festoons. The thread being by now short enough for closer operations, he takes his sewing on his knee, and proceeds calmly with it. He thinks he is doing finely in this position until he discovers that the last five stitches have firmly attached the leg of his trousers to the article being mended. Then he repeats rapidly all of Kitchener's profanity that he can recall, cuts himself free and flings his sewing into the tent.

His watch tells him that it is half past twelve, and he decides that he must get something to eat. There is no sign of the absent men, and as yet he feels no anxiety about them. He starts up the fire and puts on the kettle. Tea is the only thing he knows how to cook, and he is largely theoretical about that. In the course of half an hour he has made about two quarts of a very inky brew, which he is surprised to find quite unlike anything he ever tasted. By adding large quantities of cold water, however, it becomes fairly palatable, albeit somewhat chilly, and with this and hardtack he makes a lunch which, though not exactly appetizing, satisfies his hunger. Then he sits down to smoke and wait. By three o'clock, there still being no sign of his friends, he becomes anxious. As the wind still blows strong from the same quarter, he knows there can be no use in attempting to signal with the gun. All that he can think of doing is to wait until nightfall and then build a bonfire on the high land back of the camp. For this purpose he gathers all the available wood and carries it up to the point he has selected. Six o'clock comes and still they have not returned. He eats a miserable supper of hardtack and cold water, being too unhappy for anything more ambitious, and then sits watching the slowly darkening sky. Shortly after seven, he climbs to where his wood is stacked, and starts his fire. He sits before it, feeding it, and listening intently. The sky is completely overcast, with not a star showing, and no sound comes to his strained ears but the mournful whine of the wind through the trees. The stillness is terrifying. Out of it there suddenly comes to his alert senses the startling sound of a far-away laugh. It is so human and at the same time so weird a sound that his heart stands still. It is like the laughter of a maniac—wild, disordered, uncanny. His first thought is that it is one of his friends, gone mad with hopeless wandering in a desolate country. But immediately on the heels of that fancy comes the recollection of a sentence in Kitchener's letter—"the land where the loon laughs in the hush of the night!" That is the satisfying explanation—it is a loon and nothing else! He piles the drift-wood high upon his fire and watches the flames leap upward. Surely so vivid a point of light must be visible for many miles! It must guide the wandering steps of the lost ones—are they all lost by now?—back to the safe shelter and the comfort of the camp! Taking solace in the thought, he sits on the ground with his back to a rock, and watches the fire. From it he occasionally casts a furtive look into the black of the night about him. But instantly his eyes revert to the fire. He is shut in on all sides by an eternity of void space. The whole of his world is the few feet of ground between his rock and his fire. When he has to get up to add another log to the flames, he moves with trepidation. A step beyond the line of light would mean a plunge into black space, thereafter to fall forever. From the far shore of the river comes the plaintive grieving of a whip-poor-will, three long, sad notes, and then silence again. The weary hours creep forward laggingly, broken only by the work of feeding the fire and by mournful and terrifying sounds that come to him out of the desolate forest about. The last time he looks at his watch he finds it is past midnight. Then a new sound comes to his ears, borne from afar by the breeze, that brings him to his feet with a jump. There can be no mistaking it—it is pleasant human voices shouting a rude chorus. He cannot hear the words, but the dear familiar tawdry tune shapes them for him.

"It's the soldiers of the Queen, my lads."

He stretches wide his arms and shouts in the teeth of the breeze, his full heart choking him, "Kitchener! Kitchener! Kitchener!" He knows his voice will not carry half the distance that still separates them, but still. from sheer joy, he continues to shout as he piles fuel upon his beacon fire that is casting its light afar and bringing the lost ones home again. How they meet at last, and spend the rest of the night in feasting and singing; how he is told that the needle of the compass got off its axis and was of no use to them, and how at last they foregathered with Cyclops by getting to windward of him by chance and his hearing the faint bang-bang of their guns and running them down just about sunset, is afterward a confused and delightful recollection to him.

WILLIAM EDWARD AITKEN.

Natural History.

Intelligence of the Wild Things.

BY HERMIT.

The Red Squirrel.

(*Continued from page 825.*)

BISMARCK did not always hide bread beneath pine needles or leaves. At a certain season of the year the trees about my cabin were made into storehouses. This season was governed by the bluejays. When they were nesting they did not come to the cabin and Bismarck could store food in the trees without fear of being robbed.

My attention was called early to the fact that a gale of wind did not dislodge the pieces of bread which the squirrel had stored on the limbs of a hemlock tree. I found that each piece was held in place by a small twig. Scores of times afterward I saw Bismarck lift up a twig with his hands and then push the piece of bread with his nose to the junction of twig and limb. Of course the natural spring of the twig held the bread in place.

Bismarck always stored mushrooms in the trees, for he knew that the bluejays did not eat such food. He would drop the stem of the mushroom between the prongs of a forked limb, if there was cap enough left to hold the same in place, otherwise he treated it just as he would a piece of bread.

How Bismarck acquired a knowledge of the edible mushrooms is a mystery beyond my powers. Doubtless, when he attended the Chickaree College, he studied natural history instead of the dead languages. He knew how to harvest mushrooms. He gathered them soon after they appeared above the ground. Gathered thus, they would keep several days, while a few hours' growth would spoil them if left in the ground.

Bismarck knew how to eat mushrooms. He did not begin on the freshly gathered ones; he knew they would keep, and he selected those that would decay shortly. Human beings eat the specked apples from motives of economy, and the same impulse controls the squirrel.

In the woods about my cabin grow many varieties of the poisonous mushrooms. One deadly variety—the "Destroying Angel"—possesses a form most pleasing to the eye. Its symmetrical shape and pearly white color give it a look of innocence that has lured many a human being to an early grave. I have never seen a toothmark by a squirrel, mouse or mole in one of these deadly mushrooms, which goes to prove that the wild things know more than some human beings.

A few years ago, while out on a walk with the Appalachian Mountain Club, I told a professor, who was an expert on mushrooms, that I used the mushrooms which were approved by the squirrels, and no others. He said that I was risking my life, for he claimed that squirrels could eat poisonous varieties that might kill human beings. I thought that the professor knew more about mushrooms than he did about squirrels, so his warning was wasted on me. Up to date I have found the squirrels all right and I feel no fear when eating what they eat.

For years I attended a squirrels' school, and Bismarck was the schoolmaster. He taught me many things relating to squirrel life. Much of the knowledge acquired was wholly unknown to me before.

When Bismarck first introduced himself to me I think he was an old bachelor or a widower. Three years later he excavated a storehouse in a bank, beneath a boulder,

and made a sleeping nest in a pine tree, both in the dooryard. The storehouse was used but little after the first winter. The next spring he took to himself a mate, but did not introduce her to the dooryard. Some distance from the cabin, in a swamp, Bismarck's mate made a neat little nest in a hemlock tree. Here she reared two baby squirrels. Bismarck did not take much interest in his family through the summer. He spent most of the time in the dooryard, sleeping in his own nest by night. By day his time was occupied in fighting the crows and in driving squirrels and birds from the dooryard.

There was always a good lot of food for Bismarck to choose from, and I thought he would give up hard work and lead a life of ease. But I did not know the thrifty ways of the red squirrel. When the harvest season for hazlenuts drew near, Bismarck buckled down to hard work. He began his new life by calling often on his family in the hemlock tree. One day I found Bismarck and his wife digging beneath a pine tree that grew on the high land just out of the swamp. They brought out a great quantity of pine rootlets during the next two days. There was not much soil, which indicated that the squirrels had discovered a natural cavity, partly filled with pine rootlets. The third day, about 4 o'clock in the afternoon, the work stopped. Mrs. Bismarck ran to a pine root, sat up straight, folded her hands and said something. Mr. Bismarck ran to her side, folded his hands, and made a reply. Both squirrels looked toward the hole beneath the tree by turning half way round. Then they looked at each other, and Mrs. Bismarck ran into the hole and immediately appeared and said something that sounded very much like "it is well." Then both squirrels scampered away. The winter storehouse was completed.

When the hazlenuts were ripe Bismarck and his mate began to fill the storehouse. Bismarck gathered the nuts about the cabin, while his mate gathered those around the home nest. Bismarck did a lot of running, for he carried but one nut at a time. He always worked under high pressure, running to and fro at the top of his speed.

I noticed that he left many nuts on the bushes, but when I investigated I found a worm in each nut—a good reason for rejecting them; but as the husks seemed perfect, how did Bismarck know the worms were there? I think his keen scent was the secret. By the sense of smell he could tell a wormy from a sound nut. So could I after the nut was smashed, but not before.

After the hazlenuts, beechnuts were gathered. But right here competition was too great for the squirrels. The bluejays haunted the beech groves and could load up with from twelve to eighteen nuts, then could use their wings against the squirrels' legs, so the latter were usually short on beechnuts.

The acorn followed the beechnut crop, and as the woods of Cape Ann are made up mostly of oak trees, there were usually nuts enough for Bismarck's family and to spare.

Besides being a hard worker Bismarck proved to me, in many ways, that he was quick-witted and resourceful. A sweet acorn tree near my cabin was loaded with nuts. Beneath the limbs on the south side was a carpet of pine needles, while under the limbs on the north side grew a dense mass of brambles and cat briers. Bismarck did not drop a nut into the mass of briers, but carried each nut—one at a time—to the clear side before dropping it. Could human intelligence do more?

When Bismarck and his mate had stowed away food enough for winter, they made a winter nest in the pine tree that grew above the storehouse. In the new nest the whole family passed the winter after the manner of red squirrels.

The two baby squirrels for the most of the harvest time remained in the nest or on the hemlock tree in which the nest was located. Now and then they followed the mother to a nut tree, but were so noisy that I imagine the fear of enemies caused the discreet mother to drive them home.

When the family storehouse was well filled, Bismarck stored a few nuts in the hole at the cabin. I think he would have stored more if it had not been for the alert wood mice. He hid a great many nuts around boulders and trees. These nuts were used in the winter, and often lasted until late in the spring. In the spring, when the nuts started to grow, Bismarck dug them up, bit off the sprouts, and buried them again.

When the nut crop is a failure the squirrels are face to face with a famine. Long before the nut season approaches the squirrels know that they must depend on other food for the winter's supply. During one year of failure I carefully noted how Bismarck conducted himself, knowing that he would teach me how the red squirrel provides food when his main supply is cut off. When September warned the squirrels that the season for providing food for winter was on, Bismarck turned his attention to the corn in the dooryard. Years before he had stored corn, when he was obliged to compete with the bluejays and chipmunks. The latter could carry away from fourteen to nineteen grains, while Bismarck's load was but two grains. He soon evened things up by hiding corn in the dooryard, or near it. When the supply was exhausted, and the bluejays and chipmunks had disappeared, Bismarck would dig up his corn and carry it home. It was sharp practice, but the squirrel was justified, when we consider the circumstances. For several years prior to the famine, Bismarck had dropped the habit of storing corn, and only gnawed out the germ, leaving the mutilated grain for the bluejays and chipmunks. Now, Bismarck undertook to store corn, hiding it as of old, but I vetoed the act, by withholding the corn. The squirrel then turned his attention to a black cherry tree, and with the aid of a chipmunk soon stripped it of fruit. I think the chipmunk gathered the fruit for the stone. He gathered an enormous quantity and surely could not make use of the soft part. The red squirrel may have gathered for immediate use and also for a winter supply.

Bismarck's next move was a great surprise. I caught him carrying bones to his storehouse.

One summer I saw Bismarck sitting on a stone wall, apparently eating a bone. After he got through he hid the bone in the wall. I found that the bone was old and partly decayed. I smashed up similar bones and Bismarck seemed to relish a meal three or four times a week, but I never knew him to store bones for winter use before. His next move was to attack the pine cones. These were gathered while quite green. They were left on the ground three or four days and then carried, whole, to the family storehouse—a great quantity was stored under stumps, trees and boulders. The hemlock cones were gathered later, but were husked at the foot of the tree on which they grew.

During the following winter Bismarck looked to me for food. A loaf of bread was wired to a post near the cabin door, from which he could eat, while he could not carry it away. One cold, rainy day, he sat by the bread without eating, and whimpered like a little child. He was telling me in squirrel language that it was cold, rainy, and almost night, and that I ought to give him some bread to take home to his family. I understood his appeal and passed him a biscuit. He scampered away chuckling over his good luck. After that, fair or foul, all through the winter days, he would beg for bread to take home, and always chuckled when he got it. Perhaps he was laughing at me for being an easy mark, or it may have been a squirrel for "I thank you a thousand times." However that may be, he was welcome, for I thought of the baby squirrels starving along on a cone seed diet.

Bismarck would eat all kinds of meat—even fat pork—but he preferred cooked meat to raw. While the famine was on he turned his attention to many kinds of food found in the woods. I made a record of each variety and religiously tasted of everything he used. Frozen barberries and chokeberries were preferred to all others. I found the barberries had lost much of their usual sourness; the chokeberries were sweet and palatable. While the former remained on the bushes through the winter, the latter were soon exhausted, for they were food for quail, grouse, bluejays and mice. The berries of the greenbrier, staghorn, sumach and rosehips were used sparingly. The greenbrier berries had a sweetish taste; the staghorn sumach were sour and puckery, while the rosehips had a pleasant flavor at first, ending in a most disagreeable bitter. Many mushrooms were caught by an early frost and remained frozen through the winter. These were food for Bismarck. He would gnaw out the under part, or gills, rejecting the rest. I tasted the food, but cannot say that I care for frozen mushroom.

In the spring pussy willow buds formed a part of Bismarck's food. I found the buds nearly tasteless, but they crunched between the teeth like a crisp cucumber. As spring advanced, creeping wintergreen and partridge berries appeared here and there where the sun had melted the snow, and Bismarck greedily devoured the bright red berries. Later berries formed the greater part of his food until the hazlenuts were ripe. Wild apple trees abound on Cape Ann, and Bismarck attacked the fruit early in the fall. He destroyed great quantities for the seed, which was the only part stored for winter use. However, he seemed to relish an apple, if it was not too sour, and all through the winter he would eat a Baldwin apple, even to the seeds, at one sitting.

The history of Bismarck through a year of famine is the history of other red squirrels on Cape Ann. It is evident that the red squirrel is famine proof. If the nut crop is a failure, chickaree turns his attention to other food sources, and by perseverance and hard work is able to keep the wolf from the door.

For years Bismarck and the bluejays have matched wits. After nesting the bluejays would flock to the cabin and impudently appropriate all the food found in the trees. Bismarck seemed to know that it was useless to store food longer in this way, so he would bury it beneath the pine needles. The jays were soon onto this trick. When I threw a piece of bread to the squirrel he would start at once to hide it, while the jays would follow him, keeping in the trees, just out of reach. The moment he left, the jays would fly down, dig out the bread and carry it away. It often happened that Bismarck would fool the robbers by pretending to bury the bread. He would dig a hole, cover it over, put down the pine needles, but would run away with the bread in his mouth. While the jays were scratching the pine needles right and left, in a useless search, Bismarck would hide the bit of bread and return to the dooryard for more. He was not so particular if the food was wheat bread, but if it was his favorite food—doughnut—the jays were fooled every time.

Every spring Bismarck taps the trees around the cabin. He begins on the maples and ends later on the birches. If the tree is small, he taps the trunk; if large, he works on the limbs. He gnaws through the bark and into the wood, then clings to the limb or trunk, below the wound, while he laps the sweet sap. If there is a hollow in the bark into which the sap flows, Bismarck is sure to find it.

Did the red squirrel learn how to tap trees from the American Indian, or did the Indian learn from the squirrel?

The habits of the red squirrel are rapidly changing in this locality on account of a foolish State law. The story is quickly told. Ward 8 (city of Gloucester), where my cabin is located, contains over eleven thousand square acres. Its area is greater than that of the other seven wards combined. The bulk of the territory of ward 8 is made up of woodland and shrubland, the city proper being in the other seven wards. Ward 8 contains the delightful summer resort known as Magnolia. This resort derives its name from Magnolia Swamp, the only spot in New England where magnolia glauca is found in a wild state. The famous Coffin's Beach is also in this ward.

The General Court four years ago placed a close time of five years on small game in the territory east of Ward 8. This protects the seven wards of the city and the town of Rockport. Two years ago the town of Essex, which joins Ward 8 on the west, was protected, so that the gunners from a population of about forty thousand are turned loose in Ward 8. The extermination of nearly all the game, and of great numbers of song birds, has been the result of this peculiar legislation.

All the wilds things are desperately wild. The red squirrel if he hears the report of a gun instantly rushes to a hiding place. Well he knows the deadly meaning of the report. He has turned day into night and now harvests his nut crop in the night time. I sleep in the open air, and during the harvest season I listen for hours to the sound of droppingfi nuts which the industrious but wary squirrels, are cutting from the oak trees around my cabin.

Bismarck is still in the land of the living, although ten years have passed since he first introduced himself, and requested me to book him for table board. He has cost me many dollars, while he has not paid a cent in the coin of the realm. However, I owe him for teaching and am ready to balance the books and exchange receipts.

I know that my position in relation to the red squirrel's destruction of song birds will be sharply criticised by those who believe in the squirrel's total depravity. But the truth is that I describe wild life just as I find it, not as some books say I ought to find it. If the red squirrel was as destructive as reported, there would not be a young bird reared around my cabin. My notes show that last year the following named birds nested near my cabin, and probably every nest was known and visited by the red squirrel:

	Number of nests.
Chestnut sided warbler	3
Black throated green warbler	1
Oven bird	2
Vireo	4
Canada fly-catching warbler	1
Robin	2
Towhee bunting	2
Catbird	1
Wilson's thrush	2
Indigo bird	1
Total	19

A ruffed grouse nest was looted by the crows when it contained but four eggs, after which the bird resorted to a swamp and reared a brood.

Several of the nests named were destroyed, but none by the squirrel. In the light of my observations I cannot consistently denounce the red squirrel.

A New Caribou.

IN Volume XIV. of the Bulletin of the American Museum of Natural History, Dr. J. A. Allen described a new caribou from the Kenai Peninsula of Alaska. Unfortunately the only known specimen is a head collected in the autumn of 1900 by Mr. Andrew J. Stone, whose explorations of the far North are so well known to our readers. The animal is characterized by great narrowness of skull, by a great development of antlers, recalling in some respects the antlers of the barren ground caribou, but much heavier and with longer and more numerous tines. In the specimen described, there runs along the underside of the neck a strip of greatly lengthened white hair, four or five inches wide, which hair in the median line is eight inches long and sometimes even more. If this feature is a constant one, it would be a distinguishing mark of the species. Dr. Allen has called this caribou *Rangifer stonei*, in recognition of Mr. Stone's important contributions to our knowledge of the distribution of large game, and especially of the caribou in northern North America.

Camp-Fire Flickerings.

"That reminds me."

Ways and Means.

A TURKEY shoot was in progress. Three men were in the shoot-off. The first man up using the old rifle—his companion for many years in many States—centered the bullseye. The others could not beat nor equal the shot, and the winner proudly took the big gobbler homeward for the Christmas diner.

His wife seeing the gun and turkey, assured her husband that the prize was won by gambling, not by skill with the rifle; that the meat was defiled and should by no means grace the Christmas table.

No angry words followed, simply a philosophical silence. Then the horse was brought out and the turkey was taken to a neighbor's and exchanged for a fat hen turkey. This bird, being duly presented to the mistress, was pronounced wholesome, for it was, indeed, young and very fat.

Years passed. The lady of the house is at church on a spring morning, leaving the winner of the turkey shoot, now a sedate old man, at home to care for the house. He was reading and musing, when in walked his son with a few suckers—taken on the Sabbath day! The pair looked guiltily at each other in philosophical silence. Then the son, requesting secrecy on the father's part—as if such a request were necessary—took the suckers to the barn, where they rested in cold water that day and night.

Early Monday morning the boy made another visit to the brook, caught another sucker, put it on the string with those defiled ones and took the mess to his mother; who praised him for his skill. It was skillfully done, and the suckers were large and plump.

After the dinner was over and the sucker meat had been separated from the bones, the father took the young man aside and told him the story of the turkey given above, advising him never to waste good victuals, but always to consult ways and means for saving them.

OVID, N. Y. BENJ. E. BIRGE.

"I went coon hunting down in Georgia with two boys;" said George W. Bealock, the other day. "They knew nothing about it and it was my first experience. The dogs treed a coon; we saw the animal enter a hole in the tree, and we cut the tree down. It did not leap from the branches, as we expected, so one of the boys crawled into the tree and began to poke the coon with a pole. In about a minute we heard a combination of human and animal yells, which indicated that our friend had found the animal, and that it was not a coon. Soon he emerged from the log and a half-grown wildcat was clinging to him. With two pistol shots and a blow with an axe we succeeded in killing the animal, but the boy who crawled into the log will bear the scars of his encounter with the young wildcat for the rest of his life. I have been coon hunting since, but I am always certain that it is a coon that is treed before I cut down the tree."—St. Louis Globe-Democrat.

Game Bag and Gun.

California Game Interests.

SAN FRANCISCO, Cal., May 22.—*Editor Forest and Stream:* Among "nails driven in 1901" you have recorded as No. VII., Sec. 626k of the Penal Code of California forbidding the sale of game and game birds.

The passage of the law was a notable victory for the best class of California sportsmen, and it was the outcome of a sportsmen's convention called last year, and which took place in this city. Representatives were present from most of the counties of the State, and the game laws, mainly through the efforts of the committee appointed by the convention, were thoroughly revised and quite satisfactorily amended by the Legislature.

Some of the principal newspapers of the State and Coast have been peculiarly antagonistic to game law legislation. Those the furthest back in the woods, and also in antique intelligence, have been the most ardent obstructionists. The usual argument advanced against laws for the protection of game has been that the laws are made in the interest of city sportsmen, clubs and rich fellows, who in open season can go out and kill all the game, while poor people—the other fellows—have to work. Another argument has been that some people do not shoot, but like game to eat, and if they cannot buy it they will be deprived. Both these theories look well to the uninformed when in type and nicely arranged phrases, but they are not so picturesque to those who consider that when the game is exterminated the poor fellows who work, and the other poor fellows who buy, will have a tougher time of it than ever.

One of the leading San Francisco papers (Chronicle) was notably worried and gave much space editorially to democratic ideas against "class legislation," as applied to game laws, although it is not appreciably democratic otherwise. It alleged that most game was plentiful. Deer, if much protected, would eat up gardens and fields, and quail were devastating vineyards (this claim is rich reading where quail are worth $3 per dozen and grapes are worth $6 to $10 per ton), and that conditions here are entirely opposite to those in Europe, where only the rich can have game, etc.

Even after the passage of the law by the Legislature the paper urged Governor Gage to veto the bill, and from an extensive editorial I copy the following paragraph verbatim ad literatim:

"Since the passage of the bill in the closing days of the session, hotel and restaurant keepers, marketmen, waiters and sportsmen in thousands have expressed their disapproval. They agree with everything the (itself) has said against it."

I consider the paragraph a curio worth further preservation, as a modern instance of editorial art, although the writer seemed to consider the sportsman the last leaf upon the tree—an omnibus waiter, or something coming after.

There is perhaps no region in America as much in need of wise laws for the protection of game, and where protection will be productive of so much good, as the Pacific Coast. Here is a vast and varied territory yet fairly supplied with game of many kinds, but from many parts of it the game has been and is being exterminated. Much of the territory is sparsely settled and vacant land owned by the Government. A great deal of it is only adapted to mining operations, grazing and lumbering. There are extensive parts of it that are used for pasturage alone, and for that purpose but few months in the year, while much territory in the mountains is rarely explored except by hunters of game.

Notwithstanding these natural conditions that are favorable to the game, there are many other considerations most unfavorable, and there is no lack of evidence that all kinds of game is being rapidly destroyed. Antelope, once plentiful in California valleys, are entirely extinct; elk, once generally scattered and numerous over a wide area, now exist in but a very few isolated and remote localities; bears are now seldom found in this State except in the extreme northern and northwestern mountains, while deer, until the protective laws of recent years, were becoming scarcer each season and were plentiful only in the more distant and undisturbed parts of the mountains. With the laws now in force for their protection, I do not think they will increase in numbers unless wardens are more generally appointed and systematically provided for.

There are many things to make the preservation of game more and more difficult, particularly in California. While there is vast mountain territory with many of the best natural provisions for the larger animals, affording great expanses of cover, browse, mast and water, there are also vast regions where some or all of these advantages are lacking or meager. Heavy snows drive the game from the higher mountains in winter, and in other regions the drought of summer restricts and confines it to narrow limits.

Each year even the most inaccessible of the mountain localities are being more thoroughly explored and exploited in one way or another. In addition to pasturing and lumbering operations, to which most mountainous regions are subject, the minerals of California and most portions of the coast offer a further inducement to explorers and settlers, and one of a most attractive nature.

Again, for six or eight months of the year in California men can live almost anywhere with the least need of equipment or shelter. They can carry necessaries for half a year into the remote nooks and corners of the mountains upon a single pack animal, and hundreds of hunters and prospectors do so, their supplies often consisting mainly of guns, ammunition, a few groceries and their blankets. The mountains must furnish the rest. There is not much difference between a hunter and a prospector. The latter may not hunt for a living or at times he may, but he nearly always hunts to live and relies to a great extent upon the game if there is any.

One of the best laws for the protection of game in California is the one made a few years ago prohibiting the sale of venison and deer skins. Before the establishment of this law it was a common thing to see wagons coming from the mountains of Humboldt, Trinity, Shasta and Siskiyou counties loaded with dressed or dried deer skins with from two to a dozen men in charge. A single wagon load might contain a thousand skins and not a pound of venison, all save that consumed by the party having been left to rot where it was killed. Such parties made a business of hunting deer for their hides, and made little if any disguise or denial of it. Although it was a despicable business, there was more or less money in it and nothing to prevent.

Many deer skins are doubtless yet smuggled out of the State, and deer are yet slaughtered for them in remote localities, but in the main it has been stopped, and the lines are being drawn closer and closer that will eventually stop it altogether. In prohibiting the sale or possession of hides the law is in a measure destructive, and those killing deer legitimately—bucks in the open season—often leave the hides in the woods or destroy them.

The conditions mentioned, with others of more or less consequence, such as floods and forest fires which drive game from its places of refuge, make the protection of game animals and birds in California very difficult. The scattered sportsmen who give thought to the subject, and others who are interested, need more encouragement and assistance than they receive or are likely to receive from local newspapers, too many of which have no conception of the importance or value of efforts made, and who know little about the subject. In nothing is a little knowledge a dangerous thing unless it be in the hands of editors who may lead thousands of readers astray. It would seem that the many States from which game has been nearly or quite exterminated should afford instances or examples enough to the few remaining with a comparative abundance that careful and intelligent work must be done for its protection and maintenance. But the game belongs to everybody, and everybody's business is proverbially neglected, unless somebody attends to it for everybody. This seems to be the case in more matters with which a Republican Government has to contend than one.

RANSACKER.

A. B. F. Kinney.

THE following appreciative notice of Mr. Kinney as citizen, churchman and sportsman is from the Worcester Gazette:

The three fields of business, hunting and church work seem at first thought so utterly diverse and almost inconsistent with each other that one would not expect to find a man who had attained not only success but prominence in all three. And yet that it what A. B. F. Kinney has done. To some Mr. Kinney might be known best as a business man who, in the twenty-five years that he has been in Worcester, has more than been successful. Others might think first of his activity in the Methodist Church, of which he is a member, and of his prominence in missionary work. And still others, perhaps most of those who know him, think of him as a lover of outdoor sports

A. B. F. KINNEY.

and an enthusiastic fox hunter. All three would be right. It is rare that a man wins prominence in more than one field, but Mr. Kinney has done it in three, and three that are so far from being kindred and so various as those that have been mentioned.

Mr. Kinney has been an ardent sportsman all his life. When a boy he had the love of hunting and fishing, but not the means of gratifying it, and it was not until he came to Worcester, twenty-five years ago, that he was able to indulge in the sports as much as he wished. In these twenty-five years he has probably done more than any one man in Worcester to build up an interest in hunting and fishing. That he has been successful the Worcester Fur Company and the Worcester Sportsman's Club, in the founding of both of which he was instrumental, will attest. The Fur Company was organized in 1884. Previous to that time there had been a company to which any one in the county who had ever shot a fox belonged. It was, however, without organization, officers or by-laws. Mr. Kinney conceived the plan of putting the company on a firmer and more definite basis. As a result, the present Fur Company was founded, and for the first eight years Mr. Kinney was its president. Since retiring from that office he has still kept up his interest in the company, and is always present at annual hunts and banquets. Mr. Kinney is also president of the Worcester Sportsman's Club and of the Worcester County Game Protective Association.

Mr. Kinney's experiences in hunting have not been confined to the small game near at home. He has traveled all over the United States, and shot all kinds of game. The last big animal that he brought down was a 700-pound grizzly, which he shot in the Teton Mountains, Idaho. At that time he was hunting with a party of whom Jerome Marble, of this city, was a member, and he went solely to get a grizzly. His friends finally left him to come back East, but Mr. Kinney stayed behind, and at last succeeded in securing what he wanted—a beautiful specimen, which did not drop until the fourth bullet had struck him. The beast's head is now mounted and occupies a prominent position in Mr. Kinney's home on Westminster street. Here, by the way, he has one of the finest collections of heads, horns and hides in New England. Further evidence of how widespread Mr. Kinney's prominence as a hunter may be seen in the fact that he was once president, and is now vice-president, of the National Fox Hunters' Association, and from the following dedication inscribed by Thomas Martindale in his "Sports Royal": "To A. B. F. Kinney, a friend of thirty years' acquaintance, and the best all-round sportsman I have ever met; a man equally expert with rifle, gun or fly-rod, who has killed game of every species that the American continent affords, from the grizzly bear to the ubiquitous rabbit, from the wild goose and its rival in migratory flight—the mysterious brant—to the solitude-loving woodcock, and who is, besides, what the world affectionately calls a royal good fellow."

Mr. Kinney, however, is not all sportsman. In business he has been very successful as a broker and dealer in guns and ammunition, and it was he who started here the first gun store between Boston and New York. Mr. Kinney is also a thorough churchman, and for the past twenty years has been a trustee of Trinity Methodist Church. He is president of the Methodist City Mission and Church Extension Society, and of the Sterling Camp Ground Association, the oldest Methodist camp ground in New England. In 1896 he was a delegate to the General Methodist Conference at Cleveland, O. He has always been prominent in religious and philanthropic work. It is not often that a man combines church work, business and fox hunting, but Mr. Kinney has done it successfully, allowing no one of them to interfere with the other two. He believes in healthful outdoor recreation, such as hunting and fishing afford, and thinks that they are not inconsistent with his standing in the Church.

Besides his efforts to arouse an interest in hunting and in shooting, Mr. Kinney has done a great deal toward improving the quality of American fox hounds; more, possibly, than any man in New England. The hounds here, not so long ago, were too slow to insure good sport, but by importing stock from Kentucky, Mr. Kinney has succeeded in greatly improving the quality. Every one hereabouts has heard of the Kinney-White pack of twelve hounds, and probably most of the fox hunters in the country have hunted behind them and know what they are worth. At present, however, Mr. Kinney has little to do with dogs except to hunt with them, and the pack is cared for by John M. White, of Millbury. The hounds, it might be said, are the chief source of pleasure which Mr. Kinney derives from fox hunting.

Tobique Guides.

Editor Forest and Stream:

In the sporting publications of the last few months there have been a number of articles concerning the character of the Tobique River guides in New Brunswick. Some of these have been written temperately, others in heat and haste, and very few indeed have exactly hit the mark. This discussion began, I believe, late last fall with an interview printed in one of the Bangor newspapers. The sportsman that published his views had just returned from the Tobique, and having fallen afoul of the native, was in an exceedingly unhappy frame of mind. If my recollection is right, this gentleman had negotiated tentatively with two different guides, and had finally made a selection. But when he arrived at Plaster Rock he found both men and their outfits awaiting him. Naturally, he had no intention of employing two sets of guides, and when he said so and sought to show the second guide the mistake, the guide declined to see it, and demanded a month's payment to settle the affair. The gentleman, very wisely, declined to accede; there was a threat of legal process, of seizure and jail, and for a while it seemed extremely probable that the sportsman's trip would be ruined. The affair, however, was in some way compromised, but the annoyance, the delay and other disagreeable incidents had their decided effect upon the sportsman's mind, and when he came out of the woods he expressed himself in unmeasured terms concerning the rascality of people along the Tobique. It is only justice to him and to the other guide, however, to say that the trip itself was a thorough success, so far as the conduct of the guide engaged was concerned.

Now, in the Provinces there is a term of derision that exactly states what this sportsman had in mind. In words it is "Mean as a Tobiquer." It originated on the Mirimichi, so far as I can find out, but the truth of the matter is that the Tobiquer is only human—somewhat simple, to be sure, but still human. Justly speaking, human nature is displayed there as it is in every other quarter of the globe. There are rascals along the Tobique and there are also honest men. I don't know whether the rascals or the honest are in a majority, but I certainly can certify to meeting several honest men—also certain rascals. I know of men along the river that have fleeced and robbed by divers tricks every unsuspecting sportsman that fell into their clutches, and I also know other men that would blush to take the scantest advantage of even the most unwary. But this condition prevails everywhere. Take the Adirondacks, for instance. There are guides there that make a specialty of wringing the last cent from the departing sportsman, and there are others—some—that do not do this thing. It is the same thing in Maine, Canada, western Quebec, Muskoka—everywhere.

The point I wish to make in defense of the Tobique, which I know fairly well, is that its guides are no different from the guides of any other place, save that they have less experience. I repeat this to impress its truth.

It is an unsafe proceeding in any quarter of the globe to go blindfolded. One is likely to fall if he do. No man should go fifty or a hundred miles into the heart of a howling wilderness with a man he has no reason to be-

lieve may be trusted. I did it once with a man I had been warned against—on the Tobique, too—and the first year he was diligent, respectful and honest. The next year he proved himself to be a thief, a sluggard and other things too numerous to relate. He was also—worst of all—a liar without art.

It is also said that a majority of the Tobique guides are merely untrained farmers' boys. Many of them are, indeed. Many of them can't cook and can't make camp as finished and handily as the Maine guide does; but most of them know how to shoot—that is, the best of them. I should say that along the Tobique there are really about ten competent guides—men like Ad Moore and his partner, Charley Cremin, of Nictau; Henry Lewis, of Arthurette; the Barkers, of Riley Brook; Manzell Giberson, the Armstrongs, and McGinn, of Perth, and one or two others.

Whether the Tobique be good or bad, no man should go there without first learning something about his prospective guides. I think all the readers of FOREST AND STREAM that have been in that country will bear me out in what I have said, and if I can give any further information to any one interested, I shall be only too glad to do it. M. F.

C. H. Barber.

DEATH in his ceaseless flight upon the tireless wings of time is rapidly adding to the number of his victims.

On Sunday, May 19, at his home in South Framingham, Mass., there fell before the grim reaper one of nature's noblemen, Mr. C. H. Barber. For more than fifty years Mr. Barber had been an annual visitor to the woods and waters of Maine, and to the many, many hundreds whose good fortune it was to make his acquaintance the announcement of his death will come as a pang, with all the force of personal bereavement and loss.

Mr. Barber had passed the allotted span of life—the three score and ten years of Scripture—and yet away back in early boyhood days he cast his fly upon the waters of the eastern portion of the State—Grand Lake, Grand Lake Stream and other noted resorts—long years before sportsmen penetrated the wilds to Moosehead Lake or the Rangeleys.

He was an old-school sportsman—a synonym for all that is included in the title of gentleman—genial in companionship, chivalrous, courteous and obliging to all, and as true and steadfast in his friendship as the needle to the pole.

He was a lover of good dogs and his kennel always contained choice specimens fit for the bench and field trials.

Few indeed, if any, there are who could boast of greater knowledge of or greater familiarity with the covers of New England, and often a well-filled game bag was ample proof of his love of the sport and skill with the gun. For many years he spent his winters in the South for quail and other upland shooting, and here as elsewhere his death will be deplored.

During all the years of his active life he was a lover of fine horses, and his stables always contained specimens of the choicest breeding which took no dust from the speediest, some of which he bred and raised. C. H. Barber is gone—the last sad parting on earth has come—but the afterglow of his life will long remain a prized legacy to all who knew him and came within his kindly influence. GEO. MCALEER.

WORCESTER, Mass.

Sea and River Fishing.

ANGLING NOTES.

Grayling.

EARLY in May I made an appointment in New York with Mr. H. C. Pierce, of St. Louis, and talked with him about various things concerning fish and fishing, and particularly about his trout preserve and hatchery on the Brulé River, in Wisconsin. Incidentally, Mr. Pierce told me that he had secured a quantity of grayling eggs from Montana to hatch in his hatchery on the Brulé with the idea of stocking some of the Wisconsin waters with the fish. Later, I regretted that I had not gone deeper into this matter of introducing the Montana grayling into Wisconsin and made a memorandum to write to Mr. Pierce about it. Upon my return home I opened the latest copy of Land and Water, and the beginning of the very first item in the Fish and Fishing department referred to grayling in these words: "Rumors have been going about during the past fortnight that some of the people who hold the fishing rights on part of the Kennet at Hungerford are making arrangements to destroy all the grayling in their portions of the river. On making inquiries I find that there is a certain amount of truth in these rumors."

The writer Alder is at a loss to know why the grayling should be destroped, but assumes that it is to give more room for trout, and he concludes: "At any rate it would not produce an increase in the number of trout which would even remotely approach compensation for the loss of the grayling."

Within two weeks last past I was talking with Mr. Dean Sage, of Albany, and he mentioned a visit which he made to Michigan to angle for the Michigan grayling with the late Mr. David Fitzhugh, the times being before visits of other eastern men, fishculturists, who attempted to take the eggs of the fish to propagate the grayling in New York State.

Mr. Sage has very pleasant recollections of the grayling as a game fish and that they were the quickest fish to take the fly of any species he had ever fished for, but there is no accounting for tastes; for while one sportsman is spending money freely to bring one species of grayling to new waters, fishermen across the sea wish to destroy the fish in their waters, and other anglers are mourning the disappearance and utter extinction of still another species of grayling in yet other waters.

Rod-Fishing on the Banks of the Hudson

Often in riding up and down the Hudson River, either on the Central or the West Shore railway, I have observed from the car windows people fishing from the shore. At times nearly every dock or pier head will have several anglers, and at certain points the retaining wall of the railway itself will have anglers at intervals, and the thought has occurred to me that here was an industry that found no place in fishing statistics. The people who engaged in the fishing enjoyed a day in the open air, and there can be no better relaxation for the people of the towns, and they add to their larder excellent food at little cost, and it is certainly a distinct blessing to those who can engage in this fishing that the river affords both recreation and food at such slight expense. One afternoon, very lately, I presume the tide was just right as the train I was on, going south, rushed along, for there seemed to be an unusual number of fishermen on the wharves and sea walls, and I wondered how many people daily resorted to the river for the fishing from the banks purely for pleasure, and I regretted that I had not counted those to be seen from the car window, and I resolved to do so on my return. I returned on the Empire State Express and unfortunately the smoking compartment was on the land side, so that my count was very imperfect, as I spent some time in smoking where I could not see the river, and a great part of the river could not be seen from the train even if one gave up smoking entirely, for buildings hide some of the docks, and down trains will pass just as one is straining one's eyes to see if a particular dock contains anglers. I decided to count only those who were fishing with rods and fishing from the bank. As the train made the curve at Spuyten Duyvil I gave up a partly smoked cigar and went to my seat on the river side of the Pullman, and began my very imperfect count. The wall from Spuyten Duyvil north was well peopled and in a short distance I counted eighteen anglers. One man was accompanied by his wife, apparently, and she was reading a book while he held his rod in hand. A lunch basket near by indicated that they were out for the day. There were not nearly as many anglers visible when I went north as when I went south a few days before, and the tide was apparently not favorable to fishing. This I judged from seeing no squat nets in operation. In fact, I saw but one, and that on a man's shoulder as he walked toward the river bank. On the down journey I saw a number of squat nets in operation. I did not count hand liners on the bank, nor did I count anglers in boats anchored near the shore, but when I reached Albany I counted the marks in pencil on the margin of the morning paper I did not read, and found that they represented a total of 49 rod fishermen I had that morning seen fishing in the Hudson from the bank between Spuyten Duyvil and Albany. How many were fishing that I did not see it would be useless to speculate about, but I am satisfied from that and other days when I have watched the fishermen from the train that on every fair day several hundreds of people fish from the docks or banks in the Hudson between the Battery and Albany, the precise number of hundreds I leave to some one else to guess. Here is fishing that costs nothing, for guides or boats, a rod and line and bait and a walk to the water is all that is required. If the angler gets nothing but white perch or tomcod in the autumn, he is probably hoping always that striped bass will bite, and if he gets no fish at all he gets a summer day of rational, healthful enjoyment in the open air, and he is better for it in body and pocket than if it had been spent where beer flows and tempests blare and the hurdy-gurdy gets in its seductive work on a hot day. How many of these anglers have a love of nature in their souls and how many fish for the pan or broiler alone I do not care to know; it is enough that so many people are enabled to gratify one desire or the other, and I wish that there were more as fortunately situated. As I am writing a letter comes to me from a lady, and I quote a paragraph from it:

"I am here for a short stay and the weather is behaving disgracefully. I felt a wee bit hungry for the smell of the blossoms and the balm of green foliage on town-tired eyes, and so anticipated sunshine and balmy-scented breezes. Instead, I shiver in the light of a roaring hearth fire, and count the crystal beads that ornament the maple leaves outside my window.

"I like the country town in the rain, far better than the city's stones and flags, and I feast my soul on all its possible glories, forgetting, when I came, the absence of the sunshine. I am reminded by Thoreau's 'Week on the Concord and Merrimac,' and his description of fish and fishing, to ask you a question or two."

We all have a touch of it, if we examine into the component parts of our composition. It is less diluted and nearer to the surface in the case of the cultivated woman, who gives expression to it, than in the case of the man who sits dumbly, perhaps, on the railway wall on the bank of the Hudson, but we all have it in a greater or less degree, because "He orders all things well."

Trout Eggs.

Occasionally some angler enters a protest against the open season for brook trout, claiming it is too long because the trout he has taken have been found to contain eggs in July or August and therefore the season should close the last of June or the middle of July. When told that the eggs he has found in the summer are undeveloped eggs, and that they would not be fully developed until October or November, he is surprised, and perhaps more surprised when told that trout have eggs every month of the year. It is a good sign to have a man say it is wrong to take trout containing eggs in August, for it is proof that he has not seen the eggs of trout when they are ripe and after the legal season has closed, but there is no more harm done in taking the fish in August than it would have been to take the same fish on the first day of the open season—say, in April. While at the Suffolk Club, on Long Island, in April, I was examining the contents of the stomachs of some trout to find what they had been feeding upon, and in the ovaries of a female I found one single egg of last season's development with the undeveloped eggs of this season, which the fish would have deposited next fall had she not taken a fly of feathers and tinsel in mistake for the real thing, and I wished for once that I was a camera fiend that I might photograph the eggs to serve as an object lesson. The developed egg, as large as a June pea, was a great contrast to the undeveloped mustard seed eggs, and the most skeptical would have been convinced that if the single egg was ripe the others were far and away from ripe. Some individuals of the salmon family fail to deposit all their eggs and carry a few over until the next spring, and the belief is that these eggs are absorbed during the season of recuperation, but I have yet to be convinced that this is so. Of all the trout that I have opened and examined in the spring and early summer—and I have examined a great number during the past thirty years or so—I doubt if I have found more than five or six that contained eggs that should have been deposited the previous autumn, and never have I found more than two or three eggs in the ovaries in the spring that were developed, and these eggs have always been full and plump and well colored as though the time were October instead of April or May. Why the eggs that remain over should not have been cast at the proper time I shall not pretend to say, as it would be mere speculation, but in stripping trout by hand if all the eggs are not secured the fish will go into the hatching sacs and try and make a bed as certainly as if none of her eggs had been taken, and this will be repeated until all the eggs are taken by the operator or she casts them herself. A few years ago I noted in this column that a ripe female trout had been discovered in a New England breeding pond in August. My informant was one of the fish commissioners of the State, and he related what had been told to him by a former superintendent. In fact, I think two different trout had been found with ripe eggs at different times, one in July, as I recall it, and the other in August. That the eggs were ripe was discovered by handling the fish, and the explanation was that possibly something had happened to each fish to retard the development of the eggs the previous autumn, and so they had become ripe at an unusual time, and there was no ripe male fish in the ponds to impregnate the eggs. The number of eggs that came from the fish in the summer I never knew, but since hearing of the incident I have been led to believe that it was possible that the fish did spawn at the usual time and retained a few eggs in the ovaries, which made them escape when the fish was handled the following summer. Unfortunately such fish as I have discovered to have a few developed eggs in the spring were dead when the discovery was made, and, therefore, it was not possible to determine if the eggs could have been stripped from the fish in the usual manner employed by fish breeders in the autumn; but until it is proven to the contrary I shall hold to the belief that eggs remaining over in the ovaries can be stripped by hand if an opportunity offers to make the trial. The trouble will be that no one will be looking for a trout that contains developed eggs in the spring retained from the previous autumn, and so the trial may not take place. A. N. CHENEY.

"Between Casts."

CHARLESTOWN, N. H., May 29.—*Editor Forest and Stream:* The exquisite illustration of a scene on a trout brook, entitled "Between Casts," in the supplement to FOREST AND STREAM received this morning, is almost an exact duplicate of an old photograph which hangs over my writing table, taken years ago, of a favorite Vermont brook, just across the Connecticut River from our village, out of which I have taken scores and hundreds of trout in the years long past. The photograph only needs the addition of the two anglers and the fallen pine to make the resemblance perfect. It is more than sixty years since I first fished the stream, but I have had many a day's pleasant sport by its waters, sometimes alone, sometimes in the company of brother anglers who have long since gone over to the majority. My last trip to its sparkling waters was in the company of a young friend from New York, who has since written you one or two interesting letters from Central America. The remembrances are recalled by your illustration, which will keep the photograph company, but I fear I shall never see those rapids again except in the pictures and in memory, for my days for such scrambles are over. "The spirit is willing, but the flesh is weak."

I have been very much interested lately in brother Cheney's letters on large and small trout, and wish to indorse him fully in his expression of the opinion that the large trout are the ones to be caught, leaving the small ones to grow and become breeders at two or three years of age, when by all physiological experience in all varieties of animal life the progeny will be stronger and healthier far than from their maturer ancestors.

There is no question as to the cannibalistic propensities of these full-grown or overgrown fish, and I got a bit of information last week which seems to carry out the conclusion. I have written you once or twice of the extreme drought of the last two summers, which practically dried up most of the small brooks here in southwestern New Hampshire, leaving only pools of water here and there in the deeper holes, and of my fear that the trout would be exterminated. A few days ago I had occasion to employ the village Rip Van Winkle who strips the brooks annually, to do some work in my garden which was beyond my powers, and I asked him incidentally if he had been fishing this spring. He said he had, but had very poor luck, and added that all the trout he caught were very large ones. He said that he did not see a small trout in either of the two brooks he had fished. He had caught thirteen trout the first day and about twenty the second one, in another brook, and repeated that they were far above the average size of his catches, but that he saw no small ones whatever.

Now I think this carries out Mr. Cheney's contention completely. The trout had all been driven by the drought into the deep holes, the big fellows had gobbled up the little ones and another year the brooks will probably be tenantless. I fear my fishing days are over, except in the columns of FOREST AND STREAM, where I enjoy the records of other fellows' adventures and successes. I hope Kingfisher and Mr. Starbuck will take to the woods again this year and give us some more delightful records of their experiences.

Let me congratulate you on the accession to your columns of Fayette Durlin, Jr. His stories of Old Hogarth, Sooner, and Saunders' Mule are among the best things I have read in a long while. If I do get a chance to wet a line, I will drop you one if I have a favorable response.

VON W.

Canadian Angling Notes

IF last year was an off season for fishing in Canada, anglers are having their compensation this spring. From all sides come reports of splendid sport. A party of Connecticut men who passed through Quebec a few days ago on their return home from their lakes alongside the line of the Quebec & Lake St. John Railway, and who have fished the waters of the Metabetchouan Fish and Game Club for the last ten years, told me that the fishing had never been so good in their waters as it was this spring. Both at the head of Lake Kiskisink and also in the rapids at the outlet, as well as in that portion of the Metabetchouan which flows through the club limits, the trout have proved most abundant, and some of them have run over three pounds in weight. Mr. and Mrs. W. C. Bryant, of Bridgeport, went up to the club house on Tuesday last, and among others now upon the limits are Major Hincks and son, and Mr. F. Benham, all of Bridgeport. Messrs. C. P. Peets, of New Haven, and Samuel Dodd, C. P. Bradley, Messrs. Coe, Stevenson, Chamberlain and Fay, of Meriden, Conn., returned home this week. Congressman Russell, chairman of the Ways and Means Committee, has had some excellent sport this month as a guest of the Metabetchouan Club.

On the adjoining territory, controlled by the Bostonnais Fish and Game Association, good trout fishing has been enjoyed by Dr. Porter, of Bridgeport, and Mr. Lincoln, of Pittsburg.

Mr. and Mrs. C. Grant Lafarge went home last week after having excellent sport on the waters of the Laurentian Fish and Game Club.

Lake Edward has been again yielding some of its heavy red trout, a number of the specimens brought to Quebec last week having exceeded five pounds in weight. The water in the lakes is still so cold that the large fish are rising quite well to the fly. The number of fish being taken on the fly in Lake Edward this spring is much larger than usual, while really excellent sport has been enjoyed on the Vermillion River—a little to the north and west of Lake Edward—during the last few days. A number of three and four pound fish were among those taken on the fly last week on these waters by a party of Quebec anglers.

Ouananiche are still being taken in large quantities in Lake St. John. During the last ten days they have risen freely to the fly in and about the mouths of the Ouiatchouan and Metabetchouan rivers, but the water is too high for them in the Grande Décharge. The fly-fishing there ought to be good this year by June 12 or 15.

Salmon fishermen are already commencing to arrive, and no doubt some of them will be upon their rivers before this letter appears in print. The fish have been about the mouths of the rivers for some time, and ought now to be entering them. A steamer arrived from the north shore of the Gulf here yesterday with a cargo of salmon from the nets at the mouth of the Moisie.

Dr. Johnson, of Cornell, has been here for some days making ready for a trip to some of the north shore rivers, and no doubt there will be good sport on the Labrador streams, as well as on the Ristigouche, by about the 10th of the month.

E. T. D. CHAMBERS.

QUEBEC, Canada, June 1.

Unreliable Traditions.—I.

Editor Forest and Stream:

It requires not a little boldness for any one to claim that the traditions which have become almost household words in the home of the angler are not always to be relied upon, and certainly no one should attack them without good cause. They are helpful to the young angler, but he should not rely upon them without a personal test on his part, as opportunity offers. Traditions are guides for what they are worth and not rules to be followed without question as to their soundness.

I will give you a few traditions which are very old and which, upon a full test, have been found by many veteran anglers to be quite unreliable.

1. Many years ago it was quite usual for anglers to arrange their trips so as to be on the stream during dark nights in the belief that the trout were in the habit of feeding during light nights, but a test of over twenty years, made long ago, showed that there was no perceptible difference between light and dark nights so far as the day's catch was concerned.

2. There was another which worked in the opposite direction. I have known many anglers to time their trips so as to be on the stream during moonlight nights on the ground that there is usually an excess of storms and rainfall during dark nights, but an actual test and record shows that there is really no difference whatever.

A few years ago the German Government published a record of the rainfall for thirty-six years, by which it appeared that during the first eighteen years the rainfall on dark nights, as compared with light nights, was in the proportion of 19 to 18, and during the last eighteen years it was 18 to 19.

3. It is quite a common belief that the earlier an angler can get upon the stream the more sure he is of sport with the fly, but after awhile he discovers his mistake. The fish will not rise readily until the flies are warmed into being by the sun, which is rarely before about 8 o'clock. By that time the trout begin to leave their haunts and get upon the reefs, where they lie in the little pockets watching for the natural flies, and they will travel many hundred feet for this purpose.

That veteran angler, Judge Fitch, rarely went out before 8 o'clock, and often later, and his first effort was to find out whether the fish were yet on the reefs, for there he always found his best sport tackling his fish in swift water, though, of course, he also fished the pools where the large trout are generally found.

4. There is another tradition which is almost universally believed, and that is that bright flies should be used on a dark day and dark flies only on a bright day, but any one who will make a careful test of this rule will find that it is far from reliable.

Some twenty or more years ago I visited a small lake in the Catskills, where we had a club house, and, although the afternoon was dark and rainy, I could not resist the temptation to "wet my line."

I tried all my bright flies, but got no rise. It then occurred to me that nature brought out the dark and ugly flies on such days, and as soon as I put my darkest flies on my leader the trout rose quite freely.

My experience since then has been quite in line with my success on that afternoon and several anglers to whom I related the above incident have told me since that they have frequently had greater success with dark rather than with light flies on dark and rainy days, and this simply means that there is no force in the above tradition, and that every angler must rely upon his own judgment and experience.

5. There is an old tradition, which I heard in my boyhood, and which is very commonly believed to this day, and that is that making a loud noise, or even talking on the stream, disturbs the fish, but there is no truth whatever in this claim. Fish are sensitive to the slightest concussion, but they cannot hear any sound emitted above the water, however loud it may be, and this I can state most positively from actual personal tests.

In 1856 I caught in one day quite a large number of pickerel through the ice in Lake Horicon, in Wisconsin, with the aid of a fishing box, which was then allowable, and my companion and I talked in our usual tones during the entire day without the slightest perceptible effect upon the fish, which were frequently within two or three feet of the surface of the water, but the slightest pound on the ice, which produced a concussion, scattered the fish immediately.

Many years ago Mr. Cornelius Van Brunt, who is well known as one of our oldest and most skillful anglers, and to whom I had related this circumstance, while on one of the streams in Canada filled with trout, found by actual test that the trout could not hear and were not disturbed in any way by any sound uttered above the water, and this was supplemented by both of us a number of years ago in a way which is of sufficient interest to mention quite fully.

We had on the shore of Lake Willewemoc a tank of considerable size in which the water was between one and two feet deep, and in it we had placed some seventy or eighty large trout. On one occasion we removed the cover and each leaned over the tank, remaining perfectly motionless, until the fish became absolutely quiet, and with our mouths not over two feet above the water we talked and shouted without disturbing the fish in the slightest degree, but the moment the slightest movement was made, which in this case was the simple raising of a finger, all the fish became frantic with fright.

There are two or three more traditions which are open to criticism, but to incorporate them in this article would make it too long, and I will reserve them for a further communication.

Of course the above views are given for what they are worth and as the result of my own personal experience.

J. S. VAN CLEEF.

MAY 29.

CHICAGO AND THE WEST.

Fishing Season Begins.

CHICAGO, Ill., June 1.—To-day there came a little burst of sunshine and a little rise in the temperature and a little hope that we may possibly have more decent weather. The result on the angling trade was at once apparent, and the counters of the retail stores were crowded all this morning. There will be a big exodus of Chicago fishdom north bound this afternoon and to-night.

Within the last few days the trout season has come on apace, and probably the best fishing of this spring will be found within the next few days. The members of the Gaylord Club, whose fine preserves are on the south fork of the Pike River, Wisconsin, have gone up almost en masse to the club this week, and all those who have not already departed will start out this afternoon or to-night. The Gaylord Club is one which experienced almost an entire change of membership and management a few years ago. Its president is Mr. F. M. Stephenson, of Menominee, Mich., and its membership now includes some of the wealthiest and most expert fly-fishermen of Chicago and the Middle West.

Mr. William G. Beale has outfitted to-day and started for a trout trip along the Pike in Wisconsin. Mr. Walter L. Lee, of the Republic Iron and Steel Company, goes north to-night, but he stops at Minocqua and is looking for muscallunge rather than trout.

Mr. A. G. Holmes and friend, of Green Bay, Wis., this week took twenty-six trout in a day's fishing along some streams near the latter city.

Dr. Boettscher and a friend or so, of Chicago, start for the Prairie River to-night, going in at Merrill. Mr. E. J. Dressler goes to the same place. By the way, I hear that the north fork of the Prairie River is this summer panning out better than the main stream, which has been much more steadily fished. The advent of a new railroad with a station close to the banks of the Prairie would seem to herald the doom of that pretty little river, of which a few of our Chicago fly-fishers have always been so fond.

The Watersmeet streams are reported good for trout this week, and several of our fishermen are going to take a try in that region, more especially watching the upper waters of the Ontonagon River near that point.

The Castalia Club.

The Castalia Club, of Ohio, was never in more flourishing condition than it is this season, and the famous little stream has been offering magnificent sport to all the club members. There are some members of this club who live in Chicago, and of these Mr. Robert Forsythe, Vice-President of the Illinois Steel Company, and Mr. R. P. H. Durkee, also prominent in capitalistic circles, leave to-night for some further adventures on the Castalia trout waters.

Muscallunge.

Mr. Harry E. Goebel, agent of the Hartford Building, in this city, and an awfully nice young man, in spite of the fact that he has a habit of collecting rent every once in a while, goes to-night with his friend, Mr. C. B. Cleveland, to Watersmeet, Wis., where he will fish for muscallunge and bass rather than for trout. Mr. Goebel nearly always manages to tangle up with a good fish or so before he comes back.

The muscallunge season has turned out nothing of consequence thus far excepting near Minocqua. Mr. C. H. Lester, who has been fishing there this week, has taken two or three fish, and yesterday telegraphed down that he had got a nice one weighing 18 pounds. Ten years ago this would not have been news, but to-day it is worth chronicling.

Mayor Harrison went in at Minocqua, but crossed to Squirrel Lake, and the success of his party has not yet come to light. The general impression is that it is just a trifle early for the muscallunge fishing, but in common with the trout and the bass fishing season, the season for the muscallunge will come with a rush when it does begin.

Bass.

The backbone of Chicago's angling sport is, of course, the splendid bass fishing which is so readily accessible from this point. That the bass fishers are getting busy is evidenced by the fact that one firm, Von Lengerke & Antoine, have been selling about 200 dozen live frogs for bait daily. To-day they sold 203 dozen, and this was before noon. Each bait-caster who goes out takes on an average of a couple of dozen bait frogs with him. This saves him the wear and tear on boots, trousers and temper which he would otherwise have to undergo in chasing the elusive frog around through the lilypads of his bass waters.

The biggest take of bass recorded for the past week was at the Lauderdale lakes of Wisconsin—seventy-three bass, taken by Mr. Salter and his friend, Mr. W. I. Blackman. I have not see either of these gentlemen, but the report of this take comes apparently well authenticated. It is very large for these days.

Among those who go up to the Fox Lake chain this afternoon are Messrs. J. E. Schall, Charles Olk, M. P. Ripley, Alex Friend, Charles Lawrence, J. W. Lowe, J. F. Hastings, Julius Rosenburgh, W. E. Rowe and H. Greenwood.

On Thursday, Decoration Day, Mr. Fred Gardner, one of our best known Chicago bass fishermen, took eighteen very nice bass at Cedar Lake, Ind., which water he fancies and fishes frequently.

Wisconsin Law Is Working.

That the Wisconsin law regulating the shipment of fish from that State is in prime working order this season is witnessed by the fact that on May 28 Game Warden Tracy, of Milwaukee, seized shipments of fish amounting to 15,415 pounds, the largest amount ever seized at one time within the limits of the State of Wisconsin. When you come to think what a pile of fish 15,000 pounds comes to and when you come to think also that this is but one lot, all seized on one day, the fact is brought home that it may pay a State very well to look after this part of its public property.

Inquiries continually come up as to the Wisconsin law forbidding the bringing out of more than 20 pounds of fish from the State. Anglers want to know whether this law is going to be enforced. The only way to regard any game law is that it is going to be enforced, and that it is right that it should be. Quite outside of this way of looking at the matter, the facts seem to indicate that these Milwaukee wardens are mighty good people not to fool with. They know their business and are looking after it in rather a hair-raising fashion. All the consignors of the above contraband fish will be prosecuted at once.

Huron County Association.

Mr. George F. Titus, of Norwalk, O., is secretary of the Huron County Game and Fish Protective Association, and he writes this week that his friends have every reason to hope that they will be able to accomplish some work for better game laws than are now on the statute books of Ohio. He says that the results aimed at by the Association are, first, a hunting license; second, no spring shooting; third, an open law on quail from Nov. 10 to Dec. 15, and on all other game Sept. 1 to Dec. 15; fourth, no marketing of game. It would seem that the FOREST AND STREAM Platform Plank is becoming a more stable affair every year. The Huron County Association has fifty members now, and expects to reach a membership of 200.

Lake Chautauqua.

LAKE CHAUTAUQUA lies in the northwestern corner of New York State, about seven miles from Lake Erie as the crow flies. The length of the lake is about 20 miles and breadth from a half mile at Bemus Point to 3 and 3½ miles at its broadest parts. As will be seen by the accompanying birdseye view map, it has a very beautiful and artistic shore line, full of bold points and headlands, so that whichever way the angler turns a new and pleasing panorama of scenic beauty opens up before him. High up among the hills, beyond the crest of a great ridge which divides it from Lake Erie, Chautauqua lies like an amphitheater among the rolling hills surrounding it. The elevation of Lake Chautauqua is about 1,400 feet above the level of the sea and 700 feet above the surface of Lake Erie. At this altitude the angler during the hottest season of the year finds the air cool, pure and bracing, which during the summer months is a perfect bliss to the worn-out, overworked, and parched city man.

As a fishing ground Lake Chautauqua is one of the most celebrated muscallonge waters of America. This is due to two facts: First, the lake is most admirably adapted to their welfare and growth. Second, it is annually stocked with millions of young fish from the hatchery on its shores. Muscallonge are found all over the lake, but the lower half, from Long Point down to the outlet, is by far the best ground to fish. It is so for various reasons. The fish are more plentiful there than in the upper half; they average a larger size. The lower half is better provided with hotels, boats, guides, bait, etc. The lower end is more easily reached by railroad from all principal points.

Chautauqua is a shallow lake and does not average more than fifteen feet. There are one or two deep holes in it. The principal one is just off Bemus Point. The bottom of the lake is thickly covered with weeds, which during the summer rise to the surface in large clumps.

Among these clumps of weeds are the best spots for muscallonge. In our map we have marked the fishing grounds thus: Muscallonge — — — — —; Bass x x x. Chautauqua is an exceptionally good bass water as well as muscallonge. Owing to the shallowness of the water and length of the weeds on the bottom the lightest of rigs are necessary; also short lines. We use for trolling this water Skinner's No. 4¾ and No. 6 spoons, with a No. 8 occasionally on dark, dull days, but, as a rule, small spoons double discount the large ones. In the issue of FOREST AND STREAM of Aug. 11, 1900, we gave cuts and details of how to mount spoons for Chautauqua.

For bass fishing we either use live bait or troll with the Delaware-belle.

We always make Lakewood our headquarters when fishing Lake Chautauqua.

With these notes in front of us and the map we will now start and make a tour of the best fishing grounds in the lower end of the lake, commencing at the Kent House dock. Almost alongside of this dock a drain runs into the lake. Around the mouth of this drain is a very favorite spot for bass. Bass fishing continues good all along the shore up to the entrance of Sherman's Bay. Directly you move out a little distance from this shore you are on good muscallonge ground.

From the Waldemere Point a large reef or rather series of reefs run up into Ashville Bay in the direction of Maple or Ashville Point, sometimes called one name, sometimes called the other. All around and over this reef is the very best of bass fishing; there is no better in the lake. Guides say this reef is 1,000 feet long, but after going over it hundreds of times we should say it is nearer 2,000 feet. The end can always be located by a set buoy there. On the inside of this reef the ground is bouldery and weedy, and is good bass ground. Muscallonge also work up into it. We have taken many a little fellow of 6 and 8 pounds out of the deepest holes here.

Around the point of the reef is a very favorite spot for muscallonge. We never like to leave it without getting one or two, and generally succeed if we stick to the spot any length of time. Many a fine fellow of 25 and 30 pounds has been taken from the point of the reef. From the point of the reef to Maple or Ashville Point, a distance of a mile and a half, is first-class muscallonge water. It is a very weedy piece of ground, and by about August the weeds grow to such an extent that there are merely channels between them, but they swarm with muscallonge. This is the time for 4¾ spoons, and, if mounted on a single hook they are better than on a treble hook, as they do not catch weeds so readily and hold a fish just as well. There is a little piece of clear water close to shore inside of Maple Pond. The water is about 12 feet deep. There are always plenty of muscallonge hiding up under the alders by this water; in fact, their tails must be sticking close to the bank.

We shall now leave Sherman's Bay and round Maple Point. About 300 yards out from the point is always a good spot for a big fellow. The fishing continues good all through Ashville Bay; fish from close to the weeds to 1,000 feet out from them. It takes half a dozen turns over this water to properly cover it. Ashville Bay is bounded on the north by a little point called Bly's Point; beyond Bly's Point up to Cheeney's Point is Bly's Bay. Close along shore in Bly's Bay are several good big clumps of lilypads, very much favored by black bass, and quite often a good sized muscallonge is here. Now we come to what we consider to be the very best stretch of muscallonge water in Chautauqua. It runs along the shore from Cheeney's Point up to Bemus Point. The ground lies from 100 to 3,000 feet out. On reaching Cheeney's Point we always put on No. 6 or No. 8 spoons, as this bit of water is pretty clear of long weeds. The possibilities here are always great. You may strike anything from 4 to 40 pounds, and one just as likely as the other. It is always worth while to put in half a day on this stretch of water. We believe more fish can be taken out of it than from any other similar stretch of water in the lake. Off Bemus Point is the deep hole; get on No. 8 spoons and sufficient line out to get it near the bottom. Your chances in this hole are to take one of the great-grandfathers of 70 or 75 pounds. They are here, and have been taken from this hole of the above sizes. It will be seen from the foregoing that the fisherman can start from the Kent House dock and come up to Bemus Point, nearly seven miles, without once getting off A1 muscallonge grounds. It is one continuous string of weed beds all the way; and it is safe to say that the angler will not pass a single clump of weeds that does not contain one or more of these fresh water tigers, waiting to rush out on some unsuspecting prey, or to try conclusions with some ambitious angler.

We will now crop the lake at Bemus Point and take the eastern shore home. We first strike Arnold's Bay. The shores are gravelly, and for about 100 yards out are good bass grounds; then weeds are struck, and also muscallonge. From Arnold's Bay we run along close to shore over A1 bass grounds until we get down to Bellevue Bay. From the northeast corner of this bay a reef runs out about 3 to 500 feet. It is a fine piece of bass grounds. Skirting the mouth of Bellevue Bay the muscallonge grounds commence again. Last season one seldom went over this stretch without getting one, but, as a rule, they run small in this part of the lake, averaging from 3 to 10 pounds.

From Bellevue Bay all the way down to Greenhurst the muscallonge fishing is good. About one-half mile out into the lake from Griffith's dock, in a direct line for the Waldemere Point, are three or four large, thick clumps of weeds. Troll around these weeds carefully three or four times, then shorten your lines a little and dash over them as fast as the guide can row. There are usually some old bouncers of 35 and 40 pounds in these weeds, and they have got a knack of rushing for the spoon directly it strikes a weed, when you are dashing over the bed. If one of our readers should ever have this experience he will find his fun commences when a 40-pounder strikes his spoon in the weeds. He will have a regular circus. The old fellow will dive down and run in and through the weeds in all directions. You can't hold him; you have to give him line, and all the time he is gathering up more weeds. We have seen our line apparently tied tight to the bottom under the weed bed and the fish jumping like mad 100 feet out. The trick is to get that fish; but you must first get rid of the weeds, which is no easy matter. On very bright days we always cork up our lines; that is, we split a beer bottle cork and put it on the line 15 or 20 feet from the spoon. We can then let out another 20 feet without dragging the weeds. There are some good muscallonge grounds below the Kent House, but we have never had the time to thoroughly explore them in such a manner that we can intelligently describe them. We think on the whole that the upper part of the lake, from Bemus and Long Point to Mayville, is generally better bass ground than the lower end. The shores on both sides are generally rocky and gravelly.

Lakewood, on Chautauqua Lake, can be reached from all quarters. The main line of the Erie reaches it from New York, Cincinnati, Cleveland, Pittsburg and Chicago. Buffalo is only a few hours' ride over one of the branches of the Erie.

The Kent and Waldemere hotels give special rates to anglers during the early part of the fishing season, and again during the fall. We have stopped there many a time, and always regretted leaving one of the most genial and courteous hosts that is to be found by those seeking pleasure and sport.

J. CHURCHWARD.

NEW YORK.

Another Cabin by the Lake.

ON the shores of South Watuppa Lake, which lies a short distance west of Fall River, Mass., are eighteen camps, where from the middle of April until late fall lovers of fishing, boating, sailing and bathing congregate and store up energy for their winter's work in the city. The lake is about three and one-half miles long by half a mile wide, and the shores are for the most part heavily wooded. There is good white and yellow perch, pickerel and black bass fishing. The bass are gamy and afford one a great deal of sport.

Commodore Wm. Walker is the most popular man on the lake, and his camp has the finest location. From the veranda on the second story of his shanty (as he calls it) one gets a sweep of the whole lake to the north. On the hill top is seen Fall River, with its church spires and factory chimneys; across on the opposite shore stands an old weather-beaten farmhouse, and in the cleared space the cows are seen, giving one a feeling of company and at the same time one has sense of security from intrusion. In the heat of the day to lie in a hammock at the water's edge with a pipe and a book makes one feel that life is worth living after all. It is strange the men one finds here—ardent fishermen and sincere lovers of nature, who know by name all the birds, can call by name every rope on a sailing craft, and if they can find a listener will spin endless fishing yarns and tales of adventure—men who at their calling in the city appear as though their one thought in life was their business.

In the spring of the year wildfowl rest here on their way northward, and later in the season the gulls come occasionally from the bay for a taste of fresh water. To don a suit of old clothes, hoist the sail and pass a pleasant day at some camp down the lake is a pleasure which is enjoyed each year by an increasing number. However hot in the city, it is always cool here, and soothed by the gentle lapping of the water, you are sure to get a refreshing night's rest. But the lake has also its stern side, and in a storm can raise a sea which requires skillful sailing on the part of those unfortunate enough to be caught out. The waters of the lake have often reminded me of the emotions of mankind; sometimes it is smooth and pleasant, and one starts out with a sense of good times to come, when a change in the wind and other signs show that a storm is brewing; soon the waters begin to toss; they are getting angry and are looking for some victim upon whom to wreak their spite. A run is made for the nearest shelter, and from this vantage ground we see the lake work itself up into a pitch of great fury. The waters hiss and bubble and great waves roll shoreward and break impotently at our feet. The storm over, the waters gradually calm down, the sun shines again, the birds sing in the woods, and we wonder that the smooth surface, disturbed by only a few ripples caused by a pleasant southerly breeze, can be the same waters that a short while since were ready to deprive us of our property—yea, even life if they were able.

WEEQUASH.

FALL RIVER, Mass., May 24.

Flies for Pickerel.

POUGHKEEPSIE, N. Y., June 1.—*Editor Forest and Stream:* Your correspondent Muskadosa, of West Roxbury, asks whether pickerel can be taken with a fly, and if so what flies are best.

I do not know whether they can be taken throughout the entire season or not, but in the fore part of the season—say in the latter part of May or beginning of June—I have had them rise quite freely to a red or red and white bass fly, and other anglers have told me that they have had the same experience.

J. S. VAN CLEEF.

See in advertising columns list of contents of Woodcraft Magazine. Hours of good reading there.

Blooming Grove Park Trespass Case.

From the New York Times.

PORT JERVIS, N. Y., June 3.—The special charter under which the Blooming Grove Park Association has existed in Pike county for a number of years was declared in a measure unconstitutional by Judge Purdey at the opening of the regular June term of Pike County Court at Milford, Pa., this afternoon. The organization is composed largely of New Yorkers, and when it was formed David Dudley Field, one of the members, drafted a charter, which created for the Association a court of original jurisdiction, whereby persons hunting, fishing or otherwise trespassing on the lands could be treated without a jury before a justice of the Association and corrected and punished.

Since the charter was granted by the Pennsylvania Legislature the residents of Pike county believed it was unconstitutional, but no one who suffered under it felt disposed to fight the Association until last fall. At that time Charles Hazen, of Lackawaxen, and other sportsmen were hunting deer. Hazen shot a buck, and it ran on the big preserve of the Association and died. The hunters pursued, but an employee of the Association discovered the hunters' dogs, and later found the men themselves, who had hidden in the brush. Hazen was arrested and arraigned before Judge Shannon, who imposed a fine of $50. He refused to pay the fine, was taken to Milford Jail, but was later released on a writ of habeas corpus and instituted proceedings against the constitutionality of the charter of the Association.

The case was tried in the April term, but Judge Purdey reserved his decision until to-day. The Court holds that any act, general or special, under which a court is authorized to impose fines, and which deprives the defendant of a jury trial, is unconstitutional, and he therefore ordered the release of the prisoner. The decision has created a feeling of rejoicing among the Pike county sportsmen.

The Kennel.

Dog Churning.

ON Saturday the Carnarvon county magistrates gave their decision in the case of alleged cruelty to dogs, in which Owen Jones was summoned by the Royal Society for the Prevention of Cruelty to Animals for using a sheep dog for the purpose of churning milk. The court was crowded, for the public manifested considerable interest in the matter, as the practice is pretty general in North Wales, especially among small farmers.

Mr. J. Menzies, who presided, said that the magistrates found considerable difficulty in adjudicating upon the case, inasmuch as they had no precedent to guide them, and because there was such a conflict of evidence at the time of hearing. However, they went to see the dog at work. The dog was young and in good physical condition, but it had not been long in training. The churning was done by means of a light wooden table about 9½ feet in diameter, placed at an angle of 45 degrees from the horizon, and revolving on a pivot. At the bidding of his master the dog willingly went on the table and worked with apparent ease, but in three minutes after the magistrates left he ran away. On being brought back he was chained to the structure, and from this time forward he showed signs of fatigue. His breath became shorter, his tongue protruded, and his legs seemed to get stiff and tired, and he got lower down on the table, thus dragging backward and requiring greater exertion to work the machine. The bench were of the opinion that ten minutes after the dog had been chained the cruelty began, but it was not excessive, and when the dog was again unchained he seemed to revive, and climbed up to a higher level, where he remained working easily for ten minutes more until the milk had been churned. They did not believe the defendant had any intention of being cruel to the dog, but if he continued to churn milk in the same way he could only be allowed to do so provided the dog was in good physical condition, and that he was not chained. Churning obviously was not to the dog's instinct, but that of itself did not constitute cruelty. In place of the chain the defendant might get a guard for the machine, which could be obtained at a trifling cost, and would render the chaining unnecessary, and leave the dog free to work at a higher level. In their opinion the ends of justice would be attained by dismissing the summons and cautioning the defendant not to use the machine again in a similar manner—namely, that the dog would not be chained.—London Field.

Points and Flushes.

THE veteran dog trainer, Mr. R. B. Morgan, who is now residing at Pryor Creek, I. T., had a serious misfortune recently, his kennels being entirely destroyed by fire. But Mr. Morgan belongs to the indomitable school. In writing us concerning the calamity—one which would dishearten most men—he says: "The ground is there yet. I will commence building in the morning (May 27). You know one of the old guard would not let a little thing like the burning up of his kennels stop him. Dan, my son, being close by at the time, got all the dogs out safely. I am very much pleased to think it is no worse, for I have five dogs in my kennel—setters. I do not think any kennel can produce five better ones. I am speaking of dogs which have no public record."

Mr. H. H. Cooper, secretary of the W. C. K. C., of Winnipeg, Canada, writes us that "The Western Canada Kennel Club field trials will be held this season at Lasalle, Manitoba, Oct. 2 and 3. These trials are strictly amateur, and are open to members of the W. C. K. C. only."

Mr. R. B. Morgan, of Pryor Creek, Indian Territory, while recognizing the naturalness and propriety of the universal wish to make good bargains, has this to say about some dog buyers: "I 'venture to say there is not a reputable kennel owner in the country to-day who does not spend more cash on the care and education of his really good dogs than most would-be buyers would think of paying for a dog thoroughly trained. A great part of this expenditure on the owner's part is made before he has really begun the dog's education. Speaking from my own experience, I am very glad to say that the FOREST AND STREAM inquirers are not looking for a cheap class of dogs, but are willing to pay the price, provided they get a good one."

29. Burgess, Marblehead, Massachusetts Bay.
29. Winthrop, class handicap, Winthrop, Mass.
29. Seawanhaka Corinthian, annual race for Leland challenge cup for raceabouts, Oyster Bay, Long Island Sound.

THE tuning up of Constitution was continued at Newport during the clear days of last week. Her sails are improving daily and her crew is getting into better shape, but until everything is working to Mr. Duncan's entire satisfaction no attempt will be made to drive her. On last Wednesday Constitution was taken outside the harbor, where there was considerable sea on, but she moved along with great ease, not seemingly disturbed by the waves. She seems to be almost perfectly balanced, for while under sail the wheel can be left for several moments at a time, and she moves along without coming up or keeping off her course in the least. Mr. Duncan was called away on Thursday, and during his absence the boat was taken to Bristol, where slight changes were made in her rigging. Her compass has been placed in position, but will be of little value, as the steel spars make it almost impossible to adjust a compass so it will be perfectly accurate. In the case of Columbia when sailing by compass it was necessary to place the instrument on the cabin floor at the foot of the companionway and keep a man stationed there to inform the helmsman as to his course. The steel spars are fast taking shape in the shop at Bristol. New hollow, wooden club topsail spars have arrived, and they will replace the old ones, that were considered too light.

Columbia has been lying at her mooring off the breakwater at Glen Cove. Mr. Morgan had her out several days last week, and as the wind was from the eastward most of the time, she would beat up to a point nearly off Stamford, then stand back toward Glen Cove, giving her crew plenty of practice with the light sails, which they handled in excellent shape. She is in splendid condition and looks more fit than she did two years ago. Columbia was taken into the Erie Basin dry dock on Monday. She will remain there for several days having her underbody cleaned.

The first race between Constitution and Columbia will take place off Newport on June 15, and they meet again on June 22 off Larchmont. The race is for a cup valued at $500, offered by the Larchmont Y. C.

SHAMROCK II. was docked at Southampton on last Saturday for the purpose of giving her a general overhauling before she receives her new mast and other gear. The salvers who have been engaged in recovering the spars and rigging which were lost when the challenger was dismasted have found that the topmast was not broken and that most of the rigging is intact. The condition of the mast shows that it only yielded to the strain put upon it by the heel of the topmast after the bowsprit had given away. The opinion abroad seems to be that Shamrock I. is ten minutes faster over a thirty-mile course than she was two years ago, and up to the time of the accident to Shamrock II. her performances against the older boat were as satisfactory as could be expected, considering she was an untried vessel. It has been stated that Shamrock I. will be seen in American waters this season, acting as a trial horse for Shamrock II.

INDEPENDENCE was given her first trial under sail on Monday. She was towed out to Boston Light, where the towline was cast off shortly after 1 o'clock and she stood out into Massachusetts Bay under her lower sails. The wind was blowing from the east and there was a long rolling sea on. Independence heeled down quickly, but soon found her bearings and moved rapidly, using her overhangs to an appreciable extent. Her full bow did not seem to retard her progress in the least in the seaway, and her wake was also very clean. Her head sails set perfectly, and the mainsail had but few wrinkles, which will draw out as soon as the sail is stretched. She seemed to steer easily with the balance rudder and minded her helm with readiness. All interested in the boat were more than satisfied in every particular. After some slight changes have been made in her rigging she will again have another trial during the latter part of the week.

Our Boston Letter.

BOSTON, June 1.—It was expected that Independence would have gone out on her trial trip this morning, but a drizzling rain effectually prevented it. Everything was made ready and guests had been invited. Although she would have probably gone out if the weather had not been stormy, there is still considerable to do on her in the way of fitting out. Capt. Haff was rather pleased than anything else that she did not go out, for there are some things which he desired to have finished before sail should be put on her.

From all indications Independence will go out on her trial trip Monday morning. Throughout the day the workmen were busy on the fittings above and below decks. The eye bolts for the boom crutch were put in and mousings were put on the mainsheet bridles to prevent the blocks from going too far forward. The mainsheet has not been reeved through the blocks, and probably will not be until just before she goes out on Monday. The mainsail has not been bent, and will not be until she is ready to go out. The mainsheet will be taken off every night when she comes in from sailing. This is to keep it dry as much as possible, and also to get it off the deck, where it would take up too much room when coiled up.

Independence was towed from the Atlantic Works to Pier 1 of the New England docks last week, and the remainder of the work of fitting out will be carried on at this place. Although she will be provided with a tender for the crew, provisions are being made on board, not only for the officers and men, but also for Mr. Lawson and his guests. She is partitioned off below decks as if for cruising, but the woodwork is very light, and all of the panels are cloth.

The space at the extreme after part is given up to a stateroom. Forward of this, on the starboard side, is a guests's stateroom, and on the port side is the quartermaster's storeroom. Forward of these, on the starboard side, is Mr. Lawson's stateroom, with toilet connecting, and on the port side a guest's stateroom. Next comes the main cabin, with berths and lockers. This space will be used for a sail room when racing. Just off the main cabin, on the port side, is a locker for oil clothes. Forward of the main cabin is the captain's room, on the starboard side, and a guest's stateroom on the port side. Between these is a passage leading to the galley and officers' mess room. Forward of this is the sleeping space and messroom for the crew, provided with swinging pipe berths.

On Friday the big hollow wooden boom was swung into place. It looks very large and appears to take up much of the beam of the boat. It is supported by trusses with wooden struts, the same as Constitution. The wire guys are made fast at the outer end and are set up forward by turnbuckles. The fitting which takes the place of the jaws of the gaff is made of white metal. Suspended from it is a shackle upon which it is intended to secure the throat of the mainsail. Adrian Wilson, of the firm of Wilson & Silsby, is not in favor of this fastening, and claims that it will prevent the sail from setting properly.

JOHN B. KILLEEN.

YACHTING NEWS NOTES.

The Greenport Basin and Construction Company has had a busy season with the fitting out of a large number of older boats and the building of a number of new ones. The yawl Vigilant, owned by Mr. Perry Chubb, is now receiving finishing touches to her hull and rigging and will soon be in commission. The steam yachts Freelance, owned by Mr. F. A. Schermerhorn; Altair, Mr. E. D. Trowbridge; Magnet, Mr. Latham A. Fish; Nirvana, Mr. William T. Sands, and Willada, Mr. William Hester, have been overhauled and have left the yard. The cutter Isolde, Mr. F. M. Hoyt, went into commission last week and sailed for Stamford. Senta, Mr. J. H. Hinckle, which recently arrived from Southampton after a rough trip of sixty-five days, has been entirely rerigged and refitted. Mr. Henry S. Redmond's cutter Syce has been put in shape and is ready for sale or charter. Mr. Redmond's yawl Ailsa, that will race against Vigilant, arrived at this yard from Falmouth, England, on May 31. The cutter Eelin, purchased by Mr. Philip T. Dodge, left England at the same time as Ailsa. She has not been reported, but is expected any day. The English-built Taurus, owned by Mr. J. H. Hanan, arrived at this yard last week, thirty-two days out from Marseilles, France, and is now being overhauled. The schooner Katrina, Mr. James B. Ford, was put overboard a few days ago, and is having her rigging renewed. The 36-footer Grayling, built for Mr. Robert Toland, of Philadelphia, has been taken by her owner to her home port. The 30-footer Marion, built at this yard for Mr. F. M. Smith, has been hauled out and is to be given a last overhauling before the racing begins.

Mr. Cyrus P. Judson has sold his steam yacht Nushka to Mr. J. H. Hoadley, of New York city.

The twin screw steam yacht Irene, built for Mr. Leonard Lewisohn, was successfully launched from the yard of her builders, the Gas Engine & Power Co. and Charles L. Seabury Co., at Morris Heights, at 8:30 on June 1. The boat was named by Miss Irene Lewisohn. Her dimensions are as follows: 155ft. over all, 130 ft. on the waterline, 18ft. beam and 8ft. draft. She is a flush deck vessel of steel construction, with mahogany deck houses. The forward deck house will be used as the dining saloom, and the after deck house will be used as a music and drawing room. Below decks, starting at the bow, is the chain locker followed by the boatswain's store room, crew's toilet room and forecastle fitted with lockers and pipe berths. Aft of the forecastle are staterooms for the

officers. Next aft comes the galley, which extends the full width of the vessel, which is fitted with a large range, sink with hot and cold water, dressers, dish lockers, etc. Next aft comes the engine and boiler space. Following the engine space aft is the owner's bath and toilet room. The owner's and guests' staterooms are large and are fitted with every convenience. The main saloon is very roomy and is reached from the after deck house by a stairway. Triple expansion engines and Seabury water-tube boilers furnish the motive power. Her builders guarantee a speed of eighteen miles an hour. The yacht will be lighted by electricity and will carry a naphtha launch and three other boats.

The new steam yacht Hope, which was launched recently from the yard of the Gas Engine & Power Co. and Charles L. Seabury & Co., for Mr. Guy Norman, has had her trial trip. The contract called for a five-hour trial, and she was to make twelve miles an hour consecutively. She made sixty-one knots in the five hours under natural draft.

Mr. Joseph M. Doggett, of the Larchmont Y. C., has bought the sloop Ludeah from Mr. J. Montgomery Sears through the Gas Engine & Power Co. Ludeah will be raced against Mira and Hebe. She was too large for Mr. Sears' use at Bar Harbor, and he is having the Gas Engine & Power Co. build for him a knockabout that is to conform to the Bar Harbor Y. R. A. rules. The new boat is planked and is nearing completion.

The new 45ft. steam launch General Mitchell, built by the Gas Engine & Power Co. and Seabury & Co. for the use of Gen. John R. Brooke, at Governor's Island, has had her official trial in the lower bay and has been accepted. The guaranteed speed was eleven miles an hour.

The auxiliary yacht building at Morris Heights from designs made by the Gas Engine & Power Co. is owned by Mr. R. W. Cumming, of Newark, N. J. She is 76ft. long over all, 52ft. on the waterline, 17ft. beam and will draw 7ft. 6in. Mr. Colgate Hoyt has purchased a 40ft. cabin naphtha launch from the Gas Engine & Power Co.

The English-built steam yacht Sagitta, which has been chartered by Mr. Joseph DeLamar, arrived from Southampton at New York on May 27. She is 563 tons Thames measurement, and can steam thirteen knots. She left Southampton on May 10, and St. Michaels, where she stopped for coal, on May 18.

The auxiliary schooner Diana has been purchased by Mr. F. C. Penfield, N. Y. Y. C.

Invader, the Canada cup challenger, was launched at Oakville, Canada, on May 27. The boat is 27ft. 6in. on the waterline, 9ft. 8in. beam and draws 6ft. She carries 1,485 sq. ft. of sail.

The Milwaukee yacht Orion, built to defend the Canada cup, was launched on June 1. She is 43ft. over all, 27ft. on the waterline, 9ft. 6in. beam and 6ft. 6in. draft. The mainsail contains 967 sq. ft., staysail 240 sq. ft.

The steam yacht Nymph, recently purchased by Mr. F. S. Brown, of Philadelphia, ran on the Point Abino Rocks near Buffalo and is a complete loss. The boat struck the rocks during a dense fog. She was 100ft. over all and was valued at $10,000.

The schooner yacht Endymion, built for the late George Lord Day, has been sold to Mr. George J. Lauder, of Pittsburg, Pa. Mr. Lauder will sail on June 22 in her for Scotland.

Mr. Edward Kelly's 51-footer Huguenot, recently built by Harry Huntington, is now hauled out at the Jacob yard at City Island having her fin fixed in place. She will race in the Larchmont regatta on June 15 for the first time.

Mr. C. C. Iselin has chartered the English steam yacht Christabel for the America Cup races.

The steam yacht Rival has been sold by Mr. F. J. Root through the agency of Mr. A. J. McIntosh to Mr. Turner A. Beall, of New York.

The steam yacht Akela has been sold by Mr. W. H. Ames, of Boston, to Mr. Winslow S. Pierce, of New York.

The English steam yacht Sybarita, owned by Whitaker Wright and chartered by George J. Gould, arrived at New York on June 3.

Winthrop Y. C.

Saturday, June 1.

THE second race of the Winthrop Y. C. was sailed on Saturday afternoon, June 1, in a puffy breeze from the northwest. In the first class Udeal carried away her mast and the race was won by the Hanley cat, Thordis. Privateer again had an easy time of it in the 21-footers. In the 18-footers Della won handily. The following is the summary:

25ft. Class—Start, 4:00.

	Finish.
Thordis, W. Foster	5 10 40
Alert, B. Ridgeway	5 21 24

21ft. Class—Start, 4:05.

Privateer, J. McConnell	5 18 10
Ruth, A. S. Richards	5 41 03

18ft. Class—Start, 4:10.

Della, C. H. Kelly	4 57 21
Hector, A. W. Hubbard	5 00 25
Louise, W. D. Allen	5 01 00
Thelma, E. K. Tewksbury	5 02 07
Martha, W. Jenkins	5 06 07

JOHN B. KILLEEN.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter III.—Laying Off, Making the Moulds and Setting Up the Frame (Continued).

It is easier to fit the rudder trunk, or case, now than after the boat is planked, as would be the case with larger craft, and this is made like a box, with two 1in. mahogany or Kaurie pine planks on each side of the sternpost, with a 1½in. centerpiece on the after side. The latter is rabbeted into the two sides, and all three are rabbeted into the counter frame.

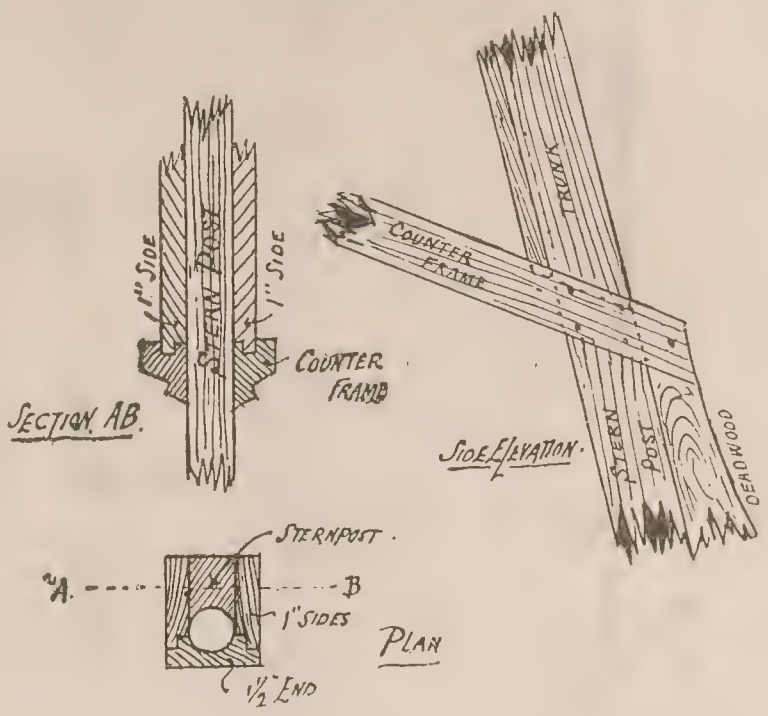

Fig. 8.

All the joints, like the scarphs of the stem and sternpost, etc., must be well fitted and painted with thick red and white lead before bolting together.

Both boats' keels and frames are now ready to set up, but they will be treated in different ways, as the centerboarder will be built bottom up, and the keel boat keel downward.

Starting with the centerboarder, draw a central chalk line on the floor and mark all the sections out, then set up the midship section exactly square with the central line, so that the keel will be about 2ft. above it, using the plumb line to make sure the center line of the mould is vertical and right over the line on the floor. Fix the mould in place with a center post, which should be fixed to the mould so that one edge is on the center line. This post must be nailed to a cleat on the floor and well stayed fore and aft to keep it in a vertical position. Two side posts will be necessary to keep the mould level.

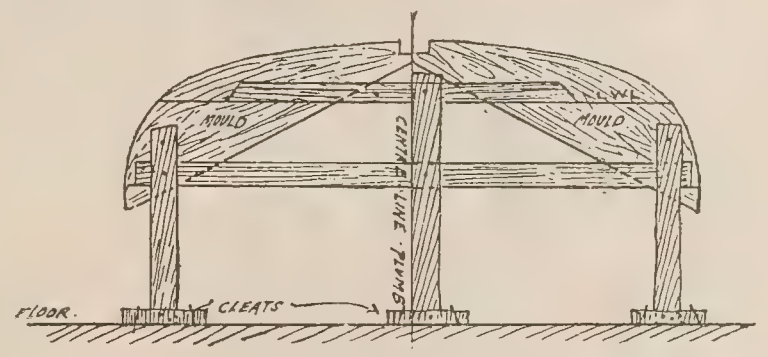

Fig 9.

The exact distance apart from center to center of the moulds should now be checked along the center floor line, and the height of the L.W.L. on the midship mould noted, as all the other moulds must be leveled to this height above the floor. They will all be set up in the foregoing manner, and well stayed fore and aft, so that they are all square with the center floor line, and their vertical center lines plumb and L.W.L.'s level. This is a long and tedious business, but on its accuracy all the rest of the work depends, so do not spare a little extra care and time over it, and fix them so that they will not move when you come to work on them.

I would advise working to the fore edge of the moulds forward of and including the midship section, and to the after edge of the others—that is to say, place the forward moulds so that the mark for their places on the central floor line comes just on the fore side of each, and on the after side of the after moulds. The object of this is to avoid bevels on the edges of the moulds, which would be required if the center of each were taken instead of the edge, as shown by the sketch.

Check the squaring of the moulds by measuring from the center of the stem to the outside of the first mould at the sheer level on each side, and see they are the same; then do this between each pair of moulds till all are exact.

The moulds are now ready for the keel to be bent over them and screwed to each, when it is seen to be correct and fair to the curve of the drawing, and the stem and transom must then be stayed in a similar manner to the moulds, squaring and plumbing from the central floor line as before, and a line should be stretched through all the moulds at the L.W.L., and carefully leveled. A sheer batten should be nailed round the moulds at the deck level to fair them and hold them all in place while the rabbet is cut.

The moulds for the keel boat will not be set up first, but after the keel and frame are set up in place on the stocks, and fixed by shores and stays from the roof and walls. The stocks are best made from a 3in. by 9in. deal on edge, firmly fixed to the floor at exactly the same angle as the keel.

When the frame is fixed, a clear center line must be marked along keel, stem, sternpost and counter frame, and the stations for the moulds marked on it in the same manner as on the floor line in the case of the centerboard boat. The moulds can now be set up as before, except that they are now right way up and stayed from the roof, or if that is too high a fore and aft 3in. by 9in. deal must be fixed from stem to stern, and well secured to the roof and walls, and the moulds stayed from that.

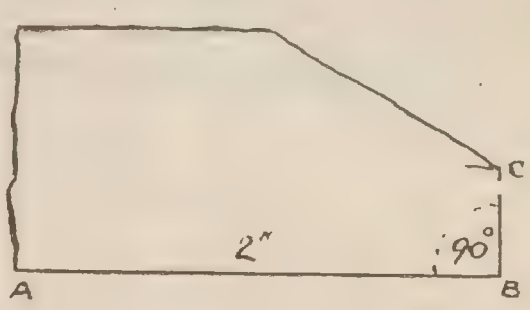
When the moulds are all fixed square and plumb in their proper places, and the sheer batten on, the next job is to cut the rabbet.

Chapter IV.—Cutting the Rabbet and Fairing the Moulds.

It is a common practice for professional builders to cut most of the rabbet of centerboard boats before the keel and stem are set up in place, as it is much easier to get at the work when they are in separate pieces, which can be easily moved into the most convenient positions for working.

This method, however, requires considerable knowledge of the trade before it can safely be attempted; and, though entailing more work, it is consequently much safer for the amateur to cut the rabbet after the whole frame is set up and properly fixed in its place, as in this case he can easily see the exact angles required at each section of the rabbet.

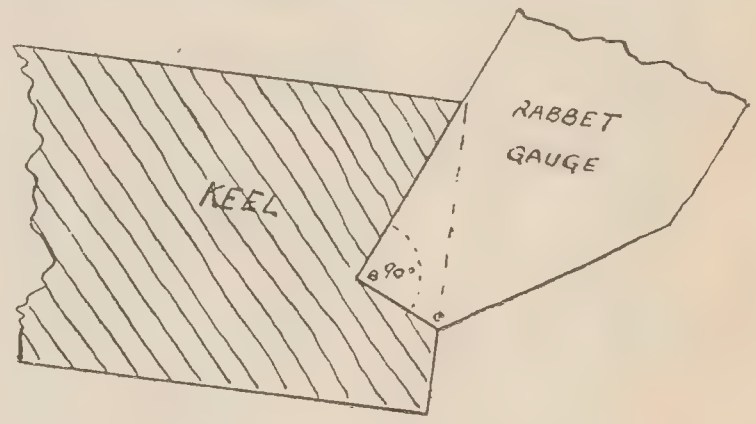
Before starting on the rabbet, a gauge must be cut out of a small piece of hardwood, about 2in. long, 1in. wide and ½in. thick. One edge, A-B, must be carefully planed up, and one end correctly squared to it, and marked off to the exact thickness of the planking—B-C.



RABBET GAUGE
A.B.C. = a right-angle
B-C = thickness of plank

Fig. 13.

The use of this gauge is to ascertain the proper depth to cut the rabbet at any part, and also to see if the inner angle is correct, the side A-B being placed on the flat of the rabbet, thus:



B, C—Thickness of plank.
Fig. 13½.

and the square end, B-C, showing the proper depth and angle.

This gauge should be kept in a convenient pocket, so as to try the rabbet continually while it is being cut. In addition to this gauge, a strip of American elm ¼in. by ¾in. in section, and 3 or 4ft. long, should be used to bend around each mould to show the angle of the back of the rabbet, with the side of the keel or stem, which must be a continuation of the curve of the mould.

Having prepared the gauge and the batten, set off the rabbet line on the keel and stem at each mould, taking the proper position of the lower edge of the rabbet, X from the sheer and half breadth plans at each station. This varies very much in the two types of boats now under consideration; as in the centerboarder, No. 1, the rabbet is underneath the keel, while in the keel boat, No. 2, it is on the side.

The only safe way to get it correct is to make a careful sectional drawing of the keel or stem at each station, and mark the rabbet line X on the keel and stem at those points as already stated,

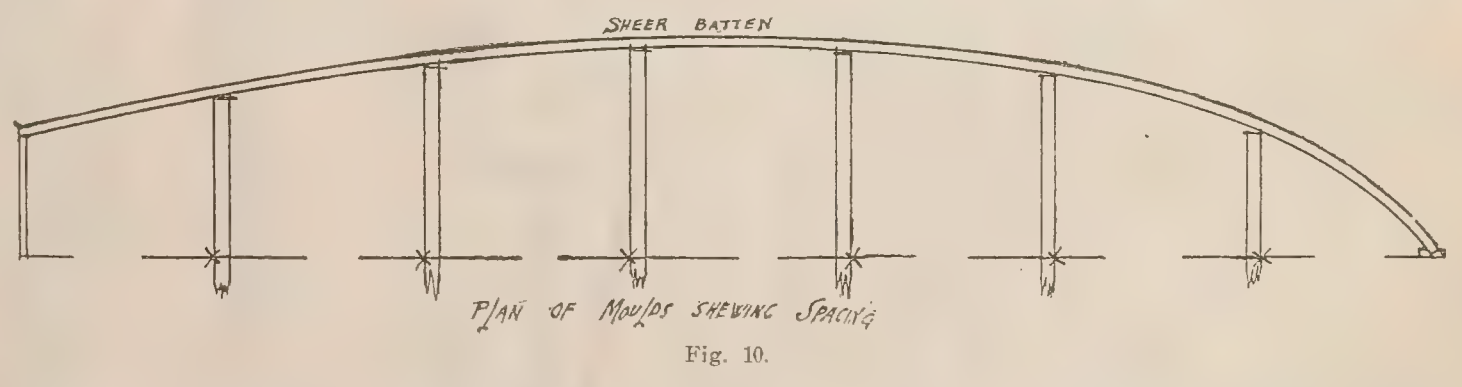


Fig. 10.

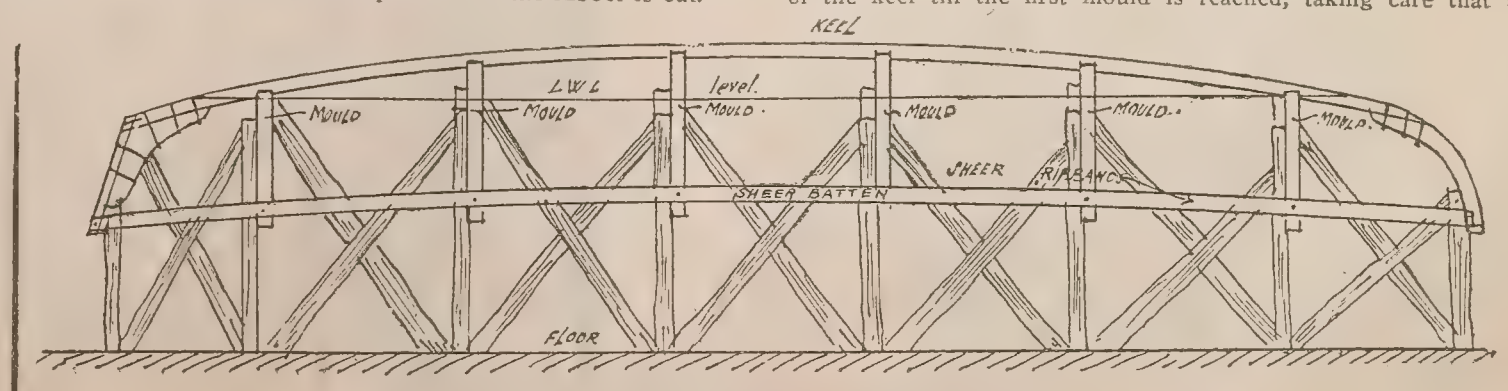
drawing a fair line through the spots, and cutting a few inches of the rabbet at each of these places, taking care to follow the curve of the mould, and not to cut quite to the full depth; the accompanying sketch will show how this is done at the moulds 1 and 2.

When a section of the rabbet is cut at each of the moulds, take a stiff batten about 12ft. long and tack it over the moulds, so that the fore end just touches the rabbet line on the stem at the deck level under the sheer batten; now cut a bit of the rabbet in the same way as before, letting the end of the batten into the stem to the depth of the rabbet, as shown by the rabbet gauge.

Repeat this about every 6in. down the stem and fore end of the keel till the first mould is reached, taking care that the



— ELEVATION OF CENTRE BOARD BOAT IN FRAME —

Fig. 11.

batten lies flat on the moulds and fits the rabbet, bending the batten over the moulds in various positions, so as to get the correct angle for the rabbet at all points from the stem-head to the first mould.

When these sections have been correctly cut at each mould,

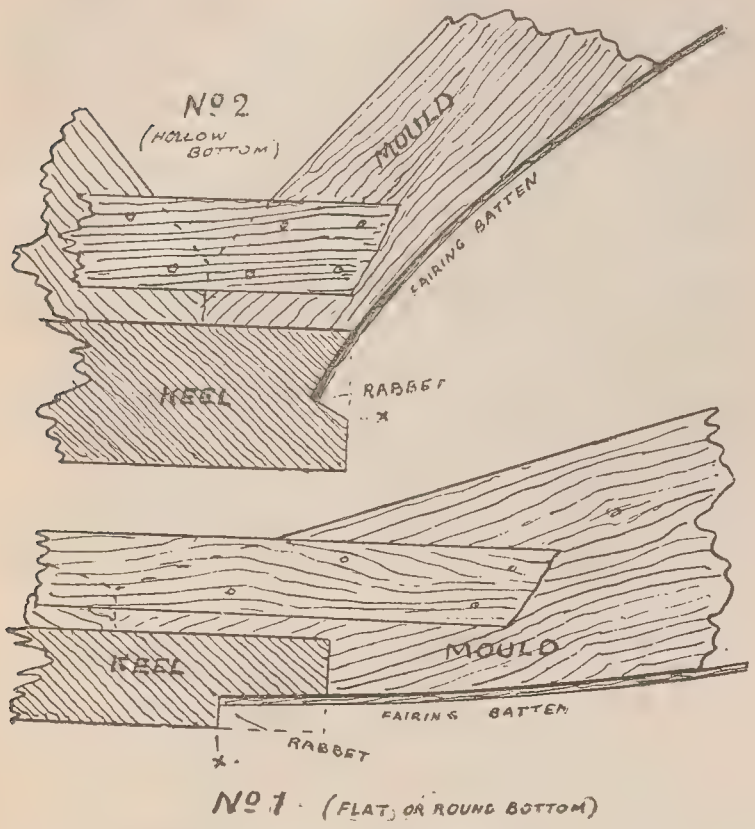


Fig. 14.

including the transom of the centerboard boat, and the sternpost and counter frame of the keel boat, the intermediate portions of the rabbet may be cut and faired up from section to section with the chisel and rabbet plane, testing every part with gauge and batten, and also laying the batten flat along the rabbet, to see that there are no lumps or hollows in it.

Harlem Y. C. Annual Regatta.

CITY ISLAND—LONG ISLAND SOUND.

Thursday, May 30.

THE Harlem Y. C. held its nineteenth annual regatta on Thursday, May 30, in a light N.E. breeze. Thirty yachts started. The 51, 43 and 36ft. classes were sent away at 1:20 o'clock, and although the wind was light the tide was in the boats' favor. Aquila crossed ahead in the weather berth, but Mira soon drew ahead of her; with the wind N.E. it was a beat to Matinicock Point, the first mark, a reach to Delancy Point, and a run home, until the wind hauled and made it another beat. Memory appeared for the first time in a yawl rig. Snapper got away fourth in her class, but soon took the lead, and after passing the first mark she was beyond any danger of being overtaken by any boat in her class, barring accidents. The 51, 43 and 36ft. classes sailed over an eighteen-mile triangle; the 30 and 25ft. classes had a thirteen-mile course, while the 21 and 18ft. boats sailed over a nine-mile course. The times were:

	Finish.	Elapsed.
Sloops and Yawls—51ft. Class—Start, 1:20.		
Sunshine, W. Christie & Jones	Withdrew.	
Sloops and Yawls—43ft. Class.		
Aquila, J. K. Getty et al	Withdrew.	
Mira, Charles Lane Poor	5 34 45	4 14 45
Memory, W. N. Bavier	Withdrew.	
Coquette, M. Delaney	Withdrew.	
Ramona, C. H. Weeks, Jr	Withdrew.	
Cabin Catboats—25ft. Class—Start, 1:25.		
Marguerite, T. J. Canavan	Withdrew.	
Emily, John Wimmer	6 02 00	4 37 00
Bessie F., F. J. Muhlfeld	Withdrew.	
Golden Rod, W. A. Towner	5 54 35	4 29 35
Cabin Sloops and Yawls—25ft. Class—Start, 1:30.

Fortuna, Brudi & Ulrich	Withdrew.	
Cabin Catboats—30ft. Class—Start, 1:35.		
Dot, C. T. Pierce	4 16 30	2 41 30
Glory, J. Greenbaum	Withdrew.	
Cabin Sloops and Yawls—30ft. Class—Start, 1:40.		
Alerion, A. K. Alker	4 26 30	2 46 30
Ereco, J. Oppenheim	Withdrew.	
Elua, L. P. Bigelow	5 34 30	3 54 30
Petrel, O. C. Rigl	5 44 00	4 04 00
Vim, C. Brauneck	5 45 15	3 55 45
Open Sloops and Catboats—21ft. Class—Start, 1:45.		
Ox, Robert Bavier	5 12 25	3 27 25
Gazabo, H. V. Volte	5 13 00	3 28 00
Undine, A. M. Fecheimer	Withdrew.	
Ellide, M. R. Walsh	5 40 00	3 55 00
Dottie Deane, G. H. Lansing	Withdrew.	

The winners were: Mira, Golden Rod, Snapper, Dot, Alerion and Ox.

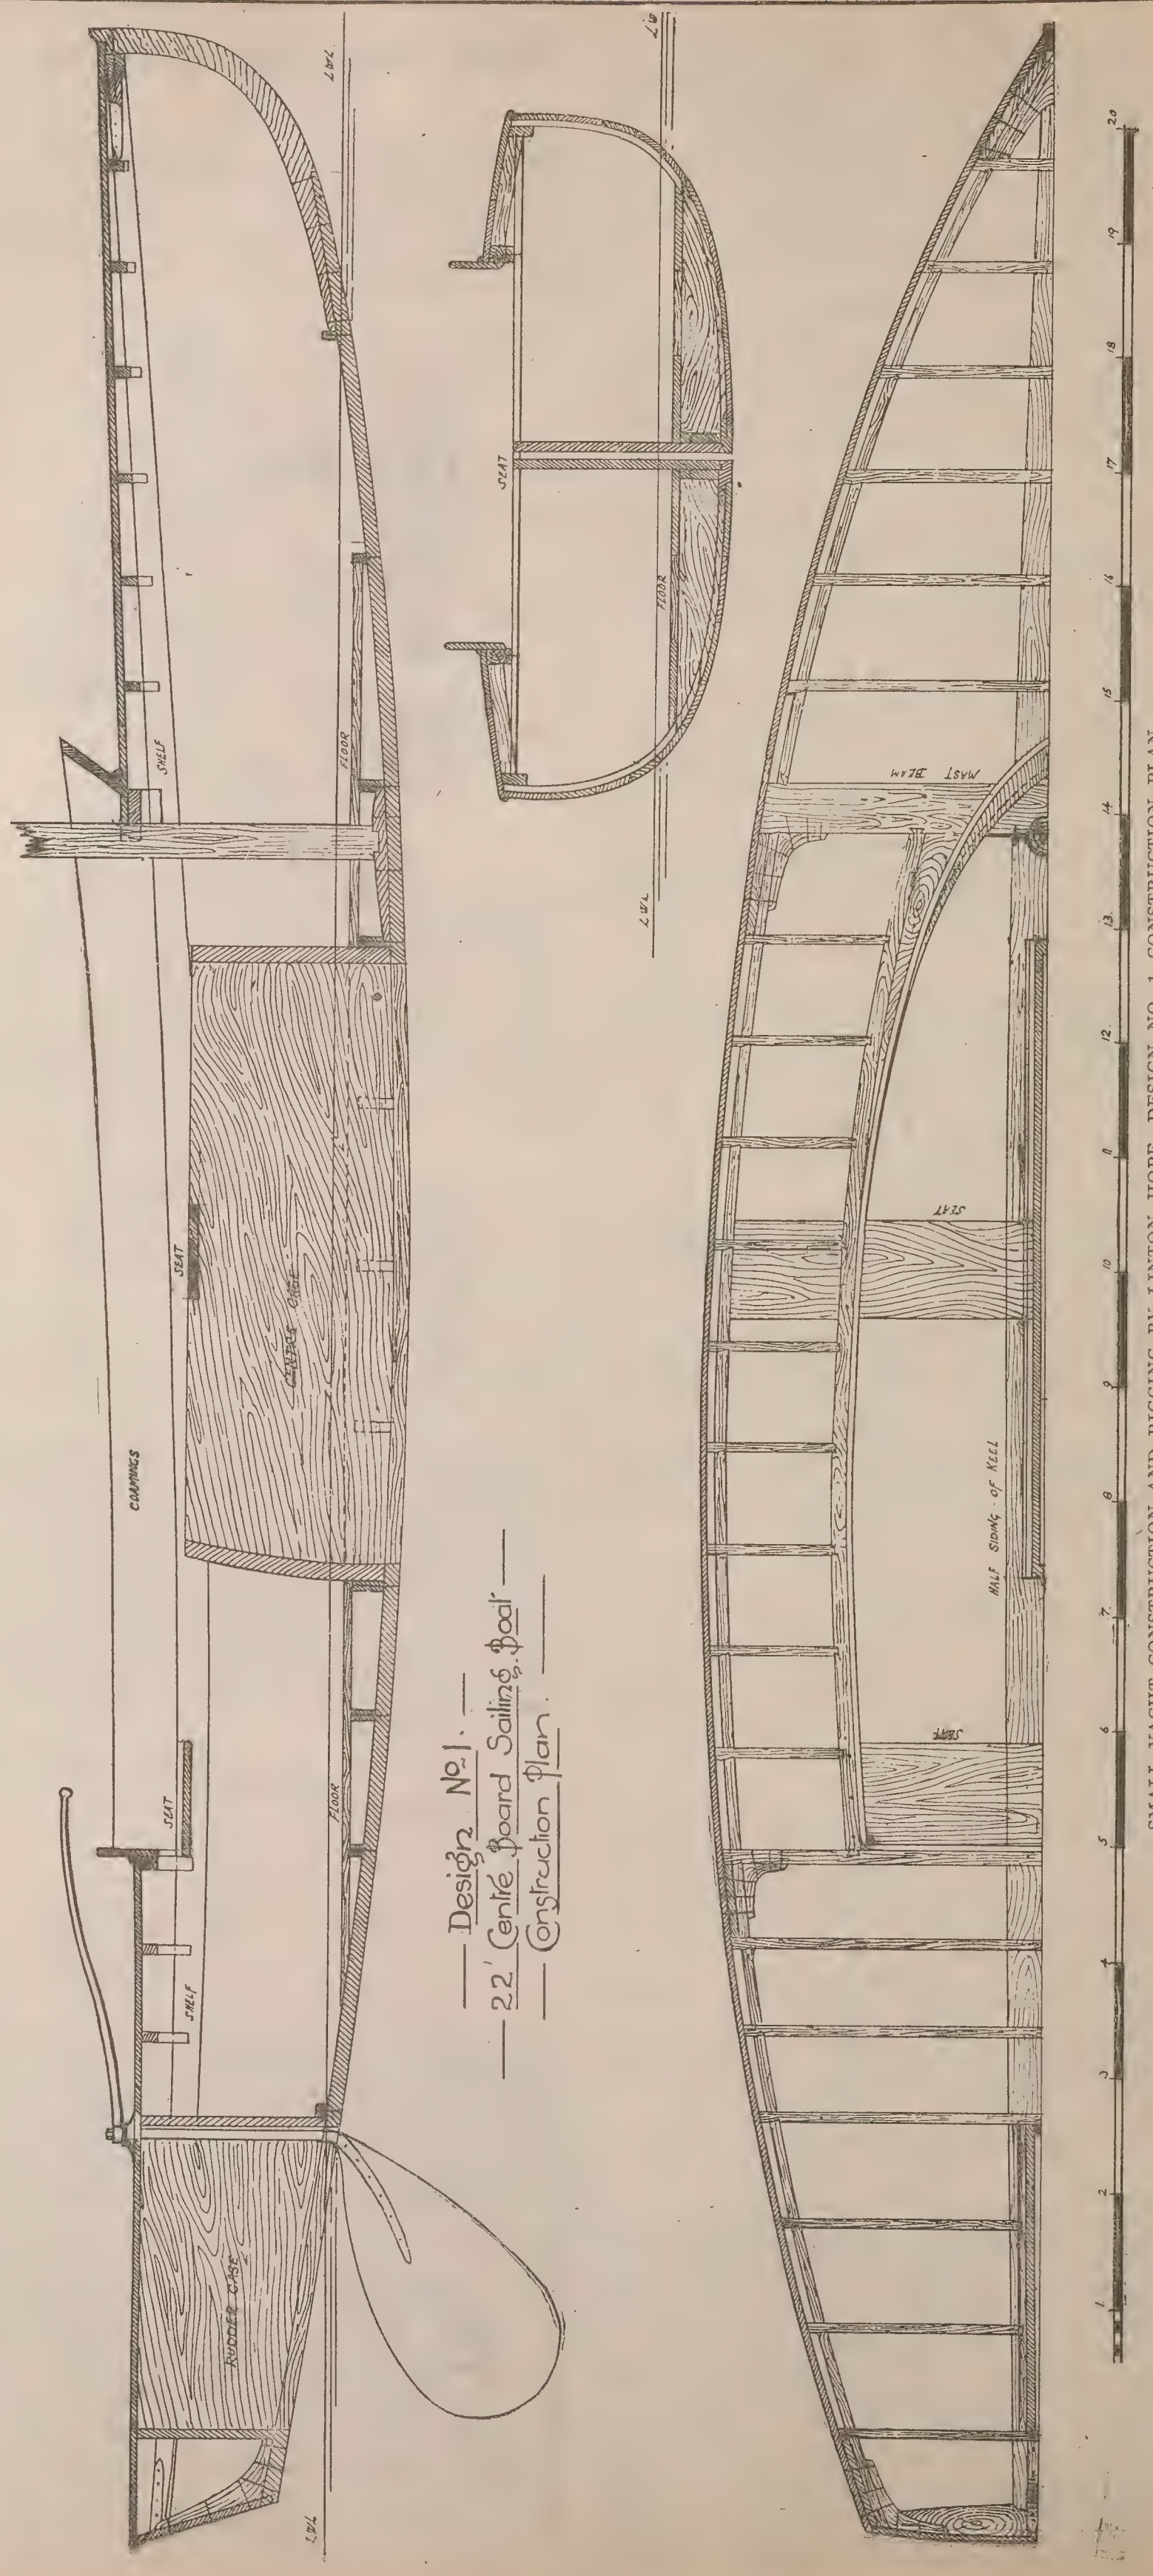
Williamsburg Y. C. Annual Regatta.

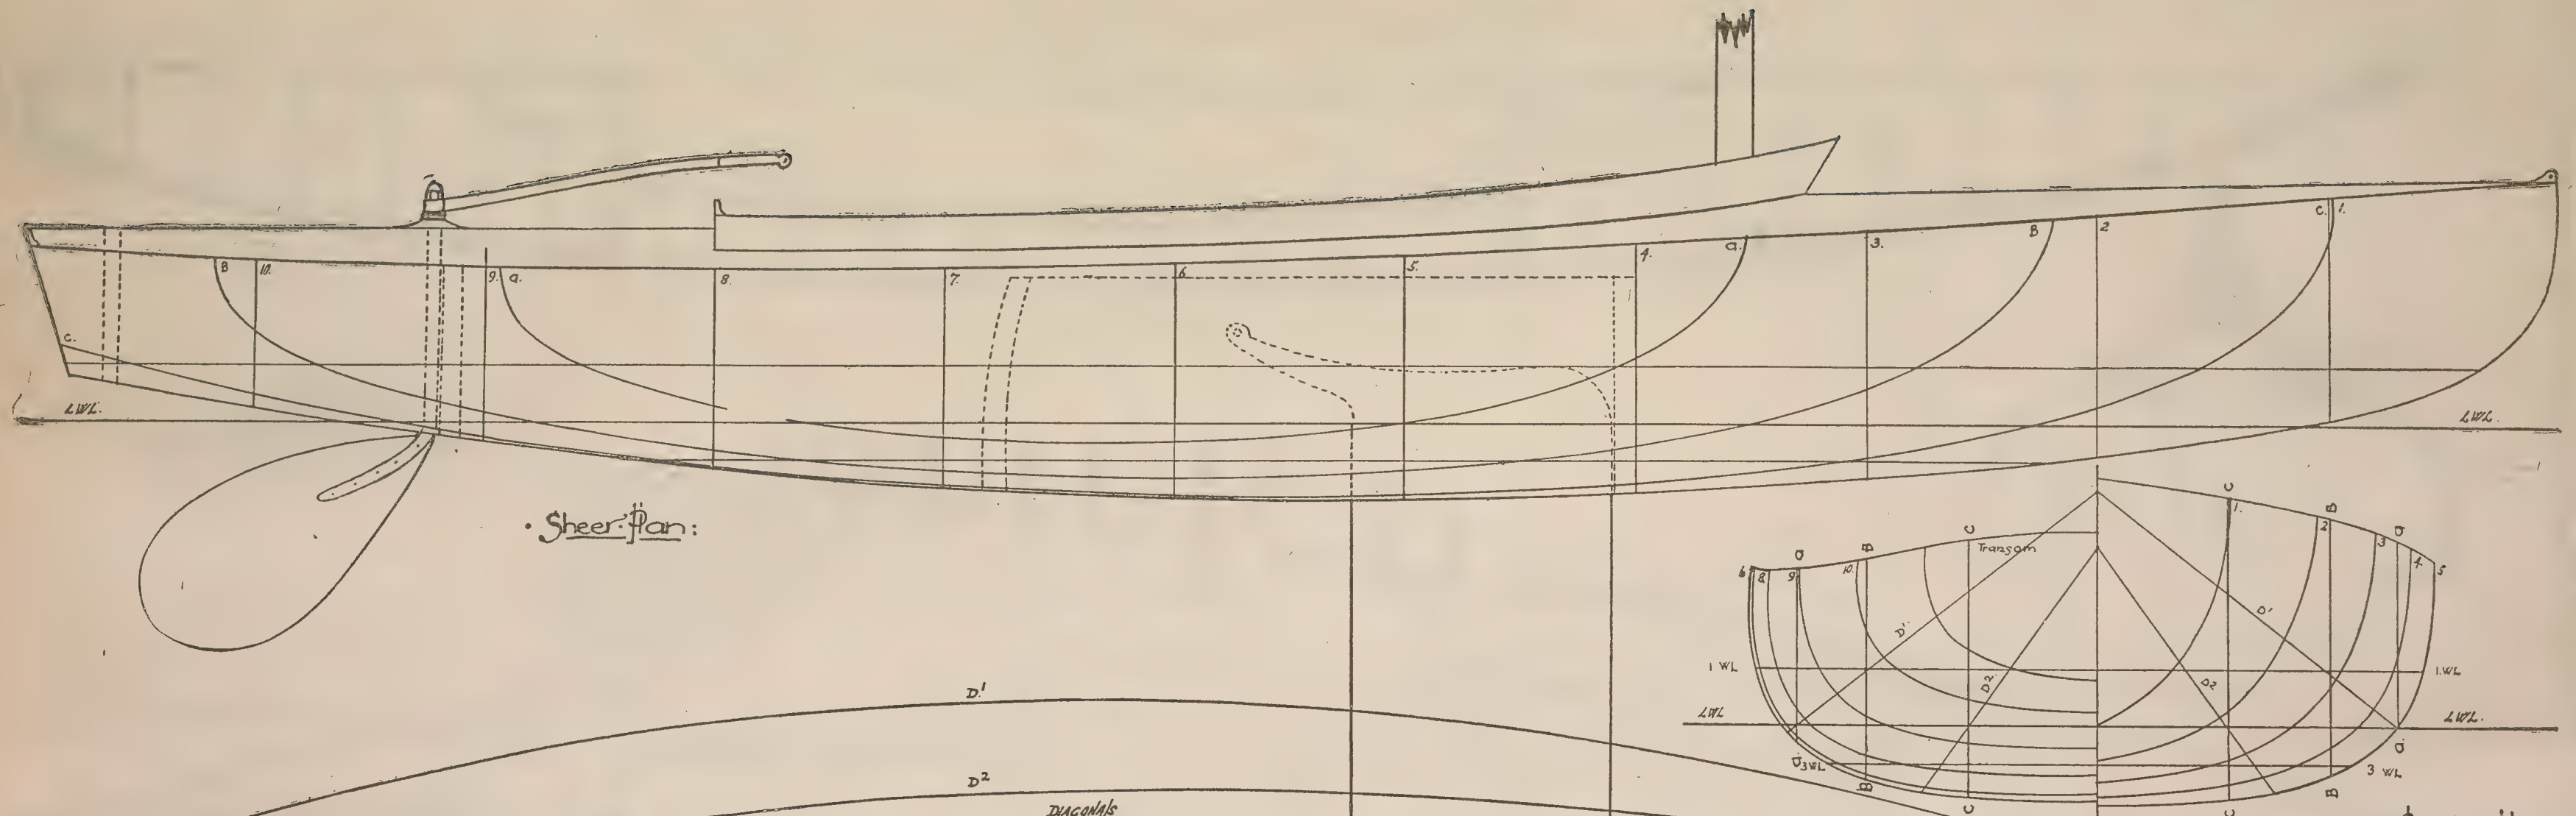
NORTH BEACH—FLUSHING BAY.

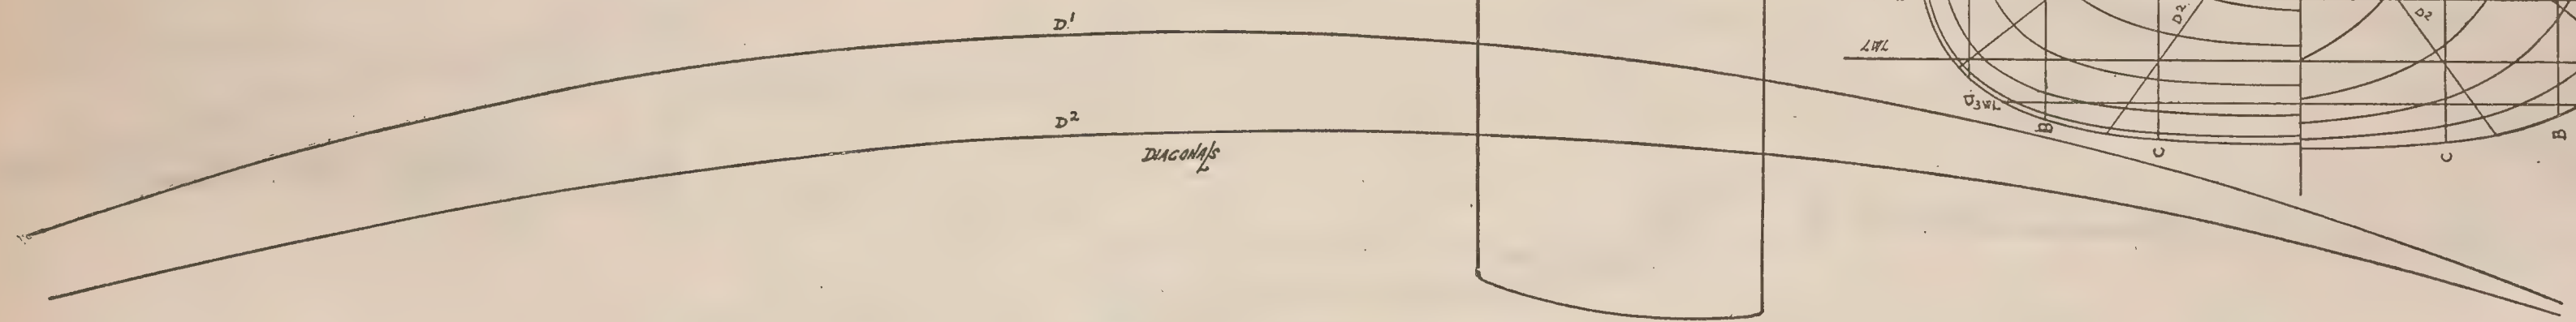
Thursday, May 30.

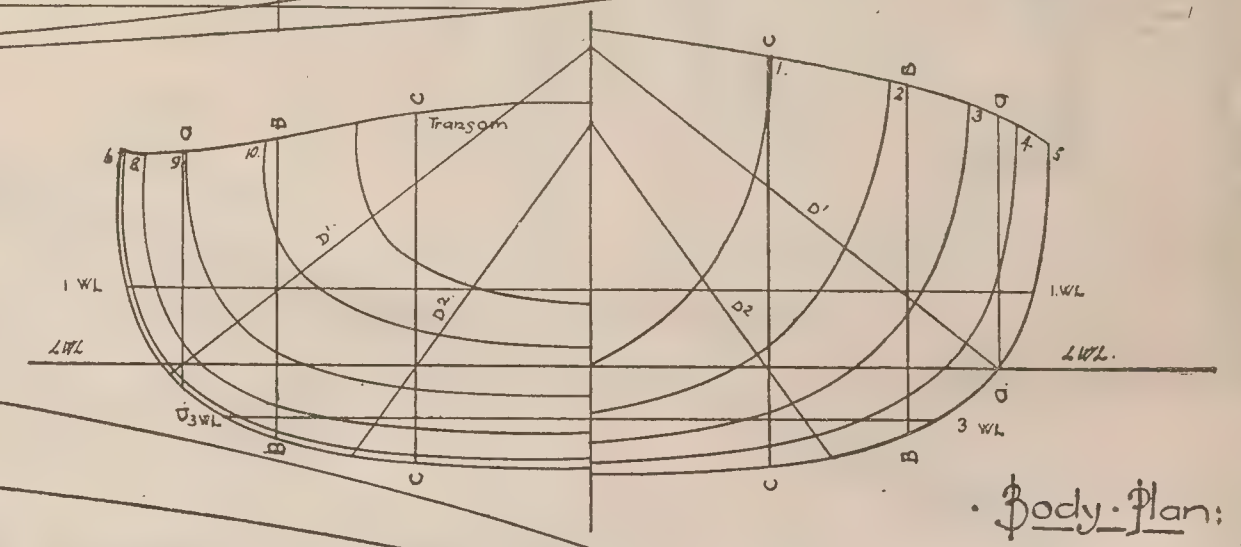
THE Williamsburg Y. C. held its thirtieth regatta on Thursday, May 30, in a variable wind over the club course off North Beach, in Flushing Bay. At the start the wind was light from the N.E., but later died out entirely and came in from the S.E. The times were:

	Finish.	Elapsed.
Class A—Cabin Sloops Over 30ft.—Start, 12:10.		
Bertha K., Frederick Kaiser	2 58 00	2 48 00
Portia, John Fennell	Withdrew.	
Bel Ami, Daniel Noble	Withdrew.	
Class B—Cabin Sloops Under 30ft.—Start, 12:10.		
White Rose, Paul Schmidt	3 47 10	2 07 10
Iris, Frank Leonard	Withdrew.	
Class E—Cabin Catboats—Start, 12:15.		
Critic, E. V. Rosemond	3 20 05	3 05 05
Gloria, William Brown	Withdrew.	
Mabel, M. E. Haman	Withdrew.	
Virginia, George Stillman	Withdrew.	
Cabin Catboats Under 24ft.—Start, 12:15.		
Reckless, Lawrence W. Wright	3 17 00	2 58 00
Jessie, William H. Phillips	Withdrew.	
Florence, G. Stewart Card	Withdrew.	
Open Catboats—Start, 12:20.		
Echo, Charles M. Dillon	3 20 00	3 00 00
Edith M., Frederick Eardsley	Withdrew.	

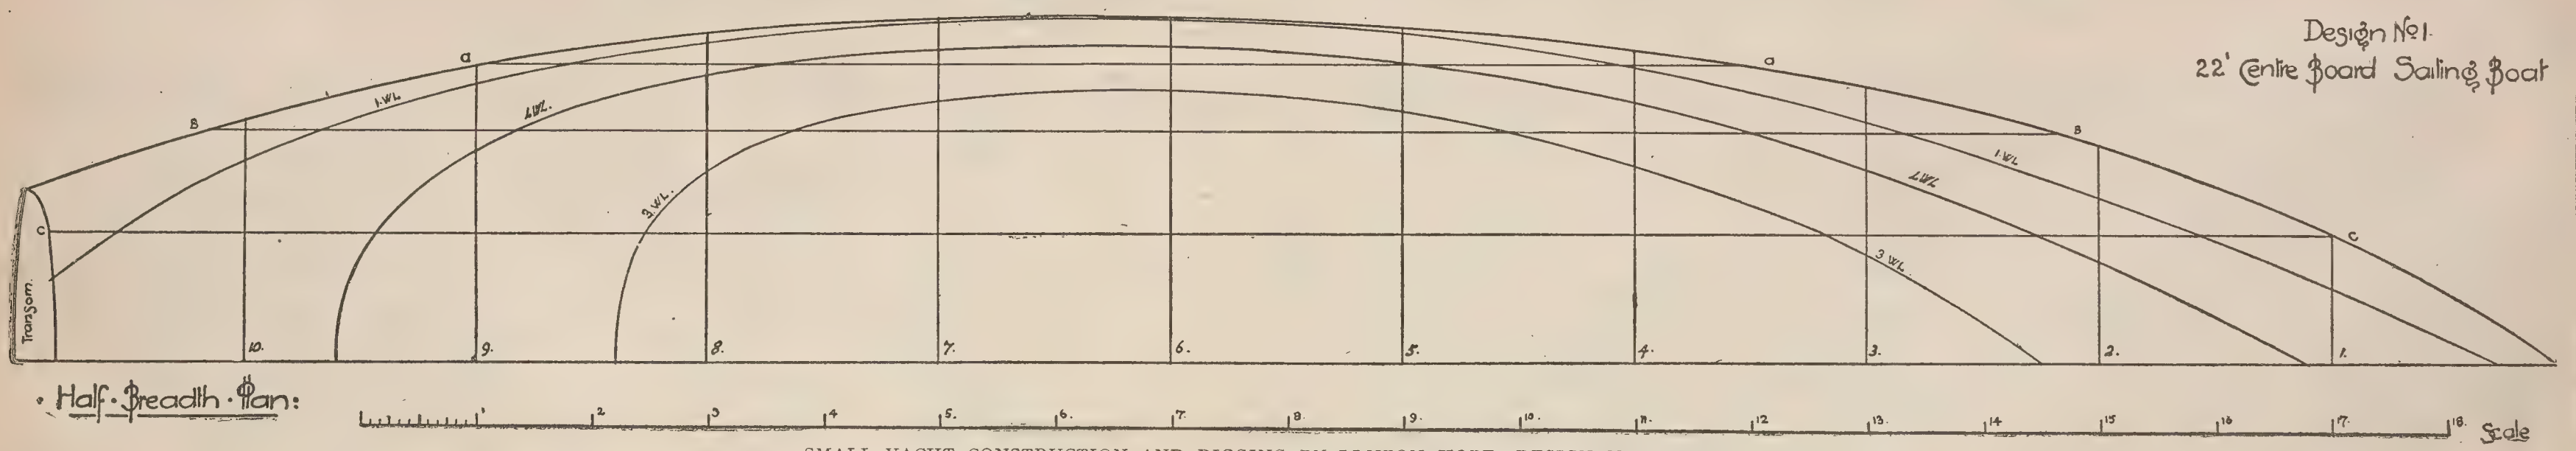








Design No 1.
22' Centre Board Sailing Boat



SMALL YACHT CONSTRUCTION AND RIGGING BY LINTON HOPE.—DESIGN NO. 1, LINES.

South Boston Y. C.

CITY POINT—BOSTON HARBOR.

Friday, May 31.

THE opening race of the Y. R. A. racing season was sailed on Friday in a light northeasterly breeze. The race was given by the South Boston Y. C., and twenty-seven yachts lined up at the start. There were several new boats entered, but, strange to say, the prizes did not all go to new boats in the classes in which they sailed. In the 25ft. open class the starters were nearly all Cape cats. Hustler had an easy time of it here, winning by over 9m.

In the restricted 25-footers, last year's champion Flirt, designed by Crowninshield, started in to repeat her performances of last year. In this class there were two new boats—Calypso, designed and built by Hanley, and Cyrilla, designed by Mills and built by Smith, of Quincy. Flirt, as usual, was right at the line at gunfire, and was never headed throughout the entire course. Early Dawn put up a hot argument, but the keel boat was too much for her. Calypso was just out of the shop, and was by no means in racing condition. On the reach from Buoy 7 to the ball mark off Moon Head she had trouble with her balloon jib and lost considerable ground. John T. Cavanagh, who sailed her, and her owner, A. W. Chesterton, were satisfied with her work under the conditions, and think that she will prove all right when she is thoroughly fitted up and has been tuned.

The race of the restricted 21-footers marked another success for Crowninshield. Opitsah III., designed by him for Sumner H. Foster, took away the honors after a hot fight with Harriet and the yawl Coquette. In the open 21-footers Bud and Cleopatra started. Bud had practically a walk over. In the 18-footers there was a hot scrap between Dauntless and Lobster from the starting line to the first mark, but after this Dauntless pulled into first place and proceeded to stay there. There were five starters in the 18ft. knockabout class. They went over the starting line in a bunch, and there was a hot scrap between Aspinquid, Oriana and Ayaya all over the course. Oriana was first over the starting line, but Aspinquid took the lead near the first mark and kept it. In the 15ft. class Vitesse, which was designed by C. D. Mower four years ago, had an easy win from Dorothea and Melodie, the latter a new boat designed by Fred Lawley. The following is the summary:

Open 25-Footers.

	Elapsed.
Hustler, Whetmore & Robbins	2 37 51
Widgeon, A. J. Horton	2 47 42
Romance, Loring Sears	2 55 02
Theodora, Frank Burgess	2 59 06
Rival, W. S. Nickerson	3 03 52

Restricted 25-Footers.

Flirt, Fabyan & McKee	2 18 00
Early Dawn, J. E. Doherty	2 20 24
Calypso, A. W. Chesterton	2 30 07
Cyrilla, W. D. Turner	2 38 28

Open 21-Footers.

Bud, S. N. Small	2 38 38
Cleopatra, F. F. Crane	2 48 55

Restricted 21-Footers.

Opitsah III., Sumner H. Foster	2 34 52
Harriet, L. T. Harrington	2 36 07
Coquette, B. D. Amsden	2 36 39
Eaglet, W. Starling Burgess	2 39 02
Tarpon, S. N. Johnson	2 50 20

18-Footers.

Dauntless, Benner & Patten	1 57 35
Lobster, C. J. Hendrie	2 01 35
Hector, A. W. Hubbard	2 08 06

18ft. Knockabouts.

Aspinquid, W. A. Comey	2 08 21
Ayaya, W. P. Keyes	2 09 22
Oriana, Alfred Douglas	2 10 10
Bacchante, Humphrey & Lauriat	2 12 08
Disa, Geo. A. Brackett	2 16 42

15-Footers.

Vitesse, W. J. Coombs	1 22 45
Dorothea, A. W. Finley	1 26 41
Melodie, F. D. Lawley	1 28 32

In the afternoon there was a race for sailing tenders, which proved the most interesting of the day. They were split up into two classes, one open to all and the other for the one-design boats of the Savin Hill Y. C. The summary of these races is as follows:

Open Tenders.

	Elapsed.	Corrected.
J. Merrrill	1 07 56	1 07 56
H. Stickney	1 07 32	1 07 14
W. Colson	1 10 23	1 10 11
C. M. Dollbeare	1 11 32	1 10 41
F. O. French	1 13 12	1 12 42
J. Trotman	1 10 45	. . . .
C. Chance	Withdrew.	

Savin Hill One-Design Tenders.

A. J. Horton	1 06 28
C. Leach	1 06 30
J. McBeath	1 07 10
A. Hawes	1 07 42
H. Skinner	1 07 52
A. Maguiness	1 08 22
J. E. Robinson	1 09 34
C. Howland	1 09 35
E. Keeper	1 11 02
J Turner	1 11 30
J Wills	1 18 00

JOHN B. KILLEEN.

Indian Harbor Y. C.

GREENWICH, CONN.—LONG ISLAND SOUND.

Thursday, May 30.

THE Indian Harbor Y. C. sailed its first championship race of the season on Thursday, May 30. The club went formally into commission, and the race was started at 2:15 o'clock. The wind was light from the S. and E., but quite steady. Two classes filled, Mr. F. B. Jones' Badger winning in the raceabout class, while Mr. Alfred Peats' Enpronzi won in the 43ft. class. The summary follows:

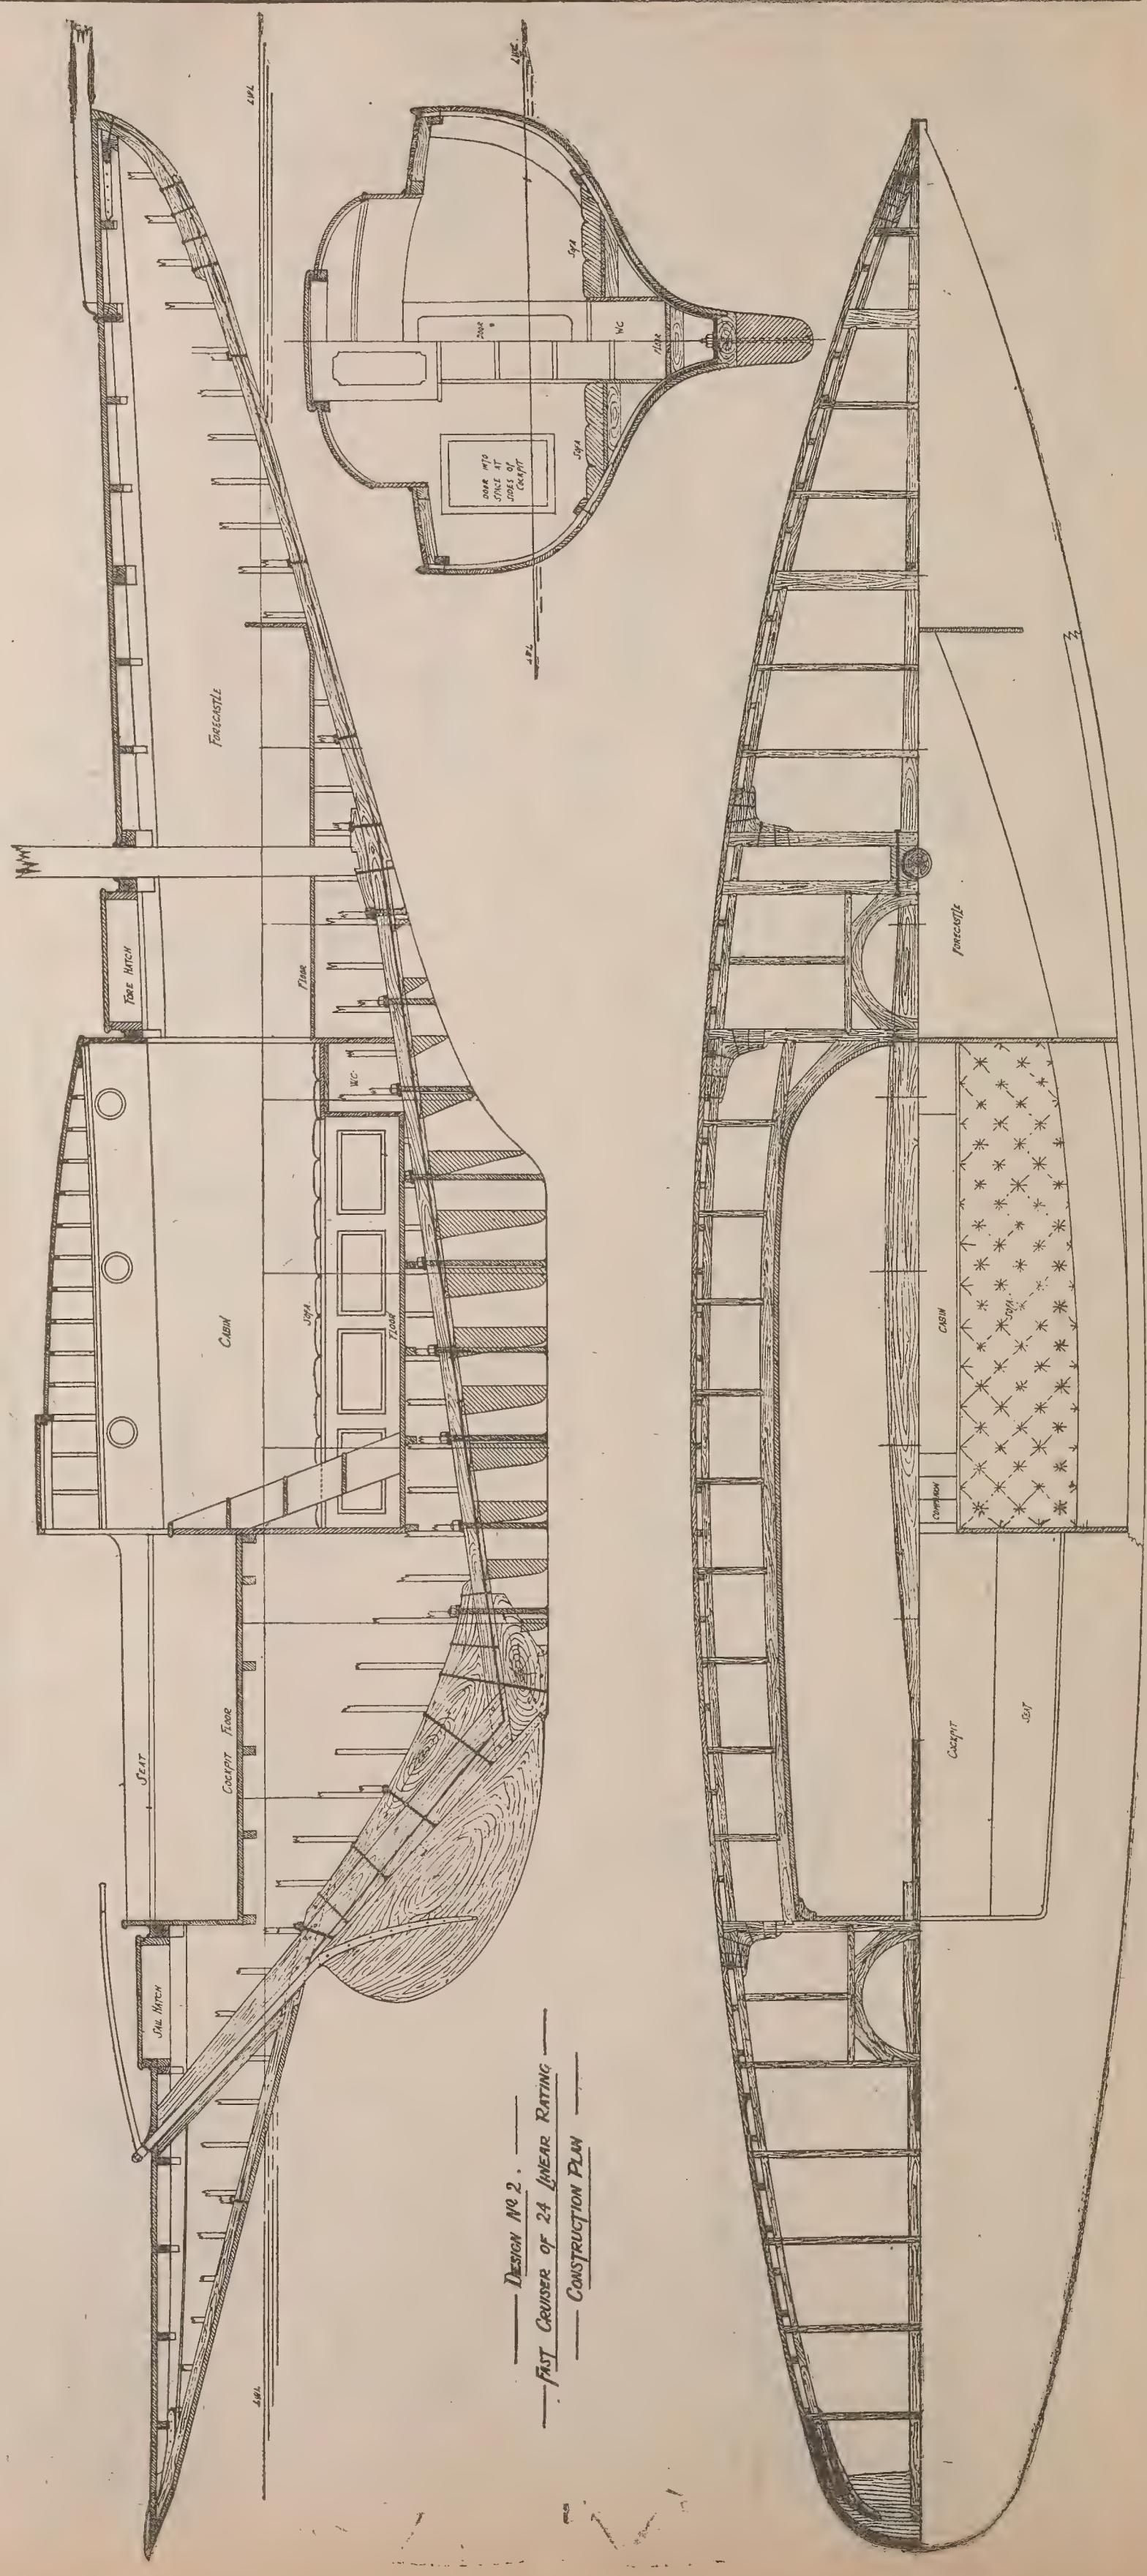
Raceabouts—Start, 2:15.

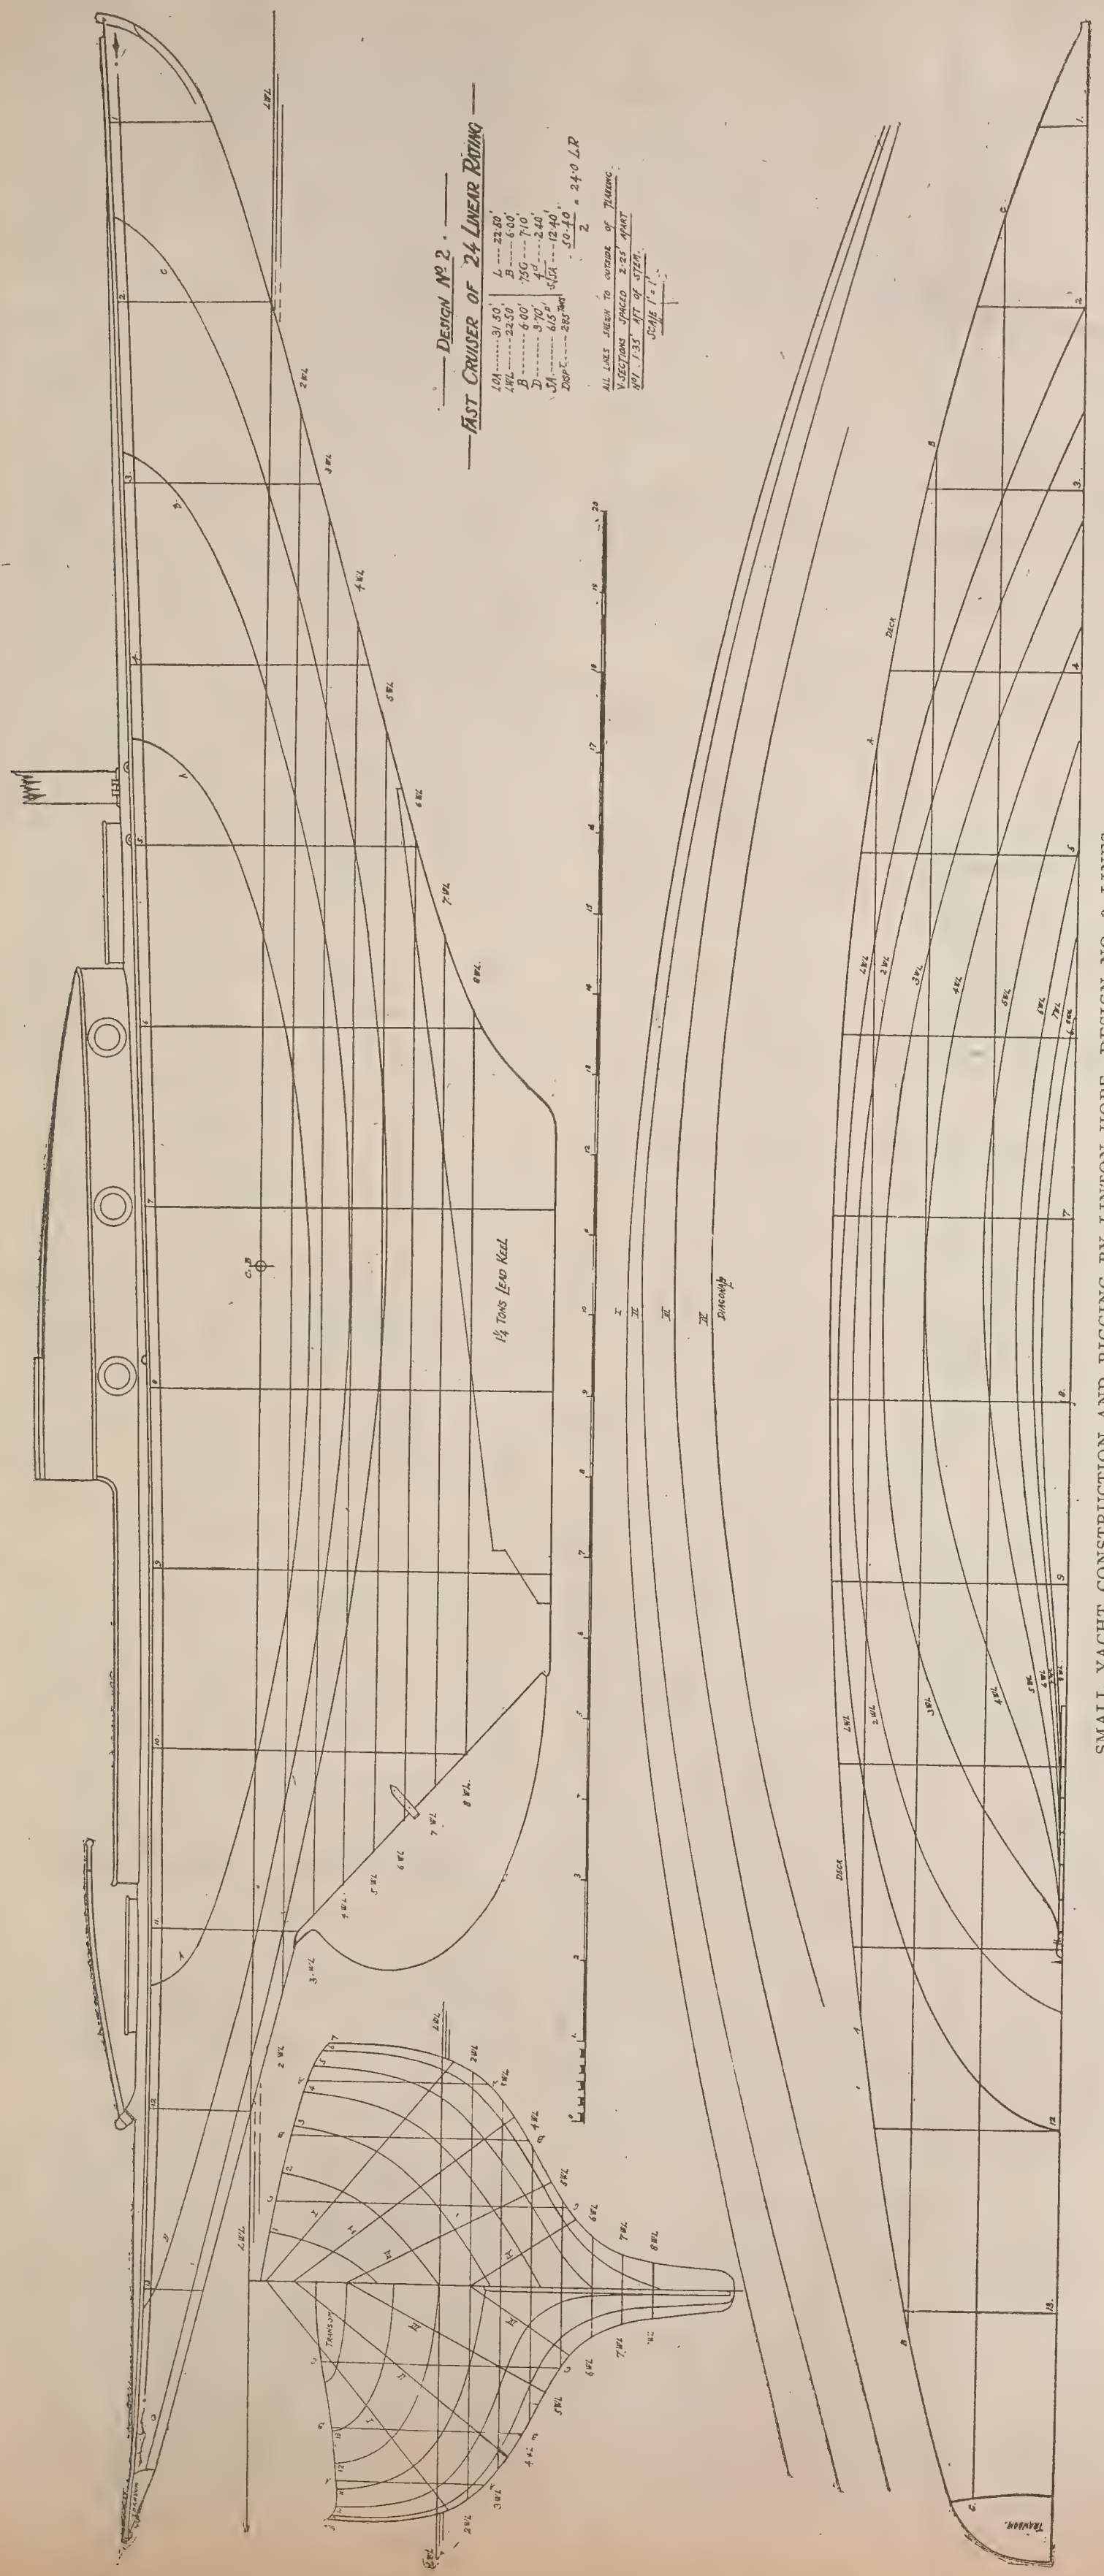
	Finish.	Elapsed.
Badger, F. B. Jones	4 17 29	2 02 29
Rogue, F. T. Bedford	4 19 42	2 04 42
Oonagh, S. C. Pirie	4 23 04	2 08 04

43ft. and Under.

	Length.	Finish.	Elapsed.
Enpronzi, A. Peats	2 58 20	4 57 05	1 58 45
Sultan, C. S. Somerville	3 01 10	5 21 35	2 20 25
Sirene, R. Outwater	2 47 50	5 26 51	2 39 01
Bonnie, C. Mallory	2 47 50	5 43 45	2 55 55
Spindrift, E. S. Griffin	2 56 40	Not timed.	
Freya, G. J. Bradish	2 53 40	5 36 35	2 42 55

The Regatta Committee is composed of F. B. Jones, Charles F. Kirby, F. C. Henderson, Charles E. Simmis and Richard Outwater.





SMALL YACHT CONSTRUCTION AND RIGGING BY LINTON HOPE.—DESIGN NO. 2—LINES.

Atlantic Y. C.

SEA GATE—NEW YORK BAY.

Thursday, May 30.

THE Atlantic Y. C. went into commission and held a race for its members on Thursday, May 30. The race was sailed in the afternoon over one of the triangular courses on the lower bay in a fair southerly breeze. The signal gun was fired at 3:05, and Maraquita and Ondawa stood down for the starting line. The latter boat in the lead by over half a length with the wind abeam, they had a run to the first mark to Fort Lafayette, a close hitch to Craven Shoal, a beat to East Bank and a run home. The boats sailed twice over this course, making a total distance of eleven miles. Just after the start Mariquita overhauled Ondawa and finally drew ahead, which lead she maintained until the finish, crossing the line 16s. in the lead of Ondawa. Mariquita has to be remeasured on account of some alterations that have been made on her, so that the figures may be changed on corrected time. In the other classes the boats crossed the starting line in the following order. Akista, We Win It, Song and Dance, Pebble and Peanut. They had a run to the first mark, a reach to the second and a close hitch home. The summary follows:

	Finish.	Elapsed.	Corrected.
Class K—43 to 51ft.—Start, 3:05.			
Mariquita, H. B. Shaen	46.83	5 11 08	2 06 08
Ondawa, H. J. Brabert	48.93	5 11 26	2 06 26
Sloops—Class M—30 to 36ft.—Start, 3:10.			
Akista, George Hill	36.00	4 26 43	1 16 43
Yawls—Class M—30 to 36ft.—Start, 3:10.			
We Win It, F. M. Randall		4 38 51	1 28 51
Sloops—Class P—21 to 25ft.—Start, 3:10.			
Song and Dance, E. F. Luckenbach	21.00	4 49 04	1 39 04
Sloops—Class R—Under 18ft.—Start, 3:15.			
Pebble, R. W. Speir	16.52	4 46 07	1 31 07
Peanut, Calvert Brewer	16.52	4 52 28	1 37 28

Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Thursday, May 30.

THE Seawanhaka Corinthian Y. C. went into commission and held its first race on Thursday, May 30. The boats sailed over the inside course and three classes were filled, namely, the raceabouts, Seawanhaka knockabouts and club catboats. The wind was from the N.E., so the first leg was a beat to Plum Point, then a reach to a mark in Cold Spring Harbor, and then a run back to Plum Point. The boats sailed three times over this course. In the raceabout class Mr. H. M. Crane started his new boat, Merrywing, which was designed by his brother, Mr. Clinton H. Crane, who also started in Raider, one of his last year's productions, while Mr. Johnson De Forest started in his last year's Scamp. Merrywing got the best start, leading over the line, with Raider second and Scamp third. In the second round Scamp got in the lead and finished first, beating Merrywing by a small margin. The summary follows:

	Finish.	Elapsed.
Raceabout Class—Start, 3:05.		
Scamp, Johnson De Forest	6 35 05	3 30 05
Merrywing, H. M. Crane	6 35 23	3 30 23
Raider, C. H. Crane	Withdrew.	
Scamp wins by 18s.		
Knockabout Class—Start, 3:10.		
Vagrant, W. G. Low, Jr., and T. B. Brown	6 44 27	3 34 27
Wyntje, Colgate, Hoyt	6 53 12	3 43 12
Marcia, De Le R. Dresser and H. Jacquelin	6 54 37	3 44 37
Nakodo, J. T. Sherman	Fouled buoy.	
Seawanhaka Cats—Start, 3:15.		
No. 1, J. R. Whitman	6 29 28	3 14 28
Nos. 2 and 3 did not finish.		

Gravesend Bay Y. R. A.—Atlantic Y. C.

SEA GATE—NEW YORK BAY.

Saturday, June 1.

THE first of the Gravesend Bay Y. R. A. races was sailed on Saturday, June 1, under the auspices of the Atlantic Y. C. There was a fresh S.E. breeze blowing at the start that held true throughout the day. The larger boats carried topsails, and their course was from the starting line off the club house to the red can buoy No. 12, and then to the Government buoy off Fort Hamilton to the white spar buoy off the Brooklyn Y. C., thence to the starting line. It was a reach to the first mark, where the boats jibed and set spinakers for the run to the second mark, and from there it was a beat home. The other classes sailing a shorter course, had a run to Fort Hamilton buoy, a beat to the Brooklyn mark and from there a close hitch to the finish line. The summary follows:

	Finish.	Elapsed.
Sloops—Class M—30 to 36ft.—Start, 3:10.		
Akista, George Hill	5 07 09	2 02 09
Titania, W. H. Childs	5 16 45	2 11 45
Sloops—Class N—25 to 30ft.—Start, 3:10.		
Squaw, H. J. Heath	4 37 34	1 27 34
Sloops—Class P—21 to 25ft.—Start, 3:10.		
Song and Dance, E. F. Luckenbach	4 34 56	1 24 56
Sloops—Class Q—18 to 21ft.—Start, 3:10.		
Wraith, Calvin Tomkins	4 41 11	1 31 11
Wink, W. A. Barstow	4 47 42	1 37 42
Sloops—Class R—Under 18ft.—Start, 3:10.		
Peanut, Calvin Brewer	4 54 23	1 44 23
Pebble, R. W. Speir	4 54 57	1 44 57
Catboats—Class T—21 to 25ft.—Start, 3:10.		
Qui Vive, George Freeth	4 36 38	1 26 38
Catboats—Class V—18 to 21ft.—Start, 3:10.		
Elsie, C. P. Rosemon	4 55 11	1 45 11

The winners were: Akista, Squaw (sail over), Song and Dance (sail over), Wraith, Peanut, Qui Vive (sail over) and Elsie (sail over).

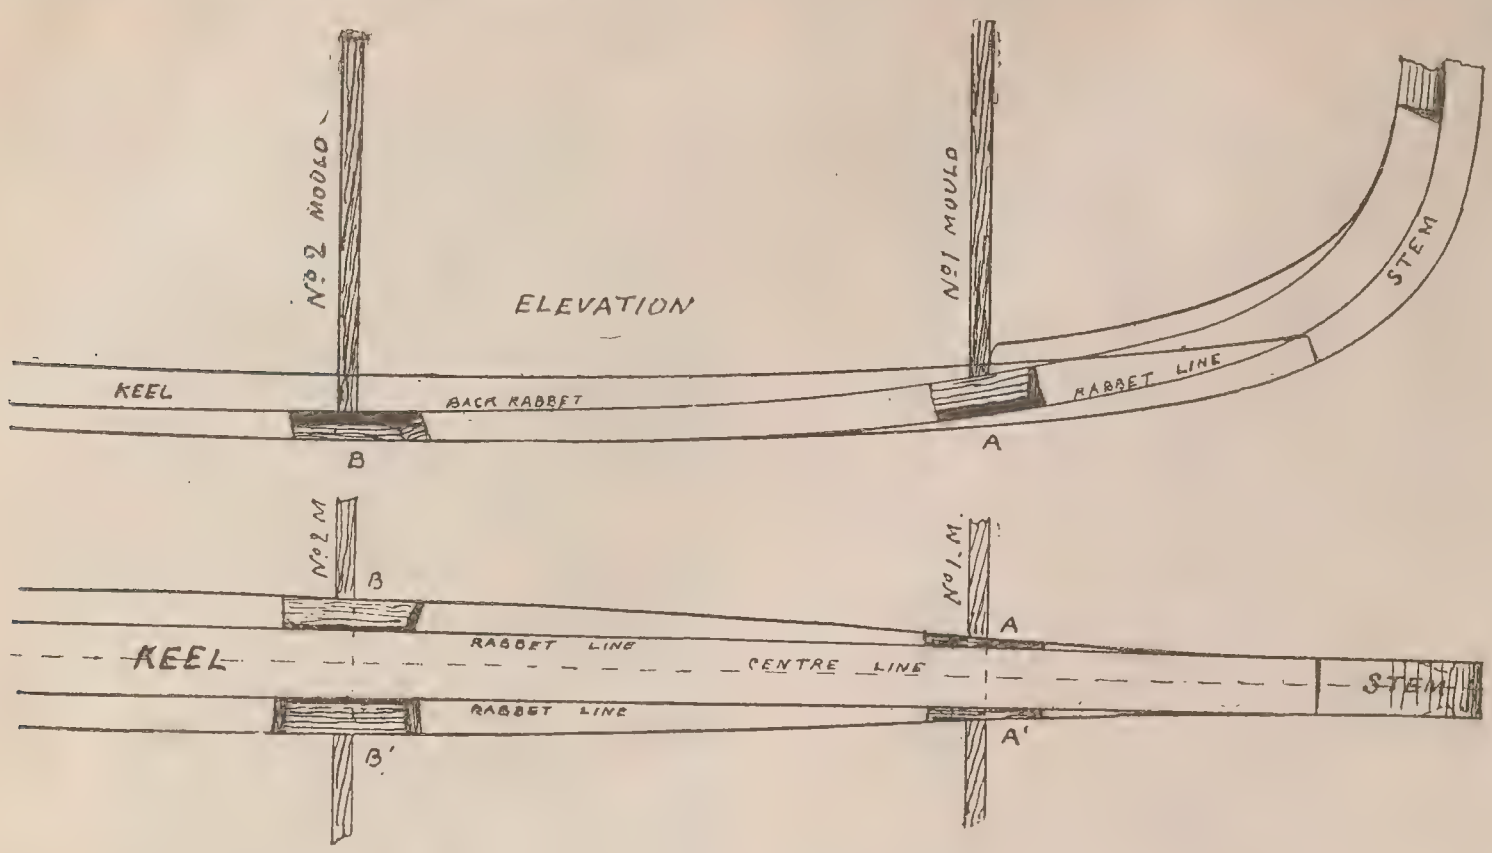
Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Saturday, June 1.

THE Seawanhaka Corinthian Y. C. held races for the Seawanhaka knockabouts and club catboats on Saturday, June 1, the boats sailing over the inner course twice at Oyster Bay. The times were:

	Finish.	Elapsed.
Seawanhaka Knockabouts—Start, 3:05.		
Nakodo, C. W. Wetmore	5 14 15	2 09 15
Vagrant, Brown & Low	5 15 33	2 10 33
Marcie, Jacquelin & Dresser	5 53 40	2 28 40
Seawanhaka Catboats—Start, 3:10.		
No. 3, H. W. Warner	5 37 22	2 27 22
No. 4, Ralph Hill Thomas	5 37 28	2 27 28
No. 1, A. R. Whitman	Withdrew.	



NO. 1 BOAT—PLAN—(Under Side of Keel). A 'A', Portions of the Rabbet Cut.

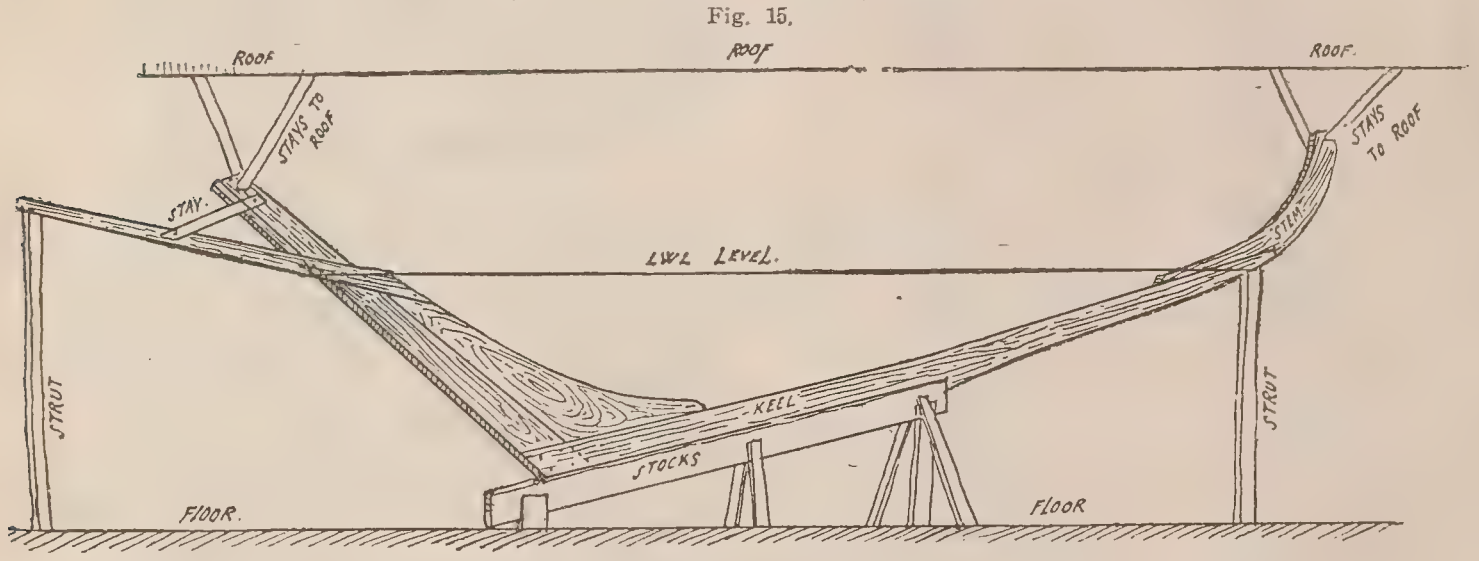

Fig. 12.

Knicknerbocker Y. C. Annual Regatta.

COLLEGE POINT—LONG ISLAND SOUND.
Saturday, June 1.

THE Knickerbocker Y. C. held its annual regatta on Saturday, June 1. The course was around Gangway Buoy near Sands Point, a distance of 14.5 miles. The wind was E.N.E. at the start. The Manhasset one-design boats finished at Gangway Buoy. This made it windward work for the first half of the course, a run back to Throgg's Neck, and as the wind veered to S.W. about 3 o'clock, made it a close hitch up to the finish. The Newport special thirties and the raceabouts made the prettiest racing. Hera and Esperanza fought it out among themselves. Hera got the best of the start and held her lead to the finish. In the raceabout class there was some good work between the Herreshoff boats, Rogue and Oonagh, the Purdon boat, Snapper, and the Crownshield-designed Badger. The latter was sailed by her owners, Mr. F. B. Jones and Mr. W. R. Thorsen, with the assistance of Mr. E. Burton Hart. This makes the third consecutive race Badger has won. The times were:

	Elapsed.	Corrected.
Schooners—65ft. Class—Start, 12:05.		
Miladi, S. H. Mason	4 40 04	4 40 04

The winners were: Miladi (sail over), Mira, Eurybia, Memory (sail over), Hera, Oiseau, Ouananiche, Dot, Badger, Win or Lose and Lambkin.

Com. Frank Tilford, Indian Harbor Y. C., has appointed C. Stuart Somerville Fleet Captain; L. P. Jones, M. D., Fleet Surgeon, and the Rev. M. George Thompson Fleet Chaplain.

Marine and Field Club Match Race.

GRAVESEND BAY—NEW YORK BAY.
Saturday, June 1.

Two of the Marine and Field Club one-design boats sailed a match race for $300 on Saturday, June 1, over the club's course in Gravesend Bay. The two contestants were Kelpie and Quinque, owned respectively by Mr. W. K. Brown and Mr. L. H. Smith. The start was at 3:05 o'clock in a S.E. breeze. Kelpie took the lead in the first round, but on the second round she was passed by Quinque, which boat finished 37s. in the lead. The times were:

Match Race, $300—Start, 3:05.

	Finish.	Elapsed.
Quinque, L. H. Smith	5 26 15	2 21 10
Kelpie, W. K. Brown	5 26 44	2 21 47

Western Yachts.

CHICAGO, Ill., June 1.—In the trial spins off the lake front on Decoration Day, Illinois, the Canadian cup defender, had her first test with another yacht. Her competitor was Josephine B., and the new boat proved able to take the measure of Josephine very easily. The start was fairly even, and at the breakwater gap Illinois was leading by 58s. This was a beat into the wind, and at this sort of going Illinois was unmistakably superior. She seemed very tractable, and her fashion of going pleased the knowing ones very much.

On the homeward leg Josephine did a shade better, Illinois gaining only about a minute. The start was at 2:05 o'clock, and Illinois finished at 4:08:33, leading Josephine 15m. The wind was not strong, but steady, a good sailing breeze.

The building of the new club house of the Chicago Y. C. was enjoined by Clarence W. Marks, and a motion to dissolve the injunction was this week called before Judge Clifford, at which time counsel for Mr. Marks asked leave to file a bill of interpleader in the name of the Attorney-General, Mr. Hamlin. The latter was expected to appear in court within a few days. Mr. Marks owns the premises at Michigan avenue and Randolph street, and he objects to the erection of buildings along the breakwater. Judge Clifford continued the matter and the motion for dissolution will come up later.

In the Derocation Day races Vencedor and Siren had a little spin together, but Vencedor gave Siren no show at all, beating her decisively before the four-mile crib was reached. This was the first time the boats have come together since 1896, and Vencedor seems greatly improved since her earlier days. E. H.

Yacht Club Notes.

The New Haven Y. C. had its opening race on Decoration Day, May 30. There was one race for sloop yachts over a fifteen-mile course. It was won by Evelyn, owned by the Rev. John O. Berg, pastor of the Seamen's Bethel, in 3h. 59m. 2s. Kathryn, owned by James B. Smith, was second, in 4h. 38m. 5s., and Mariposa, owned by George H. Townsend, 2d, was third, in 4h. 45m. 58s. The wind was light.

❀ ❀ ❀

The opening regatta of the South Norwalk Y. C. was sailed on Decoration Day, May 30, over the inner course. A southeast wind favored the yachts and a good day's sport was had. Com. C. B. Keeler's sloop Defiance won in the sloop and knockabout class. A. E. Chasmer's Ayli won the race for cabin catboats. William H. Bynington's Grace was the winner in the open catboat class, and George Thompson's Florodora was the winner in the jib and mainsail class. The next race will be sailed on June 15, and will be open to all yachts enrolled in any club in the Long Island Sound Association.

A race under a five-mile breeze opened the yachting season here, the contest being the annual regatta for the Citizens' cup, sailed over the Bridgeport Y. C. course on Decoration Day, May 30. The contest was between the sloop Kit, Thomas H. MacDonald, and the sloop Tern, C. E. Perkins, of the Park City Y. C. The breeze was too light for the three yawls in the race—Hapassah, F. A. Wilmot; Gram, C. B. Bartram, and The Vagabond, W. E. Holah. The latter gave up on the second turn. Kit and Tern took the lead, and sailed evenly till the second turn, when the former showed more speed and came in first, beating the Park City representative 2m. 45s. No corrected time was given, as the Tern will have to be remeasured, so that the actual winner is not known.

❀ ❀ ❀

The Knockabout Association of Boston has offered a cup to be known as the Intercity Cup for Raceabouts, under the following conditions: Contest to be open to a representative boat from each of the following districts (or from any other district by approval of the Executive Committee): Islesboro, Maine and vicinity; Buzzard's Bay, Newport and vicinity; Long Island Sound, Marblehead and vicinity. Races to take place off Marblehead, and to begin on Monday, Sept. 9, and to continue daily until one boat has won three races; after four races have been sailed only winners of one race shall be allowed to compete; after six races only boats which have won two races. The cup to become the absolute property of the final winner. Races shall be sailed under the rules of the Knockabout Association governing raceabouts, and restrictions relating thereto, and under the rules of the Yacht Racing Association of Massachusetts governing sailing regulations. The general conduct of the races shall be in charge of the Executive Committee of the Knockabout Association, and any point not covered by the above rules shall be referred to them, and their decision shall be final. Entries must be made to the Executive Committee of the Knockabout Association on or before Sept. 1.

❀ ❀ ❀

The second annual regatta of the Manhasset Bay Y. C., of Port Washington, L. I., will be sailed over the club courses on Saturday, June 8. The classes are for the 43ft. boats and under; also for sloops, special thirties, Larchmont twenty-fives, the 21ft. and Manhasset raceabouts, Seawanhaka knockabouts and one-design dory class. Entries can be made with Edward M. MacLellan, chairman of the Race Committee, at 90 Water street.

❀ ❀ ❀

The Sing Sing Y. C. will hereafter be known as the Shattenuc Yacht and Canoe Club.

❀ ❀ ❀

J. V. S. Oddie, secretary of the New York Y. C., received a cablegram from Sharman Crawford, Vice-Commodore of the Royal Ulster Y. C., confirming the new agreement as to the time of the races off Sandy Hook for the America Cup. The cablegram reads:

"BANGOR, County Down, Ireland.—Secretary New York Y. C.: Date now definitely fixed; first race, Sept. 21.

"SHARMAN CRAWFORD, Vice-Com."

❀ ❀ ❀

Mr. S. Montgomery Roosevelt has purchased the cutter Wenonah, formerly owned by Mr. James Stillman, and will change her rig from that of a cutter to that of a yawl at Hawkins' yard at City Island.

A. C. A. Membership.

Eastern Division—Frank G. Trott and E. P. Trott, West Medford, Mass., Medford Boat Club; H. J. Walker, Woburn, Mass., Innitou C. C.; Walter M. Robinson, Boston, Mass., Innitou C. C.; William R. Traill, Fred Israel, Frank Walsh, Charles H. Rand and William H. Beaumont, Worcester, Mass., all members of the Tatasset C. C.

Atlantic Division—John W. Conrad, Beverly, N. J.

Northern Division—C. P. Howard and F. A. Shackwell, Lachine Boating and Canoeing Club, Montreal; H. J. Page, E. L. Harrison and Graham Kelsey, Toronto; C. N. Marshall, A. L. Marshall, H. Veavey and C. W. McLean, Grand Trunk Boating Club, Montreal.

Rifle Range and Gallery.

Fixtures.

May 30.—Pohlmann's Pavilion, Jersey City Heights.—Tournament of Our Own Shooting Society.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

The Art of Revolver Shooting.

"THE Art of Revolver Shooting" is the title of a comprehensive work by the famous revolver expert, Mr. Walter Winans, vice-president of the National Rifle Association of Great Britain. It is artistically and profusely illustrated from designs by Mr. Winans and from original photographs. The thirty-five chapters which it contains are replete with useful information. The evolution of the revolver, selecting it, its cleaning and care, learning to use it, practice and training, ammunition, sights, targets of all kinds, competition, stage and trick shooting, big and small game shooting, target shooting off horseback, pigeon shooting with the pistol, and clay target shooting with the revolver, shooting in self defense, revolver shooting for ladies, revolvers for the police, revolvers in war, killing disabled animals, shooting in the dark, etc., are all minutely and ably treated. The illustrations are specially instructive. The advice concerning the careful handling of the revolver, to avoid possible accidents, is worthy of careful observance by all who handle firearms. The peculiar impulse which controls most people at sight of a revolver or other firearms is illustrated by a brief anecdote, told by the author, as follows: "One of my ornamental revolvers used to lie as a decoration on the writing table in my Bisley hut. Of course it was unloaded, and there were no cartridges near. Some visitors dropped in, one by one, to lunch. First came an elderly lady. She sat down near the table; her eye fell on the revolver. She instantly snatched it up with a laugh, and pointed it at me, with, 'I'll shoot you.' I

made her put it down, and was explaining to her how injudicious it was to point a revolver at any one, how it might have been loaded, etc., when in came a parson. He sat down and began talking pleasantly. Presently his eye caught sight of the revolver. Grabbing it, he shouted, 'Now, I'll shoot you,' and pointed it at me, roaring with laughter. I locked up that revolver." Were his advice followed, there would be none of the "didn't-know-it-was-loaded" accidents possible. He says, "Never leave a revolver, loaded or unloaded, where any one can touch it. Keep it locked up, unless actually in your possession." There is no circumstance directly or indirectly related to revolver shooting which is left untouched. The appendix gives a valuable dissertation on the law as it views the carrying and using of revolvers in Great Britain and the United States. The work contains 251 pages. It is printed on heavy fine paper, and well bound in cloth. We can furnish it. The price is $5.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, May 19.—The scores to-day were made in a very heavy cross wind. Mannel, Allen and Hoffman were on the sick list, and Barley and Brannagan on a vacation at Brannagan's ranch hunting coyotes and small game. Col. S. E. Beaver, one of our old-time revolver shots, brought out a new pistol, made from the Winchester .22 rifle action. He shot it at rest, and placed 18 out of 20 in the 3in. ring at 50yds. It is similar to the one with which Young shot himself. Young placed 9 out of 10 in a 3in. group with it off-hand at 50yds., using Peters short cartridges. It hangs much like the old dueling pistols. Becker had a Colt's automatic pistol, and made 49 out of 50 on a Blount bullseye. Henry Kenitzer presented Capt. Kuhnle with his Pope Winchester, and the Captain showed some of his old-time form, making a 6 average in his first 26 shots. A. H. Pape has taken unto himself a wife, and will be heard from later. A. H. Cady has just returned from the East, and has also joined the matrimonial ranks. If this mix-up continues it will disrupt our club. Washburn returned from Honolulu, where he has been for two and a half months. He couldn't hit a barn to-day, as the natives there gave him no chance to practice and keep in trim. Dorrell led with rifle to-day, and Young with pistol and revolver. Young also tried his light .22-74-45 Winchester rifle, using Peters cartridges, resting the weapon over his right arm near the shoulder, with good results, his 17 being one point away from club record. His 39 with revolver was made with Peters .44 Russian model cartridges, and is the best score ever made with factory ammunition in the club, but his best pistol scores were made with Peters .22 long rifle and .22 short cartridges, fresh from factory. Scores, off-hand on Columbia target; 10-shot scores:

Rifle, 200yds.:										
A B Dorrell, .32 Pope	5	5	12	3	1	6	5	3	3	7	50
	7	10	3	6	4	7	3	4	3	15	—62
	7	2	2	9	3	4	5	6	5	4	—53
	5	8	2	6	3	4	1	8	4	6	—47
	6	3	5	9	6	6	9	4	4	4	—56
	1	13	7	5	3	5	6	7	7	9	—63
Capt F Kuhnle	5	1	7	9	11	11	8	1	3	3	—59
	8	10	7	2	7	7	7	5	3	5	—61
	9	5	4	5	4	10	8	11	8	5	—69

Pistol, 50yds.: F. O. Young 38, 42, 42, 42, 46, 48, 49, 49; Ed Hovey 42, 43, 46; Dr. J. F. Twist 59, 72; Mrs. C. F. Waltham 74, 86, 88; J. B. Bradley 96; J. R. Trego 81.

Revolver, 50yds.: F. O. Young 39, 45; P. A. Becker 61, 66, 69, 70, 72; C. M. Daiss 62, 63; Dr. Twist 78, 90; J. R. Trego 87.

.22 rifle, 50yds.:

F O Young	1	1	2	3	2	2	2	1	1	2—17
	2	3	3	2	2	2	1	2	2	1—20

We congratulate E. E. Patridge on his record of 24. If his 4 had been a 3 he would have received a Columbia button from us.

F. O. YOUNG, Rec. Sec'y.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, May 26. Conditions, 200yds., off-hand, at the German ring target. Gindele was declared champion for the day with the good score of 228. Weather, cloudy; thermometer, 55; wind, 6 to 9 o'clock:

Gindele	228	222	222	220	212	24	23	19—66

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

June—Osceola, Iowa.—Southeastern Amateur Shooting Association's tournament. Lee Wheeler, Sec'y.

June 5-6.—Baltimore, Md.—Maryland county shoot for amateurs on the grounds of the Baltimore Shooting Association; valuable prizes. J. Mowell Hawkins, Mgr.

June 6.—West Chester, Pa.—All-day target shoot of the West Chester Gun Club. F. H. Eachus, Sec'y.

June 3-4.—Columbus, Wis.—Tournament of the Wisconsin Trapshooters' League. G. V. Dering, Sec'y.

June 4-5.—Stratford, Iowa.—Stratford Gun Club's annual tournament.

June 4-6.—Circleville, O.—Under auspices of the Pickaway Rod and Gun Club, annual tournament of the Ohio Trapshooters' League. G. R. Haswell, Sec'y.

June 5-6.—Rochester, Minn.—Rochester Rod and Gun Club's tournament.

June 10-11—Tomah, Wis.—Tomah Gun Club's tournament.

June 11-12.—Bedford, Ind.—Fifth annual tournament of the Indiana Trapshooters' League. J. B. Stipp, Sec'y.

June 11-13.—Sioux City, Ia.—Seventh annual amateur tournament of the Soo Gun Club. W. F. Duncan, Sec'y.

June 12-13.—St. Marys, W. Va.—Fifth annual tournament of the West Virginia State Sportsmen's Association, under auspices of West Virginia Gun Club. Mallory Brothers, Mgrs.

June 13-14.—Pensacola, Fla.—Peters Cartridge Company's Amateur tournament, under auspices of the Pensacola Gun Club.

June 13-14.—Bellefontaine, O.—Fourth annual tournament of the Silver Lake Gun Club. B. G. Cushman, Sec'y.

June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis, Mgr.

June 19.—Gloversville, N. Y.—Annual tournament of the Gloversville Gun Club. Chas. A. Bogart, Sec'y.

June 20.—Waterville, Me.—Amateur target shoot of the Waterville Gun Club; $75 added money. Dana P. Foster, Sec'y.

June 20-21.—Amherst, Mass.—Amherst Gun Club's two-day tournament; $65 in cash and merchandise. H. B. Perry, Pres.

June 25-26.—Bristol, Tenn.—Tournament of the Peters Cartridge Company. John Parker, Mgr.

June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.

July 1-2.—Sherbrooke, Can.—Tournament of the Sherbrooke Gun Club.

July 4.—Schenectady, N. Y.—All-day amateur target tournament of the Schenectady Gun Club. Harry Strong, Sec'y.

July 4.—Towanda, Pa.—Annual tournament of the Towanda Gun Club. Magautrap. M. F. Dietrich, Sec'y.

July 4.—Frankfort, N. Y.—Third annual target tournament of the Frankfort Fish and Game Protective Association. W. J. Weller, Sec'y.

July 5-6.—Duluth, Minn.—Central Gun Club's tournament. J. W. Nelson, Sec'y.

July 15-17.—Columbia, Mo.—State Amateur shoot, under the auspices of the Columbia Gun Club. W. A. Vivion, Sec'y.

July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

Aug. 8-9.—Lafayette, Ind.—Tournament of the Lafayette Gun Club. J. Blistian, Sec'y.

Aug. 12.—Winnipeg, Man.—Fifth annual trapshooting tournament, under management of the Winnipeg Industrial Exhibition Association; $1,000 in money, trophies and medals. F. W. Heubach, General Manager.

Aug. 27-30.—Okoboji, Ia.—Lake Okoboji Amateur tournament, at Arnold's Park; $400 added. For programmes, address E. C. Hinshaw.

Sept. 2-3.—Richmond, Va.—Tournament of the Virginia Trap Shooters' Association, under auspices of the West End Gun Club.

Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds, $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

Sept. 9-14.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament, under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.

July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 16-19.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament, under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

IN FOREST AND STREAM of May 25 there was published an editorial on "Sweepstake Shooting." Mr. Will K. Park, a thorough expert in trapshooting matters, was kind enough to compliment it, and as further showing the benefits to be derived from shooting for sport instead of money, he cites the trapshooting conditions about Philadelphia, which explains as follows: "Our esteemed contemporary, FOREST AND STREAM, prints a very excellent editorial in a recent issue on 'Sweepstake Shooting.' They advocate the abolishment of all sweepstakes in club affairs, and cite the success of the New Utrecht Gun Club, in which trophies alone form the incentive for the display of skill. The Florists' Gun Club, of this city, might also be taken as an example of a successful club, although using flying targets exclusively, where sweepstakes in club shoots are never sanctioned, and where prizes alone reward skill, a handicap plan equalizing contestants. This excellent rule has brought many new shooters into the club, and, what is more to the point, it has kept them there as regular attendants, although they never advanced beyond a 60 or 70 per cent. marksman. Sweepstakes would drive this class away in a short time. In big open tournaments the sweepstakes are depended upon to draw the crowd. In a large number of programmes received at this office within the past few weeks we have noticed particularly one condition, which reads: 'All sweepstakes optional.'"

The programme of the Innterstate Association's trapshooting tournament, given for the Sherbrooke Gun Club, Sherbrooke, Quebec, Canada, July 1 and 2, is now ready for distribution. It provides ten events each day, seven at 15 and three at 20 bluerocks, entrance $1.50 and $2. Headquarters will be at the Grand Central Hotel. The programme may be obtained of Mr. Charles H. Voss, secretary of the Sherbrooke Gun Club, or of Mr. Elmer E. Shaner, manager of the Interstate Association, 111 Fourth avenue, Pittsburg, Pa. Further information is presented in the programme as follows: "This tournament will be held on the grounds of the Sherbrooke Gun Club. Shooting will commence at 9:30 A. M. sharp each day. The grounds are situated on the banks of the St. Francis River, ten minutes' ride from the center of the city by electric cars. They are located in a beautiful meadow, with all the surroundings and arrangements that go to make trapshooting enjoyable. All purses will be divided according to the Rose system, into four moneys, at the ratio of 5, 3, 2 and 1. Guns and ammunition forwarded to Chas. H. Foss, Sherbrooke, Quebec, Canada, will be delivered to the shooting grounds free of charge. First-class loaded shells will be for sale on the grounds. Price of targets, 2 cents each, deducted from purses before dividing. Black powder barred. Lunch will be served on the grounds. The Interstate Association's rules will govern all events."

The Waterville (Me.) Gun Club has issued the programme of its tournament, which is scheduled for June 20. It presents eleven events, 10, 15, 20 and 25 targets, entrance based on 10 cents per target; 200 targets in all, with a total entrance of $20. Shooting commences at 10 o'clock. To first high gun, $5; to second and third, $3 each; to fourth and fifth, $2 each. The competition is open to the world. A silver cup will be given to the amateur who makes the highest average for the whole programme. Lunch served on the club grounds. Guns, etc., sent in care of the club will be delivered on the grounds free. Arrangements have been made with the Maine Central Railroad whereby excursion tickets can be purchased for Waterville and return at the rate of 2 cents per mile from Bangor, Pittsfield, Gardiner, Brunswick, Bath, Lewiston and Portland, good June 19, 20 and 21. Mr. J. A. Davidson is secretary. With the programme came the following, which is as gratifying as it is novel: "FOREST AND STREAM, New York City, June 1.—Gentlemen.—Recognizing the fact that those papers devoted to the sportsman's world give the trapshooters and the clubs much free advertising, we decided to devote one page in our programme to such papers without any charge to them. We only ask that you continue to use us as you have in the past. Very truly yours, Waterville Gun Club"

The report of the Missouri State shoot, published in our trap columns this week, is of special interest to the amateurs of the trapshooting world, since it was an amateur shoot. It was a pronounced success.

Messrs. Griesedieck and Mermod made a great finish in the tie for the Lemp trophy, going as far as the sixty-sixth round, when Mr. Mermod lost a bird, thereby leaving victory with his competitor.

The Amherst (Mass.) Gun Club has issued the programme of its two-day tournament, June 20 and 21. Professionals may shoot for targets only. Handicap, 16 to 21 yards. Targets thrown from a magautrap at 1½ cents, included in entrance. Shooting commences at 10 o'clock; dinner on the grounds at 1 o'clock. Sixty-five dollars in cash and merchandise prizes. There are ten events on the first day, with a total entrance of $14, and eight events on the second day, with a total entrance of $13. For further information, address the president of the club, Mr. H. B. Perry.

The regular programme of the Woonsocket (R. I.) Gun Club provides seven events, a total of 100 targets for $5. It commenced on May 18, and continues on June 1, 15 and 29; July 13 and 27; Aug. 10 and 24. The conditions are known, unknown and reverse angles. Sweeps optional. Targets 1 cent. Rose system governs. Paid representatives barred from stakes. Mr. L. W. Campbell is president; Mr. E. W. Kent is secretary.

From the Pittsburg Chronicle-Telegraph of May 29 we learn that Miss Annie Oakley (Mrs. Frank Butler) is giving her shooting exhibitions with undiminished skill and popularity with Buffalo Bill's Wild West Show. The host of friends of this charming lady will sympathize with her deeply on learning that she is suffering from a badly sprained ankle, caused by a fall; but she bravely continues her professional tasks.

The Canadian, of the Leyland line, on which the American team sailed, was due in Liverpool on Tuesday or Wednesday of this week. No doubt but what some of them han an interview with old Neptune, and that high averages with that famous old salt has been figured out ere this. On Tuesday of next week, according to the terms of the match, is the commencement of international trapshooting definitions.

The programme of the Soo Gun Club's seventh annual amateur tournament, at Sioux City, Iowa, June 11 to 13, announces $450 in cash and merchandise prizes. The events each day are in the main 15-target events, $1.50 entrance and $5 added. On the second day the Interstate championship contest takes place. There are eight prizes for the general averages. Mr. W. F. Duncan is the secretary.

There is a report current that Mr. C. W. Feigenspan, the expert shooter of Newark, N. J., has received and accepted a challenge from Mr. J. W. Vandeveer to shoot for the E. C. cup, emblematic of the championship of New Jersey, and that the contest will take place on the grounds of the Freehold Gun Club, June 15. Mr. Neaf Apgar has an intention to challenge the winner.

Mr. Elmer E. Shaner, manager of the Interstate Association, informs us that the programme for the Grand American Handicap target tournament, to be held July 16 to 19 (the dates being changed from July 23 to 26), will be ready for distribution by June 15.

Mr. W. A. Vivion, of Columbia, Mo., writes us as follows: "The state amateur shoot which was held at Moberly, Mo., last July, is to be held at Columbia, Mo., this year, July 15, 16 and 17. This is a state shoot and is usually well attended."

The Schenectady (N. Y.) Gun Club will hold an all-day amateur target tournament on July 4. The programme provides 15 target events, 15 targets each; added money. A magautrap will be used. The secretary is Mr. Harry Strong.

The Towanda (Pa.) Gun Club announces that it will hold its annual target tournament on July 4. Targets will be thrown by its new magautraps. Mr. W. F. Dietrich is the secretary.

Mr. Guy Burnside and Mr. F. C. Riehl were the finishers in the contest for the Republic cup. The former won in the eighteenth round of the tie, which was shot miss and out.

Mr. Geo. A. Mosher, who has been manager of the Syracuse Arms Co. during the past eight years, informs us that on May 31 he severed his business connections with that company.

Mr. A. F. Leonard, secretary of the Brockton (Mass.) Gun Club, won the silver trophy for the third time at the club's shoot, May 30. It is now his personal property.

At the Decoration Day shoot of the Auburn (Me.) Gun Club the Waterville team won the Lovell diamond badge, breaking 222 targets out of a possible 250.

The Bellow Falls (Vt.) Gun Club schoots on Thursday afternoon of each week, and is pleased to have shooters participate.

The next tournament of the Missouri State Game and Fish Protective Association will be held at Kansas City.

BERNARD WATERS.

ON LONG ISLAND.

New Utrecht Gun Club.

Interstate Park, L. I., May 30.—The Decoration Day shoot of the New Utrecht Gun Club had a good attendance, considering the numerous other attractions of the day peculiar to the great cities. Numerous beautiful prizes, artistic bronzes, etc., rewarded the skill of the shooters. The pigeons were mixed in quality from ordinary birds to better, with an occasional lightning bird. Following are the scores:

Event No. 1, 7 birds, then miss-and-out, for club prizes:

B Waters, 28	2122112—7	D C Bennett, 28	0*11220—4
F D Creamer, 28	111120w	Dr Wynn, 29	1111111—7
W F Sykes, 29	2221222—7	W A Stuart, 28	1121212—7
G H Piercy, 29	2222121—7	Dr Martin, 29	2221111—7
C A Ramapo, 28	2210020—4	M Meyer, 28	1*11111—6

Ties on 7; after a few rounds each shooter went back 1yd., and the last rounds were shot from the 33yd. mark:

G H Piercy	2222212112222111112 22
B Waters	1121112211122212222120
Dr Martin	1212222121122212212*
Dr Wynn	11110
W F Sykes	20

Piercy first, Waters second, Martin third, Wynn fourth.

No. 2, 3 pairs:

C A Ramapo, 25	10 10 00—2	Snyder, 25	10 10 10—3
M Meyer, 25	11 11 01—5	Dr Wynn, 26	01 11 01—4
G H Piercy, 26	10 11 11—5	B Waters, 25	11 11 11—6

No. 3, 10 birds, then miss-and-out, for club prizes:

G H Piercy, 29	1112211111—10	W A Stuart, 28	2**02*1101— 5
D C Bennett, 28	1211212222—10	J N Borland, 28	222*102212— 8
B Waters, 28	2222222222—10	M Weightman, 28	2020w
C A Ramapo, 28	120*w	E W Reynolds, 28	2220w
F D Creamer, 28	2212221211—10	H Edey, 28	2122210220— 8
J H Jack, 29	2121222222—10	M O'Neill, 28	2100222w
Dr. Wynn, 29	1122212110— 9	A Hendrickson, 28	2222202122— 9

Ties on 10:

B Waters	2222212	J H Jack	222220
F D Creamer	2212220	G H Piercy	1121*

Waters first, Creamer second, Jack third, Piercy fourth.

WESTERN TRAPS.

Intercity Shooting Park.

CHICAGO, Ill., June 1.—Dr. Bill reports from the Intercity Shooting Park that the gun sharps of St. Paul and Minneapolis have not been making so good records during the week past as they are accustomed to do, the scores being away below the average. The weather has been bad, but this has not everything to do with low scores. The manager of the park has placed a trap on the peak of the club house roof. This throws the targets over the shooters' heads, and the result has been scores so low that the boys refuse to allow them publication. The targets are thrown about 75ft., and good scores are impossible. The shooter's back is toward the trap, and all shooting is at unknown angles. As may be imagined, this puts up a pretty stiff game for even the best of the experts. The following scores were made on May 23 by the Minneapolis Gun Club for the Val Blatz diamond badge, 15 targets:

Danz 15, Hays 10, French 14, Whitney 9, Shorty 11.

Schlitz diamond badge, 25 singles: Danz 15, Hays 17, French 19, Marshall 20, Shorty 14, Spear 18, Thompson 21, Brown 20.

Club badges, 10 singles and 5 pairs: McKay won senior, Brown won junior, Hays won amateur.

On May 25 the St. Paul Rod and Gun Club made the following scores. Event 1, 25 singles, unknown angles, for St. Paul Rod and Gun Club trophy; events 2, 3 and 4, shoot-off for same; event 5, 25 singles, unknown angles, for Thompson and Danz trophy; events 6 to 10, 15 singles, unknown angles:

BLUE JEANS.

Garfield Gun Club.

Chicago, Ill., June 1.—The appended scores were made on our grounds to-day, on the occasion of the fifth trophy shoot of the season. Pollard, Eaton and Young tied for Class A medal on scores of 22. Dr. Meek won Class C medal on 22, while P. McGowan won Class C medal on 23.

I guess we had our class business turned upside down.

The day was a delightful one for target shooting—just warm enough to be comfortable, and a nice light breeze. Owing to a special pigeon shoot being conducted to-day by some of the members of the club, the attendance was not quite up to our standard, only eighteen shooters being present:

Fifth trophy shoot, 25 targets:

J McDonald	0011111111101100100110111—17
A Dorman	0011111101111011111111101—20

DR. J. W. MEEK, Sec'y.

Montana State Tournament.

GREAT FALLS, Mont., May 25.—The eighth annual tournament of the Montana State Sportsmen's Association, held in our city, May 17, 18 and 19, was a grand success, being the largest and most successful tournament ever held in the State, as high as fifty shooters participating in some events.

The weather conditions were all that could be expected, barring the first day, which was rather windy, and from position of traps made the right-angle birds hard to catch.

Two magautraps were used, and 28,000 bluerocks thrown, including sweepstakes.

The individual bluerock championship cup was won by J. W. Huse, of Fort Benton. In this event, Huse, Benner and Nalbach tied with 44 each, and on shoot-off Benner and Huse again tied. On the second shoot-off Huse won it.

The Brownlee challenge medal was won by Wm. Cummings, of Stockett.

The three-man championship cup shoot was won by Benner, Gallagher and Nalbach, of the Great Falls team.

Highest average was won by Nalbach, of Great Falls.

Twohy, of Anaconda, won the live-bird championship medal, Morrison, of Fort Benton, winning the challenge live-bird medal, both having tied on 15 birds each. On 10-bird shoot-off they again tied with 10 birds each, and on second shoot-off at 10 birds Twohy killed 9 and Morrison 7.

The live birds used were good strong flyers—no duffers to speak of. Most of these birds were purchased of R. E. Cobb, of St. Paul.

A peculiar feature of the wind-up of the tournament was that the last gun of the last squad, with his last shot to shoot, killed the last bird that the club had on hand.

The following officers were elected at the annual meeting of the Montana State Sportsmen's Association, held on Friday, May 17: Frank Klepetko, Anaconda, President; C. A. Tuttle, Anaconda, Vice-President; C. H. Smith, Butte, Secretary-Treasurer.

Anaconda was selected as the place of holding the ninth annual tournament.

H. L. NALBACH, Sec'y.

Westminster Gun Club.

WESTMINSTER, Md., May 31.—The annual spring trapshooting tournament, given in this city to-day by the Westminster Gun Club, was not very largely attended, the weather having been very unfavorable during the morning, with showers of rain up to 9 o'clock. The conditions throughout the day were not conducive to high scores. There were eight target, one live-bird and one miss-and-out events.

Of those participating in the tournament Hicks, German, Malone, Hawkins and Devall were from Baltimore; Seitz, Eyster, Bortner and N. H. Bortner, of Glen Rock, Pa.; Peters, Reif, Willis, Baughman, Ousler and Herring, of this city. The scores:

Events:	1	2	3	4	5	6	7	8
Targets:	15	15	20	20	15	20	15	15
Hicks	9	10	14	12	15	19	14	14
German	15	15	17	18	13	16	15	11
Malone	13	14	14	15	11	18	11	8
Peters	10	13	17	14	11	18	14	9
Hawkins	14	13	17	18	14	18	13	14
Seitz	12	8	10	14	10	10	10	7
Reif	14	13	17	17	12	14	13	12
Hering	11	10	17	15	10	14	..	11

Zionville—Limeport.

STANDARD, Pa., June 1.—Herewith find scores of events shot May 24. The large shoot of ours was a challenge shoot for a chicken and waffle supper at the Eagle Hotel, Limeport, situated on the club grounds. We lost the supper on our grounds, but we have to shoot two big shoots yet before we can decide which club wins. The dates are not yet determined.

Zionsville Gun Club.

H. T. ERDMAN, Sec'y.

IN NEW JERSEY.

Trenton Shooting Association.

Trenton, N. J.—The scores which follow are those made Saturday, May 25, and Thursday, May 30 (Memorial Day).

The attendance on the 25th was small, the weather being the cause, it being rainy and generally disagreeable. A few of the faithful, however, braved the elements and shot through the programme provided.

After we get the scores and walks covered, which is to be done at once, it will matter very little to us whether it rains or shines. It is also intended to increase the size of the club house to 34ft. frontage, and adding lockers for the convenience of the members and an up-to-date desk for the use of the cashier.

The attendance on Decoration Day was very good, considering the outside attractions, and also the fact of no attempt being made to provide anything unusual in the way of an extra programme. It was just a family affair, strictly private. Some members who rarely visit the grounds were on hand and enjoyed the outing. Mr. J. R. Taylor shot in splendid form, making the high average of the day, 89 per cent., with J. E. Thropp, Jr., a close second with 87 per cent.

As soon as the improvements are finished and some other work has been finished there will "somethin' doin'" in this locality. Will advise the nature of this later on:

May 25.—Events Nos. 1, 2, 3, 4 and 5 were optional sweeps, 16yds.; event No. 6 was gun held below the elbow at 13yds.; event No. 7 was 5 pairs; events No. 8, and 9 were optional sweeps:

Westwood Gun Club.

Westwood, N. J., June 3.—One of the largest shooting events ever held in Westwood, N. J., took place on Decoration Day, at the Westwood Gun Club grounds. Shooting started at 10 A. M. The first event was a match race between the Oradell Gun Club and the home team, which resulted in a victory for the latter. In the afternoon another match took place, with the Spring Valley Rod and Gun Club, which the Westwood Club won by 30 targets.

Both matches called for ten-man teams and 25 targets per man. After the contests were over there were both prize and sweepstake shooting, which proved very exciting. About 500 spectators witnessed the shooting.

E. L. GREENIN, Sec'y.

Hudson Gun Club.

Jersey City, N. J., June 3.—The shoot of the Hudson Gun Club to-day was at targets. Event 10 was at 20yds. rise. Event 11 was at 5 pairs. The next shoot will be on June 16. All are welcome.

Events:	1	2	3	4	5	6	7	8	9	10	11

Missouri State Tournament.

THE Missouri State Game and Fish Protective Association held its twenty-fourth annual convention and tournament in the city of St. Louis this week. It has been a good week and a good meeting throughout. With an attendance running steadily above the half-hundred mark, and this representing largely the element of bona fide amateurs of the middle West, a good strong programme, well managed and everybody interested in the game, there has been "somethin' doin'" in the full sense of the term, since the firing of the first practice gun, on Monday morning.

The tournament was again held at Dupont Park, under the able auspices of the St. Louis Shooting Association, and the direct management of Mr. David Elliott.

Live birds were shot over the Fulford traps, which worked, as they always do, most excellently; and two magautraps put out bluerocks at a pace that quite satisfied the shooters in that direction.

Tuesday, May 28.

After devoting Monday to practice work, the boys began earnest work on Tuesday morning in the Missouri State four-man team contest at live birds. The pigeons were not especially fast, but there were enough good ones to make the work interesting, and the high score of 59 out of 60, made by the St. Louis team, composed of Griesedieck, Smith, Denning and Field, is well worthy of remark. Ten teams participated in this contest, which occupied much of the day. An informal target programme was also shot, consisting of ten 15-bird events. The scores in the team shoot follow:

Washington Park.

Annual Meeting.

The annual meeting of the Association was held on Tuesday, at the spacious club rooms of the Rawlings Sporting Goods Company, 620 Olive street, with an attendance of fifty members. Meeting was convened at 9 P. M., by the president, Dr. M. C. Starkloff. Minutes were read by Secretary Taylor, and approved. All bills were paid to date, and reports by the officers, dwelling upon the necessity for broader game protective legislation and kindred subjects, were presented at some length and approved.

The next annual tournament and meeting was voted to Kansas City. Frank Smith was elected President; Dr. Plank, Vice-President; Robert Elliott, Treasurer; Paul Franke, Secretary—all of Kansas City. After voting thanks to retiring officers and G. H. Rawlings for courtesies extended, the meeting adjourned.

Wednesday, May 29.

Weather conditions were the best to-day, and excellent work was the result at both targets and live birds. The State and Interstate individual championship races occupied most of the day on the live-bird grounds, but the target end ran along smoothly, with a total of sixty-nine entries in target events. The Republic cup contest, scheduled as the regular event for the day, was not begun until 5 P. M., and only four squads were shot up to the tenth round. The scores:

Events:	1	2	3	4	5	6	7	8	Broke.

*Indicates those who shot in both Interstate and Missouri State championship races, one score counting for both events.

Thursday, May 30.

There were in all ninety-two entries in the target events to-day. It being Decoration Day, the regular attendance was swelled by many local shooters, who chose to pass the holiday at the park. Merchandise prizes of considerable value were given in alternate events, and this added novelty and vim to the game. Scores follow:

In the live-bird contest for the Republic cup there were sixty entries, and it was found impossible to quite finish the event. The birds were much faster than in the former events of the week, and of the forty-eight men who finished their strings of 25, only five had clean scores at sundown, when it was decided to finish the match on Friday.

Friday, May 31.

Features of the programme to-day were the conclusion of the contest for the Republic cup and shooting off ties for State and Interstate trophies. The birds averaged very good, and there were no straight scores added to yesterday's list. It took until almost noon to close this event, when the contest for the W. J. Lemp Brewing Company's amateur championship trophy was immediately called. This, however, was only half finished, as work was interrupted to permit of shooting off ties from Tuesday. For the Missouri State championship solid gold medal Griesedieck and Little had a spirited contest up to the eighteenth bird, when the latter retired on a fast outgoer.

There were five ties in the Interstate medal contest. De Long lost his first, Daniels his fifth, Griesedieck his tenth, and Little his thirteenth bird, leaving the field and victory to that splendid veteran, Capt. J. Sedam, of Denver, Colo. The Captain shot in splendid form, and well earned his laurels.

The target programme was continued, with an entry of fifty, Baker winning the day's average with but 3 lost, while Money, De Long and Gay were each but 1 behind. The scores:

Events:	1	2	3	4	5	6	7	8	Broke.

Saturday, June 1.

This was the last, though not least important, day of the big meet of the Missouri Association for 1901. Work was begun early on the conclusion of scores for the Lemp medal. This being cleared up, a 10-bird open sweep was shot, with twenty entries. The programme was cleaned up by 2 P. M., when the shoot-off for the Republic cup was called. Dave Elliott has selected a fast lot of birds for this event, and the lot was a very good one. Chase and Collins were the first to lose, each going out on right-quartering drivers in the seventh round. Hubby lost a hard bird just over the fence in the twelfth round. Burnside and Riehl then continued to the eighteenth round, when the latter undershot a left-quartering towerer from No. 1 trap, and Burnside won by killing his bird nicely.

The ties in the Lemp trophy contest were then called. It proved an event of much interest, the race narrowing down in the thirteenth round to Griesedieck and Mermod. These two determined and very competent St. Louisians continued to the sixty-sixth round, when Mermod lost a very fast bird, leaving Griesedieck the winner. It was a beautiful race, and a credit to both

gentlemen, the birds being good, though not averaging as fast as in the Republic cup shoot-off.

This ended the live-bird game, and the shooters, having completed the target programme, finished the day in spirited contests of ties for the merchandise prizes, of which there was a handsome lot.

Altogether it was a great tournament, with attendance remarkably sustained to the end. The Association, through its officers in charge, certainly deserves congratulations on the results obtained.

Scores of all events and finals follow:

Notes of the Week.

A. H. Fox won high average for the week with 23 lost, Dick Linderman being second best.

The Fox squad, composed of Fox, Howard, Cunningham, De Long and Irwin, scored 99 in one 20-bird event on Saturday, and the "Velox" squad, composed of Daniels, Sedam, Money, Gottlieb and Arnold, scored 74 out of 75 in one event on Friday.

Herbert Taylor took much pride in the programme, which he arranged with much taste and perception. It is worthy of preservation.

Dave Elliott was everywhere at once, the busiest and one of the best liked men on the grounds.

The Kansas City boys say that while this was a good shoot they will have a bigger one up the river next year.

There was only one kick registered during the week that was really wicked. This was by a granger who drifted in Saturday, used a 10-gauge gun without the knowledge of the management, and after shooting in one event declared he was robbed because he got no money. In his complaint he said he had purposely dropped for place, as there were too many straights; but as division in this particular event was high guns, his calculation went wrong.

F. C. Riehl.

Editor Forest and Stream:

The history of the Missouri State Game and Fish Protective Association is replete with successful tournaments. For years they have been recognized as the most important event of each trap-shooting season. The attendance of representative sportsmen has made this tournament national in its scope and character. The Missouri State shoot has always had the best interests of the sportsmen at heart. It was the first large tournament to adopt the Rose system of division of moneys, thereby successfully demonstrating that it was applicable to large shoots as well as small club events.

The Kansas City Star cup and the St. Louis Republic cup have attracted the attention of the sportsmen for a number of years, and served to keep alive the interests in the sports of gentlemen.

The Missouri State Game and Fish Protective Association has had these beautiful live-bird championship emblems in charge. Besides these, the Dupont trophy, Lemp trophy and E C cup have been important events. The Sportsmen's Review cup was redeemed last year by the Association at a cost of $100, and the Association has always guaranteed $1,000 to these championship events.

This year the Association decided to run a tournament without the aid of the professional. The results have shown that they were right. The tournament has been a most pronounced success from every point of view.

The programme has been carried out to the smallest detail. The attendance is the largest in any tournament this year. Sixty entries in the Republic cup, and ninety entries in the target events show that the professional is no longer necessary to the success of a tournament.

The Missouri State Association wishes to extend its thanks to the professionals who came here and shot for targets only. It wishes the sportsmen of the country to know that the St. Louis Republic, the Globe-Democrat, the Post-Dispatch and the St. Louis Star have had their special representatives on the grounds each day and given a large amount of space to the events. It wishes to thank Forest and Stream and Shooting and Fishing for sending their representatives, Mr. Riehl and Mr. Irwin, to report this tournament, and last but not least the Association desires to express its gratification to the many sportsmen who have attended the shoot for their assistance in making the tournament such a pronounced success.

Herbert Taylor, Sec'y.

Haverhill Gun Club.

Haverhill, Mass., May 31.—Owing to the threatening weather early in the morning the attendance at our Memorial Day shoot was not large, only twenty-one shooters participating; but what was lacking in numbers was made up in enthusiasm and good fellowship. Everybody seemed to enjoy himself and had all the shooting he wanted.

Two thousand nine hundred and thirty targets were thrown, and a very good percentage was broken. It was an ideal day for target shooting, and some excellent scores were made. Almost 80 per cent. is not a very bad showing for twenty-one shooters "away out in the country."

Visitors were present from Boston, Hingham, Newburyport, Amesbury and Merrimac. In the prize event Allison and George tied on 47 out of 50 for first, Allison winning in the shoot-off. Howe and Tozier tied on 46 for second, Tozier winning on the shoot-off. Allen was third with 45 and Bowen fourth with 44. The summary follows:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19

S. G. Miller, Sec'y.

Fitchburg Rifle and Gun Club.

Fitchburg, Mass., May 31.—Memorial Day proved a very dark and dull day, and although there was not much wind, it was a hard day for the man with the scatter gun, for the light was very deceptive.

Two prizes were given, open to all except the five men on No. 1 team. Rob won the first and Donovan second. In six miss-and-out events Cutler won three and Converse three. Capt. Hawkins' team won both events in the team race. These events included all the shooters formed into two teams, wiht Capt. Hawkins on one side and Capt. Donovan on the other, but Hawkins' men were just a little too warm both times.

Several of the regular handicap matches were shot off, and altogether things were kept humming all day. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20

I. O. Converse, Sec'y.

Providence Gun Club.

Providence, R. I.—A most enjoyable day was spent at the grounds of the Providence Gun Club on Decoration Day. F. Inman, of Pascoag, was high with .933 per cent.; Griffith, Cranston, Francotte and Inman made up the first squad, and they went straight in event No. 2.

The targets were thrown fully 65yds., but there was no wind, and a dull even shooting light held true all the afternoon.

It is most unusual for us to get such a calm day, as our club is situated on the highest land within twelve miles, and a strong wind sweeps across the grounds most of the time.

We missed our secretary, jolly Bob Root, who is ill, but will soon be about again. Mr. Root's work was performed by Hugh Bain in a most satisfactory manner. Budlong officiated at the keyboard in his usual quick and positive way.

Events:	1	2	3	4	5	6	7	8	9	10

Pigeon Shooting at the Gun Club.

France, May.—At this club's meeting the competitors included that redoubtable shot, Mr. R. A. Welch, of the Carteret Club, New York. Shooting commenced with the weekly contest for the members' £100 challenge cup, added to a £5 sweepstakes at 7 birds each, 30yds. rise. Thirteen gunners faced the traps, and Mr. F. Hodgson Roberts, making a run of 8 kills, secured temporary possession of the trophy. The pool of £65 he divided with Mr. Calder, who stopped 7 birds out of 8. For the Newmarket £4 handicap sweepstakes, with £25 added, seventeen sportsmen tried conclusions, and some exceptionally fine shooting was witnessed. Ultimately the American, Mr. R. A. Welch, 30½yds., won the cup, his total being 16 kills consecutively. He beat Mr. Gordon Smith in the ties, with whom he divided the stakes of £68. A £3 sweepstakes, with a £10 cup added, at 26yds. rise, followed, for which eighteen entries were received. After some good all-round form had been displayed, Mr. C. Collier, who brought down 11 off the reel, was returned the winner of the cup. The proceeds of the sweep, £54, he shared with the Australian, Mr. A. W. Eales, who had 1 kill less to his credit. In the minor events honors rested with Mr. Ross, Mr. Brougham, Sir T. Freake, Mr. Holt, Mr. Calder, Mr. A. W. Eales and Mr. Peterson.—London Field.

Ossining Gun Club.

Ossining, N. Y., May 31.—Herewith please find scores of the Ossining Gun Club, made at the Memorial Day shoot, May 30. The new club house, while not completed, was used, and amply accommodated the large crowd of shooters and their friends. All events at 10 targets. The best percentage was made by J. Carpenter, of Kensico, 85 per cent.:

Wollaston Trap Club.

Wollaston, Mass., May 31.—The Wollaston Trap Club held an all-day shoot on Memorial Day. The number of shooters present was not very large, but all hands had a good time.

Paolucci and Barry, two old-time rivals, furnished a lot of amusement by shooting a couple of private matches, in both of which Paolucci was the winner.

Events 1, 3, 5, 7 and 8, 10 targets, unknown angles; events 2, 6 and 10, 10 targets, regular angles; events 4 and 9, 10 targets, reversed angles; events 11 and 12, 5 pairs. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12
Elwell	5	6	9	8	6	8	8	4	7	5	5	7

PUBLISHERS' DEPARTMENT.

The new price list of the Union Metallic Cartridge Company's shot shells is not only a very attractive pamphlet but contains a great deal of matter useful and interesting to shooters. It gives excellent illustrations of loaded shells, wads and primers, and also the new names which have been adopted "to protect the reputation of the U. M. C. factory loaded shells against the inferior loading of their empty shells by others." Dealers and sportsmen alike will wish to supply themselves with this list, which may be had, on application, from the company, at Bridgeport, Conn.—*Adv.*

The Forest and Stream is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 15, 1901.

VOL. LVI.—No. 24. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

Fish have their various characters, defin'd
Not more by form or color than by mind;
The wary trout but few temptations hit,
The perch an idiot, and the carp a wit.
We cheat the finny fools, ourselves as blind,
Fools, in our turn, are cheated by our kind!

AN INTERESTING AND IMPORTANT CASE.

THE situation with respect to the notable seizure of illicit game in a New York cold storage warehouse by Protector Overton is this: The game protective authority and the Arctic Freezing Company have arranged to submit for adjudication an agreed statement of facts, and the case is to be carried from one court to another as expeditiously as may be practicable, until it shall have been determined by the United States Supreme Court.

We have here quite the most interesting and important issue that could be made in relation to game protection. The point to be tested is the constitutionality of a law which prohibits in one State the possession in close season of game imported from another State. The New York case is of national interest and of national importance, because the principles involved are of national application. While the entire prohibition of the possession and sale of game in the close season irrespective of the origin of the game is not universal throughout the country, it prevails so generally that it may be said to be a characteristic feature of game protection in the United States, just as it is abroad. It is a factor of such importance as to be absolutely essential to any effective scheme of game protection. Every State, then, which has such a law and depends upon it to keep its game from the market in close time, is concerned quite as much as New York in the result of this test suit, since upon the outcome will depend the determination of the constitutionality of all such laws.

It is understood that the cold storage people are putting their trust in the decision which was rendered last year by the New York Court of Appeals in the case of the People vs. the Buffalo Fish Company, Lt.

By a popular misinterpretation the court was believed to have held in that decision that a statute forbidding the possession in close time of fish brought into the State from outside territory was invalid because in conflict with the commerce clause of the Federal Constitution. But the fact is that the court did not so decide. The prevailing opinion was written by Justice O'Brien, who based his decision upon two grounds. The first ground was, as he wrote referring to the section of the law under review: "What it means, and all it means, is to forbid any person to catch, kill or be possessed of the fish described from waters of this State. The word 'possession' obviously refers to those fish the catching or killing of which is prohibited—that is to say, fish in the waters of this State, and not those procured in a foreign country."

As the second ground upon which his decision was based, he wrote that if the statute were conceded to apply to fish brought into the State, "then I think it is clearly invalid as in conflict with the commerce clause of the Federal Constitution."

On the other hand, Justice Gray wrote a dissenting opinion, in which, as to the point of conflict with the Federal Constitution, he said: "There is no question of interstate or foreign commerce, in my opinion, but merely one of whether in the interest of the protection and preservation of game fishes the Legislature may not competently enact a statute so stringent in its provisions as to insure the accomplishment of the end in view, however it might result in apparent restriction of the liberty of the citizen."

The court was composed of seven members. Of these Justices Parker and Landon concurred with Justice O'Brien as to both points; and Justice Werner concurred only in the first ground stated; while Justices Haight and Martin concurred with Justice Gray in the dissenting opinion. Thus, of the seven members of the court, while a majority of four believed that in its wording the statute did not apply to imported game, and hence that the case should be dismissed, only three (or less than the majority) agreed as to the unconstitutional nature of the law.

Under these circumstances, as was pointed out in one of our recent issues by Willard S. Reed, of the Corning Bar, the Phelps vs. Racey decision is still the authority in New York; and that decision was that a statute which expressly forbids the having in possession of game during the close season, regardless of where, when or how obtained, is valid.

As we have said before, there is every reason for confidence that the prosecution of this present case, if it shall reach the Supreme Court, will result in establishing by that highest authority the constitutional integrity of this most important and essential feature of our game protective system.

FOREST RESERVES AS GAME REFUGES.

THE first settlers in a new country are always careless of the natural resources spread out in such abundance all about them. As population grows denser people begin slowly to realize the value of such resources and to see that they ought to be made the most of, because they add to the income of State, of landed proprietor or of public.

The history of the settlements here in America has been one of reckless waste, but at last our eyes are beginning to be opened and we are coming to view these matters somewhat as people see them in the densely populated countries of the old world. For thirty years and more a few people have earnestly urged the importance of forest care and preservation, without apparently awakening the least public interest. But suddenly within the last five years the whole country has become aroused on this subject. The Government is doing great work; State colleges of forestry are being started; the more important institutions of learning have established forestry schools; the profession of forester has become a recognized one, so much so that the growing boy in considering what calling he shall follow when he becomes a man, counts this vocation as one of the possibilities.

As with the forests, so with the game and fish. These are recognized sources of income and are coming to be looked at from the intensely practical side. Maine has given more attention than any other State to the question of what its game may be worth to it, and it has been estimated that the annual visits of anglers and hunters bring millions of dollars into the State. Vast sums are spent for the mere privilege of catching fish, or taking game, or traveling through the woods or over the waters, and spent by people who except for these attractions would stay at home or would go elsewhere. What is true of Maine is true of the Adirondacks, where, according to the State authorities, 7,000 deer were killed last year in a tract of country only ninety miles in diameter. Of the visitors who killed these deer a large proportion came from other States and practically all came from other counties. The Dominion of Canada realizes the money value of her game and fish, and strives to induce people to visit her woods and streams for the fishing and hunting.

For every fish taken and for every bird or deer killed, the visitor pays a liberal price. His money is distributed among railroad companies, hotel keepers, merchants, guides and farmers. It is money that would not come to them except for the game and the fish which lure the visitor to the section. So long as these are abundant people will continue to come, and in ever increasing numbers, but so soon as the supply becomes exhausted the travel will stop.

Evidently then it is worth while to keep up the supply, and this fact is now well recognized. One of the readiest and simplest means of stocking a region, or of keeping up an existing supply, is the establishment of game refuges which shall be rigidly protected, and from which the surrounding country may be constantly restocked. We have an example of this on a very large scale in the Yellowstone National Park, from which each season the elk pour out over the surrounding country in something like their old-time abundance, so that only in the vicinity of this Park can good elk hunting now be had.

The game refuge idea is growing. Already it has been adopted in New York, and on a small scale in Connecticut. Pennsylvania is taking hold of it. A bill on the same line is shortly to be introduced in New Jersey. Canada has its state and national parks, where hunting is absolutely prohibited.

Over almost all the vast regions west of the Missouri River game has been practically exterminated, and unless something is done this extermination will be as complete within the next twenty-five years as that of the buffalo to-day. Such extermination can be indefinitely postponed by the establishment of extensive game refuges, where the different species shall be rigidly protected.

We have already called attention to the desirability of constituting the forest reserves as such refuges. These reserves have already been withdrawn from settlement, and though established for a widely different purpose—one absolutely essential to the well-being of the arid West—they are well fitted for game refuges. Within one or other of these reserves every species of North American game may find a natural refuge, where in peace and quietness it may increase and multiply for all time.

The setting aside such refuges falls within the province of the different State governments, and ought to appeal to them with especial force. Each year the number of people who wish to go into camp to shoot and fish increases, and if places were known in the mountains of the West where good fishing and hunting could certainly be had, thousands of men with their families would annually turn their faces westward who now go to the Adirondacks, or to Maine, or spend their time at some resort on the sea shore, by the Great Lakes, or by the rivers. The establishment of such game refuges and the consequent increase of game would bring millions of dollars into Wyoming, Montana, Colorado and California, and most of these dollars would find their way into the pockets of the local population.

SNAP SHOTS.

The hotel proprietors of Helena, Mont., have been accustomed to serve game in close season quite as freely as do the hotel and restaurant men of New York. The new game law contains a section specially designed to stop this close season game traffic. One of the most ardent advocates of the new statute was a Helena hotel man, and some amusement has been had over the fact that this particular person was the first one to be caught up under it. State Game Warden Scott lives at this hotel, and when he saw wild ducks on the table after the season for them had expired he promptly invited his host to repair to the nearest justice and settle. The local paper in reporting the case says that the ducks "were shipped in from St. Paul, and that is where the Lacey Act concerning the killing of game came into play. Sec. 5 of that act provides that 'the dead bodies of any wild game animals or game or song birds transported into any State or Territory, or remaining therein for use, consumption, sale or storage therein, shall upon arrival in such State or Territory be subject to the operation and effect of the laws of such State or Territory enacted in the exercise of its police powers, to the same extent and in the same manner as though such animals and birds had been produced in such State or Territory, and shall not be exempt therefrom by reason of being introduced therein in original package or otherwise.'" But the Lacey Act had no bearing on the Helena case. As we have pointed out before this, the application of a State law to imported game depends upon the wording of the statute. If the text of the State law is so comprehensive as to cover imported game, the law applies to imported game; if the State law does not cover imported game, such game may not be made subject to it by act of Congress. Congress may control game only so long as the game remains a subject of interstate commerce; when it ceases to be an article of interstate commerce it immediately thereupon comes under control of the State.

Two recent cases of prosecution for Sabbath breaking, in Yonkers, N. Y., have directed attention to that provision of the penal code which forbids fishing on Sunday. The law is altogether a dead-letter; it is put into force once in a while as a spite measure; but tens of thousands of men go fishing on every pleasant summer Sunday, and no one ever thinks of interfering with them as Sabbath breakers. The fishing statute is one which should be repealed, for the simple reason that as a dead-letter it breeds contempt for other fishing laws which are not and should not be dead-letters.

The Sportsman Tourist.

On Reading "Sam Lovel's Boy."

So this is the last time; never more, hereafter,
May we gather with them where the light leaps high;
Hark the cobbler's stories, echo the gay laughter,
Prod the old man's memory tn his "Taking Ti."
Never more the linter, of a night, shall hold us;
Never shall we wander forth with Drive and Sam.
This is the last time Mrs. Purin'ton shall scold us;
Antwine racks invention one more "teekly tam."

Aye, here we part, for he, the dear magician,
Waves his creatures from him, and goes on before,
Leaving us he summoned to the fields Elysian,
Gazing sadly after at the close-shut door.
He has gone, and, henceforth, growing grass shall cover
Half the broken hearthstone; birds in flight shall stop,
Squirrels perch and chatter of their own true lover,
On the drooping shutter of Uncle Lisha's shop.

Ruth Hall.

De Witt Clinton's Letters.

Editor Forest and Stream:

A. N. Cheney's contribution on De Witt Clinton's letters about the National History and Internal Resources of the State of New York must have been read with deep interest by all your subscribers, and to one reader of FOREST AND STREAM the article was specially attractive, for it served to remind me that I had the good luck, several years ago, to find a copy of the letters by "Hibernicus" among a quantity of trash in an unpromising situation, and since exchanging a nickel or two for the book, have never failed to pick it up without finding entertainment on every page. Since Mr. Cheney describes the volume as "very rare," I am, perhaps, warranted in regarding my copy as well worth preserving, for although it is bound in the cheapest style, its pages are perfect.

To a resident of this quarter of the State the letters are particularly interesting. Their author is regarded as the Father of the Erie Canal, but all through its pages he refers to the waterway as "The Western Canal." The first letter is dated "Montezuma, May 26, 1820," and in these days of enlarged-canal discussion, it is worth noting that Clinton describes the boat on which he traveled as 74 feet long, 13 feet wide, "which draws, when not loaded, 7 inches of water, and when loaded, 11." The canal itself was 40 feet in width at the surface; at the bottom 28 feet, and its depth 4 feet. To quote every paragraph of interest would require more space than you might care to give, for the letters are written from the point of view of an enthusiast who now and then ventures on the domain of phophecy. For instance, anticipating one effect of the canal, he says: "When the great six-horse heavy teams are banished from use, the roads will be improved. The tippling houses, which derive their principal support from teamsters, will fall into disuse." Another prediction not yet fullfilled was this: "The opening of a market for grain will prevent its conversion into ardent spirits—the curse of morals, and the bane of domestic felicity. Whisky now sells for 18 cents a gallon. What a temptation to inebriety! A man may now keep constantly drunk for three or four shillings a week. Nothing but a heavy excise can banish the use of this deleterious poison." He discusses the geology of the canal country as it was known at that time, but admits "we are but in the horn book of this science." He was confident that coal would be found along the route of the canal, and his belief led to this reflection: "The moment coal is discovered within fifty miles of the canal, what sources of wealth will immediately be developed. Deprive Great Britain of its coal, and you ruin the kingdom. Give it to the proud republic of New York, and she will soar on eagle wings above all competition." In a letter dated Geneva, June, 1820, he laments that "natural science has no hold of the affections of this community," and in illustration of the fact continues: "The common names of European birds are applied without discrimination to American ones, and this has created endless confusion. It is in vain that I look for our quail, our partridge, our woodcock, our pigeon, our swallow, our robin, our goldfinch, etc. There is nothing of the kind to be seen. I am pointed to birds of those names, but here the resemblance ceases. The English snipe is the same in Europe and America, and probably many aquatic birds, but that snipe is the only one in which I have ascertained a complete sameness."

Here and there in the letters are allusions well calculated to stir the blood of the reader who happens to have a weakness for the rod or gun. One paragraph says: "Along the canal I have been regaled with the salmon and pike in great perfection. The salmo fario, or common trout, is visible in various places in the canal," a statement from which one must infer that the water in the canal at that time must have been purer or the trout less particular than they are now. One of his observations I can testify to being well founded, viz.: "A species of crayfish, which I have not seen, is said to be peculiarly dangerous to mill dams by its perforations. It inhabits the Genesee River in abundance." Every boy who has ever fished in the Genesee River, and had his fingers seized by the claws of the "crab," knows how abundant they are and what an excellent bait they make for bass. One letter dated Canandaigua, devoted to birds and the ornithologists, opens with this sentence: "At the house of the respectable and worthy Mr. Greig I met for the first time with the ornithology of Alexander Wilson, in nine quarto volumes, and need I say that I am delighted with it beyond measure?" Another letter begins with this picture to tease the wildfowler of the present day: "I saw, for the first time, in the Seneca River at Montezuma, the aquatic plant called wild rice or *Folle avoine.* It grows all over the West and North—and wherever it flourishes, myriads of water fowls are attracted to it, and derive their chief support and exquisite flavor from its alimentary qualities. In the lakes and rivers adjoining Montezuma thousands of wild geese and ducks of all kinds congregate at the proper season for food, except the canvasback duck, or *Anis vallisneria* of Wilson, which derives its name from a water plant called *Vallisneria,* on the roots of which it feeds, and which is a fresh water vegetable, that grows in some parts of the Hudson and Delaware, and in most of the rivers that fall into the Chesapeake."

Two letters dated "Western Region, August, 1820," are devoted to discussing the rattlesnake and its peculiarities. In early days the country about here was famous for the number of rattlesnakes that could be found by anyone who was looking for them. They are now about as rare as the dodo in this vicinity, but they have left their name on a point in the Genesee River below the city, and it will doubtless be called Rattlesnake Point ages hence, although the last of the reptiles was killed there many years ago. It is the only place of which I have any knowledge that one could identify with the spot alluded to in this passage of Clinton's: "A great den exists on the east side of Genesee River, near Rochester. In the spring they travel west (as their heads are then found in that direction), ten or twelve miles, and scatter themselves over the lowlands; and for this purpose they swim across the river. In the autumn their heads are pointed to the east, as they return to their den."

Apropos of the proposed introduction of moose into the Adirondacks, an extract from letter XLIV is suggestive: "On my way to the west I passed a few days at Albany, and among other public places visited the Museum of Natural History. Here I saw the largest of the cervus genus, called the moose. It was mounted in the museum. Its height above the shoulders 7½ feet, and its weight 1,000 pounds. Its horns had fallen off before it was killed. Twenty-five, it is said, were killed in the country north of Whitestown last winter at different times. This one belonged to a herd of five."

I have refrained from quoting what the distinguished author said about the fish of the lakes and rivers tributary to the canal, for Mr. Cheney has presented the matter fully. But in regard to the "blossoming" of the lakes I find, in the handwriting of some former owner of the book, notes commenting on Clinton's contention that the phenomenon was due to the exuvia or ova of insects. The first note says: "The effect is too great for the cause. From closely examining this substance, I am of opinion that it arises from the flowers of eel grass (*Zostera mariana*), which flowers in July to August, and I have seen lakes blossom only where this grass grew." Again, when the writer of the letters refers to the "blossom" as of animal origin, the writer of the notes (who I fancy was an engineer on the canal), says: "I cannot forego the observation that the lake blossom is attributable to aquatic vegetables, in part to its flowering, and partly and more especially, to its decay. I have never seen it except in bays where the *Zostera mariana* grows. I subjected it to alkaline tests and from yellow produced a green color. There are on the Oneida Lake insects which perch on the surface of the water. Their quantity is immense, but they appear to deposit their ova on small bushes from the edge of the lake half a mile inland. I have noticed their slimy deposits, and seen them in various stages of growth. They move from the land to the lake in masses, toward evening, and so numerous as to intercept the rays of the sun. This continues maybe ten days, and their death sometimes occasions great stench."

EDMOND RICHMOND.

ROCHESTER, N. Y.

Where the Loon Laughs.

In Three Parts—Part Three.

THREE luxurious and happy days are spent in camp before the expedition moves on. Then everything is packed away, the dunnage bags laid in the canoes, and a start is made. Just below the camp they pass the entrance of Lost Channel, and a mile or two further down come to the entrance of North Channel, closed by a boom. They slip around the end of the boom without any difficulty, and proceed. North Channel is a series of little rapids and falls, every one of which requires a portage of fifty yards or less. To the Sick Thing it is an interesting experience to observe how close to these rapids and falls Kitchener will guide the canoe without apparent danger of being sucked in. It is simply a matter of making use of the back water and keeping close to the shore. Then, when a clear view is obtainable, the Sick Thing lays hold of a rock and Kitchener stands up to inspect—the other canoes waiting for orders. By noon the last of the rapids is passed and the entrance to Six Mile Lake is observable in the distance. It has been a hard and quick morning's work, and everyone is hot and tired. Clothes are off in an instant and all four men plunge into the tail of the rapids. Then comes a luncheon of hardtack, stick chocolate and raisins—a delightful feast to ravenous men. After that, a quiet smoke, and then on again. Six Mile Lake is lashing itself into fury under a stiff breeze, and the heavily loaded canoes take in a good deal of water. But the open water is passed over safely, nevertheless, and camp for the night is made on an island which promises good shelter from the coming storm. By the time the tent is up and the fire started, the rain is coming down in torrents. How Kitchener accomplishes it the others do not rightly know, but while they lie comfortably in the tent, he actually prepares and serves a big pot of delicious soup, a pot of refreshing tea, and what goes by the name of a rice pudding. By the time this is disposed of, the rain has ceased, and nothing is left of the storm but an occasional flash of lightning and the grumbling of distant thunder. In the twilight, a loon passes close overhead, his wings making a loud whistling; and a moment later a stately crane goes by. The fire is flooded out by the rain long since, and the fuel lying about is too sodden to make another. There can be no cheery camp fire for this night. But presently the moon comes up, shining weirdly through driving clouds and lighting fitfully the black water and blacker headlands. Then, away in the distance, comes the voice of the loon. For reasons of his own, probably, the strange wild creature is not laughing to-night, but instead, indulges in an undertoned whimper broken at intervals by an unearthly shriek.

"Boys!" says Kitchener, solemnly; "there's the agony and despair of twenty centuries in that creature—and let me tell you why. The soul of Judas Iscariot, the man who betrayed his Friend for money, dwells in him."

Nobody makes any rejoinder. The thought sinks in and becomes part of the gloom and the silence of the night. Until they creep at last into their blankets, the four voyageurs remain in melancholy reverie.

Next day, the sadness of the preceding night all forgotten, they go forward again. At the end of Six Mile Lake they pass through a narrow channel into Crooked Lake, at the extreme northern limit of which they find an abandoned lumber camp. According to the map, there should be a portage here, but so far as the eye can discern there is no possible way through the tangled growth of forest and underbrush which fringes the shore. Kitchener lands and plunges into the bush. In fifteen or twenty minutes he returns.

"I have found it," he says; "but it's the most dubious looking trail I ever saw—hard to find and harder to hold to. However, it's all there is."

As they are taking the bags out of the canoes a big, straight, keen-eyed young man, carrying a Winchester over his shoulders and holding it by barrel and stock with both hands, comes out of the bush and approaches them. It appears from the little he says that he is a French-Canadian farmer from Go Home Bay, about twelve miles to the southeast. He grows a little garden truck, owns a cow and a horse, raises a few hogs and chickens and hunts for game the year round. "All the year round?" "*Mais non!*—honly w'en she was allow it by de law." This with a quiet smile. "Yes; that is the portage—dam bad portage, certainlee!"

The beginning of the portage is a plunge into the bush and then the faint outline of a trail. Then a broken and rotten bridge of logs that would be hazardous enough to cross empty handed. Then a long flight through an almost tropical growth, climbing over dead trees and plunging unexpectedly into sodden spots of morass where the foot sinks to the ankle—a short portage after all—only about two hundred yards, but an exceedingly bad one, and ending by the margin of a little stream choked with weed and bullrush. Following this a few yards down, open water is reached, but apparently landlocked.

"There isn't any outlet from this," the Sick Thing announces.

"Do you see that tangled mass of swamp weed straight ahead?" Kitchener asks.

"Yes; but you don't surely imagine that to be a channel! It is evidently impenetrable."

"The reeds bend in that direction. What movement there is in the water is through there. Let's try it."

The Sick Thing laughs derisively. For once Kitchener's woodcraft is at fault. But they drive the canoe in and pull themselves along by the help of the sturdy bulrushes. In five minutes they have won through, and there before them stretches open water. It was the channel after all, and the Sick Thing hastens to apologize. At the head of this water an ancient dam is found. Then follows a portage, commencing over steep rocks, continuing through a ravine choked with dead timber, and then on over a fairly good trail—about one hundred and fifty yards in all. At the end of it, the canoes are slipped into a little stream perhaps five yards wide. A dozen yards down this a big dead tree blocks the way, and too close to the water to allow the canoes to pass under. The bags are lifted out and laid atop of the tree and the canoes passed over, a ticklish operation. Then, five yards further along, a submerged tree blocks the channel, too high in the water to allow the canoes to pass over and too heavy to be sunk by any available means. Fortunately it is covered with slime, and by dint of coaxing, lifting, shoving and wriggling, the canoes are at last got over it. Five hundred yards further, the open water of McRae's Lake is found. At the northern extremity of this, a dam with an open flume is reached. The canoes slide through the flume without having to be unloaded, the men stepping dryshod over the rocks alongside. The four voyageurs are now in Georgian Bay. Camp is made at the first convenient spot on the mainland, and a hearty supper and ten hours of unbroken sleep follow. A seven pound pike for breakfast, parboiled for twenty minutes and then fried with bacon and seasoned with pepper and salt and a dash of curry, and the expedition moves forward once more. It passes the deserted lumber mill village of Muskoka Mills, stopping a moment to leave letters to be forwarded by the next steamer, and then on to find good camping ground for the night. This is found to be not only good, but really delightful, and a whole day is spent in luxurious idleness. There are socks to be darned, shirts to be washed, buttons to be sewed on, and a world of social happy talk to fill in the time, with the smell of the birch log from the camp fire at night and the glory of the heavens to gaze upon.

As the course from this on is likely to be somewhat puzzling, Kitchener submits the Government map of Georgian Bay to the first native he meets.

"We think up here," says the native, "that the survey must have been made in the Government offices in Toronto. The map is worse than useless. You would do well to put it away and ask your course from point to point as you go along. I know every inch of the coast from here to the entrance to Moon River, myself. I'll draw it on the blade of a paddle, if you like; but I warn you that even that won't be sufficient. There are big bays you are certain to go into, if you are not careful, and they'll cost you anywhere from three to twelve miles of paddling. Stop at every house you come to and ask. That's the only way to do it. The first you'll come to is Jimmy Darling's, on Aberdeen Island, and the next is Loudon's, on High Rock. Those are two points that will see you safely over part of your journey. But for heaven's sake look out for the bays!"

He makes a rapid, free hand drawing on the paddle, and leaves them. They go straight to Darling's Island through a sheltered channel, and from there see the open water of Georgian Bay, white-capped and threatening. A call at Darling's house results only in an interview with a servant, who seems profoundly ignorant of the geography of the country. However, she is quite sure

there is an inside channel, back of the islands, that will afford safe passage for the canoes. Another glance at the tumbling water convinces them that the inside channel must be found, and as there is no one else to consult within several miles, they proceed to search for it themselves. In a few minutes an entrance is found back of what seems to be a large island facing Darling's. This they enter, and find themselves in a wide and sheltered stretch of water dotted with innumerable islands. Never doubting that this is the channel they are in search of they proceed. After several hours' paddling they discover they are in a big landlocked bay—one of the snares the native had warned them against—and they have to turn back. They eventually creep out by the same channel they entered, and are once more in face of Darling's Island, with only enough daylight left to make camp for the night. They sleep that night with the booming of the surf in their ears. Shortly after 7 o'clock next morning the canoes are launched again. As the sea in the open has gone down, and there is no wind worth mentioning, they decide to cut through the wide stretch of water and head directly for Loudon's Island. The next island with a house on it that comes in view they stop at, and Kitchener climbs over the rocks to interview the inmates. Nobody being astir, Kitchener boldly knocks at the door, and presently it is opened by a man in his night shirt, who takes in the situation at a glance.

"What can I do for you?" he asks. "I suppose you are lost—everybody who ventures into Georgian Bay gets lost sooner or later—and you want me to find you again. Where are you headed for? Moon River? Well, come out here and I'll try to show you; but I warn you that you are more in the hands of Providence than in mine."

He steps out upon the rocks with his solitary garment fluttering in the cold morning wind and proceeds to point out the way.

"You fellows will have to hurry," he says, in conclusion, and wagging his head at the sky, "for it's going to blow like blazes."

They steer for a fishing hut which appears in the distance, and there interview a lone woman guarded by two fierce dogs. Her opinion is that they will never find the entrance to Moon River though they search for it for a month on end. Nobody ever finds it, that she has ever heard tell of. Sometimes it seems to be in one place—but mostly it isn't. But they can try for it if they want to. There isn't any law against that that she has ever heard tell of. Then she exhausts her store of knowledge by telling them the way to Indian Harbor.

They pass on to the next objective point, to-wit, a small island with a solitary tree growing on it, and marking the entrance to the harbor. Indian Harbor proves to be merely a channel between an island and the mainland. At the end of it the open water of Georgian Bay is again encountered. A long paddle through tumbling seas brings the party to the next indicated point, namely, Jubilee Island. Here an intelligent half-breed, in charge of a Mackinac boat, is found; and from him minute instructions are obtained with the usual warning against landlocked bays. Despite this, not only is the entrance not found, but once more do the weary voyageurs find themselves at the end of a long bay with a great stretch of paddling to live through before the open is reached once more. Then, night coming on, camp is made at the first available island. Supper finished and black night shutting in, the four gather round the blazing logs, light their pipes with a live ember—which, by the way, imparts a new and delightful aroma to tobacco all its own—and settle down for a comfortable chat.

"Do you know, Kitchener," the Sick Thing says, drawing dreamily at his pipe, "I have made a discovery on this trip! The waterways of this country, all of it probably from the Atlantic to the Great Divide, were used as highways by the inhabitants long before roads were even thought of. If they wanted to get from the interior to the seaboard, from trading post to town, or from their own settlement to the next settler's clearing, they used the waterways. Here have we been traveling over lakes and rivers we never saw before, and the course has been marked for us by thousands and thousands of men who have gone before us. And another interesting thought comes to me. We are traveling just as the early voyageurs did—like La Salle or Marquette, or any of those splendid old chaps who did it for glory or for skins, or to preach the gospel to the red man. I wonder if they ever went over our course."

"The usual course from Quebec and Montreal to Mackinac and beyond was up the Ottawa to Lake Nipissing, down the French River to Georgian Bay, through the Soo, and so on. Our course has too many portages for big canoes and heavy loads. However, it is quite evident from the plainly marked portages that the course has been in constant use from the beginning—probably from the earliest settlements in America."

"Wonder if the priests did any swearing on the portages," Cyclops remarks, sleepily.

"I fancy they did a bit of praying, you know, when they passed through the shoals of Georgian Bay," the Little Officer Boy says, reflectively. "They're just awful."

"They'd be all right in a breeze," Kitchener says, "for they'd be shown by the whitecaps then. But in such a day as we've had, with the water almost still, why, they're enough to make a man old before his time. My hair has stood on end so long to-day that I doubt it will ever lie down again. It's nothing but shoal and sunken reef from the time we left Darling's Island. The first thing you know there is a sudden yellow gleam through the black water, for all the world as though some submarine monster were reaching out to crush you in its maw, and you just sheer off in time to save the canoe. But if we can find the entrance to Moon River to-morrow, I think we shall be free from that part of our dangers. I don't mind rocks above water, but I hate those sneaking things that lie hid just below the surface."

"The rock formation in this country," says the Sick Thing, "is most interesting. We are probably standing on the earliest geological formation known to science—on the very backbone of old Mother Earth, so to speak. And what an idea you get of an early molten condition with mighty forces heaving and twisting in the birth-throes of creation! How the river courses are marked and scored with the passage of glaciers! All the rest of the earth is young compared with this. Why, the very rock we are sitting on may have stood exactly where it stands now ten thousand years before Moses came upon the earth to make his great trek into the wilderness according to the will of God! It is to me a most solemn and——"

"I say," Cyclops interrupts, and is promptly checked by Kitchener.

"Be quiet, child! Go on, Sick Thing."

"What is it, Cyclops?" the Sick Thing says, indulgently. "Tell us how it impresses you."

"I was only going to ask if any of you fellows had any tobacco," Cyclops says, giving vent to a mighty yawn. "Sorry I interrupted you."

They all replenish their pipes, and then fall into a comfortable silence, gazing steadily into the glowing embers of the fire. There is too much lazy content to require the stimulus of conversation. It is sufficient to sit and think, or even not to think at all, but just to smoke and smoke, growing deliciously sleepier with every moment. And then, the unspeakable comfort of creeping into blankets laid atop of odorous spruce twigs, to fall asleep on the instant and lie quiet and dreamless for ten blessed hours of forgetfulness!

Next morning Kitchener and the Little Officer Boy go off in one of the canoes to explore for the entrance to Moon River, while the Sick Thing and Cyclops remain on the island and keep house. According to the Government map there is a perfectly straight entrance from Moon River Bay into Blackstone Harbor. When Kitchener returns, after an absence of about five hours, he has a different story to tell. The entrance may be described as follows: Sadie Island, lying at the southwest corner of Moon Island, is the beginning. Its name is plainly painted in large characters on a rock. The course is then southeast, following the main channel and avoiding the bays on either hand. Then comes Keller's Island on the right, also plainly marked, and further along, Island 62 on the left. About two miles beyond this an island lies in mid-stream, which may be recognized by a large rock shaped like a sugar loaf, which is a prominent feature of it. Here a turn to the northeast is made into Captain Island's Straits. The course is then along the left bank until a house on the far side of a bay is reached. This house marks the entrance to Blackstone Harbor.

The expedition does not move until the day following Kitchener's investigations and his redrawing of the Government map. The two canoes find their way into Blackstone Harbor without any difficulty. They cross the harbor, keeping a long point of land on the left, and come to the entrance to Blackstone River. This is closed by a boom, necessitating unloading the canoes and a lift over. Then comes a dam and another small portage. The Blackstone, a narrow, winding and picturesque stream flowing between sedgy banks and shut in by heavy timber which throws it into deepest shade, is a charming bit of traveling. A few miles further along it runs more swiftly over a pebbly bottom, so shallow that the four voyageurs have to step out of the canoes and wade the rest of the way to the next dam. At this dam there is an awkward lift over an almost perpendicular bank, and a short portage beyond. The canoes are set down in the midst of a tangle of logs, beyond which is a boom which the canoes slide over. Then there is a little bay, completely shut in by forest, at the far end of which a river is found flowing through drowned land. By means of a dam the lumbermen have so raised the level of this stream that it overflows both its banks and submerges the forest. As the stream itself is choked with logs, a short cut through the forest is made—a decidedly novel experience in canoeing. Every condition of a stroll through summer woods is there—the hum of insect life, the shy call of a bird, the multitude of forest colors, and above all the solemn hush of the woodland. It is slow progress, but so delightful an experience that the voyageurs feel no impatience, but rather regret when it is ended and the river channel reached once more. This part of the river, too, is filled with floating logs, which have to be slowly manipulated for every foot of way the canoes make. At last the dam is reached and the tired men land, strip, and plunge into the water just where it comes tumbling over. Then, luncheon—and after that the weary trail. A portage of something over a mile—an easy one, however—brings them to the water above a flume. More logs and a boom, and after that a half hour's paddling into Crane Lake, where camp is made. It is evidently an old camping ground, abundant evidence of sojourners who have gone before being found—some of them not quite satisfying to dainty nostrils. Kitchener is a sworn enemy to making camp where another camper has preceded him, but in this case there is no alternative, the afternoon being too far advanced to permit of further seach. On one of the trees is pinned the following curious legend: "Hemah che lie juh no Moon ewh O mah ah yah—Mr. Elijah Yellowhead from Orillia, Ont., Aug. 12, 1900."

Next morning the camp is visited by a Fire Ranger, who serves the customary notice—Victoria, by the grace of God, desires her well-beloved to carefully extinguish their fires before leaving, whereby Her Majesty's forests may be preserved, with minute instructions how to proceed in the matter. The Fire Ranger carries in his canoe the invariable fire pail and the equally invariable rifle, without which latter no native seems ever to stir abroad. He is a big, straight, alert, self-reliant young man with a wonderful air of dignity and good-breeding about him—the kind of man one would desire to know more of. Out of native politeness he makes an effort to translate the inscription on the tree, but fails for want of knowledge of the tongue. He hazards the opinion, however, that it was written by an Indian guide who took a party of Americans through recently, and probably contained some timely hint for other guides to follow.

"Down on Georgian Bay," the Sick Thing says, "the natives would have characterized your Americans as a d—d Yankee push."

"There's no call to speak of the Americans that way," he answers, quietly. "We get lots of them through here, and they're as decent men as I want to know. They take care of their fires and leave their camps sweet and clean. They don't take any more fish than what they can eat, nor cut any more wood than what they need. The Americans are all right—as right as they make 'em."

Next morning, the channel from Crane Lake into the Upper Blackstone Lake is found to be an easy course, there being only one dam, and that open and with sufficient water to float the canoes through. The Upper Blackstone breaks upon the view like a glimpse of paradise. It is so entrancing a spot that the voyageurs, though they have paddled not more than five miles since breakfast, decide at once to make camp. From the spot they select for the purpose they can see, away in the distance, a clearing in the forest with a scattered group of little houses in it. When the tent is up and everything made snug, one of the canoes sets off to visit this clearing and obtain, if possible, a supply of fresh vegetables—anything, in fact, to vary the ordinary round of camp diet. Potatoes, eggs, bread and butter are the fruit of a ten miles paddle, and the voyageurs live high that night on black bass, bacon, blueberries, fried potatoes and great slices of good white loaf spread thick with the unaccustomed luxury of butter. To properly appreciate such delicacies one must have been deprived of them for a week or two. Then, they are eaten in a kind of exalted ecstacy, as something almost too precious for mortals.

The delights of the Upper Blackstone are so great that it is left behind only after several days, and then with regret. A climb of perhaps sixty feet by a trail through the forest brings the party to Birch Lake. A mile's paddle brings them to a dam with a hundred and fifty yards portage around it. Then a half mile through Burnt Lake, and another portage, beginning with a sharp ascent and then winding for half a mile through the bush. Then Portage Lake, with a mile and a half portage over a wagon trail at the end of it.

"Boys," says Kitchener at the beginning of this, "as this is a long portage I propose that we make it in one carry. Sick Thing, are you good for two of the bags?"

"Sling 'em up and I'll try it," the Sick Thing responds.

He starts with something more than twice the load he has thus far carried. At the end of half a mile or so he shoots his load over his head and rests. He is doubtful about ever getting it up again—but he must rest. Then, when his breathing is easier he lifts the heavier of the two bags to his shoulder, adjusts the tump-line about his head, and slides the bag to the hollow of his back. Then, taking the other bag by its tump-line, he swings it over him and drops it on top of the other, finding the operation much easier than he had dared to hope. Training has done wonders for him. Another half mile, and he rests again. Kitchener goes past him now at a jog trot, a canoe on his shoulders and a miscellaneous load in his free hand.

"Can you do it, old man?" he calls.

"Yes; to the Queen's taste. I just stop now and again to admire the scenery."

When he has his load up again, Cyclops trots past him bearing two bags, an axe, a couple of guns and various odds and ends. He looks quite comfortable and entirely happy. A shorter carry this time, and the Sick Thing admires the scenery once more. The Little Officer Boy now passes him, bearing a canoe, and the Sick Thing falls in behind and makes a lusty effort to keep up. But he cannot do it, and when the Little Officer Boy has disappeared around the next turn he lets his bags drop once more. Then Kitchener comes running back to him.

"By George, old chap," he cries heartily, "you've done it within a couple of hundred yards. This expedition is just what you needed. It's made a lusty youth of you."

The course from the end of the portage is into Lake Joseph, and thence by a small channel into Lake Rosseau. At the far end of this is Morgan's Bay, the ultimate destination. Just three weeks have passed since the four voyageurs left Orillia. The remainder of the month is to be spent in permanent camp in fishing, shooting and in limitless idling. Though the mainland is dotted with summer cottages and the village of Rosseau lies in a corner of the bay, civilization is still sufficiently removed to be easily forgetable. Camp is pitched on a little island nearly three miles from the mainland, and the only sounds which reach it, other than the familiar sounds of the forest, are the occasional hootings of a steamer passing in the distance, the steamer which will ultimately carry them homeward again. The place is as wild and primeval as though there were not a settlement within a hundred miles.

One of the first excursions the party makes is to the wonderful Shadow River—one of the show-places of Muskoka. The canoes go dancing across the bay to this. Even with a load the canoe, modeled directly after the red man's primitive design and changed in no particular save that basswood takes the place of birchbark, has a certain capriciousness in its motion. But with just two paddlers in it to carry, its coquetry breaks out and colors all its behavior. It goes swiftly through the water, but with a little mincing way that is indiscribably charming—never steady for a moment. The little creature seems to enjoy herself too much in her play with the water to be sedate. She curtsies to it, invites it, shifts away from it, coquettes with it, and acts generally like a willful, beautiful hoyden in the presence of a big lover she is more than half afraid of.

The water of the Shadow River is so dark and still that it looks like a pool of ink, and the shadow pictures in it are depicted with extraordinary fidelity. The stream winds and winds through ever-changing banks, and the sheer beauty of it is beyond description. Here it will be shut in and overarched by deep, dark forest, with now and then a little opening glade that gives you a vista of a hundred yards or so, not of the ordinary tangled mass of rock and rotting timber common to this country, but something as soft and soothing to the senses as an English landscape. Then the banks will change to rocks and ferns and gorgeous wild flowers, with little curving pools formed for no other purpose than to delight the eye. Sometimes the trees shoot straight up and leave the open water to paint its color harmonies of sky and cloud and bank, and then, again, the overarch is so complete that the sun only comes through in little flecks and splotches. But, sun or shadow, the pictures are always there—such pictures as it is worth a three weeks' journey to see. There is a curious illusion forever in the mind of the visitor to this extraordinary stream. He is led to expect that the next bend will bring him in sight

of some bit of ancient architecture—a monastery, a cathedral, a battlemented tower, something to complete the impression of old-world mystery and romance which seem to belong by right to magical Shadow River.

Kitchener's Memorandum of Expenses, Treasured by the Sick Thing as a Memento.

FOOD SUPPLIES (FOUR MEN FOR ONE MONTH).

40lbs. shanty biscuit. 20lbs. smoked bacon. 5lbs. clear pork. 10lbs. small white beans. 30lbs. granulated sugar. 3lbs. Edwards' desiccated soup. 3lbs. black tea. 7lbs. oatmeal. 7lbs. cornmeal. 6lbs. Carolina rice. 6lbs. sago. 8lbs. evaporated apples. A few cloves. 5lbs. dried apricots. 6lbs. cooking raisins. ¼lb. white pepper (in a bottle). 2oz. India curry powder (in a bottle). 3lbs. table salt. 5lbs. flour (for thickening). 2lbs. maccaroni (broken into short bits). 5lbs. Canadian fall cheese. 5 cakes Ivory soap. 1 cake Sapolio. 1lb. 12s paraffin candles. 3lbs. sweet stick chocolate. Matches in a tin box.

Cost of above, $21.60.

All in separate drill bags made to fit. Tea, soup and salt to be covered in addition with oilcloth. All bags to have tie strings at mouth.

Five dunnage bags, water proof, 24 × 36in., with flap at top and rope through the grommets to tie—$10.

Five leather tumplines 7ft. long, with head bands, 3¼ × 12in.—$3.75.

Three waterproof sheets—$3.

Frying pan with folding handle. 3 tin pails, the largest 9in. in diameter by 9in. in height, all to fit into each other, and all with covers. 4 tin cups. 6 tin plates, 1¾in. deep by 7in. in diameter. 1 tin spoon 9in. long. 4 tablespoons and forks. Candle lantern. Light axe with cover—$3.90.

Carbolated and plain petrolatum. Pond's extract. Purgative. Carminative. 2 rolls surgical bandages. Quinine pills—$1.50.

Combination tool holder containin screw driver, file and awl. Small pincers. Copper wire. Some 1in. riveting nails. Strip of tin 5in. wide by 10in. long. 1lb. white lead and putty mixed, two parts of former to one latter. ¼yd. stout canvas. Some ¾in. wood screws. Some 2in. wire nails. Oil stone. These are for mending possible leaks in canoes—$1.75.

Rent of two William English canoes for one month—$10.

Rent of 7 × 7ft. tent with 3ft. wall, one month—$4.

Total cost to each man—less than $15.

All food supplies obtained from Michie, a dealer at No. 5 King street west, Toronto. He can direct strangers where to get canoes, tent and dunnage bags. Bags are carried by railroad as baggage. Expressage on canoes is not expensive.

PERSONAL EQUIPMENT FOR EACH MAN.

Khaki suit. Extra trousers. 2 flannel shirts. Sweater. Belt. Suit heavy underclothes for night wear. 2 pairs heavy wool socks. Hockey boots with rubber heels. Tennis shoes. 3 large bandanna handkerchiefs. 3 white handkerchiefs. Slouch hat. Tuque for sleeping. Seaman's long oilskin coat. Tooth brush. Hair brush. Comb. Shaving tackle. Sewing outfit. Bath towel. Pair heavy blankets (two pairs sewed together form sleeping bag for two men). Clasp knife with ring and lanyard. Compass. Match safe.

Total weight of entire equipment, including everything but canoes, about 300lbs.

WILLIAM EDWARD AITKEN.

Natural History.

Breeding the Wild Pigeon.

BOSTON, June 5.—*Editor Forest and Stream:* Inclosed I send you a letter from Prof. C. O. Whitman, of the Department of Biology of the University of Chicago, upon his experiments in breeding and rearing of the passenger pigeon in captivity. The interest of the readers of FOREST AND STREAM in the almost accomplished extermination of this beautiful and once so abundant species is evident by the frequent communications which have appeared in your columns.

Prof. Whitman's most interesting letter was, as will be seen, written without any idea of publication, but gives the news—delightful to me, as I think it will be to many readers—of the easy domestication of the species and the way open for its preservation, at least for purposes of study, and possibly eventually for restocking territory favorable to the experiment.

Readers of the paper will remember the brave efforts of Mr. J. B. Battelle, of Toledo, to domesticate the ruffed grouse and induce it to breed in captivity—an experiment which I hope he has not entirely given over.

Prof. Whitman's report that the passenger pigeon will breed all right in confinement is most encouraging, and his statement, "If I could get one new bird I would soon have a flock of fifty," will, I hope, stimulate readers of FOREST AND STREAM who are so situated as to make it possible to furnish Prof. Whitman not only one but a number of specimens in the interest of his remarkable experiment.

It is part of a series of great interest to biologists and naturalists generally, which he is conducting at his biological laboratory at Wood's Holl, Mass., where he is hoping to create a natural history farm. As a first installment, he has now under cultivation a columbarium and a collection of pigeons, already the largest of the kind in existence, and rapidly increasing by accessions from all parts of the world.

This has been undertaken with several ends in view, as he states in a communication to Science (N. S., Vol. XIII., No. 327, pages 538 to 540, April 5, 1901). He most interestingly says:

"The pigeon group, containing between 400 and 500 wild species, and not less than 150 domestic species or varieties, offers one of the most favorable fields for the comparative study of variation, and for experimentation in dealing with the problems of heredity and evolution."

Readers interested in the subject are referred to the Science article for a brief but most interesting exposition of the scientific uses to which such a natural history farm can be devoted. If, as seems to be the case, the passenger pigeon is still known to exist in small numbers, and to breed in the central parts of New York, and perhaps in some portions of Missouri, Michigan and Wisconsin, I am hopeful that the appearance of this letter will not be too late to stimulate bird lovers and naturalists to make captures of the bird, and to communicate at once with Prof. Whitman at the University of Chicago.

C. H. AMES.

UNIVERSITY OF CHICAGO, May 20.—Dear Mr. Ames: I am always glad to find a friend of the passenger pigeon. I have at present thirteen. A Mr. Whittaker, of Milwaukee, obtained a pair from the Indians about twenty years ago. He kept them and raised a flock of fifteen. I had about half his flock, and increased this number, although not rapidly. During 1899 and 1900 I failed to get a single egg hatched. The birds began mating early in February and laid many eggs before June 1, but all failed to give young, although many developed to, or near to, the point of hatching.

This year I separated males and females until April 1, then got three pairs to work. One young was hatched and did well. When two weeks old it fell down from its nest and was injured and died. I have three pairs sitting now, each pair in a separate pen. They are now quite well tamed, and are faithful in incubation.

They are very hardy, living outside all winter in my back yard in pens that are protected from wind. They are apparently proof against diseases that carry off many of the other wild species. They are my special pets, and I have tried in many ways to obtain one or more new birds, so as to strengthen the reproductive power, which seems to weaken as the result of long inbreeding. I am afraid it is almost hopeless, for only a few scattered pairs seem to be left in the country, and no one is likely to succeed in capturing a bird alive. I have not, of course, abandoned the effort, and have some parties on the lookout.

They will breed all right in confinement. If I could get one new bird, I could soon have a flock of fifty. They lay only a single egg at a time, but hatch in twelve and a half days, and lay again by the time the young is two weeks old. I have crossed them with the little ring dove, and have some fine hybrids, all of which are sterile. I am studying wild species in general, and am testing various crosses. I have obtained some fertile hybrids, and a few are reproducing, so that I expect to get some interesting results in this line.

I am studying the modes of life, voices, color patterns, origin of specific characters, the embryology—in short, the whole natural history, distributing problems among my students when I can do so in their interest. I have as yet published no report of work, but may get to that point soon. Very truly,

C. O. WHITMAN.

[What Prof. Whitman has done is certainly of the very greatest interest, and it is much to be desired that he should receive specimens to renew his breeding stock. It is possible that Mr. J. B. Battelle, of Toledo, may be able to help him to do that, since fourteen or fifteen years ago that gentleman wrote to FOREST AND STREAM telling of Ben Frost, who lived near Toledo, and across the Michigan line, who at that time bred wild pigeons. This was in January, 1887. Still further back, in Vol. XII. of FOREST AND STREAM, May 8, 1879, an account was published by Mr. Frank J. Thompson, so long in charge of the Cincinnati Zoological Gardens, of wild pigeons breeding in confinement under his charge there. Later, if we recollect aright, Mr. Thompson published in FOREST AND STREAM a more extended account of the breeding of these birds in confinement.

It is certainly much to be desired that Prof. Whitman should secure the birds needed for continuing his experiments. From all points of view the matter is one of very great interest.]

Experience with Wild Animals.

ALBANY, N. Y., May 31.—*Editor Forest and Stream:* If the discussion of "Experience with Wild Animals" which has taken place from time to time in the columns of FOREST AND STREAM has not been officially closed, I shall be pleased to add an item, which I recently happened upon, relating to the subject. While the facts quoted are not from my own experience, and perhaps may be considered hardly up to date, still they seem to prove that in the old flintlock days, if not in the age of repeaters, there were occasionally some dangerous wild animals. Although the following case was an exceptional one even at that time, it is perhaps of sufficient interest to bear present repetition. Ross Cox, the narrator of the incident, was one of the Astorians who sailed from New York on the Beaver in 1811, and remained on the Columbia River until April, 1817, when he made the overland journey to Montreal. I quote from his "Adventures on the Columbia River," p. 213. Commenting on bears, the author says: "From the scarcity of food in the spring months, they are then more savage than at any other season, and during that period it is a highly dangerous experiment to approach them.

"The following anecdote will prove this, and were not the fact confirmed by the concurrent testimony of ten more, I would not have given it a place among my memorabilia:

"In the spring of this year (1816) Mr. McMillan had dispatched ten Canadians in a canoe down the Flathead River on a trading excursion. The third evening after quitting the fort, while they were quietly sitting around a blazing fire eating a hearty dinner of deer, a large, half-famished bear cautiously approached the group from behind an adjacent tree, and before they were aware of his presence, he sprang across the fire, seized one of the men (who had a well-furnished bone in his hand) round his waist with the two fore paws, and ran about fifty yards with him on his hind legs [sic] before he stopped. His comrades were so thunderstruck at the unexpected appearance of such a visitor and his sudden retreat with pauvre Louisson that they for some time lost all presence of mind, and in a state of fear and confusion were running to and fro, each expecting in his turn to be kidnapped in a similar manner, when at length Baptiste LeBlanc, a half-breed hunter, seized his gun, and was in the act of firing at the bear, but was stopped by some of the others, who told him he would inevitably kill their friend in the position in which he was then placed. During this parley Bruin relaxed his grip of the captive, whom he kept securely under him, and very leisurely began picking the bone which the latter had dropped. Once or twice Louisson attempted to escape, which only caused the bear to watch him more closely; but on his making another attempt he again seized Louisson around the waist and commenced giving him one of those infernal embraces which generally end in death. The poor fellow was now in great agony, and vented the most frightful screams, and observing Baptiste with his gun ready, anxiously watching a safe opportunity to fire, he cried out, *'*Tire! Tire! mon cher frere, si tu m'aimes. Tire pour l'amour du bon Dieu! A la tete! A la tete!'* This was enough for LeBlanc, who instantly let fly, and hit the bear over the right temple. He fell and at the same moment dropped Louisson, but he gave him an ugly scratch with his claw across the face, which for some time afterward spoiled his beauty. After the shot LeBlanc darted to his comrade's assistance, and with his *conteau de chasse* quickly finished the sufferings of the man stealer, and rescued his friend from impending death, for with the exception of the above-mentioned scratch, he escaped uninjured. They commenced the work of dissection with right good will, but on skinning the bear they found scarcely any meat on his bones—in fact, the animal had been famished, and in a fit of hungry desperation made one of the boldest attempts at kidnapping ever heard of in the legends of ursine courage."

CHAUNCEY P. WILLIAMS.

*Shoot! shoot! my dear brother, if you love me! Shoot, for the love of God! At his head! At his head!

Wild Pigeons and Rice Birds.

IN a recent article on "Birds and Their Habits," says the Richmond Dispatch, we incidentally alluded to the wild pigeons which formerly flocked by thousands to Virginia, and ventured the assertion that this disappearance in late years is "one of the dozens of mysteries which ornithology presents."

Several of our contemporaries say that there is no mystery at all about the non-appearance of the wild pigeons, and unhesitatingly attribute the absence of these birds to pot-hunters and sportsmen, who formerly slaughtered them in great numbers.

For our part, we are more than willing for the shotgun to receive its share of odium—the more the better, we say, in fact—but we are not prepared to stand corrected in this matter.

The same fallacious reasoning which attempts to explain the absence of the pigeons overlooks the annual visitations of millions of sora which flock to our marshes at certain seasons. These strange little birds are killed by the ton with guns, sticks and what not; yet there is no apparent diminution in their numbers. Year by year and decade by decade they mysteriously appear in certain months, and despite the pitiless war waged against them, tarry with us until the voice of nature, speaking through their instinct, summons them to other climes. Their movements and the reasons which prompt their migrations leave man entirely out of the question.

So, too, our mottled little friend, the partridge, lingers constantly with us, despite the cruel treatment accorded him at times by sportsmen. In the summer, when nesting, he is almost confidential, and comes quite near our rural habitations to whistle the story of his domestic felicity. When autumn sears the meadow lands and the forests blush—possibly at the rapacity and selfishness of man—he grows shy, and the instinct of self-preservation makes him cautious. But through all his vicissitudes he is with us the year round, and even the hosts of his enemies cannot quite exterminate him.

Now why, we ask, do the partridges and the sora—two most toothsome birds—still survive when the wild pigeon has practically disappeared from our woodlands? The arguments which apply to one should apply to the others—indeed, the wonder is that poor little Bob White can live to whistle a single note when he is so beset by his pursuers.

Game Bag and Gun.

A Goose Hunt with Two Hearts.

THE word "goose" has long been synonymous with "fool"; but this, I believe, is a popular error, like that which attributes unusual wisdom to the serpent. The goose, besides possessing the keenest of hearing, has, in a wonderful degree, the ability to profit by experience and the faculty of transmitting to others of its kind the knowledge gained by experience.

The geese that wing their migratory journeys between the winter quarters on the Gulf and their breeding grounds among the lakes of the far North have developed their senses to a degree that is truly wonderful and that brings upon them many a curse from baffled hunters. Their flight is across a great open plain, two thousand miles in length. In this distance there is scarcely a lake where they may alight and be secure upon open water. The whole stretch is now fairly well peopled, and nearly every farmhouse possesses a shotgun. The rivers afford the only resting place in the long journey, and along these every conceivable strategem and ambush is employed to bring about their destruction. Be they never so weary, or be the water never so tempting, no least suspicious sign is too small for them to note.

It is of some experience of their baffling acuteness and a successful stratagem of old Two Hearts that I wish to tell you.

I had been spending my vacation at an Indian agency on the Missouri River. A dreary enough place it was, too, with its single, dusty street and gaunt, cheerless Government buildings—painted all of one dull green and trimmed with a duller shade of green—standing in bold relief against the great gumbo hills, that rose behind them and stretched on beyond the limits of the reservation. My memory of those gumbo hills is always colored brown. True, they were sometimes green, but only for a few weeks in the early spring, before the hot, dry winds swept up from the south and blasted the scant herbage that covered them. But with all the drawbacks that appeared to one who had spent ten years in a beautiful green village of the East, the place for me had a charm that outweighed all the charms of other places—for to me it was home. There I had spent the first ten years of my life—the happy years of childhood—and during the ten years that succeeded, all my dreams of sleeping hours and the dreams of waking hours, called day dreams, had been of those gumbo hills, that rose, gloomy and bare, above the great muddy river, and of the people that lived in the little log cabins that nestled in the deep ravines and dotted the valleys.

At several of these little cabins I was ever a welcome visitor, and I found in them what the vague but tenacious memories from childhood had told me of, love—not pity—

sympathy and real interest—not curiosity. To the people of those little cabins I was not an alien, not one of a different race; and among them I enjoyed a real rest and threw off a self-consciousness that was the natural outgrowth of being regarded, on every hand, for ten years, as a wild West curio.

When autumn came and a summons to return to school, I still remained.

At one cabin in particular I was a frequent and ever welcome visitor. It was not three miles from the agency and stood on a little bench or notch of the hillside, just at the mouth of a deep ravine that opened to the river.

I liked to walk the narrow trail that brought me to this cabin, for it led, cool and shady, along the foot of the high bluffs, that were cut abruptly off from the big hills. I liked my welcome. I liked to sit in approaching evening and watch the little specks of moving life on the broad flats below, and watch the setting sun and the great river that hurled its turbid current against the foot of the staunch bluff, but a short distance above, in a fierce attempt to tear the bluff down, only to be turned aside and made to swing diagonally across the flats, from whose opposite side the crunch-crunch and the following thud-thud, on the still air, told of the river's unrelenting energy and its better success with a less resisting prey. Seeming to forget its recent rebuff in the success of the moment, it hurled itself at the opposite bluff, to be served as it had been served countless times before, and would be countless times again, during its journey to the sea. I liked to smoke with the old man his kinnikinik and listen to his tales of other days. And I liked the way he listened, when in my turn I told some tale of school days and the land strange to him "back East."

He could relate some strange stories, could the old man—Two Hearts—tales of a childhood and youth passed by the clear rivers, the limpid lakes, the laughing cascades and in the virgin forests of the land of Hiawatha; tales of the chase and the warpath, and the great uprising that had ended in his people being driven to these parts, to learn the art of agriculture in the gumbo hills. Some of his tales of the all-conquering race sounded strangely like a translation into his own tongue of some English tales of Spanish doings. Yet for the truth of all I had but to look into his deep, honest eyes, or note the great scar across his right cheek, his pronounced limp, and his mutilated left hand—relics of those other days. No tone of malice or deferred vengeance spoiled the harmony of his talk. He had made a personal application of the severest test—"pray for them which despitefully use you"—of his new religion; the religion that he had heard the missionary preach and had seen the soldier and frontiersman practice.

So, during those summer months I renewed a friendship that had been mine in childhood and profited by my friend's knowledge of the folk-lore and inner and unwritten history of his people, as I had profited before by his skill in making bows and arrows and snares for small game.

As autumn passed and winter approached I went not so often to the old man's cabin, but spent my free time along the river flats, where prairie chicken and quail fattened on the wild sunflower and bullberry seeds. There was a keen but friendly rivalry among some half-dozen of us in hunting these birds, and each carried a short stick, which told by its notches a score kept with a conscientious honesty unknown among some hunters. But this sort of sport was beginning to pall, and all were delighted when the chilly winds from the northwest became more chilly and the advance guard of migrating geese squawked a promise of a month of real sport.

Being young, we were sanguine, and, from soap boxes or the counter top near the stove in the trader's store, aired our skill with shotgun and rifle, the superiority of our make of arms, the fine qualities of our dogs and our consequent expectations. From other soap boxes the old-timers laughed at us. They could all tell stories of successful goose hunts in the days when geese were plenty, but now contented themselves with finding out which one of us had gone in the afternoon to the river, and greeting these with a haw-haw chorus when they made an appearance at the trader's.

Being new to this particular sport, I had it all to learn, and began to appreciate its difficulties when I tried the range from some bushes where I thought to conceal myself to the point of sand bar on which a flock had alighted the evening before. Finding the range across the bar too long—the June rise does its work well—for much chance of success, I tramped a couple of miles through willows and brush to a point where the river seemed to narrow and the current washed the near bank. Here I tried the range to the bar opposite me. I could easily shoot to the bar, but accuracy was impossible. Some three hours yet remained before the geese would come in for the night, and I hastened back to the bar I had first visited. I remembered a large drift log stranded there, with a quantity of brush clinging to its gnarled roots. Beneath the roots and brush I made what I fancied to be a close ambush, and patiently waited, till I was chilled to the marrow and my fingers became so numb that I could hardly have handled my gun if I had had occasion. No goose came near. With chagrin I saw a flock of twenty swing in from the north, their white breasts glistening in the last rays of the setting sun; they wheeled in two wide circles above me, brought their flight directly over the river, out of range from either bank, and settled on the point of bar that I had tried to shoot across to. Another flock, after like maneuvers, settled on the bar a mile above. It was getting dark, when a third flock swept its wide circle above me. I saw that it, too, was going to move on, and I leaped from cover and, to vent my spite, banged away at them, knowing that they were far out of range.

Each day for two weeks I evolved some new scheme, in the evening tried to put it into execution, and at night walked home, tired, cold and hungry, with empty game bag, a strong desire to keep out of sight and a certainty of being laughed at when I showed myself at the trader's. My friends had met with but little better success. The most successful, the trader's clerk, had invited me twice, with a taunting smile, to eat roast goose with him.

Each failure, however, had only made my appetite the keener. At first I wanted a goose for the mere sake of it. Now success meant vindication before the old-timers, triumphs among my friends and revenge on the fool geese. It was when I had exhausted my own ingenuity that I remembered that I had not visited my old friend for three weeks, and I hastened to repair my neglect.

After we had indulged in a little random talk and had each inhaled several lungfuls of fragrance and comfort from the long-stemmed red-stone pipe, I went through a catalogue of my failures as a hunter—even as with other failures to a father confessor. An onlooker would have thought, to see my eagerness and the sympathetic face of Two Hearts, that we were deep in some grave subject. When I had chattered on for half an hour the old man straightened himself, finished lighting his pipe and gave me a comforting reply. "Yes, my son, the ways you have attempted were good once. I have used some of them, and with success, until the magáh became knowing of them. Even now some leader not so wary as the rest may take his flock within range of some well-constructed ambush, but it must be a very good one indeed. I have a method which I think is yet good, for I have used it but twice, and know of no one else having tried it. If we get what we shall seek you must keep the manner of getting a secret, for if it is used many times it will become as useless as other ways. I can do the trick by myself, but if I were to instruct you and let you try it by yourself, you might spoil the matter, so we will try it together. Ask from your friend at the trader's his fast-shooting gun and bring also your double-barrel. I will use it and you the fast gun. I like not the fast gun, because it speaks too much of wanton killing, but for this time it will be good, for we must get what we want in one hunt, or, at most, in two. Load nine shells with buckshot; we will need no more. Come every evening until the magáh alight on the point of yonder bar on the left side of the river. Our preparations, once made, cannot be changed easily, and I will make preparations with that bar in view."

With me this half-promise of success from Two Hearts was as good as a "promise to pay" from most people. I counted four or five geese as already mine. And why shouldn't I? I figured it out logically, as I had been taught to do in school. If "a bird in the hand is worth two in the bush," then two birds in the bush are equal to one in the hand, and ten geese on the bar equal to five in a gunny sack.

My suppressed excitement must have shown itself when on the next day I asked for the loan of my friend's repeater, and I turned my eyes guiltily away while he looked me over in surprise and broke out with "Humph! What lay are you on now? What the Dickens do you want with a seven-shot pumper when you haven't got action yet for your double barrel?" But I got the gun without compromising myself, and with it and my double barrel went by the hill trail, so as to encounter no one, to the old man's.

No geese settled on the bar that evening, nor yet on the next. On the third evening our vigil on the hillside above the cabin was rewarded by the sight of fifteen (as nearly as we could count, at two miles' distance) alighting on the bar we watched. When they were fairly settled, the old man jumped to his feet and cried, "Come. We must work fast now. In but two hours it will be too dark," and limped swiftly down the hill. Picking up the double barrel at the cabin door, he struck off up the river on the trail along the foot of the bluffs, while I followed close, carrying the pumper. We hurried on for nearly a mile, until well around the bend and out of sight from the long, straight sweep below and the bar on the next bend. Here Two Hearts scrambled down the bank to where a light skiff was tied. We quickly entered and rowed to the opposite shore.

Now I understood his scheme, for I saw a large drift log, dry and light, that rode high on the water, lying along the bank, and to its outer side was lashed, with elm bark thongs, a small dug-out canoe, just big enough for two men to curl up in. I saw more than that. By the markings of the sand I saw that the log had been dragged from a point a hundred yards back on the bar, and by horses, too. The old man had swum his horses across the river, had skidded the log over the bar and had swum his horses back again—just to give me a pleasure. A lump rose to my throat and a fuller knowledge came to me of this friendship I possessed.

When I had placed the guns in the canoe and had curled up in the forward end, Two Hearts pushed off. Then, taking up a short paddle, he curled himself into the back end and we were off on our strange voyage. In but a few minutes my cramped position became uncomfortable, but I tried not to give evidence of it, because my companion was cheerful under worse conditions. He had an arduous task indeed to handle from his cramped position our old craft, to keep it from entering the swift current and hold it on its course in the quieter water along the bar and all the while keep the head end of the log from swinging shoreward and revealing the canoe. And all this he did without permitting any part of him to appear above the level of the log's top. What a botch I should have made had I tried it by myself! We had drifted along for nearly half an hour; the sun had set, and it was growing chilly, when my companion broke the silence with some instructions: "We are about half-way there. We shall be in good time, and shall have light to recover our game, should it fall into the river. Rub your hands and keep the blood in them, for when the time comes we must work fast. Our chance will be only for a minute. When those two dead trees on the right bank come in line I will give you a sign. When I have fired at the magáh sitting, then do you let the fast gun speak. Do not fear the boat, the log will keep it steady."

In the deepening twilight and gathering chill we drifted along. When the two dead trees came in line the old man gave me a little kick, as though he thought me asleep, and, laying down his paddle, picked up the double barrel. Just a moment he waited, while I prepared for action, then he jumped to his feet, steadied himself just a second, and poured the deadly contents of both barrels into the perfectly surprised flock. Then he leaped into the water (not waist deep) to arrest the drifting craft. Panic! It had full sway there on the bar. One goose lay still, while two others tried vainly to join the twelve that, with terrific clamor of squawking and beating of wings, rose straight into the air. Now belched the pumper. As Two Hearts had jumped into the river I had sprung to my feet, steadied myself with one foot on the log, and poured charge after charge of buckshot into the rising flock. So close together did they rise that they beat each other with their wings and impeded their own haste. Great is the repeater! Though my last two charges found the remnant of the flock out of range, only five of the twelve winged in disorganized rout down the river to tell, among their fellows, of terrible disaster by a new method. Two Hearts now quickly cut the thongs that bound the log and canoe and bade me collect the geese from the bar while he paddled after the four that had fallen into the river. A little later I joined him a half-mile below. Crossing the river again, we spent the night with a near-by friend. Two Hearts would take only the three geese that he had himself shot, for, as he said, "There is only I and the old woman." Two of the remainder I left at our friend's, so with five geese in a gunny sack I trudged back to the agency. I tossed my heavy load into a corner at the trader's as though it were very common stuff and this an every-day occurrence, but I was nearly bursting with exultation. When, the next day, I had my friends to eat goose with me, my triumph was compete. In their presence I cut seven large notches in my score, and my conscience made no whisper against the big yarn I told to protect Two Heart's secret.

For a long time my reputation was like a fir tree and my glory like the moon. But it leaked out that Two Hearts had had more to do with getting those magáh than I. It leaked out through the chatter of women. Bah! When could a woman, of any race or people, keep a secret?

RODERICK HERON.

CHICAGO AND THE WEST.

General Changes Among Illinois Wardens.

CHICAGO, Ill., June 6.—Sweeping changes in the executive department of both the fish and game commissions of the State of Illinois were made yesterday at Springfield. It seems to be the policy of Governor Yates to make radical changes in the service in both these branches and resignations of the deputy fish wardens will be asked for forthwith. All the deputy game wardens will be asked also to hand in their resignations. State Game Commissioner Lovejoy is not a resident of Chicago, but it has not yet been determined who will represent him in this important city. One or two of the old deputies will in all likelihood receive new commissions, but at this writing the personnel of the fish and game deputyships is a matter of speculation.

The sportsmen of the State have as yet had no opportunity to form an opinion in regard to the qualifications and personal plans of the new appointee to the office of State Game Commissioner; Mr. Lovejoy, of Roscoe. He is reputed to be an able and energetic man, and although a novice in the work of game protection, as, indeed, must be any man new to this office, he has expressed his intention of doing all that he can to enforce the laws of the State. He has already been addressed by some of the leading sportsmen of Chicago, who have expressed the hope that he will take early and strenuous measures for the suppression of the illegal traffic in young prairie chickens which is sure to take place again this summer as it has so regularly in the past years. Up to this time our State Game Commissioners have rather inclined to the theory that the place to carry out protective measures is in the country and the fields, the intention being rather to punish the individual violator of the law than to go after the root of the main temptation which induces so many men to break the game laws, namely, the game traffic of this and other large cities. It cannot be said that there has ever been made a thorough and business-like attempt to break up the illegal game industry of Chicago. If Mr. Lovejoy shall devote his energies to this consummation he will receive the thanks and approval of every thinking sportsman of the city. The office of Game Commissioner has taken an added importance of late years and its duties require of any public servant an honest and faithful administration. There is as yet no reason to suppose that Commissioner Lovejoy will not thus discharge his duties.

Summer Deer Hounding by Fishermen.

I am asked by a prominent sportsman of this city to give as much currency as possible to the news of the continuous violation of the Wisconsin game laws by the guides and fishermen in the neighborhood of Minocqua and Woodruff, Wis., and, indeed, all through the chain of lakes adjacent to these points. This gentleman says he knew of three deer killed ahead of hounds by a guide a week ago. He saw many other parties out hunting and was invited to go hunting himself. He says that many of the hotels in that part of the country serve "mutton" on their table as often as they do beef, and that it is a common practice for anglers to go out with a rifle in the boat with them. He says that these men are not content with shooting deer around the edge of the lakes or fire hunting them at night, but are doubly breaking the law by using hounds to hunt them. This would seem just a trifle open and brazen, and this gentleman asks, through the columns of the FOREST AND STREAM, to call attention of the authorities of the State of Wisconsin to this state of affairs, in the hope that immediate steps may be taken to set the matter right. Attention has been many times invited in these columns to the ill-assorted practice of taking a rifle in the boat while out muscallunge fishing.

The Minnesota Pine.

The lumbermen of Minnesota have, as chronicled herein from time to time, succeeded in getting their finger into the big commercial pie of the Indian pine lands of the Minnesota reservations, having one way or another succeeded in getting permission to cut certain amounts of timber on the reservations. Not content with their success they have attempted to carry on the old game of dishonest operations. So bold have been their actions in this regard and so general the complaint from the Indians in regard to the measurement of the timber cut on the reservations, that Agent Mercer and other officers of the Indian service have nearly concluded that a complete end must be put to the lumbering operations on the

reservations. Thus far something like $80,000 has been taken from these lumber operators as penalties for cutting green timber under the "dead and down" act. It would seem that there is at least a tardy and partial awakening of those most interested in preventing such nefarious operations as those which have disgraced the State of Minnesota and the Government of the United States under the protection of this infamous "dead and down" timber act.

As to the Minnesota Park, let us be patient. After the lumbermen have by hook or by crook succeeded in cutting away all the dead and down timber, all the green timber, and everything else marketable, then perhaps we may have our park.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Gun Licenses.

NEW YORK, June 4.—*Editor Forest and Stream:* When I was a boy, my grandfather, whose boyhood went back to within a few years of the foundation of our Government, and who was very much alive to the rights and privileges conferred thereby, used to take me squirrel hunting, and deeply impressed on my youthful mind that in this great and glorious land of liberty "fishing and fowling are free to all men."

Now I read in FOREST AND STREAM "The gun license question in this country is not, Should we have the license? nor, Shall we have the license? but, When will the license come?" and it jars me. Rather than put a price on what most Americans have been taught to consider a birthright, would it not be better and more American to cut the open seasons shorter and shorter, if necessary, to preserve the game? Would not an open season of a few days only, free to all lovers of field sports, be better than one of several weeks, open only to those who have surplus dollars? Should not necessary restrictions be for all alike, and not be measured by the size of anybody's pocketbook? And is it not to be hoped that the legislators of certain States will become ashamed of the petty meanness of non-resident license laws taxing "the other fellow"?

Allow me to propose as Plank No. 2 of FOREST AND STREAM Platform, "Carrying guns in woods or fields should be prohibited in the close season." Laws to that effect would do more to preserve song birds and game than any possible license laws. Exceptions could be made of registered shooting grounds for practice, and allowing farmers to shoot predatory animals and birds on their own land only, to protect their crops and poultry yards.

As one of the correspondents of FOREST AND STREAM recently said, "What use has a man for a gun in the woods or fields in the close season except to violate the laws?"

D. R. MARSHALL.

A New Adirondack Preserve.

ON Monday, June 3, at Albany, N. Y., the Fenton Game Preserve Association was incorporated. Its purposes are to lease or own 40,000 acres of the John Brown tract in Lewis and Herkimer counties, to be maintained as a private park for hunting and fishing purposes and for recreation. The directors are Arthur Luetchford, of Rochester; Sanford E. Stanton, of Watertown; Pierce D. Schenck, of Dayton, O.; Prof. Eugene L. Richards, of New Haven, Conn., and Samuel W. Skinner, of Cincinnati, O.

Wild Geese at Little Magog Lake.

SHERBROOKE, Que., June 4.—Little Magog Lake, nine miles from Sherbrooke, Que., is a favorite resting place for wild geese in their migrations. This spring six out of a flock seemed to admire the place so much that they are still there. They are being watched with interest, and woe to the being who may dare to molest them. Whether they are nesting or not is not yet known. JOS.

Partners Wanted for the Rockies.

Editor Forest and Stream:

I am thinking of a trip for big game in the Rockies, and would like to find one or two companions to make up a party. Perhaps some reader of FOREST AND STREAM might care to communicate with me through your office.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

67

About the queerest fish story I know of, a highly truthful-looking man—indeed, he was a clergyman—tells the Washington Star, happened to me at a little lake in Wisconsin where I used to summer with my family. One day my wife was out in our boat with a party of friends. She was letting her hand trail in the water, without thinking about its shrinking effect, and when she finally took her hand in her wedding ring was gone. The lake was deep at that point, and although we made considerable effort to recover the ring, it was not found. Naturally it worried her a good deal, and the next year she would not go back to the same place. Nor did we go the following year; but the third year we went there again, and one day I was in the woods, about a mile from the lake, with my boy, trying to get a shot at some denizen of the forest or other. As we went peering around among the trees to get a squirrel we had seen, I noticed something shining on a twig in a tree about twenty-five feet from the ground. I sent my boy up after it, and when he came back I was more than astonished to find that the shining thing was my wife's wedding ring.

How it ever got there was a mystery at first, but I was not a believer in fairies and that sort of thing, so I began to investigate for material causes. The top of the tree had deadened, and with a suspicion in my mind I sent my boy up to see what signs might be above the green boughs. He called down to me presently that there were remains of a fishhawk's nest in the forks of the tree, and, putting this and that together, I came to the conclusion that the hawk had caught the fish that had gobbled up my wife's ring in the lake, and had taken it to the nest for the young hawks. They didn't care for jewelry and had left that part of the fish in the nest, from which, as the nest was blown to pieces by the wind and beaten by the storms, the ring had dropped out and by chance had caught on the twig where I found it. In any event, if that was not the way it got there, how did it? For it surely was there, and my wife is wearing it to-day.

68

And here is another ring story to go with No. 67. The New York Evening Sun tells it, and if you see it in the Sun it may be so:

General Grant was very fond of fishing at Greenwood Lake, and stories of his fishing exploits are still told at the Fuller House. Here is one of them: "One afternoon the General was fishing for pickerel on the lake when he hooked a large eel. The slimy creature knotted itself with the leader, and in removing it a beautiful horseshoe ring slipped from the General's finger and fell overboard. Banker J. Rhinelander Dillon visited the lake two weeks afterward and killed a large pickerel. The idea occurred to him that he would like to taste a fish just out of the water, so his guide cleaned it, and they were about to row to shore to cook it when the guide picked up the entrails, preparing to throw them overboard. To his surprise he discovered the very ring which General Grant had lost two weeks before."

To verify this story an Evening Sun reporter called on Mr. Dillon. This gentleman not only said the story was true, but he also exhibited the ring in question.

Said he: "I believe it was in either '74 or '75 that the affair occurred. I rarely eat fish, but that particular pickerel looked so tempting that I was seized with a strong desire to eat it. Under ordinary circumstances I should have given the fish away. I told the story of the find on my arrival at the Fuller House, and then learned that General Grant had lost the ring. I wrote to his son, Colonel Fred Grant, and explained how the ring came into my possession. He wrote back that if my story was true I was entitled to the ring, and might keep it. I actually believe that Fred thought I was telling a fish story, or he would not have told me to keep the ring."

Mr. Dillon now wears the ring on the little finger of his right hand.

Sea and River Fishing.

Unreliable Traditions.—II.*

Editor Forest and Stream:

IN an article recently sent to you in regard to unreliable traditions I stated that there were some other traditions open to criticism, which I would refer to in a later communication, and the first to which I would refer is the one which has come down from time immemorial and commonly believed, that trout should be eaten, if possible, on the day on which they are caught, and when I say that trout should be kept over night and cooked on the next day to be at their best, I am aware that almost every angler will say that this claim is simply absurd.

But right here I must ask my brother anglers the question whether they speak from their own actual test and experience. Can any angler give me, from his own knowledge or experience the name of any fresh water fish which should be cooked on the day in which it is caught?

I am not bold enough to say that there are none, and can only say that after a pretty large experience I do not know of any, and, least of all, those belonging to the salmon family.

About three-quarters of a century ago a man by the name of Evans was the proprietor of a hostelry some three miles or more north of the city of Philadelphia, on the road lying on the east bank of the Schuylkill River. It was a typical wayside inn lying on the west of the road, with a charming lawn extending to the east bank of the river. The building was only a story and a half high, but with its ample piazza and grounds kept in perfect shape it naturally commanded a large patronage. But to this Evans very soon added a new attraction.

He very soon discovered that the Schuylkill River, whose waters were remarkably pure, was full of catfish of the most delicious variety, and when parties came to his hotel he always served them with a supper of catfish, and it very soon became quite the rage in Philadelphia for persons to get up parties to go to Evans' hotel for a supper of catfish and coffee. Evans tried to impress upon his guests that the catfish were never killed until after their arrival, and he carried out this delusion in this way: He had a large trough at the pump near his hotel in which he kept a large number of fish, about a half pound each in weight, and when a party arrived he always took enough fish by count with a little net to supply the table, and they always believed that the fish on the table were cooked and served as soon as they were killed, and this belief made his inn so popular that in the '40's he retired with a fortune.

But now as to the real facts of the case.

In the early '40's, while yet a mere lad, I had the privilege of enjoying one of these suppers of catfish and coffee and saw Evans take the fish which we supposed we were to eat, out of his horse trough, but after our supper he quietly admitted to me that it was utterly impossible to cook a catfish as soon as it was killed, for the reason that it would curl up in the pan or spider and that he, therefore, always had plenty of fish in his cellar which had been killed the day before, which had become hard and which would lie out straight in the pan and not curl up while being cooked.

He also admitted that the fish taken from the trough in front of the inn were put in a tank at the back of the house and replaced over night in the trough.

Why Evans was so frank I do not know, unless because he felt safe in satisfying my boyish curiosity, knowing that I lived far away.

And now let us apply the same rule to trout. When they are first brought in the fish are usually soft and pressed out of shape, and if they are immediately cleaned and put in the frying pan or spider the tail ends will invariably curl up, and often be underdone.

But if they are cleaned and wiped dry, and the dish or pan in which they are placed set on a cold cellar floor, the fish on the next day will have resumed their natural shape, the flesh will be hard and solid, and they will lie in the spider as straight as shingles—and a trout to be its best must be evenly cooked.

Years ago, when a surplus of trout was brought in at Murdock's, on the Beaverkill, or at Smith's, on the Rondout, they were always cleaned and kept in the coolest part of the cellar to be drawn upon in case of a scarcity, and they were often drawn upon in another way. On a number of occasions both Mrs. Murdock and Mrs. Smith suggested that to wait until the day's catch was cleaned and cooked would delay supper a full half hour, and to avoid delay it was proposed to cook for the first dish the first fish caught the day, or, perhaps, two days before, and furnish the second one from the day's catch. I was in the secret, and, at their request, usually stated that only one of the dishes had been supplied from the day's catch, and in every instance the response was that they had noticed that the first dish was the most perfectly cooked and the most delicious, with a regret that the second dish could not also have been supplied from the day's catch.

There is one more tradition in which I believed and followed for some years, and that is that ice should be used for the purpose of transporting trout, but I soon discovered that the presence of the ice destroyed, to a large extent, the delicate flavor of the fish, and in two or three instances the fish became tainted during the process of cooking, and others have no doubt had the same experience.

I resolved to abandon all efforts to bring my fish home, but was reminded that in many places, particularly in Mexico, it was customary to wrap a wet flannel cloth around a pitcher or jar of water, with the result that by reason of the gradual evaporation from the wet cloth the water in the jar would be kept cool and even reduced in temperature, and as an experiment I applied the same principle in the keeping of trout, and have done so many times since, and always with the result that I have never had a fish spoil or become tainted, although kept for several days, and I therefore feel that I can very confidently recommend to other anglers the following plan:

Never open or clean a trout. It is not according to nature that the air should be allowed to touch the inside of the fish and the little sac of blood at the head of the stomach will very frequently cause the fish to spoil or become tainted even after it is placed in the spider.

The angler usually desires to take home his catch of the last two days, and possibly the third, which can readily be done if the weather has been cool, and he can do so by adopting the following method:

Select the fish which it is desired to take home, wipe them dry with a soft cloth and place them unopened in a dish or pan upon a cool cellar floor. If the cellar is not sufficiently cool a cake of ice to cool the air may be placed within one or two feet, but must never be allowed to touch the fish. When it is desired to pack the fish for transportation again wipe them dry and then pack them in the following manner:

Take four or five thicknesses of ordinary wrapping paper, or if that cannot be obtained take newspapers, inclose the trout in the paper and tie up the package.

Then take a woolen cloth or flannel, for which an ordinary blue flannel fishing shirt will answer every purpose, soak it thoroughly in cold spring water, then wring the water out, as far as possible, and wrap this cloth or flannel three or four times around the package of trout, and then, in order to prevent too rapid evaporation, wrap three or four thicknesses of paper again around the bundle, and the package is complete and need not be examined until home is reached.

If a woolen or flannel cloth cannot be obtained, the moss which grows in the beds of our streams will answer the purpose almost quite as well, only that the water, as far as possible, must be pressed out of it; and there is also another way of keeping trout upon the same principle, which I have tried with perfect success.

Some years ago I caught, with my companion, quite a large number of trout on Monday morning in Balsam Lake, and left them in my basket over night, simply setting it on the cold cellar floor.

On the next day I took out the trout, wiped them dry, and in the absence of the woolen cloth I soaked my basket in cold spring water, using it as an evaporator, then put three or four thicknesses of newspaper inside of the basket and filled it with trout, and to prevent too rapid evaporation I wrapped five or six thicknesses of newspaper around the basket, which was not opened until Wednesday morning, when the trout were cleaned, and in the afternoon they were served at a trout supper at which two or three old anglers were present, all of whom refused to believe at first that the trout had not been caught on that very morning.

I have suggested the above method of preserving trout with great reluctance, but the use of ice is attended with so much labor and annoyance that if any other method to preserve the fish can be suggested it is at least worthy of a trial, and this is all that I would suggest to my brother anglers.

I am not prepared to say that the plans which I have suggested could be adopted with equal success with regard to other fish, for I am aware that some fish—notably the black bass—cannot be preserved for any length of time without the use of ice.

J. S. VAN CLEEF.

JUNE 5.

*For first paper see issue of last week.

Pickerel Fly-Fishing.

DUANE, N. Y., June 6.—*Editor Forest and Stream:* Answering your correspondent, Muskodosa, of West Roxbury, Mass., in your issue of June 1, with regard to catching pickerel with a fly, let me record that my wife while trolling near the shore for speckled trout on the evening of June 3, in Lake Meacham, Duane, N. Y., caught on a fly-rod with a dark alder fly, size No. 6, a pickerel that weighed 5 pounds. Guides of thirty years' experience in this vicinity have never known of one being taken in this way before.

H.

ANGLING NOTES.

Trout Waters and Eel Pots.

THE Forest, Fish and Game Law provides, in Section 61, as follows: "Eel weirs, the latter of which are not less than one inch apart, may be maintained in waters not inhabited by trout or lake trout. * * * Eel pots of such form as may be prescribed by rules of the Commission may be used in waters not inhabited by trout or lake trout." Waters inhabited by trout are the very waters from which eels should be removed, and the Forest, Fish and Game Commissioners were apparently of this opinion, for, in their first annual report to the Legislature (1895), they said: "Eels are notorious spawn-eaters, and, as such, seriously interfere with the propagation of better food fishes by natural processes, and if the commissioners had power to set eel baskets in waters containing *Salmonidæ* for the purpose of taking eels that come onto the spawning beds to eat the spawn of trout, it would aid materially in minimizing the devastation from this cause." No action having been taken by the Legislature to give the Commissioners the power they sought, in their report for 1896 they referred to it again:

"Many of the fresh water fishes are spawn-eaters to a greater or less degree, but the eel is more destructive of spawn than any other fish, as it does not spawn in fresh water and is ready to prey upon both fall and spring spawning fishes, as it has no fasting season at the spawning time. * * * At night, when lake trout are spawning on a shoal in mid-lake, the eels are present in vast numbers to eat the spawn as fast as it is deposited by the trout. * * * We would ask that the Commission have power to use or authorize the use of eel pots in all waters, whether inhabited by trout or not, for it is in trout waters particularly that eels are proving destructive of young fish."

The Commissioners, as I understand, have contended that trout would not be taken in eel pots if they were set in trout waters, and the only argument I have heard against this position was that it was theory only because it had not been tried and it was illegal to try it in public waters, and it would be a risk to try it even for experimental purposes. Manifestly absurd as this argument is, it has prevailed apparently, for the law still remains on the books as I have quoted it, and the eels prey upon the spawning beds without let or hindrance, for it is comparatively a rare thing to catch eels in trout waters with hook and line. In one lake that I am familiar with that the State has stocked with a lavish hand, planting several species of the salmon family, there are mills on the outlet stream, and it is not uncommon, when eels are leaving this lake to go down to the sea, for them to so clog the mill wheels as to cause a shut down to clear the wheels. Last fall an employee of the State spent some time on the lake examining the spawning beds of lake trout and he reported eels, eels everywhere in abundance wherever the fish congregated for spawning.

Early in the month of May I made a visit to Mr. August Belmont, at Babylon, L. I., where he has a trout preserve. While we were wading one of the inlet streams he asked the superintendent something about eels, and the man replied that he had taken a certain number, and I then found that eel pots were set in the pond (there were six set when I was there, and Mr. Belmont gave directions to set six more), and upon returning to the house we rowed across the pond and lifted two of the pots, finding one eel, one bullfrog and one small pickerel (*Lucius reticulatus*). The pond is shallow and is devoted exclusively to trout, but small pickerel have found their way into it, and, of course, eels cannot be kept out of it, although they are kept down by using the pots, and in all the history of the pond no trout have been taken in the eel pots. It simply confirms the position of those who think the State law should be amended to permit, under restrictions if necessary, the use of eel pots in waters inhabited by trout. Eels are excellent food, and if pots should be permitted by law a sufficient number would be taken to materially reduce the hordes of eels that are, under the present law, devastating the spawning beds of trout. Another theory: If eel pots will take bullfrogs and pickerel, by all means set them in trout waters that have become infested with pickerel, and the bullfrog is a spawn destroyer and is much more ornamental and useful served minus his body than alive in a trout pond. So that eel pots will serve several good purposes if placed in waters that contain trout, and work no injury whatever to the trout themselves.

First Report from the Salmon Rivers.

Under date of May 26 Mr. Archibald Mitchell writes me from Runnymede, P. Q., on the Ristigouche River, a personal letter, which I quote in part: "In my last letter I told you of my plans for this year; that I would not be able to stay long on the river on account of going to Europe. Archie [his son] and I arrived here May 24. We got to work at once and fished all day. I did not get a rise, not even from a kelt, but I hooked two very large and healthy-looking parr, which somewhat surprised me, as in past years, so far as my recollection goes, they have not risen to the fly until the season was pretty well advanced. Archie killed a fresh run fish of 17 pounds near where you killed your first fish last year. For the past three seasons Archie has been fortunate enough to get the first fish on our waters. I had heard of fine strings of large trout being taken down at Side Head, and for years I have been trying to hit it right and get a little trout fishing. I left our salmon pools and went down to Side Head to fish for trout on Saturday, but this trip, like all the others I have taken down there for trout, was simply "a delusion and a snare." I got nothing. The smelts had been running a day or two, and had gone to parts unknown, and the 2 to 4 pound trout had evidently followed them. When I returned up river Saturday evening I was agreeably surprised to find that Archie had killed another fine fresh run fish of 22 pounds. It put up a good fight, and although it did not jump once, it made several very long rises and took out much line. These two are the first fish taken with the fly on the Ristigouche this year, as far as I can learn, and the earliest ever taken on the river so far as my record goes. James Wheeler informs me that Mr. James Bryan, of New York, killed a salmon some years ago on the same water on May 21. The water is extremely low for this season of the year. The snow is all melted and the water is still dropping very fast. If copious rains do not come soon we will have very low water in June, and poor fishing, I think, on all the early or high water pools. Note that we arrived on May 24, which is very early. Club house [Ristigouche Salmon Club, at Metapedia] not open, and no other fishermen here. Last year we reached here June 3. At Runnymede the river was then full from bank to bank, and the snow in the woods not all melted. I beached a kelt standing and casting from shore outside and just above where the Alford gate stands." (This is almost directly opposite the Capt. Sweny cottage, and below Camp Harmony, where the Upsalquitch comes in.) "This year, with all the snow melted, one has to walk about 150 feet to reach the edge of the water."

One of the greatest charms of salmon fishing is, that no two seasons are ever exactly alike, and one never knows what kind of fishing he is going to have any year until he gets to the river and tries it. The water may be right and the fish not there. The fish may be there and the water all wrong, and it is only once in a number of years that the combinations come right, as they did in '96. But fishing as good as it was that season would spoil any fisherman in a few years, and soon take the romance all out of it. As our friend the late Mr. John Mowat used to say, "It would not be angling; simply 'Pull, Dick; pull, Devil.'" But, after all, nowadays, there is really not much danger of our becoming bloated on account of too luxurious salmon fishing, and in my opinion it will take something very like eternal vigilance and not a little expenditure of money to keep the fishing for years to come as good as it is now. I suppose you must have noticed that they had excellent fishing on the Penobscot this year. It appears that by some unforeseen and fortunate combination of conditions that does not occur often, a school of salmon happened to get past the nets. I was busy and did not get a chance to go there and try my luck, but when I heard of the good fishing, through Mr. Ayer, and received a fine salmon by express, it started up some of the old time enthusiasm, and I wished very much to be at Bangor pool.

I met your friend Mr. Wilson and another gentleman who is with him (Mr. Williams, of Salem, N. Y.), at Metapedia yesterday, on their way to Deeside, and I hope they will meet with success this year. Alexander Mowat wrote me that the pool was very much changed by an ice jam, which formed last winter at Maclan Island, and I hope the change has improved the pool, as very likely it has. You will remember that this is the pool where I killed salmon of 22½ pounds last year on June 13. I shall return home on June 10 this year, so I will not get much fishing."

Mr. Mitchell is nothing if not philosophical. It is rare to find an angler more so; and he is a living exemplification of the late George Dawson's maxim (which I once borrowed unwillingly), that it is "not all of fishing to fish." Anglers are not numerous who would see danger in salmon fishing that was of a superior order, because it would take the romance out of angling; but if this sentiment could be cultivated it would aid much in the preservation of our game fishes.

Catch or Kill.

The communication in the FOREST AND STREAM from Mr. Terry Smith upon the subject of killing fish induces me to suggest to him that some kinds of fish are very properly killed, while others are caught; and as to the latter I think his argument good that they should not be killed in type after they are caught with a hook. For instance, the fish I have written about in the preceding note, the salmon, is not reduced to possession until it is killed. The salmon takes the fly and may be securely hooked, but he is not caught until brought within the embrace of the gaff and then the fish is killed with a club by a blow, or several of them, on the head. No salmon fisherman would claim that he had caught a salmon merely because he had hooked it. The late Billy Florence always vigorously protested against "catching salmon" as a misnomer, and that the hall mark of a salmon fisherman was when he declared that he had "killed salmon." It is quite a different matter with brook trout or black bass, which are also lured with the fly. When they are securely hooked and played to the inside of a landing net they are caught, but they are not necessarily killed, for they may be returned alive to the water. Fresh run salmon are never returned alive to the water and they must be killed if they are possessed, and it may be equally fitting to "kill" tarpon, but it would not, in my judgment, be a fitting term to apply to the taking of small fish that may be secured in the landing net, alive, after being caught on the fly.

Development of the Brook Trout.

It was in May that I reaceived from Dr. R. Ellsworth Call a letter, from which I make the following extract: "At the suggestion of Hon. Eugene G. Blackford, which is heartily seconded by my wish, I have prepared an exhibition of the stages of development of the common brook trout, the material coming from the Cold Spring Harbor hatchery. This is arranged in two glass jars and will be left for you to-day at the Madison avenue office of the Forest, Fish and Game Commission, in New York. It is the wish of the trustees of the Brooklyn Institute of Arts and Sciences that you will accept these jars and contents with their compliments. I trust that the exhibit will prove of interest to you. At the next sportsman's exhibition at Madison Square Garden I shall try to illustrate a whole series of these developing forms as a part of the exhibition."

It was at the Sportsmen's show in New York last spring that Mr. Blackford first told me of the exhibit of the development of fishes as prepared by the Brooklyn Institute, and he said that it was nearer to perfection than any similar display he had seen. Early in this month of June I brought the jars with me from New York to Albany, as great care had to be exercised in their transportation, and they could not be intrusted to a transportation company. Mr. Blackford's praise of the exhibit I can now indorse in similar terms. Each jar contains a glass slide in alcohol, and on the slide the development of the trout is shown, each stage bearing a legend. The alcoholic mixture has apparently been filtered, for it is as clear as crystal. One jar contains the following stages: Eggs just taken, eggs at thirty days (showing eye spots), eggs at sixty days, fry just hatched, fry three weeks old, fry six weeks old (sac nearly absorbed), fry three months old, monstrosities (double-headed fry. The second jar contains fingerlings six months old and fingerlings nine months old. Altogether it makes a most interesting and instructive exhibit of the development of the common or native brook trout *Salvelinus fontinalis,* and tells the story of the growth of this fish much better than pages of printed matter. Within twenty-four hours after the jars reached the capitol in Albany the question was asked a score of times, "What holds the eggs and fish to the glass slides that the alcohol does not dissolve it?" And on each occasion I have replied with truth, "I do not know." I never make it a practice of looking a gift horse in the mouth, particularly if it is a very fine specimen of a horse.

A. N. CHENEY.

In New England Waters.

BOSTON, June 8.—Returning fishermen report cold weather, east winds and rain the most of last week. Such conditions are not only against fly-fishing, but detrimental to enjoyment in the woods and on the waters. The James L. Richards party to the upper waters of the West Branch of the Penobscot, Me., has returned. They found the weather cold and very rough, but still they had pretty good fishing. "Only the fly" is used by any of the members of this party. Mr. W. J. Follett got twenty-nine trout the first evening in, from Foss and Knowlton Pond, which is the pond on which the camps of the party are located. Mr. George W. Brown says that the fishing was all they could ask for. W. J. Leckie is entirely satisfied with his catch. They also fished Kidney Pond and other waters belonging to the upper waters of the Sourdnehunk Stream. The trout run from ¾ pound up to 1½ and even 2 pounds. They are exceedingly gamy, biting very freely, frequently even three being taken on one cast. Many beautiful trout were returned to the waters, because "almost a bucket full" were already in camp. Mr. P. S. Allison, the Englishman, was charmed with the outing. He had no conception of State of Maine fly-fishing, though he had often tramped the Scotch moors for sake of a few fingerlings. Even the cold, damp weather delighted him, reminding him of "a fine Scotch mist." It is evident that the party has visited one of the best trout sections in Maine; rather hard to reach, requiring a canoe trip up the Twin Lakes from Norcross, and thence by land to the upper waters of the Sourdnehunk, which flows into the West Branch. The canoeing was a decided novelty to the Englishman. It is understood that Vice-President Roosevelt is booked for a fishing trip to these waters this summer.

Mr. C. F. Danforth, of Boston, has again surprised himself by taking a landlocked salmon of 10 pounds weight from Dan Hole Pond, New Hampshire. A friend with him on the trip also secured one of 5½ pounds. It will be remembered that Mr. Danforth landed a big one from the same pond last year. There has been a week of good fishing at Lake Auburn, Me., and some large salmon have been taken, mainly by local fishermen, who have thronged the pond since the fishing became better. Mr. C. H. Jones, of Boston, has good reports from some friends who fished there a week ago. Mr. S. Everett Hyde, with his friend Herbert Hall, has just returned from a successful fishing trip to the ponds in the region of Holeb, Me. They had remarkable luck and fine sport. They caught, trolling, trout up to over 3 pounds—square tails, with only a few lakers. But their best sport was in fly-fishing. Mr. Hyde remarks that it is a feature of some of the ponds in that section that the trout will rise to the fly any day in the year when the ice is out. Their best day's work was seventy-eight trout, all on the fly, and one small salmon. Mr. Hyde owns a camp in that part of Maine, and is greatly pleased with his location, both for hunting and fishing. Mr. A. C. Manson and son, H. C. Manson, have just returned from a short fishing trip to the Upper Dam. The shortness of their stay was about the only trouble they experienced. The weather was cold, with a cold, easterly wind and rain, but they caught trout every day. Mr. Manson remarks that "We caught all the trout we ought to have, and greatly enjoyed the outing." Mr. Manson is one of the busiest of Boston merchants. The Camp Stewart party to Upper Richardson Lake had fair success, though the weather was almost too cold and rainy for fly-fishing. Mrs. H. C. Day took some good trout, and landed a salmon of 3 pounds, the only one taken by the party. Mr. C. A. Stearns was high line, with the largest trout—4¾ pounds. Prof. J. F. Moody took the largest number of trout. Mr. H. C. Day had his usual good success. Mrs. W. W. Moody lost a "big one," after having him hooked three-quarters of an hour. Charlie Roberts, the guide, said that his whole trip was spoiled by losing that trout. Still, he was not in the least to blame, the hook having evidently worn out. Mrs. F. E. Stanley, who had never fished before, caught fourteen handsome trout, and is now thoroughly converted to the sport. So it is. Once they get a taste of angling, they are anglers ever after—both men and women.

BOSTON, June 10.—The fishing trip of Mr. A. S. Woodworth, of Boston, was a very successful one. Indeed, he carries off the record for salmon for the cold, rainy days that he fished. From Rangeley Lake he took his biggest salmon, weighing 7½ pounds. From Mooselucmaguntic he took fourteen salmon, from 2½ to 4 pounds, and a great many trout. From Rangeley he went to Kennebago for fly-fishing, where his success was only fair, the weather being too cold and rainy. Mr. Woodworth says that he attributes the success he always has to the fact that he employs a guide who knows where the fish are, and then he gives his whole attention to fishing. He does not believe that fish are to be caught by sitting around the camps and hotels and bragging. There are other good reports of salmon caught out of Mooselucmaguntic. Near Bald Mountain camps, E. C. Brunelle, of New Bedford, landed a salmon the other day that thoroughly tried both his skill and his tackle. The salmon weighed 9½ pounds, and it took two hours and a half to bring him to the net.

From Birch Point, Dr. Bates, of Lowell, has taken a salmon of 10 pounds. Mr. Cospray, of New York, has taken a salmon of 10½ pounds at Capt. Billy Soule's camps, Cupsuptic Lake. Mell Sampson, of Norway, caught a trout at Haines' Landing last week that weighed 5½ pounds. At the same point Mrs. C. F. Wyman, of Worcester, took a salmon of 5½ pounds. Miss Harriet W. Blair, also of Worcester, a salmon of 5 pounds. A further salmon record at Rangeley Lake is appended: Mrs. S. L. Kenyon, Springfield, Mass., 3¾ pounds; W. F. Sturtevant, Springfield, Mass., an old-time angler at the Rangeleys, 4 pounds; B. D. Sweet, Boston, Mass., 6½ pounds; B. F. Greeley, Boston, 3 pounds; C. A. Taft, Whitinsville, Mass., 3½ pounds; Mrs. T. O. Bemis, Springfield, Mass., 5 pounds.; W. W. Coolidge, Salem, Mass., 3¾ pounds; G. A. Hale, Peabody, Mass., 3½ pounds; C. H. Hayes, Boston, 3 pounds; Miss Ruth Smith, Springfield, Mass., 7½ pounds; Mrs. A. A. Call, Springfield, Mass., four salmon, the largest 7 pounds. But the Rangeley record for big landlocked salmon is smashed at Lake Auburn. Mr. Bartlett, of Norway, Me., has taken one from that lake this spring weighing plump 11 pounds. Later that record has been broken by Mr. James Dawes, who has caught a salmon weighing 13½ pounds. Before this the record had been held by Mr. Frost, of Portland, with a salmon only an ounce or two scant of 13 pounds. The big fish are being taken on the Rangeley spinner, which is also true of the fish taken at the Rangeleys. Still, Mr. A. S. Woodworth, noted above, fished only with the old style of live minnow, put on so that it would spin.

The Board of Fish and Game Commissioners held two hearings at Haines' Landing June 6, in response to petitions from those interested in fish and game. The first petition was presented by W. E. Paterson and twenty-four others of Rangeley and Franklin county, and asks that only 10 pounds of fish be permitted to any one boat at a time, on any of the Rangeley waters. The other petition, presented by John B. Marble and fifty-three others, also W. H. Ellis and fourteen others, asks that only fly-fishing be allowed on the Kennebago Stream, from its source to a point opposite the boathouse of the Oquossoc Angling Association; also on Rangeley Stream, from its source to its junction with the Kenenbago Stream. The petitions have caused a good deal of discussion among guides and sportsmen who visit the Rangeleys. No decision has yet been arrived at, and the matter will come before the Board of Commissioners at Augusta in a week or two.

The brook trout fishermen are still at it, and the catches have been better since the high water and cold weather have been over. Mr. Wesley C. Hemenway, of Boston, has been up to Ludlow, Vt., in charge of George L. Armington, of that place, and took fifty-three trout. Mr. J. H. Jones, of Boston, with a friend, has been up to Tamworth, N. H., brook trout fishing. They caught fifty-three trout. Asked about the size of the fish, Mr. Jones simply turns his head and says, "Don't ask me." It is simply the old story of stripping all the fingerlings out of the Massachusetts, New Hampshire and Vermont streams each year, and hence there never are any large trout to catch.

Mr. Felix Tausig and Leo Pickert, of Boston, are on a fishing trip to the preserve of the Laurentian Club, in Canada. Mr. E. C. Stevens, of Boston, drove out to a trout stream in Bedford the other morning with his daughter. He caught thirteen trout before breakfast, his daughter taking one of ¾ pound. Mr. Stevens says that he has not begun to fish yet; will go later.

Mr. D. J. Flanders and F. J. Bartlett, of Boston, have been on a fishing trip to the Rangeleys. They had good success at Haines' Landing and other points along the lakes. The F. Y. Fitzpatrick party, of Boston, has returned from a very successful fishing trip to Moosehead. They were quartered at Kineo. The strings of the several individuals of the party were: 23 trout and togue weighing 40 pounds; 31, 98 pounds; 39, 80 pounds; 40, 85 pounds; 51, 100 pounds; 28, 52 pounds. Mr. Fitzpatrick caught a salmon weighing 6 pounds, and many large trout. The Camp Comfort Club, composed of Boston and Pawtucket sportsmen, have had great success at Moosehead. The party, in two weeks' fishing, took over 700 trout and togue of good size. The Walter H. Messon party, of Springfield, at the same lake, took a string of thirty-one trout in one forenoon's fly-fishing; average weight, 2½ pounds. To R. E. Traiser, of Boston, is credited a trout of 4 pounds—a good one for Moosehead; Geo. A. Fales, of Boston, salmon of 4 pounds; A. P. Jaques and C. W. Arnold, Haverhill, both trout of 3½ pounds.

Good fishing is reported from the Dead River region, although the weather has been cold and stormy. The abominable little flies that have covered the Rangeley waters in windrows, almost, have been found on all the ponds in the Dead River section. Even the trout waters in Aroostook county have been covered with them. Much interest is manifested among sportsmen as to what these flies are. They have never been seen before, and will they ever come again? There are accounts of many young salmon being taken by boys and others trout fishing the brooks that empty into the Penobscot at Bangor and above. It is believed that these young salmon are those liberated in the streams by the Fish Commissioners, hence the boys and trout fishermen are undoing the work done by the Commissioners. Good bass fishing is already reported from the vicinity of Vanceboro, Me. A great bass season is promised on all Maine waters. SPECIAL.

Fishing in Greenwood Lake.

GREENWOOD LAKE is on the line of the Erie Railroad just forty-five miles from New York. Perched up among the mountains a thousand feet above the level of the sea, Greenwood Lake rests like a sapphire gem in a somber setting of forest trees which fringe it on all sides. This water is one of the best fishing grounds within a day's journey of New York. In a couple of hours after leaving his office in New York the angler can be struggling with a mighty bass among the stumps at the head of Big Horn Island, and if he be a very ardent disciple of Walton he can get up in the morning, catch some fish and have them in New York before 10 A. M. During the past season we have heard several fishermen declare that everything connected with the lake is perfect except the railroad transportation, and the only thing necessary to make that so would be the addition of a chair car to the business men's trains. It is now up to the Erie to try the result of a chair car this coming season. Greenwood Lake contains the following game fishes: Small-mouth black bass, large-mouth black bass, wall-eyed pike, pickerel (Eastern Pond), perch, bullheads, etc.

Large catches of bass and pickerel were constantly recorded during the last season, and some enormous specimens of the large-mouth black bass are often taken. We have seen specimens of 10¼, 12½ and 14¼ pounds. They were weighed on our own scales (and these we can guarantee to be correct).

We give a bird's-eye view map of the lake, which shows the general outline and contour of the surrounding country. It also shows the location of the principal reefs, bars, sunken islands, etc., where fish congregate. We have purposely drawn the lake a little wider than it really is. We did this to give room to detail the fishing along the sides. To explain this map intelligently, we will imagine ourselves in a boat, making a circle of the lake and fishing it as we go along. We will start toward the head from the Greenwood Lake Glens Station. From the Glens docks to Stirling Forest dock there is a fine productive stretch of water, especially for small-mouth black bass.

A NEWFOUND LAKE LANDLOCKED SALMON.

In this stretch there are a few exceptionally good spots. One is on the inside of the Cranberry Marsh and around it. When trolling this stretch of ground, the first course should be taken within 20 feet of the shore, then another 20 feet further out. If casting, the whole course can be covered as you move along by taking the center and casting on both sides of the boat. At Storm's Island we find a reef at each end; these reefs are good spots. If trolling, work around them once and then in, over and across. If casting, keep the boat out in the deep water and cast in over them. On the outside of both reefs the water drops deep suddenly and forms two good wall-eyed pike holes. When still-fishing, anchor the boat on the reef and drop the bait out into the deep water.

Just beyond Sterling Forest Station is Hickory Point, about 20 to 30 feet out—a good deep hole for still-fishing. There are three reefs running off from this point; the water is very deep between them and A1 wall-eyed pike grounds. From Hickory Point up to the Brandon House is all good ground. Keep pretty close to shore. Just below the Brandon House Point a big rock will be noticed on the shore; a little distance out from this rock is a small reef, A1 for bass. On the outside of the reef the water is deep and good for wall-eyes. Passing Chapel Island we enter the upper right arm of the lake. This is good ground everywhere, and is patronized by small-mouths, big-mouths, pickerel, etc. Along the reaches in front of the Windermere Hotel are first-class bass grounds. Directly down from the Windermere dock is a reef; it can be located by bringing in line the Brandon House Point and Willow Point. The reef is in about 10 or 12 feet of water, and generally has some very big bass, either on or around it. On the outside toward the Brandon House is deep water and good for wall-eyes.

Continue down the lake and bring in line the Brandon House Point and Ferncliff Hotel dock, and here the fisherman strikes a sunken island. This is excellent trolling and live-bait fishing grounds. All along the shores from Ferncliff down to Big Horn Island is first-class bass water. Just off the Hohokus Club house and again off the big rock just below are reefs. These reefs are known as the State Line Reefs, as the boundary line between New York and New Jersey crosses them. At the head of Big Horn Island will be found a lot of old stumps and a little out beyond them a sunken island. These are the spots for the monster big-mouths. All over the stretch of water on the inside of Big Horn Island are good pickerel and large-mouth bass grounds. On the outside of the island and around the rocks at the foot are small-mouth grounds. From the head of Big Horn Island to the ice house just above the Glens dock in about 10 feet of water is the old dam; bass often congregate about it. From this old dam down to the bottom of the lake is all good water for pickerel, with here and there a stray bass.

The best casting baits for Greenwood Lake are night-walkers (worms) and frogs. We have found our ordinary pickerel and bass baits take well in this water.

JAMES CHURCHWARD.

Newfound Lake Fishing.

I AM somewhat late in telling the story of our fishing trip to Newfound Lake. The ice went out earlier than usual. Generally the Hebron end of the lake opens first, particularly when there is a west wind. The present season the wind held steadily from an easterly direction, and the whole lake cleared at about the same time. On the morning of April 23 my companion of our successful deer and bear hunting trip of last November and I started for Rogers' camp, at the head of the bay, a short distance from the village of Hebron. On the train we met two brother anglers from Exeter, N. H., bound for the same place. Rogers met us as lively as ever at Bristol. The following day the sprightly General appeared as he always does with the breaking up of the ice. When the time comes that he fails to show up, Newfound will have lost one of its attractions.

In nearly all my former hunting and fishing trips I have had pretty good luck. My companion, although quite young, is very successful, and our combined luck held good during the few days we fished. We caught six salmon and five trout, most of them from 4 to 5 pounds, the largest weighing 8 pounds. We would have caught more if we could; also, we would have been satisfied with less. We had all we could use after giving away one-half. The best fish taken by any one while we were at the lake was caught by the fourteen-year-old son of Col. R. N. Elwell, of Exeter. I mail a photograph of the young angler and his victim. This salmon was caught on the morning of April 27, and weighed at camp 11 pounds. The fish was quite a fighter, and his captor handled him very coolly. His younger brother, who was in the boat (and who also landed two salmon), was awed into silence during the contest.

The General as usual brought his brother to navigate the boat. This young man spent a part of last year at Cape Nome and in the Klondike. He overflowed with marvelous tales of the Alaskan region, and the General called him the K. L. (not meaning a knight of labor, but referring to a certain gentleman who in times past answered to the name of Anannias).

There were other attractions at the camp besides the fish and the numerous meals which Rogers provided. A certain young member of the Rogers family and also a schoolmarm who mysteriously appeared, rather diverted the attention of the K. L. and my young man from the business they were brought up to attend to. The General and I had some serious talk about what the former called nocturnal rambles on the lake with female companions. The General and I had long since gotten over such foolish behavior. Our arguments had no effect. The young folks said they went out fishing, and perhaps they did; at any rate, they never caught anything, and the only result, as far as we could see, of those moonlight wanderings was a decided disinclination to respond to our call to get up at 3 A. M. to take us fishing at daybreak. Well, all of us have been younger. Killing a lot of game or catching a great many fish is not the only pleasure of an outing of the present time. I know we all enjoyed the days spent at Rogers' camp. All regretted leaving ,and hoped to meet at the same place when the ice goes out next spring. C. M. STARK.

DUNBARTON, N. H.

West Virginia Prospects.

ROMNEY, W. Va., June 6.—*Editor Forest and Stream:* I will endeavor to write you a line or two about our fishing prospects for this summer and prospects for hunting this fall. The South Branch has been high four times this spring, and that cleans out the river and makes fishing better. I think we will have good fishing here this summer. Our season opens June 15. A good many suckers were caught this spring by local fishermen. I spent a month this spring in Webster county on the Elk River, and that stream is a good bass stream, and if the dynamiting and logging was stopped it would soon be full of black bass. I saw a pheasant dusting itself in the road two miles out of town the other day, and saw several pairs of partridges. I think the pheasants, quail and wild turkeys will be plentiful next fall, as we had an open winter and the snow did not destroy them. The tanneries are being built on the river above here, and that will injure the bass fishing to some extent. Will write you if any good catches are made here this season.

J. B. BRADY.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and so much earlier as practicable.

CHICAGO AND THE WEST.

Muscallunge Fishing.

The muscallunge began to rise to some extent this week. Further catches are reported from the lakes immediately adjacent to Minocqua, Wis., Charlie Lester having taken several very nice fish besides those reported last week. A gentleman just back from Squirrel Lake says that no big fish had been taken there, although two ladies had been lucky enough to land two fish, of 17 and 18 pounds respectively. Mayor Harrison, of Chicago, took a number of muscallunge, but none of them heavier than 11 pounds.

Mr. George K. Wheelock, with his friends, Ex-Superintendent of Streets Redmond, Dr. Dunham and Mr. McDonald, with ladies, are this week at Conover, Wis., and they send down word that they are having very good luck both with muscallunge and bass.

A strong tip comes from an experienced muscallunge fisherman who is well acquainted with the Wisconsin waters that about the best lake in the Manitowish chain to try for muscallunge is Boulder Lake. There is another little lake between Wildcat and Rice, which has no name, but is also a good muscallunge lake. These matters are worth remembering.

Good Tips for Bass.

For those who wish to get good bass fishing in upper Wisconsin it is good counsel to keep in mind Fish Trap Lake and Sand Lake, both of which were at one time known as muscallunge waters, but which still retain their reputation as good waters for black bass.

I offer as a good tip for someone who wants to go fly-fishing for bass, the Fox River, at Dayton, Ill., which, if I remember correctly, is reached by the C., B. & Q. railroad, the point being near Ottawa. Mr. Elmer Wilkinson, of this city, three weeks ago caught 32 small mouth bass at this point, the fish averaging 2 pounds in weight.

I suggest as something worth looking into the water known as Wawasee Lake, on the Baltimore & Ohio railroad, about 100 miles east of Chicago. This lake is located on the divide between the Kankakee and Lake Michigan regions, upon the summit of the great terminal moraine which lies at the foot of Lake Michigan. It is 300 feet above Lake Michigan, is nine miles long and two miles wide, and in places 80 feet in depth. It is said that this lake sometimes offers very decent bass fishing, and as it seems to be a new one to most Chicago anglers, I hope someone will try it out and report his success.

Cisco at Lake Geneva.

Lake Geneva, Wis., has the unique reputation of being the only lake hereabouts in which there is an annual run of cisco. Much has been written at different times in the angling columns of FOREST AND STREAM regarding this peculiar phenomenon of this particular water. Annually, some time early in the month of June, there comes this great run of cisco feeding at the surface of the lake. They can then be taken in untold numbers and rise beautifully to the fly. Mr. L. C. Kunze, who is just back from Lake Geneva (by the way, with a very nice string of bass and pickerel), reports that this week the cisco are just beginning to jump and that in about a week the full run of the fish will be on. Then there may be seen the familiar spectacle of the surface of the lake dotted with boats all busily engaged at the exciting sport of taking these little fish. The run lasts about a week or ten days, ordinarily, and then the fish retire again to deep water, and nothing is heard of them until the following spring.

Out-Bound.

Mr. James A. Patton and a party of several friends, all of Evanston, Ill., leave this week for the Manitowish chain of Wisconsin for muscallunge.

Thus far there have been but few parties out on the famous Fifield chain of Wisconsin, but the Wisconsin Central line reports that quite an exodus will take place at the end of this week for Fifield and the Mason chain. One party of eight gentlemen, under the leadership of Mr. Otis, are outfitting to-day in preparation for a trip to Fifield. They ought to strike the muscallunge about right.

Mr. Wm. H. Bartlett, of this city, starts for Colorado this week with a complete and variegated assortment of trout flies. Mr. Bartlett is an enthusiastic fly-fisherman and he owns in New Mexico a splendid trout stream thirty miles in length, which crosses his big ranch ground, the latter embracing 175,000 acres. By the way, can some kind reader of FOREST AND STREAM advise Mr. Bartlett where he can obtain a few adult specimen of ruffed grouse for stocking purposes? He wants very much to introduce this breed in New Mexico.

Speaking of these birds reminds me that, contrary to our earlier ideas on such matters, we found the ruffed grouse in considerable numbers along the Two Medicine River on the Blackfoot reservation of Montana. We saw also in that locality numbers of the big blue grouse, and also the sharp-tailed grouse, together with what we took to be the genuine pinnated grouse or old-time prairie chicken. Higher up in the mountains we also saw the "fool hen." The blue grouse we saw in heavy pine timber, and also on the high ridges of considerable altitude. The prairie chickens were sometimes near the aspen thickets and sometimes out on the open plains.

He Wanted Just a Dozen.

A man who was going trout fishing stepped into a sporting goods store this morning. He had decided to go trout fishing on Saturday and needed just a few flies, merely as a matter of form, to take along with him. He had a box full of flies at home—probably fifty dozen in all—of different patterns, but his friends who had fished on the same stream earlier this week had written him that the grizzly-king and coachman divided the honors. The man was not sure that his grizzly-kings were all as good as they might be, and his coachmans were nearly all 8s or 10s, whereas number 6 was reported to be a better size for the good fish in this water. As a matter of form, then, he decided to get about a dozen more flies, perhaps half each of grizzly-king and coachman. Really he would not get another fly more than that; because he had plenty of flies already, and what is the use of getting a lot of things one does not need?

The salesman, polite and obliging, brought out upon the counter the long boxes containing the latest millinery in trout flies. "Well, perhaps I can take a dozen and a half in all," said the man to himself, as he tumbled among the brightly painted attractions. "Maybe I might as well make it a couple of dozen. I'll tell you what I'll do; I'll take a half-dozen each of the grizzly-king, coachman number 8, coachman number 6 and Seth-Green. No, make it a dozen grizzly-king. They may come to that fly strong, and I may run out.

"Now, what is this new Lady-Martha with a white wing, black body and red tail? Looks as if that might be good to have along, too. I'll take a half-dozen—no, make it a dozen. A half dozen one way or the other don't make any difference. On the whole, I think I'll have another half-dozen of the Seth-Greens, as these are tied very prettily. Yes, as you say, this new Wickham's-fancy is a good fly. I'll have a half-dozen—no, make it a dozen. I'll bet I'll do business with that fly. What do we say about the Parmachenee-belle? Well, I hear all kinds of stories about that. Never caught a thing on that fly in my life, but everybody else says it's the only thing a fellow ought to have. Give me a dozen of those, just for luck. And this thing with the little red wing and peacock body—what do you call that? Well, give me a dozen of 'em. It looks a killer or else I'm no good judge. I'll take three or four professors—I mean a dozen professors. They are good sometimes. And now that I think of it, my friend told me that last year the silver-doctor was the only thing worth a cent on that stream. I believe I will have to take a few silver-doctors along. Now this firefly-coachman wing has a fine red body—if I'm any judge of a fly that surely ought to do some trading with them along in the afternoon, especially if the light is getting a little dim.

"Now, about leaders. Of course I've got thousands of them, but probably they'll break. It's best not to take any chances about it. I ought to have some drawn gut leaders, anyhow—a half dozen—no, I mean a dozen. Well, make it three dozen while you are at it, and give me the best gut in the house. Now, tie these all up. I've got to go to lunch, but I'll be back in about a half hour and we'll pick out some more."

"I sold one gentleman sixty dozen trout flies in one hour yesterday," said the salesman, bland and unruffled. He is well acquainted with human weakness. He knows that when once a brand new collection of trout flies is spread before an enthusiastic fly-fisherman, the salesman does not even have to press the button.

Twenty-five And.

President Nat H. Cohen, of the Illinois Fish Commission, is like charity which begins at home. He lives at Urbana, and has just caused five of his fellow-citizens to make appearance in court on the charge of illegal fishing. Each man was fined $25 and costs.

Report of State Fish Commission.

The annual report of the State Fish Commission of Illinois contains some very interesting reading. It takes up among others one question which has always been of the greatest interest to those who have undertaken to enforce the State game laws. In the old days we used to arrest a game dealer who had prairie chickens in his possession out of season. "True," the dealer would say, "I have prairie chickens, but they were killed in Dakota, so what are you going to do about it?" Since those early days there have been three or four strong State decisions maintaining the position that game cannot be held during the close season, no matter where it was taken originally. The report of the Fish Commission may be seen to cover practically the same ground. It goes on to state:

> The general impression had ground among the Commission men that any fish shipped from outside of the State to the Chicago market, whether of under size or not, could be legally handled. As a result that point has been hotly contested by the Chicago fish dealers, and the abuse has descended of course to fish shipped in from all portions of our State, and it could not be accurately determined whether they were fish from Illinois or from States where it has been found consistent with the law to have permitted the sale of fish from other States. The ruling of the Commission has been backed by good legal advice that the State of Illinois through its Legislature had the right to say what should be legally offered for sale within her own borders. Whenever under size fish have been found in the possession of the dealer, when not offered for sale, they were confiscated and turned over to the Chicago charitable institutions. This met with some opposition at first, but we are pleased to say that the better classes of dealers in Chicago have become convinced of the correctness of the opposition, and as a rule now refuse to receive consignments of fish smaller than allowed by law, and if such consignments are received and found to be mixed with larger fish and not detected until after receipt, were voluntarily turned over to our wardens for disposition named. While all parts of the State were well supplied with shipments of fish from various markets, they are, many of them, too small to be legally offered for sale, and it has required a great deal of time and patience to enforce the law in these instances and yet not work hardships. Our wardens have been instructed, when such fish are found in the possession of dealers, to notify them that they are too small, obtain the name of the shipper and notify him also of the infraction of the law. This for the first offense. If the offense is repeated, then in every instance to prosecute. Fish smaller than those authorized by law that can be offered for sale are not wanted in the markets; they are not in any sense desirable, and are known among fishermen as trash. The dealers themselves admit that there is no profit in handling them. The last session of the Legislature enacted laws compelling shippers to label their barrels or boxes, such label expressing kind of fish, from whom and to whom. This has given us an opportunity of tracing always the shipper of small fish. The clause mentioned makes both the shipper and transportation company liable.

The State Commission seems to feel itself put upon the defensive, and no doubt it has felt some criticism of its work as viewed from the standpoint of the sportsman. The following paragraph shows the position of the Commission:

> A great hue and cry is raised about the immense damage the seine does on the Illinois River. I think that we can safely assert that more harm is wrought by the injudicious use of hook and line in the river itself than by the seine. We have given this matter especial attention, and note that more fish of less than prescribed market size are brought in and offered for sale by the anglers than by the fishermen who use seines of proper mesh.
>
> We have, at various times, seen hundreds of small bass and crappie taken by an angler in a day's fishing near the dams, and many of them were thrown away as too small to use, or after being kept on a string all day they were either dead or injured to such an extent as to make it useless to put them back in the water. There is no limit to the size of fish that can be taken with hook and line, but there should be.
>
> The Fish Commissioners conceive it to be their duty to undertake to protect the fish for the angler, but not for him alone, and do not believe it to be incumbent on them to destroy a great industry to gratify personal pleasure.
>
> The time will come in this State, as it has already in older countries, when the waters will have to produce their full share of food, as a matter of public economy, and there will always be, as now, a necessity for the use of some means of taking the fish when of sufficience size for use, and to do it we know of no other appliance better than the seine, but that of course to be used under proper restraint.
>
> We are informed that another effort will be made during the next session of the Legislature to enact a law to prevent the use of the seine. The matter should be very carefully considered and the facts thoroughly canvassed before legislation is enacted, and

BIRDS-EYE VIEW OF GREENWOOD LAKE. SHOWING FISHING GROUNDS.

it should be prompted, not by sentiment, but the consideration of the best interests of all concerned.

There is a lot of good sense in this, as there is in all that Dr. Bartlett or Mr. Cohen has to say. As to the sincerity, integrity and ability of Dr. Bartlett and Mr. Cohen, and their enthusiasm in their work, there can be no question whatever. We could not have better men in the very position which they occupy, and perhaps they know better than the soprtsmen themselves how helpful their work has been to the sportsmen. It is only to be asked of them if, in confining the bulk of their work to the Illinois River, they are not more or less unconsciously brought under the influence of the Illinois River Fishermen's Association. It is true there is a very large commercial industry carried on along that stream, and perhaps that industry ought not to be at once, or at all, abolished. As to its magnitude and popular benefit, however, there are two ways of looking at it. The total membership of the Market Fishermen's League, and all the men employed by those market fishermen, does not number one-tenth that of the active anglers of the State. These marketmen make a business of fishing, and they benefit themselves a hundred times as much as each angler would. To say that they benefit the people of the State is wrong, for the Commission itself admits that the greatest market for these coarse fishes of the Illinois River is in New York city. Now, whether it is better to help 50 fishing firms make $5,000 or $10,000 each per year, for themselves, not for the people, and to do this at the expense and through the efforts of the State; or whether it is better to please and benefit 5,000 anglers of the State, is something which ought not to be decided offhand in favor of the commercial proposition. The sportsman is used to hearing the talk of "class legislation," but when you come to figure it out, the game and fish dealer is about as apt to take advantage of a bit of class legislation as anybody, when he gets a chance. Of the commercial success of the Illinois Fish Commission there cannot be any question whatever. Its members state they have incidentally benefited anglers, and let us hope that this is true, though our streams and lakes do not prove it.

The report gives some interesting figures regarding the introduction of German carp. It seems that the latter fish was first planted in 1886, in the following numbers and at the following places.

Okaw River	3,000
Saline River	2,000
Little Wabash River	2,000
Big Muddy River	2,000
Sangamon River	2,000
Clear Lake	5,00
Illinois River	5,000
Rock River	2,000
Fox River	2,000
Kankakee River	2,000
Lincoln Park Lakes, Chicago	1,000
South Park Lakes, Chicago	1,000

In the past year, 1900, the carp has taken a place far in advance of all other coarse fishes in the market totals, the statement of the Illinois Fishermen's Association giving the pounds of different fishes sold in 1900, as below:

	Pounds.	Value.
Carp	6,332,990	$189,980 70
Buffalo	3,143,154	94,294 62
Catfish	241,000	9,640 00
Bull pouts	499,100	19,964 00
Sunfish and ring perch	252,050	7,561 50
Striped bass	92,931	4,646 55
White perch	459,580	13,787 40
Crappie	114,490	6,869 40
Black bass	70,221	7,022 10
Number of turtles, 202,900	.....	8,471 50
Total	11,205,516	$362,246 77

From the position of the Commission in regard to the commercial value of its efforts, it may be readily imagined that a vigorous apology would be forthcoming for that industrious creature, the carp. The Commission points with pride to the 6,000,000 pounds of animated raw cotton which it has sprung on the public within the space of one short year, but it would seem to confess a certain anxiety in the following paragraph:

In many of the lakes that are fed wholly or in part by springs, such as Fox Lake, for example, carp have increased in great numbers, as they cannot well be kept down with hook and line. Citizens and owners of property on the lake petitioned to have a warden appointed under whose supervision they might remove the gar and dogfish and at the same time the surplus carp. This arrangement was made and we sent Mr. G. R. Ratto, one of our best wardens, to Fox Lake to attend to this work. This was accomplished, and over 60,000 pounds of carp were taken out. We were much surprised to find carp of such large size and in such great numbers where the water was of such low temperature. A number of the carp yeighed 40 pounds or over, and one was taken that weighed 55 pounds. While taking out the carp a muskalonge weighing 49 pounds was caught. This specimen was preserved and mounted, and is now in the possession of Mr. Cohen. From Calumet Lake and River nearly 100,000 pounds of carp have been taken during the past two years. From the Sni Ecarte Club preserves in Adams and Pike counties nearly 100,000 pounds of carp and spoonbills were taken, etc.

As a man and a citizen one cannot feel anything but pride in the work of our able Fish Commission, but as a sportsman and as an angler who has seen some of the best of our Western fishing grounds usurped by this useless fish, the carp, one might be forgiven if he used the words of the old Scotch divine and said, "I hae my doots." Let us hope for a later repentance and confession on the part of these good gentlemen. Suppose they try the mongoose on the carp!

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Canadian Angling Notes.

THE feature of the coming week in angling circles in northern Canada will no doubt be the opening of the spring fishing for ouananiche in the Grande Décharge of Lake St. John. Up to the present time of writing, all the ouananiche fishing has been done in the waters of the lake, and it is usually from the 12th to the 15th of June before the water lowers sufficiently to afford good fly-fishing in the pools of the Grande Décharge.

The season is undoubtedly much earlier this year than usual, and I am daily expecting to hear of good catches being made in the vicinity of the Island House, for the steamer is now crossing daily and the hotel was to have opened on the 6th, or nearly a week earlier than is customary. Judging by the abundance of the fish secured by the bait fishermen in the lake itself this spring, there is every indication of a fruitful fly-fishing season in the Décharge.

As if to compensate for the disappointments of last season, the trout fishing continues to be extraordinarily good in all parts of the Lake St. John country, and if the game seen at this time of the year be any indication of what the hunting will be like next autumn, this ought to prove a banner year for sportsmen. Several parties of anglers report having seen caribou, and I am told of one party in the vicinity of Lake Edward which secured a good photograph of a fine moose at very short range.

The Lake Edward region is surprising everybody this season by the excellence of its sport. Not since this territory has been opened up by the railway has there been better fishing in the big lake itself than during the last few weeks. Only a few days ago another lot of 4-pound brook trout was brought to town by local anglers. The catch was made upon the chain of lakes connecting with Lake Bouquet, and extending as far as the Vermillion River. The waters connecting these lakes are rich in rapids, which afford good fly-fishing throughout the season.

All the members of the Metabetchouan Fish and Game Club who were on their preserves this spring have now returned, and so have most of the members of the Triton Club. A Syracuse party from the Triton limits passed through Quebec last night on their way home. All seem satisfied with their spring outing.

Lake Quaquakamaksis, in the vicinity of Lake St. John, is attracting numbers of anglers this spring and yielding some very heavy trout.

Gen. W. W. Henry, U. S. Consul here, has been re-elected president of the Lake Bernard Fish and Game Club, which controls one of the finest preserves in the country. Several members of this club are still upon the limits, but the General has returned to town, and reports that in one day's fishing on Lake Saccicoma his catch included ten speckled trout running from 2 to 3½ pounds each.

Salmon fishermen are hurrying down to their rivers, a number of the Ristigouche anglers having reached their pools as early as the first of the motnh. Mr. C. W. Wilson, of Glens Falls, is one of the new men on the river this season. The members of the St. Marguerite Club will pass through Quebec in a day or two for their river, while many of the north shore rivers will not be fished till about the middle of the month.

QUEBEC, June 8. E. T. D. CHAMBERS.

The Kennel.

Honest Dog Dealing.

ASHEVILLE, N. C., June 7.—*Editor Forest and Stream:* A short time ago I noticed an advertisement for Mr. R. M. Morgan's kennels, of Prior Creek, I. T.

I wrote to him and asked if he could furnish me with a puppy from six to ten months old, and he replied that he could fill the order. The puppy when little was very promising, and he had sent same to the country to a farmer friend to raise. Upon receipt of my order he went to the country for the puppy, but was very much disappointed in the way it had turned out, as it had not developed in the way he had hoped. Mr. Morgan very promptly wrote me that the dog had not turned out as he had expected, and as an honest man he could not afford to ship me the dog, as it would not be a credit to his kennels or satisfactory to me, returning me the check with his regrets.

I determined this was the man from whom I wished to buy a dog. As he had others, I purchased one eighteen months old from him, which is in every way a very promising dog, showing good breeding and good qualities.

I feel that such honesty and straightforwardness should not go unnoticed, and I take the liberty of giving you this information. FREDERICK RUTLEDGE.

The Augusta Journal received the following story from Mr. Norris, of Iceboro, who vouched for its truth. Mr. Norris says that one day last week, while working near the river, he heard the baying of a hound in the camp meeting woods, and supposed that a fox hunting party was abroad. A minute later the fox appeared; he crossed the railroad track and ran on to the ice at the top of his speed, heading directly for the hole in the ice. Mr. Norris thought he would run into the hole and be drowned. But such a finale was not down on Reynard's programme. On arriving at the hole in the ice he turned back, and, doubling his track till he reached the railroad, and turning down that, which runs at right angles with his own track, he ran several rods, then sat down to wait and watch. He had but a few moments to wait before the hound appeared in hot pursuit of the scent. The dog, with his nose to the snow, kept on across the railroad track, on to the ice, and straight for the hole where Reynard had turned back. As is well known, hounds trust to their keen scent rather than to their sight, and when the dog arrived at the end of the trail his momentum was too great to stop short of the hole in the ice, and with a farewell yelp he disappeared into the swift current of the Kennebec, never to reappear. Whether Reynard smiled as he trotted leisurely off is not known, but can be imagined.

The Meet of 1901.

IT has been definitely decided that the camp site for the meet of 1901 will be Mudlunta Island, St. Lawrence River, Aug. 9 to 23, and the following particulars will therefore be interesting:

The twenty-second annual meet of the American Canoe Association will take us back again to the ever-popular islands of the St. Lawrence River.

The Camp Site.—The Commodore has kindly placed at the exclusive disposal of the Association his Island of Mudlunta for the meet of 1901.

The Island of Mudlunta (meaning Crescent) is one of the prettiest islands of the St. Lawrence. It is one of the Admiralty group, is over ten acres in extent and situated about two miles south from Gananoque, between the Canadian and middle channel, and it is believed will make one of the most attractive and convenient sites the Association has ever had the pleasure of camping on.

The headquarters will be very conveniently located in the Commodore's residence (which will be used exclusively for that purpose only during the two weeks of camp), within easy access from the main and ladies' camp and dock.

The main camp will lie to the east of headquarters on a high and level tract of land, and will embrace such a space that desirable spots can be secured by all.

The ladies' camp, or Squaw Point, will be situated to the west of headquarters, and while the portion laid out for this purpose is not as large as that of the main camp, still a sufficient number of beautiful and desirable locations will be found to accommodate every one.

The Camp Store.—The exclusive privileges of the right of sale on the camp grounds have been awarded to Messrs. Johnston & Hale, both of whom have been in the grocery and supply business in Gananoque for years. They will build a commodious store in the vicinity of headquarters and will endeavor to serve to the best of their ability the wants of the members. They will also supply ice if required.

The camp dock will be a large one, equal to all emergencies, and be situated on the side of the bay in front of headquarters.

The Mess Tent.—This will be most advantageously situated on a level stretch of land lying between two bays. It will be to the east of headquarters and very convenient to both the ladies' and main camp. A capable caterer will have charge of this department, and guarantee satisfaction. The rate will be as usual, $1 per day.

Bring Your Bathing Suits.—The waters of the St. Lawrence are famous for their bathing virtues. Sand beaches are numerous on Mudlunta Island, both in the ladies', headquarters and main camps.

Transportation.—Special efforts are being made along this line, and it is hoped that many of the members will take advantage of the special rates to attend the meet.

Carpenters and laborers will be engaged and lumber purchased and tent floors, skids, etc., will be built for the members at reasonable rates. Tents, cots, camp chairs and tables will also be rented at low figures. Full particulars will be given later.

Racing Programme.—The Regatta Committee have arranged a very attractive list of sailing and paddling events. War canoe racing will again be made a feature and many suitable trophies will be put up for contest, among others being the very handsome shield representative of the war canoe championship of America (won last year by the Toronto C. C.), and which, if won by them again this year, will become their property. It is a very handsome trophy, and every club should put forth an effort to secure it for the adornment of their club house. The sailing petition, as presented by the sailing men, having had the approval of the Executive Committee, it is hoped that increased interest will result in the sailing events therefrom.

Cruises.—Several short cruises will be arranged for under competent guidance to some of the many beautiful spots of the Thousand Islands, and it is hoped that many of the members will come prepared to take part. Among other cruises in prospect may be specially mentioned one up the Gananoque River to Marble Rock, a trip that is acknowledged by all who have taken it as one of the most beautiful and enjoyable.

Membership in the American Canoe Association can be secured on application, indorsed by two members in good standing, and on no objection being raised to the applicant

after publication for two weeks in the official organ of the Association he becomes a member. The entrance fee is $1 and the annual dues $1.

A Final Reminder.—The administration is sparing no effort to make this one of the most successful meets in the history of the Association, and urges every one that can attend to come. They will not regret it.

Further particulars will be given later in the usual camp circular.

The racing petition as presented to the Executive Committee for approval has passed. A gist of the changes is as follows, viz:

First—A limit has been put on distance between bulkheads and size of cockpit. (Rule 1, Par. 1.)

Second—A minimum weight has been placed on decked sailing canoes. (Rule 1, Par. 1.)

Third—A canoe must use the same suit of sails at a meet with reduced area for decked canoes and increased area for open canoes. (Rule 1, Par. 1.)

Fourth (a new rule)—Rule 2. Classifying the canoes into three classes.

Fifth—Flags not to be given as prizes except for the paddling and sailing trophy races. (Rule 6, Par. 1.)

Sixth—Putting a fixed length and time limit on the record races. (Rule 6, Par. 3.)

Seventh—Putting a fixed length on the paddling trophy and adding other fixed races. (Rule 6, Par. 6.)

Eighth—Allowing all comers to enter the trophy sailing race. (Rule 6, Par. 7.)

Ninth—Decision of protests of members present at meet to be final. (Rule 10, Par. 2.)

Tenth—A canoe upsetting in a race debarred from winning prizes. (Rule 13, Par. 2.)

Eleventh—Allowing old canoes to race at 1901 meet. (Rule 25.)

'Mid Reef and Rapid.—XIII.

BY F. R. WEBB.

"WELL, what do you think of it?" queried George, an hour later, as he paddled across to us. "The rain's let up for the present, but it's evidently going to rain more or less all day. Hadn't we better make camp here and be through with it? This will make an excellent camp place."

"It's a very good place," said the Colonel, "and I don't know but what, perhaps, the most sensible and comfortable thing will really be to hang up and make ourselves comfortable right here. It is almost lunch time now, and I'm afraid we can't make Bear Lithia to-day. The great objection to this place is the lack of water. There's none nearer than the mill, and that's a quarter of a mile away."

"Yes; it's about three-quarters of a mile away, across those fields and in the rain," said Lacy, whose job it is to carry the water. "I move we go on, now that it has quit raining, and if it comes on to rain again we can easily find as good a place as this, with the chance of its being closer to water."

"Well, it's all the same to me," said George from his canoe. "What do you say, Commodore?"

"Well, I'll tell you," I replied. "This is a good enough camping place, barring the lack of water, but I'm particularly anxious to reach Bear Lithia, if possible, this evening, as I wrote Compton we would be there to-day, and——"

"But he will hardly expect us on such a day as this," the Colonel broke in.

"That may be," I replied, "but there is no harm in making the effort, and if worst comes to worst we can easily find as good a place as this to camp in, and, as Lacy says, with the chances in favor of its being closer to water. I vote to go on."

"So do I," said Lacy.

"Well, it's all the same to me one way or the other," said George.

"Same here," said the Colonel, as he began to take down the fly, in which operation Lacy lent him a helping hand, and in a few minutes it was folded up and repacked in George's canoe, and we were paddling out into the still, deep pool, headed for the bend ahead, while the clouds still hung low, heavy and wet, across the entire heavens. A little breeze rippled the water into cold, leaden wrinkles and shook the drops from the overhanging trees in miniature showers into the water beneath with a soft musical tinkle.

Around the bend the river seemed to come to an end like a large pond in a broad, flat, gravelly beach, at the outer edge of which was strung a low fringe of bushes and small clumps of cottonwood trees, which extended clear across the river. A nearer approach disclosed the cottonwood patches to be small, clumpy islands, between two of which most of the river rushed and pitched headlong in a foaming mass down a short, narrow and very steep slope, in a glorious rapid, whose tumultuous waves tossed their shaggy white crests high in air. At the foot of the islands, below this deep, narrow pitch, the river spreads out in a broad, shallow, fan-shaped rapid, down which the water shoots swiftly with a flat, gently rippling surface. At the bottom, and extending clear across the river, is the usual fringe of loose stones, over which the water tumbles in a mass of pearly foam in a fall of a couple of feet or so.

This final shoot is always shallow, and we were well aware that we couldn't jump it on the present stage of water. Last year we disembarked some little distance above it, and led the canoes down to and over the fringe of stones, but this morning, after a glorious rush down the shoot above, over the big waves, over which our canoes bobbed up and down like corks, we let the canoes run swiftly out over the glassy shallows below, back paddling vigorously all the time, and gradually checking their speed, so that when they began to grate gently on the gravelly bottom a few yards above the pitch we sprang quickly out before the canvas skins of our boats had time to come to harm on the uncompromising stones, and by means of the stern painters gently eased them down the fall into deeper water below, where we drew them alongside of us, as we stood, knee-deep, in the swift, foaming water, and dropped over the sides into our seats with our feet hanging out over the gunwales on either side to allow the water to run out of our canvas shoes.

We had harly got settled comfortably in our canoes before the rain began again—a chill, fine, penetrating rain, which shimmered grayly on the cold surface of the river and glistened like a sheet of varnish on our decks and hatches. We speedily drew our rubber capes and hats from under the front hatch, where they are usually carried, for accessibility, and put them on. Thus attired and with closed hatches and aprons, we were in position to disregard the rain and so kept right on down the river.

The three miles between the Shaver and Riverbank dams is pretty much one continuous rapid, and is a conglomeration of reefs and ledges requiring great care and skill to successfully navigate, particularly with the rain shimmering on the water and obscuring the surface indications; but we succeeded in slipping in and out among them, and threading our way through them with but little trouble and without mishap. Fortunately, at the present stage the water was not so swift and powerful as usual, giving us time and opportunity to negotiate the reefs comfortably and leisurely.

The big fish dam a mile and a half below Shaver's looked formidable as we approached it. It is one of the biggest dams of this character on the river—really as big as most of the mill dams—and it required not a little skill and care, as well as nerve, to jump it successfully. In one spot the water shoots over a little gap in the top of the dam in a long, narrow tongue, breaking up into big foam-crested surges at the foot, two or three suspicious lumps along the edges in the course of this tongue being suggestive of big rocks. I landed on the dam and inspected it closely, feeling out the rocks with my pike pole, while George, after maneuvering for position by back paddling, hung poised above the fall while he studied it. Becoming satisfied as to the position of the rocks, he let go. His canoe dropped down into the powerful suction, settled down into the water to the gunwales as it dropped over the verge, and then shot out into the long tongue of water below the dam. For an instant she was buried in the snowy foam below, and then emerged, with the water streaming in sheets from her decks, as she shot down the swift rapid below in safety. The rest of us made the shoot with equal success, the Colonel and I each scoring a slight bump from the rocks as we went over.

The next quarter of a mile required peculiar care, as the water was not only reefy but, owing to a considerable fall of two or three hundred yards or so in length at this place, was quite strong. However, there is a fairly good boat channel through this fall, along close to the left bank, down along which we shot swiftly, without much trouble, and we passed on down into deeper water below.

The art of back paddling is a very useful and valuable one—I might say, indispensable one—to the practiced canoeist in threading his way in and out among the reefs and ledges. He works his boat around from one little cross chanel to another, or gets her in position to slip through opportune little gaps in the ledges much easier and surer than by driving ahead in a frequently unsuccessful attempt to beat the current through. He holds his canoe stationary while he surveys his course, and if an eligible opening appears to right or left he inclines the stern of his canoe—not the bow—in that direction, and by holding the boat stationary with a few easy back strokes with the paddle, the current gently swings the canoe into position, when, on getting in line with the shoot, he lets go, and she gently slips through or over. Care must be exercised in this backward swinging around or across currents, that a swift shoot of water from around the corner of some rock does not catch him, or it will take his boat by the stern and throw it around end for end in a twinkling, and with consequences that may prove disastrous.

"Hello, you fellows!" came a hail from a little group of three or four disconsolate looking rustics huddled up shivering together under the trees along the bank out of the rain as much as possible, while the "set" fish poles, strung out in a row along the edge of the gravelly bar, pointing out over the water, with the lines sagging away down stream in the set of the current; proclaimed their occupation.

"Where you all from?"

We admitted our abiding place.

"Where you all goin'?"

We confessed to our destination.

"Must be runnin' a race, ain't ye?"

We modestly disclaimed any pretentions to speed.

"Mebbe you're surveyin' the river?"

We admitted that we undoubtedly were surveying the river, but not strictly in the interests of science, technically speaking.

"Well, say!" in a hopefully pleading tone, "can't you all come ashore for a few minutes and give a feller a nip of somethin' hot? It's powerful chillin' settin' here in the rain, and nothin' to drink."

"Singular," said George, in a musing tone, as we drifted slowly by on the deep, gently moving water into the Riverbank mill pool, after apologetically explaining that our section had just passed through a heated prohibition campaign, and that we had all reformed. "Singular how when a stranger learns that this crowd hails from Staunton he at once assumes that there must be something to drink along. Now this is the second time in the last three days that this expedition has been hailed from the bank by thirsty gentlemen, hopeful of procuring liquid refreshment of a spirituous character. I didn't expect this when I consented to join this expedition. I am not accustomed to it, and my reputation will be ruined."

"Yes; it's a pity about that reputation of yours," Lacy replied. "Let's see, how does that celebrated old quotation go? I think it is something in regard to the difficulty experienced in injuring eggs that are already in a hopeless condition."

"That's all right about that reputation," George retorted; "you Staunton fellows need some one along to give tone to the crowd, but while I am willing to make some sacrifices to benefit my friends, I feel that there are limits to what a man ought to be expected to stand, and in justice to myself I feel that I really ought to draw the line somewhere."

We portaged the Riverbank dam in a light drizzle. The portage was an easy one—in fact, so easy that all we had to do was to slide the canoes over the round, smooth, slippery log that formed the crest of the dam next to the right bank, and drop them about 3ft. into the swift water below, and each man portaged his own canoe without assistance from the others.

The heavy, swift rapid below the ferry at the mill was shot without touching—in fact, as we proceeded down the river we were surprised and delighted to see how our hopes of finding better water were realized. On leaving our temporary camp at Shaver's, I really anticipated considerable trouble in navigating the section of river between that place and Elkton, which is particularly shallow, swift and rocky, and I fully expected we would be out in the water half the time; but, except at the dams, we really had but little getting out to do. Of course our intimate acquaintance with the river stood us in good stead, for there was really as little water in the river down here—allowing for its increased size—as there was up in North River, but in running the falls and rapids, if there was any water at all to be had, we knew just where to find it.

The rain obligingly let up for an hour, when we reached the fine old Yancey place—our usual stopping place for lunch—so, after easily sliding the canoes over the low mill dam 100yds. above, we went ashore and opened up our canoes, and taking the mess chest and our camp stools with us, we enjoyed a very satisfactory lunch.

While the rest of us were enjoying our after-dinner smoke, George took his fly tackle—which he always keeps rigged up and strapped to the deck of his canoe—and wading out into the swift, shallow stream, he made a few casts around in likely spots, and, as the result of his experiments, he soon had four nice bass on his stringer, insuring us a good fish supper. He might eaily have taken more, but the return of the rain hurried us into the shelter of our canoes and our rubbers, and we pushed out into the rapid stream and proceeded on our way, while the rain descended in a fine, penetrating, mist-like shower.

The Blue Ridge Mountains throughout the entire extent of the valley are more or less hidden from near view by a parallel line of buttress-like spurs and foothills, which jut out from the main range, through which at close range only occasional glimpses may be had of the great mountain chain proper. In the reach to the right a few miles below a most impressive, beautiful and imposing view is obtained through a broad gap in these foothills, through which a brawling creek finds its way down to the river.

The rain opportunely ceased, giving us a wider, clearer view, and the mountain slope was most beautiful and majestic, as seen through this gap; its lofty summit shrouded from view in the heavy rain clouds which enveloped it, and whose black masses loomed up ominously up the river, while light, fleecy folds and wreaths lingered caressingly lower down the mountain sides.

The rain swept in a dense, leaden gray cloud from up the river, down along the flanks of the mountain chain, blotting out everything from view as it advanced, like a huge curtain, streaked with slanting, wavering, parallel lines from top to bottom.

It came hissing and blistering down the river in a long, white line across the still surface of the pool in which we were floating, and swallowed us up in its whirling embrace as it passed, shutting us up closely in its heavy, drenching folds, through which each canoe loomed up in vague, blurred outline, while the big, heavy drops pelted fiercely on our decks and hatches, smashing into spray, and the water ran in little rivulets down the black, shining folds and little gullies of our gossamers, into the hollows of our oiled canvas aprons over our laps, where it collected in pellucid little pools, into which the big drops splashed again, while the entire visible surface of the river was covered with little ets and spouts of water, as the fierce slanting lines of rain penetrated the surface.

We backed in under the dense, low-hanging trees on the left bank, to wait until the fierce onslaught should pass over, where Lacy and the Colonel, under the shelter of some particularly thick, overhanging boughs, managed to light their pipes, while I, at the same time, secured a light for a cigar.

The storm, meanwhile, raged around us with increased fury, and the mountains and foothills were entirely blotted from view by the dense cloud of rain, while the trees on the other side of the river loomed up in an indistinct mass as though seen through a fog.

[TO BE CONTINUED.]

Meet of the Atlantic Divison, A. C. A.

THE meet of the Atlantic Division, A. C. A., was held at the Lime Kiln, on the west bank of the Hudson, opposite Yonkers (Glenwood), N. Y., on May 30 and 31 and June 1, last, and although the lateness of the season and the constant rainfalls of April and May doubtless tended in some degree to diminish the attendance at the meet, yet it turned out to be a highly pleasant and successful affair.

The registered attendance was about thirty, and the members present included such old-timers as Robert J. Wilkin, C. Bowyer Vaux, H. Lansing Quick, Daniel B. Goodsell, Frank C. Moore, Robert H. Peebles and Thomas Hale, Jr.

Camp was made on Thursday morning, a number of out-of-town canoeists having spent the night with the Yonkers C. C., to whose courtesy and hospitality the success of the meet was in great measure due, and was continued until Sunday afternoon, after the official termination of the meet on Saturday. The camp site had been carefully prepared by the Camp Site Committee, consisting of M. Ohlmeyer, Jr., chairman, and Mr. Louis Simpson, and would have been able to accommodate triple the number of canoeists in attendance.

The campers had the good fortune to have a little interval of generally fair weather during the meet, and improved it to the utmost. The Regatta Committee, with Mr. Goodsell as chairman, arranged a number of races for those in attendance. On Thursday two paddling races were held, the first a tandem, double-blade paddling race, in which Messrs. Davis and Conrad defeated Messrs. Stark and Eastmond in a close race; the second a double-blade paddling race, in which Mr. Stark defeated Mr. Davis by a very narrow margin.

On Saturday the possession of the Atlantic Division sailing trophy was contested, and the race won by Mr. Alexander H. Paula, of the New York C. C., with Mr. H. Lansing Quick, of the Yonkers C. C., present.

The meet as planned was a practical cruising meet, no general mess being provided, the members bringing their own camp kits and stores and preparing their meals in camp. The result demonstrated very clearly the possibility of a successful meet on a purely cruising basis.

Eastern Division Meet 1901.

CAMP BLUFF—MERRIMAC RIVER.

June 15 to 17.

Eastern Division Officers.—Vice-Com., Louis A. Hall, Newton, Mass.; Rear-Com., Chas. M. Lamprey, Lawrence, Mass.; Purser, A. Elliott Kimberly, Lawrence, Mass.

Executive Committee.—Chas. W. Dodge, Boston, Mass.; Frederick H. French, Boston, Mass.; A. V. Coulson, Worcester, Mass.

Committees.—Camp Site: H. W. Horn, chairman, 613 Common street, Lawrence, Mass.; John H. Richardson, Lawrence, Mass.; H. P. Poore, Lawrence, Mass.; A. W. Lang, Lawrence, Mass.; C. W. R. Seeton, Lawrence, Mass. Regatta: Marcus Butler, chairman, Lawrence, Mass.; Herman Dudley Murphy, Winchester, Mass.; Louis S. Drake, Auburndale, Mass. Transportation: C. M. Lamprey, chairman, 119 Bailey street, Lawrence, Mass.; George M. Littlefield, Lawrence, Mass.; Henry A. Bodwell, U. S. Appraisers' Office, Boston, Mass. Signal Officer, James A. Greer.

Purser's Office, Eastern Division, American Canoe Association, Lawrence, Mass., May 27, 1901.—The annual meet of the Eastern Division, A. C. A., will be held at Camp Bluff, on the Merrimac River, four miles above Lawrence, Saturday, Sunday and Monday, June 15, 16 and 17.

The camp is charmingly situated in a pine grove on high land, one of the prettiest spots on the river.

The catering will be made a special feature. No effort will be spared to make this important detail of camp life an attractive one. Meals will be furnished at the usual reasonable rates.

Transportation.—All canoes and duffle shipped care of Lawrence C. C., Lawrence, Mass., so as to arrive not later than Friday, June 14, will be forwarded to camp.

Take Lowell electric cars, leaving Lawrence, North Station, every thirty minutes, to A. C. A. landing. Arrangements will be made for ferrying members across the river.

Tents and tent floors will be supplied on application to the chairman of the Camp Site Committee. Please make your applications early.

A reception will be tendered to visitors by the members of the Lawrence C. C. on Saturday night.

Be sure to attend the meet and get to camp Saturday evening, if possible. Per order,

LOUIS A. HALL, Vice-Com.

A. ELLIOTT KIMBERLY, Purser.

Programme of Races—Monday, June 17.

1. Single blade, one-half mile.
2. Tandem, single blade, one-half mile.
3. Club fours, single blade, one-half mile.
4. Club fours, double blade, one-half mile.
5. Tandem, double blade, one-half mile.
6. Single, double blade, one-half mile.
7. War canoe, one mile straightaway.
8. Relay race, three men, single canoe.
9. Tandem, man overboard, one-fourth mile.
10. Sailing race.
11. Tournament.

Extra events, hand paddling, hurry scurry, standing paddling.

Order of events subject to change.

Remember the A. C. A. national meet at Thousand Islands, St. Lawrence River, Aug. 9 to Aug. 23, 1901.

Also, Pan-American Exhibition meet at Buffalo, N. Y., June 24 and 25.

1902 National Meet.

Next year it is the turn of the Eastern Division to hold the national meet, and if the members of this division desire that the national meet should be held in New England waters, and that an Eastern Division man should be elected Commodore, they should be present at the business meeting to instruct their delegates.

Knickerbocker C. C.

THE annual spring regatta of the Knickerbocker C. C. was held off the club house at the foot of 152d street, Hudson River, New York city, on Decoration Day, May 30. The summary follows:

Single Paddling—Won by L. P. Stockwell; B. F. Cromwell, Jr., second.

Double Paddling—Won by L. P. and E. H. Stockwell; B. F. Cromwell and Fred Kellar, second.

Triple Paddling—Won by E. H. Stockwell, W. G. Harrison and F. E. Taylor.

Swimming—Won by George E. Taylor; Fred Kellar, second.

Sailing, Racing Rig—Won by Surprise, handled by D. H. Kretzner; Chiquita, handled by Matthew Ohlmeyer, second.

Sailing, Cruising Rig—Won by Twilight, handled by W. G. Harrison; Bee, handled by George E. Taylor, second.

CANOEING NEWS NOTES.

Sec'y-Treas. Herb Begg has the Year Book in press, and will, it is expected, be able to place it in the hands of the members very shortly. He has been successful in securing over $800 of advertising for it.

F. H. Dobbin, of Peterboro, has been appointed to a position on the Camp Site Committee. He is an old A. C. A. man, and will fill the position very acceptably.

A. C. A. Membership.

Atlantic Division—J. E. Haviland, Brooklyn; Herbert S. Turtle, New York. Both of the New York C. C.

Eastern Division—Samuel E. D. Hartshorn and J. Rodney Wood, Woburn, Mass., Innitou C. C.; Jas. C. Ramsey, Lawrence, Mass., Lawrence C. C.; William C. Corey and W. R. Locke, Winchester, Mass., Winchester B. C.; Waldo P. Cutter, Woburn, Mass., Innitou C. C.; Benjamin I. Page, Haverhill, Mass., Pemigowassett C. C.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

JUNE.

12. East Gloucester, evening race, Gloucester, Mass.
15. South Boston, club cruise, City Point, Boston Harbor.
15. Beverly, club, Monument Beach.
15. New York C. C., annual, Gravesend Bay.
15. Larchmont, spring regatta, Larchmont, Long Island Sound.
15. Seawanhaka Corinthian, first race, Center Island cup, Oyster Bay, Long Island Sound.
15. Burgess, Marblehead, Massachusetts Bay.
15. Winthrop, class handicap, Winthrop, Mass.
15. Hull-Massachusetts, club, Hull, Mass.
15-17. New York, 90-footers, Newport.
15-17. Boston, cruise, City Point, Boston Harbor.
16. South Boston, cruise, City Point, Boston Harbor.
17. Beverly, open sweepstake, Monument Beach.
17. Duxbury, club race, Duxbury, Mass.
17. Hull-Massachusetts, classes over 18ft., Hull, Boston Harbor.
17. Dorchester, classes 18ft. and under, Dorchester, Boston Harbor.
17. Corinthian, first club championship, Marblehead, Mass.
17. East Gloucester, club race, Gloucester, Mass.
17. Brooklyn, annual regatta, Gravesend Bay.
17. Pavonia, annual, Bayonne, New York Bay.
17. Burgess, Marblehead, Massachusetts Bay.
18. Atlantic, annual, Sea Gate, New York Bay.
19. East Gloucester, evening race, Gloucester, Mass.
20. New York, annual, New York Bay.
20. Duxbury, ladies' day, Duxbury, Mass.
22. Beverly, Corinthian, Monument Beach.
22. Marine and Field, open, Gravesend Bay.
22. Hull-Massachusetts, club, Hull, Mass.
22. Manhasset Bay, third series race for Jacob cup, Port Washington, Long Island Sound.
22. New Rochelle, annual, New Rochelle, Long Island Sound.
22. Atlantic, special, Sea Gate, New York Bay.
22. Winthrop, special handicap, Winthrop, Mass.
22. Seawanhaka Corinthian, second race for Center Island cup, Oyster Bay, Long Island Sound.
25. American, Newburyport, Massachusetts Bay.
25. New York, Glen Cove cups, Long Island Sound.
26. East Gloucester, evening race, Gloucester, Mass.
27. Indian Harbor, special, Greenwich, Conn.
27-28. Seawanhaka Corinthian, special, Oyster Bay, L. I. Sound.
29. Boston, City Point, Boston Harbor.
22. Savin Hill, open, Boston Harbor.
29. Hull-Massachusetts, club, Hull, Mass.
29. Atlantic, annual, Sea Gate, New York Bay.
29. Burgess, Marblehead, Massachusetts Bay.
29. Winthrop, class handicap, Winthrop, Mass.
29. Seawanhaka Corinthian, annual race for Leland challenge cup for raceabouts, Oyster Bay, Long Island Sound.

JULY.

2, 4, 6. Newport, Y. R. A., cup defender class, Newport.
2. Indian Harbor, Greenwich, Long Island Sound.
3. Columbia, City Point, Boston Harbor.
3. East Gloucester, evening race, Gloucester, Mass.
3-8. Brooklyn C. C., cruise, Gravesend Bay.
4. Beverly, open sweepstake, Monument Beach.
4. Duxbury, club race, Duxbury, Mass.
4. Boston City, City Point, Boston Harbor.
4. Corinthian, second club championship, Marblehead, Mass. Bay.
4. East Gloucester, open, Gloucester, Mass.
4. Gravesend Bay Y. R. A., first open regatta, Gravesend Bay.
4. Annisquam, open, Ipswich Bay, Mass.
4. Larchmont, annual regatta and schooner races for Colt cup, Larchmont, Long Island Sound.
4. Hartford, annual, Saybrook, Long Island Sound.
4. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
4. Pavonia, McInnis cup, Bayonne, New York Bay.
4. Canarsie, parade, Canarsie, Jamaica Bay.
4. Penataquit Corinthian, annual, Bay Shore, L. I.
4. Columbia, Chicago, Lake Michigan.
4. Burgess, Marblehead, Massachusetts Bay.
5-11. Atlantic, cruise, Sea Gate, New York Bay.
6. Shinnecock Bay, club, Shinnecock Bay.
6. Hull-Massachusetts, club, Hull, Mass.
6. Winthrop, special handicap, Winthrop, Mass.
6. Mosquito Fleet, City Point, Boston Harbor.
6. Riverside, annual, Riverside, Long Island Sound.
6. Beverly, convention, Monument Beach.
6. Savin Hill, club, Boston Harbor.
6. Seawanhaka Corinthian, third race for Center Island cup, Oyster Bay, Long Island Sound.
6. Burgess, Marblehead, Massachusetts Bay.
6. South Boston, ladies' day, City Point, Boston Harbor.
8. Norwalk, annual, South Norwalk, Long Island Sound.
8-9-10. New York, Newport series, Newport.
10. East Gloucester, evening race, Gloucester, Mass.
13. Moriches, club.
13. Corinthian, third club championship, Marblehead, Mass. Bay.
13. Beverly, club, Monument Beach.
13. Winthrop, class handicap, Winthrop, Mass.
13. Hull-Massachusetts, club, Hull, Mass.
13. Larchmont, open, first day of race week, Larchmont, Long Island Sound.
13. Seawanhaka Corinthian, race for Roosevelt memorial cup, Oyster Bay, Long Island Sound.
13. Manhasset, special, Port Washington, Long Island Sound.
13-20. Larchmont, race week, Larchmont, Long Island Sound.
15-19.—Interlake meet, Put-in-Bay, O.
17. Beverly, Buzzards Bay.
17. East Gloucester, evening race, Gloucester, Mass.
18, 20, 23. Newport Y. R. A., special races, Newport
20. Westhampton C. C., club.
20. Hull-Massachusetts, club, Hull, Mass.
20. Savin Hill, club, Boston Harbor.
20. Winthrop, Winthrop, Mass.
20. Duxbury, ladies' day, Duxbury, Mass.
20. Beverly, Corinthian, Monument Beach.
20. Winthrop, open, Winthrop, Mass.
20. South Boston, club handicap, City Point, Boston Harbor.
20. Stamford, annual, Stamford, Long Island Sound.
20. Seawanhaka Corinthian, fourth race for Center Island cup, Oyster Bay, Long Island Sound.
20. Trial race to select Canada cup defender, Chicago, Lake Michigan.
20. Burgess, Marblehead, Massachusetts Bay.
22. New York, cruise, rendezvous, Glen Cove.
22. Harvard, cruise, rendezvous, Morris Cove, L. I. Sound.
22. Canarsie, open, Canarsie, Jamaica Bay.
23. New York, cruise to the eastward.
24. Seawanhaka, cup race, Lake St. Louis.
24. East Gloucester, evening race, Gloucester, Mass.
25, 26, 27. Hull-Massachusetts, invitation races, Hull, Mass.
25-26. Erie, regatta, Erie, Pa.
27. Beverly, open sweepstake, Monument Beach.
27. Corinthian, fourth club championship, Marblehead, Mass. Bay.
27. Shinnecock Bay, special, Shinnecock Bay.
27. Sea Cliff, annual, Sea Cliff, Long Island Sound.
27. Northport, annual, Northport, Long Island Sound.
27. Winthrop, special handicap, Winthrop, Mass.
27. Seawanhaka Corinthian, fifth race for Center Island cup, Oyster Bay, Long Island Sound.
27. Manhasset, fourth series race for Jacob cup, Port Washington, Long Island Sound.
29. New York, Astor cup races, Newport.
29-30. Burgess, open, Marblehead, Massachusetts Bay.
30-Aug. 3. Pan-American regatta, Buffalo, N. Y.
30-31. New York, trial races to select America Cup defender, Newport.
31. Corinthian, Marblehead, Massachusetts Bay.
31. East Gloucester, evening race, Gloucester, Mass.

AUGUST.

1-3. Corinthian, Marblehead, Massachusetts Bay.
1. New York, trial race to select cup defender, Newport.
3. Duxbury, club, Duxbury, Mass.
3. Beverly, Corinthian, Monument Beach.
3. Winthrop, special handicap, Winthrop, Mass.
3. Indian Harbor, club, Greenwich, Conn.
3. Moriches, association regatta.
3. Atlantic, Sea Gate, New York Bay.
3. Hempstead Harbor, annual, Hempstead Harbor, L. I. Sound.
3. Seawanhaka Corinthian, Robert Center memorial cup races, Oyster Bay, Long Island Sound.
3 Manhasset Bay, special, Port Washington, Long Island Sound.
3. Hull-Massachusetts, club, Hull, Mass.
3. Savin Hill, club, Boston Harbor.
3-5-7. New York, trial race to select cup defender, Newport.
5, 6. Manchester, West Manchester, Massachusetts Bay.
7. Misery Island, Salem Bay, Mass.
7, 8. East Gloucester, Gloucester, Mass.
7. East Gloucester, evening race, Gloucester, Mass.
9, 10. Annisquam, Ipswich Bay, Mass.
10. Beverly, Van Rensselaer cup, open, Monument Beach.
10. Winthrop, class handicap, Winthrop, Mass.
10. Westhampton C. C., association regatta.
10. Brooklyn, Gravesend Bay.
10. Shelter Island, open.
10. Beverly, Van Rensselaer cup, open, Marion.
10. Hull-Massachusetts, club, Hull, Mass.
10. Bridgeport, annual, Bridgeport, Long Island Sound.
10. Horsehoe Harbor, annual, Larchmont, Long Island Sound.
10. Bridgeport, special, Bridgeport, Long Island Sound.
10. Seawanhaka Corinthian, sixth race for Center Island cup, Oyster Bay, Long Island Sound.
10-15. Chicago, races for the Canada cup, Chicago, Lake Michigan.
12, 13. American, Newburyport, Massachusetts Bay.
17. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
17. Moriches, open.
17. Wollaston, Quincy Bay, Boston Harbor.
17. Corinthian, fifth club championship, Marblehead, Mass. Bay.
17. South Boston, club handicap, City Point, Boston Harbor.
17. New York, New York Bay.
17. Winthrop, special handicap, Winthrop, Mass.
17. Indian Harbor, annual, Greenwich, Long Island Sound.
17. Seawanhaka Corinthian, seventh race for Center Island cup, Oyster Bay, Long Island Sound.
17. Hull-Massachusetts, club, Hull, Mass.
17. Savin Hill, club, Boston Harbor.
17. Canarsie, Corinthian regatta, Jamaica Bay.
17. Columbia, Chicago, Lake Michigan.
24. Shinnecock Bay, association regatta, Shinnecock Bay.
24. Corinthian, sixth club championship, Marblehead, Mass. Bay.
24. South Boston, ladies' day, City Point, Boston Harbor.
24. Winthrop, class handicap, Winthrop, Mass.
24. Hull-Massachusetts, club, Hull, Mass.
26. Cape Cod, Provincetown, Mass.
27. Wellfleet, Wellfleet, Mass.
29. Plymouth, Plymouth, Mass.
30. Kingstown, Kingstown, Mass.
31. Duxbury, Duxbury, Mass.
31. Beverly, Corinthian, Monument Beach.
31 Westhampton C. C., open.
31. East Gloucester, club, Gloucester, Mass.
31 Marine and Field, Gravesend Bay.
31. Hull-Massachusetts, club, Hull, Mass.
31. Hartford, annual, Saybrook, Long Island Sound.
31. Huntington, special, Huntington, Long Island Sound.

CONSTITUTION was dismasted on Tuesday, June 4, when about three miles southwest of Brenton's Reef Lightship. The accident is attributed to the breaking of the starboard spreader, it being the same kind of a mishap that befell Columbia on Aug. 21, 1899, in nearly the same place. It was unfortunate that the accident happened at this time, as the crew were beginning to work together so well. At the time of the accident the wind was blowing strong from the southwest, and there was a jump of a sea on. Fortunately no one was seriously hurt, although some of the men were pretty well bruised. After the accident Constitution was taken to Bristol in tow, where the steel mast will be repaired. Mr. Duncan hopes to have the boat ready for the Glen Cove races of the N. Y. Y. C., which are to be sailed on Tuesday, June 25.

The English-built cutter Astrild was destroyed by fire on June 5. The yacht was owned by Messrs. Addison G. Hanan and Herbert W. Hanan, N. Y. Y. C. The boat was lying at anchor off the owners' country place at Port Chester, N. Y. The fire was caused by the explosion of a five-gallon tank of gasoline that was connected with the stove in the galley. The steward was badly burned, but his life was saved through the efforts of the sailing master of the yacht, Capt. Peterson. Astrild was burned to the water's edge and sank in about fifteen minutes after the fire started. The crew escaped in the boats. Astrild was designed by Mr. G. L. Watson, and was 60ft. on the waterline, 87ft. over all, 15ft. beam and drew 11ft. She was valued at $20,000, and $4,000 had been spent on her this season. No insurance was carried. The crew lost everything, including their savings, which amounted to several hundred dollars.

Our Boston Letter.

BOSTON, June 9.—Boston yachtsmen have now reached the conclusion that there will be no chance for Independence to compete in the America Cup races this year. It is lamented on all sides, and there are some who are greatly chagrined over the latest phase in the controversy between the Cup committee of the New York Y. C. and the owner of Independence. They feel that Independence is a very fast boat, and would like to see her qualities practically proved in competition with Constitution and Columbia. But, from the present outlook, there seems to be little hope that she will have a chance at the Cup races even though she should prove her worth in informal trials. Mr. Lawson intends to get the yacht into the best possible trim, and expects to meet Constitution and Columbia in the races of the Newport Yacht Racing Association on July 2, 4 and 6.

It is really to be lamented that the Independence controversy has resulted so unsatisfactorily, for in the trials which the yacht has had during the past week it has been shown that she is wonderfully fast. She is a beautiful boat under sail, and the manner in which she moves through the water exceeds the hopes of even her warmest admirers in model. She has a beautiful set of sails, not only beautifully made, but of such proportions as to impress one upon first sight. All of her sails show the Wilson peculiarity of a flowing luff and a straight leach.

The way in which she gets moving is simply wonderful. She does it so easily and gracefully that one would have no idea that she is developing any speed until one has had the opportunity of trying to keep up with her. That flat bow of hers does not seem to make as much fuss in the water as some have claimed it would—in fact, her entrance and wake when under sail are very fine. She pushes a little wave out from her bow which goes aft without ever again coming near the boat. The wonder of it is where this wave goes to. There is no disturbance at the stern and the water closes in around her after she

has gone through it, so that one would think that it had never been disturbed.

She takes a heel very quickly and gets her bearings quickly. The strongest breeze she has been under yet was not over fifteen knots, but she proved very stiff in it. It was intended by her designer that she should take a heel very quickly, so that her sharp bilges could get into the water. When she is heeled her entrance is much different than when she is on an even keel, and instead of a bluff entrance, those hard bilges, with the flat floors, make it very easy. The little wave that is pushed out from her bow is merely surface water, and has absolutely no body to it. It curls away from her and settles back, and underneath it is solid water.

She is simply a marvel of designer's skill, and she carries out every characteristic upon which B. B. Crowninshield figured when he contemplated her lines. In taking a heel very quickly, she gets those long ends of hers into the water, and when she has started to move she uses the greater part of her overhangs. Thus she gets more side to sail on, and though she gets down on it very quickly, she has greater stability when she gets there.

Her first trial was on last Monday in a very light air, and though she showed that she could move fast under the conditions, it was not quite enough to be satisfactory. On Thursday she was given a trial which showed her to be not only a wonderful boat as far as sailing goes, but also that her construction is much more staple than that of other 90-footers which have been built in recent years. She sailed very fast—faster than the wind on a reach—and she easily distanced the tugs in the light breeze in which she started, which was not over eight knots. In this breeze she ran right out of her own wind.

As the trial progressed the wind became stronger, and at the last was fully fifteen knots and puffy. In this breeze she jibed over quickly and put her steel mast to a test which it will probably never be called upon for in a race. It was thought at first that Capt. Haff was trying her to the limit, but it was afterward found that he could not help himself. The screw of the steering gear of the balance rudder became jammed and it was impossible to turn the wheel. Capt. Haff had put his wheel hard up to wear ship. He had intended to run out in the bay again and try the topsail under a different setting. When he tried to put the wheel down it would not move, and the jacht jibed.

It came so suddenly that everything went over with a run. She was on the starboard tack at the time, and the starboard preventer backstays and the mast head runners were hauled taut. There was just time to pull the hook of the preventers out of the eye bolt, but the runners were still in place. The boom came over and banged up against the runners. Designer Crowninshield jumped and cut the tackle on the runners and let the boom go out. The port masthead runner and the preventer were not in place, and there was no time to lace them down.

Those who have seen Constitution and Independence claim that Independence is the better moving boat. I have seen both in their first trials, and followed both in the same tug, and it is my opinion that in the trial of Thursday, in the same conditions of wind and water Constitution had in her trial off Bristol, Independence moved the faster of the two. Of course this might not always be the case, but it shows that Independence is not a yacht to be idly considered, for there is little doubt that she is exceedingly fast.

At Lawley's almost everything has been finished in the east shop. The Wiggin 21-footer, the Wade 21-footer, the Herter 35-footer and the Binney 70ft. steamer are ready to go overboard. In the west shop the 70ft. steam yacht, designed by C. H. Crane for Edmund Randolph, is partly plated. The Eno 120ft. steam yacht is fast nearing completion. The keel of a 103ft. steam yacht is ready to be set up. She was designed by Fred Lawley for New York parties. Chauncey B. Borland's steam yacht, Monaloa, designed by Binney, was launched Saturday.

The cruise of the Boston Y. C. will be held on Saturday, Sunday and Monday, June 15, 16 and 17. There will be racing runs on all three days. The first run will be to Marblehead on Saturday. On Sunday the fleet will run to Gloucester, and on Monday will run from Gloucester to Hull, reaching there in time for the boats of the club to enter the Y. R. A. open race of the Hull-Massachusetts Y. C.

The schooner Constellation, Francis Skinner, Jr., arrived at Marblehead from Newport Thursday. At the Marblehead yacht yard, W. O. Gay's 70-footer Athene has been hauled out for cleaning and overhauling. It is understood that she will go out for a try with Independence this week. It is also expected that the schooner Hildegarde will enter the game.

JOHN B. KILLEEN.

Brooklyn Y. C.

GRAVESEND BAY.

Saturday, June 8.

THE second race of the Gravesend Bay Y. R. A. was sailed under the auspices of the Brooklyn Y. C. The wind was strong from the west, making reefs necessary for some of the boats. They went twice around the usual courses. The first leg was a beat to the mark off the Atlantic Y. C. club house, the second leg was a broad reach to the Fort Hamilton buoy, and then it was a close reach back to the home mark. The summary follows:

Sloops—36ft. Class—Start, 3:35.

	Finish	Elapsed.
Akista, George Hill	5 18 30	1 43 30
Bonita, Haviland Brothers	5 28 39	1 53 39

Sloops—30ft. Class—Start, 3:40.

Squaw, Vice-Com. H. J. Heath	4 49 07	1 14 07

Sloops—25ft. Class—Start, 3:40.

Song and Dance, Mr. Luckenbach	4 54 30	1 19 30

Sloops—21ft. Class—Start, 3:40.

Wraith, Calvin Tomkins	4 59 00	1 19 00
Wink, W. A. Barstow	5 00 00	1 20 00
Elsie, C. P. Rosemon	5 02 07	1 22 07

Sloops—18ft. Class—Start, 3:40.

Kelpie, Mr. Brown	5 04 08	1 24 08
Pebble, R. W. Spear	5 05 33	1 25 33
Peanut, Calvin Brewer	5 06 00	1 26 00

Open Catboats—21ft. Class—Start, 3:40.

Martha M., R. Moore	5 08 58	1 28 58

The winners were: Akista, Squaw (sail over), Song and Dance (sail over), Wraith, Kelpie, Martha M. (sail over).

Manhasset Bay Y. C.

PORT WASHINGTON, L. I.

Saturday, June 8.

THE Manhasset Bay Y. C. held its annual regatta on Saturday, June 8. It was an ideal day for a yacht race. A strong but steady westerly breeze continued throughout the day. Com. Stephen W. Roach's steam yacht Emeline, the flagship of the club, was used as the committee boat. Twenty-nine boats started, and the racing in most of the classes was quite close. The boats of the 36, 30 and special 30 had a nineteen-mile course round the Gangway buoy to Matinicock Point, then to Delancy Point on the north shore and back to the finish line. After the beat out of the bay, the boats then had a broad reach to Matinicock, a beat to Delancy Point and a broad reach home. The 25 and 21 footers and knockabouts went to the Old Hen buoy and the Hen and Chickens reef and back, a distance of eleven miles. The 21 and 18 footers Manhasset Bay one-design boats and open catboats sailed a shorter course to the Old Hen buoy and back. The 36-footers were the first class to start, as no boats appeared in the 43ft. class, and the other classes followed at intervals of five minutes. At the start Memory got the lead, followed by Leda and Anoatok, and Hera got away before Esperanza in the special 30ft. class. In the 30ft. sloop class Alerion got the best of the start, with Oiseau second, Enpronzi third. Dot led Flyaway at the start in the 30ft. class, but the start of the day was when the raceabouts crossed the line. Snapper, handled by her new owner, Mr. Bryan Alley, got over first, with Rogue second, Sis third and Badger last. The strong breeze put the boats' rigging to a hard test, and three of them were disabled. Rogue lost her bowsprit, and as soon as that gave way her hollow mast snapped and went over the side. Sis immediately withdrew and went to Rogue's assistance. Snapper carried away a masthead runner and withdrew. Oiseau lost her bowsprit, but as she has a solid mast it remained intact. Mr. F. B. Jones scored his fourth consecutive win with Badger in the raceabout class. Harry Ward lost his first race in Lambkin, but the boat's jib was in bad shape. The summary follows:

Sloops—36ft. Class—Start, 12:40.

	Finish	Elapsed.
Anoatok, J. R. Martin, Jr.	3 43 43	3 03 43
Leda, H. L. Maxwell	3 37 36	2 57 36
Memory, W. N. Bavier	3 46 22	3 06 22

Sloops—30ft. Class—Special—Start, 12:45.

Hera, R. N. Ellis	3 48 14	3 03 14
Esperanza, H. O. Havemeyer, Jr.	3 46 21	3 01 21

Sloops—30ft. Class—Start, 12:45.

Enpronzi, Alfred Peats	4 02 30	3 17 39
Oiseau, J. R. Maxwell, Jr.	Disabled.	
Alerion, A. H. Alker	4 01 58	3 16 58

Catboats—30ft. Class—Start, 12:45.

Dot, C. T. Pierce	4 13 07	3 28 07
Flyaway, F. L. Kraemer	Withdrew.	

Catboats—25ft. Class—Start, 1:05.

Win or Lose, J. S. Appleby	Withdrew.

21ft. Raceabouts—Start, 12:50.

Rogue, F. T. Bedford, 1st	Disabled.	
Sis, E. T. Bedford	Withdrew.	
Snapper, A. B. Alley	Disabled.	
Badger, Thorsen Jones	2 44 29	1 54 29

S. C. Y. C. Knockabouts—Start, 1:00.

Ruby, G. E. Edwards	3 02 27	2 02 27

Manhasset Raceabouts—Start, 1:00.

Arizona, G. A. Corry	2 47 42	1 47 42
Bob, Phillips & Mayan	2 50 54	1 50 54
Mist, J. W. Alker	2 53 33	1 53 33
Lambkin, S. W. Roach	2 49 19	1 49 19
Firefly, Guy Standing	2 55 31	1 55 31

M. B. Y. C. Special Knockabouts—Start, 1:15.

Scintilla, J. R. Hoyt	2 55 31	1 40 31
Lassie, E. C. Wallace	2 59 27	1 44 27

Sloops—21ft. Class—Start, 1:05.

Ox, R. N. Bavier	3 10 00	2 05 00

Sloops—18ft. Class—Start, 1:10.

Nora, Louis Iselin	3 06 21	1 56 21
Chipmunk, B. Jacob	3 10 34	2 00 34
Mistral, A. C. Bostwick	3 02 50	1 52 50
Cricket, H. C. Preyer	2 53 10	1 43 00
Sora, W. Holy, Jr.	2 52 20	1 42 10

The winners were: Leda, Esperanza, Alerion, Dot, Badger, Arizona, Scintilla and Sora. Sail over: Ruby and Ox.

Edward MacLellan, Robert Jacob and Charles D. Mower were the Race Committee.

Wollaston Y. C.

WOLLASTON—QUINCY BAY.

Saturday, June 8.

THE first handicap race of the Wollaston Y. C. for the Chase cup was sailed in a strong westerly breeze, Saturday, June 8. The race was sailed off the club house in Quincy Bay. The entries included yachts of from 17 to 34ft. waterline. Neptune led to the first mark, when Claytonia pulled in ahead of her. Claytonia led to the finish, but Neptune won on time allowance. The summary:

	Length.	Elapsed.	Corrected.
Claytonia, W. S. Wiley, Jr.	33.02	1 41 37	1 25 01
Neptune, A. E. Linnell	26.02	1 42 31	1 20 36
Rover, J. L. Smith	31.00	1 53 55	1 33 48
Shamrock III., W. D. Given	22.00	2 02 08	1 37 11
Mudjekewis, A. L. Baker	25.00	Disabled.	
Thelma II., E. A. Merrill	22.02	Withdrew.	
Sea Gull, A. Shay	16.04	Withdrew.	
Canacum, E. Morse	23.11	Withdrew.	

JOHN B. KILLEEN.

Hull-Massachusetts Y. C.

Saturday, June 8.

QUITE a surprise was developed in the race for 25-footers in the first regular club race of the Hull-Massachusetts Y. C. on Saturday, June 8. It was the first complete defeat which the champion Flirt has yet sustained, and it was so clean that there was no room for doubt that it was done on its merits. Calypso, designed and built by Hanley for A. W. Chesterton, was the boat that did the trick. In the race of the South Boston Y. C. on Memorial Day, Calypso did not show up very well, but she was then a new boat just from the shop. The cleats for her jib sheet were not even on her deck.

On Saturday she was again from the shop, but this time in better condition for racing. There was a rattling breeze blowing from the southwest, which was calculated to be good enough to try out any boat. They were given a three-legged course, which gave them a beat, a reach and a run. Both were at the line together at the start, with Flirt in the weather berth. Calypso pulled out from under the keel boat's lee, less than 100yds. from the starting line, and was never headed again during the race. She beat Flirt on every point of sailing, even on the windward leg, where Flirt has always been surpreme.

There was also a race between the 18ft. knockabouts, in which Aspinquid again proved a winner. Aspinquid was sailed by Dr. Litchfield, which is calculated to make her faster by three minutes over the course sailed. These boats went over the starting line in a bunch, but separated soon after, Aspinquid taking the lead, which she never relinquished. The summary:

25-Footers.

	Elapsed.
Calypso, A. W. Chesterton	1 52 17
Flirt, Fabyan & McKee	1 56 59

18-Footers.

Aspinquid, W. A. Comey	1 49 19
Bonito, G. H. Wightman	1 50 17
Barbara, A. F. Hayden	1 53 19
Tethla, C. W. Cole	1 53 21
Bacchante, Humphrey & Lauriat	1 53 41
Ayaya, W. P. Keyes	1 58 08
Oriana, Alfred Douglas	1 59 29

Corinthian Y. C.

ESSINGTON—DELAWARE RIVER.

Thursday, May 30.

THE Corinthian Y. C. held their opening race on Thursday, May 30. The weather was clear and the wind was southwest. The times were:

Essington to Claymont—Six Miles—51ft. Class—Start, 11:05.

	Finish	Elapsed.
Liris, Robert Barrie	1 10 16	2 05 16
Narounya, R. P. White	1 02 16	1 57 16

36ft. Class—Start, 11:05.

Paukewis, C. Clark, Jr.	12 44 56	1 39 56
Alays, H. D. Henry	12 51 56	1 46 56
Fidelio, H. S. Jeanes	12 46 09	1 41 09
Vaya, Dr. R. Harte	1 05 09	2 00 09

Knockabout Class—Start, 11:25.

Raccoon, B. Koons	12 56 10	1 31 10
Gavota, R. W. Koons	12 58 47	1 33 47
Grilse, E. D. Toland	1 01 02	1 36 02

Return from Claymont to Essington—51ft. Class—Start, 2:45.

Liris	5 06 05	2 21 05
Narounya	4 39 03	1 54 03

31ft. Class—Start, 2:45.

Paukewis	4 34 32	1 49 32
Alays	4 36 55	1 51 55
Fidelio	4 35 40	1 50 40
Vaya	5 26 45	2 41 45

Knockabout Class—Start, 2:50.

Raccoon	5 16 53	2 26 53
Gavota	4 52 40	2 02 40
Grilse	5 20 55	2 30 55

Winthrop Y. C.

WINTHROP—BOSTON HARBOR.

Saturday, June 8.

THE first special handicap race of the Winthrop Y. C. was sailed off the club house Saturday, June 8. The yachts were divided into two classes—21 and 25 footers, and 18 and 16 footers. The 25-footer Thordis won easily in the first class and Della had room to spare in the second class. The summary:

21 and 25ft. Class.

	Elapsed.	Corrected
Thordis	0 42 37	0 42 37
Harriet	0 48 05	0 45 05
Ruth	1 04 00	0 47 00
Freja	0 55 10	0 52 10
Alert	0 56 20	0 50 20
Zelica	0 55 42	0 52 42
Winthrop	1 03 50	0 51 50

18 and 16ft. Class.

Della	0 54 31	0 54 31
Dupe	1 03 10	0 58 10
Hector	1 03 40	1 01 40
Martha	1 09 45	1 01 45
Virginia	1 15 28	1 06 28
Flash	Disabled.	
Bubble	Withdrew.	
Louise	Withdrew.	

JOHN B. KILLEEN.

South Boston Y. C.

CITY POINT—BOSTON HARBOR.

Saturday, June 8.

THE first handicap race of the South Boston Y. C. was sailed Saturday, June 8, in a strong westerly breeze. There were three classes and nine starters. The 30-footer Emma C., which in former years kept the boats of her class in the Y. R. A. guessing, had an easy win in the first class. In the second class Disa, an 18ft. knockabout, won easily from boats which were much larger. Maison had a soft time in the third class. The summary:

Class A.

	Elapsed.	Corrected.
Emma C., Peter Coupal	1 16 19	1 15 19
Bohemian, George Field	1 35 46	1 27 46

Class B.

Disa, G. A. Brackett	1 15 27	1 12 27
Nancy Hanks, George Lane	1 23 20	1 19 20
Marguerite, J. Palmer	1 23 20	1 20 20
Empire, Frank Cobb	Did not start.	
Jungfrau, H. B. Bailey	1 38 34	1 34 34

Class C.

Maison, J. Blaisdell	1 51 52	1 47 52
Angora	Did not start.	

JOHN B. KILLEEN.

Riverton Y. C.

RIVERTON—DELAWARE RIVER.

Thursday, May 30.

THE Riverton Y. C. opened the season on Thursday, May 30, sailing their first race on that day. The wind was strong and steady from the southwest. The summary:

Catsboats—Start, 3:10.

	Finish	Elapsed.
Catharine, J. H. Reese	4 58 00	1 48 00
Gertrude, G. N. Halloway	5 00 00	1 50 00
Sea Gull, Lee Cook	5 04 30	1 54 30

Barolyn, C. C. Rianhard, broke mast, near gaff, before passing first buoy.

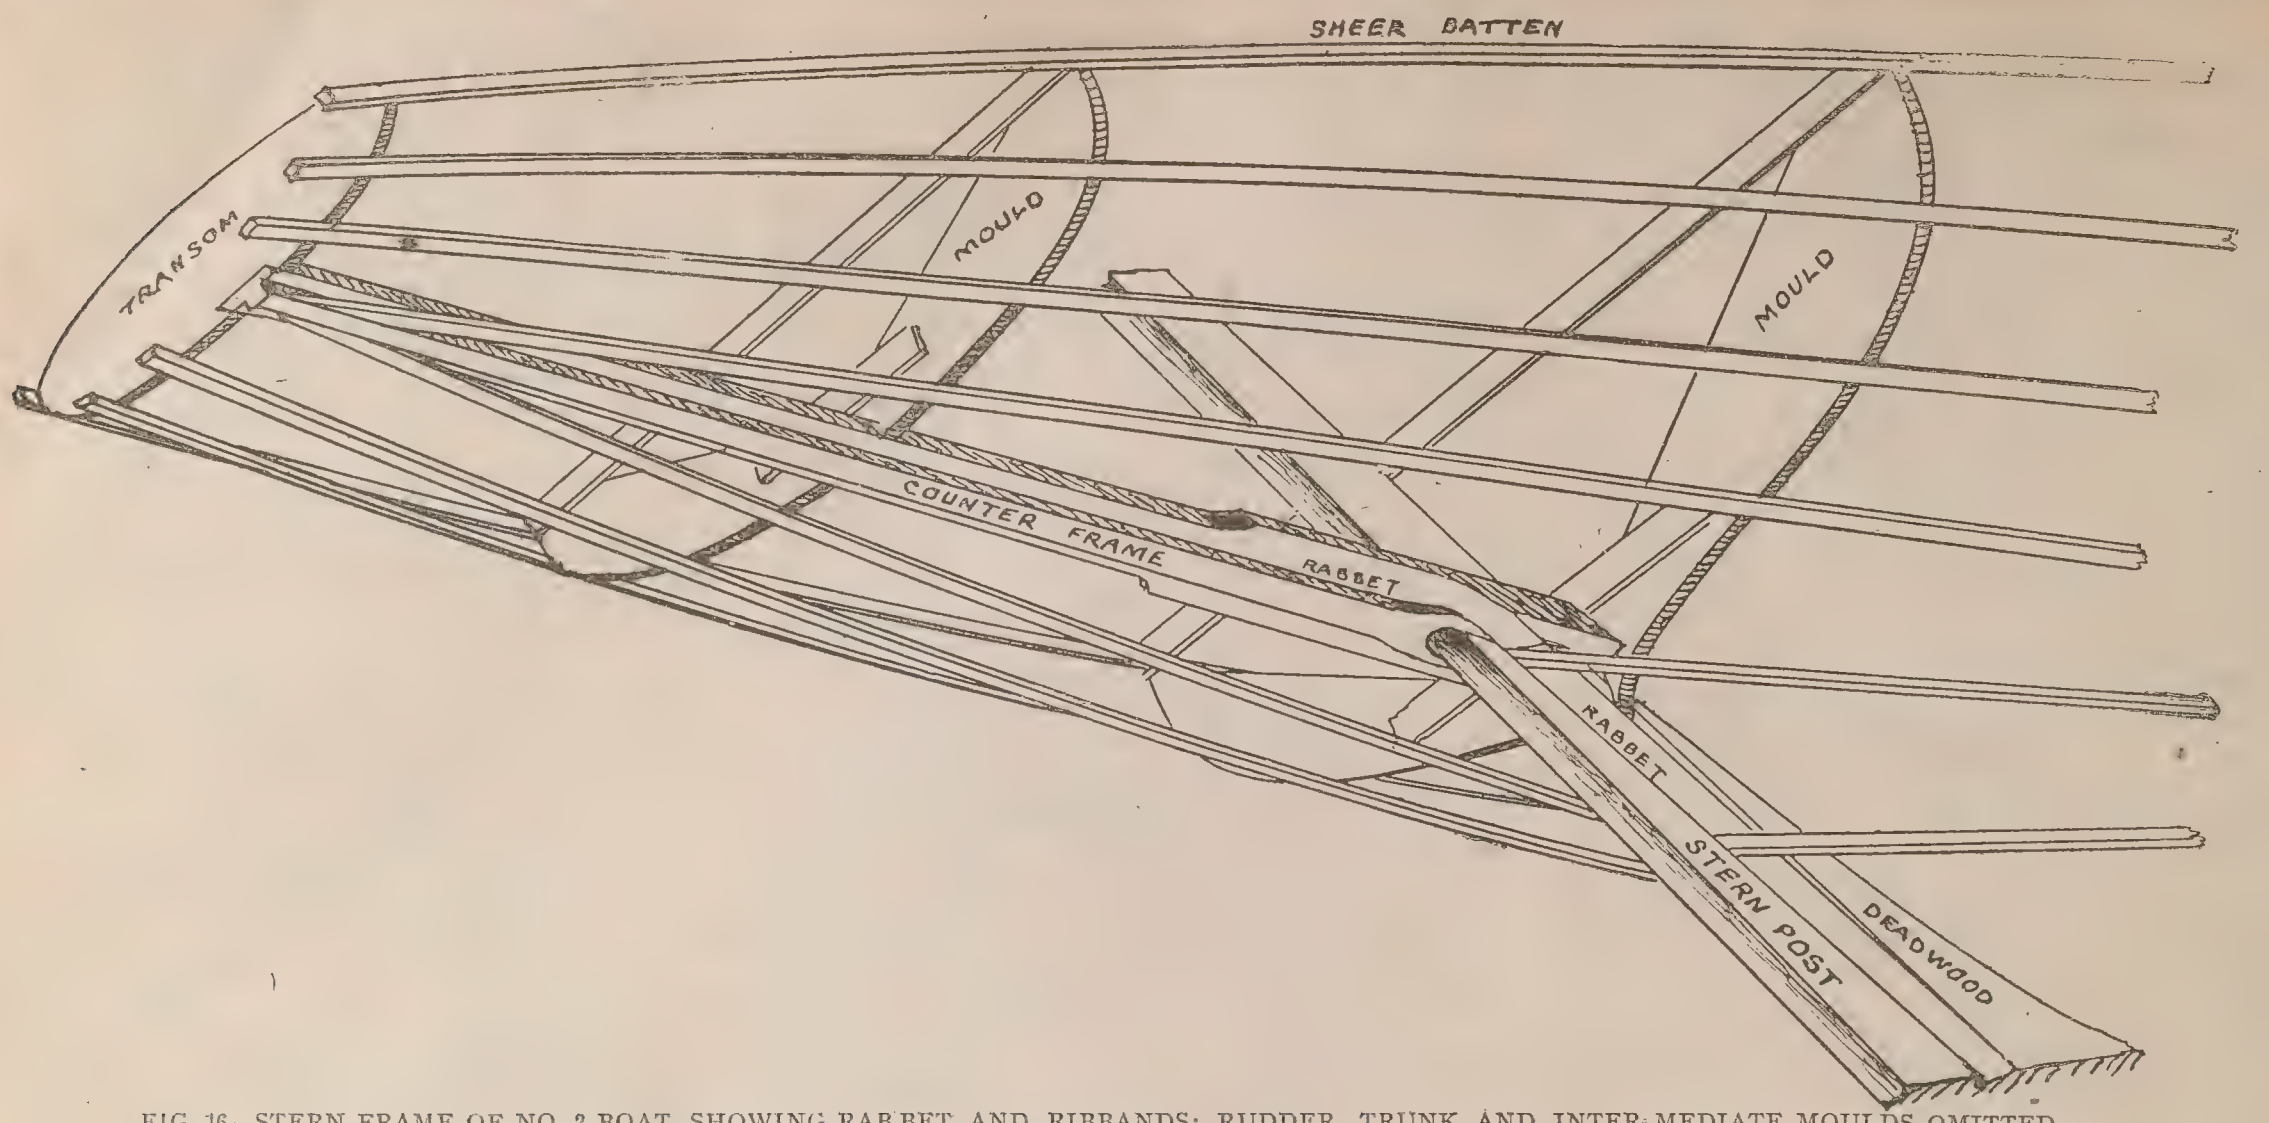

FIG. 16.—STERN FRAME OF NO. 2 BOAT, SHOWING RABBET AND RIBBANDS; RUDDER, TRUNK AND INTERMEDIATE MOULDS OMITTED.

Second Class—Start, 3:10.

Serapis, Edwin Bonsack	5 15 00	2 05 00

Jib and Mainsail Class—Start, 3:15.

Fiona, J. H. Hillman	5 10 00	1 55 00
Pumpkin, J. Frishmuth	5 35 00	2 20 00
Kaloola, H. W. Emmons	Withdrew.	

Fiona failed to finish inside of buoy and lost race.

Mosquito Boats—Start, 3:20.

No. 11, A. Cook	5 00 00	1 40 00
No. 2, C. M. Biddle, Jr.	5 01 00	1 41 00
No. 14, H. Walnut	5 05 00	1 45 00
No. 1, S. Solomon	5 07 00	1 47 00

No. 14 lost first place by finishing outside of buoy.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter IV.—Cutting the Rabbet and Fairing the Moulds (Continued).

THE most difficult parts to cut are where the rabbet turns from the under side of the keel to the side of the stem in No. 1, and where it runs off the sternpost on to the counter frame in No. 2 (see sketch). In each of these cases the only way is to cut plenty of small sections as before, and continually try the rabbet gauge and battens, using the large batten at various angles over the moulds, so as to fair the rabbet in all directions. As the planking will run past the transom in both boats, all that need be done here is to cut the transom nearly to shape, and fit the joint between plank and transom as each plank goes on.

I have, perhaps, put the cart before the horse in dealing with the rabbet before explaining the method of fairing the moulds by means of ribbands or battens; but it is usual to cut the rabbet roughly to nearly its full depth, and then to fair up the moulds before finishing off the rabbet.

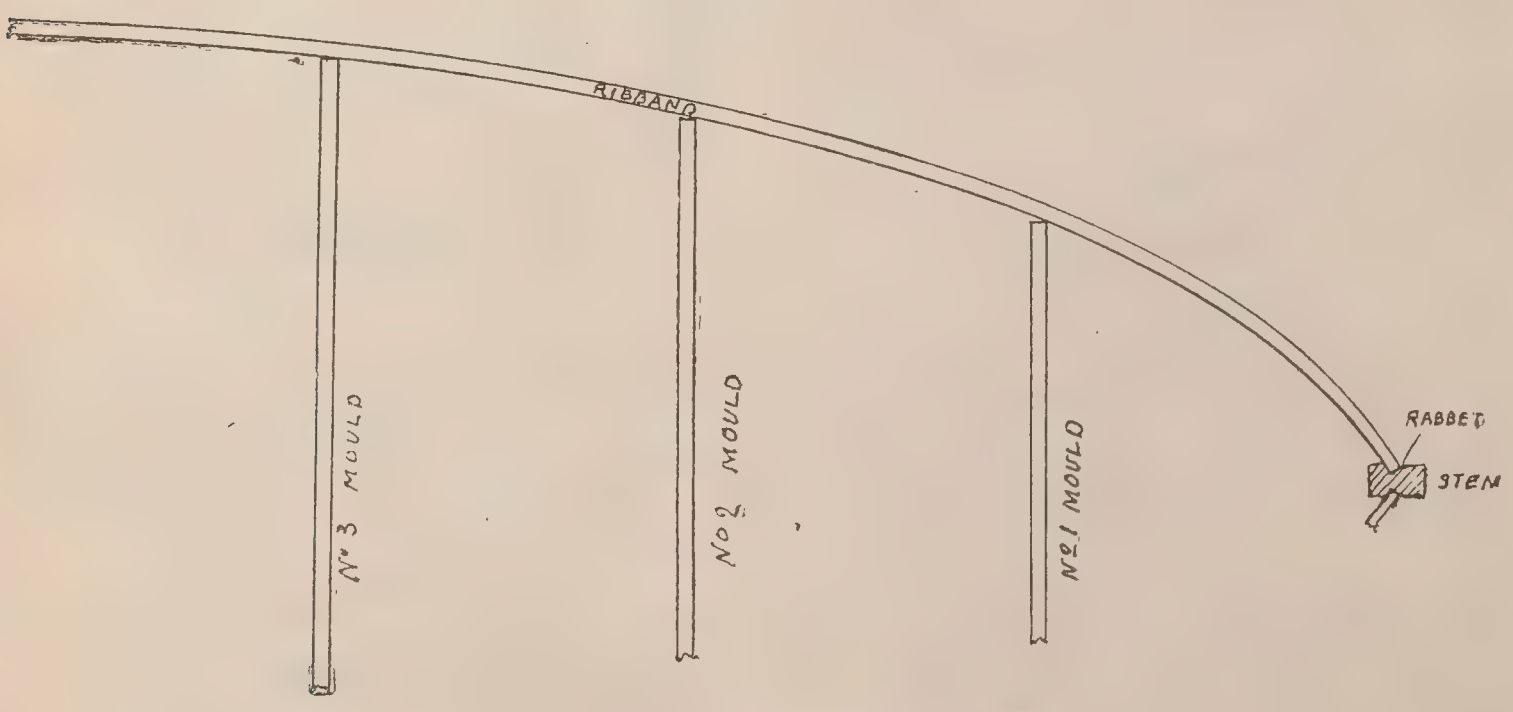

FIG. 17.—METHOD OF FAIRING MOULDS AND STEM RABBET.

This fairing is done by nailing over the moulds six or eight long ribbands of Oregon pine, or other suitable wood, clear of knots, and at least as long as the boat, with a square section of say ¾ by ¾in. for the centerboard boat, and 1in. by 1in. for the keel boat. They should be fairly evenly spaced on the midship mould, and nailed to it with 2in. wire nails, and then bent carefully around all the moulds and fastened into the stem rabbet, and to the edge of the transom. When the curve is sharp, as in the fore ends of the upper battens, they may be tapered a little, to enable them to bend easily, but the taper must be quite fair and very gradual.

If the battens do not touch all the moulds fairly, they must be make to do so by either cutting away the moulds that are too full or by packing up with slips of wood on the slack places. This is one of the most difficult parts of the whole work, requiring great patience and judgment and a correct eye. It is very seldom that all the moulds are absolutely correct, no matter how carefully they have been made, and there are sure to be errors both in the original design, the full-sized drawing on the floor, and also in making the moulds from the drawing and setting them up; so that it is only by careful fairing with the battens that these errors can be put right.

A good rule in fairing when an error is found in a mould is to go carefully over the measurements at that station and see if the error is in the mould itself, or in the spacing, or merely through the batten failing to bend fairly. If you cannot find the cause in any of these, then get well away from the boat, first at one end and then at the other, and try to see if the fault is not at some other mould which is either too small or too large.

Also see if the ribband is pinned—that is to say, fastened at the ends so that it is forced into a greater curve than that required by the moulds, as this should not occur unless a very sudden curve is needed, as in the fore ends of the upper ribbands. Each ribband should be pulled toward the ends of the boat before it is fastened, and should be fastened first to the mid section and then successively to each of the moulds till the ends are reached.

Do not attempt to start timbering till you have got the moulds, ribbands and rabbet thoroughly fair, the latter being cut to its full depth and finished, as once the timbers are in place it will be difficult to make more than very slight alterations in either moulds or rabbet.

V.—Timbering and Planking.

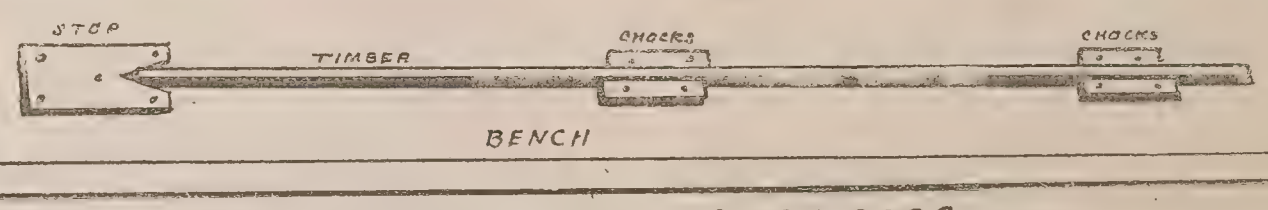
When choosing the American elm for the timbers (or ribs), see that it is white in color, close-grained, and free from shakes or knots. Get it cut at a saw mill, so that it is in convenient lengths, say a foot or 18in. longer than the lengths required for the longest timber, and 1-16in. over the moulding and siding given in the specification to allow for planing up. By having the wood cut in planks and planed up to the exact thickness of the timbers, and then sawn into the proper widths, you can save the labor of planing two sides of each timber; and as this is a very tedious job it is well worth the extra shillings charged at the mill.

Before starting to plane them up, two pairs of cleats or chocks must be screwed to the bench, so that they are some distance apart in each pair, as the width of the finished timber, and an end stop cut into a V to hold the end of the timber firmly. All these must be ⅛in. lower than the finished timber will be, so as to clear the plane. The first pair of chocks should be about half the length of the longest timber from the end stop, and the second pair a similar distance beyond the first.

The object of these chocks is to hold the timbers firmly on the bench while being planed, and to prevent them doubling up and breaking, as they would do if simply laid on the bench in the usual manner. Great care should be taken to set the plane carefully and to keep it sharp, otherwise it will tear the elm badly and spoil most of it.

Having prepared the timbers, their spacing must be set off along the keel and sheer batten, according to the specification, taking care that none of them come just on a mould. At the bow it will be found that the distance from the stem of No. 1 mould is much greater along the sheer batten than it is on the keel. Therefore, if the spacing were the same on both, there would be a gap on the sheer batten near the stem with no timbers. To obviate this the spacing on the keel is slightly reduced, especially where it runs into the curve of stem, and the spacing on the sheer batten correspondingly increased, so as to set the same number of spaces on both. The result is that in a boat with a bluff bow the timbers are almost in the form of a fan from the stem scarph to the deck. In boats with an easy curve of stem and deck line like No. 2 this is not very apparent, but it is there to some extent, and must be allowed for in spacing.

As the heels of the timbers are to be let into the keel, a small joggle or notch is cut in the top of the rabbet for each timber to fit into; and to get these joggles the right width and depth a simple way is to get two cheap dovetail saws about 6 or 7in. long, set in straight handles, and knock the handle off one. Now get a ¼in. hole drilled through both ends of each of the blades and screw them side by side, with a pair of ¼in. gutter bolts,



METHOD OF HOLDING TIMBERS FOR PLANING

FIG. 19.—METHOD OF HOLDING TIMBERS FOR PLANING.

which can be bought at any iron monger's. Before screwing them up, slip a piece of hardwood, of slightly less thickness than the siding of the timbers, between the two saw blades, and let the bottom of it be parallel to and at the same distance above the teeth of the saws, as the depth to which the joggle is to be cut. The two bolts will of course pass through the wood, and when screwed up firmly, will hold all three together, so that they can be used as a single saw.

By this means you saw both sides of the joggle at once, and it is impossible to cut it too deep, as the gauge will stop the saws cutting when they get down to the wood.

Before cutting the joggles, run a gauge line along the side of the keel of the centerboard boat, as it will be an extra guide to regulate the exact depth to which they should be cut; and there is no room for alteration in a keel of this sort, owing to the small amount of back rabbet.

In cutting the joggles, the points of the saws should be used, and the cut started on the angle of the back rabbet and side of the keel, holding the saw at such an angle that when it is down to its full depth at the deepest part on the angle, the point of the saw just cuts the inner angle of the rabbet. Remove the wood between the pair of saw cuts with a narrow chisel, so that you have a wedge shaped notch, as shown in the sketch.

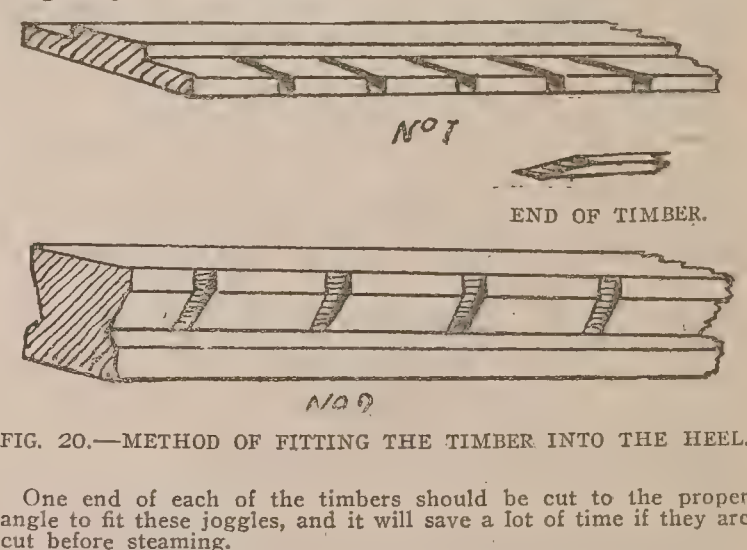


FIG. 20.—METHOD OF FITTING THE TIMBER INTO THE HEEL.

One end of each of the timbers should be cut to the proper angle to fit these joggles, and it will save a lot of time if they are cut before steaming.

The timbers and keel being prepared according to the foregoing instructions, get up steam in the kiln or steam chest, and put the timbers in for half an hour's steaming. When they are soft, start with the longest, in the middle of the boat, taking each one quickly from the kiln, and fitting the heel into the joggle in the keel, which, if it is properly cut, should hold it firmly, but a nail must be driven through it into the keel to make sure; then pull the timber gently into its place inside the ribbands, working from the keel to the sheer batten, to which the outer end of each should be nailed, but see that every timber is fairly touching all the battens befor nailing the end to the sheer batten.

The boat is now ready for planking, and we will suppose the material for this to be ready for use, cut to the required thickness, and of ample length and width. Before the planking is started, the widths of all the planks must be set off on the midship mould, stem and transom, or sternpost and counter frame, as the case may be. To do this correctly will take a fair amount of patience to avoid any of the planks running off to a point at the ends, and at the same time to get them round the turn of the bilge and quarters without splitting.

A fairly safe rule is to have the narrowest planks at the bilge, and the widest at the garboard next the keel. The top strake or sheer plank is usually a little wider than the one below it, and they gradually get narrower to the bilge, and then widen out to the garboards. The forward ends of all, except the top strake and garboard, should be about the same width where they meet the stem, but at the transom of No. 2 boat they must be narrowest at the top strake, as the sharpest curve in the transom is just at the deck, and it would be impossible to work a wide plank over such a short turn.

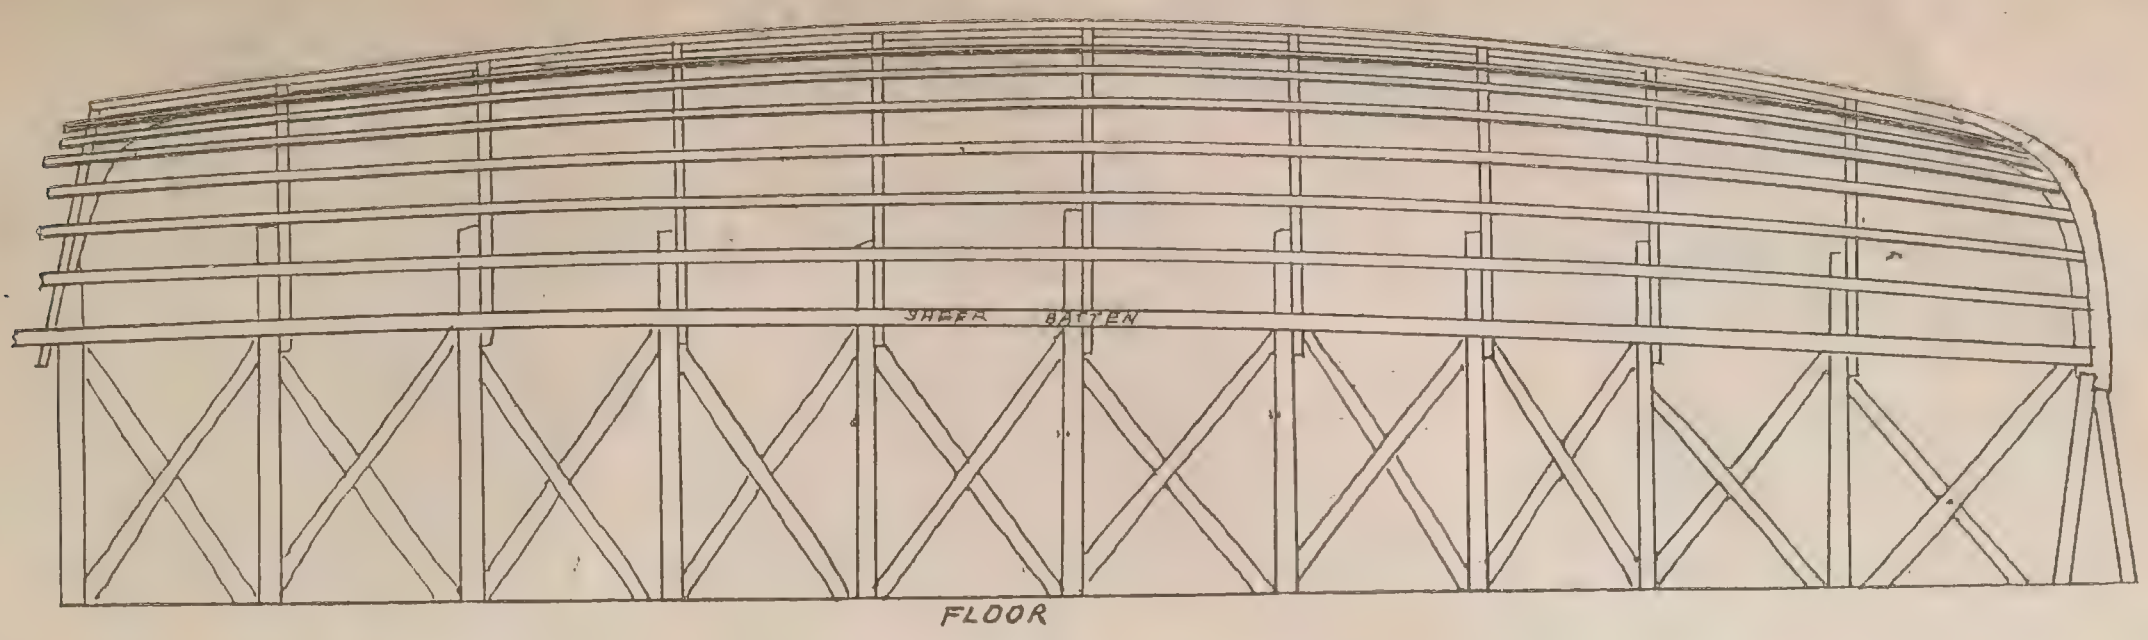

FIG. 18.—FRAME OF NO. 1, WITH RIBBANDS IN PLACE READY FOR TIMBERING AND PLANKING.

The Independence Correspondence.

THE Independence controversy is closed so far as the New York Y. C. is concerned, and unless Mr. Lawson conforms to the rules and regulations of the club, which he has not seemed disposed to do up to date, his boat will not be seen in the trial races. The letters are as follows:

"BOSTON, May 25.—Commodore Lewis Cass Ledyard, Chairman of Committee, New York Y. C.—Dear Sir: Your letter of yesterday with the assurance that my boat can take part in the trial races, and, if selected, may defend the cup, was received this morning.

"I will at once charter an interest in her to such person or persons as may be agreeable to your committee and will give such person or persons full control and management of her during the match. I thank your committee for having suggested a way to fairly determine in a sportsmanslike manner which boat shall be selected to defend the cup, and I will do all in my power to make the contest a success. Believe me, yours very truly,

"THOMAS W. LAWSON."

"41 West Forty-fourth Street, New York, May 28.—Thomas W. Lawson, Esq.—Sir: I have received your letter of May 25, in which you say that you will charter an interest in your yacht to such person or persons as may be agreeable to the committee, and will give such person or persons full control and management of her during the match.

"Any member or members of this club to whom you may elect to charter your yacht by a charter which will vest in him, or them, during its term, the full control and management mentioned in your letter, would be a 'person or persons agreeable to this committee.'

"If you will refer to my letter of May 10 you will find that this matter has been already fully explained to you.

"Respectfully,

"LEWIS CASS LEDYARD, Chairman."

"BOSTON, May 29.—Commodore Lewis Cass Ledyard, Chairman of Committe, New York Y. C.—Dear Sir: Your letter of 28th inst. received this morning. I have handed the entire correspondence to my counsel with instructions to draw a form of charter in accordance with the agreement reached therein.

"Upon receipt of same, and before selecting the members of your club who will be asked to act, I will submit same to you for your approval. Believe me, sir, yours very truly,

"THOMAS W. LAWSON."

"41 West Forty-fourth Street, New York, June 3.—Thomas W. Lawson, Esq.—Sir: In reply to your letter of May 29 I beg to say that it is not necessary for you to submit to the committee the form of any charter you may propose to make.

"It is the duty of any member chartering a yacht to notify the secretary of the club. He thereby accepts full responsibility for the conduct of the vessel.

"The arrangement between the owner and the charterer is, as already stated to you, one wholly between them.

"It is the custom of the club to accept the statement of the member without further inquiry, and the committee is not aware of any reason for departing from that custom.

"Respectfully,

"LEWIS CASS LEDYARD, Chairman."

"BOSTON, Mass., June 5.—Commodore Lewis Cass Ledyard, Chairman of Committee, New York Y. C.—Dear Sir: Your letter of June 3 received. As I informed you in my letter of May 29, I handed the entire correspondence to my lawyers with instructions to draw a charter in conformity with the views of both of us as expressed in the letters.

"I inclose herewith such charter, duly executed by me, together with a copy of the letter of the attorneys to me, giving their opinion of and their reasons for the form in which the charter is drawn. My own opinion is that they have fairly and successfully overcome the seeming obstacle by making a charter which, while it allows you to maintain your position that the vessel defending the cup is the representative of your club, also allows me to maintain the position which I have held from the start, viz.: that any American owning the best American boat may defend the cup without giving away his boat.

"In asking the members of your committee to accept the position of the charterers, I wish to assure you that I will do everything necessary to free you in every way from owners' duties. My captain, officers and crew are in every way able and competent; the designer, Mr. Crowninshield, will be with the boat, and as I will personally manage my boat through the season I will be only too pleased to give to the charterers all the assistance desired.

"I trust the charter will be entirely satisfactory and that the members of your committee will accept the same. If, however, it should not in whole or in part meet their views, kindly send me one with any changes you may desire. Believe me,

"Yours very truly

"THOMAS W. LAWSON."

The charter in full follows:

"I, Thomas W. Lawson, of Winchester, Middlesex county, State of Massachusetts, sole owner of the yacht Independence, do hereby charter, devise and let such interest in the said yacht Independence as is hereinafter expressed and set forth, to Lewis Cass Ledyard, S. Nicholson Kane, August Belmont, C. L. F. Robinson, J. V. S. Oddie, E. D. Morgan, E. M. Brown, J. Pierpont Morgan and C. Oliver Iselin, members of the New York Y. C., for the period and for the purposes, conditions and limitations hereinafter set out.

"Whereas, The yacht Independence was built by said Lawson for the purpose of offering her as a candidate for the honor of defending the yachting trophy called 'The America's Cup,' and of defending the said cup and keeping the same in America, provided said yacht be the best American-built vessel for that purpose, and the New York Y. C. holds as trustee said cup under a deed of gift in trust, and the New York Y. C. has notified said Lawson, owner as aforesaid, that a match for said cup can be sailed only between a challenging (foreign) yacht club on the one hand and the said New York Y. C. on the other, and is not open to other contest (nor to defense by the best American-built yacht unless entered for the match by a member of said yacht club which holds said cup as trustee); and,

"Whereas, The New York Y. C. has notified said Lawson, owner as aforesaid, that it, said yacht club, trustee as aforesaid, has made certain constitution, by-laws, rules and regulations or customs, in addition to said deed or deeds of trust, to the effect that the said yacht Independence, in order to enter, if selceted for the purpose the races for the defense of the America Cup, 'must be qualified to fly the flag of the New York Y. C.,' and 'be under the responsible maangement of one or more of its members,' and that to be so qualified she, the yacht Independence, must be either 'enrolled in the name or names of members' of the New York Y. C., trustee as aforesaid, or must be 'chartered to a member or members' of the club, trustee as aforesaid, 'for a period of not less than two months;' and,

"Whereas, The New York Y. C., trustee as aforesaid, upon being informed by said Lawson, owner as aforesaid, that he would charter an interest in said yacht, 'to such person or persons as may be agreeable to the committee' of the New York Y. C., and would 'give such person or persons full control and management' of the yacht 'during the match,' notified the said Lawson that 'any member or members' of said club to whom he might elect to charter the yacht 'by a charter which will vest in him or them during its term the full control and management' of her during the match 'will be agreeable' to said New York, Y. C.; and,

"Whereas, The said Lewis Cass Ledyard, S. Nicholson Kane, August Belmont, C. L. F. Robinson, J. V. S. Oddie, E. D. Morgan, E. M. Brown, J. Pierpont Morgan and C. Oliver Iselin are members of the New York Y. C. and persons agreeable to the said club;

"Now, this instrument witnesseth: That the said Lawson in order that the said yacht Independence may qualify, provided she show herself to be the best American boat, to enter the match to defend the said cup, does hereby execute this charter on the following conditions:

"First—That, provided the charterers or the New York Y. C. notify said Lawson that said yacht Independence has been selected to defend the America Cup, the said Lawson will deliver such interest in said yacht as is necessary to give to the charterers sole control and management during the match for the America Cup to the charterers in the port of New York three days preceding the date fixed for the first match or cup race, such interest in the said yacht to be retained by the said charterers for a period to and including the last match for the said America Cup, and in general for such period as may be necessary to qualify said yacht to enter and take part in said match.

"Second—That the said Lawson will provide and pay for all the provisions and wages of master, officers and crew and other expenses necessary to maintain the said yacht and those in connection with her, and such sails, spars, rigging and other things that may be necessary in order to properly carry out the purpose for which this charter is made.

"Third—That the charterers shall not have the right to use the said yacht for any other purpose than that heretofore specified, or what may be incident thereto, and it is distinctly understood and made a part of this instrument that said Lawson shall continue to be the sole owner of said yacht Independence at all times until said match shall have been completed.

"Fourth—That the charterers are to see that the purposes for which this charter is made are complied with.

"Fifth—It being the purpose and effect of this charter to give unto the parties to whom said yacht is hereby chartered all rights and powers, both as to time and as to management and control, which are necessary to qualify said yacht Independence to enter and take part in said match for the America Cup, and this instrument shall be so construed.

"In witness whereof I, the said Thomas W. Lawson, hereunto set my hand and seal this 6th day of June, A. D. 1901.

"THOMAS W. LAWSON."

The opinion of Mr. Lawson's attorneys is as follows:

"BOSTON, June 5.—Mr. Thomas W. Lawson, 33 State Street, Boston.—Dear Sir: At your request we have examined the correspondence between yourself and the chairman of the committee of the New York Y. C. for the purpose of drawing a charter which should conform to the views of both parties as expressed in the letters which have passed between you, and we herewith inclose a form of charter which seems to us to meet the requirements.

"We have also examined copies of the deeds of gift under which the America Cup is now held in trust, and incidentally, the constitution and by-laws of the New York Y. C., and so far as we are able to procure the information, the 'customs' to which one letter of the committee makes reference.

"The committee of the club seems to be of opinion that, either by the deeds of gift or by the constitution or by-laws or customs of the club it is necessary for the Independence to be under the control and management of one or more of its members during the match. It is unnecessary for us to comment on the legality of a trustee modifying the terms of a deed of trust for its own benefit, for, as we understand it, you desire a charter drawn to meet the views of both of you, and this is not impossible, as the inclosed form indicates.

"The committee is, of course, familiar with the fact that in the past, since the cup has been in the possession of the New York Y. C., it has been defended by owners other than members of the New York Y. C., and in the later letters of the committee—see letter dated May 28—they recognize the propriety of your chartering only such an 'interest in your yacht' as will give to the members of the club the full control and management mentioned in your letter—i. e., during the match. In other words, their later letters only ask for a technical compliance with their views, and they do not now ask that you transfer your actual ownership.

"Your own position in the matter is clearly stated in your first letter to the committee, i. e., the letter of April 25, in reply to their letter of April 23, viz.: that you would give to the New York Y. C. full control and management—that is repeated, substantially, though in different words, in your subsequent letters—though you have steadfastly pointed out one limitation, viz.: that you will not in fact part with your ownership to any individual, nor become a party to a deceptive pretense of transfer of ownership. You will, however, notice that in their letters of May 24 and May 28 the committee recognizes that your boat may race—not merely a boat which you now own may race if you cease to own her, but your boat; and the committee's letter of May 24, and your own letter of May 25 define the practical method of complying with the requirements of your own previous correspondence, viz.: the open retention of ownership, and at the same time of complying with the requirements of the committee by giving over to a member or members of the club full control and management during the match.

"The committee has in its later correspondence said nothing regarding a desire to control your boat during the trial races, as distinguished from the match or cup race; apparently recognizes the incongruity, if not impropriety, of asking to control your boat while in competition with their own.

"You will notice that we have inserted the names of the members of the Challenge Committee of the New York Y. C. as the charterers. We entirely agree with your own suggestion that it would be inappropriate for you to make any invidious distinctions by the selection of a particular name from the list of the New York Y. C members, especially as the charter is only demanded by the committee to technically conform to their views. It would have seemed most appropriate to name all the members of the club as charterers were this not impracticable; the only remaining course seems to be to select certain officials of the club, and as this committee consists of the only members of the club whom you officially know; as they opened up a correspondence with you, and declined to express any preference, these persons are most naturally the ones to assume the duties which they themselves demand to have assumed by some one.

"We have, therefore, drawn a charter, which exactly meets the requirements of both of you, and have incorporated the material portion of the correspondence as the simplest and clearest method of expressing these requirements. Yours truly."

Commodore Lewis Cass Ledyard's reply to all this, which closes the subject, was sent on June 7, and is as follows:

"41 West Forty-fourth Street, June 7.—Thomas W. Lawson, Esq.—Sir: Your letter of June 5 was received this morning. The papers inclosed therewith consisting of an instrument signed by you and a copy of a letter addressed to you by counsel, whose name is not disclosed, are herewith returned to you, the committee having notified you on June 3 that it did not desire you to submit to them a form of any charter you might propose to make.

"Throughout the entire correspondence this committee has been anxious to believe that you had no other object than to avail yourself of such reasonable regulations as might be necessary to qualify the Independence to compete for the honor of defending the cup, and they have, therefore, in spite of many things in your letters to which exception might have been taken, treated you with uniform courtesy.

"Your last letter, however, with its inclosures, indicates a settled purpose on your part to misunderstand the position of the committee, which has been again and again stated to you in terms too plain to be open to any but willful misconstruction.

"It is evident that further discussion can serve no useful purpose, and the committee therefore must decline to pursue the subject further with you.

"If a member of this club notifies the secretary that he has chartered the Independence, or that he has accepted a transfer of her, it will be for such member to enter her for such events as she may be qualified to enter. Respectfully,

"LEWIS CASS LEDYARD, Chairman."

Yacht Club Notes.

The open spring regatta of the Morrisania Y. C. will be sailed Sunday, June 23, over the course in the East River and Sound. The yachts will sail in three divisions, and the start will be made at 11 A. M. from a buoy anchored off the club house at One Hundred and Fifty-sixth street and the East River. Entries will close with H. J. Bartro, Secretary of the Regatta Committee, on or before June 23.

The Regatta Committee of the Larchmont Y. C., John F. Lovejoy, Howard W. Coates and Frank Hardy, has issued a circular announcing the spring regatta of the club, which will be sailed on June 15. This regatta is open to yachts of the New York, Eastern, Seawanhaka Corinthian, Atlantic, American, New Bedford, New Haven, New Rochelle, Corinthian of Marblehead, Hull, Indian Harbor, Riverside, Horse Shoe Harbor, Corinthian of Philadelphia, Sea Cliff, Knickerbocker, Huguenot, Shelter Island and Massachusetts Bay yacht clubs. There will be races for all the regular classes according to the club's classification, and for special 30-footers, Larchmont special 25-footers and raceabouts. Prizes will be given in each class where there are two starters, a second prize where there are four starters, and a third prize where there are five or more starters. The preparatory signal will be made at 11:30 o'clock. Entries must be lodged with the Regatta Committee at Larchmont not later than 8 o'clock on Thursday evening, June 13. All yachts entered for this regatta must be reported to the Regatta Committee at the Club house before 9:30 o'clock on the morning of the race, when the owner will receive a chart of the course and sailing instructions. The tug C. P. Raymond has been chartered for the use of the committee, and will carry a limited number of members. Tickets are $1 each.

The Regatta Committee, N. Y. Y. C., has issued the programmes for the club's fifty-fifth annual regatta, and the races for the Glen Cove cups. The former will be sailed over the regular courses down the lower bay and around the lightships, on Thursday, June 20, while the latter will be over a triangular course on the Sound, starting from a line between the committee boat and a mark one-quarter of a mile from Matinicock Point buoy, on Tuesday, June 25.

Entries are invited for the several schooner and single-masted and yawl classes in the annual regatta, for which prizes are offered in each class—a cup for the first boat, if two or more start, and a cup for the second, if four or more start, the cups for the yachts in cruising trim being two-thirds of the value of those offered for the boats in racing trim.

The Bennett regatta cups—a cup for schooners and a cup for single-masted vesse's and yawls—will also be sailed for, in racing trim, over Course No. 1, around Sandy Hook Lightship. These cups may be seen at the club house.

Entries for the annual regatta must be made in writing and lodged with the Regatta Committee at the club house before 11 o'clock in the morning on June 19.

The iron steamboat Cepheus, provided for members and guests of the club on regatta day, will leave Pier No. 1, North River, at a quarter past ten o'clock punctually.

The Glen Cove or N. Y. Y. C. Station No. 10 races are for all the classes, and also for the 30-footers owned by members. In each class there will be a prize for the first boat if two or more start, and a prize for the second if four or more start.

The start of the Glen Cove races will be made at half-past eleven o'clock. The usual preliminary and preparatory signals and intervals of time will be given for the schooners and sloops; but the thirties will have a one-gun start.

Appended to the Glen Cove programme is this notice:

"The 90-footers will be started fifteen minutes after the others have been sent away. Their sailing directions will be issued later." It is not believed, however, that any of the nineties, or Cup yachts, will be present, but there is just a chance that Constitution and Columbia may be around, and hence the Regatta Committee want to be prepared for them.

Entries for the Glen Cove cups must be made in the same way as those for the annual regatta, and will close before 5 o'clock in the afternoon on Monday, June 24.

The Regatta Committee is composed of Mr. S. Nicholson Kane, Mr. Chester Griswold and Mr. Newbury D. Lawton.

YACHTING NEWS NOTES.

The Duke of Sutherland's steam yacht Catania has been chartered through the agency of Messrs. Gardner & Cox to Mr. R. A. C. Smith, N. Y. Y. C. She is a single screw yacht of 668 tons, and is 222ft. over all, 193.45ft. on the waterline, 26.7ft. beam and 15.35ft. deep. There is 9ft. headroom in her cabins. Catania was designed by Mr. G. L. Watson and was built by Messrs. D. & W. Henderson Co., in 1895. The yacht has a spar deck with deck houses of teak, the forward one containing the dining saloon and the other containing the owner's sitting room and library. On the lower deck there are six guests' staterooms and two bathrooms. A passageway connects the forward part of the boat with the after part between decks. The owner's stateroom is forward, and connecting with it is a large bathroom. Catania has triple expansion engines. She carries a crew of thirty men.

The ketch rigged yacht Taormina arrived at Newport on June 6 in a strong southwest breeze. She has on board three lieutenants of the Austrian navy, who are making a year's cruise in the Atlantic. Since leaving Austria they have visited Gibraltar, Trinidad, Martinique, La Guayra, Virgin Island, St. Thomas, Porto Rico, Baton, Baltimore, Annapolis, New York and several places along Long Island. They went up the Orinoco River for a distance of 230 miles. They expect to cruise to the eastward, and hope to be in this country for the Cup races, after which they will return to Austria by steamer. Taormina is 74.6ft. long, 15.8ft. beam and 9.7ft. deep. She was designed by J. P. H. Payne, and built by A. Payne & Sons at Southampton in 1877. She is owned by Count Colloredo-Mannsfeld.

Mr. Walter Jennings, N. Y. Y. C., has chartered through Messrs. Tams, Lemoine & Crane the English-built auxiliary steam yacht Cuhona, owned by Mr. H. A. Campbell, Mumford, England. She has three masts and is rigged as a barkentine. She was built under special survey, and has a rating of 100 A1 at Lloyds. Her dimensions are: Length, B. P., 163ft.; beam, 26.1ft., and 14.5ft. depth of hold.

The 75ft. schooner Muriel, owned by Mr. Charles Smithers, N. Y. Y. C., has been launched from the yard of her builders, the Townsend & Downey Shipbuilding Co., of Shooter's Island, S. I. She is built of steel, 68ft. on the waterline, 99ft. over all, 20ft. beam and 12ft. draft. She was designed by Messrs. Cary Smith & Barbey.

Mr. Charles R. Flint, N. Y. Y. C., has chartered the steam yacht Artemis from Mr. Frederick G. Bourne, N. Y. Y. C., through the agency of Messrs. Tams, Lemoine & Crane. Through the same agency Mr. J. A. Garland, N. Y. Y. C., has chartered from Mr. E. E. Morse the schooner Kiwassa, formerly Viator.

Gunilda, the English steam yacht chartered by Mr. Henry A. Hutchins, N. Y. Y. C., arrived from Southampton and St. Michaels on June 5 at New York. She carried a crew of twenty-five men, and reports a good trip with fresh westerly winds during the last part of the passage. She is rigged as a schooner, and has a sail area of 4,620 sq. ft. Her dimensions are: Over all, 177ft.; waterline, 166.5ft.; beam, 24.65 ft., and draws 14.15ft.

The Bath Iron Works closed a contract with New York parties a few days ago for the construction of a steel yacht to cost $200,000. The owner's name has not been made public.

The auxiliary yacht Lady Godiva, chartered by Mr. H. C. Rouse, arrived at New York from Cowes last week. She sailed on May 15, and touched at Hamilton, Bermuda, where she coaled and left on June 3.

It is stated that the King of Portugal will order a yacht with which he will try to win back the Vasco de Cana cup, which was lately won by Mr. Guinness' Leander. The cup is in possession of the Royal Yacht Squadron.

Preparations are being made for an ocean yacht race during the summer from Southampton to Lisbon. Several English boats are expected to compete.

A copy of the Yacht Register for 1901, published by Lloyds Register of Shipping, has been received at this office. The space devoted to particulars of American yacht clubs has been increased from two to eight pages, much information on the date of establishment, entrance fees and annual dues of American yacht clubs and a list of officers being given in addition to the clubs' burgee. There is also a very accurate list of American yachts of 30ft. over all length and upward. This book has become such a complete and elaborate work that it is indispensable to every yachtsman and every club library. We congratulate the publishers on the excellence of the book. It is superior to any work of its kind yet published. Copies may be secured from 2 White Lion Court, Cornhill, London, E. C.

We are indebted to the Secretary of the Hull-Massachusetts Y. C. for a copy of their club book. It is well bound in brown canvas, carefully printed and contains much valuable information.

The year book of the English Y. R. A. is now in circulation. The book is larger than in previous years and contains much interesting matter.

Messrs. Gardner & Cox, of this city, have made the following sales: Steam yacht Seneca, sold by Charles Fletcher, of Providence, to Theodore R. Hostetter, of Pittsburg; steam yacht Washita, sold by H. W. Putnam, Jr., to James Sherman, of Port Henry, N. Y.; catboat Ethel, sold by A. B. Boyd, to W. T. Eames, and W. R. Fry, of Sewaren; catboat Themis, sold by R. H. Eggleston to James T. Graff, of Philadelphia; knockabout Argonaut, sold by A. O. Von Kilch to R. Floyd Clarke; launch Seawanhaka, sold by Frank Nitteberg to George Beebe; steam yacht Toinette, owned by E. E. Smathers, chartered to Frank J. Gould.

The Battle of the Yatches.

THE following doggerel was printed in Cruikshank's Comic Almanac for 1852, the year following the original race for the America Cup:

A truly affecting copy of verses, made by a British tar in Spithead last August, and corked up in a bottle, floated to the end of Herne Bay pier last week. The bottle was speedily uncorked, in a vague expectation of cognac; but the finders, discovering that the only spirit which it contained was the spirit of the verses, magnanimously surrendered the whole to the Board of Admiralty, as justly and legally appertaining to the body. The Board, having sat upon the bottle (and broken it), rose as soon as possible, after instructing the First Lord to transmit to us the poetry, with a polite note stating how they had come by it, and lamenting that the poet should have so obstinately adhered to his peculiar mode of spelling the word "yacht."

O weep, ye British sailors,
  Above or under hatches,
Here's Yankee Doodle's been and come,
  And beat our crackest yatches!
They started all to run a race,
  And were well timed with watches;
But, oh! they never had no chance,
  Had any of our yatches.

The Yankee she delayed at first,
  Says they, "She'll never catch us,"
And flung up their tarpaulin hats—
  The owners of the yatches!
But presently she walked along;
"Oh! dear," says they, "she'll match us!"
And stuck on their tarpaulin hats,
  The owners of the yatches!

Then deep we plows along the sea,
  The Yankee scarcely scratches,
And cracks on every stitch of sail
  Upon our staggering yatches.
But one by one she passes us,
  While bitterly we watches,
And utters imprecations on
  The builders of our yatches.

And now she's quite hull down ahead,
  Her sails like little patches;
For sand barges and colliers we
  May sell our boasted yatches.
We faintly hears the club house gun—
  The silver cup she snatches—
And all the English clubs are done,
  The English clubs of yatches!

They say she didn't go by wind,
  But wheels and springs and ratches;
And that's the way she weathered on
  Our quickest going yatches.
But them's all lies, I'm bound to say—
  Although they're told by batches—
'Twas build of hull and cut of sail
  That did for all our yatches

But novelty, I hear them say,
  Some novelty still hatches!
The Yankee yatch the keels will lay
  Of many new club yatches.
And then we'll challenge Yankeeland,
  From Boston Bay to Natchez,
To run their crackest craft ag'in
  Our spick and span new yatches.

A new industry has been brought into the United States during the past two years by the introduction and acclimatization of the little insect which fertilizes the Smyrna fig in Mediterranean countries. The dried-fig industry in this country has never amounted to anything. The Smyrna fig has controlled the dried-fig markets of the world, but in California the Smyrna fig has never held its fruit, the young figs dropping from the trees without ripening. It was found that in Mediterranean regions a little insect known as the blastophaga fertilizes the flowers of the Smyrna fig with pollen from the wild fig which it inhabits. The United States Department of Agriculture in the spring of 1899 imported successfully some of these insects through one of its traveling agents, W. T. Swingle, and the insect was successfully established at Fresno in the San Joaquin Valley. A far-sighted fruit grower, George C. Roeding, of Fresno, had planted some years previously an orchard of 5,000 Smyrna fig trees and wild fig trees, and his place was the one chosen for the successful experiment. The little insect multiplied with astonishing rapidity, was carried successfully through the winter of 1899-1900, and in the summer of 1900 was present in such great numbers that it fertilized thousands of figs, and fifteen tons of them ripened. When these figs were dried and packed it was discovered that they were superior to the best imported figs. They contained more sugar and were of a finer flavor than those brought from Smyrna and Algeria. The glastophaga has come to stay, and the prospects for a new and important industry are assured.—Everybody's Magazine.

Rifle Range and Gallery.

Fixtures.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

Rifle at Shell Mound.

SAN FRANCISCO, Cal., May 27.—Yesterday at Shell Mound range was gloomy and wet, but the shooting stand was filled with marksmen.

In the semi-monthly event of the Golden Gate Rifle and Pistol Club J. E. Gorman surpassed his own world's record for fifty shots with the small arm at fifty yards. Gorman's record at this distance was 471 points out of a possible 500, which had never been beaten, though it was tied by Anderton, the crack pistol shot of Boston. Yesterday Gorman entered for fifty shots, but found himself in such good form he shot the full 100. His score for the second fifty was 474, beating the world's record three points.

Gorman's detailed score follows:

10	9	10	10	8	10	9	10	10	8	—94
10	10	9	10	9	9	8	10	8	9	—92
9	9	9	10	10	9	9	10	8	9	—92
10	10	10	9	10	9	9	10	8	10	—95
9	9	10	10	10	10	8	10	10	9	—95
10	10	9	9	10	10	9	10	10	8	—95
10	10	9	9	10	9	9	10	10	9	—95
9	10	10	10	7	8	10	8	8	10	—90
10	9	10	9	10	10	10	10	10	10	—98
10	10	10	9	9	10	9	10	9	10	—96

The results of the shoots of the various organizations were as follows:

Semi-monthly shoot of the Golden Gate Rifle and Pistol Club, pistol section, gold medal—J. E. Gorman, 95, 98; W. F. Blasse, 85, 84, 84. Silver medal—F. S. Washburn, 90, 88, 86; Ben Jonas, 78, 73.

Rifle section, handicap—C. M. Henderson, 216, 213, 221, 223, 217; A. D. Dorrell, 217; H. M. Pope, 221; D. B. Faktor, 227, 219; O. Boehmer, 210, 213, 211; A. Gehret, 227. Silver medal—W. F. Blasse, 182, 190, 189, 212. Gold medal—B. Jonas, 202; W. F. Blasse, 206, 200; J. F. Bridges, 214, 222; H. Hinkle, 210; D. B. Faktor, 231.

San Francisco Schuetzen Verein, regular bullseye shoot—Prize winners: F. Brandt, A. Pape, R. Stettin, L. Ritzau, F. Atzeroth, William Goetze, Capt. J. Thode, D. B. Faktor, F. Rust, Charles Thierbach, Dr. F. H. Cranz, Henry Meyer, John Gefken, August Meyer, D. Dunkel, Henry Zecher, Otto Burmeister, Andrew Mocker, Otto Bertelsen, Henry Huppert.

Germania Schuetzen Club, monthly bullseye shoot—F. P. Schuster, 251; E. H. Frost, 278; W. Doell, 532; G. H. Bahrs, 540; F. Brandt, 556; Dr. L. O. Rodgers, 633; R. Stettin, 900; H. Huber, 905; C. M. Henderson, 910; F. Rust, 998.

Red Men's Schuetzen Club, monthly medal shoot—Champion class, P. H. Rulffs, 386; first class, Capt. H. Grieb, 357; second class, J. A. Mohr, 356; third class, H. Schult, 326; fourth class, D. Tamke, 263; first best shot, J. A. Mohr, 25; last best shot, H. Schult, 21.

ROEEL.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, June 2.—We had one of California's loveliest days, which brought many visitors to the range, and among them were many ladies, who always bring good luck, good wishes and good looks. Even the surly face of some shooter who makes a miss changes into broad smiles when he turns and faces the misses or mistresses, for we have several of the latter now. Several new members were added to-day, among them Alex Pape, brother of A. H. Pape. Alex is the champion sculler of the Pacific coast. Mrs. A. H. Pape has also joined our ranks, and tried her husband's big rifle to-day. Pape rolled up the fine score of 38 to-day in honor of her first appearance, and Young beat the revolver record here for 50 shots, while Brannagan slammed in two scores of 40 with his revolver, after having aired it at the small game and coyotes in his country trip. Hovey showed up with a new .38 Winchester rifle and shows he has not lost his hold yet. Capt. Kuhnle, our old veteran, led the boys on the 3 shot match. He is practicing for the bundfest. Scores, offhand, Columbia target, rifle, 200 yds.: A. H. Pape, 38, 59, 59; G. M. Barley, 55, 71; Ed Hovey, 57; C. M. Davis, 57; Capt. Fred Kuhnle, 62, 68, 71, 74; H. Hinkel, 67, 84; G. Mannel, 75; Alex Pape, 87, 119; E. A. Allen, 103, 147; Dr. J. F. Twist, 135, 135; F. L. Pape, 144, 169, F. Page, 146; Mrs. A. H. Pape, 194. Pistol, 50 yds.: F. O. Young, 42; Dr. Twist, 55, 62, 64; Dr. H. W. Hunsaker, 60, 74; G. Mannel, 68; Mrs. G. Mannel, 76, 79. .22 rifle, 50 yds.: F. O. Young, 25, 26; Horace Stevens, 30, 33, 36; E. A. Allen, 34, 39; C. Bachman, 37, 38, 40, 42, 44; A. Emich, 41. Revolver, 50 yds.: F. O. Young, with revolver ammunition, made 57, 56, 52, 50, 63; then, in a 50 shot match with Brannagan, in which he shot Peters Russian model .44 factory cartridges without any sighting shots, in his .44 Smith & Wesson revolver with 4 pounds pull of trigger and blowing in barrel, made the following, viz.:

Young	9	9	4	7	6	6	6	5	1	5—58
	2	5	4	2	8	5	5	1	5	6—43
	4	7	3	2	3	6	3	4	3	3—38
	3	2	6	2	2	6	6	9	3	8—47
	4	9	2	5	7	3	2	3	5	4—44
Total										230

Fifty shots in 9 inch ring; 46 shots in 8 inch ring; 44 shots in 7 inch ring; 35 shots run in 8 inch ring; 49 shots run in Blunt bull; 457 count on Standard target. This may never have been beaten under conditions; has it?

A. J. Brannagan (.38 Smith & Wesson, Laflin & Rand powder), 40, 40, 51,; P. A. Becker 49, 60, 70; S. Carr 56, 79; F. W. Page 69, 76, 77, 81, 85; Dr. W. F. Browning 106.

Rifle 3 shot match, 200 yds.: Capt. Kuhnle 12, 15, 20; G. Mannel 14, 15, 16; C. M. Davis 15, 18, 19.

FRED O. YOUNG,
Recording and Corresponding Secretary.

Cincinnati Rifle Association.

CINCINNATI, Ohio.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading road, June 9. Conditions: 200 yards, offhand, at the German ring target. Payne was declared champion for the day with the good score of 225. Weather fair, thermometer 76, wind 11 to 2 o'clock:

						Honor.

Like Picking Up Money.

In every city, town and village in the United States where there is shooting or fishing or yachting we want agents to canvass for subscriptions for FOREST AND STREAM. Every sportsman is deeply interested in its subjects, and every sportsman is glad to discuss his doings afield and to hear of the adventures of other sportsmen.

Money is to be made by canvassers for FOREST AND STREAM, and those who wish to take advantage of the opportunity we offer should send for premium list and circular.—Forest and Stream Publishing Company, 346 Broadway, New York.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

June 12-13.—St. Marys, W. Va.—Fifth annual tournament of the West Virginia State Sportsmen's Association, under auspices of West Virginia Gun Club. Mallory Brothers, Mgrs.

June 13-14.—Pensacola, Fla.—Peters Cartridge Company's Amateur tournament, under auspices of the Pensacola Gun Club.

June 13-14.—Bellefontaine, O.—Fourth annual tournament of the Silver Lake Gun Club. B. G. Cushman, Sec'y.

June 17.—Wollaston, Mass.—All-day shoot of the Wollaston Trap Club.

June 17-20.—Warm Springs, Ga.—Southern Interstate tournament; two days targets, two days live birds. Chas. L. Davis, Mgr.

June 19.—Gloversville, N. Y.—Annual tournament of the Gloversville Gun Club. Chas. A. Bogart, Sec'y.

June 20.—Waterville, Me.—Amateur target shoot of the Waterville Gun Club; $75 added money. Dana P. Foster, Sec'y.

June 20-21.—Amherst, Mass.—Amherst Gun Club's two-day tournament; $65 in cash and merchandise. H. B. Perry, Pres.

June 25-26.—Bristol, Tenn.—Tournament of the Peters Cartridge Company. John Parker, Mgr.

June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.

July 1-2.—Sherbrooke, Can.—Tournament of the Sherbrooke Gun Club.

July 3-4—Flint, Mich.—Second shoot of the Michigan Trapshooters' League. John Parker, manager; Chas. Caleb, Sec'y.

July 4.—Schenectady, N. Y.—All-day amateur target tournament of the Schenectady Gun Club. Harry Strong, Sec'y.

July 4.—Towanda, Pa.—Annual tournament of the Towanda Gun Club. Magautrap. M. F. Dietrich, Sec'y.

July 4.—Frankfort, N. Y.—Third annual target tournament of the Frankfort Fish and Game Protective Association. W. J. Weller, Sec'y.

July 4.—Ossining, N. Y.—Target shoot of the Ossining Gun Club.

July 4-5.—Champlain, N. Y.—Champlain Gun Club's tournament; all events open to amateurs; some events open to professionals. Wm. Fraser, Pres.

July 5-6.—Duluth, Minn.—Central Gun Club's tournament. J. W. Nelson, Sec'y.

July 9-11.—Pine Bluff, Ark.—Eleventh annual tournament of the Arkansas State Sportsmen's Association, under the auspices of the Pine Bluff Gun Club. E. A. Howell, Sec'y.

July 15-17.—Columbia, Mo.—State Amateur shoot, under the auspices of the Columbia Gun Club. W. A. Vivion, Sec'y.

July 24-25.—Detroit, Mich.—Third shoot of the Michigan Trapshooters' League, under auspices of the Pastime Gun Club. John Parker, manager.

July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

Aug. 8-9.—Lafayette, Ind.—Tournament of the Lafayette Gun Club. J. Blistian, Sec'y.

Aug. 12.—Winnipeg, Man.—Fifth annual trapshooting tournament, under management of the Winnipeg Industrial Exhibition Association; $1,000 in money, trophies and medals. F. W. Heubach, General Manager.

Aug. 15-17.—Ottawa, Can.—First annual tournament of the Dominion Trapshooting and Game Protective Association, on the grounds of the St. Hubert Gun Club. A. W. Throop, Sec'y-Treas.

Aug. 27-30.—Okoboji, Ia.—Lake Okoboji Amateur tournament, at Arnold's Park; $400 added. For programmes, address E. C. Hinshaw.

Sept. 2-3.—Richmond, Va.—Tournament of the Virginia Trap Shooters' Association, under auspices of the West End Gun Club.

Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds, $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

June 14.—Interstate Park.—Live bird shoot; main event 20 birds, $5 entrance; class shooting; four moneys. L. H. Schortemeier, 201 Pearl street, Mgr.

Sept. 9-14.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament, under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.

July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 16-19.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament, under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The programme of the Schenectady (N. Y.) Gun Club's tournament, to be held on July 4, announces that all are invited. Shooting commences at 10 o'clock. Magautrap and bluerocks. The competition will consist of fifteen 15-target events, each $1.25 entrance, except Nos. 10 and 15, which are $2.25 entrance, but which have each $4.00 added. Targets, 15 for 25 cents. The Rose system will govern. Manufacturers' agents and professional shooters may shoot for targets only. Lunch and shells may be procured on the grounds. Take trolley cars at railroad station for Union avenue six minutes past the hour and every fifteen minutes thereafter. Fare 5 cents. Four minutes' walk from car to shooting grounds. Shells may be sent in care of Capt. V. Wallburg, and will be delivered to grounds free of cost. Five trains east and west after 3 P. M. on New York Central railroad. Gentlemen wishing to shoot for targets only are cordially invited to do so. Communications addressed to the undersigned at Schenectady, N. Y., will receive prompt attention. V. Wallburg, president and captain; H. Strong, secretary.

Under date of June 8, Mr. Elmer E. Shaner writes us as follows: "The tournament scheduled for Buffalo under the auspices of the Pan-American Exposition has been officially declared off. I am in receipt of a telegram from Mr. S. D. Clarke, secretary of the bureau of sports, stating that it will be impossible to give the shoot."

In a cablegram to Capt. J. A. H. Dressel, on Tuesday of this week, it was reported that in a preliminary sweepstake Mr. R. O. Heikes broke 25 straight, with Crosby and Gilbert 22 each. In the second sweep Mr. T. A. Marshall was high with 22. The main event, the international shoot, was started. The weather was fair, with a blustering wind, and there was a fair attendance, a good part of which was ladies. Crosby scored 19 out of his first 20 and 17 out of his second 20. When 400 targets had been shot at the scores were 319 to 303 in favor of the Americans.

Further details were omitted, excepting that the results of the first day were: American team, 866; English team, 801. This indicates a much closer race than was anticipated on this side of the frog pond, although the American eagle as yet has lost no tail feathers.

In the Sun of June 10 the following concerning American shooters in London was published: "John W. Gates and C. C. Naumann have been taking part in the pigeon shoots of the London Gun Club at Notting Hill, London. J. W. Gates on May 25 had very good success. He was handicapped at 28 yards. In a $10 sweepstakes he killed seven straight and took as his share of the money $100, and in a similar event he divided after killing only four and won $105. C. C. Naumann shot from the 33 yard mark in the handicaps, and in four events he missed early in the shoot. He and Vernon Baker shot a match with A. W. Eales, of Australia, and Mr. Heywood. Each stood at the 30 yard mark and shot at 24 birds. Eales and Heywood killed 20 each, winning the match. Baker killed 20 and Naumann 17."

The programme of the Interstate Association's trapshooting tournament, given for the Jamestown Gun Club, Jamestown, N. Y., July 10 and 11, is now ready for distribution. It provides ten events for each day, seven at 15 targets and three at 20 targets; entrance $1.50 and $2. Shooting commences at 9 o'clock. Four moneys, 40, 30, 20 and 10 per cent. Guns and ammunition forwarded to J. W. Graff, Jamestown, N. Y., will be delivered on the grounds. Targets, 2 cents. Lunch will be served on the grounds. To reach the grounds, take Lakewood car, in front of the Sherman house (which will be the headquarters) for Livingstone avenue; or Celeron car for Ashville avenue. Mr. Elmer E. Shaner, 111 Fourth avenue, Pittsburg, is the Interstate Association manager.

An Associated Press cablegram contains the information that on Monday of this week the American team had a preliminary practice shoot, and did not perform so well as expected. The conditions are different from those to which the American shooters are accustomed. The rise is at eighteen yards and the targets are thrown very swiftly down hill. Some of the best shots of the team were much out of form. The English were not shooting as well as the Americans, yet it was intimated that it was possible that the former were not doing their best in the practice shoots. The cablegram intimates that there is the realization of the possibility of defeat on the part of the Americans.

Mr. L. H. Schortemeier announces a live-bird shoot at Interstate Park, L. I., on June 14. Shooting on the arrival of the 9:20 train from East Thirty-fourth street, L. I. R. R., will commence with $2 miss-and-outs from the 30yd. mark. On the arrival of the 11 o'clock train the Monte Carlo event will begin. It is at 12 birds—6 at 29yds., 6 at 31yds.—entrance $5, high guns, 40, 30, 20 and 10 per cent. The main event, 20 birds, 26 to 33yds., $5 entrance, class shooting, 40, 30, 20 and 10 per cent., commences on the arrival of the 12:20 train. This handicap remains open till the arrival of the 1:50 train. Birds extra in all events.

A press dispatch states that the American team arrived safely in Liverpool on June 6, and as soon as their baggage could be checked they left for London, where a welcome from the representatives of the English team and Middlesex Gun Club awaited them. The dispatch stated that Messrs. Parmelee, Crosby and Elliott started in earnestly to be sea sick at the commencement of the voyage, and made a very high average. The match begins on Tuesday of this week. It will be reported for Forest and Stream by Mr. Edward Banks, whose eminent ability as a trapshooter and writer is well known.

Mr. John S. Bowen, Gainesville, Fla., under date of June 4, writes us as follows: "Our Interstate shoot is to take place here on the 25th, 26th and 27th of this month. It will be managed by the Peters Cartridge Company. There will be ten events each day the first two days, with about $100 added money by the Gainesville Fla., Gun Club. The third day will be a 50-bird handicap for the amateur championship of Georgia and Florida, the winner to be awarded the Peters Cartridge Company trophy. As soon as I get the programme from the printer, will forward same to you."

The Cleveland Gun Club Co. write: "In our interstate shoot, June 19 to 21, we will add a special event on the second day. This event does not appear on our programme. It will consist of 100 targets, entrance $5, targets included, open to all amateur shooters of the State of Ohio; prize $200 diamond badge, to be known as the Amateur Championship Diamond Badge of Ohio. Highest score to win and own badge. This badge will not be shot for unless 20 or more entries are made."

Under date of June 6 Mr. C. F. Kramlich, Allentown, Pa., informs us that the Weiler Gun Club shot a five-man team race at bluerocks with the Independent Gun Club, of Easton, and defeated the latter by a score of 100 to 90. The losers paid for a supper for the entire party.. The scores were: Weiler Gun Club—Miller 21, Straub 18, Daudt 20, Weiler 21, Kramlich 20; total 100. Independent Gun Club—Frederick 20, Mauser 14, Transue 19, Harrison 17, Heil 20; total 90.

Mr. C. G. Blandford, captain of the Ossining Gun Club, writes us that "a clay bird shoot will be held by the Ossining Gun Club July 4. Opening of the new club house. Refreshments, shells, etc., on the grounds. Trolley cars run directly to the grounds. Experts and professionals are invited to shoot for targets only, at 1 cent each, or shoot in the sweepstakes, with a slight handicap, to be arranged by the club's handicapping committee. Shooting, rain or shine."

The great international trapshooting contest began on Tuesday of this week. The preliminary practice demonstrated that the contest would not be such a cinch as it at first was considered to be. But, as is well known, the American team is composed of shots who are mighty with the gun, who learn new conditions quickly, and therefore will give a good account of themselves whether they win or lose.

In a match at 50 live birds for a $100 purse, 30 yards rise, use of one hand only, Mr. L. T. Duryea defeated Mr. T. W. Morfey at Interstate park last Saturday by a score of 44 to 37. Another match at 50 birds for $100 a side was made and shot forthwith, and was won by Mr. Duryea by a score of 45 to 44. On June 1, at 50 birds, 31 yards rise, Mr. Duryea defeated Mr. Morfey by a score of 46 to 42.

Under date of June 5 the Pine Bluff Gun Club writes us as follows: "The eleventh annual tournament of the Arkansas Sportsmen's Association will be held in Pine Bluff, Ark., under the auspices of the Pine Bluff Gun Club, July 9, 10 and 11. Programmes will be mailed later. For further particulars address E. A. Howell, secretary."

Miller's Gun Club, of Toledo, O., has issued the programme for its second annual tournament, June 25 and 26. The events, which are alike for each day, are four at 15 and six at 20 targets, $1.50 and $2 entrance. The shooting commences at 9 o'clock. Magautrap rules govern. Targets 2 cents. Class shooting. Manufacturers' agents may shoot f. t. o. All shells shipped in care of the secretary, Mr. Geo. Volk, will be delivered on the grounds free of charge. One-half cent for each target thrown will be reserved for average money, to be divided 30, 25, 20, 15 and 10 per cent., for those shooting through the programme of both days.

We are informed that the second shoot of the Michigan State Trapshooters' League will take place at Flint, Mich., July 3 and 4, John Parker, manager; Chas. Caleb, secretary; and that the third shoot of the Michigan State Trapshooters' League will take place in Detroit under the auspices of the Pastime Gun Club July 24 and 25.

Mr. A. W. Throop, secretary-treasurer, Ottawa, Canada, writes us as follows: "The Dominion Trapshooting and Game Protective Association desire to claim Aug. 15, 16 and 17 next for their first annual tournament, to be held in Ottawa, on the grounds of the St. Hubert Gun Club. Programme will be sent in due course."

On May 29 the president of the Illinois State Sportsmen's Association, Mr. Jas. R. B. Van Cleave, appointed Hon. Wm. J. Butler secretary-treasurer of the Association. Mr. Butler is a charter member of the Illinois Gun Club, is enthusiastic in shooting matters, and has had experience in the management of tournaments.

In a team match, fifteen men on a side, between the Boiling Springs Gun Club, of Rutherford, and the South Side Gun Club, of Newark, N. J., Boiling Springs won by a score of 298 to 278. Each man shot at 25 targets.

In the Diamond Badge event, at a tournament of the Freeport (Ill.) Gun Club, June 4, Mr. J. S. Boa won with the excellent score of 49 out of 50 targets.

The Champlain, N. Y., Gun Club will hold a tournament on July 4 and 5. All events open to all amateurs, and some events open also to professionals.

Mr. L. T. Duryea sailed for England on the Majestic on Wednesday of this week. He will do some trapshooting before his return.

The programme for the Grand American Handicap at targets will be ready on June 22, instead of June 15 as at first announced.

BERNARD WATERS.

Ashland Gun Club.

RICHMOND, Va., June 5.—Following are the scores of the Ashland Gun Club's first annual tournament:

Event No. 1, trophy; 25 targets; open only to farmers of Hanover county, Va., who do not belong to any gun club: Payne 4, England 5, O. Mallory 10, Lake 6, Harrison 7, Dr. Lamens 5, White 15, Dr. Winston 8, F. B. Winston 3, Mackey 13, Butler 6, Pendleton 1, Baker 7, Parkinson 12, Irby 4, Sydnor 7, Maas 4, Dahl 1, W. G. Mallory 8. Swift 6, J. A. Mallory 5, D. Vaughn 4, Vial 11, Tiller 7, Kersey 5, C. H. Vaughan 11, Seay 6, Lane 11, Carpenter 11, H. G. Vaughan 5, Ellett 10.

The following events were each at 25 targets. Nos. 2, 4 and 6 were open. Nos. 3, 5 and 7 were handicaps:

Fitchburg Rifle and Gun Club

FITCHBURG, Mass., June 7.—Our regular shoot was held on the afternoon of June 5, and every one present had a most enjoyable afternoon's sport.

In the handicap prize shoot there were some very close and interesting contests. This club has spent a goodly sum in protecting, propagating and releasing game birds in this vicinity, and it was a very pleasing thing to hear all the afternoon around our grounds the pleasant call of Bob White, although the shooting was continuous. Several sat on the fence surrounding the grounds and called all the afternoon; but when they hear a gun next October they won't stay around like that. They will "lite out" lively then, and it will take our good dogs some time to locate them. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

I. O. CONVERSE, Sec'y.

Boston Gun Club.

BOSTON, June 5.—Just the right kind of weather was in evidence at the fifth serial shoot on the Boston Gun Club grounds to-day, and though a light attendance, no enthusiasm whatever was lacking. The usual gathering was augmented by two new faces for this series, though not new on the grounds by any means, and the way they handled their scatter guns was a caution to most of the others. The lady friends of the club were out in full force, two of the number venturing to try their hand in the sport, with the best of results, one of them incidentally making a fellow shooter look like 30 cents in the trapshooting arena, and the other coming out on the right side of the ledger with a 53 per cent. average—a no mean score considering the short acquaintance with gun, cartridges and targets.

The prize match to-day brought forth new aspirants for first honors, Paine and Adams coming in ahead of the others, the former 1 bird in the lead of the latter. From now out the interest increases, as the shooter has a chance to throw out poor scores. At present the leader is Frank with 97, with Woodruff 4 targets in the rear, though not out of the hunt yet.

Scores below. All shooting unknown except event No. 15, known angles, and event No. 5, infielders.

WESTERN TRAPS.

Illinois State Sportsmen's Association.

CHICAGO, Ill., June 6.—On May 29 Hon. William J. Butler was appointed secretary-treasurer of the Illinois State Sportsmen's Association, succeeding Mr. Charles J. Stickle, the former incumbent. Mr. Butler is a charter member of the Illinois Gun Club, of Springfield, and has always kept up a keen interest in shooting matters. He was well known in the management of the tournament given at Springfield this spring, and is bound to make a very efficient and popular officer in the onerous and sometimes thankless duties of the secretaryship of a shooting organization whose proportions are those of the old Illinois State Association. Mr. Butler is by profession a lawyer and has been a member of the Illinois State Legislature. Thoroughly posted as he is upon practical legislative matters, he ought surely to be of the utmost service during the session of the next Legislature in framing proper laws for the protection of our game birds and fishes. The selection of so useful and prominent a citizen for the duties of the secretaryship of the Association not only adds dignity to the Association itself but gives promise of good work on its part during the coming year.

Central of Duluth.

The Central Gun Club, of Duluth, Minn., held a very pleasant shoot on Decoration Day. The honors were carried away by John Nelson, who won the diamond badge in the final shoot for the possession of this trophy. Twelve men who had won this badge during the past two years were entered in the shoot on Decoration Day, hence the competition was certainly a warm one, and Mr. Nelson's win is a very distinguished one. A large crowd of interested spectators watched the shoot. The event for the diamond badge was at 100 birds, shot in strings of 25. The winner was tied by Dr. D. H. Day, each breaking 94 out of the 100, certainly a mighty sharp gait. In the 25-bird tie Nelson broke 23, and Dr. Day falling back to 19 the former was declared the winner and owner of the badge. His performance is thought to be the best ever seen on the Central grounds. This diamond badge was bought by the Central Gun Club and the Lake Superior Gun Club in 1899, and put up in competition between the two clubs. The Superiors at first had the best of it, and the medal was won more than once by J. D. Finn, of that city, as well as Dwight Kennedy and Levi Fulton. During the past year Duluth has forged to the front, and the Central Gun Club men have been taking the medal most of the time themselves. It has now come to Duluth to stay. The following were the scores: J. W. Nelson 94, Dr. D. H. Day 94, Dr. H. W. Spratley 93, A. W. Loud 92, Warren Mendenhall 89, Levi Fulton 87, Lewis Eisenach 86, A. A. Farrington 85, T. J. Storey 85, A. B. Thomas 83, D. H. Kennedy 83, Walsch 83.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, June 8.—The appended scores were made on our grounds to-day on the occasion of the sixth trophy shoot of the season. The day was a nice one for trapshooting, barring a chilly north breeze, which blew across the traps. J. S. Boa won Class A medal on a score of 23. John Wolff won Class B medal on a score of 22. P. McGowan won Class C medal on a score of 21. The attendance was good, there being thirty-four shooters present. Shooting continued until almost dark:

DR. J. W. MEEK, Sec'y.

Chicago Gun Club.

Chicago, Ill., June 6.—Most of the members were out of town fishing. There must be great fishing through the ice. In other words, it's very cool here. R. B. Mack made a fine record in the weekly shoot. Dr. Wolf won second prize and Bowles won the monthly trophy. Messrs. Willard and Antoine shot three races of 25 targets each. The first was: Willard 25, Antoine 24. Second: Willard 22, Antoine 24. Third: Willard 21, Antoine 22. The scores:

Weekly trophy, 25 targets, handicap in birds:

	Broke.	Hdcp.	Total.
De Wolf 1111111110011011011011010—18	7		25
Bowles 1101001111111111011101101—19	5		24
Buck 1011110101010100111111011—17	6		23
R B Mack 1111111111111111111111101—24	4		25
Burcky 0110100011101110001101101—14	0		14

R. B. Mack wins high gun trophy. De Wolf wins handicap trophy.

Monthly trophy, 15 targets, handicaps in rise:

De Wolf, 16	1100011101111101—10
Buck, 16	1101011111011111—12
Burcky, 16	1000101110011100— 7

Maryland County Shoot.

BALTIMORE, Md.—The Maryland county shoot, which took place on the grounds of the Baltimore Shooting Association, June 5 and 6, was a complete success. It was in the main a tournament for amateurs, although there were events open to all.

June 5, First Day.

Eighty-one shooters, representing thirteen counties of Maryland, participated in the first day's contests. From 9 o'clock in the morning until about 7:30 at night two sets of traps were in constant use. During that time more than 12,000 targets were used. Together with the club members who took part in the open-to-all events there were about 100 shooters present. This far exceeds the attendance at any previous shoot of any sort on any day in the history of the local Association.

The weather conditions were most favorable. This was the first time that such an event was ever successfully pulled off in this State. About two years ago a well-known local trapshooter attempted to have a similar event here, but could not get the shooters. Mr. J. Mowell Hawkins, secretary of the B. S. A., deserves great credit, as he was the chief worker.

The most interesting event of the day was the three-man team race for the amateur team championship of Maryland. The team from Queen Anne county won the first prize with 107. The team representing Caroline county was second with 105. Twenty-three teams entered in this contest, the entire afternoon being required to decide it. The prizes were: First, three gold medals; second, three silver medals; third, three gold scarfpins. Peters, a member of the local club, carried off the honors in the eight professional events, and also won the Schirm cup. For the winner in the Baltimore handicap at 50 tarrgets, Peters broke 47 targets and Storr and German were each second with 46. The summaries follow:

Events for county amateurs:

Three-man team race: 50 targets each man: Queen Anne county 107, Anne Arundel county 100, Calvert county 46, Montgomery county 102, Harford county 102, Carroll county 54, Baltimore county No. 1 93, Baltimore county No. 2 73, Cecil county 61, Baltimore county No. 3 101, Baltimore county No. 4 67, Baltimore county No. 5 81, Baltimore county No. 6 80, Baltimore county No. 7 86, Cecil county No. 2 94, Cecil county No. 3 79, Queene Anne county No. 2 72, Queene Anne county No. 3, 61, Caroline county 105, Cecil county No. 3 88, Worcester county No. 1 99, Worcester county No. 2 64, Cecil county No. 4 100.

Events open to the world:

Extra, 15 targets: Hicks 11, Lupus 12, Malone 13, German 11, Dupont 11, Leland 9, Baughman 12, Peters 13, Storr 13.

First event, 15 targets: Lupus 15, Peters 15, Malone 14, German 14, Baughman 14, Hicks 12, Storr 12, Dupont 11, Leland 10.

Second event, 20 targets: Storr 20, Dupont 19, Peters 19, Hawkins 18, Leland 18, Lupus 17, Baughman 16, Hicks 16, Chelf 12, Malone 11, German 10.

Third event, 15 targets: Peters 14, Baughman 14, Dupont 13, Hicks 12, Lupus 12, German 11, Malone 10.

Fourth event, 20 targets: German 19, Leland 19, Storr 19, Peters 18; Hicks 17, Lupus 17, Bond 17, Baughman 16, Malone 12, Dupont 12.

Fifth event, 15 targets: Peters 15, Storr 15, Bond 14, Leland 14, German 14, Hicks 13, Dupont 13, Lupus 12, Baughman 12, Worthington 11, Kirk 11, Calvert 7.

Sixth event, 20 targets: Lupus 19, German 19, Dupont 19, Peters 19, Storr 17, Baughman 17, Hicks 16, Malone 16, Leland 15, Bond 15, United 9.

Seventh event, 15 targets: Peters 15, German 14, Dupont 14, Malone 13, Hicks 12, Lupus 12, Storr 12, Baughman 11, Leland 9, Bond 8.

Eighth event, 20 targets: Dupont 19, Peters 19, Bond 18, Lupus 17, Malone 17, German 17, Baughman 17, Storr 16, Leland 14, Hicks 12.

Baltimore handicap: Hicks 35, Lupus 43, German 46, Malone 41, Dupont 42, Baughman 42, Sampson 33, Wetherall 33, Levy 35, Pensy 38, Smith 44, Dawson 19, England 34, Schhaab 39, Edwards 28, J. Kirk 35, Prospect 29, Leland 41, Bond 45, Peters 47, Storr 46.

June 6, Second Day.

The second day of the county shoot opened up with ideal weather. In the afternoon the wind increased and ended up in a blinding rain and thunder storm, which was the means of cutting out the last event of the professionals, but did not stop the county amateurs, who shot off the ties in a blinding rain. Mr. J. Mowell Hawkins, secretary of the B. S. A., handled the crowd of shooters with ease, and kept them all in motion. In all there were over 21,000 targets shot at, being a larger number than ever were shot at in a similar event in Baltimore. Mr. L. H. Schaab, from Howard county, made a score of 83 in the 100-target amateur championship shoot, and deserves great credit, being the lone representative from that county, and carrying off the second high score, the first and second scores being a tie.

The first prize of the professional open event, a gold medal, was won by Dr. Lupus, with a score of 162 targets. Mr. L. A. German was a close second, breaking 161 targets.

The 100-target amateur event was won by H. Linn Worthington, of Cecil county, winning a silver loving cup from Grant Alberger, also of Cecil county, in a shoot-off in a driving rain for first place, both having made a score of 84 targets in this event. The second prize was a shotgun. The third prize, a silver water pitcher, went to L. H. Schaab, of Howard county. The balance of the prizes went to the following, in their order: Nelson, of Baltimore county; Marley, of Worcester; Kroh, of Baltimore; Barnes, of Cecil; Robinson, of Montgomery; George, of Queen Anne; Hopkins, of Harford; White, of Cecil; Kirk, Sr., of Cecil; Medinger, of Cecil; Dr. Hopkins, of Frederick; Sparks, of Baltimore, and H. W. Sullivan, of Worcester, who made low score, winning a bottle of wine as the booby prize.

Haverhill Gun Club.

HAVERHILL, Mass., June 8.—Owing to June 1 being very stormy our prize series was not started until to-day, and but very few shooters were present. The inclosed scores are not very brilliant to look at, but are fair considering the conditions. The northeast wind was very strong, and the targets cut up about all the antics that were possible, and we hope for better conditions and more shooters later on. Events 2 and 3 were prize events. Tozier and Follansbee tied for first place with 25 out of 30:

SECRETARY.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Michigan State Trapshooters' League.

Saginaw, Mich.—The first shoot of the Michigan State Trapshooters' League took place at Saginaw, May 28, 29 and 30, and was a very successful affair.

The shoot was very ably managed by Mr. John Parker, of Detroit, and complimentary remarks were heard on all sides for the way the tournament was conducted. The trade was represented by John Parker, representing Peters Cartridge Company; Ralph Trimble, representing Winchester Repeating Arms Company; Capt. Arthur du Bray, representing Parker Brothers; Squires and Phyllis, representing Dupont Powder Company; E. C. Fort, representing Robin Hood Powder Company; Charles North, representing the Cleveland Target Company; A. G. Courtney, representing Remington Arms Company.

Mr. North very ably assisted Mr. Parker in conducting the shoot, and made a great many friends for himself and his company. About 15,000 targets were thrown, and it was generally conceded that it was the best State shoot that had been held in Michigan for years.

The team race was won by the Flint Gun Club team; the individual expert championship was won by Frank Shearer, of Bay City; the semi-expert championship was won by Charles Caleb, of Flint, and the amateur championship was won by A. E. Gorham, of Mt. Pleasant; the Iron City handicap was won by Caleb, of Flint.

On live-bird day the birds were an exceptionally fine lot, and over 2,000 spectators were in attendance. Messrs. White, Parker and Flanders tied on 15 straight for trophy, and in shooting off the tie Flanders won.

The next shoot of the State League will be held at Flint, July 4 and 5, and the following shoot will be held in Detroit in July on the ground of the Pastime Gun Club.

Phyllis, shooting at the 20yd. mark, won high average prize on targets, and also won non-resident high average prize on live birds.

Resident average prize was won as follows: Messrs. Parker, Mercier, Thompson and White divided first average; Capt. F. C. Merrill, of Bay City, won second average, and Mechon, of Saginaw, won third high average on live birds.

May 28.

Jaennerette 20, rug; Blauvelt 20, fancy clock; Krebs 20, glass pitcher; Hall 19, picture; Coe 18, rocker; Seeley 18, wine set; Wise 15, flask; Lenone 14, wallet; Lane 14, picture; R. Strader 14, match safe.

Winch

Forester Gun Club.

Newark, N. J.—The Forester Gun Club held another well attended shoot on Decoration Day. The morning started with threatening weather, but turned out a capital day for target shooting. The grounds have been remodeled so as to give some of the old-time style of shooting. There were events of walking matches which proved to be very interesting to the participants. There were three events, handicaps, for merchandise. Belcher won a pair of cuff bottons and a can of powder; Stanton also won a can of powder.

The programme for live birds in the morning was dispensed with, as the city had a gang working on the Suez Canal alongside of the club, and the management would not endanger any one.

All the events were at 10 targets. The figures in No. 8 are allowances in No. 7; No. 10 contains allowances in No. 9; No. 12 contains allowances for No. 11; No. 14 contains allowances for No. 13; No. 16 contains allowances for No. 15:

Boiling Springs vs South Side Gun Club.

Newark, N. J., June 8.—The fifteen-man team race between teams of the Boiling Springs Gun Club, of Rutherford, and the South Side Gun Club, of Newark, N. J., shot on the grounds of the latter club, was won by Boiling Springs by a score of 298 to 278, each man shooting at 25 targets. The scores follow:

Mississippi Valley Notes.

A pleasant informal shoot was held June 3 at the Western Cartridge Company's Sunnyside range, at East Alton. In considering the scores, consideration must be taken of the fact that it is an especially difficult ground on which to shoot, and that much of the work was done at 20yds. rise:

The sportsmen of Louisiana, Mo., have organized a gun club, with twenty members, and are practicing regularly every Saturday afternoon.

The Quincy, Ill., Gun Club has added ten members to its list this season, and was never in a more flourishing condition.

The fine store and stock of the Fink Hardware Company and sporting goods house at Quincy was totally destroyed by fire on June 2. The firm will rebuild at once.

The Mt. Sterling, Ill., Gun Club will give a novel shooting tournament on the 18th inst. Incidental to an excursion on the Illinois River from Beardstown to Kampsville and return, a barge will be fitted with a set of expert traps and a programme of 150 targets per man is to be shot as the boat steams up and down the river.

The Roadhouse, Ill., Gun Club announces a two days' open target tournament on June 25-26.

Col. A. J. Lovejoy, the new Illinois Game Commissioner, is organizing his forces for an active compaign against illegal shooting of any and all kinds during the ensuing season.

The Freeport Gun Club held an excellent home tournament on June 4. Complete scores are given below. The diamond badge event at 50 targets per man, for State championship, was won by J. S. Boa, with the excellent score of 49. The event was at 50 targets, $3 entrance:

Portsmouth Gun Club.

PORTSMOUTH, N. H., May 30.—The Portsmouth Gun Club held an all-day shoot on their new grounds, on Christian Shore, yesterday, and in point of attendance it was the largest trapshooting contest ever held in this vicinity. Fifty-five shooters were entered, and some fine scores were made. The new magautrap worked like a charm, and the sportsmen were enthusiastic over it. There were present to enjoy the day members of the clubs from Dover, Exeter, Boston and Concord, while the local shooters were never so largely represented. Many of the business and professional men of the city were present and took a hand in demolishing the whirling clay pigeons.

The out-of-town guests arrived early, and Dover and Exeter were well represented, while Messrs. William and Horace Kirkwood were present from the Boston Gun Club, and assisted in placing the trap and otherwise conducting the shoot.

The presence of Messrs. William and Horace Kirkwood, of Boston, added greatly to the pleasure of all, as they are thorough sportsmen, expert shots, and the best of friends and companions. The local gun club always feels honored by their presence, and gladly extends a welcoming hand to them.

Mr. Rowe, of the Concord Gun Club, with sportsmen from Rochester, York, Kittery, Rye and other places, were present, and all entered very heartily into the enjoyment of the sport.

Fully 4,500 targets were thrown during the day.

The event of the day's shooting was the cup contest between teams from Exeter, Dover and Portsmouth. This is the first in this season's series of interclub shoots, and much interest was manifest. Last season three shoots were held, and each club by turn captured the trophy, leaving it in the hands of the Dover team. This season it is expected to hold six shoots unless the cup is won in three successive shoots by any one club before the tournament is completed. As the clubs are fairly well matched this seems hardly probable.

The first shoot resulted in a victory for Exeter.

The highest individual score was by Carlisle, of Exeter, who scored 19 out of a possible 20, and was very heartily applauded.

The next shoot in the series will be held in Exeter on the Fourth of July.

Aquidneck Gun Club.

NEWPORT, R. I.—The Aquidneck Gun Club held a successful holiday shoot on Decoration Day, at which eleven members were present, besides a number of spectators. Seven events were shot, aggregating 100 targets. The weather, while not clear, was well suited to shooting, the light being even, and the absence of wind favoring the targets:

Events:	1	2	3	4	5	6	7	Shot	
Targets:	15	10	20	15	10	20	10	at.	Broke.
Plumer	3	4	8	8	2	..	..	70	25

Howard	..	..	..	3	..	..	..	15	3

Events 1, 2, 4, 5 and 7, regular angles; events 3 and 6, unknown.

*Visitor.

J. S. COGGESHALL, 2d, Sec'y.

Titusville Gun Club.

TITUSVILLE, Pa., June 2.—Although several contests for a local medal had taken place previous, on Decoration Day occurred practically what might be termed "opening day" of the Titusville Gun Club. On this occasion Oil City Gun Club members to the number of fifteen came to give the home club a "send off," and from their arrival at noon until late in the evening the shooting was fast and furious. At the conclusion of the event the visitors, who are true sportsmen, clever shots and genuine gentlemen, were banqueted at the Mansion House. So great was the crowd of spectators that it interfered not a little with shooters getting to the score. However, all enjoyed themselves hugely, and the shooters from the Hub of Oildom (where the next Interstate shoot will occur) were loud in their praise of the local organization as entertainers. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	Shot	
Targets:	15	15	15	15	15	15	15	15	15	at.	Broke.

ON LONG ISLAND.

Sheepshead Bay Rod and Gun Club.

Sheepshead Bay, L. I., June 8.—The summer series of shoots of the Sheepshead Bay Rod and Gun Club began to-day. Among the visitors were ex-Register Hugh McLaughlin, James Shevlin, John Schlieman and P. H. Quinn. Two tied on 11, the possible being 12. The scores:

P Quinn, 27.....222222112021—11
L Allen, 25.....211222012211—11
J Pillion, 28.....2221222122*0—10

H McLaughlin, 27.011101012010— 7

Duryea vs. Morfey.

Interstate Park, L. I., June 8.—There were two matches shot to-day between Messrs. L. T. Duryea and T. W. Morfey, both of which were won by the former. The first match was at 50 birds, $50 a side, use of one barrel only. Morfey was in hard luck, having many birds dead out. The scores:

T W Morfey.....*2211*22212112*110212212*—20
**2022*1*222221120*221022—17—37

Auburn (Me.) Gun Club.

AUBURN, Me.—The morning of May 30 dawned damp and dismal, and the outlook was enough to put a damper on the spirits of the most enthusiastic trapshooter; but in spite of unfavorable weather, twenty-one shooters answered the "roll call" at the Auburn, Me., Gun Club's annual tournament and shot through the programme of the day.

Waterville, Portland and Androscoggin gun clubs were represented, and some very good scores were made, considering the day. Waterville again won the Lovell diamond badge, breaking 222 targets out of a possible 250. The Auburn team came next, and Portland third. Hunnewell was high gun for the day.

Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	15	15	20	20	15	15	20	20	15	15
Barker	11	13	8	18	13	12	12	17	13	9

SECRETARY.

Woonsocket Gun Club.

WOONSOCKET, R. I.—The second regular programme of the season was shot on Saturday afternoon at the club grounds. Unfavorable weather conditions prevailed, and high scores were not the order of the day, but the enthusiasm of a true trapshooter is proof against north winds, driving mist and low scores. Nos. 1 and 6 were known angles; Nos. 2, 3, 5 and 7 were unknown; No. 4 was reverse:

Events:	1	2	3	4	5	6	7
Targets:	10	15	20	15	10	20	10
Mills	8	12	15	12	7	17	10
Campbell	9	14	15	9	9	14	7
W O Darling	8	8	14	8	4	10	8
Balcom	3	9	9	..	2	7	..
Emerson	5	9	..	8	..	..	..
E R Darling	..	..	13	12	8	10	7

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Keystone Shooting League.

HOLMESBURG JUNCTION, Pa., June 8.—Messrs. C. Geikler and F. M. Eames made a very interesting competition for supremacy. Eames won three 10-live-bird matches in succession, the scores being: Eames 7, 9 and 10; Geikler 4, 5 and 9, each of the three matches being shot from the 30yd. mark. They then engaged in a target contest at 12 pairs, and tied on 20. Eames won in the shoot-off.

The three match events at 25 targets were shot as follows:
First match: Ridge 25, Longnecker 22, Terry 19.
Second match: Ridge 24, Terry 17, Smith 18.
Third match: Howard Ridge 23, Dr. Smith 20.

There was a match between Luther and Jones, of 50 targets, at unknown angles, 16yds. rise, and Jones broke 40 and Luther 35.

The three open sweepstake events were all shot at unknown angles, 25 targets, 16yds. rise. The scores follow:

Second event: Terry 19, Stevenson 18, Eames 18, Wagner 17, Geikler 15.

Third event: Longnecker 24, Ridge 23, Stevenson 22, Eames 22, Geikler 21, Terry 19, Wagner 15.

The following, prepared by the board of governors of the Keystone Shooting League, shows the averages made by the members who contested in the past season in the club handicap at live birds, in five or more shoots:

	No. of shoots.	Shot at.	Per cent.	Points.	Class.
Brewer	23	230	80 4-10	116	B
Budd	20	200	92	116	B
Bucknell	5	50	90	32	A
Balz	7	70	62 8-10	8	B
Davis	15	150	84 2-3	74	B
Darby	19	190	82 1-10	92	B
Fees	21	210	82 4-10	102	B
Fitzgerald	28	265	70	138	B
Geikler	35	348	80 2-10	138	B
Harrison	10	100	82	52	B
Hobbs	21	207	81 6-10	88	B
Henry	32	320	89 7-10	206	A
McCoy	28	280	89 7-10	186	A
Luther	5	50	76	14	B
Painter	12	120	91 2-3	80	A
Ross	15	150	84 2-3	70	B
Russell	13	124	82 4-10	54	B
Sanford	10	100	80	42	B
W N Stevenson	16	160	90	106	A
O K Stevenson	6	60	86 2-3	34	A
Vandergrift	19	186	90 3-10	124	A
Van Loon	35	350	84 3-10	180	B
Wynn	8	76	71	18	B

Class A, 85 per cent. and over: Henry, first; McCoy, second; Budd, third.

Class B, under 85 per cent.: Van Loon, first; Geikler, second; Brewer, third.

Wollaston Trap Club.

WOLLASTON, Mass., June 8.—The regular weekly shoot of the Wollaston Trap Club was held this afternoon. The wind was quite brisk, but it did not prevent some pretty good shooting.

Event 3, 10 targets, straightaway; event 12, 5 pairs; event 13, 10 targets, reversed angles; all other events 10 targets, unknown angles. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Barry	4	8	7	6	9	..	4	6	..	..	8	8	9
Thomas	10	8	10	7	6	10	9	5	5	..	9	4	..
Britt	10	8	7	9	6	3	6	4	..	7	4	..	..
Muldown	5	4	7	5	3	..	..	..	5	8	..	..	..
Whitmarsh	10	7	8	9	8	..	..	..	..	..	..	..	..
Baker	9	5	9	9	8	..	..	..	..	..	..	..	..
Tibbetts	5	4	7	5	8	..	..	..	..	..	..	..	..
Doell	3	4	8	4	4	4	..	..	5	..	..	..	..
Mann	6	4	5	3	3	4	1	7	..	3	..	..	..
Allison	..	..	..	..	..	..	7	9	8	8	7	9	6	10
Howe	..	..	..	..	..	..	10	9	7	8	9	9	6	8
Bates	..	..	..	..	..	..	..	..	..	7	9	7	..	..

The club will hold an all-day shoot on Bunker Hill Day, June 17. There will be ten events of 10 targets each on the regular programme. Shooting will begin at 10 o'clock.

Ossining Gun Club.

OSSINING, N. Y.—Scores made at the regular Saturday shoot of the Ossining Gun Club, June 8. A strong wind made the flight of the targets uncertain:

Events:	1	2	3	4	5	6	7	8	9
C Blandford	7	6	7	8	7	5	7	8	8
E D Garnsey	6	6	4	7	7	..	..	..	..
A Rohr	5	4	2	5	..	..	..	..	..

C Rohr	..	..	..	..	..	..	..	4	..

Prize events:

	Shot at.	Broke.		Shot at.	Broke.
Barlow	12	7	Rohr	15	9
Barlow	12	7	Bedell	15	9
Rohr	15	4	Bedell	12	8

C. G. B.

Sherbrooke Gun Club.

SHERBROOKE, P. Q., May 25.—The third match of the gun cabinet series was shot by four men only. There was a lot of resting to be done by a number of those who attended the Westmount tournament the day before. Loomis won with 20 from the 16yd. mark, after a shoot-off with White.

June 1.—This was a perfect day, and the shooters showed their appreciation of the weather by a good turnout. Many visitors also were present, several of whom did a little shooting. The scores in the cabinet match were: Bray, 18yds., 21; White, 18yds., 19; Craig, 19yds., 18; Thompson, 18yds., 17; Walton, 19yds., 17; Loomis, 17yds., 17; Neil, 16yds., 15; Matheson, 14yds., 13; Ingalls, 14yds, 11; Goodhue, 16yds., 10; Kirkpatrick, 14yds., 9.

The club had the pleasure of the company of Mr. Rupert M. Watson, of the Dominion Cartridge Company. Mr. Watson starts for the West shortly in the interests of his company, and will be found wherever there is any shooting going on. Jos.

J. F. Weiler Gun Club.

ALLENTOWN, Pa.—The J. F. Weiler Gun Club's monthly shoot, held at the Duck Farm Hotel, was well attended. Following are the scores made:

Monthly shoot at 25 targets: Daudt 18, Miller 18, John F. Weiler 7, Lucas Straub 17, Morrow 14, Plad 14, Jones 22, Sobers 14, Griesemer 15, Hohe 9, Shindel Weiler 19, Banner 21, Kramlich 25, Flickinger 7, Lieberman 11, Mitman 12, Ulmer 15, Acker 19, A. S. Weiler 7.

Live bird shoot at 7 live birds: John Weiler 6, Banner 6, Jones 5, Plad 7, Straub 5, Flickinger 4, Lieberman 6, Daudt 7, Sobers 7, Acker 7, Shindel Weiler 7, Mitman 4, Ulmer 6.

John F. Weiler, treasurer of the club, gave an exhibition at 33yds.

PUBLISHERS' DEPARTMENT.

Summer Homes.

IN the Lake Country of Northern Illinois, Wisconsin, Minnesota and the Upper Peninsula of Michigan, on the line of the Chicago, Milwaukee & St. Paul Railway, are hundreds of most charming summer resorts. Among the list are Fox Lake, Delavan Lake, Lake Geneva, the Lauderdale Lakes, Waukesha, Oconomowoc, Palmyra, the Dells at Kilbourn, Elkhart Lake and Madison, Minocqua, Star Lake, Frontenac, White Bear, Minnetonka, Marquette, Spirit Lake, Okoboji, Big Stone Lake, etc.

For illustrated booklets "Summer Homes for 1901" and "In the Lake Country" send address with six cents in postage to F. A. Miller, General Passenger Agent, Chicago, Milwaukee & St. Paul Railway, Chicago, Ill.—*Adv.*

A PROPOSED AFRICAN GAME RESERVE.

THE vast herds of wild animals which formerly inhabited South Africa have been swept away by the pitiless rifles of the so-called sportsman and the hide and head hunter. Last year in London a convention was called to take steps to induce the Government to establish game refuges in what was formerly the greatest game country in the world. The horse having been stolen, it is now in order to lock the stable door. We may hope that it is not too late, and that protective regulations may be properly enforced, to the end that some of the species now pitifully reduced in numbers may re-establish themselves.

Africa is a vast continent, and as yet it has not all been run over by the exploring white man. What its possibilities still are is suggested by an interview ascribed to Sir Harry Hamilton Johnston, British Commissioner for Uganda, who has just returned to London after an absence of two years. Much of this time has been devoted to exploring portions of British East Africa, and especially the Uganda district and the great region roughly bounded on the east by Lake Rudolph and its tributaries, on the south by the Victoria and Edward Nyanza, on the west by the Albert Nyanza and the River Nile, and on the north by the fifth parallel of north latitude. Here is a territory more than four hundred miles from north to south by three hundred from east to west, over much of which, owing to the tribal wars of years ago, there are no inhabitants. Its depopulation either by the slaughter of its people by their foes or by their being driven out through fear of attack is complete. Throughout this region uninhabited by man, large animals are marvelously numerous, and have been so long unmolested that they are wholly without fear of man. Here too are found strange animals, one of them reported to be a species whose fossil bones have been found in the later Miocene or early Pliocene deposits of southern Europe, but which was thought to be long extinct.

The exploring party passed through a beautiful country, abounding in animal life, constantly meeting herds of elephants, of zebras and of antelopes, which looked at them curiously as they passed along, but showed no fear. Rhinoceroses were frequently met, as were also lions, but these last were so well fed on the antelopes, hartbeests and zebras that they showed no disposition to attack the caravan nor any interest in it.

The game was so abundant and so tame that no hunting was done. The expedition was a scientific one, and it was necessary to obtain specimens of all the animlas seen for the British Museum collections, but aside from this the members of the party refrained from shooting game. It said that they found more pleasure in wandering through this beautiful natural zoological garden and in watching the tame and half-tame creatures than in killing them—a matter so easy as to be butchery.

It is reported that Sir Harry Johnston intends to advise the Government to maintain the district as a national park and game preserve; something which it is earnestly to be hoped will be done. The region appears to be wholly within British territory, it is amply stocked, and immediate action as advised by its explorer—the man who of all the world knows most about it—will maintain a state of nature here for all time. This action, however, must be prompt. The report brought back by Sir Harry Johnston is certain to start out into this region a horde of hunters who in very short time may do an amount of damage there which years of careful protection will hardly be able to undo. Britons, like Americans, have had so many object lessons in this matter of game destruction that it may be hoped that the Government will act promptly. It is an easy matter to take life. A species may readily be exterminated, but to re-establish one greatly reduced in numbers takes time, or the attempt may fail.

Yet among those who are bent on killing, such protective enactments may be very unpopular. Each individual who wishes to indulge in slaughter feels that to him full privileges should be granted, but that other people should be restrained; and regards restrictions of all kinds as a great hardship—when they apply to himself.

The time has come—and this fact is coming to be more and more generally appreciated—that all sorts of barriers must be erected by law and by public opinion in the way of the civilized man who uses firearms in pursuit of wild creatures. Short seasons, a limit to the bag, shooting licenses, gun taxes—all these things have come or are in sight in most civilized regions. But by far the most efficient means of protecting our large game is the establishment of refuges such as we have in the Yellowstone National Park, where protection shall be absolute. It would be a fine thing if Sir Harry Johnston's reported recommendation to the British Government should be carried out.

THE MICHIGAN GRAYLING.

WE alluded the other day to the effort making in Michigan to secure a respite for the grayling—a fish dear to the angler and threatened with early extinction. There is but one stream in the State—the Manistee River—where the species is now known to breed. If the Manistee could be protected by the prohibition of fishing in its waters for a term of years, there is every reason to believe that they would increase in such numbers that the stock might be regarded as permanently established. Without such protection the species is doomed. To convert the Manistee into a refuge for the fish has been the task undertaken by Mr. W. B. Mershon, of East Saginaw; the projcet has been with him a labor of love, and to it he has devoted unstinted time and effort. At his instigation a bill protecting grayling on the Manistee was introduced in the Legislature of 1901, but we regret to record that it was defeated by a combination of selfishness and stolid indifference; in particular by the pig-headedness of a certain Senator Palmer, who came from some upper county or district through which the Manistee River passes, and who thought it would abridge the rights of his constituents if they were not allowed to go out and exterminate this fish. The other members of the Legislature failed to recognize that the Manistee River did not wholly belong to this backwoods legislator, and did not recognize that the fish in Michigan were the property of the entire State of Michigan instead of this one little district, so they allowed him to have his own way and had what they considered the courtesy of not interfering in a local matter.

Inasmuch as the Legislature will not meet agian for two years, and thus two seasons will be left for the grayling fishermen to prosecute their industry, the probability is that the fish will have been cleaned out from the Manistee as they have been from other Michigan waters.

DOGS AND MEN.

IN the United States the history of the dog, concerning his legal, commercial and domestic status, shows that the people at large have been much divided in their opinion concerning him.

From the extreme point of view which magnifies him into a paragon of nobility and worth on the one hand, to the point of view which reduces him to an unmitigated nuisance on the other, there are many graduations and qualifications of opinion. It is less so in England and other countries of Europe wherein there is more uniformity of opinion on the value and rights of people and dogs, and more respect for the laws governing them.

Dog owners of the United States have felt that they were and are most unjustly discriminated against, to the deep hurt of their pride in a noble friend, to say nothing of inroads on pocketbooks. State legislatures and courts have many times refused to recognize the dog as being property, though in a few instances an involved qualified interest has been conceded to owners; municipalities have imposed burdensome special license fees with the further obligation of a collar with a special tag thereon as a condition precedent to the rights of the owner to keep the dog at all, and the right of the dog to continue to live; express companies exact double rates for carrying dogs to and fro, at the same time disclaiming all responsibility for their loss, death or escape; park commissioners and railway managers exclude dogs entirely from the properties of which they have charge; many landlords show a hostility to dogs living on their premises, and many families, neighbors to other families which own dogs, exhibit a most peevish disposition when said dogs bay the moon of nights, or hold barking dialogues by the hour when people best sleep if dogs do not bark; or make predatory calls in the neighbors' cellars or kitchens to steal food or visit the gardens to kill the flowers.

All these subjects have been topics of deep and prolonged discussion, public and otherwise, from time immemorial. The dog owner contended that he truly loved his dog; that the latter was the children's pet and the guard of the home, and had a pedigree or should have one if it could be unearthed; the injured or disturbed party maintained, with some show of justice, that, if the dog loved his owner and guarded his family, such did not condone the dog's misdeeds in respect to others, if indeed he were guilty of any. Express companies found that dogs were presented for shipment with a piece of rope or dog chain to secure them, and that a dog, commonplace to the eye before shipment, increased several hundred times in value if lost after shipment. Legislatures viewed with disfavor a property recognition of dogs, because for each really valuable dog there were hundreds of worthless curs, many of the latter living a predatory life, and exceedingly prejudiced to sheep growing. Municipalities, for special sanitary reasons, and for general reasons of comfort and protection, were forced to restrict the multiplication of curs, vagrant and otherwise, incident to irresponsible ownreship.

However, all these subjects have been given earnest and prolonged discussion from time immemorial. Grave as they were and are, they sink into relative insignificance when considered in relation with the actual killing of a dog for any cause by any one other than the owner. Many years ago some of the States adopted laws which justified the summary killing of dogs caught in the act of pursuing deer or sheep. At that time such laws met the resentful denunciation of many dog owners. Nevertheless, the laws remained, and time and experience have proved their wisdom and beneficence. This legal principle as it concerns dogs seems to be gaining wider adoption, for one State after another has added the law to its statutes. The owners at large accept it passively, therefore with their approval presumably, in noteworthy contrast to their protests of years ago on this point. It thus implies a recognition of the rights of others on the part of dog owners, which is better for themselves as owners, and incomparably best for the advancement of the dog in public esteem and his property possibilities. So long as owners as a class were insistent on the dog being a matter of property, and that regardless of whom he might assault or what property he might destroy, or what distrubance he might create, he still was property to be dealt with only by due process of law, they could hope for nothing favorable to their cause from public opinion on legal enactment. There is a distinct gain when their own rights are recognized in conjunction with rights of others.

PROTECTOR OVERTON'S RAIDS.

ARRANGEMENTS for beginning action in the cold storage cases which recently made such a sensation in New York have not yet been completed, though the negotiations are more or less well under way.

Incidentally, the case against Frank W. Burns, a dealer in poultry and game, of 390 Park avenue, who was the first man arrested by Protector Overton this spring—May 7—for selling game out of season, came up in Special Sessions before Justice Jerome, upon motion of the defendant's counsel for an adjournment to give the defendant an opportunity to obtain witnesses from Pennsylvania. It is inferred from this that the defendant's plea will be that the birds which he sold came from that State. If such a defense is to hold against the laws of New York, all attempts to enforce game laws so far as they refer to sale and possession might as well be abandoned. It had been reported that the arrest of Burns gave Protector Overton the first evidence that he had against the Arctic Freezing Company. This, however, is not the case. The evidence against that company was obtained in quite a different way, which, however, is not made public.

The interest in this attempt to enforce the State laws is very widespread. Protector Overton has received letters from many parts of the country, congratulating him on the raid. Vice-President Roosevelt, who, as is well known, is deeply interested in game protection, and is especially desirous to see the illegal cold storage business broken up, has written a very strong letter to Mr. Overton, and says:

> I want to tell you how heartily pleased I am at your recent really noteworthy feat in making the raid on the cold storage offenders. You are entitled to the respect and gratitude of good citizens generally, and in particular of all believers in the protection of game and song birds. Sincerely yours,
>
> THEODORE ROOSEVELT.

While from the mountains of California a reader of FOREST AND STREAM writes: "Away up here in the mountains 3,000 feet above the sea I read of your quests for illegal game, and congratulate the State of New York upon having a square game protector."

The Sportsman Tourist.

A New Guinea Tragedy.

SOMEHOW it has ever been the fate of Samoa to be the home of mistakes and the land of misconceptions. Everything that is has been neglected, and everything that is not has uniformly been taken for fact, the result being by no means all that was to be desired. Among other things there seemed to be a common convention to forget that we were but a handful of white people and wofully discordant at that, living on sufferance among a host of savage people. On every hand there was conclusive evidence of battle, murder and sudden death, yet with a wave of the hand all this evidence was brushed away, and we practically consoled ourselves with the air of looking upon Samoa as possessing more or less of the nature of a summer resort.

To be sure, it was only necessary to look at the lawn in our official compound to spy the 10-inch shell which proved that it had on occasion been forced on navies as a duty to shoot up the place. No further away than our flag pole was a double proof that these still waters and steady trade winds had brought ruin to fleets, for both the mast itself and a mighty piece of wreck stuff at its tabernacle were relics of the Trenton and Vandalia, which had met their fate just around Matautu Point. We used to grin complacently at the terror of the folk who lived back in the bush no more than two miles from the beach, who had conniption fits as soon as it was dark and who kept a young battery of lightning rifles in every room. But there were bullet holes through and through the Consulate as a proof that Samoan wars respected official life no more than anybody else. Once it had fallen to my unaided lot to stand off a party of rebels who had learned of the arsenal of modern rifles and ammunition that was under our care for use should war break out. Even that seemed somehow unreal and merely a part of the comic opera which is the one thing with which the attempt to administer Samoan affairs can be compared.

It is only now in the backward view and after putting Samoa half the world apart that it comes clearly into mind that life there was really life among the savages, and that the danger was but thinly veiled by consenting complacency. Yet, as I have already indicated, there was every reason for us to know better. That we simply ignored the danger was not because it did not press upon us at every side. I remember when the wife of the Apia chief, Fa'atulia her name was, and a most matter of fact person, told me the story of her brother's disappearance, and later the identification of his bones cooked near a pit oven in the bush, all going to show that he had gone the way of all flesh and had become meat; yet even such a story as this did not seem to possess any personal warning. About my only impression of that narrative is that I wondered how Fa'atulia could drink the "suamalie," the cheap and mawkishly sweet, red wine which was reserved for the visits of high chiefs' wives.

Many such stories of the wildest aspects of South Sea life were brought to me on my cool veranda looking out to sea from the village green of Vaiala. One I recall in particular as a record of adventure of the wilder sort, especially interesting to me because I was intimately acquainted with the chief actor in the events, and was listening to it from his own lips over the tea cups in my island home. He was the captain of the British cruiser that was doing a tour of guard duty in our wretched little kingdom, and the story seemed to arise naturally from the surroundings, for we were watching just outside our reef the efforts of a Danish bark to work to windward, so as to be able to lay a course that would set her clear of the group during the night.

"That barkentine out there," said the captain, "was my first command."

"Why, Captain," I exclaimed, "were you ever a slaver?"

"Oh, come now!" he replied. "I like that, you know. The Royal Navy doesn't go in for slave dealing—rather the reverse. But it's refreshing the way you Americans have of describing one of the ancient and technically honorable pursuits of the Pacific Ocean. Morally, you are all right when you call the Dagmar out yonder a slave ship, but technically you are all wrong, for she is a labor trader. We are to blame for legalizing the traffic and giving it that name. That's why we have just to grin and bear it when the Germans hire a lot of cheap ships from the Danes and the Norwegees and fill them up with these wild islanders for work on the German plantations here and in the Marshalls. We can't say a word, but I'd just like to be around some time when an American cruiser should overhaul one of these labor traders on the high seas with the recruited labor in her hold like sardines in a tin. Your people spell the thing in the old way, and labor traffic is slavery just the same. I don't believe they would make an international question of it, but in the time I'm telling you about the Dagmar was neither a jackass bark nor a blackbirder, nor was her name Dagmar at all. In those days she was quite respectable, being no less than a British gunboat, H. M. S. Swinger. You are familiar with that type of ship, just big enough for a lieutenant's command, if he does not happen to be too big to squeeze into her tiny cabin. You must have had them here as guard ships, but for the most part on the Australian station they are used to do survey work in among the islands of the western Pacific. It's not a half-bad billet for a young lieutenant, and if he only has the luck to discover a new island or outlying reef, and is willing to spend his own money in painting his ship once a year, his speedy promotion is a moral certainty, and meanwhile it's like running a yacht.

"It was in Tryon's time that I was broken out of the ward room country of the Nelson and put in command of the Swinger. You will recall Sir George Tryon. He was the first admiral we ever had on this station, and we were his first command when he reached flag rank; he's the same one that made a blunder in maneuvers a few years ago in the Mediterranean and went down with his ship—a particularly neat way out of it. Well, as soon as I read my commission on my own quarter deck, I lost no time in clapping a mortgage on all my future prospects to raise the money to paint the ship. I slapped the paint on her the very first thing—did it in Farm Cove, right in the admiral's sight—and when she was painted till she shone, I striped her from stem to stern, with a gold band—it was real gold leaf, too. After that the admiral recognized that I was a junior officer to keep an eye on, and he tried to make my billet a pleasant one.

"Just about that time there was an aide at Government House who was no end of a swell at home, related to half the peerage in one way or another, held a commission in and a leave of absence from a crack regiment of cavalry. With all these qualifications, he became the season's society idol, the envy of all the young squatters who came into Sydney for a fling, and the despair of our service, for, of course, we could not begin to compete with that sort of thing. Being just on the edge, as you might say, of the South Sea, this chap in his idle moments read rather extensively of the books that have been written on various phases of island life, and somewhat affected naval society in order to ask questions. Accordingly, it was no very great surprise when it was given out that the Governor had commissioned him to investigate the 'recidiviste' question—you know that meant the disposition of the runaway convicts from New Caledonia, a topic that was then greatly worrying colonial statesmen. Of course this chap—we might as well call him Forrest—was no more interested in the ultimate destination of a parcel of French convicts than you are, but he was just crazy for a cruise about the islands. But it was a great surprise to me when the admiral told me that Forrest was to make the cruise with me on the Swinger, and that as far as possible I was to take him wherever he wanted to go. The rule is in cases like that for the guest to put in the cabin stores, and that rule was a mighty lucky thing for me just then. I had almost come to the conclusion I should have to draw my ration in kind and live on that, for the gold leaf for that stripe was awfully expensive. Taking such a passenger, however, put me at once on Easy Street. All I had to do was to give him a list of the cabin stores that would be needed. He more than doubled the list when he came to give the order—the wines and tobacco came out of Government House. When we came to lay out the cruise, he asked if it would not be as well to go to the Marquesas first off. Then I knew that he had been reading Herman Melville, and was just about ready for a disappointment. But I fell back on the terms of his orders, and pointed out that there was no recidiviste problem in the Marquesas—the convicts could never escape from New Caledonia to windward. But he had it all fixed as pat as you please, and I suppose made it seem very logical to the Governor. His argument was about this fashion: There were French people in the Marquesas. If they were convicted of high crimes they would be sent to Nouméa; if they should escape they would strive to reach Australia; the upshot being that the only logical thing to do was to begin his investigations at the fountain head—namely, the Marquesas.

"I can assure you we had a great cruise in the Swinger, and I mention it now only because that put me on such good terms with Forrest as to make it almost imperative that I should be concerned with the second and tragic chapter. There was this to say about him: In a literary way he seemed to accept all the fine-spun ideas of the novelists who have entered into a conspiracy to rank all the South Sea kanakas 'with but before' the angels themselves. But in practice he could not quite go it. He made a whole lot of front, never went ashore except in the fullest kind of full dress uniform—and I may remark that his regiment was manifestly one of the pictorial lot that you see in reviews. But with the people themselves he was very standoffish; he made them keep their distance and never allowed any familiarity. You can imagine how that sort of thing would work with these kanaka kings and chiefs who strut through life as if they were as good as anybody and probably rather better. Why, I have seen him insist on shaking hands with a bunch of them through his handkerchief—he spread it all over his hand first, and then when they had done shaking hands with him, he threw the handkerchief into the fire. I don't hold with that sort of thing exactly, not that I believe in making the islanders your equal, but a man who is so dead set about them ought never to come among them. It's their home and their customs, and they are entitled to them, and those who don't like them don't have to come anyway. I told him often it was lucky he was not off by himself alone on this trip, for he'd most likely never come back. It was simply astonishing that a man who was so keen set on the kanakas of the story books and who seemed to find so much enjoyment in his cruise about the islands should have such a down on the real islanders.

"This cruise with me served to start in him a desire to do some exploration off his own bat. I suppose he was after the Geographical Society's gold medal or membership in the inner circle at the Travelers. Still, it's an innocent enough ambition, and there has been any quantity of good work done by these amateurs of geography. The spot he selected for his exploration was New Guinea. It's just as true to-day as it was then that New Guinea is so completely unknown that if you will only strike back from the coast anywhere at random you will discover something new, and the further back you go the more discoveries you will make. But it has this advantage, that the further in you get the less likelihood there is of your ever winning out to tell the world about the things you have discovered. It's not entirely climate that's at fault; quinine might protect you from the country fever, but it would be a difficult matter to protect yourself from the large and perennially hungry population. A man might make friends with them—it has been done—but I have made it quite plain that Forrest was not the man to do it. He made up a small party in Cooktown—just enough to work his steam launch and Nordenfeldt gun. His plan was to run up the Fly River as far as there was water enough for his launch, then make a secondary base at that point, and with two men push through the forest in a generally northerly direction to see what there might be to see. I was away on a cruise at the time, but when I heard what he had done, I knew there was nothing left but to write his epitaph.

"Sure enough the epitaph was needed. Six months later two survivors managed to work the launch into Port Moresby, on the Gulf of Papua. They reported that the trip had been without incident until the head of navigation was reached, the latter portion of the way being through absolutely new country, and they had Forrest's sketch survey to prove it. Here the leader left them, according to his plans of further exploration. All along up the river there had been slight brushes with the natives, but after every such skirmish the people seemed content to make friends and proved themselves to be of very thievish natures. At the secondary base the party protected its position by a stockade, and soon established cordial relations with their neighbors, and opened a market, where trade goods were bartered for provisions. They heard nothing from Forrest and his two companions after they had set out on foot, but that did not excite any comment, because there were no means whatever of communication. Their orders were to maintain themselves at the head of navigation until the return of the advance party, and not to expect them back short of six months. The survivors explained that within a month after the division of the expedition they found their stockade beset by a vastly superior force, who cut off all supplies from the country. After defending their position until they two were left alone, they had gone into the launch under cover of the darkness and made their way to the mission settlement at Port Moresby.

"Naturally a relief party was demanded by the Governor and by everybody. The admiral put me in command, both because I had been a friend of Forrest and also because I had had some little experience in such work. As far as the head of navigation on the Fly River it was all plain sailing, for I had the survivors to guide me and copies of Forrest's chart. We found the stockade destroyed and all the goods looted, but no evidence that Forrest had returned thither from the interior. At that point the real difficulties began, and we found the temper of the people such that we did not venture to divide our party. It was like searching for a needle in a hay mow, but we kept at it diligently. The only thing to do was to investigate each village until we found one where Forrest had passed through. Then from this village we cast about among all villages within a day's march, until we found another point of departure. This you may imagine was no easy thing to do, for it was not always the case that our coast natives could make themselves understood. In this way we followed Forrest and his companions to the higher lands on the central chain of mountains, and there we lost the trail. We had more than once lost the trail before since leaving the river, but it had meant only the expenditure of time and patience to pick it up. But in this case we were unable to find that our predecessors had ever passed a certain village to which we had trailed them. The people were sullen, refused to understand our interpreters, and tried to make it plain that before our coming they had never seen white men or heard that there were any such beings in existence. It was overdone, and I promptly suspected the community. When we had quartered all the land beyond without finding trace of our missing friends, it was determined to round up the suspected village and make a full investigation. It was not long before we found what the French call a piece of conviction. The chief or king of the place was wearing a not uncommon ornament of cannibal society, the lower jaw bone of a man hung on a rope of fiber about the neck and worn as a gorget. But the jaw bone worn by the chief carried teeth that were filled with gold, and this proved that some white man had been killed and eaten there. The prompt execution of the chief brought the rest of the people to confession. They acknowledged that they had attacked the three white men in their sleep, had killed them with clubs and later in the day had dined upon them. Their possessions they had divided up among the different families, but when they had learned that more white men were coming in their direction they had hidden them in the thatch of their houses for fear that we would hold them responsible for the other white men who had been killed. These goods, when produced, were ample proof that it was Forrest's party that had here come to grief. Accordingly we burnt the town and destroyed their plantations in order to teach the whole interior that white men were not to be eaten with impunity. It may seem somewhat unjust to inflict punishment thus by wholesale, but it is the only thing that such savages can understand, and it is pretty safe to assume that all were guilty alike.

"Search as diligently as we might, we could find no more human remains identifiable as belonging to Forrest's party beside that one polished jaw bone. That was removed from the chief before he swung for it, and I carried it back with me. In Sydney it was identified beyond a doubt by the dentist who had done some recent work for Forrest, and who had kept a chart of his mouth, showing the old and the new work. I passed it on up to the admiral, and he to the Governor. That jaw bone was all that was left of Forrest, the cousin of half the peerage, and it was treated with respect. The Governor sent it home in a plush jewel box. Only fancy being called upon to mourn one's dear departed represented solely by his jaw bone."

"Considering your description of Forrest's manner with the islanders, his fragmentary remains are somewhat reminiscent of the instrument with which Samson did such great execution," said I.

LLEWELLA PIERCE CHURCHILL.

Taking Him at His Word.

A young hopeful of some five sleighrides recently acquired a small rabbit. His aunt found him the next day sitting on his knees with the rabbit held before him in both hands, and alternately shaking it and exclaiming: "Five times five!" "Six times three!" "Four times seven!"

Shocked at this seemingly cruel act on the part of her usually gentle nephew, she said: "Why, Harry, why on earth are you shaking that rabbit so? You'll kill it!"

"Well," responded Master Harry, "pape said this morning that rabbits multiply rapidly, but I can't make this one say a thing!"—New York Times.

Some Boyhood Memories.*

X.—"Uncle Jim's Reel."

WHEN a boy, I lived on a farm in Kentucky near Silver River.

This stream was beautiful at all seasons, but in the spring when the fish began to bite—or were supposed to—my home was an earthly paradise.

At that season I would not have changed places with a circus rider, an Indian fighter or even a pirate.

Days spent on that clear, cold, bank-shaded stream were days to enjoy and remember.

My mother's youngest brother lived in Frankfort, and often made us short visits. He seemed greatly to enjoy the change from town to the country, and also the good, wholesome country fare, but most of all the freshly caught fish that I nearly always had for him in season.

He finally came to share my enthusiasm, and said he would come down some day and go fishing with me, and show me how to catch fish. There was probably never a man living, that fished at all, who did not think that he could catch more fish, and larger ones, than any boy. Just because boys use a sapling for a rod, any kind of string that is strong for a line, spit on the bait and jerk the fish right out on the bank, when hooked, they say we don't know how to fish. "You are not scientific," is what Uncle Jim used to say. "Just wait until I come to take that fish with you, and I will show you the scientific way."

One Friday afternoon on my return from school I found that Uncle Jim had come, and the next day being my holiday, I was to have the promised lesson in scientific fishing.

We were up at daybreak next morning, a beautiful day, and by the time breakfast was ready I had a can of angle-worms dug and my tackle all rigged up. When we reached the river I found that Uncle Jim had provided himself with more tackle for one day's fishing than Mr. Moss, our storekeeper, had for his entire stock in trade. Many of the things he had brought I could see no earthly good in, and the profusion of hooks, lines, floats, leads, etc., looked to me like very foolish and wasteful extravagance, but the beautiful pole, that came apart in sections about as long as a walking-cane, and had bright metal tips, ferrules and trimmings, commended itself to me and won my sincerest admiration and praise.

But the most useless and impracticable article in all his varied outfit, to my notion, was his reel—the first one I had ever seen—and his explanation of its use only served to strengthen me in this belief. That you should unwind and let out a whole lot of good line for a fish that was too big to pull in, to run off with, was to me the most foolish idea of all, and my uncle's theory, that the fish would become tired out when it had run to the end of the line, and you could pull it back, was one that my judgment did not approve at all, and I very frankly told him so.

Then he proceeded to give me a long talk on "scientific fishing," entering into details and explanations, that did not prevent me from jerking out two nice white perch and one goggle-eye in an unscientific manner entirely satisfactory to me, while he was talking about and getting ready to illustrate the art of catching fish. The fish bit freely, and my luck was even better than usual, and by the time Uncle Jim was ready to begin, I had caught nine nice ones. He would not use my bait, but had caught a minnow on a very small hook that he had, and by a long sweep and swing of the rod was casting his hook, baited with the minnow, nearly to the middle of the river. It was certainly very interesting to see him, with easy, graceful swings, cast 'way out in the deep water—ten times the length of his pole—where I knew there must be some big fellows, but casting out and winding in was all he did, while every few minutes, with a vigorous jerk, I landed a fish high and dry.

But then, as he very truly said, "A fish that will swallow this minnow of mine will be worth a dozen such as you are catching."

Nevertheless I was making sure of mine, and after more than an hour of hard work he was no nearer to success than when he began. I had just urged him to shorten up his line, put on a worm for bait and catch some fish by my unscientific method, when something struck his bait. The large float gave a dip half under, trembled a moment, and then began to slowly disappear under the water, as though the fish taking it was too large and dignified to move quickly. In a moment I was all excitement, and dropping my pole, I dashed up to Uncle Jim, shouting, "Pull! Pull him in! Pull with all your might." He promptly told me to keep quiet and stand back. Waiting for the line to tighten, he made a quick backward sweep with arm and wrist, and whatever it was, was hooked firm and fast. I immediately made up my mind that it was a big fish—the very biggest in the river—and was as wildly excited as a boy could well get. With my whole heart I wished I could get hold of my uncle's rod and try conclusions with the monster, feeling sure that it was strength and not science that was now needed. But though Uncle Jim's eyes fairly snapped, he made an effort to appear cool and collected—it was not scientific to get excited.

It was easy to see that the thing he had hooked did not know, nor care, anything about science, for after remaining quiet for a few seconds, it made two or three lunges like a wild bull, that made the line sing, and then down the river it went at a steady gait, that seemed to say, "I'm off; you can come or not, as you please."

Uncle tried again and again to check his catch, pulling back as hard as he dared, but the strain on the line was so great he had to let it go, paying out the line from off the reel so fast that it fairly buzzed.

Finally the line was all out and Uncle Jim started on a run down the stream, keeping near the water's edge, winding in line whenever he could get any slack and trying by frequent pulls to tire his catch, which was steadily sailing down the stream, keeping about in the middle. "Bring the landing net," he shouted to me, and I ran back to where he had left it, rejoicing that he had explained its use to me. Dashing down the river bank I soon overtook him, and found that he had run down opposite his catch and was walking rapidly along, winding in his line.

"Strange he don't turn," said my Uncle; "they nearly always run up stream when hooked."

"But he is a big fellow, sure," and I plainly saw that my uncle was showing some very unscientific symptoms of excitement.

"Pull him in! Pull him in so I can reach him with the net," I shouted, making dashes into the water's edge.

"Can't do it until I tire him out; he is too big," said he. On down the river we went, running wildly over rocks, logs and brush, sometimes on flat banks and sometimes on steep, rough ones for a little way as fast as we could run, and then for a few moments more slowly, I shouting as loudly as I could every few moments some request, or suggestion, to my uncle, for I was not a scientific fisherman and did get excited.

Finally on a steep, narrow bank I managed to get the landing net between my legs, and fell headlong, with such force as to throw me heels over head down the bank, and against my scientific relative's legs, as he balanced himself on a narrow, steep ledge, and dropping his pole he went head first into the river like a big frog, arms and legs flying. The water was deep and he disappeared entirely from sight. Before he had come to the surface I had caught up the pole and was holding it as he had been doing, letting the line run out. Ordinarily, under such circumstances, I should have felt solicitous for his safety and have hastened to render him assistance, but the big fish was my only thought now.

Swimming to the bank and scrambling out of the water, bare headed and dripping, he snatched his pole without a word, and I picked up the net, and away we went after our fish.

It was fearfully hot, and we had run almost half a mile, which over the rough and obstructed river bank was equal to several times that distance on level. But at last the whale—as I had about begun to believe him to be—began to show signs of exhaustion. He did not spurt so lively, and frequently sulked, affording an opportunity to recover line, without running after him, and I began to look around to see if we were near a road, feeling sure that it would take a wagon to haul him home. But I was meeting the difficulty of transportation altogether too soon, for a moment thereafter the line ran against a snag almost in the middle of the river, and do what he would my uncle could not release it.

The line was running out at a right angle round the snag, as the catch ran down the stream, but we could not follow on and wind it in, and of course it would all be out in a few moments and the fish would break away. Big boy that I was, my eyes filled with tears of disappointment, as I realized that in a few moments our magnificent prize would surely escape.

"It will never do to let such a fish get away," cried Uncle Jim, and thrusting his pole into my hands, he threw off his coat and boots and plunged into the river. Almost breathless with anxiety, fearing he would not reach it in time, I watched him swimming swiftly out to the snag, while the line on the reel grew less and less. But at last, just as it was tightening up on the last bit of slack, and after I had waded out into the river as far as I could keep my footing to ease the strain, Uncle Jim reached out and caught the log with one hand, and with the other quickly lifted the line and dropped it into the water below the log, giving me a chance to run down the bank a short distance and relieve the strain. And now I felt that with a man of such resources as my scientific Uncle was proving himself to be, we were sure to win.

I had run but a little way when he overtook me, all out of breath and without his boots, running like a professional sprinter, although the rocks must have caused his tender feet much pain.

He was a gritty fisherman even if he was a little too scientific, was my mental criticism, as I ran back to recover the net that I had laid down upon taking charge of the pole, and I felt sure that we would soon need it now.

When I overtook my uncle, and got a good look at him, I immediately concluded that if he was to enjoy that fish we would have to catch it soon, for he looked as though he had about reached the limit of human endurance. From his general appearance he might have been a prisoner to the Indians and run the gauntlet.

He was standing on a low point that extended out into the river some distance, with his pole pointing up stream and into the bank—having run down below the fish—and was slowly but surely guiding it into the pocket formed by this point, but he was a grewsome sight. One leg of his pants was torn almost entirely off; his toes on the right foot were all bloody where he had knocked them against a stone; his suspenders were broken and hanging down; one shirt sleeve was torn from shoulder to elbow, and a long mark of blood was down one side of his face from a cut in the temple he had received by coming violently in contact with the broken limb of a dead tree.

Although I was really frightened about him, the fish was my first care, and when he called me to come quietly with the net I did so, feeling that we were now surely about to be fully repaid for all of our trouble. "Easy, Louie," said he, as I rushed in to the water's edge. "Don't go in yet; he is near, but not in reach." Then came five minutes' agony of suspense. I could hear my heart throbs.

For a moment the line would come in slowly, then with a sluggish motion be drawn back; then in a little more, then back again, we winning a few inches every time.

"We will get him, Louie; he is tired out," whispered my uncle, "and what a monster he must be," he added. It occurred to me then that if tiring out meant defeat, the fish about had us.

But in he came, slowly but surely, closer and closer, and finally I could see the water getting muddy where it shoaled, and I begged uncle to let me dash in and scoop him up with the net.

"No," said he; "now is the critical time; a wrong move now and we lose our magnificent prize and all our labor. Be patient and follow carefully all of my directions."

I knew then that my uncle was not seriously hurt, as he was still scientific.

A little nearer and a little nearer, and now I could plainly see the float on the line, and felt almost sure that I could make out the dim outline of a monster of a fish. I was glad the net was big and strong.

"Now get ready," said uncle at last, in a low tone, "and when I give the word, you can jump in and plant the net about 3 feet beyond where my hook it, and come with a rush, and I will pull in as hard as I can on the line, and I think," he said with a chuckle, "I will show you a fish that will surprise you." And he did.

Working him in a little closer, uncle wound in his line with great care, until it was all in but the tight 3 or 4 feet running straight out in the water, then bracing himself, he nodded to me, and in I went.

Landing, with a jump, just beyond where I judged the fish to be, I clapped down the landing net, and with a desperate effort rolled and tumbled, while Uncle Jim shouted and hauled clear up on the bank our prize, and the next moment we stood looking down on the biggest, dirtiest old rusty snapping turtle I had ever seen in all my life. The great, ugly, slimy thing was as large as the bottom of a tub, and his head nearly as large as my two fists.

My disappointment was indeed terrible, for my expectations had been great, and I could either have laughed or cried; but one glance at Uncle Jim convinced me that it was no matter of choice—crying was the only safe thing for me then. He was the maddest man I ever saw.

After looking at the hideous old reptile for a few moments, he silently turned away, and searching around selected a large stone—so large that he could barely carry it—and this he brought and dashed down on the turtle's head with such force that it literally beheaded it.

It occurred to me that it was done quite "scientifically," but I did not feel that facetiousness would be appreciated just then, so kept the thought to myself.

Uncle Jim then wound up his line and sat down on the water's edge to wash the blood from his wounded foot, while I went back after his boots and coat. Then we slowly limped our way back along the rough way we had come, Uncle Jim first, I in the rear, and not a word was said.

When we returned to where I had left my pole and fish, fresh troubles awaited me. Somebody, or something, had carried off my pole and line, and a hog rooting along the bank had released my fish, which the current had carried off, and then my cup was filled to overflowing, and I lifted up my voice and kept.

But my consolation came quickly, for Uncle Jim, opening his tackle box, took therefrom a handful of hooks, lines, leads and floats, and these, with the beautiful jointed rod, he handed me, saying, "For you, Louie, and you need not say anything at the house about our luck this morning."

LEWIS HOPKINS.

Ex-President Harrison as a Sportsman.

IN the death of our beloved ex-President, Benjamin Harrison, the fraternity of true sportsmen lost one of its most distinguished members. The world knew him as an orator, an intrepid soldier, an efficient ruler, an astute statesman, an exemplary citizen and a God-fearing man. A few intimate, lifelong friends, however, knew him as a sportsman in the fullest sense of the term. When a mere lad his love for the rod and gun manifested itself. The rivers flowing close by his old home at North Bend, O., were well stocked with fish in that day, and in their season wildfowl were plenteous. The woods were veritably alive with squirrels, wild pigeons and partridges, and in the pursuit of such game young Harrison became an expert shot, particularly with the rifle. General Lew Wallace, in his "Life of Benjamin Harrison," is authority for the statement that "Very frequently he [Harrison] assisted the negro who served the household in the capacity of cook, carried wood and water for him and helped him wash the dishes, that he might the better secure his company in a bout at fishing or hunting." This fondness for fishing and hunting became a passion with him in later life, and it was very rarely that a shooting season went by without his indulging in a few days' sport with the ducks, the prairie chickens, the jacksnipe or the quail.

Jacksnipe, prairie chicken and quail shooting afforded him more real enjoyment than any other kind of shooting, as pleasant weather is to be had during the shooting season of these birds—a thing seldom met with during the ducking season. He was, however, in his younger days an enthusiastic duck hunter, and his love for the sport frequently carried him out into Illinois, where a few days were spent over the decoys on the Illinois River and neighboring waters, or up into the prolific Kankakee marshes in northern Indiana. A few years after he had left the White House he made a trip to California, and while there was a member of a duck shooting party. The guides of the expedition to this day delight in telling of the time when they went shooting with an ex-President who wore long rubber boots, an ordinary corduroy shooting suit and a slouch hat. During the later years of his life he confined himself to quail shooting almost exclusively, as he considered it indiscreet for a man of his years to expose himself to the inclemencies of the weather that one is forced to encounter when ducks are the objects of pursuit.

General Harrison was always an admirer, in fact a lover, of a good bird dog, and he was never without a thoroughly trained, well-bred pointer dog, and on all hunting excursions was exceedingly solicitous for the welfare of his dog. He always took particular pains to see that his dog received the best of care.

When in the field, his garments were always of unostentatious cut and pattern. A corduroy coat and vest, with knickerbockers of the same material, canvas leggings, waterproof hunting shoes and a slouch hat of soft felt made up his apparel. It has been said that when thus harnessed for the field he was not the most prepossessing being on earth, owing, no doubt, to his shortness of stature and great abdominal development.

He was never a connoisseur of fine firearms, but always kept several good, substantial, serviceable guns about him. In his will he made disposition of two shotguns, a Lefever and a Daly, and one rifle, the last forming a part of the equipment of his summer place in the Adirondacks.

Quail shooting was unquestionably his favorite sport, as year after year found him climbing fences, plodding through the mud, brushing aside corn stalks and penetrating dense thickets in quest of America's most intelligent, most cunning game bird. Quail shooting is delightfully fascinating, intoxicatingly so, and any one who has ever been fortunate enough to get a taste of it invariably wants to drink a little deeper every season. This was true of General Harrison, and just three months before his death he, with a party of friends, with whom he had hunted

annually for twenty years, again had their hearts gladdened and their longing gratified by a three days' hunt over the beauteous fields of northern Indiana, where a goodly number of birds were secured. To illustrate his love for quail shooting, it might be pertinent to state that during his hunt last December, which regretably was his last, the third day was rendered unfit for shooting by a slow, miserable rain that made all nature take on a gloomy aspect. This, however, was not sufficient to lessen the ardor of General Harrison, and it was only after several vigorous remonstrances of his friends that he was persuaded not to expose himself to the raw, bitter wind and the chilling rain.

General Harrison was always considered a most excellent shot by all who ever accompanied him on a hunt. He was what is popularly known as a "snap shot," especially during his younger days, but even up to his last hunt his "draw" was surprisingly quick and his aim remarkably true for a man of his age. He never went forth into the field to make a "bag," but simply contented himself with a reasonable number of birds, even if many more were to be had. He strenuously condemned the wanton slaughter of any kind of game, and was a staunch advocate of all game protection movements. He was not, however, in sympathy with the present popular practice of the various States of charging an exorbitant price for a license to hunt within their borders. He believed such legislation to be unwise and wholly impotent.

One would naturally believe that General Harrison, because of his lack of physical exercise and his corpulence, would not be able to cover much territory in a day's hunt. Such belief, however, is far from true, as he was an indefatigable walker, the matter of wonderment and admiration among his friends, and he not infrequently led the much younger members of his party a merry chase across the country.

For a few years before his death General Harrison, with his family and a few intimate friends, spent his summers up in the Adirondacks in Herkimer county, N. Y., on the Fulton chain of lakes, where excellent fishing and good shooting were to be had. It was here that he got his first taste of big-game shooting, and a well-authenticated report is that more than one magnificent buck fell before his unerring aim.

There are men who say that General Harrison was cold, distant and unsympathetic. It may possibly be true that he did not wear his heart on his sleeve in public life, but every man who was ever fortunate enough to come in contact with him as a sportsman will gladly testify that a more genial, a more considerate or a more companionable sportsman never drew a gun to shoulder than he. He was a great student of nature, and his unbounded love for her frequently manifested itself. Her innumerable charms and delights seemed to completely captivate him, and being with and communing with her furnished him as much enjoyment and pleasure as the pursuit of her children.

There was one phase of hunting for which he displayed a decided antipathy. This was the killing of a wounded or crippled bird, and quite frequently a friend was called to administer the death blow.

No difficulties were ever experienced by him in finding good shooting grounds, as he was deluged every season with letters from his many friends inviting him to hunt over a neighborhood where quail were legion. He had his favorite grounds, however, and hunted over them year after year with the same companions, two or three bosom and life long friends, from his own dear city of Indianapolis.

He was always exceedingly popular with the country people—so much so, in fact, that when the people gained intelligence of his being in their neighborhood on a hunt, urging invitations were immediately sent to him to come and hunt over their farms. This popularity was doubtless ascribable to the fact that he was always especially sociable and considerate when in their presence, and showed a lively interest in topics interesting to them, such as crops, stock, etc. He never displayed any unwillingness to sit at the table with the farm hands in their shirt sleeves, but merely took it as a matter of course—an unmistakable example of his catholicism.

Around the fire after the day's hunt, General Harrison with a cigar between his teeth would often entertain the entire party with his hunting reminiscences. They were told in such a charming, delightful and inimitable style that his auditors always became insistent for more—more, and the result was that the lamp would be kept burning until a late hour. He was a man who thoroughly enjoyed a wholesome, inoffensive joke. His sense of humor was remarkably well developed, and many are the stories told by his old hunting companions of the jokes played on them and others by the General. He was many times the butt of a joke, and he took it as good-naturedly as if he had played it himself, which proves conclusively that he possessed a fine sense of humor.

His visit to a community always created a sensation. The whole populace became agog and every one had an irrepressible desire to get a glimpse of him. A few years ago he slipped into Sheridan, Ind., and enjoyed a few days' quiet shooting. The villagers, however, were apprised of his presence, and when he arrived at the station to board a train for home he was confronted by a vast assemblage of men, women and children from miles around. The public schools had been dismissed and the children were there en masse. General Harrison's little party was completely surrounded by a curious, inquiring, admiring crowd. A member of his party told a little girl who happened to be standing near by, gazing in open-mouthed wonderment at the General, to speak to him, that he should be glad to shake hands with her. She took one step forward, halted, then her courage failed her, and she was soon lost in the crowd. A buxom country maiden who had overheard the conversation, and after being assured that she would be cordially received, finally mustered up sufficient courage to proffer her hand to the General. He took her hand in his and spoke a few kind, reassuring words to her, and she went away, the happiest girl in the world. The effect of her action was electrical. From every quarter came hands thrust forward, eager to grasp those of the ex-President. And he had a firm, welcome and inspiring handshake and a pleasing smile for all. This little incident truly brought out the intrinsic character of the man. He had had a hard day's hunt, and was tired and dressed in his muddy hunting clothes. How easy it would have been for him to have refused to send the sunshine into those people's hearts, that he so graciously sent. But that would have been another man—not General Harrison.

Sportsmanship is sadly in need of such type of sportsmen as General Harrison, and in his death a distinct and irreparable loss is to be recorded. He was a model sportsman, and may his life as such be honored and emulated by all who are true lovers of the rod and gun.

INDIANAPOLIS, Ind. WILBUR CARLIN MCINTOSH.

Poke-o-Moonshine.

Editor Forest and Stream:

Perhaps Mr. Ames will find that Poke-o-Moonshine is a wanderer from the Spanish south, disguised and very much Americanized. The Mexican has a drink which is called mescal. Its effect is somewhat out of proportion to its quantity when swallowed. So the native is sometimes diffident about taking it in too large quantities.

"Poco mescal! Pocotito mescal!" is to be heard in the Mexican inn, I have read. "A little mescal; a very little mescal," is what the speaker means. "Pocotito mescal," however, is likely to mean two fingers taken in the traditional fashion.

I imagine that a South American first asked for "poco moonshine," and that he got it. The expression is of the sort that travels, so finally it came to the Adirondacks and Maine, where it rested on a mountain stream in the form of Poke-o-Moonshine.

A much more appropriate derivation would be to link Poke-o-Moonshine with the word "pokerish," a hazy, shivery sort of word, expressive of the haunted four corners and the back garret where the relics are visited by ghosts who lived and died when the relics were in prime use, and equally applicable to the dark shades of the forest in the moonshine.

Perhaps Poke-o-Moonshine Mountain is a long, tedious one to cross, a poky, uninteresting stretch of a trail that passes it—one that makes one poke along in the moonshine after sundown. Still I presume the Spanish "poco" is likeliest to be the source of the expression.

Perhaps this venture in word analysis will help Mr. Ames both as to Poke-o-Moonshine and "Poke-Logan." I never saw the latter one before that I remember, nor do I know what a "logan" is, unless it is "a logging rock or rocking stone," which is the dictionary definition.

In this connection, Mr. Editor, why isn't there a dictionary of woods terms? A book, I mean, in which one would be able to get the meaning of hobnails, still-hunt, cold trail, runway, leader, stretcher, dropper, drawing fire, holding over and the like. There are terms in general use among Rocky Mountain trappers, Maine guides and sportsmen which deserve explanation, not to say perpetuation, by a competent word analyzer and sportsman. Think what a help it would be to have descriptions of the native flies, for instance, when one is planning a trip into unfamiliar waters. See what a pleasure it would be to the writer to realize that he wasn't putting his hero on the back track of the villain when he came to the woods. "For trolling an artificial minnow is best. A small spoon is also good. We had neither with us on this day, and instead we used large, dead minnows with swivels to prevent the lines from becoming kinked. We had proceeded only a short distance when the bass began to strike," is a specimen of average fish story lingo likely to make trouble in the mind of a man who never used anything but flies on an Adirondack stream. A "strike," a "bite" and a "rise" are, perhaps, typical of three kinds of fishing—i. e., trolling, plugging (?) and fly-casting—but one might write a long time and not use the terms properly.

Of course one can find nearly all of these words in a six or eight volume general dictionary. For example, "Still-hunt, see hunt"; "hunt" is three volumes away. Then "Still-hunt, a hunt conducted with unusual silence and caution; hence, in American politics, a canvass conducted in a quiet and secret manner." I imagine the man who wrote that definition would canvass the wilderness a long while in his quiet, secret, unusually silent and cautious fashion before he would be elected a successful pot-hunter. RAYMOND S. SPEARS.

NORTHWOOD, N. Y.

Directions for a Traveler.

From the Berea (Ky.) Quarterly.

THE highways of the mountains are not laid out by compass and surveyor, but by the far more irregular laws of nature. It will be truly interesting to read through the following succinct directions actually given one of our extension workers for going from Booneville to Hazard. And the mountain man who can remember these directions without "taking notes" has a memory that surpasses that of most "furriners."

Route from Booneville, Owsley Co., to Hazard, Perry Co.

Up South Fork of Kentucky River to mouth of Cow Creek.
Up to head of Cow Creek to head of Burton's Fork of Long's Creek.
Down Burton's Fork of Long's Creek to E. D. Collihan's.
Up Sycamore Fork of Long's Creek to mouth of Trace Fork.
Up to head of Trace Fork of Long's Creek to head of Trace Creek.
Down Trace Creek to Squabble Creek.
Down Squabble Creek to Middle Fork of Kentucky River.
Up Middle Fork two miles to mouth of Gray's Creek.
Up to head of Gray's Creek to head of Joe Eversole's Branch.
Down Joe Eversole's Branch to the North Fork of Kentucky River.
Up the North Fork to mouth of Camel's Creek.
Up to head of Camel's Creek to the head of Forked Mouth.
Down Forked Mouth to the North Fork of Kentucky River.
Up North Fork one mile to mouth of Willord's Creek.
Up to head of Willord's Creek to head of Big Creek.
Down Big Creek to lower left-hand Fork.
Up to head of left-hand Fork to head of Hale's Creek.
Down Hale's Creek to North Fork of Kentucky River.
Ford the Kentucky River and enter Hazard.

Natural History.

An Outing in Acadia.—V.

BY EDWARD A. SAMUELS.

[*Continued from page 345.*]

THE young growth that John had mentioned was soon reached, but with the exception of a single woodcock, no more birds were obtained.

"What a lot of blackberries there are here," exclaimed the Doctor, as in a short time we emerged from the thick covert and entered a large tract of raspberry and blackberry bushes. "What a harvest the young ladies could gather here," he continued, as he picked handfuls of the ripe and lucious fruit.

Delicious they proved to be, and we picked and ate all we desired. "There has been a fire through here within a few years," said the Doctor, as we moved among the bushes, "and it almost always happens that the raspberry and blackberry spring up and flourish as they do here, the fruit furnishing an abundant and welcome food to many animals and birds. By and by the bushes will be over shadowed by trees, which are again establishing themselves, as we can see here, and they will weaken and die, for the sunlight is essential to their life."

"Yes," I replied; "I notice that young trees are growing, but they are not pines and spruces, such as are seen on all sides of this little patch, but are oaks, mostly, and a few maples."

"You are right," said the Doctor. "Yes; they are principally oaks, and they will for many years to come replace the cone-bearing trees in this place."

"Can you imagine how this comes about?" asked the guide.

"Very easily, indeed; the change is effected by the squirrels, chiefly."

"How do the squirrels plant the trees?" he asked.

"They plant them by burying the nuts in the autumn, and it is astonishing how accurately, how unerringly they dig in the winter to their buried treasures, which are

A PLANTER OF FORESTS.

sometimes covered by six or eight inches of snow. Of course they do not recover all that are cached, and from those that are left spring the young trees, such as those we see around us."

That the Doctor was right has been proved by the observations of many good and careful students.

The squirrel tribe seems, from its general physical conformation, to be the means—the agents—that nature has provided for securing a diffusion of our nut-bearing trees.

The little rodents, bright, nervous, active, provident, are gifted with good digestive powers, and as they are active through the winter their appetites must be provided for. Their favorite food, which is susceptible of preservation for many months, is by their peculiar instinct stored in just the right form and manner to meet not only their hibernal wants, but also to provide for a future supply.

For the nuts buried here and there, one or two inches deep in the damp, rich humus, are planted under exactly the right conditions for future germination, and if but a small proportion of them escape the squirrel's appetite, enough are left to continue the forest growth generously—yes, munificently. Every good observer will see as he passes among the pines and spruce, little sprouts of oaks and beeches scattered here and there, some rising a foot, others two or more feet in height. These are sprouts one or two years old, sprung from the nuts which had been buried and forgotten by the squirrels. Not a nut-bearing tree is anywhere in sight, and the seed must have been brought from quite a distance. I have known instances of hickory nuts being buried a half-mile from the parent tree, and acorns from even a greater distance.

The question might well be asked, "Why do the squirrels bring them to these pine groves? Why not bury them in any other place?"

They bury them everywhere—in birch woods, in fields, in old pastures and even in orchards; you can find in any of these localities at any time seedlings of our nut trees which have been planted by the squirrels. But they prefer the denser evergreen woods for storing places, and for their homes, because a better covert is afforded them from their many enemies than is found in the deciduous woods, and here again the wonderful provisions of nature are apparent. Not only is the proper rotation of vegetable life thus secured, a rotation absolutely essential, but the very best and most favorable conditions are secured for

the new growth in being planted where, during the earlier period of its life, it will be protected from the too fervent rays of the sun.

So well recognized is the fact that the deciduous trees can best be propagated and grown when shade in some form is provided them, that for many years German and English arboriculturists have provided evergreen shade and shelter trees for their young oak plantations. Thus it happens in nature's workings, that when a grove or forest of evergreens is felled it is succeeded principally by a deciduous growth.

Anually the squirrels plant the nuts, the sprouts start up and live two, three or even more years, according to the density of the shade above them, and then they die, for too much shade after a certain period is fatal to them. This planting of the nuts and the early dying of the sprouts go on year after year, steadily and constantly, until the time comes for the pines to die, when their dense shade being removed, the sprouts which had found one or two or three years' protection in it, start up with the greatest vigor and rapidity of growth.

"But it is growing late," exclaimed the Doctor, as we reached the border of the blackberry patch. "There seems to be no grouse in this neighborhood, and we had better work our way toward home; the young ladies will be expecting us."

Our steps were now turned toward the falls, John leading the way through the thick undergrowth and over windfalls and decaying logs. An occasional hare was started from its lurking place or "form," and one was not quite quick enough to elude my aim.

The hares that abound in the woods of Nova Scotia are known as the great Northern hare. Unlike the brown hare (often, but improperly, called rabbit) of southern New England, it is strictly an inhabitant of the woods, and very seldom ventures into fields and cultivated tracts.

In winter it seems to prefer the swamps, where its paths are seen running in all directions. In summer it avoids such localities, choosing higher ground at all times, being fond of a thick undergrowth of young evergreens. So abundant is it in Nova Scotia that the writer has seen many wagon loads of them carried to market. On being hunted by dogs, it often doubles on its tracks, and thus sometimes eludes its pursuers. It does not take refuge in holes in the earth as does the common rabbit on being hard pressed, but depends entirely on its fleetness and strength and the thickness of the covert. Its flesh, though rather dry, is generally palatable, but in winter, when it feeds on spruce and hemlock twigs and bark, it is far from attractive. In fact, specimens that I have shot in winter were so strongly flavored with this food that even in a highly seasoned stew they were absolutely repulsive; in trying to eat them, the flavor seemed almost as strong as turpentine.

The hare does not move around in the day time very much, but remains concealed beneath a clump of bushes or beneath a windfall or mass of rock.

It has innumerable enemies, and it forms the principal food of the lynx, fox, various species of owls and other rapacious animals and birds. Were it not very prolific it would soon be exterminated. The young are usually five or six in number, and two families are born in a year. The color of its fur changes from a light yellowish brown or buff in summer to white in winter.

At the falls the young ladies with overflowing baskets were awaiting our return, and we were soon on our way, homeward bound. The road led through a long stretch of maples and birches, their foliage showing brightly against the somber hemlocks and other evergreens which occasionally sprang up among them.

"The frost was pretty keen here," said the Doctor; "the maples are becoming brilliant and the ferns show that the touch of the *avant courier* of winter has been laid upon them."

"I wish it had been laid on some of these mosquitoes that are continually flying in my face," exclaimed Edna, petulently. "I did not expect to find any in September."

"There will be a few left until the cold weather comes," replied the Doctor, "but they will not be very troublesome—in fact, those which are hovering about us are chiefly males, which do not bite us."

"Can it be possible that the females only are the tormentors?"

"Yes; the females are the misery producers among mosquitoes."

"Awful nuisances they are," said Phœbe. "I never could understand why they were created."

"The mosquito has its mission," replied the Doctor. "It is, during most of its life, an aquatic insect, and it is then that its usefulness is apparent, for at that period of its existence it subsists on various animalculæ which render the water impure, and consequently injurious to man and other animals."

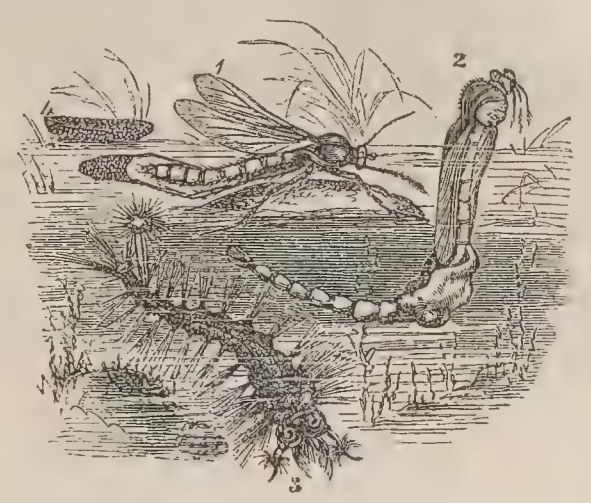
"Really, I had no idea that the pest was ever of any benefit to anything."

"Yes; I have no doubt it is of considerable benefit, although I feel sometimes that its attacks on us more than offset all the good it does."

The life history of the mosquito is far from uninteresting. The female lays her eggs in the spring and early summer. I have never seen the act performed, but it has been stated by an entomologist, who witnessed it, that she rests on a bit of grass or leaf on the top of the water, clinging to it by her first and second pairs of legs; the third pair she crosses behind her like the letter x. The first egg is caught and held between her legs, then another and another are fastened to the first by the gum that covers them, until fifteen or twenty have been arranged side by side like seeds in the head of a sunflower. The writer further states that when the mass becomes too heavy for her to support, she lowers it upon the water, but still holds it by putting her feet on either side, until two or three hundred eggs have been laid. The whole mass is shaped somewhat like a canoe, and is about as large as a grain of wheat. We can often see these tiny black boats floating on the top of a stagnant pool of water; the life within the eggs is not destroyed even if the water freezes.

If the weather is warm, the eggs hatch in three or four days, and each one sends a wiggler down into the water through a hole in the bottom. The little mite or larva swims about and ever and anon hangs himself by his tail to the surface, leaving the tip out of the water. The reason it does this is, the tube through which it breathes is not in its head, but at the tip of its tail; this ends in a few hairs, which spread out in a star-like form and are oiled to repel the water.

The larvæ mosquito soon changes into the pupa form. It now breathes through its ears, or rather tubes that look like ears, which are thrust a little out of the water; its tail resembles that of a fish, and by it it can move at will through the water. In this stage of its existence it remains about fifteen days, and then another change takes place. The pupa rises to the surface and thrusts out its head and shoulders, and then burst its skin. The filmy wings now appear, but the insect instinctively remains



MOSQUITO MAGNIFIED.

1. Insect depositing eggs. 2. Insect escaping from pupa case. 3. Larva of mosquito. 4. Floating raft of eggs.

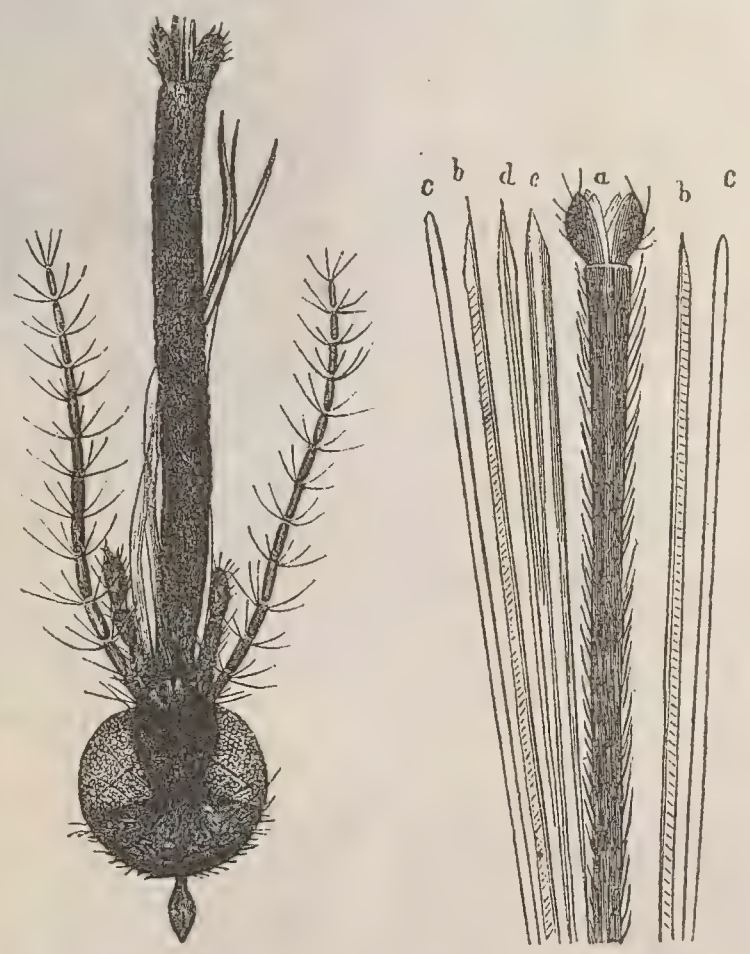
quiet until they and its slender legs are dry. When they are ready for use it leaps into the air, a singing, full-fledged insect.

"In the larval form," continued the Doctor, "it feeds upon decaying matter and micro-organisms; it is stated that it rids the stagnant pools of microbes which produce miasmatic fevers; it also eats a variety of animalculæ, and it has been known to seize and kill young fishes. When it changes to the pupa form it apparently does not eat."

"It eats all right when full grown," added John. "I've always wondered what it fed on when no animals were round to furnish it a meal."

"Probably it sucks the juices of plants," was the reply, "or perhaps it does not feed at all, if it cannot obtain the food it desires."

"The sucking or biting apparatus of this insect is quite interesting. It consists of six bristle-like organs which are inclosed in another called the labium; these are thrust into the skin and then into the flesh of the victim, until they are sunk their entire length. Gosse, the eminent microscopist, in describing the process, says: 'When the array of lancets is introduced into the flesh, you are aware that a tumor is left, which by its smart, itching and inflammation, causes much distress, and lasts many hours.



Head and proboscis of female mosquito as seen under the microscope. The reticulation on each side of the head shows the space occupied by the eyes.

Proboscis and lancets of female mosquito as seen under the microscope. a, Labium; b.b., mandibles; c.c., maxillæ; d, tongue; e, labrum.

This effect is probably produced partly by the deep penetration of the instruments, for they are fully one-sixth of an inch in length, and they are inserted to their very base, and partly by the injection of a poisonous fluid, intended, as has been conjecturally suggested, to dilute the blood and make it more readily flow up the capillary tubes. The channel through which this fluid is injected is probably the tongue, which is permeated by a tube containing a fluid, and the same channel may afford ingress to the diluted blood.'*

"The labium does not enter the wound. If you have ever had the philosophic patience to watch a mosquito while puncturing your hand, you have observed that the knob at the end of the proboscis is applied to the skin, and that then the organ bends with an angle more and more acute, until at length it forms a double line, being folded on itself, so that the base is brought into close proximity to the skin. Meanwhile the lancets have all been plunged in, and are now sunk into your flesh to their very bottom, while the labium which formed merely the sheath for the whole, is bent up upon itself, ready again to assume its straight form, as soon as the disengaged lancets require its protection."

*Recent experiments at Havana have proved conclusively that the yellow fever is communicated by the bite of the mosquito, and well authenticated cases of other diseases being spread in like manner are recorded.

A writer in the Strand Magazine, in describing the habits of the mosquito, says:

"You can best observe the mosquito in action by letting one settle undisturbed on the back of your hand and waiting while she fills herself with your blood. You can easily watch her doing so with a pocket lens. Like the old lady in 'Pickwick,' she is soon 'swelling wisibly.' She gorges herself with blood, indeed, which she straightway digests, assimilates and converts into three hundred eggs. But if while she is sucking you gently and unobtrusively tighten the skin of your hand by clinching your fist hard you will find that she cannot any longer withdraw her mandibles. They are caught fast in your flesh by their own harpoonlike teeth, and there she must stop accordingly till you choose to release her. If you then kill her in the usual manner by a smart slap of the hand, you will see that she is literally full of blood, having sucked a good drop of it.

"The humming sound itself by which the mosquito announces her approaching visit is produced in two distinct manners. The deeper notes which go to make up her droning song are due to the rapid vibration of the female insect's wings as she flies, but the higher and shriller notes of the complex melody are due to special stridulating organs situated like little drums on the openings of the air tubes.

"The curious mosquito music thus generated by the little drums serves almost beyond a doubt as a means of attracting male mosquitoes, for it is known that the long hairs on the antennæ of the males vibrate sympathetically in unison with the notes of a tuning fork within the range of the sounds emitted by the female. In other words, hair and drums just answer to one another. We may therefore reasonably conclude that the female sings in order to please and attract her wandering mate, and that the antennæ of the male are organs of hearing which catch and respond to the buzzing music she pours forth for her lover's ears. A whole swarm of gnats can be brought down, indeed, by uttering the appropriate note of the race. You can call them somewhat as you can male glowworms by showing a light which they mistake for the female."

"It is only when it is the 'little wiggler' just hatched from the egg, then, that the mosquito is beneficial," said Phœbe. "What a pity it is that it does not always remain a wiggler."

"There must be more than one kind of mosquito," said John. "I have certainly seen several varieties."

"Yes," replied the Doctor; "there are over thirty North American species, and some of them are terribly bloodthirsty."

Ocean Waifs.

A NUMBER of instances have been recorded of land birds appearing near vessels far out at sea, and apparently overcome with fatigue, they would perch for several hours in the rigging before proceeding on their journey; or, desperate with hunger, would fly fearlessly down to the deck, where food and water is never refused them. Small events like these are welcome breaks in the monotony of a long ocean voyage, but are soon forgotten at the end of the trip. Two of these ocean waifs have recently been presented to the New York Zoological Park, and are on exhibition in the bird house. One is a young European heron (*Ardea cinerea*), the gift of Capt. G. E. Warner, of the steamship Glencartney. The bird flew on board his vessel when about 205 miles southwest of Cape Cormorin, the southern extremity of India, but did not appear tired out, although it had probably not rested since leaving the land. A storm must have driven it seaward, as there is no migration route near this locality. The heron's wing was clipped ,and it proceeded to make itself entirely at home, and, showing a fierce and aggressive disposition, was confined most of the time in the potato bin, which it defended so vigorously against the inroads of the cook that the latter received several wounds from the bird's beak while attempting to secure the daily ration of potatoes.

The second bird is a European turtle dove (*Turtur turtur*), which was captured not less than 750 miles from the nearest land—Ireland. On May 27 it flew on board the steamship Phœnicia of the Hamburg-American Line, and was cared for and presented to the park by Capt. Paul Froehlich. It was in an exhausted condition when caught, but quickly recovered, and at present is in beautiful plumage, showing no signs of the buffeting of the storm which it must have undergone. The turtle dove migrates northward to the British Islands about the first of May, but, as this bird was captured on May 17, it was not migrating, but, caught by a gust of wind, was probably blown away from the land. The force of the storm would then drive it mile after mile, allowing it no chance of controlling the direction of its flight, but, from the very velocity, making it easy for the bird to maintain its equilibrium.

Hundreds of brds must perish when left by storms far out at sea, and the infinitely small chance of a vessel or other resting place being in sight makes a bird which has passed through such an experience and survived an interesting addition to a collection.—New York Evening Post.

Breeding the Wild Pigeon.

Editor Forest and Stream:

May I suggest that the reason why Prof. C. O. Whitman has had so little success in breeding wild pigeons (vide his letter to Mr. C. H. Ames, yours 15th inst., page 464) is that his breeding stock is infertile from too intense breeding?

Prof. Whitman says that his stock comes from a pair obtained by a Mr. Whitaker twenty years since. Necessarily any existing descendants must be intensely inbred, and the fact that too long continued inbreeding impairs fertility seems thoroughly established, at least in connection with dogs, as was conclusively shown by Dr. J. Sydney Turner, of London, England, some years since. And it also seems well established that the most intensely inbred bitch will breed freely if mated with a totally unrelated male, more especially if that male be of another breed of dogs; therefore it would seem that the course for Prof. Whitman to pursue is to procure a cock pigeon from some other source than the one his stock came from.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Capercailzie.

Editor Forest and Stream:

It was with great regret that I read in your columns at the time, of the untimely death of the caperacilzies put out in Vermont, not only on account of the financial loss sustained, but particularly because I am convinced that all foreign game birds introduced in our country can successfully be established and propagated if only all the important conditions for their sustenance and protection are duly observed. While I do not pretend to appear before you as an expert in raising game birds, I feel that I can nevertheless speak with authority of whatever I have to submit to you and your readers, inasmuch as I have at every opportunity presented during the past twenty years studied these birds, not only in their natural haunts but also in captivity, and furthermore, have hunted them successfully. Since I do not know under what natural conditions in reference to cover and feed these birds were given their liberty, it may be taken for granted that one or the other necessary factor for their welfare must have been overlooked. The pot-hunter or poacher alone did not hasten their destruction. I believe faulty selection of their breeding grounds or want of proper food killed them.

To write a natural history of the capercailzie would mean writing a book, and of course is out of the question here, but a few practical hints might be of value. Speaking of the capercailzie (*Tetrao urogallus*) as the king of European game birds, we must not forget that when he is brought over here he not only finds entirely new surroundings, different food, but, what I consider of particular weight, arrayed against him a whole army of beasts and birds of prey which are unknown to him on the other side, and his large size making him so conspicuous he easily becomes their victim.

In the localities where I have observed and hunted him such animals as our lynx, wildcat, panther, mink, skunk and many other rapacious animals do not exist. His only enemies there are a few species of hawks and rarely eagles. The red fox, marten, etc., are kept pretty well in check, so that from that side he is pretty well protected.

Our native forests are, with a few exceptions up in the North Woods, not adapted for his existence, being entirely too open and generally stocked with species of trees, which with their seeds are not to his liking. Since he principally feeds on young shoots, tender buds and berries of evergreens, who knows but that just the want of the right kind of food did not kill him in Vermont—the eating of strange and indigestible food?

Wherever I found him it was in mountainous districts, away from civilization, as in the southern part of Austria, in Steiermark, in the Tyrol and the Bohemian forest. Here in thick stands of pine and spruce, mixed with birch and a generous undergrowth of juniper, he thrives best.

These woods, of course, are more or less grown and managed by proper forestry systems, and are mostly so thick that he finds plenty of shelter therein. Of a number of cocks shot (hens are never killed abroad) I found the contents of their stomachs and crops to consist principally of resinous substances. He seems to be particularly fond of the seeds of Norway spruce and Scotch pine, and in addition I found a variety of other vegetable matter. It would seem from this that if a proper forestry system were introduced, wherever one would like to have them establish themselves, a continuous war declared on all rapacious animals and all possible precaution taken against poachers, nothing would stand in the way of success.

Last April, while abroad, I received an invitation to an Auerhahnjagd (hunt for the capercailzie cock) on the preserve of the Duke of S., and of course I was not slow about accepting. On arriving at the nearest railroad station to the preserve, I was met by one of the game keepers who was to take me in charge and see that my trip was successful.

Driving for about six miles into the forest, we put up for the night in a log cabin, and after the regulation hunter's supper and a pleasant chat and smoke following, retired early. The game keeper asked me during our conversation if I had ever hunted this game before, which I answered in the affirmative. "Well," said he, "our birds here will strike you as particularly wild and hard to get at, although in severe weather with plenty of snow on the ground, they congregate in large numbers on the place and surroundings from which the original stock had been liberated, and where we feed them during the hard winter. But the moment spring sets in away they go. Well, you will see for yourself. When you do your jumping, do it as carefully as possible, otherwise you will not succeed." I promised to do as directed, and when he called me next morning at about 3 I was only too willing to prove my ability as a hunter, and after some breakfast forth we went out into the dark night.

A tramp of about two miles, covered under most trying conditions, continually climbing up the mountains, brought us finally to a point where three valleys came together, and from which after light set in, one had a most beautiful and commanding view of the whole surrounding landscape. After whispering into my ear to have a sharp lookout for some prominent large spruce trees 200 yards to my left and further up the mountain, the game keeper left me, promising to meet me there again as soon as the calling and strutting time for that day was over. While it was still too dark to distinguish anything clearly, not very long after he had left me, the first signal call from a rock across the valley reached my ear and acted like an electric shock upon me. Although I had heard this call many a time before, I could not control my heart's palpitations, and just imagine one who has never heard it in his life. Would it be a disgrace for him to be overcome by the so-called "buck" or hunting fever? Certainly not.

The signal call of the capercailzie cock is so distinct, shrill and loud that it can be heard far away—it cannot be properly imitated or described by words. It is a combination of whistling and smacking—a proclamation that his majesty is wooing for the love of all the hens in his domain. It is one of the finest natural love and war songs ever heard. There are three distinct acts or verses in his calling that may be distinguished; the first is the so-called "knappen." It is a smacking with the tongue and bill ,and acts as a part of introductory. His eyes are wide open, gradually he raises his head, his voice becomes louder and louder, until it almost sounds like a challenge. This is the signal call or act 2. From this his somewhat angry call gives place in act 3 to one of entreaty and love. With fan-like tail, lowering wings, body in the strutting attitude, his eyes shut, he enters love's dreamland. In this, the third act, or so-called (schleifen) grinding or whetting act, called so on account of the peculiar noise he makes with his wings, tail and feathers, the outside world and its dangers are entirely dead to him; he, in fact, seems himself to be almost unconscious, hearing or seeing nothing. During this last act, when his eyes are shut and he seems to be in a regular fit, the hunter tries to stalk him. Generally two to four large jumps under as much cover as possible is about all he can do. The very moment the cock stops with act 3 the hunter must remain in the place and position where he happens to be as if transfixed. The least little movement and your game is gone. It has always seemed to me that nature actually comes to his assistance at the end of his love song in detecting an enemy. The moment he awakes from his trance he surveys his surroundings, and the least suspicious looking object is cause for his immediate removal to other quarters. As I have said before, the first signal call had been given across the valley, and soon was taken up by a number of cocks in various directions. To my left some

THE CAPERCAILZIE'S CALL.

gigantic pines, almost 200 feet in height, with the advancing daylight became more distinct, and as instructed, I kept a close watch over them. One large dead branch quite near the top of one of them stretched out far across the valley, forming all sorts of fantastic figures against the sky behind, and as the game keeper told me afterward, at least one dozen cocks had been shot from that particular branch. While this wooing was going on all around me, I had carefully loaded my little three-barreled 16-bore with an 8 mm. smokeless rifle barrel attached (by the way, a most powerful little gun) and stood there well hidden among some thickly grown spruces awaiting developments. I had just listened to the love song of a cock further up the valley to my right, and it seemed to me not so very far away, still I remembered that on former occasions I had been misled many a time in judging distances from sound, and was just figuring out if a stalking of a mile or so would be advisable, when suddenly to my left the first introductory notes from a cock were sounded. Quickly turning my head in that direction, I failed at first to see anything, owing to trees and branches obstructing the view, but when I had left my hiding place and had begun the jumping or stalking during the first production of act 3 of the cock's love song, I could make him out perched on a limb almost near the top of one of the monarchs of the forest.

The distance to that tree from where I stood then was at least 300 yards, and he was anywhere from 100 to 150 feet above the ground. At every repetition of his strutting I came closer and closer, executing all kinds of catlike performances to keep under cover, until I must have approached to within about 100 yards or even less. Here, to my great chagrin, further progress was stopped by an opening among the timber over which I could not proceed without exposing myself. There being no chance whatever to either get around this one way or the other, and shooting from where I stood being equally out of the question, the bird being hidden more or less by intervening branches and twigs that it would have taken a cannon ball to knock him off of his perch, I did the next best thing under the circumstances, and stopped where I was. Carefully pulling my field glasses out of my pocket, I stood there for about twenty minutes observing this noble bird through the branches in all his love antics, which he repeated at regular intervals. Finally, as it became almost daylight, he suddenly stopped calling and flew off down toward the valley, and was soon lost to view, without even then giving me a chance for a successful shot.

Probably another person in my place would have taken his chances and fired at the cock anyway, but years of experience in the forest have taught me never to shoot unless I have a fair chance of bringing my game to bag. This blazing away, emptying your magazine at a fleeing animal, is simply absurd. Ninety-nine out of a hundred it is a case of wasting ammunition, alarming all other game foolishly for miles around, and should the game really receive a shot, its effect generally is not sufficient to stop it, and the consequence is a miserable lingering death, which is directly in opposition to all rules of true sportsmanship.

By this time Father Sun had put his nose above the mountains and asserted his supremacy. Returning to the place of our rendezvous, I met the game keeper, as arranged, who greeted me with a broad smile upon his face, assuring me at the same time that he had followed my movements as best he could from his hiding place, and that I was perfectly justified in not shooting, since this very cock would probably come to that same place again, as they invariably do if not alarmed in the meantime.

"Patience is a virtue," and particularly so in stalking any noble game, we argued, and then went back to the cabin, where, after a second breakfast, I indulged in a little nap, dreaming of course of nothing else but swarms of capercailzie cocks.

Wanting to see the various winter feeding grounds, we went out in the afternoon and first visited a few of the cleared places where the red and roe deer are fed. On approaching one a number of deer were seen feeding on hay and unthreshed oats tied around a number of large trees. They allowed us to come within about 200 yards, but soon saw or smelled us, and off they went with tremendous big bounds. Making a little detour, the game keeper took me to the place from which eight years before the capercailzie had been first liberated, and where they are being fed during severe weather. The whole arrangement and layout of this place struck me as so ingenious and practical that before leaving I familiarized myself thoroughly with every detail, and hereby submit it to your readers with the hope that my observations may be of practical value.

It seems that the whole secret in the successful introduction of the capercailzie lies, as I have remarked, in the proper selection of the grounds first and all the time. In this particular case an area of from two to three acres stocked with closely grown together spruce, pine and birch, with some juniper trees as undergrowth, of various sizes, had been fenced in by wire netting to the height of 10 feet, 18 inches of the bottom being buried below the ground in such a way that no animal could very well dig in under the fence without bringing up at the wire. Around the whole inclosure about 1 foot away a trench 2 x 2 feet deep and wide was dug to serve as a means of further impediment; to be short, the whole arrangement was made so that it was equally impossible for any animal to get in or out of the inclosed area. To still more protect the birds against any animal that might try to climb over the fence, a wire was stretched as tight as a piano string across the tops of the posts all around, and to this finally at certain intervals necks of old broken bottles were

tied, so that the slightest coming in contact with the former would by its vibrations bring forth such an infernal noise as to scare the boldest prowler out of his wits.

Into this inclosure two cocks and twelve hens were brought, after their wings had been clipped so they could not fly, in fall time, and here they were cared for until the following spring, when the mating season began. The game keeper who had charge of them told me that by that time they had become quite tame, and although the feathers on their wings had sufficiently grown to permit them to fly a little, they did not avail themselves of the opportunity to escape, but instead built their nests right there. When summer came the colony had grown to the respectable number of about 150 birds.

The moment the young birds were strong enough, one of the smaller sides of the inclosure was gradually removed, permitting the old and young to go out or in at will, and when fall time came they had all left their birthplace and could be found all over the neighborhood. But during the severe weather they congregate there in large numbers, owing to the fact that the snow is cleared away and they are fed. During all this time a continuous war has been kept up against all "varmint," so that killing sly Reynard, marten or weasel is of very rare occurrence at present. No wonder that the birds thrived so well. The game keeper told me that there are from forty to sixty cocks shot every April now, and that to his best belief there were at least a thousand birds on the preserve.

After having made all these observations, we retracted our steps toward the cabin and retired early.

Next day being a stormy, miserable sort of an April day—rain, snow and sleet combined—we stayed in and killed the day as best we could, spinning yarns, looking after the rifles, eating, smoking and sleeping alternately. As is usually the case after such showers, the next morning brought better weather conditions. With the moon and stars shining brightly, we left our resting place and carefully stole over to the place where soon after a cock's love drama should end in a tragedy.

I had selected a hiding place nearer to the big trees, upon one of which his majesty had two days ago given me such a fine exhibition of his abilities as an ardent lover, and from which I could easily oversee all the "likely" places around me.

Long before daylight came the whole neighborhood echoed and re-echoed with the love calls of a number of cocks, all ready for business. My rifle was ready for action, and I was just thinking if I really should have luck that day, when with loud clapping and whizzing of wings, breaking and cracking of twigs and branches, one of these noble cocks alighted not fifty yards from me on an old dead limb. To say that I was not excited would tell an outright lie, and I do not deny that during the next few minutes my heart beat so loud that I almost could hear its throbbings. The cock immediately began the introductory of his love song. Turning his head one way and the other to see that there was no danger lurking near, he gave the signal call, and soon after was lost in love's dreams, from which he was never to awake—comedy was suddenly turned into tragedy, of which he was the principal actor. Being distinctly lined out against the sky, my shot was more or less an easy one, and the bullet went home where intended—clear through the neck—and I dare say when that cock came crashing down he never knew what had struck him.

He was a full grown, magnificent bird, and tipped the scales at an even 14 pounds. So ended a very instructive and still more pleasant and successful trip in search of the wily king of the grouse family, *Tetrao urogallus*. May he finally be introduced with success into our country is the ardent wish of the writer.

F. VON HOFFMANN.

Three Weeks in the Adirondacks.

A SPIRIT of unrest kept me unsettled, so far as business matters were concerned, the greater part of the summer of 1900. The only outlet for my discontent (better defined as "woody feeling") was found in constructing various camp furnishings—chiefly a stove. Day by day found new additions to the store; day by day found new plans and enthusiasm, known only to those who love nature, and who can find the enjoyment of planning and anticipating a trip to the North Woods—second only to being there.

The complete "ready to start" outfit consisted of a marvelous camp stove, with several feet of telescope pipe, quite suitable of serving in any well-ordered kitchen. Besides these, there were two tents and fly, two pack baskets filled to the brim with sandwiches, which were made of clothing and provisions. Our trunks were also filled, and were, on our arrival, to serve a double purpose—they were to be supplied with shelves, to be set on end, to furnish a cupboard. There were two barrels of provisions, and last, but not least, two tired men, only too glad to get away from business for a play spell. The partner of the writer's joys was W. J. Leake, a time-worn camping friend. About 5 o'clock on the afternoon of Sept. 4 we were safely landed at Lake View Lodge, on Big Moose Lake, the most beautiful spot beyond the Fulton Chain. Many friends and acquaintances greeted us on our arrival, which added much to our pleasure.

Early the next morning we were astir, and began to look about for a place to pitch our tent. The place that had been our home two years before had been demolished by the loggers, but we finally selected a beautiful spot, a bit higher than the surrounding ground, while a fine stream, which was near by, supplied us with water. Our tents were soon put up, cupboards put in order, a rustic table built, beds made on the boughs, a fire built—and Camp Jolly was in running order.

The prospects for good hunting were discouraging, as but few deer and practically nothing else had been seen. We had game dinners, however, although they consisted of squirrel potpies (of course we must add they were red ones, and quite small, but as none were allowed to be brought to camp, unless shot through the head, they were well shot—even if pretty small game).

While friends may be considered one of the greatest earthly possessions, it is not considered, by your humble servant to be conducive to successful hunting, to have too many such possessions near by when you intend to get some game. Because of this particular condition of affairs, our social obligations seemed very great, and it soon became generally known that the cuisine at Camp Jolly was worth tramping over many a rough road to partake of; therefore, very often some one would happen along our way, just in time for dinner.

In the meantime, I could not quite give up the idea of getting a deer, and kept wandering about, always on the alert for at least a sight of, if not a shot at, a buck, or nothing. On returning from one of these tours late one afternoon, a porcupine slowly dragged itself out of my path. I remembered that a friend had wished me to capture one for him, so taking my leather belt from about my waist, I hastily secured the animal, tied the strap about one of its legs, and thus fast to the end of my gun barrel, swung it over my shoulder and started tentward once more. A noise attracted my attention, when after proceeding but a short distance, on turning a sharp angle in the beaten path, lo! there stood a large, handsome buck, quietly feeding, only about twenty-seven paces distant. My expectations were to be realized. I was sure he was my game; it was such a good shot I could not miss it. Let the reader not make the same mistake that the writer did, and forget about the previous disposal of the hedgehog. I had cause to remember it very soon, when, as I sank quietly to the ground to be better prepared to take aim, the gun inclined just enough to allow the strap and porcupine to slip forward, and in an instant four claws and seemingly 4,000 quills were buried in my sweater, and incidentally in my back. We were both very busy for a few moments. The crawling creature became a veritable "thorn in the flesh."

It is superfluous to tell you, kind reader, that when the smoke of the battle had cleared away, the beautiful buck was scampering swiftly away in the distance, while by its side was another, even larger, which had been hidden from my view when first I came upon them.

Possibly it was the rain which bade fair to deluge our camp, possibly it was that I suddenly became ambitious and decided to return to work again possibly it was the disappointment and regret caused by seeing that deer literally slip from my grasp; but, whatever the cause, hunting, shooting, camping, lost interest for me. My one ambition was to murder in cold blood all members of the porcupine family. Soon after we broke camp, packed our belongings carefully in a roomy cave in a rock near our happy hunting ground, where, sheltered from the wind and storms, they await us when other vacation days shall come.

BYRON V. COVERT.

LOCKPORT, N. Y.

Anti-Spring Shooting Effects.

Editor Forest and Stream:

I believe that the much disputed question as to whether ducks will breed in this State if they are unmolested by the spring shooter is in a fair way to be settled by the result of our experiment in this county this year. The sportsmen of this county succeeded in securing the passage of a law last winter prohibiting the spring shooting of wildfowl in Jefferson county for a period of three years, and although this act did not become a law until April 6, after the first flight had come and a great many birds had been killed, we succeeded in practically stopping all shooting after that date. The result is astonishing, exceeding by far the most sanguine hope of all who supported the bill.

Geese and ducks of all kinds have been with us in thousands all the spring, and they are with us to-day—May 25—and show no more inclination to leave than they did a month ago. I inclose clipping from the Watertown Daily Times. The article is from their Chaumont correspondent:

"Since the new law has been in force against duck shooting at this season, these fowls are as tame as domestic ones, allowing persons to approach them to within a few yards. There may be seen any day on the shores of the bay flocks containing 200 ducks. Don Rogers, of Point Salubrious, counted 160 one day last week sitting on the beach near his dwelling. Fishermen report the bay teeming with bass, and there are many indications that the season will be a good one for the sportsmen."

The same condition of things prevails in all the waters of our county; ducks of all kinds are here by thousands, and I believe the people who live along our shores will bear me out in this statement, that there are more ducks in this county at the present time than there have been at any time in twenty years. While we are not disposed to want our ducklings before they are hatched, it begins to look as though the birds were satisfied with their treatment this spring, and intend to stay all summer. If they do we want you fellows in the rest of the State to keep right on shooting in the spring and drive them up here. Judging from the number of birds that got here this spring, I don't believe that many of you can hit a duck anyway.

The boys are talking now about a non-resident license for shooting ducks in this county, costing $25 for the ordinary decent sportsman. No license to be issued to pot-hunters, Oswego or Long Island shooters.

By the way, I noticed in the press dispatches the other day that Magistrate Brann, of New York city, had revoked Protector Overton's search warrant in the Arctic Freezing Company case, saying, "I will not allow this thing to go any further. The practice on the part of rural yaps coming to this city and disturbing merchants who are honest and trying to do business is all wrong."

Up in this section of the State the "rural yap" is content to eat game during the open season only, and if I know our new Game Commissioner, the "city yap" will come pretty near doing the same thing, and the "honest [?] merchant trying to do business" in defiance of the game law will find a "rural yap" at Albany that he can't convince with the same argument that he did Police Magistrate Brann.

Every fall and winter the covers of this State are cleaned up to fill the freezers in New York city, and I hope and believe that the time is not far distant when the "rural yaps" will get after their Senators and Assemblymen and demand the passage of the FOREST AND STREAM Plank, "Stop the sale of game at any time."

W. H. TALLETT.

WATERTOWN, N. Y. May 25.

Woodcock and Wood Duck.

TORONTO, Ont., June 12.—*Editor Forest and Stream:* I am gratified with the result of my appeal to the sportsmen of the United States—through the kindness of FOREST AND STREAM—in the important question of united action of sportsmen for the better protection of woodcock and wood duck. I feel sure that sportsmen in general will agree with me in classing the North American woodcock as the finest game bird in the world, and the wood duck as the most valuable. From genuine sportsmen residing in the Eastern, Middle and Western States who so promptly responded to my request, I learn that their experience coincides with ours in Ontario, which is that woodcock and wood duck are becoming scarcer each succeeding season. Such being an admitted fact, what are we going to do about it? This is a case that requires prompt and concerted action of the States and Provinces if the extermination of these grand birds is to be prevented.

I would like, if time would permit, to correspond with all the game protective associations in the United States and Canada, but life is too short and uncertain to undertake such a task, however congenial it might be. I therefore make an urgent appeal to the editors of all the papers devoted to field sports in the United States and Canada to earnestly take hold of this matter on behalf of the true sportsmen of this vast continent.

This is a work that needs to be done at once; it will not admit of delay. A close season for some years in the case of wood duck is absolutely imperative. Similar action regarding woodcock is to be desired, or in the event of this being objected to, the open season should be reduced to one month. That month for the greater portion of the United States and Canada should be October.

What sportsman who has had the incomparable pleasure of shooting woodcock in October but will regret having shot the poor, half-fledged, immature birds in July and August? We who claim to be sportsmen have a great deal to answer for in our ignorance or thoughtlessness in the past, when we could kill twelve or fifteen brace of woodcock during a day's shooting, fondly believing this sport would continue, at least for our time. Well, we have had a rude awakening, and our pleasant dreams dispelled.

Brother sportsmen, this matter to a large extent is in your hands. The editors of your respective papers will, I am sure, give you the powerful assistance controlled by them. This, of course, with the energetic assistance of your legislators, especially those that have been so fortunate as to indulge in the pleasures only to be found in outings in fields, forests and streams.

If my humble efforts result in concerted and active measures being taken for the better protection and perpetuation of these and other game birds, the efforts of your humble servant will not have been in vain.

E. TINSLEY.

Murder in the First Degree.

IN my younger days in the Hudson's Bay Company's service, I put in many years in what we call the Moose Belt in Quebec—that is, from the St. Maurice River on the east to Lake Nipissing on the west, from the Kepewa on the south to near the height of land on the north. All inside these boundaries was teeming with moose. They were killed in the most wanton manner by Algonquin Indians and the lumbermen, in many instances only the hide being taken, and the meat left. Our own Indians, who lived year in and year out in the country, never wasted a particle of meat. If they killed more than the family could consume during the winter months, before the warm days of April set in, it was carefully collected, cut in strips and smoke dried for summer use. While attending to the curing of the meat, the thrifty squaw dressed the hides. These were cut up and made into moccasins and traded at our store during their stay about the post in summer. An ordinary sized hide would cut up into about twenty-two pairs of shoes (without tops) and commanded $1.50 per pair, we selling them for the same price in cash to lumber concerns, making our profit on the goods bartered.

The young Indian the year prior to getting married always exerted himself to show how many moose he could kill. This was their boast and pride to show they were good providers of food. The Indian nature to kill would manifest itself at this time, and the numbers killed by some of the young slips is hardly to be credited. Older men with families never killed for the sake of killing.

I knew a young Indian personally whose mother had been left a widow with a large family. He was the eldest of the children, and that summer began to strut about the post in fine clothes and mix with the men of the tribe. This is one of the traits that shows itself before matrimony is contemplated. The killing of many moose was sure to follow these signs. That young boy actually killed to his own gun ninety moose. Averaging the butchered meat of each moose at the low estimate of 600 pounds, we have a gross weight of 54,000 pounds of good, wholesome food.

This section of country was in those days, I venture to say, the richest in game on the continent of America. Every little creek or lake had its beaver lodge, and even on the main routes of travel one would see beaver swimming two or three times in the course of a day's paddle.

At the posts we lived on fish game and potatoes. Our allowance of flour was only 100 pounds for each man for the twelve months, and we used to spin this out by eating only a pancake or so on Sundays and a pudding on Christmas.

The choice bits of the moose—the tongue and muzzle—the Indians brought us in quantities, the trade price of each being half a "made beaver," equal to a supposed sum of fifty cents. This was paid in goods, and would be further reduced by 100 per cent. our advance for transport and profit.

One cannot but look back with regret to those days and think such slaughter was murder.

MARTIN HUNTER.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

The Use of Dogs for Wounded Deer.

OAKMONT, Pa.—*Editor Forest and Stream:* I don't care the snap of my finger for all the deer in the United States, and would not contribute a nickel to save the whole race from extinction, as they have been pests in all my fox hunting from their infesting woods we hunted and carrying our hounds far away. So I am not prejudiced in their favor, but still, as a measure of protection, I would ask why you ardent protectionists do not favor amendments of the game laws permitting the use of some small trailing breed of dogs to trail wounded deer? Is it not probable that a large proportion of the deer wounded by "sportsmen" escape and die undiscovered? We all know what an amount of shooting a deer will take and be able to run, and if some small dog, such as a spaniel, was used to trail a wounded deer, the shooter would get his deer and be satisfied; as it is, he only kills it (a lingering death) and forthwith goes and shoots another which he may or may not get, using two deer where one would do him. I only speak of the experiences and observations I had and made in our western Pennsylvania mountains many years since, and I am sure that when we did permit our hounds to run a deer, if that deer was shot, we very, very rarely lost it, for Old Bulger, or Pete, or some other hound, could always be relied on to lead to the dead deer, after coming in on the finish of a chase. I certainly cannot remember an instance where we did not get the deer, if shot.

Against this is the fact that hounds run any quantity of deer when nobody is ready to shoot them, and what the finality of the chase is is often unknown; but if spaniels, for instance, particularly the "good ones," the "typicals," etc., of dog shows—dogs with four cigar stumps under them for legs—were used, only deer so seriously wounded as to die of the wound would be killed. Anyhow, while it don't matter to me, I wonder what kind of sport it is to shoot an animal with the result that it dies unknown and rots in the woods. Hurrah for humbug!

W. WADE.

The End of the Everglades.

There was a time when our schools taught the existence of a Great American Desert, and political economies were troubled to remedy a permanent separation between the eastern and western halves of our territory. That desert is now the Egypt of the modern world, and must continue to supply the nations with bread till the "wastes of Siberia" take up a share of the burden. What has accomplished these wonders? In both cases the railroad, that greatest factor in the civilization of our times. Supplement the road with the canal and even the parched and arid portions of the earth's surface will blossom like the rose.

Another wide district, considered a waste to all good purpose, was the swamp area, but a canal has been cut into the Dismal Swamp, and another into the Okeefinokee. There remains but the Florida Everglades, long unknown merely because of the terrors surrounding it to the imagination, though it was never deadly or dangerous to the Indian or the hunter. Now the Everglades will soon become one of the richest portions of a rapidly developing State that allows nothing to stand idle—a company has been chartered which will probably drain it by cutting a ship canal, and another incorporated to cross it with a railroad and telegraph line from the Gulf to the Atlantic. Therefore the visitor of a few years hence will find a new scenic route opened for his exploitation—leaving Jacksonville, he can sweep across the State in a grand circle and return at his leisure to wonder how and why it was supposed the southern end of our State was once considered uninhabitable, as well as uninhabited. We have already prophesied the existence of the greatest sugar plantation the world knows along a line of road from Miami to Tampa—it may be that some now living will see it.—Florida Times-Union and Citizen.

Sport in the Soudan.

LONDON, England, June 4.—*Editor Forest and Stream:* Big-game trophies of exceptional interest have recently been obtained in the Soudan. It is something like twenty years since sportsmen were able to shoot in this country. Among others who have enjoyed good sport this season, are Lord St. Oswald, Mr. W. D. James, Count Potocki and the Counts Hoyos, Prince Liechtenstein, Mr. E. N. Buxton, Mr. C. Adeane and Mr. S. H. Whitbred. The trophies obtained, now being mounted by Mr. Rowland Ward, of Piccadilly, include elephant, lion, leopard, hyaena, buffalo, roan antelope, Mrs. Gray's water buck defassa, white-eared kob, hartebeest, reed buck and gazelle. For the Natural History Museum at South Kensington, many of the army officers have obtained important specimens, notably a fine example of Mrs. Gray's water buck, presented by Capt. H. N. Dunn. W.

Gray Wolf Bounties.

MORGANTOWN, W. Va.—*Editor Forest and Stream:* It would seem that Sheridan county, Wyo., is the banner county for gray wolves. During the week ending April 13 the State paid out $503 for wolf bounties. The two highest individual payments were to R. E. Poole, $105, and to J. P. Barton, $99, both of Sheridan county, the former having killed thirty-five and the latter thirty-three, at $3 bounty. We hear from Ira Barcus, who recently returned to Saratoga after a trip to the northern part of Idaho, which he reports as being a veritable hunters' paradise. He brought with him the foot of a caribou and the horns of a white goat, both of which are abundant in the mountains of that region. EMERSON CARNEY.

Indiana Jacksnipe License.

We have had all kinds of talk on one phase or other of the question whether or not a shooting license is necessary for hunting jacksnipe in the State of Indiana. The matter may now be finally considered as settled by reference to the following letter from Mr. Z. T. Sweeney, Commissioner of Fisheries and Game, under date of June 7: "It is made very clear by the statutes that it is necessary to have a license to shoot either jacksnipe or plover by an act of March 5, 1891, which defines game birds, both plover and snipe, and also the sandpipers, tattlers and curlews, defined under same head. By comparing the above with Section 10, you will see that these birds become game and are protected from the first day of October till Nov. 10. By also comparing Section 13, you will find that you cannot kill such birds without a license."

E. HOUGH.

Another Suffolk County Eagle Killer.

SOME weeks ago we announced the arrest and trial of an eagle shooter on Long Island. On June 15 Game Protecor J. E. Overton got another. This was one Pelton, of the town of Huntington—a schoolmaster if you please—who was charged before the local justice in violating Section 33 of the Game Law. The defendant pleaded ignorance of the law, and seemed to think that this should be an excuse. A small fine—only $10—was imposed. This is the second case tried in Suffolk county for eagle killing, and it is quite time the offenders knew the law and paid heavier penalties. It is hoped that hereafter these will be imposed.

Sea and River Fishing.

ANGLING NOTES.

"Memories of the Months."

THIS is the title of an English book I have recently received from the author, Sir Herbert Maxwell, Bart., whose universal knowledge and information upon the subjects of natural history, angling, fisheries, fishculture and kindred matters entitle him to be ranked as an encyclopedic writer upon field sports; one who writes so convincingly as to leave little room for argument, and with such easy familiarity with his subjects as to carry conviction with his conclusions. The contents of this particular volume are diversified, indeed, under more than three score of captions, from Mercy in Field Sports, Trap Reform, Protective Coloration in Birds, Fish and Game Reservation in America, Fly-Fishing, to Autumn Flowers, The Age of an Eagle, and Mistletoe upon the Oak, but it is Spring Salmon which has specially attracted my attention this evening. I fear that I am something of a heretic in my belief concerning the attributes of killing salmon flies, and not being a grizzled veteran, I have sometimes wished that I could know the precise shade of color of topping, cheeks, tag or hackle that would raise a salmon that I was unsuccessfully casting for with an ordinary Jock-Scott that I would think contains colors enough for any well regulated salmon if he was inclined to rise at anything.

When Mr. George Kelson once wrote me that a certain salmon fly would be improved, as I now remember it, by changing the color of a single strand of a feather in wings, then in hue not unlike the coat of biblical Joseph, I gave up in despair, for I knew that the niceties of coloration in salmon flies were beyond my comprehension, and I would have to plug along as best I could and kill such color-blind fish as came my way and were satisfied to investigate something with movement in the water over their heads. Under Spring Salmon Sir Herbert writes: "We don't waste much time at this season in discussing the merits of different flies. A Highlander's imagination runs riot in change; a Lowlander is obstinate in preference for some particular pattern, and turns sulky if you hesitate to conform exactly to what he prescribes; but a Norseman is sensible—all he stipulates for is size; provided the lure be big enough to stir fish lying in a snow-fed stream, he sets no store by nice shades of color or variety of material."

It will be observed that the author does not say that the Norseman is more sensible than the Highlander or Lowlander, simply that he is sensible. I have another book written by Sir Herbert, "Salmon and Sea Ttrout," and so far as I have had the time to read it, found it most interesting and instructive—a book that I have put down every time with regret that I could not read it from cover to cover. In this volume, under "Salmon Flies," he says of a day's fishing when he killed five fish on a Butcher, though urged by his boatman to use a Wilkinson, as being the proper fly for the water: "The only lesson that I could deduce from this day's experience was that it didn't matter a hayseed whether one fished with a Butcher or a Wilkinson, or any other fly in the whole repertory, provided it was of a suitable size, not too small to escape observation, and not too large to arouse suspicion."

One experience of my own stands out prominently, for it marks the time that I made more changes of flies, size and pattern, to get a fish than ever before or since. The fish rose to a Jock-Scott, so torn and mutilated that I was a little ashamed to offer it, for it was really disreputable with half the junglecock gone, ditto tinsel and a piece hanging loose below the body; wings, body, hackle and horns simply mangled. I rested and changed flies, and changed flies and rested in the most orthodox manner, and returned to the remnant of a Jock-Scott that provoked the original rise and hooked the fish.

There is one illustration in "Memories of the Months" about which I would like to know more than the picture tells me. The legend under it is Bargrennan Linn, and a salmon is shown in the act of leaping what is apparently a sheer fall of water. Just above the position of the fish there seems to be a shelf, but of this I am not sure, but to that point the distance from the surface of the water below is six times the length of the fish; to the crest of the fall the distance is about seven times the length of the fish. I have dipped into the book here and there to find if the height of the fall is given and something about the character of it, but so far I find no reference to it. I have been greatly interested in the leaping of salmon in passing up over natural and artificial falls, and while the photographs made by Dr. Morris (reproduced in FOREST AND STREAM) have demonstrated that salmon can do wonderful leaping when it is necessary to reach spawning grounds, fresh light upon this subject is always welcome.

Brown Trout on Deep Troll.

Twelve years ago Mr. Marston sent me 10,000 eggs of Hampshire brown trout, and after the eggs were hatched I planted some of them in this State. I say some of them, for I divided the eggs with Mr. Peter Cooper Hewitt, who hatched his portion on the Hewitt estate at Ringwood, N. J. There is a small spring-fed pond nine miles from my home, a private pond, the waters of which empty into Lake George. In this pond I planted a few of the fry from the Marston eggs, and said nothing about it. The owner of the pond had given his consent to the planting, and there was no boat on the pond, and he said there would be no fishing in it as long as I desired to use it. My idea was that the fish would get a start unmolested in the pond, and they or their descendants would eventually work down into the lake. I have never fished in the pond, and have visited it but once, soon after the plant was made and before the fish could have been large enough to catch had they established themselves in the water. Yesterday I met a man who asked me if I had ever stocked Black's Pond with brown trout, and I said yes, though I had not even thought about it in years, and had to look up the date of the plant. He said that he got permission to fish in the pond, and caught one brown trout with bait that weighed 3 pounds, and lost a larger fish. The water was very clear and deep, and as he could get nothing near the surface, he arranged a line with a heavy lead, such as is used in trolling at the bottom in 100 to 150 feet of water for lake trout, and trolled at the bottom of the pond and caught another brown trout of 7 pounds. This is the first that I have ever heard of catching brown trout by deep trolling. It is scarcely as artistic as dry-fly-fishing in the original home of these fish, but deep trolling is a meat getting method of fishing when lake trout are at the bottom, though I never expected to hear of its being practiced on a fish that will take the fly.

Fishing Rods as Lightning Conductors.

For years I have maintained that our English cousins are more thorough in looking after the adjuncts of angling than we are on this side of the sea. A look at the pages of an English tackle maker's catalogue will prove it to any doubter, for there will be found tools that the average angler on this side never thinks of as necessary on a fishing trip. There is reason for this, because they have beeen in the business longer than we have; but the English papers often contain discussions over angling matters that to a Yankee seem trifling. For instance, did it ever occur to an angler over here that he was in danger from being killed by a lighting stroke through the medium of his fishing rod if it happened to be of steel or have a steel center? This question has lately disturbed some of our English brethren, and the question has been asked if it were not dangerous to use a steel or steel-centered rod, and one editor replied, but his answer was not deemed satisfactory to a correspondent, who writes (really I had to read it twice to determine whether or not it was a joke): "Many besides Brutum Fulmer have asked the same question. The editor's reply is not an answer to the proposition. The answer should be: (a) For whole steel rods there is exceptional danger, the case being equivalent to grasping a lighting rod at its termination; (b) in wood or cork handled rods where the touch does not in any way come in contact with the steel, there is not only little or no risk, but there is protection, the wood or cork (especially the latter) forming an insulator between the electricity of the person's body and that of the discharge from the storm cloud."

This to me is as funny as a reply an acquaintance of mine once made. He was an expert fly-fisher, using always a very light fly-rod, and he had no earthly use for bait-fishing. A friend showed him a new rod much heavier than the doctor was accustomed to, and asked him what he thought of it. The doctor balanced the heavy rod in his hand for a moment, and said quietly, "Yes; it is a good rod, and it will be very convenient if you should get lost, for you can stick the butt in the ground and climb the rod to get your bearings."

A. N. CHENEY.

Fishing on Lake Quassapaug.

LAKE QUASSAPAUG is the handsomest bit of natural water on the earth. Not that I pretend to have seen all the lakes in the world, but I do not see what natural beauty could be added that Quassapaug—Lake of the Indians—lacks. It lies in a basin on the top of the Middlebury hills. To the northward rocky cliffs, half hidden by a heavy growth of laurel, rise from the water's edge. Westward is a timbered slope; southward a level plateau, while sloping in graceful undulations to the eastward is a vast lawn, luxuriously verdured. Its waters are pelucid. No surface streams enter the lake. It is fed by several mighty springs in the clear, sandy depths, the force of whose flow produces a perpetual ripple on the surface. At the outlet, at the southern extremity, a roaring, foaming stream plunges down the rocky declivities, furnishing in the days gone by power for a multitude of mills and manufactories. Such is the descent that the water boiling from the buckets of an overshot wheel plunged directly into the penstock of a second wheel. For eight miles the stream works its way past mills, frets through rocky gorges, murmurs by pastoral scenes, until it loses its identity in the broad Housatonic at Quaker Farms. Six miles from Waterbury, the "City of Brass," Lake Quassapaug is the favorite resort of amateur Izaak Waltons and all sorts of pleasure seekers. George Wallace exercises the functions of a model boniface, ruling the destinies of the Quassapaug House, and is the personal friend of every summer girl and picnicking party in Connecticut. He controls the southward plateau. The eastward lawns are looked after and their primitive beauty maintained by John H. Whittemore, the malleable iron king, whose summer home and grounds on the crest of the slope rival the Hudson country seats and are the pride of the town. One feature of the lake is likely to be destroyed by a projected line of electric cars from Waterbury. Its sequestration has been a taking feature in the estimation of those who enjoy absolute rest and quietude. It is feared the trolley will introduce an objectionable element, but the wheels of progress cannot be stayed for such considerations.

Many years ago, before Quassapaug came into the prominence which it now enjoys, the citizens of Middlebury, with a view to appease their longings for a fish diet, stocked the waters of the lake (pond, they called it)

with pickerel. By-laws were enacted for the protection of the same, and they were permitted to grow and multiply for several years. Then a fishing company was organized, and a large seine was purchased. Certain days in each year were set apart as fishing days. Then the seine would be manipulated, the results divided among the fishers in the ratio of individual subscriptions. Thus, for some years, Middleburians had their sport, though I have been told by some who participated that other than fishing it would have been considered very hard work, and also had all the fish they could consume at stated seasons. After a time rock bass were added to the supply, and then some one introduced a quantity of young perch and roach. Attempts to stock the lake with trout were frustrated by the pike, who seemed to regard them as personal perquisites. Bullheads and eels were indigenous to the lake.

But the people wearied of seine fishing, and, one after another, they dropped out of the company, until finally there could not be found a force sufficient to operate the seine on fishing days, and the custom was abandoned. Meantime the various kinds of fish multiplied and increased in size, until marvelous tales were told by residents of the vicinity of huge bass and pickerel as 'long as a boy," seen sporting in the waters in the summer twilight. These tales found their way to Waterbury, Hartford, Danbury and New Haven, and it was not long until the farmer boys were asked almost daily the road to Quassapaug; residents of the lake region told their neighbors at the "horse-shed class" on Sunday about the great strings of bass and pickerel that "two men in a livery rig" had taken from the pond.

A better fellow or truer sportsman than Milo Wilson never lured a 5-pound pickerel to its doom at the end of 60 yards of grass line. He entered into the sport of fishing with a childlike enthusiasm that made a body happy to see him. To him I owe the knowledge that an Aberdeen hook discounts every other make for each and all sorts of fishing. He was not an erudite nor man of the finest social polish, but he would beat any man that ever came up the pike for catching fish. Nor was he above imparting this lore to his friends. Milo lived in Morrisania, and it was my knowledge of his desirable characteristics that led me to his house one warm and sultry July evening. After a supper, such as Aunt Jane, his estimable helpmate, only could prepare, augmented by relishes of his own raising in his own little garden, scarce the size of a dining-room table, I broached the subject of a trip to Quassapaug and a day in the haunts of the pickerel and bass. Milo's face beamed like the harvest moon, and happiness seemed to percolate his whole being and enwrap him as a vesture. Arrangements were quickly made on the basis of transportation on my part over against tackle and forage on his part, not forgetting his experience.

With a fishing trip in view, Milo's whole being was permeated with the consideration of ways and means incident thereto, and it was not till after midnight that he had the requisite paraphernalia for two assembled and put in trim, and would consent to take notice of either interrogatories or suggestions that had not fish in their conception. It takes about six hours to reach Wallace's boat house from the Grand Central Station, allowing two hours for lunch in Waterbury and the six-mile drive over the Middlebury hills. We reached Quassapaug in the night and had a good, long nap, though it seemed as if I had been asleep about five minutes when Milo's finger between my ribs brought me face to face with life's realities. "Did you come up here to sleep or to fish?" queried Milo, who, I was surprised to find, had everything in readiness for a start to the fishing grounds. He stoutly maintained that he had had a nap, but if so he must have done a powerful amount of work in his sleep, and I told him so, eliciting a self-complacent smile.

It was 3 A. M. when we had finally shipped our tackle and pushed off from the steamboat wharf. A heavy fog bank rested on the water; when we sat at the oars we seemed immersed in a dense cloud of smoke, and were obliged to shape our course instinctively. By standing on the anchor rest in the bow, one's head was above the opaqueness of the vapor, and the landmarks were dimly visible. So I allowed Milo the privilege (?) of rowing while I acted as pilot and sang out orders, "Port oar! Sta'board!" etc., until we finally reached the outer fringe of lilypads skirting the entrance to a strip of shallow water, caused by an overflow, when the lake outlet was dammed some years ago. I made ready to cast a spoon into the lilies and do a bit of skittering, when Milo suggested that we act on a plan which he had formulated on the road to the lake. Knowing from past experiences that it was always safe to take council from Milo in matters piscatorial, I quit my preliminaries and awaited developments. Milo unreeled a half-dozen hundred-yard lines, which he fastened at intervals to the boat's gunwale nearest the lilies. To each he attached an Aberdeen hook with gut snell, slipped a cork half-split upon each line 4 feet from the snell and proceeded to bait with minnows, of which we had ten dozen alive in our bait can. He had barely tossed the first line off and turned to bait another when in the faint light I saw the cork disappear. My first thought was that the live bait had proved sufficiently strong to overcome the float. But Milo, whose eye was also on the line, thought otherwise, for he quit his baiting operations and gave it his sole attention. The line ran out to almost its full length, and was getting dangerously near the lily thicket, when Milo arrested its progress. Instantly the slack was absorbed with a jerk and the line whizzed through the water as the fish (or whatever had hold of it) inscribed a lateral parabola.

"Jimminy Crickets, but he's a buster!" with which lucid observation Milo proceeded to manipulate the unknown and prevent the line from fouling the anchor ropes. After five minutes' play, which in point of fact was hard work, Milo succeeded in landing a 6-pound pickerel without the use of net or gaff.

Meantime, in the intervals of watching Milo's sport, I had baited a second hook, gotten it overboard and, while he was disengaging his fish, I had my hands full with fish No. 2. With a little assistance—not of my own seeking—I succeeded in landing it. It was little more than half the size of the initial catch, but it made up in gaminess what was lacking in weight.

For the next half-hour it was a nice problem to bait a hook and get it into the water in the intervals allowed us by the pickerel, which seemed bent on getting caught. It was not unusual to have three fish on hook simultaneously, and we were compelled to ignore all preconceived notions in the matter of landing them. Ignoring both gaff and landing net, the moment a cork disappeared we simply exercised brute force and pulled in hand over hand, and, strange to say, in a catch of 160 fish, several better than 4 pounds in weight, we did not lose a dozen.

Just before sunrise Milo made the depressing discovery that our live bait had been used up. We rowed in toward a rocky shore, adjusted some roach hooks, and, with worms for bait, caught a quantity of shiners. By careful handling and slipping them at once into the water bucket we managed to secure some dozens of a rather large bait. The last shiner I caught was firmly hooked, and as Milo had the anchor up I did not stop to take it off, but allowed it to drag over the edge of the boat as we rowed back to our former fishing grounds. Suddenly the end of the pole flew up, barely missing my nose, and shot overboard. Supposing it had caught a lilypad or snag, great was my surprise to see the pole shooting along the surface, making an occasional dive. Milo backed water and we rowed in pursuit. Reaching over the gunwale, I caught the pole and with not so much as a shadow of ceremony swung into the boat one of the biggest rock bass I ever saw.

But now the sun shone with fierce heat, we were sated with fish, and, after landing a couple more pickerel, we rowed for the landing. Eviscerating a dozen of the larger pickerel and the bass, which I claimed as especially my own, we gave the remainder to some other fishermen and turned our faces homeward, well pleased with Lake Quassapaug as a fishing proposition.

SAMUEL MANSFIELD STONE.

CHICAGO AND THE WEST.

Bass and 'Lunge.

CHICAGO, Ill., June 15.—The bass fishers of Chicago are threatened with a frog famine to-day. Owing to some unforeseen and unknown cause, the natural Indiana output of these speckled beauties is a shade shy this morning, and the tackle stores are filled with crowds of irate anglers who will probably be forced to depart for their customary fishing grounds this afternoon without the well filled frog basket which makes a part of the Chicago bass fisherman's outfit.

Among those who leave this afternoon or evening for the lakes of upper Illinois are Mr. I. B. Belasco, his friend Mr. Ainsworth, Mr. Charles Lawrence, Mr. H. Miner, Mr. William Dubois, Mr. Charles Olk, Mr. L. Lowe, Dr. Friend and Mr. Alex Friend. Mr. Garrett takes a party of friends up to Billy Tuohy's place on Eagle Lake this afternoon.

Thus far no very extraordinary fishing has turned up among our bass lakes. The average catch for the good bait-caster has not been more than six or eight bass for a morning's and evening's fishing. The intense heat of this week, followed by heavy rains, may have changed the fishing conditions, and perhaps we shall hear of better sport, although the season is now growing late for the best of the fun at bait-casting for bass.

Elmer Wilkinson was at Dayton, Ill., last week and caught eight small-mouth bass and a few pike in the Fox River at that point.

The George Wheelock party, which has been located about eight miles from Conover, Wis., for the past ten days, is having good sport with bass and muscallunge. Mr. Wheelock has sent down to some friends in the city one muscallunge weighing 22 pounds, which is the largest 'lunge of which I have any authentic word this spring.

Spring Run of White Bass.

I was speaking recently of the run of cisco at Lake Geneva, Wis., which takes place every year early in the month of June, attention being called to the fact that the cisco run was at that time just beginning. There is another piscatorial pilgrimage which ought to be included in these Western spring fixtures, although I have never seen it mentioned in the columns of any sporting paper. This is the great run of white bass in the Wolf River of Wisconsin, a matter which is entitled to considerable notice from the standpoint of the angler and the naturalist. At this writing the run for this year is just over, or, perhaps more accurately stated, the fish are returning down the Wolf River after having made their journey to its head waters.

These white bass breed in great numbers in Lake Michigan, and these runs into the streams on both sides of Lake Michigan are not uncommon at different points. At St. Joseph they sometimes go into the mouth of the river, and at Grand Haven these big schools are also occasionally chronicled. The white bass of the Wolf River breed either in Lake Michigan or in Lake Winnebago, probably in the latter sheet of water, although they may come up in Winnebago from Lake Michigan. They are the source of considerable profit to the net fishermen, who are so keen in their pursuit that they make abundant trouble for the authorities of the Fish Commission, who have done all they could to restrict the injurious and destructive fishing for this and other fishes of Lake Winnebago. Each year, usually about the first week in June, these white bass seem to congregate in one great body at the mouth of the Wolf River, and they pass up above the Butte des Morts country and ascend the Wolf River in one enormous school. The surface of the water is at times broken into a myriad of ripples, the fish swimming close to the surface, in the same manner as may be sometimes noticed in schools of small black bass or schools of croppies, or, less frequently, schools of yellow perch. At such times the river is absolutely alive with these fish. The school has been known to cover the river for a length of nearly twenty miles, and at any point within that distance one may at such times take all the white bass he wishes. It may be supposed that the residents of that country hail the arrival of the white bass run with joy, and while the schools are passing the river is dotted with boats, all busy in taking the bass. At such times they take the artificial fly with perfect readiness and offer very considerable sport. The native fishermen usually use small minnows or piece of minnows. The catch is limited practically only by the patience of the fisher, and 100 or more is not an unusual take.

These white bass should not be confused with the crappie or strawberry bass, which is sometimes called locally the silver bass or the white bass. It is in weight rarely over a pound and a half, and about one pound is about the average weight of the fish during the spring run. It is a gamy little fellow and very fine upon the table. I should classify this run, that of the cisco of Lake Geneva and that of the mooneyes, or moon-eyed shad in the river at Neenah, Wis., as being the three great spring pilgrimages among the Western fishes.

Trout.

Some of these facts regarding the run of white bass were gathered the other day while in company with Mr. Graham H. Harris, President of the School Board, I was journeying with Mr. John D. McLeod, of Milwaukee, for a day or so on that beautiful little trout preserve of which I have often spoken so enthusiastically. This stream—the Pine River, about eighteen miles from Waupaca—is controlled by Mr. B. K. Miller and Mr. McLeod, of Milwaukee, and is no doubt the best private trout water in the State. Mr. Harris, who is an enthusiastic fly-fisherman, was anxious to see this stream, and Mr. McLeod promised him very confidently that he would see some good sport. Up to that time the spring had been rather backward, and although some very nice takes of trout had been made, the fishing had been peculiarly erratic. It was supposed that the spell of warm weather would put the trout on the feed in good shade, and that we would have the cream of the season's fishing. Contrary to our expectations, however, a cold northeast wind continued to blow, and whether there is anything in the proverb about an east wind or not, we certainly had nothing like the trout fishing which we had a right to expect. From a dozen to two dozen small trout daily was all one rod could produce, and this only after the steadiest and most patient work at casting all day long. This is a fly-fishing game which these Milwaukee gentlemen put up and the tyro in the art of fly-casting need not expect to take any trout on this stream, which is deep and clear as glass, and can be fished only from the bank. Mr. Harris, who uses split bamboo rods of his own make, and who is a skillful fly-caster and the wielder of a very long line, found that the fish were timid to the last degree. This was not the reason for poor baskets, for the fact was that no good fish were rising, and only an occasional little fellow would turn over at some passing insect. As usual, Mr. McLeod took the best basket of fish on the fly. He did not fish so steadily as Mr. Harris and myself, being disgusted with his beauties because they would not do as he liked. Yet he took three nice trout in the morning, and in the afternoon, in the course of a few moments on an utterly impossible reach of open, shallow water just back of the club house succeeded in killing ten handsome trout on the fly. In order to take home a few trout, Mr. McLeod and I resorted to the use of cut bait for a little while in the afternoon, and I am ashamed to confess that I took over a dozen handsome trout in this way, whose weight exceeded all that I had killed on the fly.

Mr. McLeod and the club guardian, William Wood, are anxious to kill down some of these larger trout, as they think this improves the fly-fishing, so once in a while they take out some of the larger ones in the only way in which they can be killed—by bait-fishing. William Wood is still studying over the problem of keeping his trout on the club preserves. As it is, this private hatchery is feeding about ten miles of open water above the preserves. One of these days Mr. Miller and Mr. McLeod will take up seriously the matter of fencing in their trout, and if they do begin it they are apt to complete the matter in a thorough and satisfactory manner.

I presume one reason the trout were not rising better lay in the fact that they were full of this same larvæ which William Wood called "stick bait." The stomachs of these trout were full of these black bits. Yet Mr. McLeod tells me that later in the summer and at times when the trout are rising most eagerly to the fly they find their stomachs distended with this same sort of food, of which this stream has the greatest abundance, apparently at nearly every season of the year.

Mr. Harris says that he has never seen a stream which held so large an amount of fishing water as this stream in which we were fishing. Indeed, there is hardly a foot of it which ought not to be fished by the fly-fisherman. In many of the wild streams of Wisconsin the banks are hard or rocky, so that as one goes down stream he sees practically all the fish which the waters hold. Now on the Pine the banks are of turf and the stream undercuts them, leaving great caverns of an unknown extent under the overhanging banks. It is here that the trout lie, and if one stand on the bank he will very often pull out a whole school of them, some lusty ones, which he would never have dreamed lived in such a water. The stream averages only from 20 to 30 feet in width, although there are some wide and very deep holes running perhaps 6 or 8 feet in water. Mr. McLeod was much disappointed that he could not show his guests any better sport, yet he has no reason in the world for feeling that way. We surely had fish enough to eat, and we surely had the privilege of catching trout if we could, and they were surely there to catch, as we could see at any minute of the day.

By the way, there has been a little addition built to the lodge which Mr. Miller has on the Pine, and the little cottage is now one of the most artistic woods dwellings which it has ever been my fortune to see. It is all made of tamarack logs, and the railings of the balcony, the grille work for the screens inside, the hat racks, tables, picture frames, and indeed everything else about the place, are made from the native woods which grow about. A very handsome support for the big oak table is made out of a single stump, its spreading roots being nailed fast to the floor. Mr. McLeod is developing new artistic tastes in decoration every year. This spring he manufactured a couple of portières out of burlap, on which he has displayed his ability as an Indian artist, using the crude colors and the figures which one may see on the Indian robes. The effect is bizarre and very fetching.

Mayor Harrison and Mr. Hempstead Washburne were to have fished the Pine this week with Mr. McLeod, but unfortunately were unable to get away. Mr. Washburne leaves at the close of this week for the Huron Mountain Club, of Michigan, where he is accompanied by his family.

The reports regarding trout fishing this spring seem to show it as rather patchy, or rather more patchy than

trout fishing ordinarily is. Some good takes have been made on different waters, but of late for some unknown reason the trout are off their feed. I have not heard of any very good fish this week. The weather has been strange and unsettled, very cold for a long while and then suddenly very warm, with yesterday a very heavy storm, which extended all over the country up to northern Wisconsin and Michigan. Perhaps this heavy rain may have a better effect and set the trout once more on the feed.

Dams on the Illinois River.

The committee of the drainage board, which has in charge the affairs of the drainage canal which connects the Chicago River with the Desplaines and Illinois River system, has lately made a trip over the waterway as far as the Mississippi River. During the trip an examination was made of all the dams which cross the Illinois River, including those at Copperas Creek and at Henry, the former named of which is the same celebrated Copperas Creek dam which has figured so long in the Illinois fish laws. These dams have always been considered fixtures on the Illinois River, but there is reason to believe that they are to go. The testimony of all the inhabitants near these dams was that the increased flow of water turned into the Illinois River by the drainage canal retards the drying out of the spring overflows, so that crops cannot be planted until later in the spring than was formerly the custom. It is thought that were these dams taken out of the river the water would subside more quickly, whereas the increased flow given by the canal would give the river all the water it needed for navigation. The trustees have become satisfied that the Copperas Creek dam is unnecessary, and they will recommend its removal. As to the dam at Henry, no decision has as yet been reached. These great obstructions to the flow of the Illinois River, never properly provided with fishways, have always cut off a large amount of the natural up-stream migrations of our game fishes. Their removal would seem to augur better things for the anglers along the Desplaines, the Kankakee and the Fox rivers, all of which are tributary to the Illinois.

Chicago Fly-Casting Club.

The following are the scores made by the Chicago Fly-casting Club on their Saturday meetings of May 25 and June 8:

	Long Distance Fly. Feet.	Bait Casting. Per Cent.	Delicacy Bait. Per Cent.
I. D. Belasco	92	83 4-5	70 2-3
I. H. Bellows	95	91 9-10	89
W. T. Church	75	72 7-10	79 1-2
H. G. Hascall	98	93 3-10	91 5-6
N. C. Heston	83	93 2-5	88
G. A. Hinterleitner	..	77 7-10	77 1-2
E. R. Letterman	75	84 4-5	86 1-3
F. N. Peet	107	83 2-5	76 5-6
H. W. Perce	75	87 1-5	78 5-6
C. B. Robinson	..	73 3-5	84 1-3
A. C. Smith	94	91 3-5	94 1-3
June 8:			
H. H. Ainsworth	87	85 7-10	86
I. D. Belasco	90	95 4-5	..
W. T. Church	75	78 1-2	94 1-6
H. Greenwood	75	94 9-10	85 2-3
H. G. Hascall	95	90 2-5	95 5-6
N. C. Heston	75	96 1-10	95 5-6
G. A. Hinterleitner	..	93 1-5	88 1-6
F. N. Peet	..	98 1-10	94 1-2
H. W. Perce	70	93 1-5	87 1-2
A. C. Smith	93	94 1-5	97 1-2

Winning scores, May 25: Long distance fly, F. N. Peet; bait casting, N. C. Heston; delicacy bait, A. C. Smith.

Winning scores, June 8: Long distance fly, H. G. Hascall; bait casting, F. N. Peet; delicacy bait, A. C. Smith.

Prairie River Fish Butchers.

Mr. Henry Dudley, who runs a comfortable resort on the Prairie River, about sixteen miles from Merrill, Wis., makes the following communication in regard to certain statements recently printed in these columns regarding excessive catches of trout upon the stream near this place:

"I have just read an article on page 427 which puts me in the light of one who is not doing justice to my patrons and to Prairie River itself. I wish to say in defense to myself, that if the fish hog wishes to stop at the different farmhouses along Prairie River and goes in the river with his pockets filled with worms, I do not know how I am capable of stopping him as long as it is legal. I do not own the stream, but if I am lucky enough to get a bait-fisherman as a guest here, he is in nine times out of ten transformed into a fly-fisherman, or else, if not of the true sportsman blood, is so shamed that he will stop elsewhere on the stream the next year, where the worm is not abhorred. I am doing all in my power to keep and make this an ideal fly stream, and do not want myself shown as one who advocates any such doing as published in your issue of June 1. I hope to get the co-operation of all true sportsmen in making this the best fly-casting stream in the United States. HENRY DUDLEY."

I am very willing to agree with Mr. Dudley as to his proselyting for the ranks of the fly-fishers, and indeed I know that he is not only a good fly-fisherman himself, but discourages anything but fly-fishing on this particular stream. I am glad to know that the men who took more than 500 trout did not stop at his place. This beautiful little Prairie River has a peculiar reputation as a stream suitable for fly-fishing. It has been loved for many years by those who like to fish with the artificial fly, and nearly every man who has sent a friend up there has done so on the supposition that that friend was a fly-fisherman and not a bait-fisherman. There is no open stream of the size of the Prairie which can long withstand the inroads of the bait-fishing public. If these two fishers who stopped above Dudley's place had contented themselves with a decent amount of fish the matter would hardly have seemed worthy of comment, but when they take 500 or 600 trout away from so small a stream they are taking more than could be done by fly-casting and more than the stream will stand. Most of the farmers along the stream, as well as Mr. Dudley himself, take the same attitude in regard to methods and numbers, and perhaps before it is too late we shall see this river practically protected by this very wholesome sentiment. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Permanent Angling Trophies.

A Method of Making Casts of Fish.

Editor Forest and Stream:

Some of your angling readers may one of these days catch a fish of such dimensions or under circumstances that a permanent memorial of the event will be desirable. Where the taxidermist can be employed to save the specimen, his art answers well enough. But there are many occasions on which it is quite impossible to avail one's self of the professional artist's skill in order to save visible evidence of an interesting catch, and in such circumstances at present the best one can do is make a measurement, or perhaps draw a sketch, of the prize on a piece of bark. Even the photograph is unsatisfactory, for an explanation of the size of the fish must accompany it. A plan by which a cast of the trophy can be taken with ease must be welcome, and as I have discovered a method by which very satisfactory results have been attained, others may also find advantage in knowing the art, which consists in pouring melted paraffine on the object, and when the wax has hardened, removing the fish and filling the shell of paraffine with plaster of paris mixed with water to the consistency of cream. When the plaster hardens, hot water will remove the paraffine and leave a cast of the fish, showing every feature in natural size. If the model has been well posed, the effect is quite artistic. The paraffine can be saved and used repeatedly.

If one wants a copper cast of the model, he has only to save the paraffine matrix and send it to an electrotyper, who can deposit on the interior of the mould a coating of copper, reproducing in perfection every line of the fish. Doubtless if one will pay for it, a cast in silver or gold can be made as easily as in copper.

I have made several casts in plaster by the plan above described, and one that I made in copper of a perch was regarded by the United States Commissioner of Fisheries as sufficiently interesting to be exhibited at the International Fisheries Exposition in Bergen, Norway, in 1898. There is practically no limit to the size of a fish that can be represented by this process, for even a shark could be moulded and cast in sections by it and the pieces put together so as to give a complete figure of the creature. With small fish it is a very easy matter to make casts.

At one time I thought that this method of copying from nature would be employed by curators in museums of natural history to make metallic casts of interesting objects, but thus far they have not become sufficiently interested in the plan to ask for particulars. The amateurs and anglers can now take up the art if they are so inclined.

EDMOND REDMOND.

ROCHESTER, N. Y.

New England Anglers.

BOSTON, June 15.—Mr. Felix Tausig has returned to Boston from his fishing trip to the preserve of the Laurentide Club, of Canada, of which club he is a member. With his fishing friend, Mr. Pickert, also of Boston, some most happy fishing days have been spent. They were over seventy miles north of Quebec, well into the north woods. The preserve of the club includes the fishing and hunting rights of about 400 square miles of territory. Numerous lakes, ponds and streams are a feature of that part of the country, all stocked with squaretails, or brook trout. They caught all they cared for. A beautiful catch was shown to a few of Mr. Tausig's friends on Friday. In the catch were trout up to 3½ pounds, with none smaller than ½ pound. This is about as the trout run in those virgin waters, though larger fish are frequently taken. The largest taken this year weighed 4½ pounds, but they are sometimes taken as large as 7 pounds. The fishermen took a great many—all they could use with their three guides, and a good supply to bring home. Fly-fishing was good, and Mr. Tausig says that it was great sport. They were up betimes in the morning, for the mornings were too beautiful even to recline on the luxurious bough beds made up by the deft-fingered Indian guides. These guides are satisfied to work for $1.25 a day, and are untiring for the comfort of the sportsman. They saw two beautiful caribou and plenty of signs of other game. The gentlemen are much pleased with fishing in that part of Canada, the only drawback being the disagreeable license required. But a member of the club escapes this.

Mr. Frank Wise is at home from his spring fishing trip to Nova Scotia. With a couple of West Newton friends he had good sport. They are much in love with the lakes and streams back of Yarmouth. Mr. Wise's friend, Mr. Boss, who has usually accompanied him on his spring fishing trips to Nova Scotia, went this year to New Brunswick instead, to a section on the Bonnie River, where he found good fishing.

One has to have a permit to fish Fresh Pond in Cambridge, which pond is controlled by the Cambridge Water Board. These permits are few and far between, and come somewhat in the nature of political favors. But Lieut. Angus McDonald and Charles Gove have made a big catch there. They landed about 18 pounds of pickerel in one day, and under one permit. One pickerel weighed over 5 pounds, and was pronounced the largest pickerel ever taken from that pond. Mr. Gove captured the big fish, Mr. McDonald happening to be rowing at the time. The members of the Water Board and City Council were inspecting the Fresh Pond Pumping Station at the time the fish were brought ashore, and the catch was much admired. Now all the officials will want permits to fish there.

June 17.—To-day—Bunker Hill Day—is a holiday in Boston and Charlestown, but fishermen are not generally fond of firecrackers and empty parade, and a good many fishing trips were planned, and trains taken Saturday evening. Brooks in New Hampshire and Maine were to be visited and expectations were great. Mr. W. T. Farley and Frank Morse went to a pond in the Chocorna region last week. They fished one day, without a trout. That night the people at the hotel told them of another pond where they would be sure of some trout. They early visited that pond. They found the water very clear, but the fish did not bite. Looking down they could see fish moving about. At last they hooked up one, and behold! it was a hornpout. C. L. Bent and George Bean had a little better success at some brooks in Bristol, N. H., the same day, but the trout were small.

The Maine Sportsmen's Fish and Game Association is booked for Kineo, Moosehead, for its annual summer outing, from July 6 to 15. Programmes of sport will be arranged, while the evening literary exercises will consist of a discussion of the circumstances of the repeal of the September law, opened by Commissioner Carleton, and the Proper Policy of the State Toward its Guides, opened by W. E. Parsons, of Foxcroft. Commissioner Henry O. Stanley, whose term of appointment expires next winter, has announced in the papers that he is a candidate for reappointment. He is in love with the work of fish propagation, and the feeling among the best of sportsmen, with whom I have talked is that he should continue in it. Summing up the total catch of salmon at Lake Auburn, Me., on Memorial Day, it is reported the number was sixty, with a total weight of about 300 pounds. This was about the best day ever recorded at that lake, and it should be remembered that Lake Auburn never knew what a salmon was till Henry O. Stanley put them in there.

Reports from Moosehead note good fishing last week. Fred S. Lufkin, of Gloucester, Mass., was high line for the week. Early in the week he took in two hours' fishing two trout weighing 4½ pounds each; two togue, of about 8 pounds each, and one salmon, of 5 pounds weight. The Owl Club, of Boston, has been having good fishing. Two of the best strings consisted of five trout and twenty-four togue, about 100 pounds, and sixteen trout and togue, 48 pounds. Dr. C. W. Deering, of Boston, and J. F. Hutchinson, of Lexington, Mass., have both taken salmon of about 4 pounds, and Miss Murphy, of Boston, a togue of 6 pounds. Mr. Lowell, of Worcester, has caught a salmon of 4½ pounds. The number of salmon taken is a surprise to everybody, and it must not be forgotten that there were no salmon in Moosehead till put there by Commissioner Henry O. Stanley.

At the Rangeleys the fishing is good, the season holding out remarkably well. Sportsmen from all parts of the country are at the different Rangeley resorts. Much fishing is done at the outlying ponds, as well as on the lakes. A catch of 10 or 15 pounds of trout in a day's fishing at these ponds is nothing at all unusual. It is thought that the heavy rains and cold winds have prolonged the spring fishing season. Some of the fishermen recorded have visited those resorts for many years. Mr. Loring Coes, fishing from the Mountain View House, has fished the Rangeley almost every season for the past forty years. He is now in his eighty-ninth year. Mr. H. W. Clark, of Boston, is another veteran angler, quartered at the Mountain View. He has fished almost as many seasons as Mr. Coes. This season he has to his record so far a salmon of 5½ pounds, and another of 3¾ pounds, besides any number of smaller fish, all taken on the fly. A partial record of the fish taken by guests of the Rangeley Lake House for the week is as follows: J. J. Brigham, Springfield, Mass., 4-pound trout; S. S. Lunt, Boston, 3½-pound salmon; A. A. Call, Springfield, Mass., three 3¼-pound salmon; C. H. Hayes, Boston, 3¼-pound salmon and one of 4 pounds; W. F. Sturtevant, Springfield, Mass., 3½-pound salmon; Mrs. R. H. Hinckley, Boston, 7-pound salmon; J. P. Morse, Brockton, Mass., salmon of 5¾, 3¼, 3¾, 3¾ and 6 pounds, and trout of 6 and 5½ pounds; Mrs. J. P. Mores, 3¾ and 6 pound salmon. Some good catches have also been made from the Mooselucmaguntic House. Mr. and Mrs. E. Coburn, of Lawrence, who are regular fishermen at the Rangeleys, have landed twelve salmon and trout, weighing from 1 to 5½ pounds. Mr. and Mrs. C. A. Clapp, of Boston, have taken fifteen trout and salmon the past week, weighing from 2 to 5 pounds each. Mrs. J. O. McFadden, of Boston, has landed two salmon of 5 pounds and 6 pounds weight. Both fish were taken inside of an hour. Frank Ridlon, of Boston, has landed ten trout and salmon, the string weighing 28 pounds. Sportsmen will not forget that there were no salmon in any of the Rangeley waters till Henry O. Stanley put them there.

At the Megantic preserve fishing is good, and guests and members are beginning to assemble. Some fine togue are being taken at Arnold Pond on spinners. Henry R. Pearson, of Pittsfield, Mass.; D. C. Nickerson, of Leominster, and C. E. Dresser, of Boston, are making a tour of the preserve. They have had great luck at some of the ponds. Tuesday night they caught 108 good trout on Northwest Pond, fishing only a little over an hour. The trout were no fingerlings either. SPECIAL.

Canadian Angling Notes.

REPORTS continue to come in from Lake Edward of the splendid sport afforded by the trout of that and the neighboring lakes this season. Mr. E. T. Kulhn brought in a 5-pound brook trout a few days ago, and during Dr. Zimmerman's recent stay of a fortnight in his private camp there, he killed fontinalis on the fly up to 4 pounds in weight. Col. Blair, of Scranton, Pa., and his friend, Mr. Shaw, had a very successful experience last week on the chain of lakes west of Lake Edward. Lac des Belles Trintes, in the vicinity of Lake St. John, has also been yielding some very heavy trout.

The chief attraction of the Lake St. John country, however, during the last week, has been the success attending the opening of the ouananiche season at the Grande Décharge. Details of the principal catches have not reached me, but telegraphic reports state that the fish are very aundant and are rising freely to the fly, the water being in splendid condition. Notwithstanding the early character of the season, the majority of the fishermen who have expressed their intention of coming up are even later than usual, so that the earlier men have special opportunities for good sport.

The rush to the salmon rivers continues. Mr. J. J. Hill, of St. Paul, will be here to-night to join his yacht with a party of friends on their way to the St. Jean River of the North Shore.

Another important party left to-day by steamship Douro for the Natashquan and other rivers of Labrador.

Lord Savordale and Mr. H. Harris, of London, have gone to the Mingan; John Mannel, Col. Whitehead, Mr. Law and Robt. Patterson, of Montreal, to the Godbout, and Messrs. Morton Patton, of Montreal, and Edson Fitch and Veasey Boswell, of Quebec, to the Trinity. The Moisie is being fished by its recent purchaser, Mr. Ievers W. Adams, of Boston, and his son and a friend, while the Natashquan party includes F. S. Hodges, of Boston;

E. C. Chapman, broker, of New York; R. W. Johnson, of New Brunswick, N. J., president of the Johnson Manufacturing Company, of the surgical antiseptic supply business, and Mr. H. K. S. Williams, of New York.

Mr. Louis Cabot, of Boston, and nephew, are on the Grand River of Gaspe. Mr. John Fottler, Jr., of Boston, on the St. John, of Gaspe; Mr. Gardiner T. Lyons, and Mr. Walter M. Brackett, and Mr. H. O. Wilbur, and others, on the St. Marguerite, while the parties of Mr. Vanderbilt, of New York, and of Lord Minto, of Ottawa, are still on the Ristigouche. One of the earliest parties on this river this spring had rather poor sport, but good reports come from the Chamberlain Shoals party, which killed a number of fine fish on the first day out. The Ristigouche Club waters are pretty fully occupied.

E. T. D. CHAMBERS.

QUEBEC, June 15.

The Potomac Threatened.

ROMNEY, W. Va.—*Editor Forest and Stream:* In an issue of the Washington Post recently I noticed an article on the pollution of the Potomac and its tributaries, which said the tannery owners would do all in their power to prevent pollution. As this statement is foreign to the facts and to what has already been done by these tannery owners, I would like to state that the Capon River, which was at one time a fine black bass stream, has two tanneries on it, owned and operated by the Covers, who have purchased a site at Moorefield and are building a large tannery there. At these tanneries on Capon River they have run all their filth and garbage into the river for years, although there is a State law against pollution of streams. We can only judge their future by their past record, and as to the United States Leather Company, who have bought a tannery at Petersburg, eleven miles above Moorefield, will say that they have run a large tannery at Paw Paw on the main Potomac for years, and have run all their refuse stuff into the main Potomac River.

With the cutting of pulp wood in the Trough and driving it down the river, a new boom and lumber company formed for the purpose of rafting or driving white oak and pine timber down this beautiful stream, the two tanneries, one ooze factory, the cross tie rafting, a great deal of fishing and very little restocking of this stream, I fear that black bass fishing in the waters of the South Branch of the Potomac is doomed, unless adequate laws are passed and enforced to protect the fish and also the people whose stock are necessarily watered in the summer by this stream. Hoping the people who have taken this matter up in Washington will not be fooled by the empty promises or misleading reports they receive from these tannery moguls, I remain yours for pure streams,

J. B. BRADY.

Spawning of the Winninish.

Editor Forest and Stream:

I have been very properly criticised of late years for what I wrote in the "Fishing Tourist" some twenty-eight years ago regarding this species of salmon, to the effect that "in winter they are scattered through the deep water of Lake St. John, P. Q., and in June descend to the series of rapids below to spawn." I will confess that I wrote under the impression that they were a landlocked species. My only ground for the conclusion was that the fish were never seen in the lower Saguenay, which is not marvelous, since it has a uniform depth of 1,000 feet from Tadousac Bar to the Chicoutimi. However, I would now like to repeat what I said in my "Salmon Fishes" in 1890, in revision of that antique hypothesis, that "in winter they are scattered through the deep water of Lake St. John, and in June ascend the rapids of the tributary rivers to spawn," having previously visited the sea, which is easy to do *ad libitum* at any season of the year, as they are at no time landlocked or ice locked, which latter can be said of very few rivers on either side of the continent.

CHARLES HALLOCK.

Austrian Fish Exhibition.

UNDER date of May 1, 1901, Consul Hughes, of Coburg, writes as follows: "I have just learned that the Austrian Fishery Association will hold a large international fishery exhibition at Vienna during the latter part of September, 1902, a large subsidy for this purpose having been granted by the Imperial Austrian Department of Agriculture. A special effort will be made to have as the principal figure of this exhibition a complete representation of the Austrian portion of the Adriatic Sea, the products of its fisheries, etc. In my opinion, this would be an excellent opportunity for United States houses interested in the fishing industry and in the manufacture of fish-taking apparatus to exhibit their goods."

Fishing in Home Brook.

CHARLESTOWN, N. H., June 15.—"Between Casts" is framed and glazed, and hangs over the other corner of my writing table, opposite to "Commissary Brook," so called, I suppose, from the quantities of trout it used to furnish. I made a trial last week of the little brook at the end of the village, in which I caught some very large trout three years ago, of which I wrote you at the time. My trip was not very successful, except for the evidence it gave of the absence of small trout. I saw no signs of any, for the first quarter of a mile, from the head springs down through the pastures, but when I reached the level meadows, where the brook is sunk, in a deep, narrow cut through the soft soil, I felt a gentle pull in the first deep hole, and on lifting my rod I swung a half-pound trout out, which dropped on the grass the other side of the brook. I dropped my rod instanter, and made a flying leap across the brook in season to catch him before he could flop back into the water, as their habit is, and breaking his neck, dropped him into my basket. This done, I jumped back again, picked up my rod, and proceeded to examine my bait, for I had to use the humble angleworm, the brook being too narrow, deep sunk and bushy to admit of casting a fly, and found to my dismay that in my two leaps I had jolted every vestige of a worm out of my bait box, which was strapped about my waist, and my sport was at an end. I tried for a few rods further with what was left of the old bait, but could tempt no rseponse, and reeled up and came home with a nice breakfast relish for my wife and daughter.

The same Rip Van Winkle of whom I spoke in my last tried the same brook a day or two after and got eight large trout, but saw no small ones, and we both agreed that these large ones had run up from the Connecticut River.

VON W.

Keuka Lake Fishing.

BATH, N. Y., June 10.—*Editor Forest and Stream:* I have just had a day's lake trout fishing in Lake Keuka. My catch was twenty-six in all, large and small. I kept nineteen, all over 2 pounds. The largest was 11¾ pounds, the average about 4 pounds; so it will be seen that the average was good, but nothing very large. The fishing in Lake Keuka is better this year than it has ever been before. If any one wants good lake trout fishing, Keuka is the place. Will Dart, of Catawba (on the lake), the guide, and the central spot to stop at is Gibson's Hotel, Catawba. The trunk roads are runnig excellent fast trains to Bath. It takes two days now to get to Gibson's from Bath via the B. & H. R. R. and steamboat, a distance of fifteen miles. The best thing to do is to take a livery from the D., L. & W. station direct to Gibson's; the time a livery will take is about two and a half to three hours through a glorious country. Messrs. Talmadge & Sons, of Hammondsport, have offered special rates from the D., L. & W. station at Bath to Gibson's on the lake for readers of FOREST AND STREAM. He will take one or two persons in a surry or closed carriage for $3. This reduced rate will only be given when the claim is made in the name of FOREST AND STREAM.

J. CHURCHWARD.

Big Wisconsin Trout.

BERLIN, Wis., June 13.—*Editor Forest and Stream:* Have been out for few days trout fishing at Benjamin's Farm on the White River, a place that is fast becoming famous for big trout.

One of the party, Mr. Owen Gudden, caught on Tuesday a trout 20 inches long, weighing 3¼ pounds. This gentleman has the distinction of taking next to the largest trout out of White River.

The honor of taking the record trout belongs to Mr. F. H. Josslyn, of Oshkosh. It was caught last summer and nearly cost the gentleman his life, as he was obliged to lay down on top of the trout in quite deep water. The measurements of the fish were 24 inches long, 12-inch girth. It weighed 4¼ pounds.

H. R.

An Absent-Minded Preacher.

An odd circumstance happened once at Winchester. As Dr. Wilson was one Sunday morning going through the streets toward the cathedral, he heard a woman cry: "Mackerel! All alive, all alive, O!" And on his arrival at the church he began the service as follows: "When the wicked man turneth away from his wickedness, and doeth that which is lawful and right, he shall save his soul alive, alive, O!" These last words the doctor proclaimed aloud, in the true tone of the fisherwoman, to the great surprise of the congregation. But the good doctor was so studious and absent minded that he knew not what he had done.—Household Words.

Keeping Trout.

Editor Forest and Stream:

Mr. J. S. Van Cleef rather knocks all accepted ideas in the head when he says, in his article, "Unreliable Traditions.—II.," that a trout should not be "drawn" until ready for the frying pan. But I am always open to conviction and glad to be set right on this point, for I have always heretofore cleaned my fish on the stream.

FAYETTE DURLIN, JR.

Animal Humbugs.

In military stables horses are known to have pretended to be lame in order to avoid going to a military exercise. A chimpanzee had been fed on cake when sick; after his recovery he often feigned coughing in order to procure dainties. The cuckoo, as is well known, lays its eggs in another bird's nest, and to make the deception surer it takes away one of the other bird's eggs. Animals are conscious of their deceit, as shown by the fact that they try to act secretly and noiselessly; they show a sense of guilt if detected; they take precautions in advance to avoid discovery; in some cases they manifest regret and repentance. Thus, bees which steal hesitate often before and after their exploits, as if they feared punishment. A naturalist describes how his monkey committed theft; while he pretended to sleep the animal regarded him with hesitation, and stopped every time his master moved or seemed on the point of awakening.—London Exchange.

Training the Hunting Dog.

By B. Waters, Author of "Fetch and Carry: A Treatise on Retrieving."

XVIII.—The Force System.

As the term "force system" suggests, it is a system of teaching the dog retrieving, which in part is accomplished by the exercise of force. As a title, it is misleading in its significance, since force is used only in the elementary stages of the lessons, and then to a limited degree.

The force, as applied, is for the purpose of causing pain to the dog. The pain is so associated with certain acts which free him from it that he commits them mechanically to avoid it. Pain of itself teaches the dog nothing whatever in the way of intelligent and positive retrieving. Its scope, however, is quite sufficient to enable the trainer to lay a firm elementary groundwork upon which the retrieving superstructure may be built.

When left to the exercise of his own will in the use of his mouth, the dog is predisposed to harshly grasp such objects as he closes it upon. Under the schooling of the natural system, the manner in which he uses it is practically beyond the control of the trainer. Indeed, his schooling, under that system, has a tendency to develop a hard mouth rather than to preserve a tender one.

In the force system, the dog's manner of using his mouth is under the direct control of the trainer. Tender grasping of the object to be retrieved is a feature of it from the very beginning. The dog notes that when he has the object in his mouth, pain ceases.

The manner in which the dog uses his mouth to the end that pain may be avoided, and that which he uses when impelled by natural impulse, are quite distinct. The one is gentle, the other forceful.

If cruelty is inflicted by any instrument which causes pain to the dog, the trainer should not, by any sophism, assume that the cruelty is inherent in such instrument. The cruelty, when it exists, comes from the application of the punishment.

Pain can be caused without any injury whatever to the dog. When the trainer loses his temper and mutilates and shocks his dog to gratify it, he should not for a moment imagine that the origin of the cruelty is in the collar. The latter being absent, his boot, club, shotgun or whip would be quite likely to come into use, and are then cruel instruments solely because they are so applied in a cruel manner by a cruel man.

To teach the dog to retrieve from the effects of pain, some trainers pinch the toes, the ears, the nose, or apply the whip or collar. The latter has the special advantage of direct control over the dog's mouth while the pain is inflicted. Pinching his mouth hampers him in the use of it. When the pain is inflicted by the other means enumerated, the dog's mouth is under but little control, hence the progress is less positive and less complete.

In the application of force, intelligence, kindness, sympathy for the dog in his efforts to perform the desired act, good temper and a knowledge of dog nature are essential to the best success. An ignorant man can apply more force, but he should not confound his senseless punishing ability with true dog training. The cause of pain is a limited aid to training; it is not the training itself.

Retrievers trained after the force system are finished performers in their work. By virtue of this system, they have undergone a discipline which left their dislikes and objections unconsidered. They have recollections of implicit obedience only as a means of avoiding pain. Their impressions concerning it are lifelong.

A tender mouth can be insured under this system if the trainer has ordinary skill. Also, under it, the dog can be caught to retrieve whether he is old or young. The discipline further conquers and subjugates him in a general way, without impairing his independence or breaking his spirit.

Any hurry in the training should be carefully avoided. The dog must have ample time to comprehend the purposes of his trainer, and to remember what associated acts free him from pain.

After the dog will pick up the object and fetch it mechanically, the so-called natural method is applied, and the dog is then petted, flattered and rewarded in his work to the end that his enthusiasm and self-interest are evoked.

In the force system, the progress may be roughly differentiated into stages—namely, that in which the dog merely opens his mouth mechanically when he hears the command "Fetch," as a preventive or avoidance of pain; that in which he will actively engage in an effort to grasp the object when he hears the command, if the object is held on a level with his mouth, a few feet in front of him; that in which he will follow it up and pick it out of the hand of the trainer or off the ground or floor, knowing then fully that the act if completed will free him from pain; that in which the attempt is made to teach the dog to pick up an object off the floor or ground. If each stage has been thoroughly inculcated, but little if any difficulty will be encountered in steady advancement.

He further must be schooled to go after the object when or it is thrown to a distance.

If he fights the collar the trainer lets him fight it out at the end of the check cord till he entirely desists.

A corncob is a good object to school the dog on in his first lessons. It is not repugnant to him; it is shaped so that he can conveniently hold it in his mouth, and a clean one can be conveniently used at every lesson.

The first lessons should be given in a room, free from disturbing noises and the presence of spectators. The dog should face diagonally across, on the right side, so that he will be facing an object held in the trainer's left hand in front of him.

The running free end of the collar rests on top of the dog's neck. A piece of half-inch rope, about three feet long, is fastened to it. The trainer firmly grasps the col-

lar close up to the dog's neck, holds the cob close in front of the dog's nose, and gives the command "Fetch," pulling firmly on the collar at the same time. If the dog opens his mouth to cry out, the cob is then instantly slipped into his mouth, at the same time slackening on the collar and stopping all pain.

The first pull or two will determine the character of the pupil. He may be tenderly responsive to the force, or grimly sulky and mute, or disposed to fight. If he will not open his mouth to a jerk of the collar, the trainer catches it close up to the dog's neck, twists his hand outward, thereby drawing the collar tightly and shutting off the dog's wind partially and forcing him to open his mouth in a moment. The cob is then put in his mouth and the collar at the same time is loosened to end the pain.

If he shows fight, the whip is administered while he is held to the punishment with the collar, and this is continued till all the fight is taken out of him.

After each command to fetch with the corresponding pull on the collar and insertion of the cob in the dog's mouth, the trainer waits a few moments, soothing the dog kindly, to restore his confidence. When he holds it well, leave in his mouth a few moments and praise him. If he ejects it, replace it instantly in his mouth, at the same time giving him a sharp admonitory jerk.

His little weaknesses should be studied so that advantage may be taken of them. Make the first lessons short. There is plenty of time to teach the dog the accomplishment, and there are two things therewith to ever keep in mind—namely, to avoid hurry and to keep in good temper. The dog must have time to comprehend the purposes of the trainer; to associate the command and pain with the act which will avoid the latter, and to memorize all the particulars which make up the lesson. When hurried or distressed from the confusion, he becomes overheated and holds his mouth open while panting, at which juncture he cannot close it on the cob without great distress.

Each lesson should end in a romp after the collar is removed, thereby restoring the dog's confidence and making a pleasant ending to the lesson.

The first simple lessons should be continued till the dog will open his mouth promptly the moment that he hears the order "Fetch." The next stage is to teach him to step forward and grasp the cob when he hears the command. The dog is now brought into active instead of passive obedience. He must act instead of being acted upon. The trainer holds the cob about a foot in front of the dog's nose, gives the command "Fetch," at the same time jerking him forward sharply to the cob, which he is induced to seize, and which he will seize when within reach of it if the preliminary lessons have been properly inculcated. These lessons teach the dog to advance forward for the cob when he hears the command. When the dog has grasped the cob, or when he has in good faith attempted to do so and failed, the punishment should instantly cease.

When he quite realizes the virtue of the cob in his mouth in affording immunity from punishment, he will object to release it even when the trainer so desires. Its absence after a time signifies that punishment impends. When he releases it, caress and reassure him. If he closes tightly on it and refuses to deliver it, no violence or impatience should be manifested. Grasp the cob in the left hand gently, utter the command "Give," stepping on the toes of one of his forefeet at the same time. It is not necessary to pinch them severely. A gentle pressure will be quite sufficient to accomplish the purpose. The order "Give" will be promptly obeyed after a few lessons given in this manner.

Up to this stage the dog as a general rule acts mechanically. He steps forward and puts his mouth on the cob because the act saves him from pain. He has not perception sufficient to enable him to comprehend that it is necessary for him to lower his head if the trainer holds the cob near the floor in front of him. At this stage the dog's natural inclination to grasp a moving object may be aroused, and then he may follow it up and grasp it on his own initiative. When this is evoked, the rest of the training is easy. The trainer caters to the dog's inclination to make it an amusement. The command "Fetch" is given, the cob is wiggled teasingly close to his nose, and when he follows after it it is moved two or three feet further on, till he overtakes and closes his mouth on it.

Some dogs soon develop an enthusiastic inclination to enter into the matter as amusement at this stage, but no more playfulness should be permitted than is necessary to make the lessons cheerful and successful. The grave and the gay should be properly blended.

If the dog, however, refuses to be amused, the trainer lowers the cob an inch or two below the level of the dog's mouth, and forces him to grasp it in the new position. Lesson after lesson the cob is lowered little by little as the dog becomes proficient, till at length he will take it from the trainer's hand held at the level of the floor.

At this stage the dog in most instances requires extra patience in conducting his lessons. He has been habituated to associating the cob and hand together, and has looked to the moving hand as the thing to follow when ordered to "Fetch." Hence, when the trainer places the cob on the floor, uttering the command and taking his hand away, the dog is likely to follow the moving hand instead of grasping the cob. To overcome this, the trainer places the cob on the floor in front of the dog, utters the command and then moves his hand to one side an inch or two only. If the dog goes to the hand, it is then an easy matter to direct his attention to the cob.

As the lessons progress, the hand may be moved away to greater and greater distances, as the dog more and more learns that the cob is the matter under consideration.

He can grasp it with much greater ease and quickness, thereby advancing better in his training, if two sticks about three inches in length are placed at right angles in each end of it.

After the dog will pick up the cob when placed on the floor close in front of him, another stage may be attempted. The cob is tossed gently a foot or two in front of him, care being taken to have him see it when tossed. He is induced to go for it by kind inducement if possible; if he refuses, he is forced forward with the collar.

A longer and lighter check cord may be used at this stage, accordingly as the dog broadens in the scope of his work.

A great deal of difficulty will be encountered if the preceding lessons have been hurried or if they have been imperfectly taught, either or both of which are quite probable in the first attempts of the amateur. If progress is made in a proper manner, each stage is easy and certain, with the infliction of little pain or none at all. If the trainer cannot conduct the spike-collar lessons in a proper manner, it is much better for himself and infinitely better for the dog that the system be abandoned.

If at any time the dog shows a disposition to bite the cob, some slim, ten-penny nails should be tied half an inch apart, lengthwise to it, so that its surface is protected by the iron. This, against his teeth, is abhorrent to him. He will at first refuse to grasp it, but when forced to do so will carry it, and with exceeding tenderness.

Next he is given lessons in retrieving a dead bird. It is better to protect it with nails at first, both to prevent him from pinching it with his teeth, to associate it with pain to the teeth if grasped too hard, and to insure a habit of tenderness from the first to the last attempts in retrieving birds. He will require a number of lessons to perfect him in it.

Next he should be taught to refrain from going after the object till he is ordered to do so. It is better to make him "Drop," and so remain till he hears the order to "Fetch."

In the lessons teach one order at a time. Do not order the dog to "Fetch" and as he starts to obey do not command him to "Drop," or "Toho," etc. Such training balks and confuses him. One order and obedience to it are sufficient at one time. Good progress on the part of the dog is consequent to industry and good sense on the part of the trainer. If the good sense is absent, the dog should be held blameless.

Each part in detail should be perfected. The dog should be required to remain passive till he is given the command "Fetch," then to go directly to the bird, pick it up gently and quickly, and return in a direct line to the trainer. No nosing of the bird, nor dawdling on the way either when going to or coming with it, should be tolerated. The bird should be delivered to hand, and released instantly to the order "Give."

The retriever should be thoroughly proficient in all the yard lessons before any attempts are made at actual field work, and then great care should be exercised to guard against two dogs attempting to retrieve the same bird, or against interference with a good retriever by a partly broken dog. A thoroughly trained dog may be demoralized in a few moments by such bad management.

Some preliminary training may be given the dog which in a way will be of value in marking the flight of birds and in "seeking dead." The cob is shown to him, then thrown in the air far away, where he can see it and mark its flight. He is not permitted to go after it till he is ordered to "Fetch." He will then have some difficulty in finding it, and will rake the ground about with his nose in an effort to catch scent of it. The lessons may be varied by throwing the cob to the opposite side of walls, fences, bushes, etc., thus enabling the dog to see part of its flight, but preventing him from seeing it land. When assisting the dog to search for it, the trainer utters the command "Seek" or "Find," or whatever other command he may fancy, at the same time affecting earnestness in searching for it himself. In this manner, after a sufficient number of lessons, the dog will mark the cob's flight quite accurately, will find it with reasonable quickness and will learn the significance of the commands pertaining to searching for it.

These lessons should be given in moderation, as they have a decided tendency to develop the carriage of a low nose, a style of work which should be discouraged as much as possible in a dog used as a bird finder.

In respect to actual field work, after the dog is perfected in retrieving, the trainer should ever bear in mind that all retrievers are not alike even when perfectly educated, and that circumstances alter cases. Dogs vary greatly in strength. A dog, physically small and delicate, might be an excellent retriever of quail and woodcock and yet be a poor retriever of prairie chickens, owing to their extra weight.

The dog at best, owing to his construction, is not a good weight carrier. Moreover, when required to retrieve large birds on a hot day, he, if panting violently, may be forced to drop the bird so that he can breathe, etc. The shooter should have some consideration and charity for his dog under such circumstances. He has consideration for himself, as shown by his voluminous excuses for missing a bird, or didn't know it was loaded, or resting in the shade when uncomfortably warm, etc.

However well a dog may perform in his yard lessons, they canot be accepted as final data concerning his actual work afield. Carrying an object to hand is not all of retrieving. The dog must have a keen intelligence, so that he will understand how to work intelligently to the gun; he must have a keen nose so that he may be able to trail running birds to their hiding place and locate the dead ones; he should have a pleasant, tractable disposition and take pleasure in his work; he should be able to mark and remember the flight of wounded birds, and also be able to distinguish between the flight of a wounded bird and one which is not.

The finished retriever does his work expeditiously and accurately, because he knows what to do and how to do it. The poor retriever knows but little more than how to fetch a bird when he comes across it. All the intelligent cognizance of details is lost to him.

Retrieving ducks and geese is too laborious work for the average pointer and setter. Furthermore, their constitution is not sufficiently strong to withstand the shock and exposure incident to it, if they are used as retrievers of wildfowl for any important lengths of time.

Snapping Turtles.

SHERBROOKE, P. Q., June 12.—How big do snapping turtles grow? One caught here was said to weigh 40 pounds. The species is exceedingly rare in this locality, no one ever having seen one before, as far as we can learn. It was caught a quarter of a mile from water in pasture land. As he would not eat after being coaxed for two weeks, he was taken back and turned loose where found with a dog tax check attached.

Will be glad to report further regarding geese at Little Magog Lake as soon as I can get good reliable information. JOS.

27. Winthrop, special handicap, Winthrop, Mass.
27. Seawanhaka Corinthian, fifth race for Center Island cup, Oyster Bay, Long Island Sound.
27. Manhasset, fourth series race for Jacob cup, Port Washington, Long Island Sound.
29. New York, Astor cup races, Newport.
29-30. Burgess, open, Marblehead, Massachusetts Bay.
30-Aug. 3. Pan-American regatta, Buffalo, N. Y.
30-31. New York, trial races to select America Cup defender, Newport.
31. Corinthian, Marblehead, Massachusetts Bay.
31. East Gloucester, evening race, Gloucester, Mass.

AUGUST.

1-3. Corinthian, Marblehead, Massachusetts Bay.
1. New York, trial race to select cup defender, Newport.
3. Duxbury, club, Duxbury, Mass.
3. Southern Gulf Coast, Y. R. A.
3. Beverly, Corinthian, Monument Beach.
3. Winthrop, special handicap, Winthrop, Mass.
3. Indian Harbor, club, Greenwich, Conn.
3. Moriches, association regatta.
3. Atlantic, Sea Gate, New York Bay.
3. Hempstead Harbor, annual, Hempstead Harbor, L. I. Sound.

3. Seawanhaka Corinthian, Robert Center memorial cup races, Oyster Bay, Long Island Sound.
3 Manhasset Bay, special, Port Washington, Long Island Sound.
3. Hull-Massachusetts, club, Hull, Mass.
3. Savin Hill, club, Boston Harbor.
3-5-7. New York, trial race to select cup defender, Newport.
5, 6. Manchester. West Manchester, Massachusetts Bay.
7. Misery Island, Salem Bay, Mass.
7, 8. East Gloucester, Gloucester, Mass.
7. East Gloucester, evening race, Gloucester, Mass.
9, 10. Annisquam. Ipswich Bay, Mass.
10. Beverly, Van Rensselaer cup, open, Monument Beach.
10. Winthrop, class handicap, Winthrop, Mass.
10. Westhampton C. C., association regatta.
10. Brooklyn, Gravesend Bay.
10. Shelter Island, open.
10. Beverly, Van Rensselaer cup, open, Marion.
10. Hull-Massachusetts, club, Hull, Mass.
10. Bridgeport, annual, Bridgeport, Long Island Sound.
10. Horsehoe Harbor, annual, Larchmont, Long Island Sound.
10. Bridgeport, special, Bridgeport, Long Island Sound.
10. Seawanhaka Corinthian, sixth race for Center Island cup, Oyster Bay, Long Island Sound.
10-15. Chicago, races for the Canada cup, Chicago, Lake Michigan.
12, 13. American, Newburyport, Massachusetts Bay.
17. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
17. Shelter Island, club.
17. Moriches, open.
17. Wollaston, Quincy Bay, Boston Harbor.
17. Corinthian, fifth club championship, Marblehead, Mass. Bay.
17. South Boston, club handicap, City Point, Boston Harbor.
17. New York, New York Bay.
17. Winthrop, special handicap, Winthrop, Mass.
17. Indian Harbor, annual, Greenwich, Long Island Sound.
17. Seawanhaka Corinthian, seventh race for Center Island cup, Oyster Bay, Long Island Sound.
17. Hull-Massachusetts, club, Hull, Mass.
17. Savin Hill, club, Boston Harbor.
17. Canarsie, Corinthian regatta, Jamaica Bay.
17. Columbia, Chicago, Lake Michigan.
24. Shinnecock Bay, association regatta, Shinnecock Bay.
24. Corinthian, sixth club championship, Marblehead, Mass. Bay.
24. South Boston, ladies' day, City Point, Boston Harbor.
24. Winthrop, class handicap, Winthrop, Mass.
24. Hull-Massachusetts, club, Hull, Mass.
26. Cape Cod, Provincetown, Mass.
27. Wellfleet, Wellfleet, Mass.
29. Plymouth, Plymouth, Mass.
30. Kingstown, Kingstown, Mass.
31. Duxbury, Duxbury, Mass.
31. Beverly, Corinthian, Monument Beach.
31 Westhampton C. C., open.
31. East Gloucester, club, Gloucester, Mass.
31. Marine and Field, Gravesend Bay.
31. Shelter Island, Club.
31. Hull-Massachusetts, club, Hull, Mass.
31. Hartford, annual, Saybrook, Long Island Sound.
31. Huntington, special, Huntington, Long Island Sound.
31. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
31. Larchmont, special, Larchmont, Long Island Sound.

SEPTEMBER.

2. Indian Harbor, special, Greenwich, Conn.
2. Annisquam, open, Ipswich Bay, Mass.
2. Beverly, open, Monument Beach.
2. Duxbury, ladies' day, Duxbury, Mass.
2, 3. Corinthian, cruise, Marblehead, Massachusetts Bay.
2. Lynn, Nahant, Massachusetts Bay.
2. Gravesend Y. R. A., all classes, Gravesend Bay.
2. Norwalk, special, South Norwalk, Long Island Sound.
2 Sachem's Head, annual, Saybrook, Long Island Sound.
2. Larchmont, fall regatta, Larchmont, Long Island Sound.
2. Atlantic, special, Sea Gate, New York Bay.
2. Pavonia, special, Bayonne, New York Bay.
2. Canarsie, ladies' day, Canarsie, Jamaica Bay.
2. Seawanhaka Corinthian, Oyster Bay, Long Island Sound.
2. Burgess, Marblehead, Massachusetts Bay.
2 Chicago, Chicago, Lake Michigan.
3. Shinnecock Bay, open, Shinnecock Bay.
5, 6. Seawanhaka Corinthian, open special, Oyster Bay, L. I. Sound.
7. Beverly, open, Mattapoisett.
7. Seawanhaka Corinthian, fall regatta, Oyster Bay, L. I. Sound.
7. Atlantic, Sea Gate, New York Bay.
7. Lynn, Y. R. A., rendezvous.
12. New York, autumn sweepstakes, New York Bay.
14. Hull-Massachusetts, club, Hull, Mass.
14. Brooklyn, fall regatta, Gravesend Bay, New York Bay.
14. Larchmont, Larchmont, Long Island Sound.
14. Indian Harbor, fall regatta, Greenwich, Conn.
14. Manhasset Bay, club series races for points; open to knockabouts (21 and 18ft.), cabin and open catboats, bay boats, Manhasset raceabouts and sailing dories, Port Washington, Long Island Sound.
14. Atlantic, fall regatta, Sea Gate, New York Bay.
21. America Cup race, Sandy Hook.
21. New York C. C., fall regatta, Gravesend Bay.
21. Manhasset Bay, fall regatta, Port Washington, L. I. Sound.
21. Canarsie, commodore's cup races, Canarsie, Jamaica Bay.
28. Manhasset Bay, fifth series race for Jacob cup, Port Washington, Long Island Sound.

Our Boston Letter.

BOSTON, June 16.—Last week Independence was put into the drydock at the Charlestown Navy Yard, her balance rudder taken off and the sternpost rudder substituted. This was done because it was found that the balance rudder jammed so in the port when it was being turned that after having been turned to a certain angle it was very hard to get the wheel further over. In other ways the balance rudder was success, but this feature would condemn it.

It simply shows that there are yet many experiments to be made before balance rudders can be used on large sailing yachts. That they can be used has been shown in the trials of Independence. If ball bearings were put at the bottom of the rudder sleeve, when it was first put in place, it is likely that there would have been no difficulty in turning the wheel in either direction, and a change in this direction would have overcome the fault at this time; but as the time is so short for the yacht to receive a proper tuning up, it was thought to be impracticable to experiment.

There is another thing which would tell against the balance rudder. Although it would perhaps be of great assistance in making quick tacks when sailing on the wind, it certainly creates a resistance when sailing off the wind, which does not help the speed of the yacht, and when any feature is not a help to a racing yacht, it becomes a detriment to her speed. It is true that the balance rudder is more powerful than the sternpost rudder in the proportion of its further position aft, but it is also true that the rudder kicks up more fuss under the water when the yacht is sailing off the wind, and it is expected that most of the work of a racing yacht will be away from the wind or sailing by it.

Another way of remedying the difficulty with the balance rudder, and giving the water a chance to flow properly around it, would be by attaching it to a skeg, but in the short time that is left before Independence gets down to hard racing, this was thought to be impracticable and, besides, it is doubtful if a skeg could be put on which would stay throughout one race unless it were made so heavy as to put too much additional weight on the wrong part of the boat. So, the sternpost rudder has been substituted, which will be easier to handled, and under which, it is expected, that Independence will work quick enough on the wind.

Another thing that has been discovered in the trials of Independence is that she has been a bit tender. Her rig is too lofty and she thereby sustains too great weight aloft. In all of her trials she has been sailed in very light airs, except, possibly the day on which she took her involuntary jibe. Under these conditions she appeared to be very satisfactory, but it was seen by those on board that she might be at a disadvantage if she should run up against a strong breeze. To reduce this weight aloft, 5ft. have been cut off the mast and 6ft. from the topmast. Two and a half feet will be cut from the head of the mainsail, from the leach to the luff, and a sweep will be taken out of the throat of the sail to make the head fit the gaff and also to get more draft in the luff.

When one thinks of reducing the total length of the spars 11ft. the thought generally follows that her rig will be greatly reduced, but such is not the case. Her headsails, of course, will be cut to trim right, but only enough for this purpose. In all only about 200 sq. ft. will be taken from the area of the lower sails. As the total area of the lower sails is 10,981 sq. ft., it can be seen that the reduction is very slight, and so far as sails go, would not be noticed by even the most expert. With the spars it will be different. The Oregon pine topmast, which has been substituted for the spruce one, and 6ft. shorter, will look very dumpy in proportion to the length of the mainmast. This appearance was noted in the old topmast, but in the new one it will be still greater, and the spar will appear very short indeed when she is under sail again.

If it had been possible, Mr. Crowninshield would have greatly desired to keep the rig as it was and put in extra ballast; but, as Independence has been floating very close to 90ft. on the waterline, this could not be done. In making the changes above mentioned, the weight of the rig aloft is reduced without materially changing the sail plan, and the weight thus taken is equivalent to many more pounds of lead stowed in her keel.

The conflict between the Hull-Massachusetts Y. C. and the Burgess Y. C., of Marblehead, has resulted just as your correspondent predicted early in the year. The conflict comes in the Y. R. A. classes. In both clubs classes are provided for the Y. R. A. 25-footers and 21-footers for June 17. The members of the Hull-Massachusetts Y. C. contend that they have tried to go half way with the Marblehead yachtsmen in the matter, but with no success. In consequence, the difference in the prizes offered by each club for the contested classes is of interest. The Burgess Y. C.'s race is a club affair. The prizes for the 25-footers is $10 and for the 21-footers $5. The race of the Hull-Massachusetts Y. C. is an open event. The prizes for the 25-footers are $50, $25 and $10. Those for the 21-footers are $40, $20 and $10.

The Regatta Committee of the Eastern Y. C. is making great efforts to have the annual open race on June 29 a success. The prizes are cash and of very substantial amounts. The feature of the races will be the admitting of yachts under 30ft. racing length. No yachts can be enrolled in the Eastern Y. C. which are not over 30ft., but for the open race two special classes are provided—one for yachts between 29ft. and 35ft. waterline, and the other for yachts between 24ft. and 29ft. waterline. In both of these classes a first prize of $50 is offered. If four or more yachts start in either class, a second prize of $10 will be given. In the larger classes the prizes run from $150 to $50 for the schooners and sloops, with proportionate second and third prizes should the entries warrant them. The Regatta Committee is trying in every way to reach the yachtsmen and there should be a good fleet of starters lined up at the races.

At Lawley's most of the yachts have been finished and have left the basin. The 86ft. steamer, designed by Arthur Binney for C. B. Borland, had her trial trip last week, in which she developed over fifteen knots. The Wiggin Y. R. A. 21-footer, which was designed by Fred Lawley, has been launched. She is a very clean looking boat, and should make a good showing in her class. The interior of the Eno 120ft. steam yacht is being finished up. The Crane 70ft. steam yacht is nearly plated. The Binney 70ft. steam yacht received her boilers last week. Fred Lawley has an order to design a 56ft. schooner for New York parties.

Most of the yacht clubs have taken advantage of the two holidays and the half holiday to make cruises. Some of them have arranged elaborate programmes with racing runs each day. The Boston Y. C. will cruise to Marblehead and Gloucester, the South Boston Y. C. to Marblehead and the Winthrop will go on a blind cruise. Most of the smaller clubs in Dorchester Bay are also on cruises.

JOHN B. KILLEEN.

Constitution's Breakdown.

Editor Forest and Stream:

For many years I have been a sailor, but I am not a yachtsman, and do not profess to know much about yachting. At the same time, I am greatly interested in the forthcoming contest for the America Cup, and read all that I can about the vessels likely to compete for it.

I am greatly impressed by the fact that recently several of these boats have been disabled in what appears to be moderate weather, and under circumstanecs which seem to show that they are carrying far too much sail and are fitted out with spars that are far too weak. Is it not the fact that, in the effort to turn out a vessel which shall win the Cup, designers are sacrificing everything to speed, and are trying to construct mere racing machines of no use nor interest to any one except for the purposes of this contest? Is this a desirable thing? Is it calculated to benefit the sport of yachting, or indeed to do any good thing—except gratify national pride?

It used to be said—and perhaps still is—that horse racing is carried on for the improvement of the horse, and perhaps incidentally the horse has been improved within the last 200 years by his use on the track, though I fancy something could be said on the other side of the question.

That the sport of yachting has a distinct service to perform for the country in training up men and boys to know something of the sea is undoubted, but are our vessels improved by the construction of modern type? Is our knowledge of naval architecture advanced by the building of racing machines like those of the present day?

QUERIST.

The Canada's Cup Challengers.

THERE are three Canadian candidates for Canada cup honors—Invader, built at Oakville, Ont., from the designs of Messrs. Sibbick Bros., of Cowes, England, for the Gooderham syndicate of the Royal Canadian Y. C., Toronto, the challengers for the cup; Canadian, built at Hamilton by Mr. J. H. Fearnside, Rear-Commodore of the Royal Hamilton Y. C., and Beaver the unsuccessful defender of the Canada cup in 1899, now owned and sailed by Dr. A. H. Garratt and others, of Toronto.

Beaver is already well known in the yachting world. She lost the cup to Genesee, but Canadians are still confident that had there been anything better than an eight-mile breeze for the cup races the Hanley centerboarder would have sailed home without the trophy. Beaver was designed by A. E. Payne, of Southampton, England, and is wonderfully smart in a breeze. She carried a tiny topsail in the Canada cup races, but has dispensed with this piece of canvas and added 300lbs. of lead to her ballast, reducing her to her original form—a plain jib and mainsail sloop, 45ft. over all, 29ft. on the waterline, 9ft. 4½in. beam, 6ft. 3in. draft and with a sail area of 1,335 sq. ft. She is sailing better in this, her third season, than she did in her first, and will prove an excellent trial boat in the forthcoming tests. The trial races will be held off Toronto Island, commencing in the last week of June or the first week of July. The Hamilton men favor the later date, but the Toronto men are afraid that it will not leave them sufficient time before the finals at Chicago.

Invader is, without doubt, the finest specimen of the 35ft. semi-fin keel sloop ever seen on Lake Ontario. A wondrful amount of cutting away has been done to her model. The after edge of the fin, instead of being straight, so as to carry the rudder stock, is curved away in. The lead bulb is longer than the base of the fin, projecting at least a foot beyond it aft. The ballast is in the form of a straight slab, the forward end being the wider and deeper. The overhangs are very long. There is a curious pinching-in apparent in the lines of the bow, and, viewed from below and slightly abeam, there appears to be somewhat of a hump in the quarters. This disappears when the boat is viewed on the level. The general profile of the craft is very pleasing, although she has rather more sheer than would be expected for the amount of her side. Her greatest freeboard is 34in. and her least is 20 in.

The sail plan is generous, the high peaked mainsail containing 1,105.5 sq. ft., according to the blueprint, while the jib has 378 sq. ft. The mainsail has a hoist of 31ft., and the boom is 38ft. long and the gaff 26ft. The base of the forward triangle is 21ft. 6in., the mast being stepped 15ft. from the stem head, and the bowsprit being 6ft. 6in. outboard. The mast is a beautiful hollow spar, with only a 7/8in. shell of wood left. It is so light that one man lifted it easily and only two men were required to carry it around.

Invader is 49ft. 6in. over all, 28ft. on the waterline, 9ft. 4in. beam, and 6ft. 6in. draft. Her sail area is 1,483 sq. ft. She has 6,000lbs. of lead ballast. She is built of British Columbia cedar, without a knot. Her frames are rock elm and her stem is oak. Her keelson and fin are of pitch pine. The covering board, coamings and deck fixtures are of mahogany. She has a balanced rudder.

The Duggan centerboarder Toronto, built in defense of the Canada cup in 1899, has been turned into a houseboat. Much of her gear has been used in fitting out Invader.

During the second week in June the new boat was sailed frequently by Com. Gooderham, of the Royal Canadian Y. C., and by the end of the week she was getting into shape. Her first spins were all light-weather trials. She met Beaver occasionally, and proved superior to her in sailing on an easy bowline and with a beam breeze. On a close haul, during the earlier trials, she was decidedly inferior to Beaver, the latter pointing as high and outfooting her. The improper set of Invader's canvas, owing to her not having her proper gaff and boom, was responsible for this. Some fear, however, has been expressed that the extreme amount of cutting away in Invader's fin has so reduced the area of lateral resistance that she slides to leeward a little more than a keel sloop should. While she draws 3in. more than Beaver, there is much less of her under water, her fin being very much shorter.

Canadian, the Hamilton boat, is a curious craft, with fairly sharp bows, slightly flaring sides, square bilges from stem to transom, a concave bottom, and a fin keel. Her bottom is not arched up very highly, the upward curve from the bilge to the keel being about 4in. Her deck has considerable crown, and she has an immense amount of room in her body. She is built of cedar, with an oak framework. Like Invader, she is sloop rigged. Canadian is what her name indicates. Her designer, the Rev. P. J. O'Brien, a Roman Catholic priest, is, if not a Canadian, a Newfoundlander. Her owner and builder is Mr. J. H. Fearnside, of Hamilton, a well-known Lake Ontario yachtsman. Her material—sails and rigging—are all products of the Land of the Maple. Father O'Brien claims great things for the concave bottom, and it is a fact that one of his yachts, built on this model, proved superior to Herreshoff creations. The principle appears to be that the water rushing under the concave bottom acts as a spring, lifting the yacht and driving her forward. That it has been successfully demonstrated in Canadian's case is perhaps saying too much, for the boat has not had a chance to show her capabilities yet. She has been taking trial spins under the canvas of the 35-footer Nadia, and has shown great speed. Perhaps the most prominent fact brought out so far has been that no matter how hard she is driven, she still parts and leaves the water with wonderful cleanness. Toronto men look upon Invader as sure to be selected as the cup challenger, but Hamilton men are just as confident of Canadian. As a matter of fact, both have been shown to be smart—that is all. There have been no opportunities of judging the two together. It is expected that Canadian's own canvas, which is being made by a Toronto firm, will be ready this week.

The approximate dimensions of the Hamilton craft are: Length over all, 47ft.; load waterline, 29ft.; beam, slightly over 10ft.; draft, about 6ft.; sail area, 1,400 sq. ft. The wildest stories have been afloat about the boat's model and dimensions. She has been described as a double-hulled craft with two centerboards, set in the bilges on the

CONSTITUTION.
Copyright by James Burton, New York.

bias, and as a keel craft with a 2ft. curve to her concave bottom, a boat absolutely without accommodation, all of which was exploded at the opening of the doors of the building shed. All that can be said against Canadian is that she is not handsome.

CHARLES H. SNIDER.

Western Yachts.

Chicago Y. C. will this afternoon engage in an interesting little contest between some of the 35-footers, this being a sort of preliminary trial among those seeking honors in the trials for the Canada cup competition. Illinois, Prairie and Josephine are all in commission, and well tuned up, and all three of these yachts are expected to start this afternoon. Yankee, the boat built by a Chicago syndicate, is hardly apt to be in shape to race this afternoon. Prairie came down Wednesday from Kenosha and made so favorable an impression during her run that she is hoped to give Illinois a good rub this afternoon. The big fellows, Siren, Vencedor and Vanenna, will go over the new course of the club in an event to which considerable interest attaches. The owners of Siren want to get back at the victor, Vencedor, and there should be a hot race around the triangular course to-day. Vanenna, the old boat, which used to contest the Michigan City race so closely with Siren, has recently come into port after lying idle last year, and will take a hand in the triangular race this afternoon.

Columbia Y. C. will start a number of small boats for the regular club cup, among those Ripple, Wasp, Gironda, Albatross, etc. Sallie, Brier and Dolphin are recent arrivals of the Columbia fleet.

Jackson Park Y. C. pulls off its opening regatta this afternoon. Perhaps the main event will be the competition between Peeps II. and Arrow, which were close rivals in last season's races, and both of which have been carefully tuned up for this season's sport. Three P. M. is the hour set for the sport of the regattas this afternoon.

E. H.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, L. I.

Saturday, June 15.

THE first race of the series between the club knockabouts for the Center Island cup was sailed on Saturday, June 15. The wind blew strong from the southeast. The first leg of the course was a reach, the second a beat and the third a run. The course was sailed over twice, making nine miles in all. The summary folows:

Seawanhaka Knockabouts, Start, 3:15.

	Elapsed.
Marcia, Jacquelin and Dresser	1 57 10
Nakoda, J. L. Sherman	1 57 24
Vagrant, Low and Barnes	1 58 28
Triumph, H. Landen	2 03 25
Heron, F. R. Coudert	2 05 13

Marcia won, Nakodo second and Vagrant third.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

V.—Timbering and Planking (Continued).

HAVING set off the widths of the planks on the stem, midship mould and transom in No. 1 boat, and also on the stern-post and counter frame of No. 2, a batten should be placed over these points, and a fair line marked on all the other moulds and timbers. A very good plan is to start with the garboard, moving each ribband as you come to it if it crosses a seam, but be sure you do not take any of the ribbands entirely off, till you are ready to fit the plank, and do not touch the next ribband till the plank is on and nailed to the timbers, or you will have your timbers out of shape. I mention this now in case a ribband should be removed to make the spacing of the planks. If it is, it must be replaced carefully and fastened, till it has to be removed for the plank. By the way, in No. 2 boat be sure and make a seam come just at the junction of the stern-post with the counter-frame. There is a sharp twist here, and it is very difficult to fit unless the seam comes in the angle between the two.

Most builders dispense with the rabbet on the counter frame in No. 2 type, and let the planks run past the stern-post, and meet along the center line of the frame. This saves a good deal of trouble, and also some weight, but for an amateur, it is easier to get a tight joint where the rudder passes through the counter frame, if a rabbet is left as shown in the sketch, because the seam can be caulked if not very well fitted, but where the plank merely lies flat on the frame, and a hole for the rudder is cut through the plank, leaving an exposed joint inside the hole, it requires perfect fitting between plank and frame to prevent leaking, and if a leak should occur there, it is very difficult to stop.

The first plank to be fitted, is the garboard strake, or that next the keel. It is generally the most difficult, and should be most carefully fitted, as on this depends much of the strength of the bottom of the boat. To get the exact shape of the edge of the plank next the keel, which will have to fit the rabbet for the whole of its length, take two pieces of thin wood, about 5in. wide, and rather more than half the length of the garboard strake, roughly cut to fit each end of the rabbet, and tacked over the moulds and timbers, so that they overlap each other in the middle. Now take a pair of compasses and set them about an eighth of an inch wider than the widest gap between the edges of the two boards and the inner edge of the rabbet. With the compasses set to this distance, prick off a series of spots along the boards, say every six inches, till the turn of the stem comes, and there decrease the spacing between the spots (or 'spilings') to every three inches. Always keep one leg of the compasses against the inner edge of the rabbet, and be careful to mark the spilings at right angles to the board, or 'spiling batten' as it is called, and not at right angles to the rabbet line. The accompanying sketch shows how this should be done.

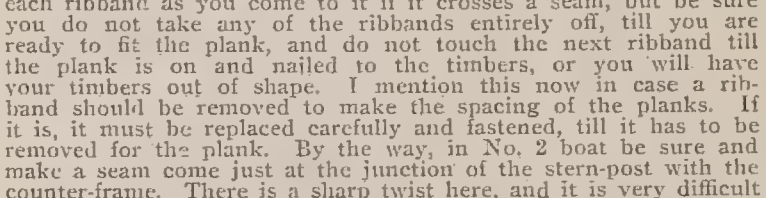

FIG. 21.—METHOD OF FILLING THE PLANKING.

If the spilings were taken at right angles to the rabbet round a curve, they would never give the true shape of the curve, but would give a smaller curve of similar shape and sharper turn, like two concentric circles.

When the spilings are all pricked off on the boards, take them off the boat and cut the edge to the spiling spots and try them up in place again, fitting the edge with a small plane till you have a good joint all along the rabbet. Then, with the spiling battens fitted carefully into the rabbet, nail them together where they over-lap each other, so that they are quite ridged like a single plank. They can now be taken off the boat again and laid on a piece of the planking and a pencil line drawn round the fitted edge. Mark off the width of the plank in the centre and at each end, but cut it an eighth of an inch outside both lines.

The plank should now be tried up in its place fitted to the rabbet in the same manner as the spiling batten; but greater care must be used, not only to insure a perfect fit, but also to avoid cutting away more of the edge of the plank than is absolutely required. The final fitting done by chalking the inside of the rabbet, and cramping and shoring the plank carefully to its place, tapping it close with a hammer along the outer edge. When the shores are removed, it will be found to be marked by the chalk where it has touched it, and these places should be planed off till it shows the chalk mark all along.

The outer edge should now be shot fair and to the correct width with a jack plane, and both sides of the plank planed up.

It is now ready for fastening in its place, and the rabbet must have a coat of either red and white lead and varnish, or some thick varnish out of an old can. The latter is best for a varnished boat, but the other is more durable.

Before fastening the plank in place, it should be tried up in place, on the other side of the boat; and if it is a fairly good fit, as it should be, it should be laid on another board and the opposite plank marked off from it.

Cramp and shore the plank into its place as before, driving it tight into the rabbet, and start nailing at the fore end, carefully boring to the full depth of the nails with a boat builder's piercer a little smaller than the nails.

Nail the inner edge first, taking care that the plank does not get away from the rabbet. The nails should be spaced about five times the thickness of the plank apart along the keel, and about three times the thickness up the stem.

After nailing the plank along the rabbet, the outer edge must be cramped and shored close to the timbers, and nailed to each with copper nails ¼in. longer than the total thickness of plank and timber. An intermediate nail should also be placed in the middle of the plank at each timebr, but care must be taken that these are not all in the same line of the grain of the plank, or it may split. In very wide thin planks the intermediate nails are increased in number; a good rule being a nail for every four inches in width in ½-in. planking, or spaced eight times the thickness.

For the rest of the planking it will not be necessary to fit the spiling batten itself to the edge of the last plank; but by using a spiling batten as long as the boat and about 3in. by ⅝in. with straight edges, the spilings for each plank in turn can be set off on the batten, and then planed off when done with.

In using this straight spiling batten, it must be laid quite flat on the timbers, without any twist edgewise; and so that it just touches the edge of the last plank, from which the spilings are to be taken. It will be found that in some places it is several inches away from the edge of the plank; so that the spiling, if taken with compasses as before, would not all come on the batten. To get over this difficulty, instead of using the compasses, the distance from the edge of the plank to the batten is taken at right angles to the batten, every foot or so, and written on the batten alongside the line on which it is taken. Where the distance is not to an exact sixteenth of an inch, it is usual to write it down thus:—3 7-16°, meaning 'full,' or just over the 7-16, while, if it is under the nearest sixteenth, it would be written 3 7-16-or 'bare.' Another sign is ↓ or 'hard off,' used where the edge is touching.

The great secret of getting a tight boat is well fitted seams, and these can only be got by careful spiling, and trying up the planks several times before fastening them, chalking the edge of the last plank each time, and planing off the chalk marks on the new plank till the chalk marks the edge all along, as explained previously.

If the seam is to be caulked it must be left open on the outside and tight on the inside so as to hold the calking. For ½in. planking a sixteenth of an inch is wide enough for the out-

side of the seam, but a first-class builder would not caulk such thin planking at all, but would fit the two edges perfectly water-tight without any stopping, only varnishing each seam as it is fitted.

This is rather beyond any amateur's powers, and is only done by one or two of the very best builders, so it will be best to caulk all seams.

From the foregoing description, it will be seen how important it is to make good seams, and it is really a matter of care and patience more than great skill. After the first difficulties are overcome seevral planks are sure to be spoiled at first, but that is of no consequence, as each failure teaches something, and the spoiled plank will always come in for some other part.

So far, we have been considering the planking as if each plank was in one piece, but this will seldom be the case in all the planks even in a long easy boat, while in a short hard bilged boat like a dinghy, there would be very few planks without a scraph, as not only would the curve, or 'sny,' of the plank be too great for the widths of the boards, but even if it could be cut cut in one piece the grain would run so short across the ends that the plank would be very weak and would sure to split in nailing. The waste of wood would also be very great, and it would be difficult to take an accurate spiling for such an extreme curve.

For these reasons, it is usual to scarph all planks where the curve or 'sny' exceeds the width of the widest part of the plank. The after end of the plank is fitted and nailed in place, as previously described, but before finally nailing in place; the scarph is made. The best form of scarph is that known as a "butt scarph,' and in this, the after end of the forward half of the plank overlaps the fore end of the after half, for about 2 in. The two ends are carefully tapered off so as to fit each other; the after end of the forward half plank being let into the other, about ⅛in. or more, according to the thickness of the planking, and the fore end of the after halt plank being tapered to a feather edge; this feather edge should come on a timber, so that when the scarph is nailed, the nails in the fore end of the scarph will go through the timber; those on the after end or 'butt' of the scarph being clinched inside on the plank.

It is most important that all scarphs should be very carefully fitted, as a leaky scarph is difficult to put right. All such joints should be made with a small iron plane, and when they are a good fit they must be well painted with thick red and white lead, or some similar preparation. The nails should be finer than those used in the rest of the planking, and great care used not to split the end of the plank, as the row of scarph nails should be only half an inch from the edge, and about an inch apart.

Where there is a sharp turn in the timbers, as at the bilge and on the quarters, the planks for these parts should be cut from boards a little thicker than the rest, so as to allow the center of the plank to be hollowed on the inside to fit the curve of the section, and it will also be rounded on the outside to correspond. The hollowing is done with a round soled plane, which is easily made from a small wooden smoothing plane by rounding the face and grinding the iron into a curve of about ⅛in. to the 2in. of width of iron.

YACHTING NEWS NOTES.

Messrs. Wilmer and Addison Hanan, owners of the English-built cutter Astrild, which burned and sank recently off Port Chester, will have the hull raised and inspected with a view to rebuilding her. Astrild is of composite construction, having steel frames, and there is a possibility that these may not have been seriously warped or damaged by the fire, which was caused by the explosion of a gasoline stove.

Mr. Philip T. Dodge's English-built cutter Eelin, which left Southampton on April 18, has arrived in good shape at the Greenport Basin & Construction Company's yards at Greenport, L. I. Eelin's sailing master reports that mild weather was experienced throughout the passage, and the boat could have carried her racing rig without any danger to herself. The yacht was almost home when the wind dropped quite out, and made it a drifting finish from Gardiner's Bay to Greenport, in which it took twenty hours to cover the twenty miles remaining. Sailing from Southampton on April 18, Eelin arrived at Bermuda on June 6 and weighed anchor for the last time the following day. Her final run with the exception of the last twenty miles was only a series of pleasant days' sailing.

Isolde, which was recently purchased by Mr. Daniel Bacon, N. Y. Y. C., arrived in New York on June 10 on the deck of the steamer Manitou. Isolde was built by the Herreshoffs at Bristol in 1895 for Prince Leopold, of Belgium, who afterward sold her to Baron Von Zedtwitz, at that time an intimate friend of Emperor William. Emperor William was the indirect cause of the Count's death by his yacht Meteor colliding with Isolde in the second day's racing of the Royal Albert regatta at Southsea, England, on Aug. 18, 1897. In the race that day were the large boats Ailsa, Britannia, Meteor and Satanita, and in the smaller class were the Saint, Niagara, Samphire, Audrey, Penitent and Isolde. The course was twenty-three miles long, which the large yachts were to sail over twice, and the smaller class once. When the big yachts had finished the first round and were starting on the second the boats of both classes became crowded together. Isolde was between Britannia and Meteor, and was fouled by the latter. The mast of Isolde was carried away and she heeled to such an extent that it threw all those on board into the water. One of the blocks of Isolde struck the Baron on the head before he went overboard, and though alive when picked up, he died at the club house at Ryde a few hours afterward. All the sailors were saved. Since the accident the yacht has been laid up at Southampton. She was a sister boat to Mr. Howard Gould's Niagara, and is 44ft. 3in. on the waterline, 66ft. over all and 12ft. 1in. beam.

The work of breaking up Defender is now progressing at City Island. The interior fittings are being removed, and as soon as that is done the hull will be cut into pieces small enough to be easily transported to Newark, where the metal will be sold.

Nevada, which was designed by Mr. Charles F. Herreshoff, Jr., started on June 15 in a match race for a special prize against Tutty, designed by Mr. A. E. Payne, and built in 1898, over a course of thirty-six and one-half miles. A fresh breeze was blowing at the time. Tutty outsailed Nevada on every point, and after a hopeless stern chase Nevada lowered her topsails and left Tutty to finish the race alone. Emperor William's Meteor beat Kariad by seven minutes over a forty-seven-mile course on the same day.

The three English boats built for Mr. Lorne Currie to try for the Seawanhaka cup have sailed trial races on Southampton Water, England. The boats are named Greyfriar, designed by Mr. Chambers, of Ipswich; L'Esperance, designed by Mr. Linton Hope, and Insula, designed by Mr. Harley Mead. The result of the trials has shown Greyfriar to be the fastest boat of the three. She has shown great speed in reaching, beating the other two boats easily. Greyfriar will be placed aboard the steamship Australasian, which will sail for Montreal on June 27. The racing crew will consist of Mr. Lorne Currie, Mr. Algernon Maudslay, Mr. Rivers Fletcher and Mr. Marmaduke Pike. Mr. Currie will sail for America early in July and give his boat some trials before the first race, which takes place on July 24.

CONSTITUTION AFTER THE BREAKDOWN.
Copyright by James Burton, New York.

Messrs. Von Lengerke & Detmold launched a 48ft. cruising cabin launch on June 18. The yacht was built by the Racine Boat Mfg. Co. for Mr. George A. Barker, of New York city, and is equipped with two 17 horse-power triple cylinder electro vapor engines. She is 48ft. over all, 43ft. 6in. on the waterline, 9ft. 3in. beam and draws 32in. The boat will be known as Idle Hour.

The sloop Quero, owned by Mr. Richard Derby, of New York city, was badly damaged by fire at Belfast, Me., a short time ago, and Capt. Dodge and the steward were seriously burned. The fire was caused by the explosion of an oil stove.

The Bath Iron Works, of Bath, Me., recently closed a contract for a large steel steam yacht, which it is stated is for Mr. A. S. Bigelow, of Boston, the owner of the steam yacht Ituna.

Messrs. Gardner & Cox are getting up plans for a cruising centerboard sloop for Mr. George Bullock, Seawanhaka Corinthian Y. C. The boat will be built this summer and will be used by her owner in southern waters during the coming winter. Next season she will be raced in the 51ft. class on Long Island Sound.

Messrs. Tams, Lemoine & Crane have recently placed contracts with the Burlee Shipbuilding Co., of Port Richmond, S. I., for two large steam yachts. The largest of these boats is for Mr. W. D. Leeds, of New York city. She will be 260ft. over all, 215ft. on the waterline, 28ft. beam and 14ft. draft. The boat was designed solely for deep sea cruising, and will have a large bunker capacity; her speed will be about fifteen knots. The other vessel is for Mr. Daniel R. Reed, of New York city, particulars of which have not been given out. Both vessels will be completed for the season of 1902.

Mr. J. Roger Maxwell's new cutter that will race in the 51ft. class was launched from the Herreshoffs on June 13. She will be known as Humma.

The new 43ft. cutter that was designed by Messrs. Gardner & Cox, and built by Mr. Frank Wood at City Island for Mr. W. L. Ward, of Port Chester, was launched on June 13. She was named Dorwina.

The English-built steam yacht Kethailes recently purchased by Rear-Com. Charles L. F. Robinson, N. Y. Y. C., arrived at Newport on June 10 after a fourteen days' trip from Liverpool. The yacht stopped at the Azores on May 31 for coal and made the passage from there to Newport in eight days. Com. Robinson has chartered the yacht for the summer to Mr. A. C. Burrage, of Boston. During the coming winter Com. Robinson will take his family on Kethailes to the Mediterranean. She is 167ft. on the waterline, 24.15ft. beam and 13.8ft. deep. She registers 479 tons Thames measurement. Her name has been changed to Wanderer.

The English-built steam yacht Katomba, which has been chartered by Mr. Larz Anderson, of Boston, arrived at New York on June 8, after a passage of fifteen days from Greenock, Scotland. The yacht is built of steel and has six watertight bulkheads and two decks. The vessel was built by the Ailsa Shipbuilding Co., at Troon, Scotland, from designs made by Mr. G. L. Watson, in 1898. She is 163ft. on the waterline, 24.15ft. beam and 13.75ft. deep.

We have received a copy of an excellent little book which is entitled "The Yachting Record." It is compiled and edited by Mr. A. F. Aldridge, of the Atlantic Y. C. The book will be invaluable to yachtsmen interested in racing, as the book contains the summaries of all the races sailed in New York Harbor and along the Sound as far east as Newport during the season of 1900. The book is very complete, and carefully indexed so that each boat's racing record can be easily found. The volume is well printed and bound in a dark green buckram. Copies may be secured from Thompson & Co., 9 Murray street.

Yacht Club Notes.

Mr. Frank Bowne Jones, chairman of the Regatta Committee of the Indian Harbor Y. C., announces that the race that was arranged by the club for the 90-footers, to be sailed the latter part of this month, and for which Constitution, Columbia and Independence had been entered, has, on account of the accident to Constitution, which has necessitated changes in the racing engagements for these yachts, been indefinitely postponed.

Com. Frederick T. Adams, of the Larchmont Y. C., has appointed Gen. Thomas L. Watson Fleet Captain, vice Joseph H. Sterling, resigned.

Charles J. Neilson has resigned as Commodore, and J. C. Heine as Secretary of the Canarsie Y. C.

The New Rochelle Y. C. will hold its sixteenth annual regatta Saturday, June 22. The races will be for sloops and cutters of the 51, 43, 36, 30, 25, 21 and 18ft. classes; for yawls of the 43 and 36ft. classes; for 30, 25, 21 and 18ft. catboats; for the regular class of raceabouts, and also for the Newport special 30-footers, the Larchmont 25ft. one-design class and the Seawanhaka one-design class of knockabouts. The starting line will be off the entrance of Echo Bay. The 51-footers will sail a distance of twenty-two miles, going three times over the course, which lies from the starting line to the Gangway Buoy, across the Sound, to the Old Hen Buoy, at Hempstead Harbor, and back. The smaller sloops, including the special 30-footers, the yawls and the Larchmont class, will go twice over the course, making a sail of fourteen and two-thirds miles. The 25, 21 and 18ft. boats of all classes will go to the Red Buoy, at the southwesterly end of the Hen and Chickens Reef, thence to the Middle Ground Buoy, at Execution Reef, and home, the 25-footers sailing the course three times over—twelve and three-quarter miles—and the 21 and 18 footers twice—eight and one-half miles. The races will be sailed under the rules of the Yacht Racing Association of Long Island Sound. The preparatory signal, the blue peter, will be set at 12 o'clock, after which the several classes will be sent away at intervals of five minutes. Entries will be received up

to noon Friday, June 21, by Charles P. Tower, chairman of the Regatta Committee ,at 21 Park Row. The other members of the committees are C. A. Becker, O. H. Chellborg, R. N. Bavier, W. E. Moore.

* * *

A new station, which will be known as No. 1, is being built by the Morse Iron Works, at Fifty-fifth to Fifty-eighth streets, South Brooklyn, for the New York Y. C.

* * *

The Royal Ulster Y. C. proposes a race in Irish waters before the annual yacht race meeting on the Clyde. It suggests that this should take place on June 18, 19 or 20, and offers two prizes of £100 each for a contest between Shamrock I., Sybarita, Meteor and Kariad, one prize to go to the first yacht and the other to the winner on time allowance.

The Largest Dory in the World.

The largest dory in the world has just been constructed at Whitcomb's ship yard at Provincetown, Mass., for Colonel Charles Ledyard Norton, of New York city. Everybody is familiar with the ordinary dory—a light, handy and safe little craft in any kind of weather. Of recent years the type has been used for somewhat larger craft, and the centerboard dory is a hummer before the wind. But the new craft fairly takes away the breath of the Grand Banks hand liners, who have lived in dories all their lives. It has been an object of great interest to the fishermen hereabouts, and all who have inspected the strange craft are united in the opinion that she could go around the world if necessary.

The owner and originator has styled the craft a "house dory," and that is what it will be when completed. Its dimensions are as follows: Length over all, 45ft.; breadth amidships, 14ft.; depth from gunwale to floor, 7ft. The "house dory" has the conventional flaring stem and tombstone of oak. To sawed knees of hackmatack the flooring or bottom of 2in. and the siding of 1¼in. hard pine planking are fastened. The half-round bilge of the famous Swampscot dory is wholly lacking, as is the graceful sweeping floor and sheer spring common to the average dory, but it is, nevertheless, an out-and-out dory.

The craft will be towed to Sandwich, where she will be equipped with a house, spars and sails by her owner. He will then take her around Cape Cod to Buzzard's Bay, where he will pass the summer in cruising.

The spacious cabin house will extend from stem to stern, the only break being in the after part, where a deep cockpit will be placed. The house will be highest amidships, the house roof sloping thence fore and aft to the line of the stem and stern. The cabin will be conveniently and comfortably furnished, for the owner intends to spend much of his time hereafter, both summer and winter, in the cozy interior. He will cruise in Northern waters during the summer and in the winter will probably cruise in Florida waters.

The "house dory" will be steered with a tiller. Her canvas will consist of two leg-o'-mutton sails spread on fore and mainmasts, and a jib.—New York Sun.

Larchmont Y. C. Spring Regatta.

LARCHMONT—LONG ISLAND SOUND.

Monday, June 17.

THE Larchmont Y. C.'s spring regatta was sailed on Monday, June 17. The race was scheduled for last Saturday, but owing to bad weather it was postponed until Monday. The breeze was light from the east in the morning, but about 2 o'clock the wind dropped entirely, leaving all the boats becalmed. After a wait of some time a light southwest breeze came up which eanbled the yachts to finish. It was a day of surprises and disappointments.

In the 75ft. schooner class were Quissetta, Amorita and Elmina, the new boat designed for the class by Messrs. Cary Smith & Barbey. These yachts were sent away at 11:35 o'clock. Quissetta got the best of the start and crossed the starting line first in the weather berth. Amorita, with a fine new suit of Ratsey sails, crossed second, and Elmina last. Quissetta rounded the first mark over six minutes in the lead, and on the next leg, with light sails set, she continued to increase her lead. Quissett awas nearly half an hour in the lead when the breeze dropped entirely, and she lay becalmed. After drifting around for some time a little air came slowly up from the southwest. Elmina caught the breeze first and took the lead and won the race by a small margin. Elmina was outsailed by Quissetta from the beginning, and it was only through a fluke that she won the race.

Larry Huntington's new 51-footer Huguenot was to sail her maiden race against Altair in K class. Just as the starting signal was given Huguenot was unfortunate enough to carry away her throat halliards. Mr. Cord Meyer, owner of Altair, very kindly offered to wait until repairs were made, but finding that there would be considerable delay, Altair went over the course alone.

In the 43ft. class Mr. Charles Lane Poor was on hand with Mira. This boat has been fitted with a suit of Ratsey sails which are perfect. Mira's only competitor was Effort II., Mr. F. M. Smith's new Herreshoff boat. Effort crossed the line first, but was soon passed by Mira, which boat easily outsailed her on every point from the start. At the end of the first round Mira was nearly twenty minutes in the lead, but she was unfortunate enough to share the same fate as Quissetta. When Mira lost the easterly wind Effort was way behind and caught the southwest breeze first and secured such a substantial lead that it was impossible for Mira to overhaul her. With all her ill luck, Mira was only beaten by 25 seconds. The summary follows:

Schooners—Class D.—Start, 11:35.

	Elapsed.	Corrected.
Amorita, W. G. Brokaw	6 30 18	6 30 18
Quissetta, H. F. Lippitt	6 29 17	6 29 17
Elmina, F. K. Brewster	6 26 25	6 26 25
Sloops—Class K.—Start, 11:40.		
Altair, Cord Meyer, Jr.	5 45 56	5 45 56
Huguenot, Edward Kelly	Disabled.	
Sloops—Class L.—Start, 11:45.		
Mira, C. L. Poor	5 55 31	5 55 31
Effort, F. M. Smith	5 55 06	5 55 06
Sloops—Newport 30—Start, 11:53.		
Veda, Daniel Bacon	6 04 26	6 04 26
Esperanza, H. O. Havemeyer, Jr.	5 49 31	5 49 31
Hera, Ralph Ellis	Did not finish.	
Sloops—Class N.—Start, 11:55.		
Empronzi, Alfred Peats	5 50 41	5 50 41
Mab II., C. V. Brokaw	6 07 33	6 07 33
Alerion, A. H. Alker	5 54 11	5 54 11
Oiseau, J. R. Maxwell, Jr.	5 48 53	5 48 53
Raceabouts—21 ft.—Start, 12:00.		
Badger, Thorsen & Jones	4 05 51	4 05 51
Rogue, F. T. Bedford, Jr.	Did not finish.	
Viper, W. D. Hennen	Did not finish.	
Sloops—Class Q.—Start, 12:05.		
Ox, R. N. Bavier	5 08 39	5 08 39
Sloops—Class R.—Start, 12:05.		
Sora, W. Hoey, Jr.	5 02 43	5 02 43
Nike, Guy Forbes	5 01 01	4 57 57
Mistral	4 58 09	4 58 09
Hope, Adrian Iselin	4 54 57	4 54 57
Cricket, H. C. Pryer	5 22 07	5 22 07
Catboats—Class T.—Start, 12:10.		
Win or Lose, J. S. Appleby	4 42 46	4 42 46
Mongoose, II., Simeon Ford	4 38 08	4 38 08
Class V.—Start, 12:15.		
Kazaza, T. J. McCahill, Jr.	5 06 14	5 06 14
Manhasset Raceabouts—Start, 12:20.		
Bah, Phillips & Morgan	4 58 36	4 58 36
Arizona, G. A. Corey	4 49 49	4 49 49
Firefly, Guy Standing	4 56 23	4 56 23
Lambkin, S. W. Roach	Did not finish.	
Sloops—Class P.—Start, 12:00.		
Rochelle, Edward Kelly	Did not finish.	

The winners were Elmina, Effort, Esperanza, Oiseau, Badger, Hope, Mongoose II., Arizona, Sailovers, Altair, Ox, Kazaza.

Corinthian Y. C.

SAN FRANCISCO BAY.

Thursday, May 30.

There was a good wind from the west, smooth water in San Francisco Bay and bright sunshine for the sixteenth annual regatta of the Corinthian Yacht Club, which took place on Decoration Day.

Forty yachts of all classes were etnreed on the propramme, most of which crossed the starting line between 11:45 A. M. and 12:40 P. M. The course was from off Powell street wharf to and around the Government buoy; thence to and around a stake boat to the northeast; thence returning to Presidio Shoal and finishing at the staritng line between stake boats.

The favoring conditions of wind and weather, the shimmering bay with its surroundings of blue mountains and headlands and verdant slopes, the bright sails of the yachts, with ships, steamers and larger craft afloat on the water, presented a splendid picture and delightful prospect. The battleship Iowa, covered with flags, was lying at anchor at the south, Alcatraz, opposite the starting point on the north, and to the west the natural wonders and fortifications of the Golden Gate. A salute in commemoration of the day was fired from the guns of Alcatraz shortly before the signal whistles for the regatta were blown by the little steamer bearing the regatta committee, and crowded with spectators and enthusiastic guests.

Yachts were classified into 20-foot class, 25-foot class, 30-foot class, 36-foot class and special class. The regatta was governed by the club book of 1897. The prizes given were flags, one for first and one for second of each class.

In the 25-foot class, Discovery, a clever spoon bow and fin keel boat that was built last year, made her début as a racer, and under the guidance of Capt. McFarland ran away from the Merope and five others.

In the 20-foot class, Joe Mattoon's Spider, which was recently imported from Japan, beat the former champion Kittiwake. The latter was considered invincible in her class and had never been beaten until the boat from Japan outsailed her.

The race between the Presto, sailed by Frank Stone; the Truant, sailed by ex-Commodore Pew, and the Æolus, handled by ex-Commodore Westerfeldt, was well sailed. The Presto won handily after a close sail throughout, but the Truant only beat the Æolus 22 seconds for second place.

The Spray won cleverly from the Neried, the Emma won the 36-foot class event by a narrow margin, and the Harpoon, after an exciting race, beat the Speedwell, Ariel and Mischief. The race was really between th eHarpoon and Speedwell, and although the Speedwell beat her in actual sailing time the Harpoon got the verdict by 45 seconds in the corrected time. The Harpoon belongs in a smaller class than the Speedwell, so she received allowances.

The judges were P. J. Martenstein, E. B. Leaming and W. P. Harrold. George W. Harrold served as measurer.

Following is a summary of results:

20-Foot Class, five nautical miles.

	Actual.	Corrected.
Spider	1 08 01	1 07 30
Kittiwake	1 23 13	1 12 13
Special Class, 9¼ nautical miles.		
Spray	1 55 35	1 52 52
Neried	1 57 33	1 57 33
25-Foot Class, 9¼ nautical miles.		
Discovery	1 49 40	1 40 40
Merope	1 53 52	1 51 36
May	2 02 10	2 01 21
Cupid	2 01 59	2 01 59
Ceres	2 29 25	2 29 25
Vega	2 20 20	2 20 04
Belle	Did not finish.	
30-Foot Class, 12 6-10 nautical miles.		
Presto	2 18 04	2 18 04
Truant	2 22 28	2 20 23
Aeolus	2 23 09	2 20 45
36-Foot Class, 12 6-10 nautical miles.		
Emma	2 16 56	2 12 22
Edna	2 16 56	2 12 47
Genesta	2 30 42	2 28 48
Neptune	2 30	2 30
Class 1—12 6-10 nautical miles; all over 36ft. racing length.		
Harpoon	2 11 48	2 08 51
Speedwell	2 10 41	2 09 48
Ariel	2 20 20	2 20 20
Mischief	2 21 49	2 21 49

Beverly Y. C.

BUZZARDS BAY.

Saturday, June 15.

THE yachting season was opened at Cape Cod Saturday by the Beverly Y. C. The race was sailed in a cold northeast gale off the club house at Wing's Neck, and all yachts carried reefs. Four classes started. In the 25-footers was the champion May Queen and a new one, Kalama III., designed by her owner, David Rice, and built by Phinney, of Monument Beach. Kalama III. ran away from May Queen down the wind, but the old boat made it all back and more too when it came to windward work. In the 21-footers, the Herreshoff-designed champion Quakeress had things all her own way. She has recently been overhauled by Herreshoff, and was in perfect trim for the race. A new boat, designed by Herreshoff, Radiant, did not make much of a showing, but it was her first race, and it is expected that she will do better when she has been turned up. In the 18-footers, Eunice, designed and built by Huckins, of Onset, for W. O. Taylor, of Boston, proved a winner in her maiden race. She was led by Allison down the wind, but on the windward work she hauled into first place and kept it. Spider won easily in the 15-footers. The summary:

25-Footers.

	Length.	Elapsed.
May Queen, D. L. Whittemore	25	2 02 13
Kalama III., David Rice	25	2 03 13
21-Footers.		
Quakeress, W. F. Harrison	21	2 09 09
Amanita, L. Bacon	21	2 13 50
Kestrel, L. S. Dabney	21	2 17 02
Radiant, C. M. Baker	21	2 17 48
Fourth Class Cats.		
Eunice, W. O. Taylor	00	1 45 14
Howard, H. O. Miller	00	1 48 45
Allison, Stewart McLoud	00	1 56 50
15-Foot Restricted Class.		
Spider, H. M. Stone	15	1 34 40
Next, Paul Jones	15	1 38 12

JOHN B. KILLEEN.

Brooklyn Y. C.

NEW YORK BAY.

Monday, June 17.

THE Brooklyn Y. C. sailed its forty-fourth annual regatta over the regular courses on Monday, June 17. There was a good breeze from the southeast, and thirteen boats started. The yachts had a close reach to Old Orchard Shoal Light, a beat to Southwest Spit and a run home. The summary follows:

Sloops—43ft. Class—Start, 11:05.

	Finish	Elapsed.
Gladys, E. F. Glover	2 25 40	3 20 40
Narcissus, A. Erdman	2 47 27	3 42 27
Sloops—36ft. Class—Start, 11:05.		
Akista, George Hill	1 51 59	2 46 59
Kangaroo, C. H. Humphreys	2 08 56	3 03 56
Bonita, Haviland Brothers	2 06 51	3 01 51
Bess, Sydney Grant	1 49 24	2 44 24
Siren, C. F. Wigand	Did not finish.	
Sloops—30ft. Class—Start, 11:10.		
Susie, C. Ferguson	2 03 18	2 58 18
Squaw, H. J. Heath	1 58 29	2 53 29
Sloops—25ft. Class—Start, 11:15.		
Gracie E., W. N. Neidhardt	1 38 59	2 23 59
Elsie, C. F. Rosemon	1 51 50	2 36 50
Sloops—21ft. Class—Start, 11:15.		
Wraith, C. Tompkins	1 04 19	1 49 19
Catboats—24ft. Class—Start, 11:25.		
Martha M., R. B. Moore	Did not finish.	

The winners were Gladys, Akista, Squaw, and Gracie E. Sailover, Wraith.

Hull—Massachusetts Y. C.

HULL, MASS.

Saturday, June 15.

THE race of the Hull-Massachusetts Y. C. on Saturday was decidedly not a success on account of the lack of wind. The 25-footers Calypso and Flirt were given the outside course, and did not have wind enough to even get back into the bay. The race of the handicap class and the 18-footers started off well, but on the second round became a drift. In the 18-footers Aspinquid took the lead at the start and held it until after the second mark was passed, when Bonito went by her and held first place to the finish. Mildred won easily in the handicap class. The summary:

Class I.—18ft. Knockabouts.

	Elapsed.
Bonito, G. H. Wightman	2 47 37
Nothla, C. A. Cole	2 49 23
Oriana, Alfred Douglas	2 54 14
Malillian, B. S. Permar	2 57 35
Aspinquid, W. A. Corney	2 59 02
Ayaya, W. P. Keyes	3 05 58
Handicap Class.	
Mildred, C. A. Coleman	2 42 35
Holly, Wm. Ware	Did not finish.

JOHN B. KILLEEN.

Newport Special Thirties.

NEWPORT, R. I.

THE first race of the special thirties was sailed on Thursday, June 13. There was a good breeze from the southeast and a smooth sea. The course was from Brenton's Cove to Bishop Rock and back, making it a run up the bay with spinakers out and a beat back. The start was at 3 o'clock. The time was:

		Elapsed.
Wawa, Reginald Brooks	5 30 00	2 30 00
Carolina, Pembroke Jones	5 33 50	2 33 50

On Saturday, June 15 Wawa and Carolina met again. The wind was light from the northeast. The course was the same as on Thursday. It was a beat out and a run home. The boats were started at twenty minutes past three o'clock. The times follow:

		Elapsed.
Wawa, Reginald Brooks	4 21 00	1 01 00
Carolina, Pembroke Jones	4 24 15	1 04 15

Burgess Y. C,

MARBLEHEAD, MASS.

Saturday, June 15.

THE Burgess Y. C., of Marblehead, sailed its first race of the season Saturday, in a very light breeze from the northeast. In the 25ft. class Cheewink, designed by B. B. Crowninshield, for F. G. Macomber, Jr., won. Sintram, a four-year-old, designed by Herreshoff, won in the raceabout class, and Ugly Duckling, owned by C. F. Lyman, won in the special 16ft. class. There were nine starters in all the classes.

JOHN B. KILLEEN.

Winthrop Y. C.

WINTHROP, MASS.

Saturday, June 15.

THE handicap race of the Winthrop Y. C. on Saturday was spoiled by lack of wind. Soon after the start the breze all died away and many of the yachts failed to finish. In the 25ft. class Thordis had a walkover, Signet being withdrawn. In the 21-footers only Harriet and Privateer finished, Harriet beating Privateer by 2m. and 10s. Hector was the only 18-footer to finish. In the 15ft. class Caper won. JOHN B. KILLEEN.

Canoeing.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Central Division Meet.

BUFFALO, N. Y., June 1.—June 22 and 23 have been selected as the dates for the Central Division meet, and the same will be held at the house of the Buffalo C. C. at Bay Beach, Ontario.

Saturday, the 22d, will be devoted to races and sports, and Sunday to cruising and sailing. The Buffalo C. C. have opened their house to all members of the A. C. A. for these days, which will make it unnecessary for you to bring anything with you but your gripsack and a desire to have a good time, unless you intend entering the races, in which event bring your canoe.

A camp fee of 50 cents per member will be charged to defray necessary expenses, and the rate for meals and lodgings will be $1.25 per day.

Boats leave the foot of Main street for Crystal Beach each hour, and 'busses run direct from dock at Crystal Beach to the club house.

On Monday and Tuesday, June 24 and 25, a schedule of twenty paddling races will be held on Park Lake, at the Exposition grounds. These races are open to all A. C. A. members, and are held under the auspices of the Central Division. Suitable prizes are to be offered, and we want to make this the best canoe race meet ever held. This can be done with the hearty support of our members.

If desired, accommodations will be secured for these two dates at rates ranging from 50 cents to $2 per night.

This meet will be well attended by members of the other divisions.

Rifle Range and Gallery.

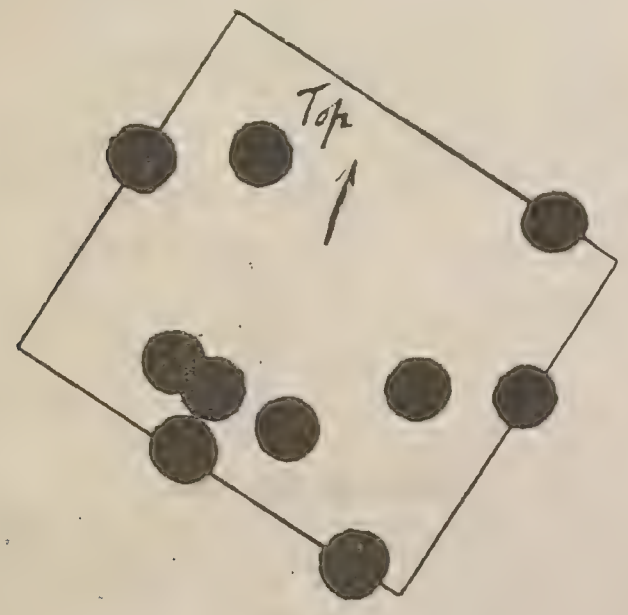
Fixtures.

July 14-23.—San Francisco, Cal.—National Schuetzenbund of North America's annual tournament in Shell Mound Park. Offhand, 200yds.

Aug. 6-7.—Taftsville, Conn.—South New England Schuetzenbund's annual festival and prize shoot.

National Rifle Association.

The National Rifle Association's official programme of the International and Interstate shooting tournament, to be held at Sea Girt, N. J., August 30 to September 7, inclusive, presents a list of the officers of the Association, a list of the officers of the tournament, the rules and regulations of the National Rifle Association of America (adopted by the New Jersey State Rifle Association), revolver and pistol shooting rules, an enumeration of the arms which may be used, a description of the different targets used, and a programme of the matches and their conditions. No. 1, the centennial trophy, Palma match, an 8 man team contest for the championship of the world, is open to riflemen of all countries. Distances 800, 900 and 1,000 yards. It will be shot on September 5. No. 2 is the Wimbledon cup match, to be



Target, full size, made with a .310 Greener club rifle, at 100 yards, Cricklewood, England.

shot on August 31. Open to all citizens and residents of the United States. Distance, 1,000. No. 3 is the Hilton trophy match, September 2, open to teams of the army and navy, under certain restrictions. September 4 is for the interstate military match. No. 5 is the inter-club match for the Schuetzen team championship of the United States. No. 6 is the President's match, fixed for September 7. No. 7 is the members' match. The matches of the New Jersey State Rifle Association number twenty-seven. The matches of the United States Revolver Association number three, of which Match A is the revolver championship, open to everybody, distance 50 yards, 50 shots on standard American pistol target. Match B is the "Military" revolver championship, open to everybody; distances, 25, 50 and 75 yards, five consecutive strigs of five shots each; entrance $5. Match C is the pistol championship, open to everybody. Distance 50 yards, 50 shots on standard American 50-yard pistol target.

The Pennsylvania Railroad will make a special reduced rate of one and one-third fares from New York, Washington, Philadelphia and intermediate points to Sea Girt and return, during the meeting. The secretary is Lieut. Albert S. Jones, Passaic, N. J.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

June 19.—Gloversville, N. Y.—Annual tournament of the Gloversville Gun Club. Chas. A. Bogart, Sec'y.

June 20.—Waterville, Me.—Amateur target shoot of the Waterville Gun Club; $75 added money. Dana P. Foster, Sec'y.

June 20-21.—Amherst, Mass.—Amherst Gun Club's two-day tournament; $65 in cash and merchandise. H. B. Perry, Pres.

June 25-26.—Bristol, Tenn.—Tournament of the Peters Cartridge Company. John Parker, Mgr.

June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.

July 1-2.—Sherbrooke, Can.—Tournament of the Sherbrooke Gun Club.

July 3-4—Flint, Mich.—Second shoot of the Michigan Trapshooters' League. John Parker, manager; Chas. Caleb, Sec'y.

July 4.—Schenectady, N. Y.—All-day amateur target tournament of the Schenectady Gun Club. Harry Strong, Sec'y.

July 4.—Towanda, Pa.—Annual tournament of the Towanda Gun Club. Magautrap. M. F. Dietrich, Sec'y.

July 4.—Frankfort, N. Y.—Third annual target tournament of the Frankfort Fish and Game Protective Association. W. J. Weller, Sec'y.

July 4.—Haverhill, Mass.—Open handicap shoot of the Haverhill Gun Club. S. G. Miller, Sec'y.

July 4.—Ossining, N. Y.—Target shoot of the Ossining Gun Club.

July 4-5.—Champlain, N. Y.—Champlain Gun Club's tournament; all events open to amateurs; some events open to professionals. Wm. Fraser, Pres.

July 9-11.—Pine Bluff, Ark.—Eleventh annual tournament of the Arkansas State Sportsmen's Association, under the auspices of the Pine Bluff Gun Club. E. A. Howell, Sec'y.

July 10-11.—St. Paul, Minn.—Sixth annual tournament of the St. Paul Rod and Gun Club, at Inter-city Shooting park; $340 added money. J. L. D. Morrison, 604 N. Y. Life Building, St. Paul.

July 15-17.—Columbia, Mo.—State Amateur shoot, under the auspices of the Columbia Gun Club. W. A. Vivion, Sec'y.

July 24-25.—Detroit, Mich.—Third shoot of the Michigan Trapshooters' League, under auspices of the Pastime Gun Club. John Parker, manager.

July 30.—Dexter Park, Brooklyn, L. I.—Annual clambake and handicap merchandise shoot at targets. Eugene Doenick, Sec'y.

Aug. 8-9.—Lafayette, Ind.—Tournament of the Lafayette Gun Club. J. Blistian, Sec'y.

Aug. 12.—Winnipeg, Man.—Fifth annual trapshooting tournament, under management of the Winnipeg Industrial Exhibition Association; $1,000 in money, trophies and medals. F. W. Heubach, General Manager.

Aug. 15-17.—Ottawa, Can.—First annual tournament of the Dominion Trapshooting and Game Protective Association, on the grounds of the St. Hubert Gun Club. A. W. Throop, Sec'y-Treas.

Aug. 27-30.—Okoboji, Ia.—Lake Okoboji Amateur tournament, at Arnold's Park; $400 added. For programmes, address E. C. Hinshaw.

Sept. 2-3.—Richmond, Va.—Tournament of the Virginia Trap Shooters' Association, under auspices of the West End Gun Club.

Haverhill, Mass.—Series of prize shoots every Saturday, June 1 to Aug. 31, given by the Haverhill Gun Club. S. G. Miller, Sec'y.

Newark, N. J.—South Side Gun Club target shoot every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's live-bird trophy shoots, first and third Saturdays of each month. Grounds, West Monroe street at Fifty-second avenue. Dr. J. W. Meek, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

Monthly contest for the Dewar trophy till June, 1902; handicap; 25 live birds, $5 entrance. First contest took place June 20, 1900.

Interstate Park, Queens, L. I.—Weekly shoot of the New Utrecht Gun Club—Saturdays.

Sept. 10-14.—Interstate Park, L. I.—New York State shoot, under the auspices of the New Utrecht Gun Club.

INTERSTATE ASSOCIATION CONTESTS.

Elmer E. Shaner, Manager.

July 1-2.—Sherbrooke, P. Q., Can.—The Interstate Association's tournament, under the auspices of the Sherbrooke Gun Club. C. H. Foss, Sec'y.

July 10-11.—Jamestown, N. Y.—The Interstate Association's tournament, under the auspices of the Jamestown Gun Club. Dr. C. Rawson, Sec'y.

July 16-19.—Interstate Park, Queens, L. I.—The Interstate Association's second Grand American Handicap target tournament; $1,000 added money. Edward Banks, Sec'y-Treas., 318 Broadway, New York.

Aug. 7-9.—Providence, R. I.—The Interstate Association's tournament, under the auspices of the Providence Gun Club. R. C. Root, Sec'y.

Aug. 21-22.—Auburn, Me.—The Interstate Association's tournament, under the auspices of the Auburn Gun Club. L. A. Barker, Sec'y.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed. Ties on all events are considered as divided unless otherwise reported. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York.

The management of the Lake Okoboji tournament have issued the following: "Bear in mind the big Lake Okoboji amateur shooting tournament at Arnold's Park, Iowa, Aug. 27, 28, 29 and 30. Come and enjoy the steamboats, sailboats, row boats, dancing, bowling, bathing and other pleasures this famous resort offers. Also bring your line and reel and try the black bass and pike fishing. The Arnold Park Hotel will be headquarters for the shooters, and every attention will be given them. C. W. Budd and F. C. Whitney, of Des Moines, will have charge of the traps and office, guaranteeing an up to date shoot. For programmes write Elmer Hinshaw, Okoboji, Iowa. All railroads make reduced rates during the summer months to this watering place. Ask your agent."

The spring tournament programme of the Magic City Gun Club, of Muncie, Ind., provides like competition for each day, July 3 and 4, namely, twelve events, of which one is at 10, nine at 15 and two at 20 targets; entrance based on 10 cents per target. It will be a strictly amateur shoot. Experts and known 90 per cent shooters barred. Magautrap rules govern. Shooting commences at 9 o'clock. Manufacturers' agents for targets only. Bluerocks, 2 cents. Local members barred from shooting for targets only. Purses divided 40, 30, 20 and 10. Guns, etc., shipped to C. Stevens, captain, will be delivered on the grounds. Mr. T. H. Barton is the secretary.

The programme of the Central Gun Club's ninth annual tournament, July 5 and 6, provides ten target events each day, each at 15 targets, $1.50 entrance and $10 added. There are thirty cash average prizes, of which five are $15; five, $10; five, $8; fifteen, $5. High guns take the averages, and contestants to win averages must shoot in all events. Shooting commences at 9 o'clock. Professionals may shoot for fun and show their goods. Class shooting, 30, 25, 25 and 20. The added money amounts to $440. For further information address the secretary, Mr. J. W. Nelson, Duluth, Minn.

The London Field, in commenting on the Anglo-American match at targets, says: "The stakes are £500 a side, but this by no means explains the raison d'etre of the match, since the members of the American team collectively will be put to much greater expense than this on account of the distance traveled. The object is to determine whether or not the reputed skill of American clay bird shots will or will not prove superior to that of the home shooters. The members of the American team, following the custom of their country, will use cartridges carrying 1¼ ounces of shot, as against the home team using 1⅛ ounces, but the Americans will be restricted to the use of one barrel, the Englishmen being allowed both. A good deal of controversy has arisen on this point, many holding that the match is not a test of skill, but of guns and cartridges. Those who take a more general view of the circumstances attending the match prefer to regard the conditions as more akin to a case where the French and English methods of boxing are compared by bringing exponents of the two systems into the arena. From the point of view of the relative value of the two systems as a means of offense and defense much may be learned from such a contest. In the same way the two international teams of shooters have the same birds to shoot at. The contest will show which is the superior, American skill exercised on the lines of American trapshooting, or the skill of our home team shooting in the manner to which they have become accustomed by long usage and years of practice."

The Haverhill (Mass.) Gun Club announces an open handicap shoot on its grounds, July 4. The programme presents fifteen events, each at 10 targets, and each with an entrance fee of $1.15. Shooters whose average is 60 per cent or under, 15 yards; 70 or under, 16 yards; 80 or under, 17 yards; 85 or under, 18 yards; 90 or under, 19 yards; over 90, 21 yards. The amateur breaking the greatest number of targets in events 7, 8, 9, 10 and 11 will receive a sole leather gun case; second, Thurman shooting blouse; third, Powers cleaning rod. Money divided 50, 30 and 20 per cent if less than twelve entries; twelve or more 40, 30, 20 and 10 per cent. Professionals and paid men shoot for targets only. Targets included in entrance at 1½ cents each. Sweepstakes optional. Loaded shells for sale. Lunch served free. Take Main street cars for Dustin square. The club's secretary, Mr. S. G. Miller, mentions concerning the division of moneys as follows: "We have been dividing money by the Rose system, but to please a few of our visitors we are going to try percentage this time and rely on the handicap to equalize the shooters. I think well of the Rose system, but a man must shoot well all the time to keep even, and can't get ahead no matter how good a score he does make. For myself I would rather win or lose something than to struggle like a Trojan to only keep even."

A letter from Mr. Edward Banks to FOREST AND STREAM contains a paragraph which will evoke for him the profound sympathy of his hosts of friends. He writes: "On my arrival in Liverpool, I was met by a telegram telling me that my eldest brother had died on Tuesday, and was to be buried that day (Thursday) at 2:15 P. M. You can imagine how I felt after being so near home and not having seen my brother for fifteen years. I was all broken up and so was Mrs. Banks. I was able by dint of rushing through by train and carriage to just reach his graveside as the last hymn was being sung. My sister, who lives in India, had only arrived home the night before, the same time we arrived at Liverpool, but she was able to leave her ship the same night." Mr. Banks explained that his bereavement, as was natural, lessened his efforts in respect to writing an account of the international trapshooting preliminaries. His letter, published in another column, will be found to contain much to engage the attention of our readers.

Mr. J. W. Nelson, secretary, writes us as follows: "At the ninth annual tournament of the Central Gun Club of Duluth, Minn., July 5 and 6, the club will put up $440. There will be ten 15 bird events each day, with $10 added money to each event. Two dollars and forty cents in averages, $15 each to first five high guns; $10 each to next five; $8 each to next five, and $5 each to next fifteen high guns."

The Hunter Arms Company, of Fulton, N. Y., renowned as manufacturers of the L. C. Smith guns, have issued a booklet of artistic excellence and comprehensive information in respect to the different grades of their guns, barrels, mechanism, shooting qualities, guarantees, etc. In it also is an excellent group portrait of the Messrs. Hunter, signed, "Yours for progressive gun making, the Hunter Brothers."

The Sherbrooke Gun Club, of Sherbrooke, Can., informs us that on each day—July 1 and 2—a separate list of merchandise and money prizes will be offered, for which both professionals and amateurs will be eligible. Ten targets, unknown angles, expert traps. First entry 50 cents; re-entries, unlimited, 25 cents. For this professionals shoot at 20 yards, amateurs 16 yards.

Mr. J. E. Applegate, of Freneau, N. J., and Mr. S. M. Van Allen, of Jamaica, L. I., shot a match at 100 live birds, 30 yards rise, on the grounds of the Middlesex Club at South River, N. J., June 13, for $100 a side and the price of the birds. The scores were: Applegate, 91; Van Allen, 90. A return match, same conditions, was arranged for Monday of this week.

Wheeling, W. Va., was fixed upon for the next State shoot of the West Virginia State Sportsmen's Association, at a meeting of the association held on June 12. The officers then elected are: President, F. C. Percival; Vice-Presidents, J. F. Mallory, Hon. J. A. de Gruyter, F. E. Mallory, Jos. Y. McNaught, Dr. H. Clay Shaw and John B. Garden; Secretary-Treasurer, Ed O. Bower.

A live bird shoot was held at Columbia, South Carolina, June 11. Some excellent shooting was done. Holly, of Aiken, killed all his birds in the sweepstake events at 8, 10 and 15 birds. Col. Tom Martin and M. B. Worthen also shot in fine form. Several hundred of the dead birds were sent to the Methodist Orphan Asylum.

Mr. A. E. Perry, of St. Paul, under date of June 14, writes us: "July 10 and 11 St. Paul Rod and Gun Club will hold its sixth annual tournament at Intercity Shooting Park. Three hundred and forty dollars added money. For other information, address Mr. J. L. D. Morrison, 604 N. Y. Life Building, St. Paul, Minn."

The Hudson Gun Club, Jersey City, N. J., will hold an all-day shoot, commencing at 10 o'clock, June 30. There will be a race between teams of the Hudson and Fulton clubs. Refreshments will be served on the grounds. For further particulars address Mr. Albert A. Schoverling, P. O. Box 475, New York.

The New York State shoot will be held at Interstate Park, L. I., under the auspices of the N. U. G. C., September 10 to 14, inclusive. Interesting matter concerning it from Mr. Walter F. Sykes, president of the New Utrecht Gun Club, is published elsewhere in our trap columns.

In a contest for the diamond medal, at a recent shoot of the Cincinnati (Ohio) Gun Club, Mr. Charles M. Peters, son of Mr. O. E. Peters, president of the Peters Cartridge Company, won the medal with a score of 39 out of 40, 38 of which was a straight run.

The second match between Mr. J. E. Applegate, of Freneau, N. J., and Mr. S. M. Van Allen, of Jamaica, L. I., on Monday of this week was won by the former. Score, 92 to 91. The match was at 100 live birds, $100, 30 yards rise.

The press dispatches mention that Mr. W. R. Crosby won a $500 cup on Monday of this week, and that members of the team won $500. The cablegrams of last week stated that the competition on Monday would be at live bords.

There are some hints that the American team will remain abroad longer than was first contemplated, and that each member will buy a woodshed in which to take home his winnings.

At Colorado Springs, Colo., in a contest recently between Messrs. Garrett and Shemwell, at 100 targets, the former made the extraordinary score of 100 straight

The Frankford Gun Club won the second contest, at Summerdale, Pa., on Saturday last, for the championship of Philadelphia.

There is a rumor that the Audubon Gun Club, of Buffalo, will give a shoot during the time of the Pan-American Exposition.

BERNARD WATERS.

WESTERN TRAPS.

The American Victory.

CHICAGO, Ill., June 15.—Western shooters received with general pleasure, though with little surprise, the announcement of the victory of the American team at Hendon. It is noticed with a certain degree of satisfaction in this city that our old friend, W. R. Crosby, seems to have led all the rest in the good work. He scored 93 per cent the first day, 95 the second, and was in the same category on the third. Paul North deserves the congratulations of his friends for having finally and successfully brought off this race between the American and English teams. The result upon the shooting system in England is apt to be a marked one. It is likely that the English shooters will take up the American style, which has proved itself so decisively superior. As to the interest given to target shooting on the other side, the result of the match should be most wholesome. The American shooters are lucky to be able to have so pleasant a trip, and those interested in the sport of trapshooting are all envying them their good fortune.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, June 15.—The appended scores were made on our grounds to-day on the occasion of the seventh trophy shoot of the season. S. E. Young and O. Von Lengerke divided honors in class A by breaking 23 out of 25, while W. H. Ford and Dr. J. W. Meek did the same on same scores, 23. Mr. L. Wolff captured the bakery in class C by scoring 19. The day was a delightful one for trapshooting and twenty-two members took advantage of it for an afternoon's sport. The trophy shooting is now divided in three series of seven shoots each, and the member reclassified for each series. To-day's shoot closes the first series. I will report the winners in each class next week:

Chicago Gun Club.

Chicago, Ill., June 15.—A large delegation from the Grand Crossing Club attended the Chicago Gun Club's shoot to-day. Everybody had a good time. Secretary Rupel was high man for the day. The targets were thrown hard, some over the fence, about 75 to 80 yards. Steck, of the home club, broke 24 in No. 2, the weekly event. Walters was second in the same event.

Weekly trophy, 25 targets:

Walters, 6	10111011111101111010111111—25
Steck, 2	11111111111111101111111111—25

F. D. LESURE, Sec'y.

Boston Gun Club.

Boston, June 12.—Fourteen shooters decided that Wednesday, June 12, was just the kind of day which a trapshooter delights in, though not that kind of a day when the success of a shoot is told by the number of targets thrown. A shoot of like character is one that befriends a club more than any other, as those who had the chance of the pleasure of this afternoon are more than pleased to get there again and are always sure to bring others with them. One of the pleasures of the afternoon was the noticeable improvement in the shooting of two of our most steadfast attendants. Though not possessed with the amount of skill which comes to the lot of our expert, they secure just as much real fun, and no one ever begrudges a broken target on their ledger. Of the others, each took a hand in some of the good shooting, Ford distancing all the rest by breaking 48 out of 50 and 24 out of 25 in the match, showing the accuracy of a Heikes or Crosby. Second position was ably accounted for by Woodruff with 80 per cent for average, a 21 in the match, incidentally bettering a previous 16, which now puts him in the lead on totals one bird ahead of Frank, who has not availed himself of the chance to throw out any old scores. Scores below, all shooting handicap distance, unknown angles:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14

West Virginia State Sportsmen's Association.

ST. MARYS, W. Va., June 14.—The fifth annual tournament of the West Virginia State Sportsmen's Association, which was held on the grounds of the Mountain State Gun Club, this city, June 12 and 13, will always be remembered as one of the best tournaments ever held in the State. The weather was all that could be asked for, except, possibly, a little warm on the first day, and all seemed to enjoy themselves from start to finish. The affair was under the personal management of the Mallory Brothers, and it goes without saying that everything was done that would add to the comfort and pleasure of all those in attendance. It is no small matter to manage an affair of this kind, looking after every detail, and these boys are to be commended for the very able and satisfactory manner in which the shoot was conducted.

If there was a single hitch during the two days' shooting, it failed to reach the writer's ears, and they are of pretty good size, too. In the cashier's office—well, there is but one cashier in the United States that can look after this part of the work like Ed Foster, Jr., and that gentleman is Mr. Ed Foster, Jr., of Marietta, Ohio. Ed does not shoot much at the traps, but he is most certainly an expert in handling the clerical work at a shooting tournament. He not only posted all scores in less than five minutes after they were made, where all could see them, but also added the earnings of each one at the same time. Eddie, you are all right. The management was very ably assisted by Mr. Howard Sergent and Mr. Chas. North (who has a brother Paul), of the Chamberlin Cartridge and Target Co. Mr. Sergent kept the squads on the move, and Mr. North did the same little trick so far as the magautrap was concerned.

The trade was represented by Col. A. G. Courtney, of the Remington Arms Co.; Mr. R. L. Trimble, of Winchester Repeating Arms Co.; Luther Squire, of DuPont Powder Co.; Mr. Chas. North, of Cleveland Target Co., and Mr. Howard Sergent.

The best shooting for the two days was done by Mr. L. B. Fleming, of Pittsburg, followed closely by Mr. Frank Alkire, of Woodlyn, Ohio, and Chas. A. Young, of Springfield, Ohio. The longest run during the two days was made by Ed O. Bower, of Sistersville, who started in on Thursday morning and got next to 81 before allowing one to get away.

Mr. F. E. Mallory, of Parkersburg, carried off the State championship badge by breaking 46 out of 50 targets. He was followed closely by Mr. Jos. Y. McNaught, of Sistersville, and Mr. John F. Mallory, of St. Marys, who were but one target behind. Mr. Allen, last year's winner, scored 44.

In the merchandise event, Mr. John F. Mallory, A. J. Stancliff, and J. C. Trees took the three guns, these being the three best prizes. Mr. Geo. R. Haswell, of Circleville, Ohio, is perhaps the happiest man in that village along about this time. He won the two bales of hay and two-bushel sack of chopped feed. George is all right when it comes to making hay, and can do it with a shotgun as well as with a rake.

At the meeting of the State Association Wednesday evening, all the old officers were re-elected. F. C. Percival, Esq., President, and Ed O. Bower, Secretary-Treasurer. The following are Vice-Presidents: John F. Mallory, St. Marys; Hon. J. A. de Gruyter, Charlestown; F. E. Mallory, Parkersburg; Jos. Y. McNaught, Sistersville; Dr. H. Clay Shaw, Piedmont, and John B. Garden, Wheeling. After quite a spirited contest as to who should get the State shoot for next year, Wheeling finally went straight and knocked the persimmon.

Tabulated scores for the two days follow:

First Day, June 12.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Broke.	Av.

The New York State Shoot.

THE New Utrecht Gun Club has issued a letter as follows:

To the clubs comprising the New York State Association for the Protection of Game and Fish.

Gentlemen: The forty-third annual convention and tournament of the New York State Association for the Protection of Game and Fish will be held under the auspices of the New Utrecht Gun Club at Interstate Park, L. I., on September 10, 11, 12, 13 and 14, 1901.

At the annual convention of this Association, held at Utica in June, 1900, it was decided that the convention and tournament in 1901 should be held under the auspices of the New Utrecht Gun Club, in the city of New York.

Some months ago it was suggested to the writer that because of the Pan-American Exhibition at Buffalo, which would indisputably be a great attraction to a very large number of the trapshooting fraternity, and as our Buffalo friends were arranging for a shoot on a very large scale, to be held during the exhibition, it would be considered a very graceful act of courtesy on the part of the N. U. G. C. to waive the privilege of Buffalo, and also that such privilege, if accorded to Buffalo, would tend materially to insure the success of the Pan-American shoot then being arranged for.

Conceding this point, we took a vote by mail of all the clubs represented at the Utica convention, and, with one exception, all voted in favor of the transfer to Buffalo of the State tournament of 1901.

We communicated with our friends at Buffalo, and they were apparently enthusiastic over the proposed transfer. The negotiations, however, have been so unsatisfactory that we have been compelled to abandon them, and as stated, the annual convention and tournament will be held at Interstate park from September 10 to 14, both dates inclusive.

We have been obliged to make these dates later than usual, as there has not been sufficient time to arrange matters for June. The grand American handicap at targets will be held in July, and other tournaments already arranged for prevent our making August dates. Under the circumstances, we have decided that September will be best, and as all the seaside resorts are open at that time our fellow members of the Association may be assured of a good time.

Targets will be charged for at 2 cents and pigeons at 25 cents. The full programme of State and open events will be published as soon as it is completed, and will contain all information necessary. The tournament will be under the management of Mr. Elmer E. Shaner. Respectfully submitted, for the New Utrecht Gun Club,

WALTER F. SYKES, President.

Richmond Gun Club.

SILVER LAKE, S. I., June 15.—The scores made at to-day's shoot of the Richmond Gun Club follow:

Events	1	2	3	4	5	6	7	8	9
Targets:	10	15	10	10	25	25	25	10	25
G Bechtel	8	6	6	..	15	..	14	9	19
A A Duke	8	13	9	6	..	23	..	6	17
F W Schoverling	7	7	5	3	11	..	7	1	13
J Lewis	7	8	8	..	16	..	6	16	
G Decker	6	13	2	..	21	..	..	..	..

A. A. Schoverling	20	Curry	9
F. W. Schoverling	11	Vroome	6
Total	48	Total	26

A. A. SCHOVERLING,
Captain Richmond Gun Club.

Sherbrooke Gun Club.

Sherbrooke, P. Q., June 8.—The members are unanimously of the opinion that the distance handicap system is a greater success than was suspected. The beginner, who is close up, is encouraged, and the chests of those who have been set back swell with pride, and all are pleased.

The gun cabinet series is being much enjoyed, and is just the thing to keep the boys regular in their attendance. Even the few who do not shoot in it are interested.

Bray, 19, 21; Craig, 19, 19; Thompson, 18, 19; Walton, 19, 17; Foss, 14, 16; Loomis, 17, 14; Ingalls, 14, 12; Friend, 12, 1.

June 15.—This was a perfect day, but a military inspection necessarily kept several whose duty lay in their country's service. The shooting was far above our usual average: Thompson, 18, 23; Craig, 19, 22; Walton, 19, 21; Bray, 20, 19; White, 18, 19; Loomis, 17, 19.

JOS.

Brantford vs. Galt.

HAMILTON, Ont., June 14.—An interesting team match took place to-day on the Galt (Ont.) Gun Club grounds between the Brantford and Galt Gun clubs, eleven men on a side.

There was a large attendance and several sweeps were shot off after the team match was finished. Mr. N. P. Leach was umpire. The match was shot over a magautrap, 50 targets each. The following are the scores in the team match: Brantford team: Hacker 49, D. J. Lewis 42, J. Brown 26, H. F. Westbrook 41, Fred Westbrook 48, C. J. Mitchell 44, C. A. Montgomery 49, J. Williams 38, J. Jack 24, Dr. Cutliff 30, C. Summerhays 42; total 433. Galt team: R. Patrick 33, H. Thomson 22, A. Newland 38, J. Dracey 37, R. C. Patrick 34, J. Wayper 48, E. Bowman 40, F. Bernhardt 30, O. Wilder 32, Peters 35, Ellis 35; total 384. Six of the Brantford team averaged over 93 per cent.—a big mark for amateurs.

S.

Soo Gun Club's Seventh Annual Tournament.

Sioux City, Ia.—The Soo Braves have long since established the tournaments as one of the regular events of each season, and about the middle of the month of roses as the proper time to hold the same.

The shooting park here is well equipped with houses, and two sets of expert traps, and large and roomy ground, yet the low scores made here deserve some mention.

There are some faults with many of the best grounds used for shooting purposes, a prominent one being that of shooting south, which is the case here. Again, the background is not the best. One set of traps throws the targets low and against green trees, and beyond that is the muddiest stream on earth, and it is not black mud, but yellow like unto gold. Take the glare of the sun, the reflection of the water, though at some distance, and those with very sharp eyes alone can get onto the fast flying mud pies.

The wind to-day was brisk and almost directly in face of the shooters, so that made the flight quite irregular.

The club has a large membership and is fortunate in having good, active officers. In John Otten, President; J. W. Boyd, Vice-President; W. F. Duncan, Secretary, and C. E. Ellis, Treasurer, there is a quartette hard to excel, while the executive committee is re-enforced by the addition of C. C. Hamilton, Oscar Hoberg and H. H. Hawman, while the honors of the field captain fall to the lot of that genial good shot, J. W. Gray.

The tournament was open to amateurs. Professionals and manufacturers' agents were barred from participating in purses, but all were invited to attend and show off their goods.

American Association rules governed, though modified.

All purses divided 35, 30, 20 and 15. All fair birds were birds and the referee so decided.

There were twelve events each day, and $5 cash added to each one, and the events were all similar, being fifteen targets.

The Shoot.

The day was bright and warm, but a brisk wind, the Jonah for many of the boys, who began gathering early, and before the day was over there were over sixty who had taken part. They came from all the surrounding States, and so far as your correspondent was able to mix with the large crowd present the following names were gathered: F. A. Moss, Rock Valley, Iowa; H. G. Taylor, Meckling, S. Dak.; E. A. Leach, Sioux City, Iowa; E. D. Trotter, Kinsley, Iowa; J. H. Burk, Elgin, Neb.; Flory Moore, Lincoln, Neb.; R. M. Klein, Spirit Lake, Iowa; A. P. McDowell, Adair, Iowa; J. A. McKilvey, Hedrick, Iowa; L. C. Hafferty, Ollie, Iowa; L. A. Mikkelson, McLin, S. Dak.; E. D. Peck, Sioux Rapids, Iowa; E. Morrill, S. Omaha, Neb.; H. F. Brown, Sioux Rapids, Iowa; John D. Pollard, Chicago, Ill.; E. G. Rust, Pringhar, Iowa; L. G. Walker, Correctionville, Iowa; S. L. Sanders, Elgin, Neb.; W. J. Shear, Spirit Lake, Iowa; C. W. Lindsey, Cherokee, Iowa; D. L. Power, Newell, Iowa; Frank Craybill, Omaha, Neb.; E. D. Adams, Rockwell City, Iowa; H. C. Baumann, Rock Valley, Iowa; G. W. Watson, Kingsley, Iowa; John Redfern, Sloan, Iowa; M. D. Townsend, Omaha, Neb.; Dick Linderman, Lincoln, Neb.; Chas. H. Hunter, Sioux City, Iowa; H. P. Blasdell, Luverne, Minn.; J. F. Snook, Luverne, Minn.; E. C. Schultze, Luverne, Minn.; F. Knobble, Breda, Iowa; F. H. Crahn, Geddes, S. Dak.; M. Diefenderfer, Wood River, Neb.; Henry Steege, Waterloo, Iowa; John Baldwin, Jackson, Minn.; Frank Diworak, S. Omaha, Neb.; E. E. Amy, Springfield, S. Dak.; F. F. Slocum, Alcester, S. Dak.

The Shooting.

Henry Steege (a farmer) from the vicinity of Waterloo, Iowa, was best man to-day. When he had shot out half the events he had only lost six targets, but being quite unwell he got some medicine that affected his vision so that the flight of the targets went wrong to him and he lost eleven in the later events, yet, with a total of 17 to the bad, he was high man and was awarded a 500 mile book on the Great Northern Railroad. Second place went to D. Morrill, of Omaha, which was a neat little bunch of cash. The third high was decided between Ed Trotter and M. Diefenderfer, while W. Shears, of Spirit Lake; C. H. Hunter and J. W. Gray, of Sioux City, were on a tie for fourth.

This young man Shears is fast coming to the front. He must have taken some lessons in Fred Gilbert's back yard and some in Klein's front yard, as in the first four events he made three straight scores, yet with this good showing he fell away during the remainder of the day.

There were plenty of average prizes, the eight lowest men getting a fine distribution of merchandise. The scores:

First Day, June 11.

Second Day, June 12.

Weather quite an improvement over the first day. The straight face to wind had subsided and during part of the day was slight, yet during the afternoon it came from behind the shooters' stand and swooping down over the high bluff dropped the targets in a measure quite low. This with the tree and grass background made the targets very hard to locate.

Some fair scores were made, yet all agree that the conditions here are harder than those found at most tournaments.

Soo City Trophy Cup.

To-day we had a little variety added in for spice. It was the contest for the Soo City trophy. This has been up each year and is worth the winning, as the entrance paid in next year goes to the winner of this year.

There was a large entry, as shooters went into this event who did not shoot in others.

Thus, having nothing in view but to get the cup, as nothing but straight scores could win anything, it seems strange that ten men should land with 14; while only five got straight scores. These were: S. A. Smith; of Hartley, Iowa; Farmer Burk, of Elgin, Neb.; W. E. Meyer, of Sioux City, Iowa; Gus Steege, of Waterloo; and H. A. Taylor, of Meckling, S. Dak.

These gentlemen were at once called up to shoot off for the prizes. If a bookmaker had been present he would have gone broke on Steege, as he lost his first target; Burk and Taylor let their second hit the grass and Meyer fell down on the third. This will convey to the reader that these targets were not puddings.

Thus, in short order, Mr. Smith has possession of the cup for this year, and it will net him about $50 next year.

It was the fine shooting of W. E. Meyer that pleased the home crowd, and in fact everybody, as he was not expected to be in at the finish, yet he secured an Ithaca hammerless shotgun.

Taylor marched off with a fine Bristol fishing rod and Mr. Burk, the farmer from the sand hills, carried home a splendid Weber shooting jacket.

It seems that at times it does one good not to feel well, as Steege again came to the front with high average and won an elegant pair of $10 trousers.

Then came Hunter, of Sioux City; Townsend, of Omaha, and Shears, of Spirit Lake, who, tieing, divided $7.50 cash.

Third high was won by Dick Linderman and E. Trotter, while the cigars were won by Slocum, of Alcester; S. D. Moss, of Rock Valley, and Adams, of Rockwell.

There were good prizes for the eight lowest men, and there was a good line of merchandise. The scores:

Third Day, June 13.

Another splendid day for shooting and those who remained over had good sport with the saucers, yet there were but about thirty shooters present, and they shot out the programme by about 2 P. M. As there were a good supply of shells and targets on the ground the reader may suppose many would indulge in some sweepstakes, but not so; every gun was laid aside and soon as possible each man marched up the hill and away for the city. Here an observing shooter may pause and ask if a two-day target tournament is not quite the proper thing for the amateur shooter?

Steege shot better to-day, and so did others. Conditions were somewhat better. The wind was in front of targets and elevated them more than yesterday, so the three days average went to the Waterloo farmer, and he carried home a nice Stevens single barrel shotgun as a weapon for his boy. W. Shears, L. Sanders, J. W. Gray and D. Morrill were all bunched for second, while E. H. Hunter, F. F. Slocum, W. D. Townsend and C. D. Linderman were in for third. Ed Trotter and C. E. Ellis were equal in fourth.

This shoot was well arranged and carried out to the letter, about the only complaint being that the conditions were too hard. Targets thrown fast against dark trees in part, some quite low and angles sharp. To-day there were two events in which but one man each scored a 15; others had 2 straights. This will show a hard game. The management are on record as intending to make the shooting this year harder than former years, as heretofore complaints were made of throwing targets too easy, so now shooters can thus shoot and see which they like best.

The officers are first class men. W. F. Duncan was active, and was ably assisted by the captain, J. W. Gray, while several other members were ready at all times to assist when necessary.

Mr. M. J. Larson, in the office, was the man for the place, and got out the figures in quick time and with dispatch almost at the close of each event. The figures were posted on the bulletin board for the amount of cash each place was paying, so each shooter could make up his own receipts as the shoot progressed, and it gave better satisfaction than anything I have seen adopted.

What puzzles the shooters most, and what is strange, is that there were so very few straights made, and yet so many in the 14 hole. Straight scores paid well, although on several occasions the straight men drew down such sums as follows: $23, $20, $16, $10, $7, $6.50, $5.95 and $4.

There were representatives here talking up shoots to be held first at Waterloo, Iowa, this coming week, and then at Sioux Falls, S. Dak., and next at South Omaha, Neb. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	T'ls

IN NEW JERSEY.

Applegate vs. Van Allen.

South River, N. J., June 13.—Herewith are the scores made this afternoon on the inclosed grounds of the Middlesex Driving Park, between Messrs. J. E. Applegate, of Freneau, N. J., and S. M. Van Allen, of Jamaica, L. I. The birds were a most excellent lot for this time of year. The attendance was very large. The match began at 3:30 and ended at 6:10. The conditions were 100 live birds, 30 yards rise, $100 a side. Mr. S. Glover was referee.

Special match: Schorty and Dudley vs. Dr. Gardiner and A. A. Duke, the latter shooting at 55 targets against the former's 50. Schorty 23 out of 25, Duke 20 out of 27, Dudley 22 out of 25, Dr. Gardiner 24 out of 28. Score, 45 to 44 in favor of Schorty and Dudley.

Duke.

Trenton Shooting Association.

Trenton, N. J., June 15.—Herewith please find scores made June 8, 12 and 15. The attendance on all three dates was light, the first two dates due to a steam yacht regatta on the river, and the Yale-Princeton ball game, and the shoot to-day was knocked in the head by stormy weather. If there is a hoodoo connected with our affairs we expect to lay it when we lengthen out the club house. The plans and specifications are in the hands of the contractors, and just as soon as they get through we intend to have a housewarming, but ice instead of coal will be used at the festivities. The band has been engaged and you will receive an invite. The motto for the occasion will be, "Come early and avoid the rush."

The International Trapshooters.

HOTEL CECIL, LONDON, June 7.—*Editor Forest and Stream:* There is very little of material interest, from a trapshooting standpoint that can be written about the trip of the American team across the North Atlantic from New York to Liverpool in the year of 1901. Daddy Neptune was really on his best behavior, and did not bother the Canadian of the Leyland line to any great extent.

The day we started, Sunday, May 26, rain made things unpleasant and kept the crowd under cover for the balance of the day after leaving Sandy Hook. During the night a dense fog came up (or down) and the Canadian's whistle was a familiar sound for the next twenty-four hours. The sea, however, was smooth and no one had any reason to complain of mal de mer.

The following brief extract from the log of Captain Hill, our skipper, tells what we did each day, and what kind of weather we met with:

May 27, 277 miles; light southerly winds with dense fog.
May 28, 303 miles; brisk southwest winds with smooth sea.
May 29, 312 miles; light southwest winds becoming easterly, with a head sea.
May 30, 299 miles; light easterly winds with a head sea.
May 31, 304 miles; light easterly winds and head swell.
June 1, 304 miles; brisk northerly winds; sea smooth.
June 2, 308 miles; brisk northerly winds; sea smooth.
June 3, 311 miles; fresh southwest winds, moderate sea, with rain.
June 4, 306 miles; fresh southwest winds, becoming northerly, with heavy rain.
June 5, 315 miles; light easterly winds, becoming southerly, with fog.

The last entry given above refers to the twenty-four hours ending at noon on Wednesday, June 5. There were thus 155 miles to be covered before we could tie up in the Mersey at Liverpool. Fog kept us back, and a misty rain fell nearly until dinner time, 6 P. M., when it brightened up over Ireland and the sun came out, our pilot coming aboard just east of Holyhead on the north coast of Wales in a blaze of sunshine that was a great relief after the monotonous fog and rain of the day, during which the whistle of the Canadian made things wretched once more.

The pilot brought us that day's Liverpool paper telling of the mishap to Constitution, which naturally had the entire sympathies of the crowd. The number of the pilot boat was 4, thus causing grief to those who wagered a week's pay on the odd numbers.

We sighted the lights of Liverpool about midnight, or a little before and tied up shortly afterward. The tender came to us between eight and nine the next morning, and we disembarked from the Canadian, parting with the captain and his entire crew, from the skipper (Captain Hill), Mr. Rigby (chief steward), down to Archie, the lengthy lad who held the dual position of deck steward and officer of the smoking room, not without feelings somewhat mixed in character. The ship herself is as steady and as comfortable a boat as crosses the ocean; it takes a gale to move her, and even then she rolls with such an easy motion that it needs must be an interior out of kilter that succumbs to the unpleasantnesses of seasickness. In the heavy quartering sea of the 4th there were but few vacancies at table for each meal; and no case was serious enough to be called a real layout.

Some of the boys felt a little squeamish occasionally, but even then they met their trials with a stiff upper lip and a jest. Fred Gilbert, the chief jester of the bunch, and the ladies' man par excellence, was responsible for what I consider to be the best thing said during the entire trip. One morning, early in the trip, he was not feeling exactly like a morning glory and made no bones of his trouble; like some others, he preferred to eat his breakfast on deck. While promenading he met Captain Hill, who said to him: "Well, Mr. Gilbert; how do you feel this morning? What do you want for breakfast?" Fred's answer was: "Captain, if you'll just give me a few kind words and an orange, I think that'll do me all right."

Pools were sold on the daily runs for a couple of days, but Captain Money and Heikes, who were in partnership, broke up the game by winning both pools, netting about $225 each. Then ordinary "hat pools" were tried, but as the ladies did not win, their husbands took but little interest in that game and it died a natural death. Various amusements were in vogue in the smoking room, and on rainy days the sign of "standing room only" could have been hung out with a perfect regard for accuracy.

Rolla Heikes and Leroy, with banjo and violin, gave us lots of music, while Mr. Homer Lind, a tenor with a tuneful voice, kindly gave material aid in getting up and carrying out a concert that was held in the saloon and was well attended. Mr. Emil Werk also contributed much to the pleasure of the voyage, being ever ready to take his part in anything that was going. All in all, a more congenial crowd could not have been gotten together on shipboard.

Adam Heilman, of Pekin, Ill., and Jack Fanning were the authorities on things nautical, Mr. Heilman in particular being a very encyclopedia when it came to referring to incidents of the voyage. He swept the sea constantly with his glasses, and not a vessel nor a porpoise escaped his notice.

One pleasant feature of the trip was an afternoon tea given specially for "The Indians," the ship's chef baking a rich and decidedly edible cake, on the frosting of which appeared in pink the sentence: "Success to the Indians." In honor of the occasion, and to show their appreciation of such sentiments, the Indians broke up every game that was in progress in the smoking room and attended in a body. Before the session closed, the chief steward, Mr. Rigby, the instigator of the tea, was brought before "Chief Long Talk" (Tom Marshall), who, while thanking him in the name of the Indians for favors bestowed, called the attention of those assembled to the fact that the team was not a team of Indians, but that there were some Indians on the team. It was an all-American team, he said, the Indians being merely an organization formed for social and religious purposes. The afternoon tea was a success in every respect.

The landing at Liverpool was attended by no discomforts, and the custom house officials showed a degree of courtesy that was especially pleasing and satisfactory. Very little baggage was examined, and what was opened was examined with care and the articles displaced put back in practically their original positions. Paul North was not on hand to meet the team as had been expected, but his absence was explained by Mr. Izzard, a member of the English team, who came to meet us and told us that "The Only Paul" was laid up at the Cecil with a sore heel. With the price of hansom cabs so low, and with London "penny 'busses" running everywhere, not a member of the team can yet understand how Paul got a sore heel. It is better at the time of writing, but Paul on crutches is an unusual sight.

The Great Western Railway officials had arranged everything for the transportation of the team, their friends and baggage, to Birkenhead, a city just across the Mersey from Liverpool, and two saloon carriages were set apart for their use on the trip to London. The sun shone brightly and the trip was much enjoyed, the party going straight through to London, no stay being made in Chester, as was at first intended.

The first day in London was passed quietly, the boys going out to the grounds in a tally-ho about 2 o'clock. The distance from the hotel to the grounds is about eight miles, and as at present arranged—if the weather continues as fine as it is now—a tally-ho will take the party out each of the days of the match. I have not as yet an idea of what the scores were this afternoon, but a fairly official report says the boys shot "like a lot of dubs," a sentence that is not so very encouraging. Before I close this letter I will try and give something more definite as to the afternoon's work, not having been able for certain reasons to get out to the grounds myself.

Mr. R. A. Welch and Mrs. Welch called at the hotel this morning, Mr. Welch, indeed, being on hand last night. Clarence Nauman has been doing such good shooting that he has got all the Englishmen afraid of what may be in store for them when the team proper begins to get in its work.

Saturday morning, June 8.—While the shooting of the members of the team yesterday afternoon was not quite up to standard, it was good enough to be entirely satisfactory. Chan Powers started off with 20 straight, and Fred Gilbert also made a straight during the afternoon, but 19 out of 20 was not made very often, the background being hard and the lay of the ground deceiving. Beyond the traps the ground slopes away, so that targets appear to be rising much faster than they really are. Mr. Joynt, a member of the English team, was present, and shot along. He gave it as his opinion that we would have a walk-over, the shooting he witnessed being a revelation to him. As one of the boys put it later on in the evening, the shooting was also a revelation to each member of the team—it was so much below average.

The work done was curiously in-and-out, for after Powers had broken his straight he dropped about 8 or 9 out of his next 20. Fanning, too, started off well but did not shoot up to form later on. As I was not out at the grounds I can say but little, all being based on information received from those who were there.

To-day we leave the hotel at 12:20, as shooting begins at 1:30, a programme of sweeps being arranged for the afternoon; all events are high guns. One of the events is at 50 targets, and it looks probable that the bulk of the purse in that event will go to the team.

It has been arranged that the team race shall be shot in squads of five men, the English shooting in two squads by themselves, and the Americans in squads by themselves. As there are twelve men on our team, it will be necessary to select ten from that number and name them before the match commences, but the other two will also shoot along, the team for the next day being selected from the ten high scores on the list of twelve. Who will constitute the "ten" is something our captain has not decided upon as yet, or, if he has, I have not heard of the makeup.

Briellets as Postscripts.

Captain Money made an excellent parson, and conducted the service in the saloon on Sunday last in a manner that would have won him a generous round of applause had it not been for the solemn nature of the ceremony.

Dick Merrill, who missed the Canadian, got to England ahead of the party, taking the North German Lloyd boat to Southampton. His banjo was on board, but of course was silent, much to the regret of everybody.

An elaborate programme of music has been arranged for the benefit of the spectators at the international shoot.

Chan Powers discovered a box of twenty-five shells in his baggage, so he, Gilbert and Fanning gave an impromptu exhibition of shooting at lumps of coal, etc., from the after part of the main deck. Eeverybody appreciated the brief diversion, and though some misses were made, the applause was hearty. Captain Hill in particular was much impressed.

EDWARD BANKS.

Middlesex Gun Club, Welsh Harp, Hendon, N. W.

Programme of music to be performed by the Anglo-Viennese Band during the Anglo-American match for £1,000. Conductor, Mr. Howard Aynstey.

Tuesday, June 11.

1. March, "Onkel Sam".....Manas
2. Selection, "A Runaway Girl".....Jones & Monckton
3. Walzer, "Une Folie de Pesth".....Camilla
4. Morceau Mignon, "Salut d'Amour".....Elgar
5. Overture, "The Bohemian Girl".....Balfe
6. Walzer, "Wiener Luft,".....Ziehrer
7. Czardas, "Stynienne".....Michiels

Interval.

8. Marsch, "Unter dem Siegesbanner".....Von Blon
9. Walz er, "Fin de Siècle".....Waldteufel
10. Selection, "The Messenger Boy".....Caryll
11. Maypole Dance.....J. E. West
12. Walzer, "Sur la Bleu Donau".....Strauss
13. Overture, "Dichter und Bauer".....F. von Suppe
14. Galop, "En Vite".....Aynstey

God Save the King.

Wednesday, June 12.

1. March, "Washington Post".....Sousa
2. Walzer, "Hofball Tanze".....Fetras
3. Overture, "Raymond".....Thomas
4. Gavotte, "Summergold".....Wareing
5. Walzer, "Pinkante Blatter".....Czibulka
6. Selection, "The Belle of New York".....Kerker
7. Indulo, "Magyar Nepdal".....Kohout

Interval.

8. Marsch, "Schönfeld".....Ziehrer
9. Selection, "San Toy".....Jones & Monckton
10. Walzer, "Lieberstraumme".....Ertl
11. Salonstücke, "Die Erste Kuss".....Schmelling
12. Overture, "Les Coronnes des Diamans".....Auber
13. Walzer, "Morgenblatter".....Strauss
14. Marsch, "Flottenparade".....Eilenberg

God Save the King.

Thursday, June 13.

1. March, "El Capitan".....Sousa
2. Selection, "Merrie England".....Binding
3. Walzer, "Fontaine Lumineuse".....Waldteufel
4. Ballet Suite, "Song Dances" No. 3.....W. Bendall
5. Overture, "Tancredi".....Rossini
6. Walzer, "Geschichten aus dem Wienerwald".....Strauss
7. American Sketch, "Down South".....Myddleton

Interval.

8. March, "With Sword and Lance".....Starke
9. Walzer, "Wiener Berger".....Ziehrer
10. Selection, "The Casino Girl".....Englander
11. Lieder ohne Worte.....Mendelssohn
12. Walzer, "Sobre las Olas".....Rosas
13. Selection, "The Mikado".....Sullivan
14. March, "Kaiser Friedrich".....Friedermans

God Save the King.

The International Trapshooting Contest.

The great international trapshooting contest, between ten-man teams of American and English shooters, for $2,500 a side, was won by the American team in three contests, June 11, 12 and 13. On the first day, the weather conditions being unfavorable for good scores, the results were: Americans, 866; English, 801. On the second day, Americans, 877; English, 794. In the first 60 on the day, Crosby scored 58, Gilbert 56, Fanning 55, Heikes 54. The English team scored 794. A high wind and a dull sky were the weather conditions of the third day. Crosby broke his first 20 straight and 17 out of his second 20. Tripp scored 36 out of his first 40, and Elliott 37 out of his first 40. The totals of the day were: Americans, 843; English, 739. This decided the contest. The result was received with a show of the best of feeling, the ladies waving American and English flags. Speeches were made by the Hon. T. A. Marshall for the Americans, and by Captain Butt for the English. Sweepstake shooting was arranged for Friday and Saturday, and a live bird match for Monday of this week. The press dispatches mention that the English sportsmen arranged a special contest between the Americans at Hendon, last Saturday, the trophy of which was a valuable cup. The conditions were 25 targets. Messrs. Fred Gilbert and C. W. Budd tied on 23. In the shoot off Gilbert won. Messrs. W. R. Crosby, R. R. Merrill, R. O. Heikes and C. Powers tied on 21. In another event, for a second gold cup, between Americans and Englishmen, Messrs. W. E. Crosby and B. Leroy Woodard tied on 14 out of 15. In the shoot off at 15, the scores were: Crosby 14, Woodard 13. A live bird competition was arranged for Monday of this week.

The conditions of the international match were: $2,500 a side, and the winner of three in five contests to be declared the winner of the match and stakes. All gate receipts to be equally divided between the two teams. Teams to consist of ten men on a side, and each team to have the privilege of using an unlimited number of substitutes in the series of contests, but no change to be made in any one contest. Each contest to be at 100 targets per man, or 1,000 per team. Targets to be thrown not less than 40 yards nor more than 60 yards; and not lower than 6 feet nor higher than 10 feet. Each American contestant allowed the use of one barrel only; English contestants, two barrels.

In a contest for the E. C. cup, emblematic of the target championship of New Jersey, which took place at Freehold last Saturday, Mr. C. W. Feigenspan, the holder, was defeated by Mr. E. I. Vandeveer by a score of 35 to 33 out of a possible 50.

In the international match, between ten-man teams of American and English trapshooters, best three in fiive matches at 1,000 target per team in each match, the American team was victorious in three straight wins, on June 11, 12 and 13. On the first day the scores were: American team, 866; English team, 801. Second day: American team, 877; English team, 794. Third day: American team, 843; English team, 739. Total for the American team, 2,586 out of a possible 3,000. Total for the English team, 2,334 out of a possible 3,000, a difference of 252 targets. The American team averaged 862 per cent; the English 778 per cent.

Painting The Lily.

The New York Journal of June 13 contains an editorial on the recent contest between Messrs. Duryea and Morfey, or, rather, it is what might be called a heart-to-heart talk, with one side doing all the talking, and also furnishing the heart. As an instance of the general depravity, Mr. Hearst in the one-penny heart-to-heart talk aforementioned, says: "At the same time some American and English savages were enjoying themselves in a similar way in London. One W. E. Crosby, of Illinois, succeeded in killing or mortally wounding 95 birds out of a possible 100."

Mr. Hearst did not know that Mr. Crosby was shooting at inanimate targets in London, but such a trifle in respect to a matter of fact is of no importance to him when writing on a matter of sentiment.

Mr. Hearst, however, is not without charity and dogmatic philosophy, for he continues: "These things are not signs of individual depravity, but merely indications of a low state of development. Of course, if Thomas W. Morfey and Louis T. Duryea and W. E. Crosby had finely organized minds, and could picture to themselves the sufferings of a bird that flutters into a bush with a broken wing and lies there in agony all night, to be put out of its misery, perhaps, by a rat in the morning, their hideous sport would be as revolting to them as it is to other people."

Passing over such a novelty as "a bush with a broken wing," and an imaginary rat which devours an imaginary bird, let us consider an editorial in the same journal of June 15, on "The Girl Thief and the Struggle for Existence." Behold, Mr. W. R. Hearst seated at his desk, in forgetfulness of what he had written two days before. He says: "Scientists prove that the animal creation, exclusive of man and his protected animals, lives in a constant state of warfare. For every animal there is some other that seeks its death. The eagle kills the hawk, the hawk kills the smaller bird of prey, the falcon kills the kingbird, the kingbird destroys smaller birds, these destroy insects, the insects destroy plants, the plants choke each other to death in their desperate struggle for moisture and light. To a superficial investigation this system of constant struggle and violant death seems most atrocious. It would almost lead to the belief that nature is ruled by the spirit of evil. But careful investigation of conditions under which the animals live and die proves that there exists no such system of cruelty as would seem to be indicated. On the contrary, it is the very struggle for life in all animals that lends interest to life. There is an intense exhilaration, excitement and delight in flight as well as pursuit. The fox flying before the hounds is as excited and as deeply interested as the man who struggles to make a run with a football under his arm. There is the same physical excitement and pleasure in the flight of the bird pursued. There is every reason to believe that animals below man are absolutely ignorant of the nature of death, and death, when it comes to them, is so sudden and violent as to be practically painless. Millions of animals all doomed to violent deaths suffer far less than the one human being who dies in bed, perhaps after weeks of agony."

Then this inconsistent closet philosopher concludes as follows: "How marvellously is displayed the wisdom of nature, which transforms violent deaths of billions and billions of creatures from suffering to actually pleasant excitement, followed by almost instantaneous annihilation."

Mr. Hearst for one penny assures his readers that the pigeon suffers untold agony of mind and body when shot by a man, and that the man who so shoots is in a low stage of development. All other animals enjoy being pursued and killed, and are, as nature made them, in a high stage of development.

However, dismissing such school boy trash as too trifling for serious argument, it may be remarked that if the pigeon shooters of America and of the world are in a low stage of development simply because Mr. Hearst feels a bit squeamish on the subject, as becomes a lily of the valley, then many doctors, lawyers, clergymen, capitalists, noblemen, gentlemen, thousands of them, are so classed. It is possible, however, that being mostly polite and sensible people, they may not tell what they think of Mr. Hearst's stage of development.

As Others See Us.

The American team which is to try its luck with a representative team of English clay bird shots sailed for this country on May 25, but is not expected to arrive here until Wednesday or Thursday of next week, which will materially shorten the time available for preliminary practice. Mr. Paul North has already arrived, and is naturally hopeful that his fellow countrymen will succeed in dusting down the Britishers to perfection. We must confess, however, that although the American team is a very strong one, and has many points in its favor, the affair does not appear to us likely to be an easy walk-over for either side. It is true that our friends across the water have been able to get together a very strong team, and in this respect they have a much bigger field to select from. Proof of this may be gathered from the fact that one firm in America makes over forty million clay birds per year, and there are three or four other factories turning out a very large number. Clay bird shooting must therefore be very popular in America, and it would be surprising if under such circumstances exceptional shots were not here and there to be found. The conditions of shooting in the two countries are, however, somewhat dissimilar, and the difference may operate in favor of the English team. To wit, the English shooter stands at a greater distance from the trap than the American; the birds are sprung much more swiftly, and by the time the shooter has got on, the bird is a considerable distance from the gunner. Again, the American must kill with his first barrel or fail to count, whereas the Britisher has a barrel in reserve. Considerable interest is being centered on the meeting, and most of the Americans in London having been advised of the event will turn up to "barrack" for their comrades. We trust that English sportsmen will not be lacking in their patronage, but that they will turn up, too, in goodly numbers to support their kith and kin.—Shooting Times.

Answers to Correspondents.

No notice taken of anonymous communications.

JOS.—I have more than once seen quoted or mentioned "Grouse in the Gunroom." What is it?—a poem, sketch, story, or picture? The ideas the sentence gives rise to are attractive. I have seen a picture of a dog looking reminiscently at a gun. Is that it? Could you not print it, if a sketch or poem? Ans.: We do not know it. Some reader may.

SHELL LAKE.—Mr. H. J. Rodgers, of Marshalltown, Iowa, writes asking information regarding the fishing, hotel rates, etc., at Shell Lake, Wis., which is described to him as an excellent place for pike, pickerel and black bass.

PUBLISHERS' DEPARTMENT.

Summer Homes.

IN the Lake Country of Northern Illinois, Wisconsin, Minnesota and the Upper Peninsula of Michigan, on the line of the Chicago, Milwaukee & St. Paul Railway, are hundreds of most charming summer resorts. Among the list are Fox Lake, Delavan Lake, Lake Geneva, the Lauderdale Lakes, Waukesha, Oconomowoc, Palmyra, the Dells at Kilbourn, Elkhart Lake and Madison, Minocqua, Star Lake, Frontenac, White Bear, Minnetonka, Marquette, Spirit Lake, Okoboji, Big Stone Lake, etc.

For illustrated booklets "Summer Homes for 1901" and "In the Lake Country" send address with six cents in postage to F. A. Miller, General Passenger Agent, Chicago, Milwaukee & St. Paul Railway, Chicago, Ill.—*Adv.*

A Valuable Publication.

THE PENNSYLVANIA RAILROAD 1901 SUMMER EXCURSION ROUTE BOOK.

On June 1 the Passenger Department of the Pennsylvania Railroad Company will publish the 1901 edition of the Summer Excursion Route Book. This work is designed to provide the public with descriptive notes of the principal summer resorts of Eastern America, with the best routes for reaching them, and the rates of fare. It contains all the principal seashore and mountain resorts of the East, and over seventeen hundred different routes or combinations of routes. The book has been compiled with the greatest care, and altogether is the most complete and comprehensive handbook of summer travel ever offered to the public.

The cover is handsome and striking, printed in colors, and the book contains several maps, presenting the exact routes over which tickets are sold. The book is profusely illustrated with fine halftone cuts of scenery at the various resorts and along the lines of the Pennsylvania Railroad.

On and after June 1 this very interesting book may be procured at any Pennsylvania Railroad ticket office at the nominal price of ten cents, or, upon application to the general office, Broad Street Station, by mail for twenty cents.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1901, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, JUNE 29, 1901.

VOL. LVI.—No. 26. No. 346 BROADWAY, NEW YORK

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

"The sale of game should be prohibited at all seasons."

NAILS DRIVEN IN 1901.—No. IX.

MICHIGAN.

H. B. No, 104, Laws 1901, Sec. 4.—No person shall by himself, his clerk, servant or agent, expose or keep for sale, or directly or indirectly, upon any pretense or any device, sell or barter, or in consideration of the purchase of any other property, give to any other person any of the protected animals or birds mentioned in this act within the State of Michigan.

THE INSECT HORDES.

A CORRESPONDENT who is seeking a territory favorable for trapping asks us to tell him of a district of the United States or Canada that is free from outdoor troublesome insects which go in, on, around, under, through, across and over any mechanical or chemical obstructions which anybody places against them. This is a question which has vexed many another. How to get our shooting and fishing, and at the same time to avoid being driven mad by black flies or mosquitoes, is on occasion a most perplexing problem. The extremely interesting chapter on the natural history of the mosquito, which Mr. Edward A. Samuels published in our issue of last week, might be supplemented with another on the mosquito as an agency in preventing the settlement of certain districts by man, and as an active and very powerful factor in game and fish protection. An old Latin author discussing the insect pests of Asia says of the mosquito and the lion:

Among the sedges of Mesopotamian rivers and the thickets of underwood, numberless lions prowl—always harmless in the gentle and very mild winters there. But when the summer is inflamed by the sun's rays, they are driven mad by the dogday heat, in those regions burnt up with torrid fervor—and also by the bigness of the mosquitoes, swarms of which infest everything in those lands. Now these pests go particularly for the eyes—moist and lucid organs—and, lighting on the quivering eyelids of the lion, bite so that the beast, long tormented, comes to his end thus: either drowned in the streams, to which they flee for relief, or else losing their eyes, which they dig out by frequently scratching at them with their claws, they go mad with fury. If this did not happen, the whole Orient would be overrun with lions.

In something the same way Lieut. Schwatka once described in FOREST AND STREAM the fate of the grizzly bear when attacked by the mosquitoes of Alaska:

A fair wind made me think it possible to go hunting inland; but it died down after getting away two or three miles, and my fight back to camp with the mosquitoes I will always remember as one of the salient points of my life. It semed as if there were an upward rain of insects from the grass, which became a deluge over the marshy tracts—and over half the land was marshy. Of course, not a sign of game was seen except a few old tracks. Indeed, the tracks of an animal are about the only part of it that could exist here in the mosquito season—that is to say, from the time the snow is half off the ground until the first severe frost, some three or four months later. During that time, all the living creatures that can leave ascend the mountains, closely following the snow line, and even there they do not get complete quiet, the exposure to the constant winds being of far more benefit than the coolness, due to the to the altitude, while the mosquitoes are left undisputed masters of the valleys.

Had there been any game within good range and I had got a fair shot, I honestly doubt if I could have secured it, for these pests—not altogether because of their ravenous attacks on my face—and especially the eyes—but for the reason that they were absolutely so thick and dense that no one could have seen clearly through the mass in taking aim. When I got back to camp I was thoroughly exhausted with my incessant fight. I was completely out of breath and had to recover it in a stifling smoke from dry, resinous pine knots. It is not unlikely that a person, especially of a nervous temperament, without a mask, or taking refuge out on the broad river, or in a closed house, would soon be killed by nervous prostration. I know that the native dogs are killed by them under certain circumstances, and I heard reports from persons so reliable that, coupled with my own experience, I have never for an instant doubted them, that the great brown "grizzly" bear of these regions at times is compelled to succumb to them. The statement seems almost preposterous, but the explanation is comparatively simple. Bruin, having exhausted all the roots and berries on one mountain, or finding them scarce, thinks he will cross a valley to another range. Covered with heavy fur on his body, his eyes, nose and ears are the vulnerable points for the mosquitoes, and here of course they congregate in dense swarms. Reaching a swampy stretch, they rise in myriads, until his fore-paws are kept busy striving to keep his eyes clear, and not succeeding, he becomes enraged, and, bear like, rises on his haunches to fight. It is now only a mere matter of time until his eyes are so swollen by the attacks that he is perfectly blind, and wanders aimlessly about until he becomes mired in the marsh and starves to death.

How the reindeer of Siberia are compelled by the mosquitoes to migrate is told by Hartwig:

Millions and millions of mosquitoes issue from the swamps of the tundra, and compel the inhabitants to seek refuge in the dense and pungent smoke of the large heaps of fallen leaves and damp wood, which are kindled near the dwellings and on the pasture lands as the only means of keeping off those abominable insects. These tormentors, however, are not without use, for they compel the reindeer to migrate from the forests to the sea shore and the ice, thus exposing them to the attack of the hunters, and they also prevent the horses from straying on the plains and wandering beyond the protection of the smoke.

The game of Alaska and Siberia kept moving from place to place by their winged tormentors have their human counterparts in the Arabs of the desert, if we are to accept the account given by Stephen Bonsal in his "Morocco as It Is," where he relates an amusing disillusionment:

I had come upon a Berber chief and his suite of womankind by the great spring on the road to Mekinez where the River of Pearls springs out of a huge rock, clear and cold as though it flowed out from the heart of a glacier, and "after compliments," as we say in Morocco, I plied him with many questions, and as he was gracious and courteous, I even ventured to put a question which always before, at the sight of the picturesque Berbers, had died away on my lips as unseemly. "Why," I said to the venerable sheik, "are thy people as restless as the sea waves? Why do they roam backwards and forwards, having no home save their tent; no country but the world," and, as I might have added, "no purpose in life but unwittingly to furnish copy to the poet?" I paused for the reply with my ear strained with eagerness and greedy to learn the secret of their nomad life. Some lovely legend, I was sure; a story of some primeval curse that still rested upon them. The venerable sheik shook his head sadly. "'Tis true," he said, "we are as restless as the sea waves, and the world is our country; but this nomad life is our fate, our destiny, not our wish. Often we troop into some pleasant valley, and fain would we tarry and fatten our cattle and grow rich and prosperous like other children of men, O Siranna! But it is not so written. When our tents have been pitched for a few weeks, there always comes over us a plague of insects, and we must strike our tents and away." So another long-cherished illusion went by the board, and I can only think with amusement of the squadrons of brave Berbers hunted from the Red Sea to the Atlantic, and from the Mediterranean to the Sahara by the insects.

And as on the tundra and the desert, so in the jungle. Here is a graphic picture of the Malay forest as Swettenham describes it:

It may be added as a minor but unpleasant detail that this tangle of vegetation harbors every species of crawling, jumping, and flying unpleasantness; myriads of leeches that work their way through stockings and garments of any but the closest texture; centipedes, scorpions, wasps, and stinging flies, caterpillars that thrust their hairs into the skin and leave them there to cause intolerable irritation, snakes poisonous and otherwise, ants with the most murderous proclivities, and last, but not least, mosquitoes that, when they find a human being, make the most of their opportunity. I have not exhausted the catalogue of pests, but only given a sample of what any traveler will meet in a day's journey through a Malay jungle. There is a wasp called "the reminder," a thorn called "Kite's talons," and an ant known as the "fire ant." The names are as apt as they are suggestive.

Indeed, one has but to turn to any book of travels in the wilderness to find that the insect bane is everywhere a curse to brute and man, biting, stinging, poisoning and causing to flee or driving frantic.

SNAP SHOTS.

It should be explained that the territory which our Staten Island correspondent describes as having been stocked with quail is within the limits of Greater New York, and this is only one of many illustrations of the opportunities for field sports enjoyed by metropolitan citizens.

Mr. F. Von Hoffmann, who wrote so entertainingly last week of capercailzie shooting, gives to-day a graphic picture of stalking the blackcock. Both pursuits are such as to call into play the highest skill of the hunter and to tax his patience to the utmost. When the game is capercailzie or blackcock, the feat of shooting it from a tree or on the ground is one in comparison with which the wing-shooting of birds flushed before dogs is a minor achievement. Mr. Von Hoffmann is a practical sportsman and a practical forester, and his estimate of the adaptability of the game to be established in this country is entitled to a great respect. One provision of the Lacey Act empowers the Agricultural Department to introduce foreign game. A beginning might well be made with the capercailzie and the blackcock, for we have abundant territory which appears to be adapted to them.

It was an ancient custom of the Indian tribes to burn over tracts of land in order that the new growth might afford better feeding for deer, and this was a prolific agency of forest conflagrations. It might be thought that a white man would have more sense than to resort to the Indian expedient of improving deer shooting amid surroundings where a fire once beyond control could do incalculable damage; but we find in the annual report of Chief Fire Warden Andrews, of Minnesota, the case of a hunter who fired lands to make pasture for deer, and started a conflagration which required the strenuous effort of the fire fighters for eight days and nights to get under control. Of the 139 forest fires in Minnesota in 1900, thirteen were credited to campers and hunters.

The Baldwin-Ziegler Polar Expedition which sailed from this country to undertake the discovery of the North Pole is notable for the completeness of its equipment and for the well-matured plan of campaign. The expedition will have two ships, the America and the Frithjof, which will meet at Tromsoë, Norway. Thence the America will go to the White Sea to take on 400 Siberian sledge dogs and twenty Siberian ponies, while the Frithjof will be engaged in securing a large supply of walrus, seal and bear meat. The two ships will join in Franz-Joseph Land. Then the Frithjof, having served its mission as a game supply ship, will return to Norway, and the America will remain to be frozen in, it is anticipated, by the middle of November. With the ponies and dogs the supplies will be moved north in bulk, and a series of shelters will be constructed of building material taken along, forming a line of permanent refuges, pushed further and further north. Thus carrying its provisions with it as it goes, the expedition will advance as far as possible until the Arctic night shuts down, and when spring comes a dash will be made for the Pole. Evelyn Briggs Baldwin, the leader of the expedition, was with the Peary party of 1893-4, and in 1897 went to Spitzenbergen to join Andrée, but was debarred from the enterprise because there was no room for him in the baloon. William Ziegler, who is bearing the financial burden of the expedition, is a New Yorker, who was a few years ago among the most active and best known of the sportsmen of Brooklyn.

The March number of the New Zealand Illustrated Magazine contains an extremely suggestive account of some capital fishing for rainbow trout in the hill streams. The fish—our American species—were introduced into these waters four years ago, and have multiplied and thrived prodigiously. Five-pounders and seven-pounders are not unusual for the rainbows in New Zealand, and a record fish of eleven pounds hints of the angling possibilities which the United States have contributed to the antipodes.

Senator Edward S. Stokes, of Cumberland county, N. J., one of the managers of the Geological Survey of the State, is engaged in developing a scheme of forest and game reserves in the Highlands and Kittatinny mountains, in the southern pine country and elsewhere. There is abundant territory in New Jersey which is well adapted to the purpose. Senator Stokes proposes to present the scheme to the Legislature at the next session.

We have been accustomed to regard tarpon fishing as a winter sport, whereas the fact is that it may be followed all the year around, and the elaborate paper Mr. Waddell has contributed to our angling columns on tarpon outfitting is not untimely. Tarpon fishing at Boca Grande, on the Florida Gulf coast, has been excellent this month, as demonstrated by the success of a party of Louisville, Ky., anglers, who have found the fishing at this season far superior to that of the winter months.

Our next number, July 6, will contain a full-page illustrated supplement, "The Home of the Bass," by W. P. Davison.

The Sportsman Tourist.

In the Yellowstone Park.

YELLOWSTONE NATIONAL PARK, June 19.—*Editor Forest and Stream:* I return after an absence of eight months to find the Park travel in full swing. The past two years the hotels were not opened until June 15; this year, in anticipation of the Presidential party's visit, they were opened on the first by the new proprietors. New buildings are being put up and old ones much improved; this is very noticeable at the Mammoth Hot Springs.

Capt. Jack Pitcher, whom many will remember as Lieut. Pitcher at the Lower Geyser Basin several years ago, and again in command of several companies of Colombian Guards at the World's Fair, has been appointed acting superintendent. He arrived early in the season, and has everything running smoothly.

Capt. Chittenden, for the past few years in charge of improvements, came on unusually early, and has several large crews at work on roads and bridges, with the largest appropriation ever made for the Park, a sum considerably over $100,000, to expend after July first. The work now being done is on last year's appropriation. The list of improvements is too long for this letter.

There is a very interesting collection of animals at the Mammoth Hot Springs—six mule deer, three males and three females. The does have given birth to four beautiful fawns. These little creatures are attracting considerable attention, as are the six little antelope Capt. Pitcher has on hand, to say nothing of the young elk calves. Capt. Pitcher intends to add a few more animals to the collection in the inclosure in front of the hotel, where they will remain until after the close of the season. It is the intention then for them to reach the National Zoological Park, where they will add so much to that beautiful place. By the way, the Yellowstone Park is credited with many of the finest specimens in the National Zoo.

I won't repeat what I have said about the game in the Park for the past fifteen or sixteen years, but only say they have wintered very well, as it was an open, easy winter. Everything appears to be in very fine condition. I hear of no cases of game starving.

Capt. Goode tells me of his scouts reporting to him the fact that they saw and counted eighteen buffalo, five of which were calves. Tracks were seen that at first were supposed to be of another herd, but later the scouts concluded that they were made by part of the bunch of eighteen. There is probably one of the two bulls left on Snake River that have been reported from year to year. I saw one on a mountain side while fishing last year at the mouth of Lewis River, where it joins Barlow's Ford. No buffalo were reported in Hayden Valley. I will not say where the eighteen were seen. It's not thought best to advertise their whereabouts.

There have been showers or heavy rains almost every day for the past month. The Park is very fresh and green. The flowers do not appear as abundant this year. I do not see them in the usual masses. When we have warmer weather they may make up for their neglect. I had been bragging about the wonderful wealth of flowers one could see—acres of one kind, and the ground blue, yellow or pink, as the flower happened to be colored. I suppose it the usual thing. If I blow the least about the climate, weather, flowers or animals, and a friend comes here to see these wonderful things, they go back on me. I think I'll brag about our fine line of mosquitoes, gnats, wood ticks, no-seeums and many other bugs and biting things. We have a lot of them just now, and I think a little larger and better than anywhere else in the world. They can sting harder, oftener and longer than any mosquitoes in Jersey or any other country.

Before I got home I saw a few things in the papers about wonderful new geysers; now I can learn nothing about them. As far as reported by those familiar with them for the past twenty years, the geysers are doing about the same amount of business. When one takes a rest for a year or two, another takes up its work or heat. Changes are always taking place in Norris Geyser Basin, because the formation is so broken up that a powerful geyser cannot form a tube that will last. They soon become mud springs. Only little geysers like the Constant are able to keep up business. There is no geyser trust in Norris Basin.

The Great Geyser, said to have broken out in the Lower Basin, from the reported location, is thought probably to be one that at the time of the Cleveland-Blaine contest was in operation. The name was changed every day, and sometimes twice a day, by parties thinking they had discovered a new geyser, and naming it after their favorite candidate. It has possibly resumed activity for a short season. When the Grand went out of business for a year or two, it did look as though the geysers were dying out, but it came around again after a few years' rest, and is now very well behaved.

Capt. Pitcher has hopes of establishing a small fish hatchery in the Park. The place selected is at some never failing springs close to the road, where visitors could see the hatching going on. The object is to keep up the supply of the many kinds of trout now fonud in the Park, and restocking some of the streams they have left, especially the Gibbon River above the Virginian Cascades. This was stocked with rainbow trout. They have all dropped over the falls. Many of the streams where most of the camping is done have become fished out for short distances, and require more stocking than the usual number dropping down from above or coming up from below. The cost would be very low, as the building could be made of logs and be in keeping with the surroundings. As our native trout spawn in the spring, the whole operation would be conducted during the visiting season. Millions of eggs can be secured from the large trout in Yellowstone Lake in July, and as these are not infested with tapeworms, they could be planted in any waters desired. For one, I hope we shall have a hatchery. We have fine fishing now, but we could have better and still live. I trust the FOREST AND STREAM will favor it.

There is some talk of marking many interesting things fast disappearing. Capt. Chittenden wishes to mark and preserve the two camps, if there is any sign left of them, where the Helena and Radesburg parties were captured by the Nez Percés Indians in 1877; and some of the most interesting things about the Indians' trails, camps and fortifications. Also of Gen. Howard's march, where his wagon train was taken up Mary's Mountain, where the wagons were let down very steep hills by ropes passed around trees. Several such places remain with the rope marks still showing. I showed a party several trees last summer thus marked. And where the train crossed Cascade Creek, and points on Mount Washburne, where the train (or that part that crossed there) had to haul their wagons up pitches of about 60 degrees and let them down places almost perpendicular. There is left at the Monmouth Hot Springs the cabin at whose door a man was shot by the Indians, and many things of this kind that are now becoming historical are fast being obliterated by the road building and other improvements. Even the graves of men killed here cannot be found except by those who assisted at the burial. There is the story of a half-breed scout wounded on a branch of Blacktail, who crawled into the brush, his companion escaping. Afterward they came back to look for him, but he was never found, nor any sign of him. I never pass along that part of the trail or in that section but that I am looking for a bone or something by which I can identify the dead scout. That was within a few months of twenty-four years ago. Capt. Chittenden hopes to find a few of these interesting points this summer and mark them on the maps and ground. The weed-grown remains of the old Henderson cabin, burnt by the Nez Percés just outside the Park in 1877, can be seen by the tourist along the Cinnabar road; but not one in a thousand knows of it.

The waters were not so high this year as usual. The Yellowstone did not reach within 3 or 4 feet of high-water mark at Gardiner.

E. HOFER.

GARDINER, Mont., June 20.

Fishing at North Bay.

ALTHOUGH I have fished annually for many years in many waters I had never had the pleasure of real trout fishing until last August, when I found myself in the town of North Bay, a place of some 4,500 inhabitants, at the intersection of the Grand Trunk and Canadian Pacific railroads, about 250 miles north of Toronto. On the train I met a Michigan doctor, who made a very genial companion. He was prospecting for nickel and copper, so he claimed; but he was by far too enthusiastic an angler to do much prospecting when productive pools were lying idle for want of anglers to fish them. We hired a rig of Joe Mullin on Monday morning and started northeast toward Trout Lake, where we had learned there were abundance of bass, big 'lunge, pickerel, pike and trout. We drove over a very rough, corduroy road, and had a poor horse. At the Trout Lake Hotel we hired a boat. This hotel was formerly kept by Dick Jessup, a very interesting character, who had drifted here from the States. I had heard many times of Jessup and was disappointed when they told me he had gone back to the States—to Florida, I believe. Many hunters and anglers in the States remember him.

Dr. Dick wanted to row and I wouldn't quarrel with him. We had seen at the hotel on the jam of the door a record of some bass caught by the late Colonel Herron, of iPttsburg, years ago. The record showed one 6, one 5½, one 5, one 4½ and three 4 pounders, an average of almost 5 pounds to the fish. They showed us the island near which this catch had been made and we rowed directly to the place. I put out my troll, using a dark copper spoon bait, and caught two fine pike on my way over to the island. We fished where a large tamarack tree had fallen over into the water. We were continually getting our lines fouled on the pinetop, but this trouble was abundantly compensated for by the numbers and the beauty of the bass we were catching. They were of a greenish caste and very beautifully mottled. We were using frogs for bait. The fish at first seemed frantic to get the frogs. The water would boil around the bait, and two or three bass would follow their captive comrade clear to the boat side, where they turned tail and were gone. The Doctor got greatly excited as I drew a fish in, claiming he had also hooked one—a monster, as he put in when I reeled in a 3-pounder. I found it had first taken the Doctor's bait, then it swam around a pine snag and then took mine. This fouling the line caused the Doctor to imagine he had hooked a whale, for he felt the full force of my efforts to land my bass. I had hooked him in the lip and when I released him the fish swam over and soon freed the Doctor's line, and for this accommodation the Doctor gave him his liberty. We caught bass and wall-eyed pike here until we were tired catching them. Each one of us longed to get one of those very large bass, but were disappointed in this, and soon tried trolling for muscallunge. We had seen at the Queen's Hotel a 'lunge caught by Mr. E. C. Shepherd, the proprietor, that weighed 56 pounds. It had an unusually large head, and the fish must have weighed something near this figure. As we worked around a bay we came upon an old wood duck and her ten ducklings. Hoping to secure one, the Doctor gave chase; but the masterly way the old mother duck handled her little army of ducklings would have done credit to Dewey or Grant. When we had one separated and pretty well tired the old mother would appear to our rear and soon the young duck would appear behind us also, and when we had turned it would be well away and resting up. The mother duck's intelligence and cunning were really wonderful. We soon gave up the chase.

Five miles down we came to a small ledge of iron ore, reputed by the natives to be extensive and of great value. The Doctor was disgusted. The ore was of great purity, but in very small quantities.

A mile further down, near the lower end of the lake, we came upon five men camped on a small island. They were business men from Rochester, N. Y. They reported fishing poor—but as they were using flies and other artificial bait this was not to be wondered at.

We had dinner with them under a clump of pine trees. They had caught about 100 fine frogs the evening before and the cook had cooked them to a brown turn. One of them had shot a fawn, and we had some of it fried. I don't think I ever enjoyed a dinner more. These campers reported two moose to have passed Sunday night. When they turned their acetylene lamp toward them all that was left was an echo of crashing branches and a faint recollection.

On our way back we tried to buy some provisions from a settler, but all he had for sale was some jerked moose and very young onions. We bought some of both, but have never found any one who could eat the moose yet. The man said it would keep, and it did.

The Doctor decided to head for the hotel at the head of Trout Lake, trolling in the hope that we might catch a big 'lunge on our way back. We came next thing to catching one. Two men, who were connected with the Havemeyer Sugar Refinery in New York, were on their way down to the Ottawa River on a canoe trip. As they came by us the younger got a terrific strike and a most magnificent fish broke water within five feet of our boat, so near as to splash the Doctor, who was trolling in the stern of the boat. I could see the monster's capacious maw and great, cold, cruel-looking eyes. It shook that troll as a dog would a rat in his frantic efforts to throw it out of its mouth.

The young man hauled it to the canoe and his comrade tried first to shoot it and afterward to gaff it, and bungled both, when the younger lifted it in on troll. It was a beauty and would go 35 pounds. It almost wrecked the canoe when it was landed.

This excellent catch fired the Doctor with a noble ambition to go and do likewise, much to my chagrin, for I was pretty tired rowing. However, our efforts were not without reward, as I witnessed the strangest sight in all my experience as an angler. As we drew near a rocky point at the beginning of a weedy bay we were both astonished at an unusual performance of fish. Fish began jumping from among the weeds toward the deeper water, not by twos, but by dozens and scores. Several struck our boat, one bass lit fair in the Doctor's lap and he quickly brushed it out, and one fell in the bottom of the boat. The panic spread away up the bay, and a regular tattoo was beat on the waters by jumping fish. Whether a school of muscallonge hove in sight or our boat started the panic I was unable to determine. I once had the same experience in Ten Mile Creek, Pennsylvania, while fishing with Dr. Clyde Crumrine. We had no luck with bait and rowed near shore, on our way home, and a small bass jumped into the boat. The performance was repeated three times, and these were the

JOE'S HOME.

only fish we caught. The fish on this occasion evidently communicated their fright, causing consternation quite a distance up the bay.

In the next bay we had a great run of luck on pike. The Doctor hooked a small one; as he drew it in it broke water and spit the spoon out, and the spoon had hardly struck the water when a really splendid pike grabbed it. The Doctor landed it, only to return the captive to its native element again. I put in my troll and in an hour and a half we had caught twenty-three fine pike and pickerel, but no muscallunge. I rowed up a creek and rested. We here saw a pair of loons on land, the only pair I ever saw out of water. They looked like a pair of very awkward ducks on stilts, and their wabbly antics showed us how very much of a water fowl the loon really is. There was a pair of young birds near them in some reeds and the four then floated off and began fishing. It is nothing short of marvelous how far the loon can dive—surely 500 or 600 feet. He is the most skillful diver of all the water fowl. I met a settler who showed me a cap he had made of a loon skin. We afterward here saw near the water a large nest of coarse sticks, that I think was the nest of a loon. At 6 P. M. we arrived at the head of the lake, putting up at the hotel formerly kept by Dick Jessup.

After supper we gathered worms in a tomato can. Since we were on Trout Lake, the Doctor said: "There must be trout here. But the trout that have given the lake its name are the salmon trout, and at this season they are in the very deepest part of the lake, and this is saying a good deal, for Trout Lake has been sounded to 160 feet. It requires a couple of pounds of lead to sink the troll to the bottom. Early in the season they are in shallow water, but retire into deeper water as the weather grows warmer. The salmon trout aims to keep himself in the same temperature all the year around."

An old settler, who lives on the Government road, said: "There's lam lashins' o' trout in Dick Jessup's old meader in the crick;" and the next morning found the Doctor urging me to hurry so we might try for some trout before dinner. We walked out the corduroy road, known as the Government road, turned to the right, stopped at the bridge over the creek, and turned up the stream through a tangle of underbrush. We left our split bamboo rods under the bridge and cut short rods, so we could fish the small pools with some comfort, as the overhanging branches rendered the handling of even short rods quite difficult.

As to numbers, the trout were abundant, but as to size, that is different. We soon had 50 or 60 fingerlings apiece, and they were such game little fellows that we enjoyed the sport very much. The sand flies were so troublesome I couldn't stand the torture and came back to the bridge and let my bait float down gently under

the bridge. I tried again and got a fine 10 inch trout. At the lower end of the bridge I lost a better one. My line fouled on some brush. But I cast again and got one of 9 inches, and found more delight in these three than in the dozens of smaller ones. The well browned flakes of these trout was a pretty fair recompense for the torment of the sand flies—at least we thus squared accounts, as we enjoyed them at the hotel for dinner.

After dinner we drove to North Bay, up an old water-course, that at no distant period was a waterway that had connected Lake Nippissing and Trout Lake. We had supper at the Queen's Hotel, North Bay, and had the good fortune to meet Edwin C. Shepherd, the hotel proprietor's son, and one of the keenest sportsmen in Canada. He advised us to try trolling from a very long pier down on the lake front. We joined the crowd and were soon walking up and down the pier fishing with a small copper spoon bait. There were with us two gentlemen from Cincinnati, who had just returned from the south and had been fishing for tarpon, and were using tarpon tackle, and it looked strong enough to reel in a calf.

The fishing was at first slow, but finally they bit furiously. Many of the men and boys of North Bay were on the pier fishing, and when they got to biting there were fish jumping around on the pier everywhere.

Two boys, who were baiting with a large-winged grasshopper, were catching plenty of fine bass. They each had a string of a half dozen that would go 3 pounds apiece. The Cincinnati man, who had been fishing for tarpon earlier and had his tackle in use here, found it answered well on muscallunge. I found splendid bass, pike and pickerel fishing without having to go further than the Government wharf, at the lower end of town.

This was the day on which the Government agent was in North Bay to pay the Indians a pension of $7 per year, and the town was full of Chippewa Indians from the Bocage Reservation, a few miles west of North Bay. Among the lot was an Algonquin named Joe Reenie, from whom I learned that the same jealousies and envies annoy the Indians that prevail among the palefaces. Because he was not a Chippewa Indian the Chippewa chief at Bocage had protested Joe's claim as well as that of his mother and brothers; hence the usual $35 was not forthcoming to Joe and his family. Ed Shepherd and I sympathized with him and he became communicative when told we proposed to hunt trout on the morrow.

"You come to-morrow, I go along; I know place not far away, plenty good trout." We agreed to meet him at 6 o'clock at the pier and found him there with a monster birch bark canoe, and two large pails, in which to gather berries. We landed at the mouth of Du Chasney Creek (pronounced as a Dutchman would a Jew, Die Sheenie), and it is a beautiful stream, very similar to our mountain streams of Pennsylvania. We followed Joe over a faint trail around the hill, and heard his assurance—"Plenty trout, big, too, nice pool, not many go in." And in an hour and a quarter we came to the pool which

"PLENTY TROUT, NICE POOL."

E. C. Shepherd, who was my companion, photographed while I was crawling out on some driftwood.

The Algonquin's Secret.

We cast across the pool into a whirling eddy by the roots of some birches, and as my bait beat up and down—for I am not a fly-fisherman—I hooked a half-pounder of great beauty and soon had three others a trifle smaller. Below the rapids I had caught a dozen or more fine trout when Indian Joe came back with a pail of delicious red raspberries he had gathered beyond a marsh. He seemed a trifle disappointed that we had not done better; but I was delighted. He fried us some fish and boiled our tea, while we caught more trout. After dinner we worked our way to the upper De Chasney Falls, where we found still better trout than the best we had found here. We worked our way home and arrived at the mouth of the De Chasney in time to photograph the ambitious structure Joe had hewn from pine logs, and a trough roof, as seen in the picture. There was no floor. A ladder led up to the loft, where some deer skins and a bear's hide await the fur trader. Old Mrs. Reenie, Joe's mother, who stands in the doorway, is reputed to be about 90 years old, but still does her own gardening and tends to her cow and pigs. While Shepherd arranged the camera I reached in through a broken pane and lifted Joe's gun out and posed in the picture as a brave man with a gun.

UPPER DE CHASNEY FALLS.

On Thursday morning, at 5 A. M., we started on a journey of twenty miles northwest, along the Government road, to Anderson Lake. The various hangers on about the Queen's Hotel assured us this lake was the only place in Canada to go for trout, where you would always be sure of enjoying the real thing. We had a good horse and made good time, albeit the road was rough. The town soon faded from view as we reached the timber country. We held our course direct northwest past the city water tanks, and about 10 o'clock we unhitched the horse at the end of the road. Here we had to pack our stuff a mile and a half over an abomination of rough country, to the lake. Several fallen trees caused us annoyance.

On a nice dry knoll above the lake we cut some poles, leaned them on a large rock, and made ourselves a rude hut by covering with a good, thick coat of pine branches, making it as thick as possible to afford us some little protection against the mosquitoes. We made our bed by gathering pine branches. When our camp was well under way we had dinner. I have always found it the most prudent to get ready for sleeping before any fishing is done. Nothing is more unwise than to leave off until darkness the pitching the tent and providing a bed. After dinner we hunted up a boat that was hidden in a bay near camp. We rowed northeast along the shore to the mouth of Little Jocko Creek, the lake being formed by Little Jocko and Jocko, and is drained by Antoine Creek into Lake Nippissing. We tried at the mouth of Little Jocko. The soprt surpassed anything previous that I had experienced in the way of fishing. Shepherd caught three trout that would average 2 pounds apiece, and I caught numerous trout that would rate as record breakers in Pennsylvania. We could care for only a few, so we threw all others back into the water, that those who come after may enjoy just as good sport as did we. In this North Bay region there are many places where trout may be taken, and I visited many of these points, including streams on the north shore of Trout Lake, Four Mile Creek, De Chasney and other places, and there was nothing that compared with Anderson Lake. At sunset we came home and had supper and made some further preparation around the camp—reinforced the pine branches on the roof and sides of our brush tent, for angry clouds to the southwest foretold a rain that came about 10 o'clock. Shepherd pronounced it a fearful storm, and awful thunder and lightning, but compared with what I have seen in the mountains of Pennsylvania, where about thirty miles of the heavens seem to crack open with an appalling crash that would surely end all things human, this seemed tame. The rain fell steadily for hours and added to our comfort by keeping the mosquitoes away, although this house of leaves was too damp for pure delight.

The next morning the sun rose back of the big pines and his golden light filtered through, prophetic of a grand day to come. All morning we tried for trout, and though the fishing was not so good as the day before, nevertheless I did not complain. To single out any one battle with a big trout is difficult when so many experiences crowd in upon my mind, and I will not attempt it.

At 2 o'clock we harnessed the roan, worked our way back to the road, and started on our long journey to North Bay, thus ending an experience so full of delight that I shall dream of it by day and by night continually until I fold my rod and wrap up my reel to cross the dark river on whose banks so many of us tremble when we think there may be no mountain streams, no purling brooks, nor leaping trout on the other shores; still they would never call it "That better land" if it hadn't.

JAMES M. NORRIS.

ALLEGHENY, Pa., May 22.

Poke-o-Moonshine.

BOSTON, June 22.—*Editor Forest and Stream:* I am indebted to Mr. Raymond S. Spears for his friendly and interesting response to my query about the meaning of the name Poke-o-Moonshine, as applied to some Adirondack and Maine mountains and brooks. The difficulty as to his suggestion that it is of Spanish origin is to know why the name should travel so far into the northeast of our country, and why it sholud attach itself to features of the landscape. I think the derivation from the word "pokerish" and with the idea of some one poking about in a difficult country in faint moonshine has a little more verisimilitude.

I like Mr. Spears' suggestion of a dictionary of wood terms. Many a term entirely familiar and well known in one locality is utterly unknown in another, as, for example, the word "logan," familiar to any person who knows the Maine woods, but, as Mr. Spears says, utterly unknown to him. Let me say for his benefit that so far from having any reference to a logging rock, or rocking stone, it refers to water, and particularly to a little bay or "dead water," such as is frequently found leading off from some sluggish stream in the Maine woods, and often necessitating a wide detour on the part of one who is following the bank of the stream on foot, in which case the person is said to have "got loganned."

I am thankful to Mr. Spears for his attempt to help me out with Poke-o-Moonshine, and hope that some one else will come to the front with the unmistakable meaning.

Let me add to this note that W. Wade, whose note on breeding the wild pigeon appears in the same number of your paper, seems to have very carelessly read both my own communication on this subject and the letter of Prof. C. O. Whitman which accompanied it.

Mr. Wade suggests that Prof. Whitman's poor success in breeding wild pigeons is due to the fact that his breeding stock is infertile from too intense inbreeding, and he advises Prof. Whitman to procure a cock pigeon from some other source than the one his stock came from.

Now Prof. Whitman's letter specifically states: "I have tried in many ways to obtain one or more new birds, so as to strengthen the reproductive power which seems to weaken as the result of long inbreeding. I am afraid it is almost hopeless, for only a few scattered pairs seem to be left in the country, and no one is likely to succeed in capturing a bird alive."

Again he says: "If I could get one new bird I should soon have a flock of fifty," and this last remark I repeated in my letter.

C. H. AMES.

The Final Argument.—"Yes, he's a fine dog, Uncle 'Rastus, and I'd like to own him, but your price is a little too high." "Bettah git 'im while yo' kin, Cunnel Hawkins. Mistah Peahpont Mawgan might want to buy him some o' dese days, an' den whah'd you be?"—Chicago Tribune.

Natural History.

Sometimes They Do.

Editor Forest and Stream:

In March and April of 1887 I was encamped with a small detachment on the Rio Grande River in Texas at a little railroad town called Langtry. The river here has high, vertical sandstone cliffs for banks, which have been sculptured into shelves and ledges by the wind or some other agency, and on these places, it is said, eagles formerly made their nests—in fact, when I was there the remains of old nests of some kind or other were still to be seen—for which reason this point of the river was called Eagle's Nest. When the Southern Pacific Railroad came that way and built the little station, it changed the name from one that was descriptive and appropriate, and called it after the professional stage beauty of the day, though the connection between this forlorn station and the Jersey Lily was difficult to understand. The necessity for maintaining troops in this vicinity was about equally obscure. In former days, whei troops were first stationed there, it was a favorite Indian crossing place, but in my time Indians in Texas existed only as a tradition, though there was some ocular evidence of their former existence in certain cayes near by, the rock walls of which were ornamented with many painted Indian pictures, representing, I suppose, some kind of history or record of their forays or predatory expeditions in that region. My time being consequently nearly all leisure, I spent many hours in listening to tales of doubtful authenticity by Judge Roy Bean, of the celebrated Chinaman decision. Roy kept a kind of store at the station, and as he had been in that country ever since the Mexican War and was also of a rather active imagination, his tales were quite interesting. Some day I may be reminded of some of them and jot them down for my friends of FOREST AND STREAM.

I also derived considerable entertainment out of a professional mountain lion hunter who had his camp a few miles up the river, on the Mexican side, and who frequently came in to visit and "booze" when there was a lull in the lion industry. His name was Julius, and he was to me an interesting character. It seems, or at least he claimed, that when once a lion gets into a flock of goats or sheep it must be promptly destroyed, or it will linger about indefinitely and visit the flock night after night and do enormous damage. Julius kept a small pack of hounds—three or four in number—and I suppose they must have understood their duty, as he was frequently sent for by owners of flocks—sometimes at a distance of many miles—to come and destroy an intruding lion, an undertaking which he usually accomplished in a short time to every one's satisfaction. Lion killing appeared to be his only vocation, as he had no other visible means of support, and the number of lions he must have killed in his time was something appalling to tenderfeet. I will not now attempt to give the figures, but he had certainly killed a lot of them, and his various exploits, as he used to narrate them to me, were very interesting. As these excursions necessarily took him far away from Langtry I was obliged to forbear going with him, as I would have liked, my duties not permitting me to leave my detachment by itself for so long a period, though he used to come regularly and endeavor to persuade me to go with him whenever he had a call. Many officers stationed at Langtry had disliked to have old Julius continually hanging around camp, but I enjoyed his narratives and always welcomed him, though it sometimes required some skill to get him to bring his visit to a close. Julius seemed to hold lions in the same degree of contempt as dangerous animals as does Mr. Wells, and according to the best of my recollection his method of killing them was to have the dogs overtake them and pull them down while he rode up on his pony, jumped off, and thrusting his Winchester muzzle right into their mouths, killed them always at a single shot. I may have misquoted him at this late date, but that is my recollection of what he used to tell me.

It is not, however, of Julius and mountain lions that I intended to write, but rather of beaver, my memory having been jogged by the recent articles on this subject in the FOREST AND STREAM. It seems that at that time the Rio Grande country must have been full of beaver. My attention was first called to that fact by the appearance one afternoon of a couple of trappers in the vicinity of my camp. They had an abundance of beaver pelts with them—I do not now recall the number, but it was something like seventy-five or a hundred. They shipped them at the station at Langtry, and that was how we came to find out about them, as they were rather of a reticient party and not given to proclaiming their affairs abroad. From the efforts of the inquisitive it came out that they had journeyed for miles along the river—at least that's what they said—and when they found favorable places they trapped beaver. Two of them traveled by row boat and trapped while a third journeyed by land in a cart with one horse and acted as a kind of tender to the boat, meeting it at favorable points, bringing supplies, and carrying their pelts to the railroad for shipment for them.

It was here that I saw my first beaver pelt, and to see the number these men shipped at the station one couldn't help gathering the idea that trapping beaver was rather easy. The arrival and departure of these men of course set every one to talking beaver, and for a while but little else was heard. Then, as now, one of the most deeply mooted points was whether or no beavers came out in the day time—about as many contestants appearing for one side of this question as for the other. I knew nothing about beaver myself, though while fishing in Texas streams at night loud noises were frequently heard that were attributed to the beaver by some of my companions who claimed to know about them. I was destined, however, soon to have the question of the beaver's diurnal appearance settled to my entire satisfaction. A few days after the departure of the trappers I had occasion to go over to Fielder's ranch on the Pecos River. The latter is tributary to the Rio Grande, about twenty miles below Langtry, and Fielder lived about the same distance up the Pecos, so in going there I had simply to cut across on the third side of the triangle to make it in about thirty miles or so. On the opposite side of the Pecos was a nice spring creek tributary, and as I had brought my fishing tackle along I crossed over and caught some nice bass. It had rained pretty well the night before and more or less during that day, so that on my return to the river I was surprised to see how it had risen since morning. It was now brimming full and rushing along like a mill race, its red waters sweeping down with them all sorts of drift and surface litter. While I stood gazing at its changed appearance, my eye was quickly caught by some objects near the other bank swimming and playing about in the water. The river was not wide at that point—probably not over thirty yards—and I could see these animals distinctly. They were three in number, and I had not the slightest difficulty in recognizing them as beaver, as the trappers had with them one unskinned beaver that I had examined quite closely, and as that had been but a few days before, I knew then just how a beaver ought to look—size, shape and detail—so I was positive that these animals were beaver. I stood and watched them with the greatest interest; they seemed engaged wholly with play, and though they remained nearly always in the water their gambols and antics reminded me more than anything else of kittens at play on a carpet, jumping over each other, cuffing and tousling each other about, and all apparently without the slightest fear of outside disturbance. There was an old log or something of the sort, upon which they would once in a while climb for a minute or so and then plunge off into the water again, and all go to playing as before. I stood and gazed at them for quite a time, and although they couldn't have helped seeing me as I stood upon the bank in plain sight—at least so it seemed to me—and at only a short distance away, they nevertheless paid not the slightest attention to me, but continued their play. Finally one of my men on the side opposite me noticed me standing there, and concluding that I wanted something came hastening over to see. At his approach, doubtless warned by his footfall, the beaver disappeared below the surface, and I have never seen one since. My recollection is that on that evening I told Fielder about having seen the beaver at not over a mile from his house, and that he told me that he saw them frequently in the day time; of this, though, I will not be certain, as I had not then adopted the practice of keeping a note book; but of one thing I am positive, and that is that they do sometimes come out in the day time.

WM. F. FLYNN.

PUERTO PRINCIPE, Cuba.

The Blue Heron.

Ardea herodias, Linn.

STATUESQUE, comparatively mute, the blue heron is a bird of silence.

True philosopher, he loves solitude and quiet. I would have you know, however, that he is no closet naturalist. Abroad with the sun, he spends his peaceful days in stately pacings along some favorite creek, often ankle deep in its waters.

Again you may find him poking about the broad reaches of quiet pools in some restful swamp till dusk closes in. Then with soft, slow, whish! whish! of broad fans he rises and floats off in the twilight to join his fellows at camp in some secret spot far in the woods.

Possessed of a very even temperament, this bird rarely gives way to excitement, though he is apt to forget himself when suddenly startled.

It is very difficult to take him unawares.

Extremely suspicious and watchful, he is ever on the alert, and only on rare occasions has it been my fortune to approach him within fair observing distance unseen.

A long neck gives his wonderfully keen eye great range of vision, while his hearing is so acute that you have to exercise the most perfect art of the still-hunter while making your approach under cover. A snapping twig, the careless rustling of the underbrush as you advance, is sure to attract his notice, and you will find his glistening eye at once turned in your direction.

His attention is riveted on the spot where you lie concealed, while the poise of his body indicates readiness for speedy departure should the suspicious sounds be repeated. Absolute silence is required if you desire to continue your observations in such a case.

Like as not, now that his suspicions are aroused, he will silently stalk off without any appearance of undue haste in his manner, only to take wing further away.

In any event you may as well change your base, for you will find it useless to attempt a closer acquaintance with him from that direction.

If, however, you have made an advance with due caution you will be well repaid for the trouble, in watching this silent bird close at hand.

Motionless he stands surveying the surroundings for minutes at a time, then with slow, stately stride, moves about the shallows with lowered recurved neck. A pause, a dart, and a small fish glistens between his mandibles. Again that wary look about him. All's well! A quick reversal of the morsel in his beak, a gulp and the tiny fish vanishes head foremost. Another cautious look around, and the slow walk is resumed.

In some favored locality, where day after day he has fished unmolested, he is apt to abate somewhat of his cautiousness. Should you be fortunate and arrive within close range undiscovered when he strikes and captures a fair-sized fish, you will be interested to see him play with it before devouring, much as a cat will tease and torture a mouse.

Walking sedately ashore, he will drop his prey on the sand, place one foot upon it and jab it spitefully again and again, with his dagger-like bill, whenever it flaps its tail or works its poor little gills in strangling. He may toss it in air and catch it as it falls, only to drop it, and presently resume his jabbing. When he thinks he has fooled it long enough, down it goes, and you will be surprised at his capacious swallowing ability. It may be he will hunch up uncomfortably for an instant as it goes down and tickles his throat, but the discomfort is momentary, and he immediately appears perfectly serene once more.

Gawky as this creature seems with his stilt-like legs, I have always admired a certain wild grace in his every motion, when undisturbed and free in his native haunts.

Should you come upon him unawares, which, of course, is possible, though not at all probable—owing to his unceasing watchfulness—his consternation is laughable. All fuss, feathers and legs, he flops up with a hoarse, guttural croak, "a soft sound," as Kipling puts it—legs and neck seemingly all mixed up, while the big wings fan the air like a windmill, the most undignified exhibition of complete demoralization that I know of.

Of wide range, the blue heron is found in all solitary localities—in swamp, salt marsh, along the meadow creeks or on the bog—in fact, wherever frogs, little fish and other small water delicacies abound.

He is useless for the table, and if let alone by plume hunters will long hold his place among us. His somber plumage harmonizes so perfectly with the grays of swamp moss, lichens and tree trunks, that he utilizes as a background for his stately poses and contrasts so pleasantly with the duns and browns of meadow and marsh, that it is a pity he should be so relentlessly killed.

WILMOT TOWNSEND.

Some Notes on the Beaver.

Editor Forest and Stream:

Dr. C. P. Ambler's entertaining article on "The Beaver at Home" will, I hope, call forth other accounts of daytime study of beaver. My own experience in this line is not extensive, but most interesting to me.

Once in the Yellowstone Park I watched a long time near some fresh beaver workings in the hope of seeing the workers, but my patience gave out before my curiosity was gratified.

Once with my old guide, T. W. Billings, of Brownville, Me., a noted beaver hunter in his younger days, when beaver were plentiful on the Allegash and Tobique, and whose fund of beaver stories was exhaustless, I hunted beaver on Randall Brook, up above the Eberne lakes in Piscataquis county, Me.

There was a report that beaver sign had been seen there, and Billings led Owen Chase, another Brownville guide and woodman, but who had never trapped beaver, and me in quest of them. It was a great adventure to me—and successful—and might be worth telling some time, but we saw no beaver by daylight till one morning we found one in our trap. We contented ourselves with this one, but I have never ceased to regret our capture of it.

I was excited enough at the time over our success. I brought out the 46-pound prize six miles on my shoulder without setting it down to rest, and thought myself very happy. We ate baked beaver a day or two afterward, and I have always counted it the finest meat I ever tasted in the woods. For years its soft pelt was the thing my toes first touched when I got out of bed in the morning.

But the animal was one of a single family that had worked its way down from the north and located where beaver used to be plentiful, but none had been seen for years, and they should have been protected instead of disturbed. We know better and do better now, I trust.

Some years later I learned of a colony of beaver living on Kennebago Stream, near the outlet of the well-known Kennebago Lake, in Maine, and twice I have made a pilgrimage to the place for the purpose of observing them. Both attempts were quite successful, and both times in daylight, late in the afternoon, I have watched beaver swimming about, carrying branches and sticks and now and then, when startled, diving with the resounding stroke of the tail upon the water—a very remarkable thing when it is heard for the first time. I am by no means sure that it is always a signal of alarm. I have heard it when it seemed to be done as much for amusement as for anything else, so far as I could discover. My method was that of still approach by canoe, and I am inclined to think that any one with a little skill and patience could secure my results. And let me commend to any one who wants to see in actual process some of the most wonderful of the "ways of wood folk" to try it. Going out in mid-afternoon, I have remained alone among the beaver and been utterly absorbed in their work till 8 or 9 o'clock in the evening, and getting from it an exhilaration hard to describe.

At last accounts this colony of beaver was in a flourishing condition, protected and prosperous, and I believe there is no reason why beaver colonies may not, and entirely by natural process, be established on a thousand Maine lakes and streams if the same protection be granted them as at Kennebago Stream. The cut of the beaver house given in connection with Mr. Ambler's article is very characteristic and good. Let me here call attention to the very remarkable beaver group in the museum of the University of Vermont at Burlington. It is equal in its way to the famous group of bison put up by Mr. Hornaday in the Smithsonian Museum at Washington. It is studied with extraordinary care and mounted with a loving faithfulness to nature that is almost beyond praise, and is well worth much trouble to see it.

C. H. AMES.

BOSTON, Mass.

Pike and Perch.

THE attractive "Fur, Feather and Fin Series," published by Longmans, Green & Co., is still further enriched by the addition of a volume on "Pike and Perch Fishing," by Wm. Senior, with chapters by other anglers. Mr. Senior, better known by his pen name of Redspinner, and as the editor of the Field, should of all persons be best qualified to write on this subject, which is one in which he has had experience for lo! these many years. He is also especially well fitted to select his associates in the production of this volume, and the mere mention of his name is guarantee that the work is well done, and that here may be found all that is known concerning pike and perch fishing in British waters.

All the different methods of pike fishing in different waters are here given, happily introduced by a chapter, more or less historical in character, which is entitled the "Pike of Fable and Fancy." The chapters on the pike are twelve in number, while to the perch are given only four, and of these one is devoted to artificial perch-culture. The last eighteen pages of the volume treat of the cookery of the pike and perch, and are by Mr. Alexander Innes Shand.

In the chapter entitled "Some Foreign Relatives," an account is given of certain American species of the genus Esox and also of Mr. Senior's experiences in fishing for muscalonge in Canadian waters. The author is evidently incredulous concerning the size of the fish of this group commonly caught in North American waters, and is disposed to laugh at 40-pound fish, yet he himself landed, on his first and only excursion for muscalonge, one which weighed 24½ pounds and had a head 11¾ inches long.

It is to be understood that the waters treated in the volume before us are wholly British, but no angler of other lands is likely to read the book without being charmed by its style and interested in its subject. The volume is illustrated by nearly a dozen full-page cuts of great beauty.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

A Few Words About the Blackcock.

WHEN spring time comes and Mother Nature awakes from winter's slumber, putting on the first touches of her new summer garb—in forest and field, over hill and dale—everywhere a new life asserts itself. A feeling of longing steals into our hearts to go out into the woods and enjoy watching her mystic ways, listening to the cooing and love making of her children.

For my part, spring tide will always recall pleasant memories of past days spent among the gamy blackcock of Europe. There, according to the game laws, the hunter is permitted to hunt, or rather stalk, them from the first day of March until May 15, and again from Sept. 1 until Feb. 1.

I lay explicit weight upon the word "stalking," because it is not only considered more sportsmanlike, but because it affords far more pleasure, particularly so during the open spring season, when the cocks are engaging in fierce battles than during the later season, when shooting them over a slow, steady dog, which resembles the mode of hunting the members of our own grouse family. While we are fighting for forest and game protection, for their very existence, the European sportsman looks on with a feeling of loftiness of a long-time-ago solved problem, enjoying himself at this very moment in gathering the fruits of timely forest protection, the very nucleus of that for game.

One shudders at the thought of what would be the fate of our grouse if shooting the cocks during the strutting season was lawful. As long as the market-shooter and pot-hunter dwell among us, it would certainly mean their utter extermination. For that reason, while many of the former class would only be too glad if such a law were enacted, let the true sportsmen stand together and thank providence that such a law hasn't already been and probably will not be enacted for a long time to come. Still, who can tell? America has developed and made such rapid strides onward, all forestry matters and their great advantages for proper protection and propagation of game are daily finding more solid ground and recognition among our citizens, that it would be no surprise if within the first quarter of the century we may enjoy the same privileges of the European sportsman. But to attain this end, let it be our motto, "*Forestry means game protection.*" It is more than half its life; it is its very foundation. Let us endeavor to give our game a better chance for its existence by an intelligent, business-like management of our forest products—the game's feeding and cover grounds. If this is done it will remain with us and also permit the introduction of desirable species of European game animals.

Of these, *Tetrao tetrix,* the blackcock, or better, the black grouse, certainly is one. He is not as full of pretensions as his bigger brother, the capercailzie, who prefers piny mountainous districts to those of an undulating, generally more broken and open character of the blackcock.

During my rambles through Germany and Austria I have found him for the most part among hills clothed with a luxurious growth of hazel, willow, alder and birch, with an abundant undergrowth of ferns and heaths. Often also, particularly so in Saxony, one meets them in respectable numbers among broken stands of spruce, Scotch pine and white birch. The last seems to be an absolute necessity for his welfare; he is called therefore in Germany "Birkhahn," "Birkwild" (birchcock, birch game) because he is particularly fond of the tender buds, twigs and seeds of the birch. Besides this, he loves all wild berries and heaths, and in winter time, when snow and ice inclose the woods, he readily takes to the stubble fields, filling his crop with the seeds left for him by the generous farmer. There they often congregate in large number, and deserve man's assistance and protection.

Many a time have I gone out in the morning—a sack filled with a mixture of grain, wheat and corn, over my shoulder, 2 feet of snow on the ground and the thermometer way below zero—scraping the snow away at likely places and scattering the feed here and there. If they find such a place once, you may rest assured that they will return to it regularly every day until the pairing season begins. I remember once counting thirty-two birds on a place I had only prepared for them the previous day. If one is careful enough in the selection of these feeding grounds and the adjoining territory is in conformity with what they like best for their breeding ground, one may rest quite assured that a few will stay and breed in the neighborhood.

While the season to hunt the cocks begins with the first of March, not until the beginning of April is the real strutting (or better, fighting) season in full swing. I have generally done most of my shooting during that month, using the preceding one to determine their battle grounds, which in most cases are some open spots in the woods. Sometimes, though, a particularly sly old cock will select the middle of a large stubble field, where he is safe from any approach. When these battle grounds, to which they return almost every morning, are once located, a thorough knowledge of their habits and the way of stalking them is of course necessary for the hunter to be rewarded with a successful shot. They are extremely shy, especially during that time, with a keen eye, and are very sharp of hearing.

Some of the easy-going "big guns" abroad shoot them from blinds or holes sunk into the ground, after these places have been located by some one else. Personally, I have always preferred to stalk them, because it gave me more excitement and satisfaction to outwit one of these black fellows.

The blackcock, as is well known, is the only polygamous member of the family *Tetraonidæ*, at least to my knowledge. While I have observed the males of other species fight among themselves, I believe this is only done for the possession of one single hen.

With the blackcock this is different. He is not satisfied to pay particular attention to only one hen with a view to taking her as his spouse, assisting in the building of the nest and caring for her and her offspring afterward. Nothing of the kind. Rascal as he is, he openly invites all the hens of creation to come to his love call, and desperately fights for their possesion with any rival. These battles are as fierce as those we see among our domestic roosters, where feathers fly and blood flows; still, they seldom fight to a clean "knockout" like the domestic fowl. The older and stronger cock is invariably the victor, who thus surrounds himself with a regular harem, numbering often as many as five members, who stay with him and whom he attends at intervals of a few days from four to five times. After he has followed out his natural instincts, unfaithful as he is, he leaves his hens entirely to their fate. This is a most remarkable natural phenomenon, and I believe does not repeat itself in any of our feathered game.

For the benefit of those who may never have either seen or hunted these cocks, I shall with a few words narrate a little outing I indulged in only a few years ago, and which I shall not forget very soon on account of the rheumatism I caught at the time from crawling on hands and knees over wet ground and lying on my stomach in five inches of icy cold water, from which position I afterward sent that little leaden messenger on its destructive mission. But to the story:

I had previously located one of the "battle grounds" where at early dawn the daily tournaments were being held, but owing to the slight cover prevailing I had so far had to content myself with watching the performance from a safe distance. On the afternoon preceding that

THE BLACKCOCK'S BATTLE FIELD.

memorable morning I had been figuring it out, and had prepared myself an artificial line of approach to within shooting distance by sticking branches and twigs in the soft ground and arranging the whole so that it afforded the needed cover without being easily detected. Early the following morning found me within about 200 yards from the rendezvous, and in the very act of approaching, when swish! a cock came sailing over the tree tops, alighting right in the middle of the battle ground. To immediately get down on my knees was all I could do; but I hadn't thought of the boggy ground, and besides it had been raining during the night and everything was dripping wet. "Stick to it," an inner voice said—and I did, first suffering agony, then pleasure, to wind up afterward with two weeks in bed with stiff joints. What does the hunter care?

My getting soaked at that very moment, therefore, didn't keep me from crawling closer and closer, every once in a while playing "dead" so as not to disturb my game. The cock in the meantime had begun his peculiar cackling, whistling (or better, gargling) call, and doing his funny acts of jumping and running around like mad. At every repetition of this I drew nearer, until I must have approached to within about 75 yards, when swish! another cock came flying down, alighting within 50 feet of the first one. By this time I had become chilled to the bone, my stomach felt like a lump of ice, and I was trembling from cold, to which was added the excitement of the occasion. How I ever managed under these trying circumstances to hit my mark afterward I can only attribute to good luck and the fact that I stopped breathing while taking aim and pulling the trigger.

From where I lay I had a good view of the whole battlefield. The second cock was the smaller of the two, but immediately struck the fighting attitude.

To observe these passionate knights of the forest in their combats has always been a rare treat to me, and although on this particular occasion I did not occupy a very enviable position, I nevertheless look back to it with pleasure.

Raising and lowering their heads, with brownish-black eyes, over which they have a bare granulated skin of scarlet color—the plumage of steel-blue swelled out—brownish wings with white bar across trailing and with the black velvety forked tail spread like a fan—thus they charged each other, all the while calling, gargling and hissing.

One who has never before seen these birds thinks they are going to kill each other, so desperate and fierce are their onslaughts, which sometimes last a considerable time. On this morning, though, the larger cock had almost a "walk over." I counted only about half a dozen or so rounds, which grew weaker and weaker.

While the battle was at its height three hens (whose color is reddish-brown, mottled and barred with black) alighted close by, and I could not help comparing them with the seconds of a duel or the sponge holders of a fistic encounter. The moment the cocks espied them, their attacks were renewed with redoubled vigor, until the weaker one, brave as he was, had to retreat, leaving, as I found afterward, bloody spots here and there upon the field of honor. The proud victor now strutted, covered with glory, before the eyes of his admirers.

Former observations had taught me that in case no other cock comes right away to replace the beaten rival, the victor goes off with his prize or fold soon after. Being prepared for this, it took me but a few seconds to have my little 8 mm. "reliable" speak her deadly note.

Pr-rr-rr-rrr! went the hens. The knight lay struggling on the ground, shot through the neck. A bedraggled, soaked specimen of humanity, more rigid than nimble, jumped to his feet and rushed across to grasp his dearly bought prize—a fine, outgrown blackcock of 4¼ pounds.

These are the excitements and incidents of hunting the European *Tetrao tetrix.*

The establishment of these birds in our country should not be a very difficult matter. I repeat again proper forest management will give them what they need for their existence, shelter and feeding grounds. A continuous war against all rapacious animals must be recommended.

Besides, I have no doubt that if these gamy fellows are once successfully established they will offer a great field for speculation and interest. Who knows but that they will bring forth a hybrid at present unknown between themselves and some members of our own grouse family?

In Germany the crossing of the capercailzie with the black grouse has produced the Rackelhahn (*Tetrao hybridus*), a hybrid in size between the two, average weight 8 pounds, which has become a very desirable addition to the feathered game. Another hybrid—blackcock and Mongolian pheasant—has of late years been observed quite frequently in Silesia and Saxony. The possibilities therefore of a cross between the blackcock and say our pinnated grouse are great, and their introduction should be encouraged.

The only drawback is the stupidity and foolhardiness of the hens, which build their nests on the ground in any old place. I have found one of these nests not more than three feet from a road, over which at least a couple of dozen wagons passed daily and twice as many pedestrians. My pointer, who was at heel, pointed, otherwise I suppose I should never have known the hen's presence.

As I have remarked above, the cocks after the breeding period has passed live in harmony together in the backwoods, and do absolutely nothing, neither for the hens nor their young—a very sad case of natural family abandonment. While I could tell you still more about these gamy fellows, I must close for to-day and leave other matters of interest for some future time. With a hearty *Auf Wiedersehen!* then, to the brotherhood of true sportsmen,

T. VON HOFFMANN.

Currituck.

CURRITUCK, N. C., June 18.—Owing to the late seasons our spring bay bird shooting was a month later than usual. Dowitchers and robin snipe have made good sport up to yesterday, which is later than I ever knew them. There will be the largest crop of quail in this immediate vicinity we have ever had. There are at least fifteen pairs laying and hatching now on my farm of fifty acres.

Our crop of celery seems perfect this season, and should cause the ducks to be abundant in the fall.

J. B. W.

CHICAGO AND THE WEST.

No Protection for Illinois Quail.

CHICAGO, Ill., June 21.—Early this week there was hurrying in hot haste among the shooters of Chicago. Copies of the new game law were at hand for the first time, and sportsmen of this part of the State could hardly believe their eyes when they found that, owing to some unforeseen event or other, the new game law has left the Bob White quail of this State absolutely without protection, as also the woodcock.

We have had splendid crops of quail in this State for the last two seasons, last fall being an exceptionally good one. Yet there is nothing but the most criminal carelessness which could have explained the shocking negligence on the part of the legislators of this State. It might perhaps be called negligence on the part of the sportsmen of the State, but this would be too sweeping an accusation. As a matter of fact, the Legislature of the State of Illinois ought to be a body of men intelligent enough to look after this branch of the law-making requirements as well as those governing the erection of Government buildings and the local river and harbor improvements. There is not the slightest likelihood of there being a special session of the Legislature to rectify this egregious blunder, and hence we must go on for two years with absolutely no protection for the Illinois quail. It is a case inciting sportsmen to the most bitter recriminations.

Yet the sportsmen have none but themselves to blame, and perhaps hereafter they may learn to give better attention to their own concerns. It is not the fault of any one organization in this city or this State any more than it is the fault of any one of the sportsmen making up this, that or the other organization. As a matter of fact, the sportsmen of Illinois ought to have a representative at Springfield every session of the Legislature. This will require money, and more than that, it will require time and individual attention. There is no use wasting time in general and vague squealing over this matter now that it has happened. Yet the fact is none the more palatable for this. Illinois stands before the bar of the sportsmanship of the United States guilty of criminal negligence.

The New Illinois Game Warden.

Mr. A. J. Lovejoy, of Roscoe, Ill., the newly appointed Fish and Game Commissioner of this State, paid the FOREST AND STREAM office a very pleasant visit this week. Mr. Lovejoy is a man of fine stature and commanding presence, and if he is not willing and able to perform the duties of the office, then certainly "he deceives his looks," as they say in the backwoods precincts. He says that while he has not as yet had much experience in the matters of practical protection of game, he is no worse off than any one else who takes an office, and he modestly claims one advantage which has not been possessed by all the wardens of the great and glorious State of Illinois. He states that he does not intend to see how much he can make out of the office. He purposes to content himself with the salary of the office and does not wish to go out with a sandbag and a club and hold up people, be they game dealers, restaurant keepers or club members. He wants to give the people of this State a good, square, heel-and-toe administration in the office of the fish and game warden. To that end he is looking about for a deputy game warden to represent him here in Chicago. Although he is only a few miles out of the city, he recognizes the fact that he ought to have a man here at all times ready to telephone him at any time and ready to take the initiative whenever the proper time shall appear.

Realizing that the selection of this deputy is an important one, Mr. Lovejoy is taking his own time and looking over the ground very thoroughly. He has consulted with several friends in the city as to the best man to be found for this position, and the choice is perhaps practically concluded at this writing. It would be rather a violation of Mr. Lovejoy's confidence to state who this man is apt to be, but it is sufficient to state that the selection as it appears to-day bids fair to be satisfactory to those who really mean business. Just what it may mean to the game dealers of South Water street is something that remains to be seen. Let us hope that they will cordially hate and detest the new game warden appointed for Chicago. The probabilities are that they will do so.

The sportsmen of Chicago and of Illinois ought to give to the new fish and game warden their cordial and undivided support. There ought not to be any politics in these matters, for, though the appointment be a political one, there ought to be back of it among the people that cordial and honorable spirit of all true politics which accepts the nominee after he has been chosen. It is no difference if we have this or the other man whom we personally wanted to see in such and such an office. When a man has been chosen to an office, he is entitled to that office, and moreover should receive the aid and confidence of the citizens he represents. Mr. Lovejoy is going to give us a good, square, honest administration, and as such he deserves the sympathy and aid of every citizen of this city. He will get it, too, or at least that of every sportsman whose influence amounts to anything.

Don't Know About It.

The following pleasant note was received from Mr. Fred Irland, of Washington, D. C., but does not quite explain itself: "I hear," said he, "that you are going up Tobique way this fall with Ad Moore. You are to be congratulated. I was with our good uncle, Henry Braithwaite, on a bear-killing expedition this spring for seven weeks. We saw thirty-five moose, but not many caribou and deer, and we devastated the bear."

I am glad to hear that the bear have been devastated by Mr. Irland and Uncle Henry, and am also glad to reflect that they did not devastate all those moose. As to my going to New Brunswick this fall, it would be almighty good news if I could believe it. But one of these days I am going to have a hunt with big Ad Moore, just to see how it goes. This business of working is a most monotonous affair at best. Meantime, if anybody has lost a moose, I reckon that Ad Moore could locate that moose if anybody could.

The Virtuousest Place.

The keeper of a summer resort in the State of Wisconsin, who appeals very largely to the support of Chicago anglers, takes exception to the statement that all Wisconsin resorts sell "mutton" in the summer season or allow it to be killed by their guests. I am glad to hear from this virtuousest place, and am very willing to believe that the writer is really doing all he can to prevent this illegal killing of deer in the summer time. As to the general truthfulness of the assertion that the Wisconsin resorts either wink at or openly encourage the killing of deer by their guests, it is too well known to require further reassertion or comment. The letter reads as follows:

"You give all the summer resorts in Wisconsin a bad name. I believe there are exceptions. I sent a bill to the Legislature last winter myself to have the female deer protected. I would like to see the game laws enforced myself. I will not say that there has not been a piece of venison served on my table, but will say this much, that under the present laws if there is any mutton served on my table it will be from some packing house in Chicago. I tihnk myself that any man who will kill a doe and fawn at this season of year ought to be prosecuted. I believe I have done as much toward the preserving of fish and game as any other man in this part of the country. I will say furthermore that during fly time ten to thirty deer can be seen on the lakes of our resorts every day, and it is not necessary that their hides should be bulleted through."

Uses of Birch Bark.

Everybody knows what a useful material is the beautiful bark of the birch tree, and no one has ever lived in the North Woods who has not found it to subserve a score of useful purposes. A newspaper item of this week states that some carpenters were recently tearing down a house in an old city located in the Northeastern pine woods, which house had been built more than 100 years ago. In tearing down the house the carpenters found that it had been originally sheathed or lined with sheets of birch bark, which had been nailed over the cracks between the boards, the sheets being held by small hand-made wrought iron nails, heavy clapboards having been nailed in turn above the bark. This house was built in 1782, and it had always been warm and comfortable. Our ancestors may not have had tar paper and the like, but they had something which was pretty nearly as good.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

On Staten Island.

Editor Forest and Stream:

Some time ago in a personal correspondence we had I mentioned the fact that we were putting out some quail on Staten Island, and you wished me later on to report the result. The quail were put out by the Richmond County Fish and Game Protective Association early this spring. Some were let out at Tottenville, others at Prince Bay, Kreicherville, Huguenot and Green Ridge. I have heard encouraging reports from the vicinity of all these places. Here at Prince Bay we can hear the familiar call of Bob White any morning in several different places within a radius of two miles. Indications point to good results. The cover for quail here is excellent, though I am afraid there is not enough grain raised to carry the birds through the winter, but in that case we will feed them.

Our quail of course have their enemies here as well as in other places—for instance, the pot-hunter, the cat and the rising generation with their Flobert rifles, but the Richmond County Game Association has had good game protectors appointed for this end of Staten Island and the evil doer will have to be shy in his violation of game laws. Some time ago our worthy game protector for this locality, Mr. Van Tobin, took a man to court for shooting robins. The man said he thought it was a crow, but the judge thought $25 was about right for shooting that kind of a crow, and the culprit paid his fine without a murmur. Probably that man can go among his associates now and brag of his knowledge in ornithology, having paid a good price to find out the difference between a robin and a crow, but I don't think he will.

Staten Island is a great place. The woods are full of mighty hunters. We have men here who are howling to have the island stocked with rabbits. There are lots of rabbits here in any locality, and where a rabbit can thrive you can find them; but these same men, who want more, let their hounds run rabbits all the spring and summer and catch the young ones. The other day a man told me that his neighbors' hounds had chased an old rabbit under his piazza, and the old rabbit did not have hair enough on her body to wad a gun with. The fact is, the old rabbit had all her fur and hair somewhere in a nest to keep her little ones warm and dry, and she had led the hounds on a wild goose chase.

There are quite a number of young broods of woodcock around here now, but the first dry spell they will go, but not all will go that start. The island is so threaded with electric light, telephone and telegraph wires that a great many woodcock are killed in their flight.

Rail birds are nesting here now. Almost every night I hear them utter that sharp, piercing note peculiar to their brooding time. Last year at about this time I found a rail bird's nest, and the sitting bird was so fearless I could put out my hand and she would peck at the end of my fingers and scold in great style. Finally she would jump off her nest and circle around me among the reeds and cattails, uttering a most plaintive shriek. At last the village boys found the nest and kept bothering with it and finally took out the eggs and broke them, and I think killed the old bird. A neighbor and I talked to those boys in a kind and proper way, but the devil was born in them, and it was just as much fun for them to kill that bird and destroy her nest as to take their Flobert rifles and break incandescent lamps along the back roads.

Weakfish, have been here the past two weeks and some good catches have been made—that is, good for this time of year, and taking into consideration the weather. The fish are taken on what we call the flats. Here in Prince Bay they are mostly tide runners, but some very small fish have been caught, not more than 8 inches long. This seems strange, as we generally count on very large fish in on the flats. It is not a common occurrence here to catch anything of that size except out in the channel.

Last evening, June 18, Henry George, of this place, went out on the flats and caught only one weakfish in the two hours he was there, but this fish weighed between 3 and 4 pounds, and the fun he had with him in about 6 feet of water fully came up to Mr. George's most sanguine expectations. ***

PRINCE BAY, N. Y., June 19.

Sea and River Fishing.

ANGLING NOTES.

Shad Culture in Hudson River.

THE shad fishermen of the Hudson River seem never to be quite suited with the conditions which exist in the river during the shad season, and the laws which govern the fishing are also not to their liking. Last season the shad were so abundant that the fishermen were reported to have taken up their nets before the end of the season, as shad were too cheap, and this season there are complaints that shad are scarce before the season is over, though they were numerous during the early run of the fish. A specific complaint has been brought to my notice in the Catskill Examiner that is so full of errors and misinformation that it demands a reply from some one, and I quote from the article in part:

"The veteran fisherman, Jacob Conine, explained to an Examiner reporter what he thought was the cause of the scarcity of shad in this part of the country. As he has fished in these waters many years, and has made it a study by observation and reading, it is safe to say that he speaks authoritatively. This is what he said: 'Why is it that there are so few shad caught in this section of the country?' Well, for one reason, I will say this: Soon after the shad hatcheries were started along the Hudson River we noticed that our catches became less and less each year. We also noticed thousands of shad fry floating dead upon the surface of the water. Now those in charge of the fish hatcheries say that a fish does not look after its young, but leaves them to shift for themselves, and as soon as they have spawned they go away. Now, I know as a fact, from my own observation, that this is not true. Why, I have seen a bullhead dig a hole in the mud several inches deep and lay its eggs. They do not leave the spot for any length of time, but remain there until the fish are hatched. They stay with the little fish until they are large enough to look out for themselves. This is true of all kinds of fish. The small ones need looking after.

" 'Now, what do the men employed in the hatcheries do? They are paid $25 a night to fish for roe shad. These shad go on the flats or near the banks to spawn, and are caught. Those not needed in the hatcheries are put in barrels and sent away to be eaten. As soon as the young fish are hatched in the hatcheries they are dumped overboard, and the most of them die from neglect. If this thing is kept up, in a few years there will be no shad. Why, I have seen more fish taken from the river in one day than there is now in a season. In some streams fishermen may fish seven days in the week, but here we are permitted to fish but five days, and pay a license of $1 per net. In the State of Vermont the fish hatcheries are maintained for less than $7,000 a year. In New York State $100,000 will not pay the expenses, and a number have made themselves wealthy in the business.' "

It may be true, as the Examiner reporter states, that Mr. Conine has read and observed, but it is quite evident from his interview that he has not observed the habits of shad, nor has he read anything about them that is reliable, and the entire interview is the rankest balderdash that was ever put out seriously by a newspaper upon the subject of fish culture, and as for its containing facts, it deserves to rank with that other newspaper essay which declared that the United States Fish Commission was crossing the shad with the jellyfish to eliminate the bones; a cross which would be as fruitful as a cross between a window shutter and a bull pup. There is one fact in this wonderful interview, but it is not the one that Mr. Conine declares to be such from his observation, for in that he is utterly wrong. The bullhead does guard its spawn and brood its young after they are hatched, until they separate, and there are two other fishes that do the same thing, but the shad is not one of them, the other two being the black bass and sunfish. Because Mr. Smith plays golf on Sunday it does not follow that Mr. Robinson, who lives in the same block, is a devotee of the game and swipes the ball on the same day of the week. The shad does exactly as the hatchery men told him, spawns and leaves the spawn and resulting fry, if any, to fate, and this is no new thing with shad, for they have done it ever since men knew anything about shad. Can Mr. Conine produce any evidence that any one has ever seen, not thousands, but a single dead shad fry floating on the surface of the river? Shad fry are almost transparent, and in a glass of water held up to the light they are scarcely distinguishable by the unobservant, and one man drank a lot of them in the water he dipped from a can in the glass used for the purpose of examining the fry. It is not unusual for people to go into the shad hatchery at Catskill and with hundreds of thousands of shad fry in tanks level with their eyes, and glass on all sides, with a good light for background, ask where the young shad are. It is for this reason that I wonder if any one could see dead fry in the river even if they were there.

This is exactly what is done by the State in hatching shad for the Hudson River in the shad station at Catskill. One man from another State hatchery is sent there to take charge of this work, and two old shad fishermen are employed on the spot. This constitutes the State force. A professional shad fisherman, who has a seine hauling ground near the hatchery, receives $20 per day from the State. This man employs a crew of twelve men in seine hauling for shad and herring. When the seine is hauled two of the men from the hatchery are present and examine the fish, and if any ripe females are found they are spawned artificially. The only condition imposed by the State is that a given number of hauls must be made, if necessary, on each day that he is paid.

If the eggs of the spawning shad were not taken by the hatchery men they would be lost, as shad neters never

return to the river any shad taken in their nets. The $20 partly recompense the captain of the crew for the delay in overhauling his fish and for the extra hauls which may be demanded. The State does not barrel the shad or do anything else with them, for they belong to the netters and probably go where they would in any event, whether there was a hatchery or not, to market.

The eggs rescued from fish destined for market are taken to the hatchery and hatched. If there had been no market fishermen to net the shad, and they had spawned naturally, perhaps one or two per cent of the eggs would have hatched, but in the hatchery jars eighty to ninety per cent are hatched, and when the yolk sac is nearly absorbed, and the fish are ready to begin the battle for life that all fish have to begin at some time or another, they are planted in the river in just such places as the parent shad would have selected for natural hatching had they been consulted.

Should any one get the idea from the above interview that the State gets any large numbers of spawning shad by the arrangement I have mentioned, I will give the exact figures. So far this year the men at the aCtskill hatchery have secured 188 spawning fish. The largest number on one day was 25, the first day; the next day 24, and the next day 5. The lowest number in one day was 2, and except the first and second days the highest number was 15. From the 188 shad the men have taken 4,940,000 eggs which would have been lost by the fish going to market if they had not been rescued and hatched at the expense of the State.

The Real Reason.

If Mr. Conine does not know why shad became scarce in the river—for they are not now, his interview to the contrary notwithstanding—I will tell him. The shad fishermen of the Hudson netted the river for market, taking everything possible out and putting nothing back until a State Fish Commission was created to remedy the injury to the fishing caused by their shortsightedness. When the Commissioners, ex-Gov. Seymour, Hon. Robert B. Roosevelt, and Seth Green, made an examination of the river they reported to the Legislature that the entire shad crop of the Hudson was worth $7,000. Then the shad hatcheries began their deadly work, of which Mr. Conine complained, and when, in 1895, a census was made of the shad taken that year in the Hudson, it was found to be worth at the net $184,897.60, and shad had fallen in price from 75 cents to 20 cents for roe shad, and 10 cents for bucks. Over 4,000,000 pounds of shad were taken from the Hudson in that year as the result of maintaining shad hatcheries.

Some Actual Facts.

Recently I had occasion to obtain from the U. S. Fish Commission some figures to be used in a paper to be read before a society of natural sciences, and some of those figures fit in here, and I quote from a letter I received from Mr. W. de C. Ravenel: "The only fishery concerning which we have accurate data upon which can be based our estimate of results attributable to fish-culture is the shad fishery. In 1880 the catch of shad was 5,164,152, and its value was $995,790. The following figures show the catch of shad each year, its incerase over the catch of 1880, and the annual value of the increase:

	No. of shad caught.	Increase over 1880.	Value of increase.
1887	8,252,326	3,108,174	$395,642
1888	10,210,453	5,046,301	676,402
1889	12,324,106	7,159,954	782,496
1890	12,827,525	7,663,373	823,965
1896	13,124,013	8,019,861	660,050
1898	13,927,730	8,823,578	466,087

"The most noticeable feature of this comparison is that the price of shad has decreased to the consumer as the catch has increased (from 19 to 10 cents each) and the returns to the fishermen even at the reduced price are much greater than in 1880."

The Hudson River has not been a self-sustaining shad stream since it was depleted by the shad netters previous to the era of artificial propagation, and there has been a constant war against the shad men to compel them by law to take up their nets during a portion of each week to permit some breeding shad to ascend the river and spawn, and they have resisted every effort in this direction which was solely to preserve the shad for the future as well as for the present day. If the Hudson had been dependent alone upon the increase from the shad of the river there would be fewer shad in the river now, but the United States Fish Commission has made generous contributions of shad fry from the Delaware and Susquehanna rivers annually for planting in the Hudson, and thus the stock has been not only kept up, but increased. From 1882 to 1901, both inclusive, the shad in the river have furnished eggs which have produced in the hatchery maintained by the State of New York 52,057,100 fry to be returned to the river. During the same period the United States Fish Commission has contributed to the Hudson from other streams 108,444,000 shad fry, or more than twice as many as the river itself was able to provide, the total of 160,501,000 shad fry being the result of artificial shad culture in the hatcheries, and all of the egs which produced this great number of fry would have been lost had they not been rescued by the State and National Fish Commissions.

Mr. Conine says in conclusion, and as a final argument, that in the State of Vermont the fish hatcheries are maintained for less than $7,000 a year, and that in New York State $100,000 will not pay the expenses. In this he is as wide of the facts as he is in giving the habits of the shad. Vermont has one hatchery devoted to the propagation of trout and salmon. I am not sure, but I think no other fish are hatched in it, and the output from the hatchery does not concern this note. New York has eight permanent hatcheries, and if each had what is alleged to be the sum expended on the Vermont hatchery New York should expend $56,000 on the eight hatcheries. In addition to the eight hatcheries, there is the shad hatchery maintained during the shad season and a mascalonge hatchery maintained only during the mascalonge season; two whitefish egg-collecting stations maintained only through the season for taking whitefish eggs. For the fiscal year ending Sept. 30, 1900, the total disbursement by the State of New York for maintenance of hatcheries and hatching stations, collection of eggs and the distribution of fish and fish fry, amounted to $52,772.66.

It will be noticed that the disbursements include hatcheries and hatching stations—that is, the eight permanent hatcheries which are in operation all the year, the shad station on the Hudson, the mascalonge station on Chautauqua Lake, the whitefish stations on Hemlock and Canandaigua lakes, the collection of lake trout eggs in Lakes Michigan and Superior, the collection of wild brook and lake trout eggs in the waters of the State, the collection of lobster, smelt and tomcod eggs in the Sound and bays and streams of Long Island, the equipment and repairs of the State fish car, the expenses incurred in bringing the contributions of the United States into New York and in planting them by means of cars or messengers of the U. S. Fish Commission. For this outlay the State waters receive every year in the neighborhood of 200,000,000 fish, and it is generally conceded to be a good business investment for the State.

The declaration made by Mr. Conine in the last sentence of his interview I do not pretend to understand, and I doubt if he does. He says: "In New York State $100,000 will not pay the expenses, and a number have made themselves wealthy in the business." Which business? I really do not know how he wishes to be understood. If he means the men who hatch fish at the per diem of $1.50 to $2, he must be in error or the men would not continue to work in all temperatures of water and in all weathers at this rate, for it is not a job that the wealthy would cling to for any length of time, and I am forced to conclude that he must have thought that he was being interviewed upon some other subject than shad culture; but if he will persist in engaging in matters relating to shad, I would suggest that he take a partner by the name of Wm. Duncan, that I find mentioned in the Philadelphia Record under the head line:

"SERIOUSLY BITTEN BY A SHAD.

"WILMINGTON, Del., June 3.—William Duncan, aged twenty-six years, a Delaware River fisherman, was bitten by a shad and is now in the Delaware Hospital here, suffering severely. While hauling in his net ten days ago one of the fish, which was particularly vicious, seized his hand in its mouth and inflicted a painful injury. The fish had fine teeth, which cut the flesh. The wound was regarded as trivial, but in a few days the hand began to swell. Now it is inflamed and swollen much larger than the usual size, and serious results are feared. The injury is infected with a poisonous matter, and the outcome may be blood poisoning."

As the shad has no teeth, not even vicious shad, the firm might be Conine & Duncan; then if they could find the man who crossed the shad with the jellyfish, they could add "& Company," by taking him into the firm, and the only plant required would be a credulous reporter on the staff of the daily or weekly press, with a department devoted to fisheries.

The Other Side of the Shield.

Since reading the interview I have quoted above, I have heard from Capt. John Pindar, of Catskill, and as he has made his living for many years—I think all his life—as a shad fisherman, and is still in the business, it is fair to assume that he knows something about it. Capt. Pindar says: "My attention having been called to certain statements alleged to have been made by Jacob Conine in an interview, I desire to say that Mr. Conine's premises are false, and his conclusions are mistaken. So far this has been the best shad season in ten years, and last year on the lower Hudson was the best shad year in twenty years." Capt. Pindar contends that the fish that are growing scarce in the Hudson are those which are not cultivated artifically, like the sturgeon and bullheads. He underlines this statement: *"If it had not been for the shad hatcheries there would not be a shad in the Hudson to-day."* I once heard a shad fisherman declare before a legislative committee that the run of shad in the Hudson depended solely upon whether or not the fish came into the river from the sea, and the hatching operations had nothing to do with it. Capt. Pindar is not that kind of a fisherman, for he knows what he is talking about when he talks about shad fishing and the habits of shad.

A. N. CHENEY.

The Settler and the Loaded Cigar.

WE have a man out this way named Bassford, fond of a rod and a gun, but yet more fond of fun along the lines of practiacl joking than any man I know of.

He and a party named Boyd went fishing. They were to fish a secluded lake teeming with small-mouthed bass of gigantic size twenty miles away in the woods and unknown as a fishing spot to the outside world.

Taking a team and swinging a boat to the axles of the wagon, they started off for a long drive through the woods. Boyd had fished the lake before and knew the way, and all went well until nearing the end of their journey they came chock-a-block against a barbed-wire fence shutting off the road and extending off into the woods. It was evident that a homestead settler had taken up the land around the lake and was fencing things in to make it easier for him to find his cattle at ngihtfall.

A council of war was held, and it was decided to go through or over the wires, which, after some work, was finally accomplished, the fence wires benefiting nothing from the operation.

Ten rods along the road and they came to a clearing with the settler's shanty in view. The door swung on its hinges and out rushed a tall, raw-boned individual, who grabbed up a hoe and made straight for the wagon, swearing as only a mad Irishman can swear when occaison demands it. Here was a pretty how de do! Boyd, in a moment, saw that unless they could lick the settler it meant no fishing that trip.

Following the usual preliminaries in the way of arguments, recriimnations and general profanity, things getting warmer every moment, Boyd, after fumbling among his dunnage, yanked out a bottle of whisky and without further ado proffered it to the settler. Hostilities ceased at once. Bassford and Boyd were given the freedom of the farm and the lake, and wire fences were forthwith forgotten. What will whisky not do sometimes?

Boyd was a happy man. He had long boasted of this lake to the skeptical Bassford, and was now in shape to make his word good.

And here is where the devil got uppermost in Bassford. He had a loaded cigar in his pocket, and thinking of the ruction it would raise if scientifically smoked by that husky, long-limbed Hibernian, he forthwith handed it to him. It was duly lighted, and some moments elapsing before Byod took up the reins to drive to the banks of the lake, the cigar meanwhile got in its work, blowing into fragments and filling the settler's eyes and face with tobacco dust, powder and ashes.

Pen, pencil or cold type cannot sufficiently convey to the reader the luird situation that followed. When Boyd and Bassford were safely down the back track a mile or so nearer home than before the explosion, Boyd turned around to Bassford and remarked that "some day his durned fooling would be apt to get him into serious trouble." That particular fishing trip can be literally said to have gone up in smoke.

CHARLES CRISTADORO.

Food of Sea Lions.

Editor Forest and Stream:

Referring to C. Hart Merriam's article in your issue of May 25 on the "Food of Sea Lions," permit me to submit a few comments upon his position and arguments, for I have been an interested reader of the correspondence between our State Fish Commission and the eastern authorities, as published in the last report of the Fish Commission. I am free to admit that up to the time of reading Dr. Merriam's article I did not believe that there were two sides to the question of the sea lions destroying fish; and while Dr. Merriam has called attention to a very interesting piece of evidence, I think he places too much stress upon one fact, while ignoring, in rather a free and unfair way, evidence which the Fish Commission of California had already published and of which he must have had knowledge, and of which he knew most of the readers of Science were in ignorance. He says in his article, "The local fishermen, the State Fish Commission and others assert without qualification that sea lions feed extensively upon salmon." From this one learns that the witnesses against the sea lions are first, the fishermen; second, the State Fish Commission, and finally "and others."

Now who are the principal witnesses against the sea lions and what are their qualifications, that they are to be dismissed in this sweeping was as "and others?" I do not recall its use by any man of standing as applied to such distinguished scientific gentlemen as Dr. David Starr Jordan and Dr. Charles H. Gilbert, of Stanford University, and Dr. Harkness, of the California Academy of Science, yet Dr. Merriam must have been familiar with the fact that the California Commission conferred with them, and had their indorsement, before they requested the right to kill on reservations. Dr. David Starr Jordan wrote in 1899: "In the case of the small, black, barking sea lion (*zalophus*) there can be no question. It enters the rivers and takes fish from the nets and is probably very destructive," and later "that the brown sea lion (*zalophus*) was a terror and a robber who deserved no support." Dr. Merriam must also have been familiar with the fact that Dr. Charles H. Gilbert had written, "My knowledge of the fish eating propensities of the California sea lion dates from 1880, when I assisted Dr. Jordan to take the census of the fisheries of the Pacific Coast. I then had a fairly extensive experience upon the fishing grounds, in company with fishermen, and I became convinced from my own observations and from conversations with these men, that the sea lion is enormously destructive of fish and fishing gear. I have seen these animals patrolling the gill nets; I have seen them eating fish. I am in favor of the reduction in the size of the herds of the sea lions on the California coast, and believe that such reduction will materially increase the fish supply in these waters." In the face of this evidence was Dr. Merriam justified in speaking of Dr. Jordan and Dr. Gilbert as "and others"?

In concluding his article, Dr. Merriam makes this remarkable statement: "It is not claimed that sea lions in their native element never eat fish, at the same time the only actual evidence we have on the subject fails utterly to substantiate the allegations of the fishermen." In view of the quotations already made from Dr. Jordan and Dr. Gilbert, I submit that they appear to me to be actual evidence and are not to be dismissed as failing "utterly to substantiate," for here on the coast we have learned to give full weight and consideration to the statements of the distinguished President of Stanford University and his able assistant, Dr. Gilbert. Here they are believed to be careful and learned scientists, especially versed in aquatic life, and we do not, when we find them arrayed upon any side of a controversy, speak of them as "and others." Out here we are more familiar with their names than with the name of C. Hart Merriam, for they have become Californians in the best meaning of the term, and we resent their being written of as "others" and their statements dismissed as "failing utterly to substantiate."

And finally Dr. Merriam states, "And is it not significant that in former years, when sea lions were much more plentiful than now, salmon also were more abundant? If the fishermen will look into their own habits and customs during the past twenty-five years, it is believed that the cause of the decrease of the salmon will not be difficult to find, and this without changing the decrease to the inoffensive sea lion." I cannot find that the State Commission has ever claimed that the decrease in salmon is due alone to the sea lion. Who believes that to be the case? "Before the Gringo came," who cared what damage the sea lions did to the fishes, or who knows how many of either there were in the waters? With the coming of the white man his demands changed the equation. Fishing for salmon began and has continued. The killing of sea lions for their hides, oils and whiskers was carried on for a time, the adult males only being killed. The carcass is now of no value and the hunters went out of business some years ago, since which time the herd, so far as any one knows, is as large as it ever was. What "actual evidence" has Dr. Merriam to substantiate his statement that "in former years sea lions were much more plentiful than now"?

I have written this note to resent Dr. Merriam's application of the words "and others" to the principal witnesses against the sea lions, and to ask if Dr. C. Hart Merriam is so great that he can in a journal of science class such distinguished scientists as Dr. David Starr Jordan and Dr. Charles H. Gilbert as "and others."

STEELHEAD.

STANFORD UNIVERSITY, California, June 15.

Glenmere Lake.

Orange County, New York.

GLENMERE LAKE is on the main line of the Erie Railroad. It can be easily reached from three different stations: Greycourt, 54 miles from New York, 4 miles from the lake; Chester, 55 miles from New York, 3 miles from the lake; Goshen, 60 miles from New York, 4 miles from the lake. It is sometimes advisable to use either Greycourt or Goshen, as many of the express trains stop at either or both of these stations, while they run through Chester without a stop.

Glenmere Lake is undoubtedly the best pickerel water we know of, both as regards size and quantity of fish. We give a birdseye view may of the lake, an explanation of which will show why this lake is always so plentifully stocked. Were millions of dollars to be spent in producing a perfect breeding ground, Glenmere could not be improved upon. Running back from the island the lake has a long arm stretching up into the woods. This arm of water is very shallow and thoroughly matted with weeds—so much so, that very few or none of the large fish go up far beyond its edge. This arm of shallow water is called the Marsh. Along the edge of the Marsh the big fish make their beds and spawn. As soon as the fry make their appearance they instinctively take to the weeds and shallow water, where they are afforded perfect protection, so that hundreds of thousands, perhaps millions, of young fish live through their first year's existence, where in other less favored spots they would have become the food of their cannibal brethren. The young fish do not appear to leave this nursery of theirs until they are about the size of railroad spikes and sufficiently strong to have a chance out in the body of the lake.

During the spring and summer one of the best fishing spots in the lake is along the edge of the Marsh among the crandocks and the many clumps of weeds. The big fish lie here evidently awaiting the exodus of the little fellows. This ground cannot be trolled—the obstacles are too many and too thick—but excellent results can be obtained by casting. The farmers and local Waltonians always cover this ground very thoroughly by skittering. When we first commenced to regularly fish this water, we did great work casting with Skinner spoons. It took but a very short time for the local fishermen to find that a Skinner spoon was by far a better lure than their old-fashioned skitter bait. To-day they cannot be induced to use anything else; and really these local fishermen are experts in casting a spoon with their 18 and 20 foot reed poles.

Some short time since large-mouth black bass were planted in the lake; they are now becoming quite plentiful, averaging about a pound each. There is not the slightest doubt that within a year or two Glenmere will lead all other waters as a bass ground, as she does to-day as a pickerel water. Large yellow perch are so numerous that the water appears to be literally alive with them. The best rigs to use in Glenmere Lake are: For trolling, Skinner casting spoons, No. 3, silver and brass; for casting, Skinner casting spoon, No. 4½, silver and brass. In both cases a little piece of the white belly of another fish should be attached to the hook as bait. No feathers of any description should be used.

Now, with either Pat or Tom, the two hotel guides, we will take a turn around the lake, noting as we cast or troll along the shores the best points and holes. Starting from the boat house, we will hug the right-hand shore. As soon as our spoons are fairly out we expect to find one waiting for us under the shade of the willows, then another one or two from the clump of weeds where the road turns off to Florida. A little beyond this clump of weeds is an orchard on the shore. Just off the last apple tree down by the water is a deep hole. At this point we expect a big fellow, as it is a favorite spot of theirs. For about 100 yards from this hole the bottom is gravelly and the fishing only so so, but as soon as the fence is reached the fishing is again good and continues so to the head of the lake. About 100 yards out into the lake opposite the next fence are a number of clumps of weeds. We always get three or four trolling around and between them. From this weed bed up to the lower point of the bay is first-class water, both for trolling and casting. Some fine fish can be got by casting in among the weeds close to shore and alongside the cranberry bushes. All around the lower part of the bay is good casting ground. From the lower point of the bay to 100 yards above the upper boat house is the best stretch of trolling water in the lake. We have taken scores of double-headers just out from the big oak tree below the boat house, and again just off the boat house. We on one occasion took twenty-nine fish in thirty-one minutes in this stretch of water, and all good ones. It was almost an impossibility to get the spoon ten feet from the boat before a fish was on it, and often it was taken when only 6 or 7 feet from the boat.

From the boat house the lake takes the form of a large cove. Part of this water is available for trolling, but the bulk is casting water. Some of the biggest fish taken in the lake comes from the cove, and are generally taken by casting into the holes among the weeds close to the shore just above the boat house. On leaving this cove we will hug the opposite shore and pass down on the inside of the little rush island, where we generally get two or three fish alongside the rushes. On turning the corner of the bulrushes on shore we generally get three or four more victims for the box. When down at the end of the bulrushes turn up toward the Marsh, keeping as close to the rushes as possible. Some big fish are annually taken here. From the bulrushes down to the end of the big island is magnificent water. The fishing is in among the crandocks and cranberry bushes. Should the angler catch the fish well on the feed at this spot, there is no limit to his catch. Having before noted the fishing around the mouth of the Marsh, we will start into Peddler's Cove from the last bunch of cranberry bushes on the outside of the big island. Peddler's Cove is one of our favorite spots in the lake; there are always plenty of bass, pickerel and big perch in it. It is available for trolling, casting or bait-fishing. At the bottom and on the outside of Peddler's Cove there is a small island; the water is good all around it.

After leaving this island we round Catfish Rock and generally get a couple before our lines are straightened out for the run down the lake. The deepest water in the lake is off Catfish Rock (16 feet). The shore all the way from Catfish Rock down to the lower cove is good trolling water, and generally yields three or four fish. The lower cove generally adds three or four more to the box, and another three or four can be got along the shore from this cove over to the bathing pavilion. We round the pavilion and are at the boat house from which we started and in time for lunch. The reader may ask how many fish we have taken since we started; we will say that we have on many an occasion taken over 100 in once thoroughly working around the lake, as above described, and this between morning and lunch time; and during the day over 200. The fact is, the lake is overstocked. We have no hesitation in saying that if one-half of the fish were taken out the quality of the fishing would be improved, for then the percentage of large fish—3, 4 and 5 pounds—would be greater than now, but as long as the Marsh remains to foster and protect the young fish all the legitimate fishing in the world, no matter how many anglers fish the lake, will never materially reduce the quantity.

Has any of our readers a taste for frogs' legs? If so, let him take Pat on a warm, still night and go up into the Marsh. With the aid of a lamp or torch a big fat frog can be seen calmly sitting on every other lilypad. With a long bamboo pole having a couple of yards of copper wire and a big treble hook on the small end of the pole, the (frog) angler can in a short time get all he wants. If he be an expert in jabbing there is no reason why he should not return from the Marsh in two or three hours with a couple of hundred frogs. Pat is an expert in taking them off the hook. During a calm, warm afternoon they will also be found out on the lilypads. The outfit now will be Pat again, the same long pole, but instead of a wire and treble hook, a couple of yards of linen line and a single hook, with a piece of red flannel on it for bait. It requires a good set of nerves to witness their enormous jumps for the red rag without a shock. There is quite a lot of fun chasing frogs in the Marsh, in addition to a dainty morsel for dinner or lunch.

Tom is more of an expert fisherman than a frog hunter. He is of rather a peculiar race, his father having been a negro and mother an Indian. Tom is a magnificent specimen of manhood, standing over 6 feet high, and broad in proportion. Some of his admirable traits are: An untiring worker, ever ready, willing, obliging and polite, and a regular fish fox. Tom is worthy of any one's trust and confidence.

When an angler is going to fish Glenmere Lake, it is just as well to write the proprietor, Mr. H. H. Cable, whose post office address is Glenmere Lake Hotel, Florida, Orange county, N. Y., and let him know by what train he is coming and at what station he will get off. Mr. Cable will then send a rig to meet him. When at the lake it will be only a matter of five minutes before he will find himself pleasantly and agreeably situated, and perfectly at home. Although absolutely in the country, the hotel has telephone connection, so that any business man can have a talk with his office at any time he wishes.

Before leaving this very charming little lake, which is one of the many artistic bits of water that dot and adorn beautiful Orange county, we must take a glimpse of its more than beautiful surroundings. Glenmere Lake is on the borders of Goshen, a veritable land flowing with milk and honey. Some of the fairest lands conceivable are in the vicinity of Glenmere. It would seem that nature had done her very best to bestow her greatest gifts throughout this region. In driving from the lake to the village of Goshen, a distance of about four miles, we pass through a stretch of most perfect park-like land; nothing richer or more pleasing to the eye exists. From this rural gem we will take the opposite direction from the lake and pass through miles of forests and rugged mountains, until we look down on Greenwood Lake, a silver thread among the somber green lines of forest-clad mountains. This part of the country is wild and picturesque. Once more we will start from Glenmere and

drive on our way home to Chester Station, a distance of about three miles. We pass through a broken country up hill and down dale, through clumps of woods, and rich rolling meadow lands, and here and there skirt flat, black lands, locally known as onion patches, but which are in reality extinct lakes. These have been filled in during the past thousands of years by vegetable growths. How many thousands of years it has taken to thus obliterate these lakes geologists can best inform us. Many valuable and interesting remains of antediluvian animals are periodically unearthed in the cultivation of these peat lands. Probably the largest specimen remains of the giant mastodon ever brought to light was taken from one of these dark swamps, but a few miles distant from Glenmere Lake. As one looks over these dark fields, now under the control of human hands, one's mind naturally pictures the time when these grim antediluvian animals roamed supreme over these fair lands of Orange county. And when one thinks of their immense size and strength, it is easy also to picture the terrible pitched battles that were fought between them and other equally terrible monsters. Century upon century, thousands upon thousands of years have elapsed since the rolling lands of Orange county felt the heavy tread of the mastodon's foot. After the mastodon, man became the supreme power. Century upon century thousands upon thousands of years rolled on over the head of this newer and more perfect animal, who during these long periods was constantly changing and developing, until we come down to yesterday, when history steps in with its pages of print and paper to give us a little light on a few past hours of earth's existance, taking the place of tales told by water-worn pebbles, fossils, bones, stone implements and rude carvings.

Upon the arrival of the white man upon this continent the red man was found in possession and power. Again battles fierce and bloody were fought between the two races for supremacy. Once more it became the survival of the fittest. The red man with his fierce, cruel nature was supplanted with the gentler paleface, who with his intelligence and science remains bringing forth from the bowels of the earth nature's great treasures, which have been lying dormant since the Creation. But we must leave these fair hills, with their wooded slopes and green pastures; we must hie away from these dark swamps with their bony movements of bygone ages, for we are entering the sun glare of civilization, which dispels the shadowy mists of the past.

JAMES CHURCHWARD.

CHICAGO AND THE WEST.

Unsatisfactory Western Angling Season.

CHICAGO, Ill., June 21.—Still we have only gloom and despair in this corner of the world. From cold and bleak east winds and chilly nights we have sprung all at once into a season of torrid midday temperattures and of all sorts of atmospheric vagaries. As a consequence, our trout have taken to the tall timber and have not send word of their whereabouts. Bass fishing, it is true, runs along, for there is no more obliging gentleman than your black bass. As to the muscallunge, the situation is about the same as that of the trout. Nobody has caught any trout worth mentioning. I have already told of the 22-pound fish which came down from near Conover, Wis., from Mr. Wheelock's party, and this still remains the largest fish reported for the season, and it would certainly seem as if the State of Wisconsin had gone entirely barren of muscallunge. Lake Vieux Desert turned out five good fish to the rod of Mr. Peck, of Chicago. He is of the opinion, as is general with anglers who are familiar with Lake Vieux Desert and its vicinity, that the lake does not contain many muscallunge, but when you do make a strike it is generally a very good one.

Mr. Harry Gobel, of the Hartford Building, this city, is one of the most patient of our muscallunge anglers who annually make a northern pilgrimage in the early summer. Harry went up to Lake Vieux Desert last week, but he came back without his 'lunge. He had some good bass fishing, but he did not care for bass. He got only one strike of any consequence, and caught a glimpse of the fish, which missed the spoon in some way, although it struck at the line and carried the spoon down into the water with it. This was the only fish of any size which Mr. Gobel saw during the trip.

Minocqua seems to be the best water, all things considered, for muscallunge this spring. I hear of one party who took six 'lunge at Carroll Lake this week, which water is just below Minocqua. The fish were not of any size, however.

Mr. H. L. Stanton, who, with Mr. Frank Willard, of this city, intended to take a muscallunge trip, probably in the Manitowish country this week, was, the last time I saw him, standing on one foot looking disconsolate and hopeless. "I always thought Willard was a thoroughbred," said he, "but here he is throwing me down for the first time in his life. He says he isn't sure he would get any muscallunge or he would be glad to go. Talk about being sure! It seems to me the only way he can get any muscallunge is to go out and try for them."

I advised Mr. Stanton to go alone, even if he had to walk every mile of the distance and fish by himself all the time. This business of trying to get together a party of anglers is one of the most heartbreaking experiences one can have. The only thing to do is to set a time for starting and then start on that date, rain or shine, whether the rest of the party are there or not. In this way you will always get what you start after.

Mr. Stanton, by the way, has returned from St. Louis to stay here permanently. Chicago is his first and only love, and he will join the ranks of anglers very gladly, nor could any man possible to be named be more welcome among them. He ought to put a "want ad." in the FOREST AND STREAM inquiring for a new fishing partner. I am sorry to hear of this about Frank Willard.

For the Mississippi River.

Mr. W. H. Comstock, whom I have from time to time mentioned in these columns for the past ten years as one of the first and most successful of our Chicago fly-fishers, came into the office this week looking for a good bass country. He said that he and a friend connected with the C., B. & Q. Railway wanted to go where they could get some really good fly-fishing for bass. This was easy. I advised him to get on a Q. train, go to Alma, Minn., and float down the river to La Crosse, Wis. This is not the time of year locally accounted to be the best for Mississippi River fly-fishing for bass. Yet it is almost certain that they will get fish enough to give them enjoyment. I have called attention to this fly-fishing for bass on the upper reaches of the Mississippi before now. It would be a revelation to a fisherman who has had all his experience upon the smaller streams of the Mississippi Valley. I trust Mr. Comstock and his friend will have an enjoyable time and believe that they will meet success.

Mr. Avery's Rainbow.

From an envelope this morning fell the following newspaper clipping:

"The mind of the imaginative fisherman cannot stretch a story beyond that which Waldo A. Avery can tell and substantiate, says the Detroit Journal. On exhibition in front of Joseph A. Marks' store on Woodward avenue is a rainbow trout, the largest seen in this town for years, and by some claimed to be the largest ever shown here. The fish measures a trifle over 23¼ inches from end of tail to tip of mouth, and is a trifle short of 6 incehs through in the thickest part.

"This trout was caught Saturday in the Au Sable River with a 4-ounce Leonard rod and with a No. 6 Cahill fly, and the weight, dead, is 4¾ pounds. The feat of landing such a heavy fish with such a light rod and slender hook can be appreciated when it is remembered that the wire used in a No. 6 hook is only about the same size as that used in the common house pin, and the whole hook could easily be laid upon a man's thumb nail. The fly—a mottled brown one—is hardly as big as a common house fly."

The above inclosure came with the following letter from Mr. W. B. Mershon, of Saginaw, Mich., and it certainly would seem to indicate that Mr. Avery has had one of those great streaks of luck which is better than finding a pot of gold under the end of the real rainbow. A weight of 4¾ pounds is something of a staggerer even for the rainbow in Michigan. This little feat calls again to mind the increasing importance of the rainbow trout in all the angling plans of lower Michigan. It has come to stay, and it will as surely supplant the brook trout there as the latter did the grayling. Mr. Mershon wrote:

"The inclosed clipping from a Saginaw paper certainly explains itself. The remarkable feature of it is the size of the rainbow trout taken in the day time on a fly. I know there have been a great many far larger rianbow trout than this taken from some of the Michigan streams, but I always have understood that these large fellows have been taken either with a worm or a minnow, and generally at dusk or late into the night. But this one that Mr. Avery killed was taken on a fly, the paper says a No. 6, but I looked at the Cahill pretty carefully, and I should have said it was a No. 8, but that is immaterial. It was about 4 o'clock in the afternoon, and it was taken from a deep pool below an old abandoned dam on a little stream that puts into the North Branch of the Au Sable. He made a gallant fight, and I stood by and finally netted him for Mr. Avery, while George Morley looked on and admired the performance, so you see here again were three members of the Saginaw Crowd strictly 'in it.'

"I have not had any tremendous trout fishing this year. All of May was stormy, cold and disagreeable, with only an occasional day for decent fishing, and June has come off hot. We spent four days in camp last week and had a grand time. We got very few trout during the day, but just at evening for about three-quarters of an hour the rainbow trout would be jumping, and during that time we would take from four to ten, and that would end the day. We had several weighing from 1 to 2 pounds, but found very few fontinalis on the North Branch. I do not think it is a stream that it pays to fish late in the season. Of course the new law limiting the size to of 8 inches is a grand one, and every one seems to take kindly to it, and it is saving the fish.

"I have missed my salmon fishing this year, but I understand the run of fish is very poor, and no fishing has been done yet worth speaking of."

Trout Fishing with a Steam Launch.

Mr. C. Gus Brommer, of Chicago, wants a bit of advice as to where he and his friends can get some good trout fishing from their steam launch. His letter reads as below:

"I am one of a party of three young men comprising the Trio Cruising Club. We have a 16-foot launch which contains a reliable motor and has unusually large locker space. One of the features is two large lockers, which are built one on the forward and the other on the after deck and 15 inches high, which have a storage capacity equal to two small trunks. In short, we have had the launch remodeled to meet our requirements, and have embodied many conveniences not to be expected in a small boat, all calculated so as not to detract from its seaworthiness or spoil its lines. It is loaded with three guns with plenty of ammunition, a complete fishing outfit for three, a camera and sundries, besides a camping outfit, including a 7 x 10 tent, a camp cook kit, some provisions and many other little useful trifles.

"Now you have some idea of the extent of our outfit. But the real object of this communication is to advise you of our destination, which is northern Wisconsin and Michigan via Green Bay. Our aim is to run up some one of the larger rivers that empty into it. Which one shall we choose? We favor the Menominee River, but we are told it abounds with falls and rapids and we want to avoid them as much as possible, yet we anticipate them and expect to portage it around such obstacles when the portage required does not exceed more than a hundred feet or two, hence the abbreviated boat.

"We have plenty of time and wish to camp and fish at our leisure. What we want is good fishing, particularly for trout, a navigable stream for a craft drawing 2 feet of water, and we want to get as far into the interior as possible, and of course pleasant camping grounds, comparatively sanitary."

I should think that Mr. Brommer and his friends would find the Menominee River too full of rapids and falls for navigation. The Escanaba River, the Ontanogon, or indeed almost any of those Northern trout streams, according to my understanding, would in all likelihood be apt to offer similar inconveniences to a craft drawing 2 feet of water. There might be many reaches where the boat would do nicely, but there would surely be shallows and falls in parts of the streams which would render navigation impossible. I should think that the Flambeau River, the Chippewa or the Wisconsin, though not offering trout fishing, would present more attractions for a trip of this kind. They would offer excitement enough in certain passages of their rougher waters and would provide very interesting sport with wall-eyed pike, bass and even an occasional muscallunge.

He Reported His Luck.

All sorts of people come into the FOREST AND STREAM office and ask for information on all sorts of things. They learn where to go fishing, then they do go fishing, and perhaps they come back home. Perhaps they never do come back; at least, in nine cases out of ten there is no further information to the effect that they ever have returned. They nearly always fail to report their luck at the same place where they got their tip.

Mr. E. J. Pressler, of this city, is an exception to this ordinary rule, and I am glad to offer his note, which he leaves, mentioning his trip to the Prairie River: "I went in at Merrill," he says, "and stopped at Dudley's. The water was very low and clear, and low down on the river there is scarcely anything to be had now. You have to go away up and fish up stream. There are any quantity of small fish, but I kept nothign under 8 inches. I think I took in the four days I was there 250 fish, and out of this number I killed less than 60—I think 58. The water was very cold. There were a few warm days and a lot of flies then, and this probably gave us what good fish we had. One day I had been working up stream and had worked out a couple or three fish, when I heard a big native come tearing over the brush. He had a bait can tied around his neck, and had a dozen or fifteen big fish in his bag. This was the only bait-fisherman I saw, and he stopped at Bates'.

"The Prairie River is the most beautiful trout stream I ever saw. It is a perfect stream for fly-fishing. Major Daniels, of Denver (who is the same Major Daniels who first went up to the Prairie River on the FOREST AND STREAM recommendation) and Mr. Stevens, of Harvard, are making a scientific study of the fly hatches and trying their own flies in imitation to ascertain the effect. Indeed I would not have had any fish at all had it not been for the generosity of Mr. Stevens in offering me some of his flies.

"I just let you hear from me to prove that there is one man who would come back and report his success in return for information."

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

New Jersey Coast Fishing.

ASBURY PARK, N. J., June 22.—Anglers are having a second season's unusual experience with a run of very large bass. While my personal observation is not quite up to my past experience, still I am on the grounds every day and keep in pretty close touch with the fraternity; and I very much doubt if ever a day gave better results than yesterday. Omitting names of captors, the weights of the large fellows were 20½, 10, 23, 23, 27, 44, 35, 22, 20, besides a host of fish from 4 to 8 pounds each. This I believe will be regarded as a record day for large fish. The favorite bait is the skinner clam. And thereby hangs a secret, which, by the way, has become an open one. The past two years our beach has been fairly deluged with the clams, and the bass seeking them as they are broken up in the surf became a comparatively easy prey. Kingfish are very scarce, owing no doubt to a very cold prevailing current. A few weakfish are in our bays and rivers, but as yet are not biting freely. Fluke and plaice are plentiful, and can be taken in abundance everywhere.

LEONARD HULIT.

BAYVILLE, N. J., June 20.—Weakfish are biting slowly, but we expect them on full of moon. Were quite a supply of bluefish in the bay this week.

HERB.

Exposition of Fisheries at St. Petersburg.

CONSUL-GENERAL GUENTHER sends the following from Frankfort, May 8, 1901:

The Imperial Russian Association of Fisheries will hold an international exposition in February and March, 1902, at St. Petersburg, for the purpose of showing the condition of the fresh and salt water fisheries of the world. The expense of the exposition will be defrayed by the Association, the Crown, the municipal government, private contributions, and by charges for exhibition space and for the admission of visitors. Premiums will be awarded in the form of gold, silver and bronze medals, diplomas of honor and money prizes. The exposition will have nine departments, as follows: (1) Fisheries in general; (2) salt and fresh water fisheries; (3) implements used in the fisheries industry; (4) products of the fisheries; (5) manner and means for preserving fish; (6) arrangement of fish hatcheries; (7) fishing sport; (8) aquariums and their inmates; (9) scientific researches concerning the lives of fishes, etc.

Lake Pleasant.

JOHNSTOWN, N. Y., June 19.—We are in receipt of a telegram from Morley's, at Lake Pleasant, stating that John Uhlinger, of this city, had landed a 17¼ pound salmon yesterday. This is the largest trout captured this season on this lake. The fishing has been good for brook trout and quite a few landlocked salmon have been taken trolling during the past ten days.

C. M. R.

Tarpon Fishing.

Second Paper—Tackle and Outfit.

Editor Forest and Stream:

Notwithstanding my failure to inaugurate a discussion on the question of "where to go tarpon fishing," I herewith send you, according to promise, my second paper of the series, which will cover the subjects of tackle and outfit. I hope that this paper will have better luck than its predecessor, and I desire to point out the fact that it is by no means too late to discuss the subject of "where to go," in case that any tarpon fisherman decides to repent his former negligence and to give his brother sportsmen the benefit of his experience. For instance, Mr. Ed vom Hofe might be induced to tell something about his numerous haunts in Florida.

The following is a list of tackle that I consider essential for any one who can afford it, and who desires to have everything that is necessary for a two or three weeks' outing on tarpon and other game fishes, with plenty of it not only for his own use, but also to provide occasionally a day's sport for a friend who has no tackle and who desires to try his hand at tarpon fishing.

Nothing is more exasperating than to run short of tackle and be unable to purchase more, so the true sportsman will provide himself with everything that he thinks may be necessary, and probably a little besides. For my part, I never on any fishing trip fail to break and lose a lot of tackle, and I always find some good fellow who wants to borrow an outfit either to try the sport for the first time or to replenish his failing stock. Moreover, the beginner invariably succeeds in breaking or losing something, so when I return from a trip I generally have to spend from $25 to $50 in order to replenish my outfit.

This list covers everything required for all other kinds of fishing that is to be found with the tarpon fishing, for the reason that on some days the tarpon are absent or will not strike, while other fish are obtainable; besides, some sportsmen like an occasional change from large to small fish. It is true that one can catch nearly all salt-water game fishes on tarpon tackle simply by changing the snells, but, as there is not much sport in "spearing minnows with a harpoon," it is better to adjust the tackle to the fish. Occasionally one gets left by so doing, because tarpon and jackfish will often go for small bait. When one of them gets hung on light tackle, there is an exciting time till something parts. I once for twenty minutes held a 6-foot tarpon on a light, 11-foot rod with a small bass reel containing 100 feet of strong line, the hook being a No. 2 mackerel, mounted on a 12-inch wire, and the bait a minnow about 2 inches long. In endeavoring to prevent the fish from towing the boat into the surf, I broke the rod, then the hook straightened out and the fish escaped. Such an experience is extremely exciting, and by no means disappointing, because the odds are fully 100 to 1 in favor of the fish.

List of Tackle.

1 long trunk for rods.
1 sheet iron box for tackle.
2 or 3 tarpon rods.
2 medium-sized rods for channel bass, etc.
2 light rods for small fish.
2 or 3 tarpon reels.
2 medium-sized reels.
2 small reels.
2 or 3 tarpon lines.
2 medium-sized lines.
2 light lines.
2 dozen tarpon snells.
2 dozen snells with medium-sized hooks.
2 dozen snells with small hooks.
1 dozen unmounted tarpon hooks.
1 dozen unmounted medium-sized hooks.
1 dozen unmounted small hooks.
3 dozen large bronze barrel swivels.
3 dozen medium-sized swivels.
3 dozen small swivels.
40 tarpon snell wires about 2 feet long.
40 lighter snell wires about 1½ feet long.
40 light snell wires about 1 foot or 1 foot 3 inches long.
1 gaff hook.
1 revolver with from 50 to 100 cartridges.
4 dozen heavy, detachable sinkers.
4 dozen smaller assorted sinkers.
2 or 3 large cork floats.
2 or 3 smaller floats.
1 old tarpon line, or other strong line for tying on reels and splicing cracked rods.
1 piece of beeswax.
1 small table vise.
1 pair strong cutting pincers.
1 pair smaller flat pincers.
1 pair round pincers.
1 piece of rubber belting about ¼ inch thick, large enough for half a dozen brakes.
1 piece of sheet lead.
2 flat files.
1 triangular file.
2 disgorgers.
1 stick of glue, or other composition for mending rods.
1 large strong knife for cutting hooks out of fish.
2 or 3 sheets of emery paper.
1 bottle of oil.
1 oiler.
1 leather case for carrying hooks, etc.
1 belt with socket for rod.
1 cushion for chair.
1 screw driver.
1 pocket tool box.
1 spool of fine copper wire.
1 ball of strong cord.
1 scale for weighing fish up to 50 pounds.
1 scale for weighing fish up to 300 pounds.
1 spool of strong linen thread.
1 bottle of vaseline for greasing steel.
3 or 4 thumb guards.
1 dozen finger guards.
1 line dryer.

The following is a list of outfit that is provided by the boatman at most fishing resorts; but the sportsman invariably should make sure each day that no item thereof has been omitted:

2 pair oars.
4 rowlocks.
1 anchor, with long rope and buoy.
1 chair lashed down near stern of boat.
1 club for killing fish.
1 large jug of drinking water.
1 drinking cup.
2 bailing dishes.
1 sail and mast, if desired.
1 live bait box, if desired.
1 piece of rope 10 or 12 feet long.
1 sheath knife.

Sometimes the boatman furnishes also a gaff and a cushion, but it is better for the sportsman to go provided with these.

The following list of clothing, etc., may prove useful to the uninitiated, and perhaps even to old sportsmen to use as a check on the things that they have collected for an outing. For years I have made a practice of providing typewritten lists of such things for my own use and for that of friends who intend joining me on my fishing expeditions. All agree that such lists are of the greatest convenience.

Clothing, Etc.

1 light-colored felt hat, and for hot weather, a Chinese scoop hat set out from the head.
1 rubber coat or poncho.
3 flannel shirts.
1 or 2 hunting coats.
2 or 3 pairs blue jeans or overalls.
1 vest or sweater, if cool weather be expected.
3 suits of underclothing suitable to the weather anticipated.
6 pairs socks.
1 pair hip rubber boots. These are not absolutely necessary, but sometimes are very convenient to have.
2 pairs ordinary walking shoes.
6 large bandanna handkerchiefs.
1 pocket knife, with corkscrew.
2 pairs leather or heavy kid gloves.
1 housewife, containing needles, thread, buttons, pins and safety pins.
1 toilet case.
1 shaving outfit, if desired.
1 package of toilet paper.
1 bottle of Jamaica ginger or Chamberlain's colic cure.
Any other medicines desired.
1 bottle of vaseline for toilet purposes.
1 box of matches.
Liquors or other drinkables, if desired.
Cigars and smoking paraphernalia, if desired.
Some light liteurature for stormy days.

In order to enable the novice to buy proper outfit, I append the following estimate of cost thereof. It is based on purchasing everything of excellent quality though not in all cases the most expensive article obtainable.

If one is going to a well-known resort, he can omit many of the items on the list, especially the duplicates, and rely upon local dealers to replenish for breakage and loss; but an old and enthusiastic tarpon fisherman sooner or later will provide himself with all the articles on the list, and more besides.

Cost of Outfit.

1 trunk	$9 00
1 tackle box	5 00
2 rods	32 00
2 rods	20 00
2 rods	10 00
2 reels	50 00
2 reels	24 00
2 reels	14 00
2 lines	8 00
2 lines	5 00
2 lines	2 00
2 dozen snells	12 00
2 dozen snells	6 00
2 dozen snells	3 00
3 dozen hooks	3 00
9 dozen swivels	4 00
120 wires	2 00
1 gaff	5 00
1 revolver with, cartridges	15 00
8 dozen sinkers	2 00
6 floats	1 00
1 vise	1 00
3 pairs pincers	1 00
Belting, sheet lead, etc	1 00
3 files and 2 disgorgers	1 00
1 knife, glue, etc	1 00
1 oiler, oil and emery paper	1 00
1 leather case	2 00
1 belt	2 00
1 cushion	1 00
Sundries	1 00
Scales, line dryer, thumb and finger guards	6 00
Total	$250 00

If it be desired to add one more first-class tarpon rod, reel and line, the preceding amount would be increased to about $300.

Let not the size of this estimate deter any one from trying tarpon fishing, because he can get along with a much smaller outfit, especially by going to some well-known resort like Aransas Pass, where tackle, generally "cheap and nasty," is procurable.

One might venture on going there with no outfit at all, counting upon hiring one at say one dollar a day, plus the cost of breakage; but this is always unsatisfactory. Or he might buy a rod, reel and line with a dozen snells and trust to luck for the rest.

And now let us go down the list and discuss the various items in respect to their quality, characteristics and price.

Trunk.

This can be bought in New York from a tackle store, but it will prove to be a rather flimsy article, and, consequently, short lived. It is better to have one made to order by a good manufacturer of trunks, giving instructions to have it built as strong and rigid as practicable. The dimensions on the inside should be 8 inches square and 6 feet 1 inch long. It should have substantial twin locks near the ends and two strong snap hasps, one on each side of the middle and about 1 foot therefrom. The interior should be ribbed with steel flats, countersunk, so as not to injure the rods, and should be lined with cloth.

My trunk made on this specification cost $9. It is large enough to contain all my rods, gaffs and snells, several reels, two guns in their cases, and a lot of small tackle and clothing. The latter prevents the heavier articles from moving about. The trunk should always be packed full, even if it be necessary to use paper for the purpose.

Tackle Box.

My tackle box is an ideal one, the plans and specifications therefor having been prepared by the widely known tarpon fisherman, Mr. R. M. Snyder, of Kansas City. It is made of galvanized sheet iron, strengthened at the corners by filleting, and provided at the sides with strong handles, to which is buckled a stout leather strap. The outside dimensions are: Length, 16 inches; width, 12 inches, and height, 10½ inches. It is divided into three tiers, and contains two shelves. The top one is 4 inches deep, and occupies the entire area. The other is 3 inches deep, 11¾ inches long and 10 inches wide. This leaves two fixed compartments, the deep one of which is divided into two spaces of 6 inches by 6 inches, and the shallow one into three spaces of 3½ inches by 12 inches. The large tray is divided into four spaces, each about 4 inches by 12 inches, and the smaller one into three spaces, each about 4 inches by 10 inches.

Any one wanting a truly first-class tarpon tackle box can do no better than to order one built according to these specifications. Mine cost $5. It is perfect in every way, except that it is a trifle heavy—a good fault for a box that has to be shipped as baggage from 6,000 to 10,000 miles per annum.

Rods.

No rods that I have yet found are quite good enough for tarpon fishing. Cane ones are absolutely worthless, for, even if they do not break, they bend so excessively as to make one continually uneasy whenever a fish is on the line. A rod jointed at the middle is a delusion and a snare. I have a couple of them of the San Antonio pattern, and although they have landed some big fish, they are not to be depended on. Their weak place is just below the joint, and they will all break there sooner or later.

The split bamboo tarpon rod may be a good one, but the only one I ever owned slivered under the strain caused by a 6-footer. It has since been wound over a couple of feet of its length, and continues to do good service.

The best rod that I have yet found is Ed vom Hofe's $16 greenheart with agate guide and tip; nevertheless I snapped one of them short off on my last outing, under the strain of a 25-pound jackfish. There is not enough material in tarpon rods, for they bend too much and break too easily. The sportsman should never have to consider anything but the strength of his line when fighting a fish.

A steel rod would be the ideal one for tarpon fishing if it could be prevented from rusting. I have never heard of such a rod, but would like to try one built like the Bristol steel rod, which, in my opinion, is the *ne plus ultra* of rods for bait-casting and trolling in fresh water. However, it will not withstand the rusting effect of salt water. The great advantage of a steel rod is that it never takes a permanent set or shows any bending after use. All wooden rods bend permanently more or less, especially those used in tarpon fishing, necessitating the constant reversion of the tip in the socket in order to bend it back.

If Mr. vom Hofe would add about 25 per cent. to the diameters of his $16 greenheart rod, he would effect a great improvement.

There is not much use in buying cheap tarpon rods. They nearly always fail quickly, and cannot be relied on to handle heavy fish, although it was on a little $8 or $10 Divine rod of mine that Dr. H. W. Howe landed the record tarpon of 223 pounds. Although a stout little rod, it was cheaply built, and I noticed that the silk windings came off after a few months' service.

The Bethabara rod is much talked of, but my limited experience with it leads me to believe that the wood is too brittle.

Lancewood, if enough of it be used, makes a fairly good rod. Dr. Howe has one of his own manufacture that is nearly strong enough to land a whale. He uses it to lend to tyros, chumps and greenhorns who want to see what tarpon fishing is like. One of them lifted on it a 4½-footer and threw the fish into the boat.

The medium rods for channel bass and other fish up to 25 or 30 pounds in weight should be jointed at the butt only, but the light rods for small fish may have several joints.

Reels.

A really good tarpon reel cannot be bought for less than $20, and I prefer to pay $25 or $30. My experience has been mainly with the Ed vom Hofe reels. His $20 rubber reel is pretty fair, but the one I have gets badly used up every year or two, and has to go back to the shop for repairs. His $25 reel (or $30 with the patent outgoing drag) is more durable; but the said patent drag is by no means worth the extra $5, as it is altogether too feeble, although I understand that he claims to be making it more powerful than formerly. In my opinion, an initial resistance of 4 or 5 pounds would not be at all too much for such a drag. No drag should operate with an incoming line for the fish alone will provide all the work that the sportsman needs.

Cheap reels are continually getting out of order, and are therefore unsatisfactory.

A good reel should hold readily 500 feet of line, and no more than this should be put on reels of ordinary size, unless the line be a fine one. It is very seldom that more than 300 feet of line are taken out by a tarpon, and I don't think I have ever seen one take more than 350 feet.

If Dr. Howe ever perfects his reel with the patent brake, it will run out of the market all of the reels that are being manufactured to-day; but he has been trying to have his reels constructed in Mexico, which is impracticable, and he is working on the cut-and-try method instead of by complete detailed plans and specifications, which is the way in which an engineer would tackle the problem.

The reel for the medium sized rod should carry readily not less than 300 feet of line, and should cost from $10 to $20.

The reel for small fishing should carry not less than 200 feet of line, and should cost from $6 to $10.

I have heard a great deal about the Kentucky reel, and that it has lately been adapted to tarpon fishing; but have never even seen one, so can pass no opinion on it excepting as to price, which is high—prohibitively so for many sportsmen, as it costs about as much as a first-class modern gun.

Lines.

Of all the lines that I have ever tried, but two have proved satisfactory—viz., the Genuine Hall No. 27 and the Empire City No. 36. These are both truly excellent, being strong, durable and reliable. The diameter of the Hall lines increases with the numbers, but the No. 27 is decidedly larger than the Empire City No. 36. The latter has surprising strength for its size. It landed Dr. Howe's record tarpon, after having been in constant use for three weeks. On the other hand, one of my No. 27 Hall lines landed a 350-pound jewfish.

Between these two lines there is almost no choice, except that a reel will spool more of the Empire City than of the Hall.

There is on the market a dark, olive-green line termed "Cuttyhunk," which is absolutely worthless for tarpon fishing. It untwists immediately, gets soft and breaks.

It is possible that there are other good tarpon lines besides the two I have mentioned, but they have never come to my notice. Some one was telling me lately of a

Hall tarpon line stronger and heavier than the No. 27. If such there be, I want one, as no line is too good for the silver king.

A spool containing 600 feet of good tarpon line is worth $4, but it does not pay to buy so much, because the ordinary reel will not hold it, even when it is dry, much less when it is wet. I find that I can buy a spool of 900 feet of Empire City No. 36 for about $5, thus making two good lines at a little more than $2.50 each. A length of 450 feet is ample, even after it has been shortened by several weeks' use.

For medium-sized fish, a No. 18 or a No. 21 Hall line is very satisfactory, or a shorter piece—say 300 feet—of Empire City No. 36.

For the small fishing there are many good, light lines, but it must not be forgotten that heavier line is needed in salt water than is required in fresh water, for two reasons, viz.: First, the greater deteriorating effect of salt water; and, second, the greater chance of hooking occasionally a large fish.

Snells.

The ordinary tarpon snell that one buys from a tackle store consists of a piece of steel wire 4 or 5 feet long with a hook at one end and a swivel at the other. This is not the proper thing at all, because at least three swivels are necessary to prevent the line from untwisting.

Again, the wire is usually too weak. The general idea that to have the wire as strong as the line is sufficient is all wrong, because the snell is often put to far greater strain than the line could stand. For instance, a taropn is often beached by the boatman grasping the end of the snell and hauling the fish out on to the sand. Many a weak snell has failed under such a condition, thus losing the sportsman's well-earned prey.

What is the best kind of wire to use for snells is still an unsettled question. The objections to steel are: 1st—If it has ever been coiled, it can never be made to stay even approximately straight, and a curved snell prevents one from striking the hook effectively into the fish. 2d—It is liable to kink and then snap off short. 3d—It rusts rapidly. 4th—It soon gets very brittle.

Brass wire has been used by Dr. Howe, and he has found it to be satisfactory, but my experience with it has been unfortunate, for the roll I bought proved to be too brittle to twist properly, so I had to take out the temper near the end of each length by heating about 3 inches of the wire in a gas flame. Several of these snells broke at the eye, so I now have four dozen of them to cut up and remake with better wire.

Next time I shall probably try copper, as it will need no annealing. I used a copper snell once, and it did not fail, although the wire was rather light.

Some tackle makers insert a short piece of chain between the hook and the wire, for the purpose of preventing the latter from being broken at the jaw of the fish. The idea is not a bad one, but the benefit from the chain is not equivalent to the extra price charged for it—some 20 or 25 cents per snell. I cannot remember ever having had a wire break for want of such a chain.

Hooks.

There is no really good tarpon hook in existence; some are better than others, but they are all bad, being lacking in strength, rigidity and toughness. The least objectionable kind is the latest pattern of the Van Vleck hook, but even these hooks fail continually by snapping off short or by corkscrewing. I have had as many as three broken or spoiled in a single forenoon.

There seems to be prevalent an incorrect idea that it is essential to keep down the amount of metal in the hook for fear of frightening the tarpon. My experience with that fish leads me to believe that it does not give a blank for anybody or anything. If a tarpon wants the bait, it will take it almost regardless of all condiitons, while at times nothing will induce the fish even to look at it. Some fishermen contend that the snell should be of very fine wire, so as to be nearly invisible, while, on the other hand in Florida they still-fish with leather snells a quarter of an inch square and with pieces of strong rope of fully that diameter.

The hook manufacturers ought to make some experimental hooks of about the ordinary size, but of much greater strength, and have sportsmen give them a thorough test. I feel confident that they would prove satisfactory, if made of the proper material.

Swivels.

The best swivels to use are the large size, bronze, barrel swivels. I have never known one to break or to bind because of the action of the salt water on the metal, while on several occasions brass swivels have failed me by breaking, and I have often seen them refuse to operate. The bronze barrel swivels cost 6 cents each, which probably represent a profit of several hundred per cent.

Gaff.

A gaff hook of polished steel with screw end, mounted on a good ash handle, about 5½ feet long, can be bought for $5 or less. It should have no barb, not only because it is unnecessary, but also because of the great tendency for it to break off. Portions of the handle should be wrapped with strong, coarse twine so as to give a firm grip for the hands.

Sinkers.

Lead sinkers should weigh from one ounce down. For tarpon fishing they should always be detachable, for a reason that will be explained in my next paper, which will treat of "how to fish."

An easy way to make them detachable is to fasten them to the snell by two or three turns of fine copper wire. Hollow cylinders of lead made for fish nets are excellent for this purpose, being of about the right weight and convenient for attaching the wire.

Floats.

These are not often necessary, but in some places they are essential, so one should be provided with them. The easiest way to make one is to tie some old tarpon line firmly around a piece of cork about 2 inches square and 3 or 4 inches long, leaving the ends of the line hanging for 3 or 4 inches so as to tie onto the snell by means of a how knot, in order that it may be untied readily.

Brakes.

The brakes sold with tarpon reels consist of a piece of leather a little narrower than the spool of the reel and about 2½ inches long, attached to the rear spreading bar of the reel in such a manner as to turn on it with considerable friction. Rubber belting is preferable to ordinary leather for this purpose, but the peculiar leather used lately on the Ed vom Hofe reels makes the best brake of this type. All of them, however, it is to be hoped, will be superseded soon by Dr. Howe's patent brake, which acts on the exterior of the spool instead of on the line. Pressure on the latter must tend to wear it out, especially when, as is occasionally the case, some sand gets into the spool.

There is an additional brake that I always use, consisting of a strip of rubber belting about an inch wide and 3 or 4 inches long tied to the rod some 12 or 15 inches above the reel seat. It is operated by pinching the line between it and the guard on the left thumb. It is very useful in relieving the right thumb from the long-continued strain of operating the main brake, and in preventing the reel from overrunning when one is attempting to shoot a fish.

Belt.

This can be dispensed with entirely when fishing from a boat, but when fishing from the shore it is truly essential. It should be broad and stiff, and the leather socket should be deep. A similar socket to be screwed to the chair seat has come into use lately. It ought to prove to be quite convenient, but as I have not tried it I cannot indorse it at present.

Cushion.

This should be about 15 inches square and 3 inches thick. It should be somewhat pliable, so that the butt of the rod can be placed between it and the wooden seat of the chair.

Scales.

There is a combination scale for weighing both large and small fish, and costing ony a dollar and a half. It weighs by one set of levers up to 300 pounds, and by another set up to 40. While it is all right for heavy fish, I do not think it is sufficiently accurate for small ones, so prefer to have also an ordinary spring balance, weighing up to 50 pounds, and costing not to exceed $2.

Guards.

Thumb guards should be crocheted from coarse cotton and finger guards from wool. They should be made large enough to go over a glove, and are needed on the left hand only.

I have evolved a combination of finger and thumb guards that works very effectively, enabling one to grasp the spooled line firmly with the tips of the fingers and thumb. It consists in running a crocheted string from the lower end of each tip to a point on the back of the hand just above the wrist, and from there running two other crocheted strings to tie around the wrist in front. This prevents the tips from working off during the struggle.

Boatman's Outfit.

The necessity for two pairs of oars and row locks is not only to have spare ones in case of a break down, but also to enable the fishermen to aid the oarsman when he cannot make headway against wind and tide.

The object of the anchor is to ease up on the oarsman when there is a strong tide running. The rope should be attached to a buoy in the boat, so that when a fish strikes, the buoy can be thrown overboard quickly, otherwise the fish might get out too much line before the anchor could be taken in. A fixed buoy in the stream, having an eye on it to run a line through, would serve the same purpose, but the movable anchor is better, as with it the position of the boat can be changed at will.

The chair should be a stout wooden one, having a back (but no arms) and a thick seat. It should be lashed very firmly to the boat so that it will not give in the slightest degree when the latter rocks.

A sail is useful sometimes in going from one place to another, but should never be employed when fishing.

The subject of bait will be taken up in the next paper.

Clothing, Etc.

A comfortable hat that will not blow off is a *sine qua non* for tarpon fishing, as is also a rubber coat or poncho.

A hunting coat is preferable to any other coat because of its numerous pockets, in which can be stowed almost all the tackle one needs to take in the boat.

Overalls are better than old pantaloons, because they can be washed.

Undershirts should always have long sleeves that will come down well over the wrists in order to protect the latter from sunburn.

Hip boots are useful if the shore is muddy, besides they can be worn with a rubber coat on a rainy day, so as to keep the fisherman perfectly dry and comfortable.

Gloves are truly a necessity, not only as a protection against sunburn, but also to prevent the hands from being skinned by the slipping of the reel handle.

If this list of tackle and outfit is not complete, I hope that some of the readers of FOREST AND STREAM will make it so, and if any one knows of any better tackle than that which I have described, he would do his brother sportsmen a good turn by telling what it is and where to get it, as well as its approximate cost.

Many readers will conclude that tarpon fishing requires too much apparatus. So thought a small boy at a railway station near Tampico last winter, who, seeing my companion and myself struggling with our burden of rods, gaffs, etc., and having with us only one fish (we had saved for ourselves but one out of the total catch), remarked, "What! All that stuff to catch one fish?"

Certainly, one can do without a great many of the things that I have mentioned herein, but to get the best possible results and to enjoy the sport to the utmost, he will sooner or later require them all.

And now a word of warning to the would-be purchaser of tarpon tackle. Don't rely on the judgment and experience of the tackle dealer or let him choose what you need, for some dealers will be pretty sure to foist upon you a lot of worthless stuff that they have on hand and could not sell to any one who knows anything about up-to-date tarpon fishing. On this subject I certainly know whereof I speak, for not only I myself but also several of my friends have been caught in that way. Specify clearly each article that you want to buy, its make and character, and let the dealer understand that you will accept nothing else.

In conclusion I want to impress upon my readers the importance of these three statements: Tarpon fishing is a man's game, and requires man's tools; no tackle is too good for tarpon fishing, and but little is good enough; and the idea of using very light tackle to give the fish a chance is a fallacy, because the chances are always in favor of the fish and against the fisherman.

J. A. L. WADDELL.

The Salmon Fishing Excursion.

THE salmon fishing excursion projected by the St. Lawrence Steamship Co. has been abandoned. The reason for giving up the trip was that the number of those applying for passage was insufficient to permit the scheme being put through.

Mr. George's Tarpon.

THE 213-pound tarpon killed by Mr. N. M. George, of Danbury, Conn., is now on exhibition at the store of Messrs. Wm. Mills & Son, No. 21 Park place, this city.

The Kennel.

Fixiures.

Sept. 2-5.—Toronto, Can.—Dog show of the Toronto Industrial Exhibition. W. P. Fraser, Sec'y. and Supt.

Industrial Exhibition Association.

TORONTO, Ont., June 21.—The following is a list of judges who will officiate at the coming bench show of the Industrial Exhibition Association, Toronto, the dates of which are Sept. 2, 3, 4, and 5..

Toronto immediately follows Buffalo, which is only a journey of three hours, and special arrangements are being made for through cars at greatly reduced rates for exhibitors.

The prize list, which has always been a most liberal one at Toronto, with the small entry fee of $2, will be on much the same lines as last year, and will be ready for distribution in a few days.

The judges are:

St. Bernards, Mr. J. S. Williams, Toronto.

Mastiffs, bloodhounds, Great Danes and dachshunds, Prof. Wesley Mills, Montreal.

Russian wolfhounds, deerhounds, greyhounds, pointers, setters, Chesapeake Bay dogs and miscellaneous classes, Mr. John Davidson, Monroe, Mich.

Foxhounds, dogue de Bordeaux, poodles, beagles and all terriers except Yorkshire terriers, Mr. James Mortimer, Hempstead (L. I.), N. Y.

All spaniels, pugs, Pomeranians and Yorkshire terriers, Mr. E. M. Oldham, New York.

Collies and Old English sheep dogs, Mr. Robt. McEwen, Byron, Ont.

Bulldogs, Mr. Tyler Morse, Danvers, Mass.

W. P. FRASER, Sec'y Dog Show.

Yachting.

Notice.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., and not to any individual connected with the paper.

Yachting Fixtures, 1901.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also of changes which may be made in the future.

JUNE.

26. East Gloucester, evening race, Gloucester, Mass.
27. Indian Harbor, special, Greenwich, Conn.
27-28. Seawanhaka Corinthian, special, Oyster Bay, L. I. Sound.
29. Boston, City Point, Boston Harbor.
22. Savin Hill, open, Boston Harbor.
29. Hull-Massachusetts, club, Hull, Mass.
29. Atlantic, annual, Sea Gate, New York Bay.
29. Burgess, Marblehead, Massachusetts Bay.
29. Winthrop, class handicap, Winthrop, Mass.
29. New York, cup defender class, Newport.
29. Seawanhaka Corinthian, annual race for Leland challenge cup for raceabouts, Oyster Bay, Long Island Sound.

JULY.

1. New York, cup defender class, Newport.
2, 4, 6. Newport, Y. R. A., cup defender class, Newport.
2. Indian Harbor, Greenwich, Long Island Sound.
3. Columbia, City Point, Boston Harbor.
3. East Gloucester, evening race, Gloucester, Mass.
3-8. Brooklyn C. C., cruise, Gravesend Bay.
4. Beverly, open sweepstake, Monument Beach.
4. Shelter Island, club regatta.
4. Duxbury, club race, Duxbury, Mass.
4. Boston City, City Point, Boston Harbor.
4. Corinthian, second club championship, Marblehead, Mass. Bay.
4. East Gloucester, open, Gloucester, Mass.
4. Gravesend Bay Y. R. A., first open regatta, Gravesend Bay.
4 Annisquam, open, Ipswich Bay, Mass.
4. Larchmont, annual regatta and schooner races for Colt cup, Larchmont, Long Island Sound.
4. Hartford, annual, Saybrook, Long Island Sound.
4. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
4. Pavonia, McInnis cup, Bayonne, New York Bay.
4. Canarsie, parade, Canarsie, Jamaica Bay.
4. Penataquit Corinthian, annual, Bay Shore, L. I.
4. Columbia, Chicago, Lake Michigan.
4. Burgess, Marblehead, Massachusetts Bay.
4-5. Lake Michigan, Y. R. A., Lake Michigan.
4-7. Biloxi, club, Biloxi, Miss.
4. Cohasset, knockabout championship and handicap races, Cohasset, Mass.
4. Quincy, handicap, Quincy, Mass.
5-11. Atlantic, cruise, Sea Gate, New York Bay.
6. Shinnecock Bay, club, Shinnecock Bay.
6. Hull-Massachusetts, club, Hull, Mass.
6. Winthrop, special handicap, Winthrop, Mass.
6. Mosquito Fleet, City Point, Boston Harbor.
6. Riverside, annual, Riverside, Long Island Sound.
6. Beverly, convention, Monument Beach.

Small Yacht Construction and Rigging.

BY LINTON HOPE.

Chapter VI.—Floors, Shelf and Deck Beams.

As soon as the planking is finished, before clenching off the nails, the moulds will have to be removed. To do this the centerboard boat will have to be turned over keel down, but the other can remain on the stocks. Before turning the boat over, all the stays of the moulds and on the stem and stern of the boat must be cut adrift from their fastenings, and when that is done she can be lifted clear of the floor by about four men and turned over on two trestles. Four or five light strips of wood, called cross spauls, with cleats on their ends, should be fitted over the edges of the top strake between the moulds to hold the boat in to her beam, as if this is not done she will fly out several inches at each side directly the moulds are removed. This must be done on both boats. The moulds can now be removed, and the easiest way is to cut them across in one or two places with a saw; but if they are to be retained for future use, it will be a longer job to get them out whole, and great care must be taken not to injure the planking and timbers.

The planking being now finished, and all the through fastenings clenched properly over roves or burrs, the positions of the floor timbers should be set off from the construction drawing. The stations are usually marked F-F-F on the drawing, or else the floors are shown on the drawing in their places.

A thin wooden template is made to fit the inside of the skin and keel, etc., at each station, and from it the floor is made either in steel or a natural oak crook. The latter is the simplest for the centerboard boat, and the bow and stern floors in the keel boat, but the hollow sections amidships on the latter will require steel floors, as suitable crooks could not be obtained, and would be very difficult to fasten. These steel floors can be made by any smith, from the template, if it shows the bevel required. This is usually done by nailing small blocks of wood on the sides of the template, at about four places from the angle of the keel and garboard to the end of the arms. These blocks must be the exact width of the finished forging, and must show the angle or bevel of the planking with the template at each point.

When ordering the iron work, always give a correct template as well as a full sized drawing of each piece, and if possible let the smith have a look at the place where it is to go.

All iron work must be fitted in place and drilled, and the holes countersunk before being galvanized.

The oak floors are cut roughly to shape from the template, giving the edges the proper bevel when sawing out of the crook. They should then be tried in place, and if a fairly good fit, the inside of the skin and keel, at the floor station, should be chalked and the floor fitted exactly to its place in the manner described in the previous chapter for fitting the planks; and when it is a good fit, the sharp angle at the junction of the planking and keel should be partly cut away to leave a water course or "limber hole." This is constantly omitted, even by good builders, but is most essential if the boat is to be kept clean and sound, for if there is no proper water course the boat cannot be pumped out dry, and water will always lie in the angles of the floors. The limbers must not be cut too large, or the joggle over the keel will be cut away, and much of the strength lost; a fair proportion for most boats would be two-thirds the height from the inside of the plank to the top of the keel at the joggle, and about twice that amount in width.

A good rule for the sizes of wood floors is to make the siding equal to two or two and a half times the thickness of the planking, and the moulded depth on the top of the keel two or two and a half times the siding; thus for ½in. planking the floor at the top of the keel should be 1in. to 1½in. by 2in. or 2½in., according to the strength required at the different stations, the stoutest floors being at the mast step and amidships, and the lightest at the ends. All floors should run up to the turn of the bilges, and the arms should taper fairly from the keel to the end, which should be square in section, so that if the floor is 1in. sided, it would be 1in. by 1in. at the ends of the arms. Steel floors are usually of a flat section in small boats, such as we are now dealing with, and should be about half the thickness of the planking at the keel, with a width of about four times the thickness. For ½in. planking they would be 1in. by ¼in. at keel, and would taper to the ends of the arms to half those dimensions.

Paint well under each floor before fastening it in place.

The shelf, which is also known as the inwale in small boats, varies considerably in its proportions to the rest of the scantlings, according to the class of boat. For instance, in some very light boats of barely 3-16in. planking with bent timbers ¼in. by ¼in., spaced 2in. center to center, the inwales were 1½in. by ⅞in., tapered fore and aft to ⅞in. by ¾in., the boat being about 25ft. over all and 5ft. 6in. beam. In an ordinary strongly built boat of the same dimensions, but with ½in. planking and ⅝in. by ¾in. timbers, spaced 5in. center to center, the shelf would be about 2½in. by 1¼in., tapered to 2in. by 1in. at the ends. That is to say, that though the planking is nearly three times as thick and the sectional area of the timbers more than seven times as great, the shelf is barely double the sectional area of that in the light boat. The shelf of the latter, however, would be fastened inside the timbers below the level of the deck, so that it would not be cut away more than ½in. for the dovetails of the deck beams, the timbers not being let into it at all, while the inwale of the light boat would have all the timber heads let in flush, and the beams let in to their full depth, but only half way through the thickness of the inwale at the top, the dovetail being tapered to nothing at the bottom of the beam. By this method the inwale touches the deck and the planking, both of which are fastened directly to it. This is necessary with such light material, to tie the skin and deck edge together, as they are both too thin to fasten to each other in the usual way by nailing or screwing the deck to the top strake.

The term "shelf" is usually applied to the heavier class of work only, but I shall use it here to denote the form of construction in which the timbers and beams are not let in, using the word "inwale" in place of shelf, when the other method is required.

It is most important that the shelf should be quite free from knots or short grain, and for that reason Oregon pine is one of the most suitable woods; but for the inwale of a very lightly built boat American elm is better, as it will not fly so easily when cut across the grain to let in the timbers and beams. The only objection to American elm for all work of this sort is its weight and expense; but if Oregon pine were used in cases where the timbers are let in it would probably split in several places, especially between the dovetails of the deck beams. A light, tough mahogany is not a bad substitute for both the former woods in either class of work, but it is as expensive as the American elm, while not equal to it in toughness, and it is considerably heavier than Oregon pine, but is more durable and less likely to split.

As soon as the pair of shelves are cut out to the correct section and taper they will require steaming at the fore ends to the curve of the boat. To save time they are usually cut out, planed up and steamed before the floor frames are fitted, being bent round the outside of the top strake and cramped or lightly nailed in place to set to their proper shape by the time they are wanted. Occasionally the after ends will have to be steamed as well, in which case they must be done separately, one end being steamed and left to set all night before taking off the boat to steam the other end, unless you have a steam box long enough to take the whole length, which is hardly likely.

Before putting in the shelf the edges of the top strake must be planed down to the correct sheer line, and this takes a lot of careful work and a well trained eye or there will be "lumps" or "straights" in the sheer. Use a jackplane set fairly coarse at first and get well away to look at the sheer as you plane the edge. Be sure and get the sheer right now, as you cannot alter it much afterward. Don't touch the top of the transom till the deck beams are faired up.

When fastening them in place fit the fore ends against the inside of the stem and to each other, so that when the breast hook is fitted afterward the whole fore end of the boat will be a solid block, composed of stem, shelves, breast hook and planking, with the space between shelf and plank carefully filled up.

Get the shelf in place and hold it firmly with three of four cramps, driving it tightly against the stem and keeping the top ½in. above the level of the under sides of the deck beams. This level can be marked all around the inside of the boat before the shelf is fitted. For example, if the beams are 1½in. moulded at the ends the level of the top of the shelf would be 1in. below the sheer line.

Start fastening from forward, putting a through fastening through plank, timber and shelf at every other timber, each fastening being alternately in the top and bottom edges of the shelf.

When within a few feet of the after end of the shelf cut it to fit tightly against the transom in the same manner as the fore end fits against the stem. It will be tied to the transom with a quarter knee. There is often a lot of twist in the shelf here, especially in long counters like that of No. 2 design, and care must be used to get it in place, nailing it at every timber if required.

The bilge stringers are the next to go in, and owing to their length being equal to that of the boat, they cannot well be fitted after the deck beams are in place. These very essential portions of the frame are somewhat similar in section to the shelf, and, like it, are worked from end to end of the boat inside the timbers, to give longitudinal strength. Unlike the shelf, they are placed on edge, and are wider at the base, where they touch the timbers, than they are at the top. A good proportion for the section would be a moulded depth amidships, equal to four of five times the thickness of the plank, with a width at the base equal to one-third the depth and at the top edge equal to one-fourth the depth. The ends would taper in the same manner as with the shelf.

The stringers should be placed right in the turn of the bilge, just over the ends of the floors, which may be cut away to allow the stringers to lie flat on the timbers. Like the shelf, they should be thoroughly fastened at every other timber, and at each floor.

Where a stringer on edge would interfere too much with the internal room, a slightly stouter one may be worked on the flat, but it will not be nearly so strong.

Before cutting out any of the deck beams a mould must be made for the longest beam in the boat, and from this template all the beams can be drawn out on the boards from which they are to be cut, placing one inside the hollow of the next, so as to waste as little wood as possible, taking care that the wood is sound and straight-grained. Where head room is not an object, it is best to make the beams thin and deep in section with the ends of less depth than the middle, the moulding amidships being about four times the siding, the latter being the same as the thickness of the deck. If, however, every bit of head room is wanted, they may be square in section, but should in that case be of greater sectional area to make up the strength required.

The ends of the beams are fitted carefully to the inside of the planking at the stations shown on the construction plan, and they are dovetailed ½in. into the shelf with a long nail driven down through the beam into the shelf. When all the main beams are in place the fore and aft beams or carlines are fitted, the ends being dovetailed for half their depth into the two end beams, but the dovetail must not be cut more than half way across the beams. The half-beams from shelf to carline are fitted just the same as the rest of the beams, all joints being dovetailed.

The beams and carlines should be cut out about ¼in. deeper than the specified moulded depth, and when they are in their places they should stand ¼in. above the deck level. This is to allow enough wood to fair them off, which is done by laying a long batten on them from end to end of the boat, and planing off all lumps till the batten touches every beam and also the edge of the top strake at the sheer line if it is moved to either side. When the batten is first laid over the beams and transom it looks a hopeless job to get them fair, but if the high beams are chalked and then some of the surplus planed off and the batten again tried until they are fair there should be no great difficulty; but it takes a lot of time and patience. Having fixed and faired the beams, it is time to fit the knees and the shaped pieces from carlines to beam at the end of the cockpit, and for all these thin wooden templates must be made, and the knees, etc., cut out by them from the oak crooks as in the case of the stem. The breast hook is the most important knee in the boat, and should be at least equal in thickness to the shelf; the moulded depth will of course be taken from the specification (which will be published later), but it will to some extent depend on the grain and quality of the oak. In the case of boats where the shelf is below the sheer level, the top of the breast hook will also be below the deck level, and will have to have a packing piece on it to take the end of the deck. The positions and shapes of the knees are shown on the construction plan, and all these will be about the same thickness as the planking or a trifle stouter, and they should all have at least three through fastenings in each arm.

Our Boston Letter.

BOSTON, June 23.—Independence has been somewhat handicapped in her tuning up by the necessity of alterations in her rig and in her steering gear. When she came out of the Charlestown Navy Yard dock with her sternpost rudder and gear substituted for the balance rudder, it was thought that there would be no further need of alterations, but on the first trial under the sternpost rudder it was found that the steering gear was not heavy enough. It was so light that there was practically no power in it.

During the trial several cogs of the steering gear, which was of the bevel type, were broken. This necessitated another change. It was decided to use the screw that has formed part of the gear for the balance rudder. In order to get the proper length on the rudder post, a piece was spliced to it, which ran up through the deck, just aft of where the bevel gear came through. On account of the rake of the rudder post, it was necessary to cut through one of the deck beams and also cut a new hole in the deck.

The after part of the screw fits into a socket on the rudder head and the wheel is turned with right and left threads, as in the gear of the balance rudder. Independence went out for a trial last Friday with this gear in place, and from all that can be learned, it will prove satisfactory. She was tried for the first time on that day with spinaker set. For the first setting it appeared to work very well, and it was run up and taken in fairly quickly; but on this point it would not be fair to make comparison, as the crew are not yet used to the sail, and the chances are that it will have to be set a few more times before men are regularly stationed on it.

On the day that she took her involuntary jibe, one of the bowsprit spreaders, or what is known as the "whiskers," was bent. This has been straightened up and the spreaders, which are hollow castings, strengthened with steel pieces. On Saturday Independence was taken down the bay for another trial, but it was so foggy that the trip had to be abandoned, and she was towed back to the dock by the tug A. W. Chesterton. She was to have gone out to-day, and it was expected that she would have an impromptu brush with the schooner Hildegarde, but the easterly wind that has been blowing for the past forty-eight hours drove in such a bank of fog that it was impossible to do anything. At one time she started from the dock, only to be driven back by a dense fog bank.

It is expected that Independence will start for Newport on Tuesday, and that the rest of her tuning up will be done in those waters. It will take several trials before the crew is permanently separated for work on different parts of the boat. If she can go out every day before she gets actual racing, she can be put into good condition, but in the event of an accident she may be seriously handicapped on account of being so far away from her builders.

In the local racing, it appears that the new Hanley-designed centerboard 25-footer Calypso is able to show her heels to last year's champion Flirt in anything except a very light air. There has been no opportunity of trying out both of these boats with Crowninshield's latest 25-footer, Chewink, owned by F. G. Macomber, Jr. Flirt and Chewink had a try out in the special race of the Eastern Y. C. last week. Flirt easily got away from the new boat, but that she did so seemed to be due to clever handling on the part of her skipper.

Chewink came up to enter the race of the Savin Hill Y. C. on Saturday, but there was no class for her, and Flirt and Calypso were having it out in Hull Bay. Calypso would have entered the race of the Eastern Y. C., but she carried away her mast off Pig Rocks, when headed for Marblehead Harbor.

In the 21ft. restricted class there have been changes of position in almost every race, and it is very hard to pick a winner at this stage. Opitsah III., designed by Crowninshield, and Eaglet, designed by Burgess, are both new boats, and have not yet had a proper tuning up. In the contest, hard after them is Zaza, which came out at the end of last season. She is short on the waterline, but there is considerable over all. She beat the class handily in one race, and it is likely that she will repeat the performance again.

In the 18ft. knockabout class, Bonito, designed by Crowninshield, seems to be able to get away with the class in all kinds of weather. She is a very pretty boat and is an even sailer. She is stiff enough for all that will be required of her, and, at the same time, she can gather speed in a very light air.

In the unrestricted 18-footers, Dauntless seems to have met her match in Circe II. This boat was originally a 21-footer, and raced for the Quincy cup under the name of Thelma. She was designed by Crowninshield. After the Quincy races were over her ends were pulled up and she now qualifies for the 18ft. class. Last year she raced with this class, but did not seem able to do much with Dauntless. In two races recently she showed up much better. In one of them she gave Dauntless a hard race, and in the other she beat her.

JOHN B. KILLEEN.

The Canada's Cup Challengers.

THE third week of June showed several things about the Canada cup challenger Invader. For one thing, she is not so big as calculated—which is an unusual and pleasing discovery, for it was feared that she would go over measurement. When she was launched it was announced officially that she was going to draw 6ft. 6in. when rigged, and that her waterline would be 28ft. She was measured carefully by Com. Gooderham, of the R. C. Y. C., a few days ago. Her draft, in racing trim, was 6ft. 2in. The forward overhang measured 9ft. 10½in., and the after overhang 11ft. 10½in. Deducting these from the over all length, 49ft. 6in., the waterline was found to be 27ft. 9in.

Invader still sits a trifle by the stern, and a slight alteration in her ballast might improve her considerably. She carried more of a quartering wave than she should when traveling at a good pace, although she leaves the water very cleanly in comparison with many yachts of her size.

The Toronto men are making good use of their time. Almost every day Invader was out for a sail, and day by day she improved. Her first trials were sailed with a short gaff, made in Oakville, and Toronto's boom. The latter was long enough, but the gaff was too short to stretch the head of the sail. When the proper spars were shipped the work of getting the mainsail into shape began in earnest. The big sail was stretched and restretched, and by the latter part of the week the cringle in the peak of it was out at the gaff end and some of the bagginess had disappeared. The No. 1 jib was found to sag to leeward when set flying, so snaps were added to the wire bolt rope of the luff of it, and it travels on the forestay.

Invader's mishaps have been of a minor character. She carried away her staysail boom, as the paid hands call the light spar on the foot of the jib; on another occasion she carried away her jib halyards, and on another the strap of the jib sheet block parted. No serious damage was done, and mariners who viewed the hollow mast, with its ⅞in. shell of wood, with suspicion, are commencing to feel confidence in it. It was lifted out when the new gaff and boom were ready for shipping, and strengthened by additional bands of brass.

A new wrinkle in light weather sailing—new, at least, to the Toronto men—is being tested. Ordinarily the gooseneck of the main boom of the 35-footers is very close to the deck. With the patent hoist on the after side of the mast, however, the whole sail can be hoisted away up till the gaff is above the spreaders and the boom is away above the deck. This upward shifting of the center of effort of the sails should result in more power, and the experiments have been satisfactory so far. A corresponding hoisting up of the jib has not yet been attempted in the cup challengers, although this works well in the 16ft. skiffs, and these little boats are frequently to be seen with their jibs away up the stay.

Invader's first spin in anything like a good sailing breeze occurred on Friday, June 21. It was an exciting dash with Beaver, the only other Toronto 35-footer, and while it was of less than an hour's duration it was a good indication of the new boat's possibilities. The two sloops took a flying start, with Beaver a length astern, and worked out of Toronto Bay in three long tacks. There was a twelve-mile breeze blowing. Beaver, always a wonderfully stiff and weatherly craft, stood up like a church and rapidly outfooted and outpointed the Sibbick boat. The latter heeled to an angle of 45 degrees, but as soon as she obtained the bearance of her long lee side she heeled no further. Her mainsail was setting wretchedly, one-half of it being curved one way and one-half the other; it was either peaked too high or needed cutting, or the backdraft of the jib was spilling into it.

The boats had a two-mile thresh to windward, nosing out into Lake Ontario to a buoy south of the Eastern Gap, and when they came about and headed back for the harbor, Beaver had a lead of 3m. 10s.

Invader, with her canvas drawing properly, owing to the started sheets, showed what she could do on the reach. She tore through and over the water, any fuss she made being purely surface spray. In the half-mile dash through the piers she gained a minute. When sheets were further started for the run back to the moorings she continued to gain, but not so rapidly, and when the yachts finished she was just twenty-five seconds astern. There is no doubt that she can be improved sufficiently to make her half a minute to the mile faster by the wind. She does not make much lee way, she foots fast enough and she is stiff enough. The trouble so far has been with the canvas. This has been greatly improved, but, as the hymn says, "Yet there is room."

The new boat, which is regarded by Toronto men as sure to be selected as the R. C. Y. C.'s challenger, can do some wonderful work in turning. On one occasion

when the writer was aboard she was approaching a wharf and had too much way on. The tiller was put hard over and she turned a complete circle. She still carried too much way, and the tiller was kept hard over until she had turned another complete circle, when she was allowed to run alongside the wharf. The two circles were turned between another yacht and the wharf, within a space less than 20ft. longer than Invader herself. Less than a minute was occupied in the whole operation. Another instance of the yacht's quickness in stays was given in her Friday brush with Beaver. She swung from full to full once in seven seconds.

The trial races for the selection of the challenger will be held in Lake Ontario off Toronto Island, commencing on July 3. The best three out of five may decide the question, but the judges may order many more races. The judges appointed are Messrs. G. E. Macrae, A. G. Peuchen, F. A. Turner and F. J. Campbell, of Toronto, and Mr. E. H. Ambrose and Judge Monk, of Hamilton.

There is little likelihood of there being more than three contestants in the trial races—Invader, Beaver and Canadian, of Hamilton. There is some talk of Clytie, a Hamilton contestant in the Canada cup trial races of 1899. being entered, but it is not taken seriously.

Canadian, Capt. J. H. Fearnside's craft, is still considerable of an unknown quantity. Under an old mainsail, staysail and jib, containing about 500 sq. ft. less than her proper sail area, she gave Hazard, a wonderfully smart Herreshoff sloop, a good chasing. Nothing, however, could be deducted from this, her first performance. Canadian seemed tender, but about a ton of ballast will be added. Her proper canvas was shipped from Toronto on June 19. It consists of mainsail, staysail and jib, Capt. Fearnside favoring divided head sails. The combined area of the three sails is about 1,500 sq. ft. The new craft is certainly not a beauty, with her high-crowned deck, reverse sheer and concave bottom—which latter she shows very plainly when heeled. She possesses plenty of accommodation, however, and promises a fair amount of speed. So far she seems at her best in leeward work, but the additional ballast may change all this.

CHARLES H. SNIDER.

New York Y. C., Fifty-fifth Annual Regatta.

NEW YORK—NEW YORK BAY.

Thursday, June 20.

THE fifty-fifth annual regatta of the New York Y. C. was sailed down the bay on Thursday, June 20. The race was sailed in a strong breeze from the south-southeast that held true throughout the day, which was an ideal one for a yacht race. The race was one of the most successful ever given by the club. The breeze was so fresh that four of the yachts were disabled before the finish. Amorita broke her fore gaff when off the Hook. At the time she was the second boat in the race, but the accident ended her chances and she withdrew. Cymbra broke her steering gear soon after crossing the starting line. Altair carried away her topmast just off the Hook, and Mira shared the same fate soon afterward. When near the finish Quisetta lost her spinaker.

The most important event of the day was Ailsa's victory over Vigilant. Ailsa was built in 1895 from designs made by Mr. William Fife, Jr., and Vigilant was designed and built by the Herreshoffs in 1893 to defend the America Cup against Valkyrie. This was the first time these boats have met when rigged as yawls.

The sloops were sent away at 11:25 o'clock, Vigilant crossing at the weather end of the line a few seconds after the signal. Hester following, then Isolde next. Ailsa, Humma, Wasp, Effort, Carmita, Mermaid, Mira and Cymbra. Quisetta led the schooners, followed by Amorita, Katrina, Muriel, Elmina and Wayward. It was a close hitch on the wind to the Southwest Spit buoy, and all crossed on the port tack. Most of the smaller boats soon came about on the starboard tack and stood over to the eastward to get out of the tide. Vigilant made a hitch that proved unnecessary, but Ailsa stood on the port tack and was soon in the lead, which she held throughout the race. Quisetta never gave up her lead, although it was a bitter fight for position with Elmina. The following times were taken as the yachts rounded the Southwest Spit buoy:

Ailsa	12 11 55	Amorita	12 25 00
Vigilant	12 15 25	Elmina	12 25 31
Hester	12 16 40	Wasp	12 26 40
Isolde	12 18 24	Altair	12 27 31
Humma	12 22 50	Muriel	12 30 10
Quisetta	12 24 08		

From the Spit it was a reach to the Sandy Hook Lightship for the larger yachts, and from the end of the Hook a beat to the Scotland for the smaller craft. It was on this leg that Amorita had lost her fore gaff and Quisetta now had only Elmina to beat, as Muriel was never dangerous. Sandy Hook Lightship was rounded thus:

Ailsa	1 01 33	Isolde	1 16 17
Vigilant	1 06 10	Quisetta	1 21 20
Hester	1 13 13	Elmina	1 22 00

Humma made good weather of it going out to Scotland and led around that mark with Wasp and Altair following. With sheets started the boats stood back to Southwest Spit, and they rounded in the following order: Ailsa, Vigilant, Humma and Hester. From the Spit to the finish line it was a run. Ailsa set her spinaker to starboard and Vigilant followed suit shortly after. The times were:

Yawls—Class G—Racing Trim.

	Start.	Finish.	Elapsed.	Corrected.
Ailsa	11 26 33	2 34 39	3 08 06	3 08 06
Vigilant	11 25 27	2 38 43	3 13 16	3 13 16

Ailsa wins by 5m. 10s. Went around Sandy Hook Lightship, 33 miles.

Sloops—Class I—Racing Trim.

Hester	11 26 41	3 03 51	3 37 10	3 37 10
Isolde	11 26 39	3 09 47	3 43 08	3 33 18

Isolde wins by 3m. 52s. Went around Sandy Hook Lightship, 33 miles.

Sloops—Class J—Cruising Trim.

Wasp	11 27 16	3 01 39	3 34 23	3 34 23
Carmita	11 27 49	3 13 43	3 45 54	3 45 47
Mermaid	11 28 30	3 23 33	3 55 03	3 55 01

Isolde wins by 3m. 52s. Went around Sandy Hook ship, 26 miles.

Sloops—Class K—Racing Trim.

Humma	11 27 03	2 50 29	3 23 26	3 23 26
Altair	11 27 25	Did not finish.		

Went around Scotland Lightship, 26 miles.

Sloops—Class L—Racing Trim.

Effort	11 27 35	3 18 16	3 50 41	3 50 41
Mira	11 29 03	3 26 28	3 57 25	3 57 25
Cymbra	11 30 00	Did not finish.		

Effort wins by 6m. 44s. Went around Scotland Lightship, 26 miles.

Schooners—Class D—Racing Trim.

Elmina	11 32 26	3 08 29	3 36 03	3 36 03
Quisetta	11 30 38	3 07 59	3 37 21	3 37 21
Muriel	11 32 03	3 19 43	3 47 40	3 47 40
Amorita	11 30 51	Did not finish.		

Elmina wins by 1m. 18s., but is protested by Quisetta. Went around Sandy Hook Lightship, 33 miles.

Schooners—Classes D and F—Cruising Trim.

Katrina	11 31 38	3 19 34	3 47 56	3 47 56
Wayward	11 31 41	3 46 16	4 12 35	4 04 10

Quisetta wins the Bennett cup for schooners. Her protest against Elmina is in the matter of their class race and prize. Muriel, the other schooner entered for the Bennett cup, was badly beaten.

Hester wins the Bennett cup for sloops.

Ailsa's time—3h. 8m. 6s.—over the thirty-three mile course is claimed to be the record time over the course.

The Regatta Committee were Mr. S. Nicholson Kane, Mr. Newbury D. Lawton and Mr. J. Frederick Tams, the latter taking the place for the day of Mr. Chester Griswold, who is out of town.

Yacht Club Notes.

The Newport Y. R. A., through its Race Committee, Chairman H. B. Duryea, W. Kane and R. N. Ellis, has issued the following circular in regard to the four races for the 90ft. class of sloops, which will be sailed off here on July 6, 8, 10 and 12:

A cup will be given to the winner of each race provided two or more start. These races will be sailed under the racing rules of the New York Y. C., except as herein modified. Entries must be made in writing to H. B. Duryea, chairman, Newport Reading Room, Newport, R. I., before noon, Monday, July 1.

Time Limit—Unless the winner completes the course in six hours from the time of the starting signal the race will be declared off and the race will be resailed on the following day.

Yachts must display their racing numbers on both sides of mainsail.

The owner or his representative must be on board of each yacht in every race.

Each yacht must file her racing measurement with the chairman of the Race Committee before the start, and must be measured with full racing crew aboard, the measurer to state in the certificate the number of persons on board at the time of measurement. No yacht shall carry in a race more persons than are stated in her certificate, but nothing herein shall be held to modify Rule 8, New York Y. C. racing rules.

All measurements must be made by John Hyslop, 4 River View Terrace, New York city.

Sailing Instructions—Starting signals—First—11 A. M., warning signal, a gun fired or a fifteen-second blast of the whistle blown, and white rectangular flag hoisted.

Second—11:05 A. M., preparatory signal, a gun fired or a five-second whistle blown, and the blue peter hoisted.

Third—11:10 A. M., starting signal, a gun fired or a five-second whistle blown, and a red rectangular flag hoisted.

Fourth—11:12 A. M., handicap signal, a gun fired or a five-second whistle blown, and the red flag hauled down, which will be taken as the time of all yachts not having crossed.

Recall Signals—Code flag B will signal a postponement of the start till later in the day, in which case the warning signal will be given on the hour, or quarter, or half, or three-quarters past the hour.

Code flag W will signal a postponement of the race till the following day.

In case of a postponement or resailed race, the course will be selected and signaled as for a new race.

The New York Y. C. burgee over code flag will indicate the use of the club code.

Answering pennant will signal "Come within speaking distance."

Supplementary sailing directions giving the course to be sailed will be issued as early as possible.

* * *

The Regatta Committee of the Larchmont Y. C. announces that the annual regatta will take place on July 4. These races are open to all yachts enrolled in recognized yacht clubs, and there will be races for all classes, according to the classification of the club, as well as for raceabouts, special 30-footers, knockabouts and the club special 25-footers. The schooners of class B will race for the Colt cup. The winner in this class will have its name inscribed on the trophy, and in all the classes there will be a first prize if two yachts start, a second prize if there are four starters, and a third prize if there are five starters. The start will be made at 11:30 o'clock and yachtsmen will get their sailing instruction at the club house early in the morning. Entries close with the Regatta Committee at the club house on July 2.

The steamer Albertina has been chartered for the use of the members of the club and their guests, and will leave the foot of East Thirty-first street at 8 o'clock on the morning of the race and the club house at 10:30 o'clock.

East Gloucester Y. C.

GLOUCESTER, MASS.

Wednesday, June 19.

THE third evening race of the East Gloucester Y. C. was sailed off the club house, Wednesday, June 19. The wind was very light at the start and petered out altogether before the race was finished. The summary:

	Elapsed.
Onda, Greenough	0 45 05
Rambler, Pomeroy	0 46 33
Alethea, Colby and Smith	0 49 09
Comet, Harvey	0 49 56
Angel, Cox	0 50 20
Kantelpit, Perkins	0 52 20
Spider, Flye	1 20 11
Sonny, Phelps	1 21 36

New Rochelle Y. C. Annual Regatta.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, June 22.

THE New Rochelle Y. C. sailed its annual regatta on Saturday, June 22. Out of fifty-four entries, fifty-two boats crossed the starting line, and of this number forty-six finished. The breeze at the start was light from the southeast, and after a while hauled to the southwest and blew fitfully during the rest of the day.

All those measuring 30ft. racing length and upward were sent twice around a triangle seven and one-third miles in length. They went first to the Gangway buoy, then to Old Hen buoy and then to the starting line, which was at the entrance to Echo Bay.

The classes under 30ft. sailed around a triangle four and a quarter miles in length. They went to Hen and Chickens, then to the Middle Ground buoy off Execution Reef and then home. The raceabouts and 25ft. sloops and catboats sailed three times around this course and the others twice around. The last class started were the Larks belonging to the Pelham Country Club.

The 51-footers were started first. Humma had the windward position and Altair just under her lee. Humma drew ahead just after the start and was well in the lead at the end of the first round. On the second round Altair pushed Humma hard for first place, and at the finish was only 23s. behind. In the 43ft. class Mira, after being twice defeated, again won, beating Effort II., Cymbra and Dorwina, a new boat designed by Messrs. Gardner & Cox to meat Mira. The yawl Scapha, which was designed by Mr. B. B. Crowninshield, won in her class, easily defeating Fleetwing. In the 36ft. class Leda won. Oshima San broke her bobstay and left her competitor to finish alone. The yawl Memory beat Sakana. The special thirties made a good race, Veda beating Esperanza. Oiseau won in her class. The times were as follows:

Sloops—51ft. Class—Start, 1:35.

	Finish.	Elapsed.
Altair, Cord Meyer, Jr.	4 42 48	3 07 48
Humma, J. R. Maxwell	4 42 25	3 07 25

Sloops—43ft. Class—Start, 1:40.

Mira, C. Lane Poor	4 51 52	3 11 52
Effort, F. M. Smith	5 14 11	3 34 11
Dorwina, W. L. Ward	5 00 46	3 25 46
Cymbra, F. C. Henderson	5 14 30	3 34 30

Yawls—43ft. Class—Start, 1:40.

Fleetwing, C. M. Fletcher	5 54 16	4 14 16
Scapha, J. Fallert	5 17 58	3 37 58

Sloops—36ft. Class—Start, 1:45.

Leda; H. L. Maxwell	5 07 44	3 22 44
Oshima San, J. T. Pratt	Lost her bobstay.	

Yawls—36ft. Class—Start, 1:45.

Memory, R. N. Bavier	5 20 15	4 05 15
Sakana, A. B. McCreery	5 22 24	4 07 24

Sloops—Special 30ft. Class—Start, 1:50.

Esperanza, H. O. Havemeyer	5 16 34	3 26 34
Veda, Robert Bacon	5 15 03	3 25 03

Sloops—25 to 30ft. Class—Start, 1:55.

Enpronzi, Alfred Peats	5 14 03	3 19 03
Alerion, A. H. Alker	5 18 41	3 23 41
Oiseau, J. R. Maxwell	5 11 30	3 16 30
Marion, F. M. Smith	5 15 06	3 20 06

Catboats—30ft. Class—Start, 1:55.

Dot, C. T. Pierce	5 14 21	3 19 21

Echo, Paul Allen	6 03 25 3 38 25
Halo, James Smith	did not finish.
Streak, E. Cunningham	did not finish.
Tom Boy, F. Halpin	did not finish.
San Toy, F. Halpin	did not finish.
Chop Suey, Paul Downing	6 19 31 3 54 31

The winners were Humma, Mira, Scalpha, Leda, Memory, Veda, Oiseau, Dot, Merrywing, Ruby, Dade, Rod, Vera, Kazaza, Opossum and Gloria.

Corinthian Y. C. Annual Regatta.

ESSINGTON—DELAWARE RIVER.

Saturday, June 8.

THE tenth annual regatta of the Corinthian Y. C. was held on Saturday, June 8 at Essington in a brisk northwest wind that covered the river with whitecaps. The course was a twenty-mile triangular one.

The race for 36-footers was exciting. When Cherokee was rounding the mark, well in the lead, she lost her mast, and was towed to the anchorage. Pawnkis won, Grayling being second and Fidelio third.

The races for the special classes, which were to have followed the start of the larger boats, had to be declared off, as the water was so rough that it was not deemed advisable for the knockabouts to take any chances. The times were as follows:

51ft. Class Sloops and Yawls.

	Finish.	Elapsed.	Corrected.
Narounya	1 42 28	2 47 28	2 47 28
Liris	1 42 39	2 47 39	2 45 05

36ft. Class Sloops and Yawls.

Cherokee	not timed.		
Pankewis	1 37 40	2 42 40	2 42 40
Grayling	1 41 37	2 46 37	2 46 37
Fidelio	1 43 36	2 48 36	2 42 53

Atlantic Y. C. Annual Regatta.

SEA GATE—NEW YORK BAY.

Tuesday, June 18.

THE Atlantic Y. C. held its thirty-fifth annual regatta on Tuesday, June 18. The wind was light from the south-southeast at the start, but breezed soon afterward and continued to blow fresh up to the finish. There was a good entry list, and some twenty boats started. The committee sent the boats away in divisions, the schooners and the sloops Isolde and Isolt going to the Southwest Spit buoy, thence around Scotland Lightship and back the same way, 25½ miles. The 51-footers and others went to the Swash Channel bell buoy, then to Orchard Shoal Light, then to the bell buoy off Sandy Hook, then back to the Swash Channel buoy and from there home, a distance of nineteen miles. The others went to the Swash Channel buoy, then to Orchard Shoal Light, then to the Spit buoy, and then home, making a distance of sixteen and one-half miles.

One of the prettiest races of the season was seen in the 75ft. class for schooners. Three boats started, namely, Elmina, Quisetta and Amorita. These boats were sent away at 11:20, Quisetta crossing the line first with Elmina on her weather quarter and Amorita some distance astern. Quisetta turned out to windward in fine shape, making gains over her opponents on every tack. Quisetta rounded the Scotland Lightship at 1:11:30, and eased off her boom to port for the run back. Elmina was timed at 1:15:30 and Amorita at 1:21:10. When the two yachts turned the Southwest Spit buoy, the times were: Quisetta, 2:19:10; Elmina, 2:19:45. Quisetta crossed the line a winner, Elmina being 5s. behind. The luffing matches enabled Amorita to close up on the leaders, but she was beaten by 2m. and 24s.

The cutters Isolde and Isolt sailed a special race over the same course. Isolt was given full time allowance. Isolde took the lead at the start and won by 10m. and 27s. The 51-footers furnished another race of interest. Humma and Huguenot were raced against Altair. Humma led over the line, and at the Swash Channel buoy she had a lead of 1m. over Altair. At Old Orchard Shoal Altair had cut down Humma's lead to 45s. On the windward work Humma again drew away from Altair. The former won by 1m. and 40s. Huguenot was 19m. and 45s. behind Altair. The summary follows:

Schooners—ClassD—65 to 75 ft.—Start, 11:20.

	Finish.	Elapsed.
Quisetta, H. F. Lippitt	3 09 05	3 49 05
Elmina, F. K. Brewster	3 09 10	3 49 10
Amorita, W. Gould Brokaw	3 11 29	3 51 20

Corrected time—Quisetta, 3:48:05; Amorita, 3:51:12.

Sloops—Special Class—Start, 11:20.

Isolde, F. M. Hoyt	3 26 32	4 06 32
Isolt, C. W. Nason	3 45 58	4 25 58

Corrected time—Isolt, 4:16:59.

Sloops—Class K, 43 to 51ft.—Start, 11:25.

Humma, J. Rogers Maxwell	2 30 30	3 05 30
Altair, Cord Meyer	2 32 10	3 07 10
Huguenot, Edward Kelly	2 51 55	3 26 55

Sloops—Class K—Cruising Trim—Start, 11:40.

Ondawa, H. J. Roberts	3 18 18	3 38 18
Mariquita, H. B. Shaen	3 22 15	3 42 15

Corrected time—Mariquita. 3:42:09.

Sloops—Class M—30 to 36ft.—Start, 11:30.

Leda, H. L. Maxwell	2 25 12	2 55 12
Akista, George Hill	2 53 12	3 23 12

Sloops—Special Class—Start, 11:30.

Selnada, J. Fred Ackerman	2 55 04	3 25 04
Siren, C. F. Wigand	2 53 23	3 23 23

Corrected time—Selnada, 3:23:31.

Sloops—Class P—21 to 25ft.—Start, 11:35.

Song and Dance, E. F. Luckenbach.....First
Cockatoo, Hendon Chubb.....Second
Apterix.....Third

Sloops—Class Q—18 to 21ft.—Start, 11:35.

Wraith, Calvin Tomkins.....Sail over

Sloops—Class R—Under 18ft—Start, 11:35.

Pebble, R. W. Speir.....First
Peanut, Calvert Brewer.....Second

The winners were Quisetta, Isolde, Humma, Ondawa, Leda, Siren, Song and Dance, Wraith and Pebble.

Savin Hill Y. C.

DORCHESTER, MASS.

Saturday, June 22.

THE Y. R. A. open race of the Savin Hill Y. C. was sailed in Dorchester Bay Saturday, June 22, in a very light easterly breeze. There were five classes in which there were a good fleet of starters. The Thordis won easily in the 25ft. open class. The Opitsah II. added another victory in the 21ft. class, and, in the 18ft. class, the Circe II. defeated the Dauntless for the first time. In the Savin Hill and Dorchester one-design classes the racing was very close. The summary:

25-Footers.

	Elapsed.
Thordis, W. U. Foster	1 34 09
Romance, Loring Sears	1 39 40
Widgeon, A. G. Horton	1 45 15
Eleanor	1 53 45

21-Footers.

J. Turner	2 16 40
E. Keepers	2 20 15
Mr. Benson	withdrew.

Beverly Y. C.

MONUMENT BEACH, MASS.

Monday, June 17.

THE Beverly Y. C. held its first open sweepstakes race off the club house at Wing's Neck, Monument Beach, on Monday, June 17. There was a good breeze blowing from the southwest which kicked up quite a lively sea. In the 25-footers the May Queen again defeated the new Kalama III. The Quakeress and the Radiant, a new Herreshoff boat, had a hot scrap in the 21ft. class, the Quakeress winning out by less than two minutes. In the class for 17ft. cats, the Eunice, designed by Huckins, put another win to her credit. She was hard pushed by the Howard and less than a minute separated them at the finish. The racing in the 15-footers was very close, there being a little over two minutes between the first and the last boat. The summary:

25-Footers.

	Elapsed.
May Queen, D. L. Whittemore	2 10 17
Kalama III., David Rice	2 18 10
Nokomis, Alfred Winsor	2 20 15

21-Footers.

Quakeress, W. F. Harrison	2 21 31
Radiant, C. M. Baker	2 23 24
Edith, E. H. Baker	2 27 33
Amanita, L. Bacon	2 31 54
Kestrel, L. S. Dabney	disabled.

Fourth Class Cats.

Eunice, W. O. Taylor	1 40 19
Howard, H. O. Miller	1 41 12
Allison, Stewart McLoud	1 42 31
Hod, C. B. Holmes	1 46 39
Maori, A. B. Hastings	1 47 20
Daisy, E. Stockton	1 54 20

15ft.—Restricted Class.

Teaser, R. W. Emmons	1 39 40
Next, Paul Jones	1 40 25
Spider, H. B. Stone	1 40 32
Varda, J. Parkinson, Jr	1 40 58
Flickamaroo, N. F. Emmons	1 41 57
Go Bye, H. Stockton	withdrew.

Marine and Field Regatta.

GRAVESEND BAY.

Saturday, June 22.

TWENTY yachts belonging to the Gravesend Bay Y. R. A. raced on Saturday, June 22, under the auspices of the Marine and Field Club. There was a good breeze from the southeast. The larger boats sailed over a nine-mile course and the smaller ones over a six-mile triangle. The first leg of the course was a beat, the second a run and the third a reach. The summary follows:

Sloops—Class K—43 to 51ft.—Start, 3:20.

	Finish.	Elapsed.
Susie, Cornelius Ferguson	did not finish.	

Sloops—Class M—30 to 36ft.—Start, 3:20.

Akista, George Hill	5 20 00	2 00 00
Bonita, Haviland Brothers	5 26 00	2 06 00

Sloops—Class N—25 to 30ft.—Start, 3:20.

Squaw, H. J. Heath	5 29 30	2 09 30

Sloops—Class P—21 to 25ft.—Start, 3:25.

Cockatoo, Hendon Chubb	4 48 30	1 23 30
Song and Dance, E. E. Luckenbach	4 53 30	1 28 00
Elsie, C. P. Rosemon	did not finish.	

Sloops—Class Q—18 to 21ft.—Start, 3:25.

Wraith, Calvin Tomkins	4 52 00	1 27 00
Wink, C. B. Vaux	4 53 00	1 28 00
Corodo, A. Peters	5 02 00	1 37 30
Spots, F. H. Henry	Did not finish.	
Broncho, F. C. Moore	Did not finish.	

Sloops—Class R—Under 18ft.—Start, 3:30.

Pebble, W. R. Speir	5 08 05	1 38 05
Peanut, Calvin Brewer	5 09 11	1 39 11

Catboats—Class V—Under 18ft.—Start, 3:25.

Martha, M. R. Moore	4 45 30	1 20 30

Knockabouts—Start, 3:30.

Kelpie, W. K. Brown	5 06 40	1 36 40
Quinque, L. H. Smith	5 07 00	1 37 00
Flying Fox, Buckman & Cone	5 08 00	1 38 00
Jigagag, W. Hutchinson	5 08 10	1 38 10
Vixen, Baylor & Mahoney	5 09 10	1 39 10
Stinger, A. P. Clapp	5 10 06	1 40 06

The winners were Akista, Squaw, Cockatoo, Wraith, Pebble, Martha M., and Kelpie.

Duxbury Y. C.

DUXBURY, MASS.

Monday, June 17.

THE first race of the Duxbury Y. C. for the season was sailed off the club house on Monday, June 17, in a light easterly breeze. Three classes started, the most interesting of which were the 18ft. knockabouts. In this class Oom Paul won by 1m. and 23s. In the 21ft. knockabouts Geisha won handily from Seconset. In the handicap class Dolphin won handily, finishing well within her handicap. The summary:

18-ft. Knockabouts.

	Elapsed.	Corrected.
Oom Paul, G. F. Cushman	1 3027	00 00
Dazzler, Goodspeed Bros	1 31 50	0 00 00
Miladi, F. R. Adams	1 32 41	0 00 00
Kittawake, H. M. Jones	1 35 47	0 00 00
Lobster II, C. C. Clapp	1 40 05	0 00 00

21ft. Knockabouts.

Geisha, W. T. Whitman	1 29 45	0 00 00
Seconset, A. Holmes	1 32 40	0 00 00

Handicap Class.

Dolphin, N. Morton	1 36 15	1 27 45

Fedora, Simmons	1 50 10	1 30 10
Pyxie, G. Wadsworth	1 51 30	1 36 30

Jubilee Y. C.

Monday, June 17.

BEVERLY, MASS.

THE first club championship of the Beverly Y. C. was sailed off the club house Monday, June 17, in a light southeasterly breeze. There were two classes and only two starters in each. In class A Adina finished first, but lost to Elf on time allowance. In class B there were two scratch boats, Vega and Rita. Vega won easily. The summary:

Class A.

	Elapsed.	Corrected.
Elf, Charles Prescott	1 33 30	1 30 30
Adina, E. S. Foster	1 33 15	1 33 15

Class B.

Vega, Pickett Bros	1 43 15	1 43 15
Rita, D. W. Taylor	1 50 00	1 50 00

Corinthian Y. C.

MARBLEHEAD, MASS.

Monday, June 17.

THE first championship race of the Corinthian Y. C. was sailed off Marblehead Monday, June 17, in a light southeast breeze. In the 25ft. class the Chewink won handily from the Cyrilla. In the handicap class the Oivana came in first, but lost to the Babs and the Elvina on time allowance. The Sintram had an easy win in the raceabouts, and the Raccoon finished first in the 16-footers, after a good race. The summary:

Second Class.

	Elapsed.	Corrected.

Manhasset Bay Y. C.

PORT WASHINGTON—LONG ISLAND SOUND.

Saturday, June 22.

THE third race of the series for the Jacob cup was sailed over the course on Saturday, June 22. The course was fifteen miles in length. The wind was from the southeast. The summary follows:

Manhasset Raceabouts—Start, 4:00.

	Finish.	Elapsed.
Bob, Phillips and Morgan	6 30 05	2 30 05
Arizona, G. A. Curry	3 31 07	2 31 07
Mist, J. W. Alker	6 32 20	2 32 20
Lambkin, S. W. Roach	6 14 10	2 41 10
Firefly, Guy Standing	6 50 01	2 50 01

A match race was arranged between Dr. Wallace's Lassie and Mr. H. L. Hoyt's Scintilla for a cup. Lassie parted her throat halyards and left Scintilla to finish alone.

Eastern Y. C.

MARBLEHEAD, MASS.

Wednesday, June 19.

ONLY one class showed up for the special open race of the Eastern Y. C. on Wednesday, June 19. This was the 25-footers in which the Flirt, the Onda and the Chewink started. On the first leg to windward, the Flirt had established a commanding lead in two tacks, and she had no trouble in keeping it to the finish. The Onda and the Chewink fought hard for second place, the Onda finally getting it. The summary:

Special Handicap Class.

	Elapsed.	Corrected.
Flirt, Fabyan and McKee	4 34 33	4 32 28
Onda, John Greenough	4 43 33	4 37 46
Chewink, F. G. Macomber, Jr	4 38 48	4 38 48

Seawanhaka Corinthian Y. C.

OYSTER BAY—LONG ISLAND SOUND.

Saturday, June 22.

THE club knockabouts sailed the second race of the series for the Centre Island cup over the club's inside course on Saturday, June 22. The wind was from the southeast, making the first leg a reach, the second a run and the third a beat. The times were as follows:

Start, 3:05.

	Finish.	Elapsed.
Vagrant, W. G. Low, Jr., and H. M. Brown	5 19 08	2 14 06
Mistral, E. I. Low, Jr	5 21 17	2 16 17

Heron, Frederick R. Coudert, Jr	5 27 57	2 22 57

Newport Special Thirties.

NEWPORT, R. I.

Tuesday, June 18.

THE third match between Wa Wa and Carolina was sailed on Tuesday, June 18. The course was from Brento's Cove to Dyer Island and return. The wind was from the south, making it a run out and a beat back. Wa Wa fouled a lobster pot and withdrew, leaving Carolina to go over the course alone. The times follow:

	Start.	Finish.	Elapsed.
Carolina, P. Jones	3 10 00	5 35 00	2 25 00
Wa Wa, R. Brooks	withdrew.		

Hull—Massachusetts Y. C.

HULL, MASS.

Open Race—Monday, June 17.

THE annual Y. R. A. open race of the Hull-Massachusetts Y. C. was sailed off Point Allerton on Monday, June 17, in a light to moderate easterly breeze. Four classes were provided for and the talent was represented in all. The 25-footers sailed a course of 16¼ miles, which is longer than usually given. The 21-footers and the knockabouts sailed a course of about 9½ miles. Both courses were triangular, the 25-footers having a beat, a run and a reach, and the smaller classes a beat and two reaches.

In the unrestricted 25-footers Thordis had an easy time of it. She got away first at the start and was never headed, finishing with lots of room to spare. The restricted 25-footers went over the line bunched, Calypso opening up a lead soon after the start. She led all over the course. On the windward work Flirt and Early Dawn had a hot scrap for second place, but Flirt opened up clear water before the mark was reached. In the 21-footers Zaza, a last year's boat, took first place. Rambler, two years old, showed up well on the windward work, and was second at the finish. In the 18-footers, Bonito established a lead soon after the start, and held it all through the race, Aspinquid following her. These boats hung pretty well together all over the course. The summary:

Class C—Open 25-Footers.

	Elapsed.
Thordis, W. U. Foster	2 58 33
Carrie M., N. C. Robinson	3 24 23
Acme, Hiram Patterson	3 34 28
Walrus, F. E. Grainger	3 53 17
Romance, Loring Sears	withdrew.

Class D—Cabin 25-Footers.

Calypso, A. W. Chesterton	2 43 55
Flirt, Fabyan and McKee	2 49 36
Early Dawn, J. E. Doherty	2 53 34
Little Peter, G. B. Doane	2 54 18
Marion, E. W. Gahol	2 59 00
Scud, H. W. Weeks	3 10 30

Class S—21-Footers.

Zaza, G. P. Shute	2 14 05
Rambler, S. M. Pomeroy	2 17 37
Opitsah III., S. H. Foster	2 19 16
Harriet, L. T. Harrington	2 21 36
Tarpon, S. M. Johnson	2 28 56
Privateer, John MacConnell, Jr.	2 29 55
Eaglet, W. S. Burgess	withdrew.

Class I—18-Foot Knockabouts.

Bonito, G. H. Wightman	2 25 34
Aspinquid, W. A. Comey	2 26 25
Malillian, B. S. Permar	2 27 10
Oriana, Alfred Douglas	2 29 28
Bacchante, Humphrey and Lauriat	2 29 45
Nethla, C. A. Cole	2 30 46
Ayaya, W. P. Keyes	2 33 20
Barbara, A. L. Hayden	2 35 06

Club Race—Saturday, June 22.

The regular club race of the Hull-Massachusetts Y. C. was sailed Saturday, June 22, in a very light easterly breeze. It was so light that the boats just finished within the time limit. The last part of the race was practically a drift and nothing of the actual sailing abilities of the boats were shown. The summary:

25-Footers.

	Elapsed.
Flirt, Fabyan and McKee	2 47 50
Calypso, A. W. Chesterton	2 51 48
Little Peter, F. B. Doane	2 53 38

18-Footers.

Bonito, G. H. Wightman	2 32 57
Malillian, A. M. Permar	2 39 56
Oriana, Alfred Douglas	2 41 37
Ayaya, W. P. Keyes	2 42 49
Aspinquid, W. A. Comey	2 43 49
Nethla, C. A. Cole	2 46 19
Barbara, A. L. Hayden	2 48 29
Bacchante, Humphrey and Lauriat	2 51 37

Handicap Class.

Dabster, G. P. Keith	2 36 03	2 23 03
Mildred, C. A. Coleman	2 34 04	2 34 04
Holly II, W. M. Ware	2 40 15	2 34 15

Burgess Y. C.

MARBLEHEAD, MASS.

Monday, June 17.

THE second club race of the Burgess Y. C. was sailed of the club house, Marblehead, Monday, June 17, in a light southeast breeze. In the 25-footers Chewink had no competitor and sailed a walkover. In the raceabouts Indian, designed by Crowninshield, won by 20s. This race was hotly contested. In the special 16-footers Raccoon, another of Crowninshield's designs, won handily. The summary:

Class D.

	Elapsed.
Chewink, F. G. Macomber	1 06 55

Class K.

Indian, J. L. Lawrence	1 10 40
Pompilia, R. C. Robbins	1 11 00
Sally V, L. W. Percival	1 11 35
Idol, T. K. Lothrop, Jr.	1 14 15
Dorothea	Disabled.

Class C.

Raccoon, A. D. Irving	0 54 55
Ugly Duckling, C. F. Layman	0 56 40
Kalitan, D. H. Follett	0 57 30
Cyclone, R. B. Wiggins	1 01 37

Shackamaxon Y. C.

DELAWARE RIVER.

Sunday, June 16.

THE Shackamaxon Y. C. held its fourteenth annual regatta on the Delaware River on Sunday, June 16. The start was at noon, and with a northeast wind all the yachts made better time than in any previous year. The finish was close in all the events. The results were as follows:

Fourth Class Duckers—Start, 12.

	Buoy.	Finish.
Yarsme, George L. Pass	2 20 00	4 30 00
Ellen, R. B. Murphy	2 22 00	4 32 00

Third Class Duckers—Start, 12.

Catherine, John Casnet	2 20 00	4 28 00
Howard G., C. Stamford	2 25 00	4 35 00

Freda K, George Kutz	2 28 00	4 35 00

Second Class Tuckups—Start, 12.

Emma, W. Flick	2 30 00	4 40 00

Dorchester Y. C.

DORCHESTER, MASS.

Monday, June 17.

WHILE the Hull-Massachusetts Y. C. was holding races for the larger classes of the Y. R. A. off Point Allerton on Monday, June 17, the 18-footers and the 15-footers and special classes were looked after by the Dorchester Y. C. The wind was easterly and light, and the racing was of the first-class order. Every race was close and at no time were the boats very far apart. In the 18-footers the champion Dauntless took first place, but she had to earn it. The 15-footer Vitesse had the same trouble in getting her prize. In the Dorchester one-design sailing dory class the racing was very close. The Savin Hill one-design sailing tenders were bunched all over the course and were constantly changing positions. The summary:

Class T—18-Footers.

	Act. Time
Dauntless, Benner and Patten	1 06 20
Circe II., F. L. Pigeon	1 06 51
Lobster, C. J. Hendric	1 12 40

Corinthian Y. C.

SAN FRANCISCO, CAL.

Thursday, May 30.

THE sixteenth annual regatta of the Corinthian Y. C. was sailed on Thursday, May 30. The course for the larger craft lay around Government buoy, thence to the one at Blossom rock, from there to a stakeboat anchored two miles away, on a line from Sausalito Point through Point Blunt, thence once more to the buoy at the Presidio Shoal and home to the starting line. The course for the smaller craft was simply an abridgment of the longer one. The summary follows:

20-Foot Class—5 Nautical Miles.

	Start.	Finish.	Elapsed.	Corrected.
Spider	11 45 45	12 53 46	1 08 01	1 07 30

California Y. C.

SAN FRANCISCO, CAL.

Thursday, May 30.

THE boats of the California Y. C. sailed an interesting race on Thursday, May 30. The starting gun was fired at 1:55, and, being a one-gun start, this was the starting time for all the boats. Thelma, flying Com. Marshall's pennant, was the first to get across the line, followed by Gypsy and Jessie E. An ebb tide helped the yachts during their beat to windward on the course, which was from the narrow-gauge Oakland pier to the Presidio Shoal buoy, thence to the Blossom Rock Buoy, then to Mission Rock, and back to the starting point, a distance of ten miles. The race resulted as follows:

36-Foot Class.

	Length.	Start.	Finish.	Elapsed.
Jessie E., sloop	31.21	1 55 50	3 42 32	1 47 32
Gypsy, yawl	31.71	1 55 31	3 44 26	1 49 26
Thelma, sloop	33.43	1 55 15	3 47 49	1 52 49

45-Foot Class.

Idler, yawl	36.98	1 56 30	3 56 46	2 01 46
Challenge, chooner	44.00	1 57 55	3 58 05	2 03 05

30-Foot Class.

Hope, sloop	27.08	1 56 40	4 10 10	2 15 10
Vesper, sloop		1 56 11	did not finish.	

Gold Trophy for Cup Yachts.

A CABLEGRAM, of which the following is a copy, was sent Monday to Sir Thomas Lipton; a telegram in the same words was sent to Thomas W. Lawson at Boston, and a copy inclosed in a letter to W. Butler Duncan, Jr.:

New York, June 17, 1901.—Sir Thomas Lipton, London, England: The Smart Set Magazine will provide a gold cup, value not less than $5,000, to be competed for after America Cup race, over same course, under auspices of well-known yacht club. Entry free to all yachts of class of Independence, Constitution, Shamrock, without regard to nationality or club membership. Two starters or no race. Cable reply prepaid.

W. D. MANN, Manager Smart Set.

Sir Thomas Lipton cabled the following reply:

London, June 17, 1901.—Mann, Manager Smart Set Magazine, New York: Cablegram received. Have instructed Barrie, my representative, to call upon you.

LIPTON.

Mr. Lawson replied as follows:

Boston, Mass., June 18, 1901.—W. D. Mann, Manager Smart Set: At any time previous to sailing her first race, July 6, I will be pleased to enter Independence for any prize offered by any American yacht club, to be sailed under any conditions made by any American yacht club, at any place, and I will have her at the starting line, barring accidents. I thank you for your telegram containing generous and enterprising offer.

THOMAS W. LAWSON.

Western Yachts.

CHICAGO, Ill., June 21.—The Macatawa Bay Y. C. will, during the week of Aug. 18-24, after the Canada cup races, offer in competition two prizes for open trophies, any sailing yacht on Lake Michigan eligible, provided it belongs to a regularly organized yacht club. This prize is donated by Judge J. C. Everett, of Chicago, and J. C. Post, of Holland, Mich., and is to be called the Waukazoo cup. This is for a cruising race from Chicago to Macatawa Bay, Mich. The name of this trophy is weird enough to attract attention. Macatawa Bay, it will be remembered, is one of the numerous pleasant little resorts just across the lake from Chicago, and at this point during the summer time there is considerable sailing interest among the little fellows.

In the above competition time allowance will be figured under the rules of the Macatawa Bay Y. C. The winning boat will retain the trophy until July of the following year. It will require two wins to own the cup.

On Aug. 23-24 the above yacht club will hold its annual regatta. There will be entries in the 25, 30, 35 and 40ft. classes, with suitable prizes for each class. This club has a large new club house, with a good ball room, and is amply equipped for business in every way. The bay itself is a good cruising point. It lies 100 miles northeast of hicago, and is rather a lake than a bay, being six miles long and one mile in width, entered by a channel from the main lake about 200ft. wide. Mr. Charles Scates is chairman of the Regatta Committee, and will be pleased to hear from any desiring to make entry at his office, 732 Chicago Opera House Block, Chicago.

Chicago Y. C. Season Prize.

The Chicago Y. C. will give a prize for the best season showing of any yacht during the summer competitions. A percentage plan will be established for the judging of boats, on the basis of 100 per cent. for first place, 66 2-3 for second and 33 1-3 per cent. for third, respectively for first, second and third places in any competition. The owner having the highest average at the end of the season will receive the prize, which is to be a handsome punch bowl. Any entry must sail seven races to qualify.

To-morrow is field day for the fleet of Chicago Y. C. Nothing important is on by way of a race, but there will be a general trial among the boats of all classes.

E. H

Boat-Stopping Apparatus in Norway.

A RESIDENT of Sweden, Count K. A. Posse, has invented a boat-stopping apparatus which will prevent collisions and facilitate the maneuvering of large vessels.

Recent experiments have been made on a steam launch accommodating 160 persons, with an engine of 30 indicated horse-power, making 9 knots an hour.

The new apparatus consists of shutters, applied on the starboard and port sides, about one-fourth of a boat length from the stern. These can be opened and shut by means of a lever applied on the deck and placed so as to be easily maneuvered by the helmsman. The shutters consist of two quadrilateral steel plates, with special packing boxes in the so-called shutter houses. Experiments showed that when the launch was going at full speed it could be stopped in fifteen seconds at half a boat length by reversing and extending the shutters.

The apparatus may be applied to any steamer. The invention has been patented in all the leading countries.

VICTOR E. NELSON, Consul.

YACHTING NEWS NOTES.

It is reported that the German Emperor has commissioned Messrs. A. Cary Smith & Barbey to design for him a schooner yacht similar to Yampa, which yacht he now owns.

* * *

Mr. W. O. Gay, of Boston, owner of the 70ft. cutter Athene, is having the Herreshoffs build for him a steam yacht similar to Scout and Mirage. The boat is nearing completion.

* * *

The steam yacht which was built by Bayles, of Port Jefferson, for the Misses A. and J. Thayer, was launched on June 15. She was named Zoraya.

* * *

Mr. Frederick S. Flower, N. Y. Y. C., has bought the auxiliary schooner Vergana from Mr. Frederick H. Benedict.

* * *

The English-built cutter Astrild, owned by Messrs. Addison G. and Herbert W. Hanan, which sunk at Port Chester a fe wweeks ago after being burned to the water's edge, has been raised and taken to the Jacob yard at City Island, where it was found that it would be impossible to rebuild her. She will be broken up and the material sold.

* * *

The New auxiliary yawl Vanessa, owned by Mr. Robert W. Cumming, Atlantic Y. C., was launched from the yard of her builders and designers, the Gas Engine and Power Co. and the Chas. L. Seabury Co., at Morris Heights, on June 17. Vanessa is 76ft. 6in. over all, 52ft. on the waterline, 17ft. beam and draws 7ft. 6in. She was designed for cruising. Her gasoline engine is under the cabin floor.

Contract has just been signed by the Gas Engine and Power Co. and Seabury & Co., for the building of a steam yacht for a well-known yachtsman, a member of the New York Y. C. She will be of steel construction, and will be fitted with two Seabury triple expansion engines, twin screws and a Seabury safety water tube boiler. The principal dimensions are 117ft. over all, 95ft. waterline, 16ft. 6in. beam and 6ft. draft. The bow and stern of this vessel will be so arranged that they can easily be removed for passing through canals. The guaranteed speed is 17 miles per hour.

The old schooner yacht America, which won the America Cup in 1851, in the famous race around the Isle of Wight, is fitting up at East Boston. She will celebrate the fiftieth anniversary of the winning of the Cup by being present at the next races for the Cup.

The trial races for the Canada cup challenegr, which were to have been held on June 24 and following days, have been postponed until July 3. Invader, of the Royal Canadian Y. C., Toronto; Canadian, of Hamilton, and Beaver, of Toronto, will take part in the trials.

The steam yacht Vinita, owned by Mr. George L. Carnegie, has been chartered by Mr. Clifford V. Brokaw, N. Y. Y. C., through the office of the Gas Engine and Power Company and Seabury & Co.

Mr. F. Gray Griswold, of Roslyn, Long Island, has had Mr. Ralph M. Munroe design for him a ketch that will be used for cruising in Southern waters. The boat was built by A. C. Brown & Sons, of Tottenville, Staten Island. She will be named Savalo, and is 66ft. over all, 52ft. waterline, 17ft. beam and 3ft. 6in. draft. Savalo is fitted with a 16 horse-power International engine. She is very roomy, having a large main saloon, two staterooms and a bath room.

We are indebted to Mr. Edward M. MacLellan, Secretary of the Manhasset Bay Y. C., and Mr. Everett Paine, Secretary of the Corinthian Y. C., of Marblehead, for copies of their club books.

Trapshooting.

Fixtures.

June 20.—Waterville, Me.—Amateur target shoot of the Waterville Gun Club; $75 added money. Dana P. Foster, Sec'y.
June 20-21.—Amherst, Mass.—Amherst Gun Club's two-day tournament; $65 in cash and merchandise. H. B. Perry, Pres.
June 25-26.—Bristol, Tenn.—Tournament of the Peters Cartridge Company. John Parker, Mgr.
June 25-27.—Walla Walla, Wash.—Seventh annual tournament of the Sportsmen's Association of the Northwest. W. G. Campbell, Sec'y.
June 30.—Jersey City, N. J.—Hudson Gun Club tournament. Club race, five men to a team. A. L. Hughes, Cor. Sec'y
July 1-2.—Sherbrooke, Can.—Tournament of the Sherbrooke Gun Club.
July 3-4—Flint, Mich.—Second shoot of the Michigan Trapshooters' League. John Parker, manager; Chas. Caleb, Sec'y.
July 4.—Schenectady, N. Y.—All-day amateur target tournament of the Schenectady Gun Club. Harry Strong, Sec'y.
July 4.—Towanda, Pa.—Annual tournament of the Towanda Gun Club. Magautrap. M. F. Dietrich, Sec'y.
July 4.—Frankfort, N. Y.—Third annual target tournament of the Frankfort Fish and Game Protective Association. W. J. Weller, Sec'y.
July 4.—Haverhill, Mass.—Open handicap shoot of the Haverhill Gun Club. S. G. Miller, Sec'y.
July 4.—Ossining, N. Y.—Target shoot of the Ossining Gun Club.
July 4-5.—Champlain, N. Y.—Champlain Gun Club's tournament; all events open to amateurs; some events open to professionals. Wm. Fraser, Pres.

DRIVERS AND TWISTERS.

Sept. 2 and 3 are the dates fixed upon for the second annual tournament of the Virginia Trapshooters' Association, at Richmond, Va., under the management of the popular expert, Mr. John Parker, of Detroit. All shooters are invited. Four sets of traps will be provided. The sweepstakes open to all amateurs. Targets 2 cents. Liquid refreshments free to all shooters. The Association's team and championship events will be the only events closed to the public. Mr. Franklin Stearns is president of the Association. Mr. J. C. Tignor is secretary-treasurer. The Association states that "last year this Association's tournament was attended by 130 shooters. This year's attendance will smash that all to smithereens, and break all records, as the Association alone numbers nearly 400 active shooters. A good time and plenty of shooting are guaranteed to all. Remember Labor Day and Richmond's hospitality. You want to shoot and you want to be treated right, so don't fail to come to the biggest shoot of the year. Address the secretary for catalogue and information." The clubs composing the Association are Chesapeake Gun Club, Newport News; Portsmouth Gun Club, Portsmouth; North Side Gun Club, Barton Heights; Blue Ridge Gun Club, Roanoke; Wytheville Gun Club, Wytheville; Ashland Gun Club, Ashland; Lynchburg Gun Club, and Oakwood Gun Club, Lynchburg; Staunton Gun Club, Staunton; Charlottesville Gun Club, Charlottesville; Norfolk Gun Club, Norfolk; Clifton Forge Gun Club, Clifton Forge; West End Gun Club, East End Gun Club, Deep Run Hunt Club and Lakeside Country Club, Richmond. Programmes will be ready about Aug. 15.

The English papers, as will be noted on reference to some excerpts from them published in another column, intimate that the American team had a real advantage in the greater load used, and had they been limited in that respect to the conditions governing the English team things might have been different. Incidentally, the thought suggests itself that had the English team been restricted to the same conditions which governed the American team, things might have been still more different. It is possible that the American team might be willing to shoot them a match on even terms. However, the loads of the American team are described in full in Mr. E. Banks' interesting account of the match, which is published in our trap columns.

The Marlin Fire Arms Company, of New Haven, Conn., has now ready for distribution a catalogue for 1901, which will be mailed to any one on receipt of application accompanied with three stamps for postage. Besides giving a complete list of the company's famous products, illustrated in parts and in whole, there is a great fund of practical information of value and interest to shooters, both in respect to rifle and shotgun. The covers are a model of artistic excellence. The front cover portrays a camp scene—an Indian of fine physique standing alertly with rifle in hand ready for instand use. The covers are printed in nine colors, and in their production display a generous outlay of thought, talent and money.

An exchange states, in respect to the Buffalo Audubon Gun Club, that "a general meeting of the club is called for Wednesday evening next, June 26, at President J. J. Reid's office, when the club will act on the advisability of holding a large tournament during the Pan-American season at the club's grounds, and if advisable dates will be set and the respective committees and arrangements perfected at once. The demand for a shoot at Buffalo seems to be coming in from all parts of the world, and the management, by the Audubon Gun Club, if it took hold, would guarantee an event second to none ever held in this country. The dates recommended by some of the prominent shooters would be early in August."

It is now a good time to study one's own ability at different marks in respect to target shooting. It is not a difficult task to find a great number of shooters, each of whom knows that he should be placed at the inside mark, while all others are strung back anywhere toward the horizon. It is, on the other hand, quite a difficult task to find a shooter whose personal opinion concerning himself is that he should be set back from the inner mark. However, if a shooter have any misgivings, it is well to get in some long-distance practice.

The Hudson Gun Club, of Jersey City, N. J., announces that there will be a five-man team race, 25 targets per man, at its tournament, June 30. The programme provides seven other target events at 10, 15, 20 and 25 targets, entrance 65 and 75 cents, and $1.30 and $1.90. Targets 1½ cents. Shooting commences at 9 o'clock. Rose system will govern. Shells for sale on the grounds. Refreshments free. Take Turnpike car from P. R. R. Ferry to west side of Hackensack River Bridge to reach the grounds. A. L. Hughes, Cor. Sec'y.

The press dispatches mention that the American team last Saturday shot a match at Glasgow for £100 a side and won by a score of 973 to 882. Each team had the use of both barrels. Merrill, Crosby and Gilbert broke 50 straight. Crosby used his second barrel once; Gilbert used his twice, and Merrill used his six times. Crosby scored 99, Tripp, Heikes and Fanning 97 each. The highest individual Scotch score was 96. The Americans were much applauded.

Those who think that there are no new reasons for low scores, relieving the shooter from any unpleasant doubts concerning his lack of skill, should ponder over the following, taken from the Meridian, Miss., News: "The heavy rains had dampened the bluerocks to such an extent it was almost impossible for shot to break them, which accounts for individual scores being lower than usual."

The Washington, Ind., Democrat states that John L. Winston, of this city, broke 94 clay targets out of a possible 100 during the State tournament of the Trapshooters' League at Bedford, Wednesday, and by doing so won the State championship, the diamond medal of the Indiana Trapshooters' League and a handsome gold watch. Winston broke 94 targets out of 100.

Mr. Elmer E. Shaner, manager of the Interstate Association, arrived in New York on Monday of this week, and forthwith energetically engaged in preparing the preliminary arrangements for the forthcoming Grand American Handicap at targets. He will be occupied two or three days with his official duties.

In a team race, fifteen men on a side, between the South Side Gun Club, of Newark, and the Boiling Springs Gun Club, of Rutherford, N. J., at Newark, on Saturday of last week, the Boiling Springs Club won by a score of 312 to 300. Each contestant shot at 25 targets.

Capt. J. A. H. Dressel received a cablegram on Thursday of last week concerning the American team, as follows: "All sail twenty-ninth," which signifies that the members will sail for America on June 29, and arrive here in time for the G. A. H. at targets.

Keep in mind that the regular entries in the Interstate Association's Grand American Handicap at targets close July 17 at 6 P. M. Penalty entries cost $5 more. Read the programme published in our columns. 2

Mr. John S. Wright has announced that he will give a delicatessen target shoot on July 10. Merchandise articles of beauty and worth will be in store for those whose merit with the scatter gun is equal to the occasion.

A correspondent informs us that a great trapshooting tournament will be held at San Antonio, Tex., by the Midwinter Association, of which Capt. Oscar Guessaz is the leading spirit.

Mr. Edward Banks informs us that he may remain abroad till July 16, when he will sail for America, and is due to land on July 26, his birthday.

At the Texas State tournament, at Dallas, last week, the team medal shoot was won by Messrs. Faurote and Dargan.

The Ossining, N. Y., Gun Club starts a new series of prize shoots on July 4.

BERNARD WATERS.

Trap Around Reading.

READING, Pa., June 20.—The members of the Eagle Gun Club, of this city, held a target shoot to-day on the Spring Valley shooting grounds, when the following scores were made:

Events:	1	2	3	4	5	6	7	8	9
Targets:	5	5	5	5	5	10	10	5p	10
Hill	2	2	4	5	2	3	6	7	6
Reed	1	1	4	4	2	5	6	4	4
Ressler	3	3	3	2	4	6	4	6	6
Focht	..	..	0	0	4	2	6	..	2
Smith	..	..	0	1	1	3	3	5	2

West Chester, Pa., June 20.—The monthly medal shoot of the West Chester Gun Club was held here to-day. The scores follow:

Monthly medal shoot, 50 targets: Henry 33, Howard 32, Mack 32, Peters, 37, Holland 32, Ford 41, H. Howard 39, Rodgers 37.

Phœnixville, Pa., June 15.—The shoot for the South End trophy was held here to-day, the attendance being very large, in spite of the rainy weather which prevailed throughout the day. The shoot for the South End trophy was for teams of five men each from gun clubs in Berks, Montgomery and Chester counties, and six teams entered. The Twin City Gun Club's team, of Royersford, and Spring City, composed of J. S. Johnson, captain; Hagey, Trumbauer, Buckwalter and Muller, broke 97 and won the trophy. The South End team, of Reading, was second. The best individual score in the event was made by Saylor, of the Pottstown team, who broke 23 out of his 25. The shoot was managed by Arthur A. Finke, of Reading, assisted by the tournament committee, composed of Messrs. Dotterer, Hodge and Erb. The scores of the team shoot follow:

Morristown Gun Club—Smith 21, Cassel 16, Gaylor 7, Parker 10, Dotterer 15; total 69.

Phœnix Gun Club—Lewis 14, Hodge 13, Pierce 16, Nyce 12, Muller 12; total 67.

Spring Valley Gun Club—Walters 12, Gerhert 18, Eshelman 13, Jones 10, Young 21; total 74.

Pottstown Gun Club—Saylor 23, Showalter 18, Benner 15, Slonaker 13, Seidel 10; total 79.

Twin City Gun Club—Johnson 21, Trumbauer 21, Hagey 19, Muller 16, Buckwalter 20; total 97.

South End Gun Club—Essick 19, Murphy 16, Ritter 17, Dietrick 10, Matz 18; total 80.

DUSTER.

Buffalo Audubon Gun Club.

BUFFALO, N. Y., June 22.—Kelsey's fine performance was the feature of the Buffalo Audubon Gun Club's shoot to-day, the day being the annual field day and merchandise shoot, which has been observed by the club each year for ten years. The committee had secured prizes enough for twice as many entries. The weather and day were ideal for trapshooting.

Nos. 1, 2, 3, 4, and 5 events were regular sweepstake events, in which high honors were carried off by Kelsey, Hammond and C. S. Burkhardt. No. 6 was the first merchandise event, in which there were ten prizes, which were drawn in order as follows: F. D. Kelsey, Norris, E. W. Smith, E. F. Hammond, W. R. Eaton, Dr. Burke, C. S. B., Westwood, J. J. Reid, E. N. McCarney. No. 7 was another merchandise event at 25 targets, and was drawn as follows: E. F. Hammond, F. D. Kelsey, C. S. B., Talsma, Norris, E. W. Smith, Reynolds, Dr. Burke, McCarney, Westwood, J. E. Lodge, Eaton, J. J. Reid. The scores:

Events:	1	2	3	4	5	6	7
Targets:	10	15	10	15	15	15	25
Kelsey	10	15	0	15	15	15	23

City Park Gun Club.

NEW ORLEANS, La.—The fifth shoot for the Peters Cartridge Company gun was held June 16, at the City Park Gun Club grounds. The day was an ideal one for bluerock shooting. Not a breath of air was stirring, and the men shot remarkably well. As a result seven of the entries tied for first place under the handicap system.

Mr. Sommer made the best score with 24 out of 25, dusting the missed bird very hard. Mr. Lhote on the shoot-off topped his rival by killing 15 straight, with added handicap. This made him winner in the day's shoot. The scores were:

L. GERTEIS, Capt. C. P. G. C.

WESTERN TRAPS.

Intercity Shooting Park, of Minnesota.

CHICAGO, Ill., June 21.—Dr. Bill, the hustling manager of the Intercity Shooting Park, midway between the two sturdy cities of St. Paul and Minneapolis, writes breezily concerning matters out in his part of the world. It is quite worth while to note what he says regarding the tournament of the St. Paul Rod and Gun Club on July 10-11. There will be $350 added, the weather will be pleasant, there will be a rattling good crowd of fine fellows, and all in all no Western shooter should be without a ticket to this important Western event. Regarding late matters, Dr. Bill specifies as below:

"The weather interfered largely with the attendance this week. Every club day was of a disagreeable nature and kept the scores below the normal.

"The tournament of the St. Paul Rod and Gun Club to be held on these grounds on July 10 and 11 promises to be the target event of the year. The club will add $350 to a very attractive programme, besides offering the trophy of the St. Paul Gun Club, emblematic of the State championship, and the Hirschy team challenge trophy. The members of the club are taking active interest in this shoot, and will also see that the shooters are entertained evenings. We want all shooters to make some one hotel the general headquarters. We will no doubt secure rates and will announce same in programme.

"Scratch the business dates of July 10 and 11 off the book. Ship your shells to Frank Novotny, St. Paul; put your gun in the case, throw the strap over your shoulder and buy a ticket for St. Paul. You won't need to make it read, "Good for return," for we would like to have all trapshooters residents of the Capital City. Remember one thing, gentlemen, all the crack shots are in Europe, and this will be a shoot for amateurs only. Manufacturers' agents can show their hand, but cannot get next to the 'jack pot.'

"The Oak Grove Gun Club, of Minneapolis, are now making these grounds their home. Watch their scores, as well as watch them grow. They turn out a good crowd and can shoot a few.

"June 6, Minneapolis Gun Club Day.—Johnston and French are shooting a good race, and making all the boys step a few; 15 singles, unknown angles: Danz 10, French 10, Mrs. Johnston 10, Johnston 12, Hays 8, Shorty 6, Brown 10, Catermaran 11. Johnston won badge.

"Ten singles and five pairs: Danz 13, French 14, Mrs. Johnston 11, Johnston 12, Cat 11, Hoffman 9, Brown 15, Moore 10. Brown won senior badge, Danz won junion badge, Hoffman won amateur badge.

"Twenty-five singles, unknown angles: Danz 17, French 20, Mrs. Johnston 17, Johnston 17, Hays 18, Cat 20, Brown 19, Hoffman 12. French won badge.

"Twenty-five singles, unknown angles: Danz 18, French 20, Mrs. Johnston 13, Johnston 17, Hays 19, Shorty 12, Cat 18, Brown 15. Danz won badge.

"Saturday, June 8.—St. Paul Rod and Gun Club Day.—The first event was 25 singles, unknown angles, for the club cup. Score is with handicap. The second event is 25 singles, unknown angles for the Thompson and Day trophies, without any handicap allowance. In event No. 1 Ramaley won in the shoot-off, with Thompson. This was a very interesting race, as it required 125 birds to the man to determine the winner. This was a hard day for shooting, as the wind was strong and very gusty:

Central of Duluth.

Just ahead of the St. Paul Rod and Gun Club tournament comes that of the Central Gun Club, of Duluth, Minn., $440 in cash added. This is the ninth annual tournament of the Central Gun Club. It is a sterling event, and ought not to be overlooked. A trip to the head of the Lakes, then dropping back to the Twin Cities at the close of the Central Gun Club tournament, would make a splendid combination for any Western—and indeed any Eastern—shooter in midsummer. These shooters of the Northwest are the salt of the earth, though they live by the unsalted sea, and the man who can spend a couple of weeks in Minnesota in early July is doing good for himself and his country. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, June 22.—The appended scores were made on our grounds to-day on the occasion of the eighth trophy shoot of the season, or the first shoot of the second series. There was a strong hot wind blowing from the rear, which caught the targets, causing them to beat down quickly or jump in all sorts of directions, making the shooting very difficult. Consequently no high scores were made. Ford, Pollard and Midgley tied for Class A trophy on 21. Bernard and Dr. Huff tied for Class B trophy on 19. C. T. Keck, our one-armed amateur, won Class C on 14.

The attendance was good considering dark day and bad weather for shooting:

Dr Carson, 21.....111101111101101—12

Steck wins monthly trophy on straight score.

BLUE JEANS.

A Floating Tournament.

THE boys of the Mt. Sterling, Ill., Gun Club have won for themselves the fame of arranging something entirely unique in the history of Western trapshooting. On June 18 they gave an all-day tournament from the upper deck of the excursion steamer City of Peoria, Capt. G. M. Sivley, master, while the boat carried an excursion on the placid waters of the Illinois River from Beardstown to Montezuma Landing and return. Recognizing something good, the boys of all nearby teams who take pleasure in the sport of trapshooting, participated. Nobody was barred, and Messrs. Black Powder and Ten Gauge were there in plural and dual form. The programme called for ten 10-target events, three even moneys, and this combination was found very satisfactory. It was an unique game in many respects, a notable feature being the ever-changing background against which the birds went—sometimes the rippling river, anon a dark forest, again a lofty hill, a waving grain field, and occasionally the fleeting framework of a low-hanging bridge. Notwithstanding these conditions, some excellent shooting was done. Fred Parks, of Mt. Sterling, won the honors, and a handsome cup donated by the Peters Cartridge Company, with the handsome score of 95. "Old Man" Gilbert, of New Philadelphia, scored 94. Craig and Riehl tied for third with 93. Ed Scott got 91 and Estis 90. The long runs were made by Riehl, 61, and Estis, 56. Forty-five men participated in the events, and with extras, 450 targets were shot. The detailed scores are here given:

Events:	1	2	3	4	5	6	7	8	9	10	Broke.

C Barlow	12	7	C Blandford	10	7
A Rohr	15	9	A Bedell	12	6
A Rohr	15	4	A Bedell	12	10

June 22.—Herewith please find scores of the Ossining Gun Club, made June 22 at the regular weekly shoot, together with the summary of prize events, which ended on this day. Bedell gets first prize with 87 per cent., a handy margin of 8 points over J. Curry Barlow, who landed second prize with 79 per cent. Bedell also gets a special prize for the longest run of breaks during the shoot. Genial Commodore Rohr shot a game race, making a tidy total of 71 per cent., which gave him third prize.

A new series of prize shoots will be started on July 4, when a good big shooting crowd is expected.

The conditions of this series of prize shoots were such that the contestants were obliged to shoot rain or shine—thus the small percentages.

All events were at 10 singles, except No. 4, which was at 5 doubles:

Events:	1	2	3	4	5	6	7	Av.
C Barlow	8	7	..	..	..	..	..	.75
C Blandford	8	9	7	6	7	9	8	.77

Barlow	12	9	Bedell	12	10
Rohr	15	7	Bedell	12	10
Rohr	15	8			

C. G. B.

Fitchburg Rifle and Gun Club.

FITCHBURG, Mass. June 20.—The second shoot of the series between Gardner, Leominster and Fitchburg was shot at Gardner yesterday afternoon, and the local team came out ahead. The weather man hit it just right, except there was quite a variable wind. It would be difficult to get together three five-man teams which are more closely matched than these three. It is anybody's match until it is over.

This was the second of six shoots, two to be held in each place. A very beautiful cup is the prize to the winning team.

After two shoots the standing is as follows: Fitchburg has broken 412, Leominster 410, Gardner 400. This assures great interest in the coming matches.

The next shoot of the series will be held at Leominster on the afternoon of July 10.

Shoots of this nature are conducinve to the best of good fellowship, and as all the fellows are true American sportsmen in the best sense of the term these meets prove a very pleasant outing to all participating. May the best team win.

Bellows Falls Gun Club.

BELLOWS FALLS, Vt.—The Bellows Falls Gun Club held their weekly shoot on the club grounds, Drislain's field, Thursday, July 20.

Eight members of the Winchester, N. H., Gun Club paid us a visit, and we hope that they enjoyed themselves as well as we did on our visit to their opening. Below are the scores:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	15	10	15	10	15	25	5p	5p	25
Lesure	6	8	7	11	6	13	16	4	5	..

Dr Knight	4	15	7	13	8	9	19	3	7	..
Fassett	..	..	..	..	8	13	17	..	..	20
Lawton	..	..	..	..	5	11	..	..	..	9
Capron	..	..	..	..	9	7	13	..	..	..
Shepardson	..	..	..	..	8	9	16	4	7	..

The first eight shooters were from Winchester, N. H., the remainder being from Bellows Falls.

Event No. 7 was a friendly match between eight members of the Winchester club and eight from Bellows Falls at 25 targets per man—200 targets to the team. The Bellows Falls team succeeded in scoring 160 to Winchester's 118. There was a very strong south wind, and that made the targets very tricky.

C. H. GIBSON, Sec'y.

The International Trapshooting Contest.

HOTEL CECIL, London, England, June 14.—*Editor Forest and Stream:* The Anglo-American team race was concluded yesterday afternoon, with a result with which you have already been made acquainted by means of cable. From the very first the ultimate outcome of the match was scarcely in doubt. Some of the boys, it is true, were a little shaky occasionally because there was very in-and-out shooting on their part in the preliminary practice. The team, too, was very short on practice, for the members of it had had only two days in which to get acquainted with a ground and a system of throwing targets that needed careful study.

I have written you about what was done on Friday, the 7th inst., so shall now tell you what was done on Saturday. As usual the team drove out to Hendon in a tally-ho, and put in a full afternoon's practice. The main event was at 50 targets, and in this first honors were won by an Englishman, a Mr. "Paul," who scored 47, and took the whole purse, as everything here is "high guns" to win, "one high gun" being generally considered enough for each purse. As the entry fee was $2.50, with thirty-six shooters, Mr. "Paul" netted quite a pleasant little sum. I have mislaid the scores of the event, but I believe Gilbert, Fanning and Parmelee made 46; Tripp, who scored 24 out of his first 25, finished with 45; Crosby and Banks had 44, and Merrill and Palmer, another Englishman, had 43 each.

The members of the Middlesex Gun Club, under whose auspices and on whose grounds the international match was shot, decided to have no practice shooting on Monday, the day previous to the race, as they had much to do getting ready for the shoot itself. The Americans, therefore, again drove out to Hendon and took in a pigeon shoot at the Welsh Harp grounds. Parmelee and Gilbert were the last to stay in with an Englishman in the main event, Gilbert dropping out and leaving Parmelee to fight it to a finish. The American killed his 23d bird and won, the Englishman losing his bird in that round.

The conditions were against the birds, but their quality even under unfavorable conditions gave the visitors some idea of how good they might be if everything was with them. At first the Americans won quite a lot of money by laying the odds on the gun, which were asked by those who were backing the bird. Four and five to one were odds which were satisfactory to the Englishmen at the start, but before the end came, nothing less than seven or eight to one would be listened to. At one time, where there were eleven left in the tie, eight of that number were members of the American party; with the long odds last mentioned above, the previous winnings of their friends soon dwindled (and in some cases were wiped out) in short order, several dropping out in quick succession. As a whole, however, the boys enjoyed their first day with English bluerocks.

The International Match.

First Day, June 11.—This was an ideal summer day—not too hot, with a bright sky and brilliant sunshone. There was breeze enough to temper the heat and also to make the targets do some queer stunts at times.

Our tally-ho left the Cecil at 10:30, which gave us plenty of time for preliminary practice. Two 25-target events were shot, and in the second one Heikes made the first and only 25 straight that I've seen made under the English system of shooting. The wind died out somewhat, and good scores were expected when it came to the match proper. An adjournment at 1 o'clock for lunch curtailed the practice work, and probably spoiled some scores in the match, as lunch does not as a rule make most people shoot better. Then again quite a long time was consumed in arranging preliminaries, such as choosing referee and judges, and regulating the flight of the targets. These were thrown fully up to the limit and "towered" in a manner seldom, if ever, seen in the States. There was no low flight of a target, such as so closely resembles the flight of the American quail or English partridge. The targets went skyward more after the fashion of a black duck that jumps from its home in reeds when the gunner comes upon it suddenly. Of course such a flight gave the Englishmen a better chance to get in their work with the second barrel, and equally of course it handicapped the visitors, who had never, except since their arrival in England, looked over a gun at targets thrown in such a manner. The conditions called for targets to be thrown not less than 6 nor more than 12ft. high, 10yds. from the traps.

Capt. Money, who was selected as referee, tried to adjust things so that targets would be thrown at about a uniform height of 9ft., but the Englishmen kept them up to the maximum. It was apparently so impossible to get all preliminaries arranged that it was finally agreed that Captains Marshall and Butt, the chiefs of their respective teams, should get together and mutually agree upon everything. Capt. Marshall did not fuss long about anything, but let the Englishmen suit themselves, being anxious above all things to avoid any possible friction, and also to get the match started.

Winning the toss, the Captain went to the score with Tripp and Budd as his assistants in the first squad. The English captain put in Messrs. Ellicott, Palmer and Paul. The "Hon. Tom" led off with a beautiful miss, and the game was on. As the Americans in the first squad only scored 47 to 53 for their opponents, the English started out 6 in the lead. (I have omitted to state that the 100 targets were shot in strings of 20, squads of six men being up at the score; it was a walk-around in fact.)

The second squad was made up as follows: Merrill, Elliott and Parmelee as Nos. 1, 3 and 5 respectively; Messrs. Pike, Izzard and C. Morris as Nos. 2, 4 and 6. No change was made in the position of the teams as regards scores, each side adding 49 breaks to its total. Fanning, Heikes and Gilbert cut down the lead of 6 to a lead of 1, scoring 51 to 46, the latter total being made by Messrs. Johnson, W. B. Morris and Capt. Butt. Mr. W. B. Crosby, the last man on the American team, broke 19 to Mr. O'Connor's 16, and the Americans were 2 in the lead at the end of 200 targets. From this point the Americans kept on piling up the breaks until the scores showed that at the end of the 100th target for each man the American team had a lead of 65 targets.

Crosby was easily high on the American team with a total of 93 to his credit, Charlie Budd was second with 89, Heikes and Tripp tieing for third honors with 88 apiece.

For the Englishmen F. Izzard was at the top with 87, Messrs. Pike and O'Connor coming next with 84 each.

It is of special interest to note that the Britishers scored 172 second barrel breaks, this showing that the use of the two barrels is of some benefit after all. Adding 172 breaks to the 199 misses, we get a total of 371 times in which the Englishmen used their second barrels, which also means that they missed on an average 1 at least out of every 3 targets with the first barrel; in other words, their total of one barrel breaks was only 629 as against the Americans' 866.

Scores of First Match, June 11.

American Team.

O'Connor	16	17	14	19	18—84—801

Of the substitutes, or reserves, Powers scored 84 and Banks 68 on the American side, while Inglis scored 79 and Joynt 76 for the Britishers.

From the scores given above it will be seen that, as already stated, the Americans won by 65 breaks, with an average of .866 as against .801, a very satisfactory margin when their lack of practice is taken into consideration.

Guns and Loads.

T. A. Marshall—Parker gun. Targets: 3¼in. Trap shell, 3¼drs. Dupont powder, 1¼oz. No. 7½ chilled Tatham shot. Live birds: 3¼in. Trap shell, 3¾drs. Dupont powder, 1¼oz. No. 7 chilled Tatham shot.

C. W. Budd—Parker. Targets: 2⅞in. Smokeless, 3¼drs. Schultze, 1¼oz. 7½ chilled Tatham. Live birds: 3in. Trap, 3½drs. Schultze, 1¼oz. 7. chilled Tatham.

Fred Gilbert—Parker. Targets: 2⅞in. Leader, 38grs. Dupont, 1¼oz. 7½ chilled Tatham. Live birds: 3in. Leader, 3½drs. Dupont, 1¼oz. 7 chilled Tatham.

F. S. Parmelee—Parker. Targets: 2⅞in. Acme, 42grs. L. & R., 1¼oz. 7 chilled Tatham. Live birds, 2⅞in. Acme, 45grs. L. & R., 1¼oz. 7 chilled Tatham.

C. M. Powers—Parker. Targets: 3in. Leader, 40grs. Dupont, 1¼oz. 7½ chillen Tatham. Live birds: 3in. Leader, 3½drs. Dupont, 1¼ 7 chilled Tatham.

R. O. Heikes—Parker. Targets: 3in. Smokeless, 3¼drs. E C, 1¼oz. 7 chilled Tatham. Live birds: 3in. Trap, 3½drs. E C, 1¼oz. 7 chilled Tatham.

E. H. Tripp -Parker. Targets: 2¾in. Smokeless, 3¼drs. Hazard, 1¼oz. 7½ chilled Tatham. Live birds: 3in. Trap, 3½drs. Hazard, 1¼oz. 7 chilled Tatham.

R. Merrill—Parker. Targets: 3¼in. Trap, 3¼drs. Hazard, 1¼oz. 7½ chilled Tatham. Live birds: 3in. Trap, 3½drs. Hazard, 1¼oz. 7 chilled Tatham.

B. Leroy Woodard—Parker. Targets: 2¾in. Smokeless, 3¼drs. Dupont, 1¼oz. 7 chilled Tatham. Live birds: 3in. Trap, 3½drs. Dupont, 1¼oz. 7 chilled Tatham.

W. R. Crosby—Smith. Target: 3in. Leader, 44grs. E C, 1¼oz. 7½ chilled Tatham. Live birds, 3in. leader, 48grs. E C, 1¼ 7 chilled Tatham.

J. A. R. Elliott—Winchester—Target: 2¾in. Leader, 40grs. Hazard, 1¼oz. 7½ chilled Tatham. Live birds: 2¾in. Leader, 43grs. Hazard, 1¼oz. 7½ chilled Tatham.

Edward Banks—Winchester. Targets: 2¾in. Smokeless, 3drs. E C, No. 2, 1⅛oz. 7½ chilled Tatham. Live birds: Same as for targets.

J. S. Fanning—Smith. Targets: 2¾in. Arrow and Leader, 42grs. L. & R., 1¼oz. 7½ chilled Tatham. Live birds: 2⅞in. Arrow and 2¾in. Leader, 42grs. L. & R., 1¼oz. 7 chilled Tatham.

Second Day, June 12.

The weather, which had been beautiful ever since we landed, changed considerably during the night, and rain and a cold wind was our lot the greater portion of the day. Early on it was fine, with gleams of sunshine, but several times while the squads were shooting in the match the rain fell almost heavily enough to put a stop to shooting altogether. Neither American nor Englishman would acknowledge that he would sooner get under shelter than stay out in the rain and wind and break targets, so the game went along, regardless of weather.

Our tally-ho attracted the usual amount of attention while on its way to and from Hendon. On the way home the Stars and Stripes, which streamed away behind us, was saluted more than once by people who evidently were glad to see their flag. One young fellow on the top of a bus waved his hat most enthusiastically as we came down Piccadilly.

As a result of the wretched turn in the weather, the number of spectators was even smaller than on the previous day, when there were far fewer than had been expected. Inanimate bird shooting is not popular enough in this country as yet to draw a big crowd, and it is extremely doubtful whether it ever will be. From a spectator's point of view, the smashing of clay pigeons is too monotonous.

There was again quite a delay in starting the team race. The way the English shoot targets is not the way we do it in America, where everybody is in a hurry to shoot, being afraid he won't get shooting enough even in the longest day. Afternoon tea, lunch and social intercourse are prominent factors in a day's target shooting over here, and truth to tell they do not go badly together.

When the race did start, Capt. Marshall followed his own example, which he set the previous day—he commenced the score sheet with a cipher, which spoiled its looks. Tripp broke his target, and saved the shell, which will go back to the States with him, accompanied by the shell with which he recorded the first tally for America in the first inanimate target match ever shot between representatives of England and America. Charlie Budd broke his target, and the race was fairly on. Out of the first 20 targets per man Messrs. Marshall, Tripp and Budd accounted for 50 to their opponents' 49, and the Americans were thus 1 break ahead. Gilbert, Elliott and Parmelee were the Americans in the next squad, and they also broke 50 out of their 60, Gilbert getting three-fifths of the total number; the three Britishers broke 51, so the two teams were even with 100 breaks apiece when the first 120 targets had been shot at.

Heikes, Fanning and Powers, (Powers was in Merrill's place on the team this day) scored 55 out of their 60, Fanning breaking straight, thus emulating successfully the example set him by Gilbert in the previous squad. As the three Englishmen in their squad only broke 47, the American team went to the front and never looked back again. Crosby started with a 20 straight, and increased the American lead by 5 targets.

As was only to be expected, the superiority of the American team being so manifest, the interest in the race lay solely in seeing how small or how large the margin of victory would be, and also how the Americans would finish among themselves. Crosby did some great shooting, landing with 95, while Gilbert, Heikes and Tripp finished with 93, 92 and 90 respectively. The improvement in the scores over those of the previous day may be traced to two causes. First, the wind was not so strong as it was on the first day, and the extra practice was also bearing good fruit. In short, the boys were catching on.

The scores in the race were as below, the Englishmen finding the target successfully with their second shell no less than 149 times:

As usual, to fill out the last squad, two substitutes from each team shot along, Banks and Merrill being the American substitutes, Brown and Musgrove the English. The latter will be better known to American shooters as J. M. Postans, who came so nearly winning the Dupont cup at Baltimore last fall. The scores of the substitutes were:

Banks	10111111011001111111	—16
	11101111111110111101	—17
	01111110110011111111	—16

Third Day, June 13.

The weather on this day was simply execrable, considering that it is now about the middle of June. The thermometer, according to reports in the daily papers published this morning (Friday), went down to 42! The sky was overcast, and the wind blew like the mischief. Overcoats—winter overcoats—and thick rugs were absolutely necessary to one's comfort while driving out to the Welsh Harp at Hendon on the top of the tally-ho.

Scores of course suffered considerably, but still the Americans kept up a capital gait, finishing with an average of nearly 85 per cent. Crosby again was high with 90 breaks, while Heikes with 88 was easily second, Gilbert coming in third with 85. Pike with 83, C. Morris with 82 and Izzard with 80 were the only men on the English team to break 80 per cent. or better. The totals at the finish were 843 for the visitors as against 749 for the English.

The use of the second barrel was again beneficial to the British totals, for the records show that 150 targets were broken with the second shell. For the sake of ready comparison, I have prepared a table showing just what the English did with their first and second shells during the entire three days' contest. The table will be found further on in this report.

Separating the teams for ready reference, we have the following:

American Team.		English Team.	
Marshall	53	Butt	71
Tripp	82	H J Cave	71
Budd	83	Ellicott	76
Powers	83	Pike	83
Elliott	83	Joynt	76
Parmelee	84	Paul	67
Heikes	88	C Morris	82
Gilbert	85	Palmer	68
Fanning	82	Johnson	75
Crosby	90—813	Izzard	80—749

The American substitutes were Banks and Leroy, who scored 74 and 78 respectively; the English substitutes were W. B. Morris and Williams, who scored respectively 65 and 54.

General Averages.

In the list of general averages it is only natural to place both teams and men in order of merit; so here goes:

	1st match.	2d match.	3d match.	Total.	Average.
American Team.					
Crosby	93	95	90	278	.926
Heikes	88	92	88	268	.893
Gilbert	84	93	85	262	.873
Tripp	88	90	82	260	.866
Fanning	85	89	82	256	.853
Elliott	86	86	83	255	.850
Parmelee	87	84	84	255	.850
Budd	89	81	83	253	.843
Powers	..	84	83	...	....
Merrill	86	..	..	...	....
English Team.					
Izzard	87	86	80	253	.843
Pike	84	83	83	250	.833

Johnson	80	78	75	233	.777
Butt	81	75	71	227	.756
Palmer	79	71	68	218	.726
Paul	73	..	67	...	....
C Morris	78	..	82	...	....
W B Morris	73	..	..	...	....
O'Connor	84	80	..	...	....
Inglis	..	70	..	...	....
H J Cave	..	79	71	...	....
Joynt	..	87	76	...	....

N. B.—Mr. O'Connor would have most certainly been a member of the English team in the third match had it not been that business of a legal nature prevented him from being in attendance on the third day.

Statistical Data of Interest.

Below are some statistical data which will undoubtedly be of interest to those who have taken the trouble to read thus far what I have written in reference to the Anglo-American team race:

The British team in the first match scored as follows:

First barrel breaks, 629; second barrel breaks, 172; misses 199.

In the second match 645 first barrel breaks, 149 second barrel breaks, and 206 misses. In the third match 599 first barrel breaks, 150 second barrel breaks, and 251 misses, making a total of 1,873 first barrel breaks, 471 second barrel breaks and 656 misses.

The Americans on the other hand, using one barrel only, broke 866 in the first match, 877 in the second match and 843 in the third, making their grand total 2,586, showing a total of misses of 414.

The grand average of the American team was .862 as against .781 for the English, the Americans thus being on average rather more than 8 targets in a hundred better than the English.

Postscripts Innumerable.

Capt. Money by special request of both teams acted throughout the entire series as referee. Messrs. Emile Werk and Frank Harrison were judges for the American team. Messrs. A. A. Carter and W. F. Cave acted in a similar capacity for the English. George Jones and Emmet Gale were reputed the official scorers, although the scores kept by D. F. Pride and B. Leroy Woodward were understood to be checks on the others.

Mr. A. H. Gale, secretary of the I. B. S. A., was a busy man indeed, having his hands full to keep things moving. I. B. S. A. is short for Inanimate Bird Shooting Association.

In a letter yet to be written I shall try and give a fairly lucid idea of the pulling apparatus; it's too complicated a matter for me to tackle in a hurry. Suffice it to say that the puller has to keep his hands and wits busy all the time to be able to pull correctly, even for such a leisurely method of shooting as is in vogue over here. In America, with the American system of rapid fire, a puller who had to handle the apparatus and indicator used at the grounds of the Middlesex Gun Club would be off his base in a jiffy. It is only right to state that the pulling during the Anglo-American match was done skillfully and accurately by a very intelligent young man, who attended to his business strictly all the time.

In order to see how the angles of the targets were dealt out by the indicator used, Fred Elliott, Jim's son, kept tally all the first day. His figures showed that the American team had 287 left-quarterers, 198 straightaways and 515 right-quarterers; the English team had 385 left-quarterers, 320 straightaways and only 295 right-quarterers. As the right-quarterers on the Middlesex Gun Club's grounds are decidedly harder than any other target, the American total score stands out even more prominently than it otherwise might seem to do. Charlie Budd drew 61 right-quarterers, but he just ate them up, as his score of 89 tells plainly.

The team race being started so late each day, and being shot quite leisurely, it was very late every evening when we started home on our eight-mile drive. Remember, we've a sun over here which does not go to bed until 8:15 every night. Making all due allowance for the difference in time, some of the boys were still eating dinner when New Yorkers were beginning to think of theirs. What time they got to bed is not to be told, but apparently neither their interiors nor their skill with the shotgun were impaired in the least.

"Half crowns," "florins," "two-bob pieces," etc., are just now worrying the boys a whole lot. Billy Crosby wanted to make a bet the other day with Mrs. Crosby about something or another. This is the way he put his proposition: "I'll just bet you one of those things, two of which make a dollar and a quarter!" (He referred to a half crown of course.)

Tom Marshall is a good captain, but he is not at his best when settling accounts with his men. On a certain division the other morning he found himself just "nine dollars out, darn the luck!"

Fred Gilbert has been as usual the life and soul of the party. The only times when he wasn't full of jokes were the brief intervals after he returned from recording totals of 15 out of 20!

Heikes pegged away and finished second in the list of those who shot on all three days; his average of 893 means a whole lot of work.

Ernie Tripp, "the gentleman from Indiana," ought to be able to get anything he wants from his Indianapolis friends and neighbors after the excellent shooting he has been doing over here.

The driver of our tally-ho made good music on his bugle, and was especially busy in that line on the way home every evening.

The Englishmen did not seem to use good judgment in the way in which they fired off their first barrel. Too often they seemed to think it was best to snap at the target as soon as it appeared, trusting to the second barrel to land it for them if it was missed with the first. Later on—that is to say on the last day—most of them shot their first barrel with better judgment. This will be noted in some instances most particularly.

Owing to the peculiarly climbing flight of the targets the Americans had to shoot much more deliberately than usual. Their time in fact would be called very slow in the States. Then again the ground sloped rapidly down in front of the score, making it hard to judge either speed or height.

Mr. O'Connor was the snappiest shot on the English team; he put in his first and second so rapidly that it was almost like sending 2½oz. of shot after a target in one long stream.

American machine-made guns and the ammunition brought over by the visitors attracted a great deal of attention. Both guns and ammunition, handled as they were by the right people, gave a capital account of themselves. "Pump guns" were quite a curiosity apparently, being examined carefully and interestedly by quite a number of people every day.

During the proceedings on the third day of the match the Englishmen got together and subscribed £40, about $200, to purchase a cup, to be competed for on Saturday of this week (tomorrow, the 15th) by members of the American team only. The conditions are to be 25 targets, one man up, unknown traps and angles.

On Tuesday night, the 18th, the American team will be the guests of the English at a banquet to be given at the Café Royale. It will be a big affair, and it is whispered about that certain presentations are to be made during the evening. What those presentations are to be can only be made known later.

The team leaves Thursday of next week for Glasgow, where a match at 100 targets is to be shot for £100 a side ($500) with a team of Scotch inanimate target shooters.

When the third and final match had been decided, some little speechifying took place in front of the club house. Messrs. North, Marshall, Gale and Butt, as well as Capt. Money, made a few remarks. Mr. Gale showed his muscular development by carrying Capt. Money in his arms and placing him on a chair, the Captain resisting the while.

Some new books will be published after the team gets back to America. Some of them will be "What I Know About the English Coinage," by T. A. Marshall; "My Life On the Ocean Wave," by "T. Bill" Crosby; Fred Gilbert is planning a series of publications embodying his life's history to date; the titles selected are "Fritz, the Farmer," "Fritz, the Shooter," and lastly "Fritz, the Sailor."

The whole team and its accompanying friends were highly gratified on Tuesday and Thursday evenings to receive congratulatory cables from President J. A. H. Dressel, of the Interstate Association. Little things like that tell mightily when you're away from home.

FOREST AND STREAM of the 8th arrived to-day, but I can't find out who has got my two copies! No one will own up.

Jim Elliott bought a nice new Russian leather pocketbook yesterday, and made everybody smell it because it "smells so nice." He has not got that pocketbook now, for some one picked his pocket last night. Jim says he expects to get it back, for "it only had a half crown in it and a few of those things they call shillings."

The aggregation of mascots brought by the Americans are now looked upon with some reverence by our British cousins. Rabits' feet, little "St. Joes," pocket pieces and even alligators are likely to be the rage at English trap shoots in future. One of the baby 'gators I brought up from Jacksonville last April watched every shot with interest on the first day.

Later—Saturday Morning.—Last night Paul North and Mrs. North entertained the members of the American team and their friends at a banquet given in the Pompadour room of the Hotel Cecil. Mr. Ellicott, a member of the English team, was also present. The banquet commenced at about 9 o'clock, and it was just about midnight when the last speeches had been made.

The weather to-day is perfectly lovely, and all the boys are looking forward to a good stiff race for the $200 cup put for competition among the members of the American team this afternoon. This cup has already been referred to above.

EDWARD BANKS.

The Interstate at Cleveland.

THE Interstate Association's tournament at Cleveland, O., given for the Cleveland Gun Club, June 19, 20 and 21, was a distinct success. Over fifty shooters were in attendance on the first day, among whom were the famous Messrs. L. J. Squire, of Cincinnati; E. D. Rike, of Dayton; R. S. Trimble, of Covington, Ky.; F. E. Mallory, of Parkersburg.

Wednesday, Ftrst Day, June 19.

The weather was all that could be desired, and the arrangements were complete, all of which were conducive to good sport and competition. The tournament commenced at 9:30 o'clock, and was concluded for the day at 3:15 in the afternoon, a half hour at noon having been taken for lunch. Two special events were shot also. This indicates that the competition, under Mr. Elmer E. Shaner's able management, progressed with smoothness and expedition. The high score of the day, 168 out of 175, was made by Squires. Of the Cleveland shooters Green was high with 165 out of 175. The competition is noticeable for the steadiness with which the contestants as a whole shot through the entire programme. The scores:

Events:	1	2	3	4	5	6	7	8	9	10

Thursday, Second Day, June 20.

The special event for the diamond badge, value $200, failed to fill. The competition again was noticeable for the steady shooting throughout the programme, and the good scores. Mr. Shaner received much praise for his efficient management.

Friday, Third Day, June 21.

The special for the silver cup at 25 targets resulted in a tie on a straight score between Messrs. Green and Mingo, which was won in the shoot-off by the latter, score 21 to 20. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	15	15	15	15	15	20	20	20	20	20	25

Boston Gun Club.

BOSTON, June 19.—The regular Boston Gun Club weekly prize shoot was held on their grounds to-day, the usual coterie of shooters being present and making things hum. Every one left his shooting togs at home this time, and was out for the best possible enjoyment. Spencer's two straights and Barry's two 9s on pairs stand out prominently for the afternoon, both showing just how a target should be centered to call it broken. The infielders again drew forth lots of amusement, the real brush shots showing their heels to the everyday trapshooter in a very dicisive manner.

The prize match continues to increase in interest, though at present Woodruff is having things all his own way, now leading by 5 birds, which is a good lead, when shooting an average close on to 85 per cent., as a daily occurrence. Frank continues to hold on to second place, though as yet not availing himself of the chance to throw out low scores. Though a new shooter, no one exhibits any more enthusiasm an good fellowship, and it is the hope that we may be favored with more of the same caliber. Spencer is just at present taking things easy in third position, evidently waiting his chance to gain a few birds on the last heat. Lane follows, only 1 target to the rear, hoping for one more good chance to be with us, and all say he is welcome. In the prize events of to-day Woodruff and Barry take care of first position cojointly with 21 each, Horace second with 19, Spencer and Lane fourth with 17.

Scores follow; all events unknown, distance handicap, except event 8, which is infielder.

Interstate Association's Target Handicap.

THE second annual Interstate Association's Grand American Handicap at targets, July 16, 17, 18, and 19, at Interstate Park, Queens, L. I., N. Y., $1,000 added, has a programme as follows:

Introductory.

The programme of the second Grand American Handicap target tournament, herewith presented, is not materially different from that of its predecessor, held last year. That programme was so happily devised that it won the approval and support of the shooters to an unexpected degree.

A majority of the events are open to amateurs only, while in the events which are open to all, a handicap obtains, thus maintaining an equity throughout between amateur and professional, or amateur, semi-amateur and novice. This is specially noticeable in the trophy events, in which a distance handicap, of scope sufficient to allow the establishing of a true equity, is one of the conditions.

The Grand American Handicap target tournament is given by the Interstate Association, and is the greatest event in target competition, as its fellow event, the Grand American Handicap at live birds, is the greatest event of the world in live-bird competition.

The Grand American Handicap target tournament of 1901 will be held at Interstate Park, Queens, L. I., N. Y., July 16 to 19.

The mammoth Casino, with its four sets of live-bird traps arranged in a straight line, occupies an inclosure of forty acres under grass, the whole of the forty acres being as level as the proverbial billiard table. The traps face due east, and the background is unobjectionable. The target traps are placed within the boundary lines of No. 1 and No. 2 sets of live-bird traps. No 1 contains a magautrap and the set of traps, Sergeant system; No. 2 contains another magautrap and the five expert traps. All four sets are in front of the Casino and easily accessible from the broad piazza.

To reach Interstate Park from New York city take Thirty-fourth street ferry, East River, to Long Island City; thence by Long Island Railroad to Interstate Park station direct; or Brooklyn Bridge to Long Island Railroad—Flatbush avenue station, Brooklyn—thence by train to Interstate Park station direct.

Conditions governing Grand American Handicap at targets: 100 bluerocks, unknown angles; handicaps 14 to 25yds; high guns—not class shooting. The number of moneys into which the total purse will be divided will be determined by the number of entries received. Entrance $10, the price of the targets being included.

In addition to first money the winner will receive a sterling silver trophy, presented by the Interstate Association.

Regular entries must be made at the cashier's office, on the shooting grounds, before 6 P. M. Wednesday, July 17.

Penalty entries may be made after July 17, up to the commencement of the event, by paying $12 entrance—targets included.

Division of moneys in the Grand American Handicap at targets:

High guns win. The Interstate Association adds $200 to the purse, and presents the winner of first money with a sterling silver trophy, commemorative of the win. The total amount of the purse will be divided in accordance with the number of entries received, as follows:

1 to 10 entries, two moneys—60 and 40 per cent.

11 to 20 entries, four moneys—40, 30, 20 and 10 per cent.

21 to 30 entries, six moneys—30, 20, 15, 13, 12 and 10 per cent.

31 to 40 entries, eight moneys—25, 20, 15, 12, 10, 8, 5 and 5 per cent.

41 to 50 entries, ten moneys—22, 18, 14, 11, 10, 8, 5, 5, 4 and 3 per cent.

51 to 60 entries, twelve moneys—20, 16, 13, 10, 9, 7, 6, 5, 5, 4, 3 and 2 per cent.

61 to 70 entries, fourteen moneys—18, 15, 12, 10, 9, 7, 6, 5, 5, 4, 3, 2, 2, and 2 per cent.

71 to 80 entries, sixteen moneys—16, 14, 11, 9, 8, 7, 6, 5, 5, 4, 3, 3, 3, 2, 2 and 2 per cent.

81 to 90 entries, eighteen moneys—15, 13, 10, 8, 8, 7, 6, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, and 2 per cent.

91 to 100 entries, and over, twenty moneys—14, 12, 9, 8, 7½, 6½, 6, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2 and 2 per cent.

Briefly summarizing the foregoing, it will be noted that two places are created for each ten entries or fraction thereof up to one hundred.

Division of moneys in the Preliminary Handicap and the Consolation Handicap (high guns win):

The Interstate Association adds $100 to the purse in each event. Fifty dollars will be deducted from the net purse in each event to purchase two trophies, one for the winner of first money in each event. The purse will then be divided in accordance with the number of entries received as follows:

1 to 10 entries, two moneys—60 and 40 per cent.

11 to 20 entries, four moneys—40, 30, 20 and 10 per cent.

21 to 30 entries, six moneys—30, 20, 15, 13, 12 and 10 per cent.

31 to 40 entries, eight moneys—25, 20, 15, 12, 10, 8, 5 and 5 per cent.

41 to 50 entries, ten moneys—22, 18, 14, 11, 10, 8, 5, 5, 4 and 3 per cent.

51 to 60 entries, twelve moneys—20, 16, 13, 10, 9, 7, 6, 5, 5, 4, 3 and 2 per cent.

61 to 70 entries, fourteen moneys—18, 15, 12, 10, 9, 7, 6, 5, 5, 4, 3, 2, 2, and 2 per cent.

71 to 80 entries, sixteen moneys—16, 14, 11, 9, 8, 7, 6, 5, 5, 4, 3, 3, 3, 2, 2 and 2 per cent.

81 to 90 entries, eighteen moneys—15, 13, 10, 8, 8, 7, 6, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, and 2 per cent.

91 to 100 entries, and over, twenty moneys—14, 12, 9, 8, 7½, 6½, 6, 5, 5, 4, 3, 3, 3, 2, 2, 2, 2, 2, 2 and 2 per cent.

Briefly summarizing the foregoing, it will be noted that two places are created for each ten entries or fraction thereof up to one hundred.

First day, July 16.—Five events at 15 targets, five events at 20 targets, entrance $1.50 and $2 to each event; $20 is added. All events at unknown angles. Manufacturers' agents, paid representatives, etc., may shoot in the above events for targets only.

Second Day, July 17.—Five events similar to those of the first day. Event No. 6, Preliminary Handicap, is open to all; 100 bluerocks, unknown angles, $7 entrance, targets included; handicaps 14 to 25yds.; high guns—not class shooting; $100 added to the purse. The number of moneys into which the purse will be divided will be determined by the number of entries received, as is fully explained elsewhere in this programme. In addition to first money, the winner will receive a trophy, $50 of the net purse being reserved to purchase same.

Third Day, July 18.—Five events at 15 and 20 targets, similar to those of the first day. Event No. 6, Grand Americon Handicap at targets, is open to all; 100 bluerocks, unknown angles; $10 entrance, targets included; handicaps 14 to 25yds.; high guns—not class shooting; $200 added to the purse. The number of moneys into which the total purse will be divided will be determined by the number of entries received, as is fully explained elsewhere in this programme. In addition to first money, the winner will receive a sterling silver trophy, presented by the Interstate Association.

Fourth Day, July 19.—Five events similar to those of the first day. Event No. 6, Consolation Handicap, is open to all; 100 bluerocks, unknown angles; $7 entrance, targets included; handicaps 14 to 25yds.; high guns—not class shooting; $100 added to the purse. Winners of money in the Grand American Handicap at targets will have 1yd. added to their handicap. The number of moneys into which the purse will be divided will be determined by the number of entries received, as is fully explained elsewhere in this programme. In addition to first money the winner will receive a trophy, $50 of the net purse being reserved to purchase same.

Regular entries must be made at the cashier's office before 6 P. M. Thursday, July 18. Penalty entries may be made after July 18, up to the commencement of the event, by paying $10 entrance, targets included.

Object of the Tournament.

The aim of the Interstate Association, an organization that was formed and incorporated "for the encouragement of trapshooting," in giving this tournament is to foster a sport that is deservedly popular; to bring together experts, semi-experts and novices; to safeguard the interests of both, and to show how a large trapshooting event should be run.

Special mention must be made of the fact that the Interstate Association adheres to its usual rule of barring paid experts and all who come under the head of manufacturers' agents from participating in the purses in the regular events. All such are welcome to shoot "for targets only" in those events. In the handicap events, however, the Association makes special conditions, fully set forth elsewhere, feeling satisfied that the ability of its handicap committee is such that all will be placed on an equal footing, and each shooter will have an equal chance to win one or other of the trophies offered for special competition in those events.

Handicaps.

The system of handicapping which is perhaps the most generally used is that of giving extra allowance of targets to the weaker shots. This is at the best very unsatisfactory, it being very difficult to adjust handicaps on an equal basis under such a system.

Another system of handicapping is that by which an allowance of "misses as breaks" is made to those who are less expert than their opponents. This system is easier to handle in a fairly equitable manner than the one above described, but it is still somewhat unsatisfactory.

The Interstate Association decided last year to discard them both and handicap by distance only. Success proved its wisdom. The distance handicap will be used again this year.

Committee on Handicaps.

It has always been the custom of the Interstate Association to exercise the greatest care in the selection of its handicap committees. Each member of such committees must possess certain qualities that unfortunately are to be found in few men. The choice of a duly qualified handicap committee is therefore always a matter of difficulty.

The Interstate Association is fortunate in the extreme, in that it is in a position to announce that the following four gentlemen will act as its committee on handicaps for the second annual Grand American Handicap target tournament, July 16-19: Bernard Waters, of FOREST AND STREAM; W. R. Hobart, of American Field; Will K. Park, of Sporting Life; Elmer E. Shaner, of Pittsburg, Pa.

Having received assurances from each of the members of the above-mentioned committee that his services will be at the disposal of the Interstate Association for the purpose of awarding handicaps in each of the three main events on the programme, the Association feels that this particular portion of the work of running the tournament is in the hands of men who will worthily and in a thoroughly satisfactory manner discharge the arduous duties imposed upon them.

The committee will meet in the Casino at Interstate Park on the evenings of July 16, 17, and 18 to award handicaps for the Preliminary Handicap, the Grand American Handicap at targets, and the Consolation Handicap respectively. Entries for these events close at 6 P. M. on the day previous to that for which it is scheduled.

Announcement.

Shooting will commence each day upon the arrival of the train which leaves Long Island City at 9:20 A. M. and Flatbush avenue, Brooklyn, at 9:25 A. M.

The Interstate Association's rules will govern all points not otherwise provided for. Special attention is called to Rule 22, which does not permit a shooter to open his gun in case of a misfire.

No guns larger than 12 gauge allowed. Black powder barred. Bluerocks will be thrown 50yds.

The standard bore of the gun is No. 12, and in the handicap events all contestants will be handicapped on that basis. Shooters using guns of smaller caliber must stand on the mark allotted to them.

Winners of money in any event must apply to the compiler of scores for orders on the cashier for the money due them. No money will be paid out by the cashier except on receipt of such an order.

Rule 10 of the Interstate Association's rules, relating to caliber and weight of gun, is not in force at this tournament. No guns larger than 12 gauge allowed; weight of guns unlimited.

The Interstate Association adds $1,000, of which amount $100 will be reserved to purchase a sterling silver trophy for the winner of first money in the Grand American Handicap at targets.

All purses in the regular events will be didived according to the Rose system, into four moneys at the ratio of 8, 5, 3, 2.

Contestants are requested to make entries for the entire programme each day. Money will be refunded in all uncontested events, and the shooter has but to notify the cashier of his intention to withdraw.

Price of targets, 2 cents each, included in all entrances.

In the handicap events all ties must be shot off, at 25 targets per man, and the original distances contestants stand at will govern.

The official score will be kept on a score board in plain view of the shooter. It will be the duty of the shooter to watch the score board and see to it that the right result is recorded. In case of error it must be corrected at once, as no appeal will be allowed after the shooter has left and passed on to the next set of traps.

Admittance to Interstate Park will be free to all during the entire tournament.

A warm and substantial lunch will be served each day in the Casino for the sum of 50 cents.

Bank checks, drafts or bills of exchange will not be received at the cashier's office, nor will any check, draft or bill of exchange be cashed during the tournament. This rule will be strictly adhered to.

A separate locker will be assigned to each shooter desiring one, there being a sufficient number to accommodate all, no matter how large the number of entries may be.

One important feature in connection with the lockers is that they are large enough for a gun to stand in when the gun is put together, thus permitting a contestant to keep his gun under lock and key at all times when he is not using it. The lockers are also amply sufficient to accommodate the other belongings of a shooter, such as gun case, shells, traveling bag, etc., and no two lockers have the same key.

Lockers will be rented to those who desire them at $1 for the week's shooting. Each applicant will be required to deposit $2, of which amount $1 will be refunded on return of the key when through with the locker.

Guns, ammunition, etc., forwarded by express must be prepaid and sent to Interstate Park, Queens, L. I., N. Y. Mark your own name on box that goods are shipped in.

Special attention is called to the schedule of events arranged for each day of the tournament. The conditions of the handicap events merit—and will of course receive—more careful study than usual.

In the handicap events the purses will be divided among the high guns, the number of high guns being governed by the number of entries.

No expense will be spared to make the shoot run smoothly. The most expert and competent help will be secured, and the office force will be large and capable.

Four sets of traps will be used; two will be magautraps; one a set of three expert traps arranged on the Sergeant system, and the fourth will be five expert traps, placed in a straight line, 5yds. apart. All shooting will be at unknown angles.

Further information relative to the tournament will be cheerfully furnished by the manager, whose home address is, Elmer E. Shaner, 111 Fourth avenue, Pittsburg, Pa.

Wollaston Trap Club.

WOLLASTON, Mass., June 18.—The Wollaston Trap Club held a shoot on Bunker Hill Day, June 17. There were ten events of 10 targets each on the programme. Woodruff was high man with 86. Whitmarsh was a close second with 85.

In the prize events, a total of 50 targets, Woodruff took first prize with 45. Whitmarsh and Paolucci tied on 42, Whitmarsh winning the shoot-off. Prescott took fourth with 39.

Events 1, 4, 7 and 9 were at unknown angles. Events 2, 6 and 10 were at regular angles. Events 3 and 8 were at reverse angles. Event 5 straightaway. Events 4 to 8, inclusive, were the prize events. The scores:

Events:	1	2	3	4	5	6	7	8	9	10
Baker	7	4	6	8	8	9	7	5	..	..

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday and as much earlier as practicable.

Dixie Gun Club Tournament.

THE first annual shoot of the Peters Cartridge Company's amateur tournament, under the auspices of the Dixie Gun Club, of Pensacola, Fla., took place on June 13 and 14, at Kupfrian's Park, and was a very successful affair.

The shoot was most ably managed by that popular and genial Indian, the only Jack Parker, of Detroit, assisted by that prince of good, genial fellows, Maurice Kaufman. Enough cannot be written in praise of the able and efficient manner in which the shoot was conducted. If you ever have the pleasure of meeting "old man" John and "old man" Maurice you will never regret it.

The trade was represented by Messrs. John Parker and Maurice Kaufman, of the Peters Cartridge Company, of Cincinnati; Mr. Lincoln, of the U. M. C. Co., and Mr. S. Kelly.

The highest average for the two days was made by Mr. Wm. Yates, captain of the Dixie Gun Club, closely seconded by Mr. B. Forbes, of Pensacola. After the shoot a rousing vote and three cheers and a tiger were given to Messrs. Parker and Kaufman for their courtesy and ability in the management of the shoot, by all wishing to have the pleasure of meeting genial Jack Parker again.

Mr. Jack Parker gave an exhibition of how he could wrestle, and he is almost as good at that game as he is in the management of a shoot. Ask Jack who caught the shark.

The following visitors participated in the shoot: W. T. Vass, Tom Chamberlain, Chas. S. Vincent, T. O. Goodbrad and Chas. Debrier, of Mobile; J. H. Fuller, Sr., J. H. Fuller, Jr., Yancey Lovelace and T. Miller, of Brewton; Chas. Kupfrian, of Millview, and Barker and Marshall.

First Day, June 13.

Events:	1	2	3	4	5	6	7	8	9	10

V. J. VIDAL, Sec'y.

Keystone Shooting League vs. Baltimore Shooting Association

PHILADELPHIA, Pa., June 19.—There was a great team race between the Keystone Shooting League and the Baltimore Shooting Association at Philadelphia to-day. The conditions were 100 bluerocks; 50 at five unknown traps and five at the magautrap. The weather was fair. The scores were 1,362 to 1,306 in favor of the Keystones. The scores follow:

Keystone Shooting League.		Baltimore Shooting Association.	
Sanford	22 23 24 23—92	Hawkins	24 21 25 24—94
Fisher	25 23 22 25—95	Dupont	20 19 23 23—85
Wolstencroft	20 24 21 21—86	Storr	23 24 22 24—93
Landis	23 23 25 22—93	Duval	18 22 21 18—79
Stevenson	23 25 23 22—93	Malone, Sr.	25 20 17 22—84
Ridge	22 21 23 24—90	Peters	22 22 24 24—92
Van Loon	22 20 20 20—82	German	18 22 21 24—85
Ross	19 21 19 20—79	John	23 22 17 14—76
Budd	21 22 22 22—87	Lupus	21 21 22 21—85
Eames	22 23 19 17—81	Robbs	15 17 17 12—61
Davis	23 22 24 23—92	Hicks	19 22 23 18—82
Sterling	24 21 19 20—84	Baughman	20 18 21 20—79
Cartledge	21 19 18 20—78	Leland	19 23 21 20—83
J Jones	18 19 17 16—70	Thomas	21 16 20 19—76
Downs	18 19 19 15—70	Tracey	17 18 22 19—76
Luther	21 22 23 24—90	Malone, Jr.	17 20 20 19—76
	1,362		1,306

PUBLISHERS' DEPARTMENT.

Summer Homes.

IN the Lake Country of Northern Illinois, Wisconsin, Minnesota and the Upper Peninsula of Michigan, on the line of the Chicago, Milwaukee & St. Paul Railway, are hundreds of most charming summer resorts. Among the list are Fox Lake, Delavan Lake, Lake Geneva, the Lauderdale Lakes, Waukesha, Oconomowoc, Palmyra, the Dells at Kilbourn, Elkhart Lake and Madison, Minocqua, Star Lake, Frontenac, White Bear, Minnetonka, Marquette, Spirit Lake, Okoboji, Big Stone Lake, etc.

For illustrated booklets "Summer Homes for 1901" and "In the Lake Country" send address with six cents in postage to F. A. Miller, General Passenger Agent, Chicago, Milwaukee & St. Paul Railway, Chicago, Ill.—*Adv.*

Swimming Shoes.

If the human biped had been constructed with web feet he would have made a better swimmer. Art can improve on nature. The Hester Swimming Shoe, advertised elsewhere, is designed to increase one's swimming power. They would be good shoes to wear on Staten Island ferry boats.—*Adv.*
